‘Uthmān was assassinated in Dhū ‘l-Hijja 35/June 656. About four months later ‘Ā’isha left Mecca for Basra along with about 1,000 men of Quraysh, shortly before she was taking vengeance for ‘Uthmān. Prior to this she had been joined by Talha and al-Zubayr. The three were now at the head of a movement in opposition to ‘Alī. They obtained control of Basra, and with many of the Muslims of that city marched to the outskirts to meet ‘Alī who had meantime left Medina for Kūfa, and was advancing against them. The battle (in Dhu’l-Hijja II 35/December 656) came to be known as the Battle of the Camel, since the fiercest struggle was round the camel bearing ‘Ā’isha’s litter. ‘Alī was victorious, and the opposing army was scattered. ‘Ā’isha herself was treated with respect, but Talha and al-Zubayr lost their lives.

After this failure ‘Ā’isha lived quietly in Medina for over twenty years. She took no further active part in politics, but became reconciled to ‘Alī and did not oppose Mu‘awiya. Her approval and disapproval, however, still seem to have counted for something. She died in Ramaḍān 58/July 678. In later times she was depicted as a model of piety, but it is difficult to know what is the basis of fact for this view.

It is said that 1210 traditions were related on her authority, but barely 300 of these were retained by al-Bukhārī and Muslim. She is said to have had a collection of the Qur’ān, and a few readings are given

on her authority (cf. A. Jeffery, *Materials for the History of the Qur’ān*, Leiden 1937, 231-3). She was noted for her knowledge of poetry and ability to quote it, and also for her eloquence; and she was versed in Arab history and other subjects.

(W. MONTGOMERY WATT)

‘Ā’ISHA BINT TALHA, one of the most famous of Arab women. Daughter of a Companion of the Prophet, Talha b. ‘Uthayy al-Āshaj al-Taymī (q.v.), who had already won great renown, grand-daughter of Abū Bakr through her mother Umm Kulthūm, and niece of ‘Ā’isha, the Prophet’s favourite wife, she combined nobility of birth with an imperious spirit and a rare beauty, which she was anxious should not go unnoticed. By nature a coquette, she courted the praises of her husband, ‘Umar b. al-Khaṭṭāb, i, 1; Kūhājyūr ‘Āzza, Ibn Kutayba, *Ma‘ārif*, 322; ‘Urwa b. al-Zubayr, *Aghāni*, s, 60, and knew how to use to the best advantage the emotions which she inspired. She even occasioned the dismissal of the Governor of Mecca, al-Harith b. Khālid al-Makhzumī, who had agreed to postpone the hour of prayer in order to allow her to complete her *ḥajj* (*Aghāni*, iii, 100, 101, 113; see Eshbir, *Fiṣṣat*, [ed. Pellat, in course of preparation] § 20, and *Aghāni*, s, 60, for an anecdote concerning the brilliant retinue which she had obtained from the caliph for the purposes of her pilgrimage). She is reckoned as one of the *mutawassitāt*, i.e. women who have had several husbands; she married successively her cousin ‘Abd Allāh b. ‘Abd al-Rahmān b. Abī Bakr, Mu‘āṭ b. al-Zubayr, and after the latter’s death, ‘Umar b. ‘Ubayd Allāh b. Ma‘mar al-Taymī. The date of her death is not known.

‘Ā’ISHA BINT YUSUF (see AL-BĀ‘ONĪ).

‘Ā’ISHA AL-MANNŪBIYYA, Tunisian saint of the 7th/13th century whose name was ‘Ā’isha bint ‘Imrān b. al-Hādīj Sulaymān. The *nisba* by which she became known derives from her native village of Mannūbiya (La Manoubia), situated 5 m. W. of Tunis. She is also commonly known, especially at Tunis, by the reverential title of al-Sayyida. The contemporary historians of the Hāfiḍ dynasty, under which she lived, maintain complete silence about her, but we possess a small anthology of her *maṣāhib* written, in a style strongly influenced by the colloquial, by an anonymous semi-literate author; the latter appears to have made use of another author, composed during the saint’s lifetime or soon after her death by an *imām* of the mosque at Mannūbiya. While still young, ‘Ā’isha gave evidence of her future vocation by a number of *ḥurāmāt*. When she reached a marriageable age, her mystical ideal caused her to refuse the cousin whom her parents wished her to marry and to flee to Tunis, where she took refuge in a *ḥayariyya* (a kind of caravanserai) situated outside the old Bab al-Fallāḥ (S.E. of the

town, later known as Bab al-Gurḍān). There she passed her life, enjoying, especially among the lower classes, a great reputation for saintliness, although certain doctors of law showed hostility towards her. Oral tradition relates that she received mystical teaching from the celebrated ṣūfī Abū’l-Ḥasan al-Shādhilī, who was at Tunis during her lifetime, but neither the *maṣāhib* of the saint herself, nor those of the disciples of Abū’l-Ḥasan, make any reference to this. She died at an advanced age, 21 Rabi‘ab 653/April 1525, or 16 Shawwāl 653/May 1525. She was buried in the cemetery which, in her time, was known as Makbarat al-Sharāf, and at the beginning of this century, a fervent devotee believed he had discovered her tomb. He erected there a wooden mausoleum which soon became a place of pilgrimage for the women of Tunis. However, the locality where ‘Ā’isha lived continues to attract believers, especially women, and to-day bears the name of al-Mannūbiyya. Around the old *ḥayariyya* has grown up in the course of centuries a small group of buildings comprising an oratory, rooms for visitors, private dwelling-houses, and even a few shops. The visit (*mi‘ād*) to the sanctuary is performed by men on Thursdays, by women on Mondays. The house in the village of al-Mannūbiya where the saint was born has similarly been made the object of special veneration. During the reign of the Husaynī Bey Muhammad al-Shāḥ (1859-82), it was converted into a huge building containing a *ṣawīya*, private apartments, and a large covered courtyard where the religious fraternities held their meetings. To-day, the decline in saint-worship has meant the abandonment of the buildings at al-Mannūbiya. Much religious poetry in dialectal Arabic has been composed in honour of al-Sayyida Lalla ‘Ā’isha al-Mannūbiyya; Sonneck (*Chants arabes du Maghreb*, i, 5-7, II, 36-9) has given examples of this verse. The cognomens al-Mannūbiyya and al-Sayyida are frequently given to girls, especially in Tunis, and even a masculine cognomen, al-Mannūbi, has been formed from the *nisba* of the Saint.

**Bibliography:** Anon., *Maṣāhib al-Sayyida ‘Ā’isha al-Mannūbiyya*, Tunis 1344/1925, 44 pp. (several Ms. of this work exist in Tunis itself); Muhammad al-Bādīj al-Mas‘ūdī, *al-Khulāṣa al-Nabhiyya fi Umār al-Friḥiyya*, Tunis 1325/1905, 64; H. b. ‘Abd al-Wahhīb, *Shahīdāt al-Tunūsiyya*, Tunis 1355/1934, 77-8; R. AISSAOUA (see ‘ISAWA).

AJARAFE (see AL-SHARAF).

AK DENIZ (see BAB AL-RŪM).

AK HIŞĀR (T. “white castle”), name of several towns.

1. The best known is Ak Hişār in Western Anatolia, formerly in the *wilāyat* of Aydı, since 1925 in that of Manisa, situated in a plain near the left bank of the river Göküklü (a sub-tributary of the Gediz), 115 m. above sea level. Known as Thyatira (see Pauly-Wissowa, s.v.) in antiquity and Byzantine times, it owes its Turkish name to the fortress on a neighbouring hill. Annexed by the Ottomans in 784/1382, it was lost again during the disorders which followed Timur’s invasion, and recaptured when rebel Baysunq (q.v.) by Khālīl Yakhshī Beg in 829/1425-6 (see Hādījī Khālifa, *Takwīm al-Tawārīkh*). Before 1914 Ak Hişār had 12,000 inhabitants, of whom three-quarters were Muslims; in 1935 they numbered 21,000. The *ḥukū* of Ak Hişār in the *wilāyat* of Manisa had, according to Cuiet (*Turquie*

*d’Asie*, iii, 548 f.), 31,746 inhabitants; in 1935 it had 91,000.

2. Ak Hişār in the Marmara district, now called Pamuk-ova, in the *ḥukū* of Geyve, *wilāyat* of İzmit (Kocja-eli), situated on the left bank of the Sakarya river, and a station on the Anatolian railway. It was captured by the Ottomans in 708/1308-9. The fortress, now deserted, commands a vast plain. The remains of many ancient columns and other buildings in the town and its neighbourhood bear witness to its earlier prosperity, but its ancient name is unknown. In 1935 it had 1,668 inhabitants, and its *nāhiye* 9,354.

3. Ak Hişār was formerly also the name of a small locality in Bosnia west of Sarajevo, at the outlet of the Prusokota in the Semeskiliza; its modern name is Polny (i.e. Lower) Wakuf. It was conquered by Muṭafā Paḡla in 907/1501-2 (J. von Hammer, *Ummid und Bosna*, 166; Ch. Perrotier, *La Bosnie*, Paris 1882, 222). (K. SÖSSEHM-F. BARINGER)

4. Town in Northern Albania, called also in Turkish Akçe Hişār, and in Albanian Krujë Kroya, “well-spring”, and formerly in the *sandjak* of Shkodra. Mentioned by the name of Kros in the chronicle of Acropolis (13th cent.), it was in 1343 a Venetian possession and in 1395 passed into the hands of Constantine Castriota. It became famous as the residence of Scanderbeg (Iskender Beg [q.v.]), and withstood vigorous sieges in 1430, 1466, and 1468, before it was finally taken by Muhammad II in 885/1474-5, July 1478. Later on it was the centre of the Bektāshī [q.v.] order of dervishes in Albania. One of the graves of Sarf Salīk Dede (q.v.) is shown in Kroya and the number of graves of Bektāshī saints around the town is considerable. Special reverence is paid to the tombs of Hādījī Hamza Baba and Baba ‘Alī (with a *tekké*). The citadel was demolished in 1248/1832 by order of Raghib Pasha. In the Albanian state the town became the centre of a sub-prefecture, and had in 1938 4,500 inhabitants, mostly Muslims.

(K. SÖSSEHM-F. BARINGER)

AK HIŞĀRĪ, *nisba* of several authors originating from one of the places called Ak Hişār. To Ak Hişār in Aydın belong:

(a) İlyās b. ‘Isā, commonly called İsx ‘Isā b. MAḤMŪD al-Dīk, author of a Turkish book of prophecies (*Kaḡhāṭi Rumāṭ-ı Kuvān*) which, composed in 963/1557-8 when the Ottomans had reached the summit of their power, foretold the continuation of their empire until the end of the world and, from the numerical value of the letters of proper names, predicted the fate of the nation until the year 2033 A.H. (Cl. Perrot, *Cat. Berlin*, No. 48, 9; Kraft, *Cat. Vienne Acad.*, No. 301; Flügel, *Cat. Vienne*, No. 1502). A few other works of his in prose and in verse are mentioned by Hādījī Khālifa (Flügel), iii, 480, iv, 155, 412, 440, and by Mehmed Tāhir (see bibliography). He died in 967/1559-60.

**Bibliography:** Bursalı Mehmed Tāhir, *‘Uḡmānīlī Mu‘allifleri*, i, 18.

and cattle. Between 1867 and 1877 Ak Šu belonged to Ya'qub Beg [g.c.] of Kashghar, since 1877 again to China (Chinese name: Wōn-sū-chow); the Chinese chose the town for the residence of the president (tso-fai) of the 'Four Eastern Towns' (Ak Šu, Kofā, Kara Shahr and Če Turfan). In the 20th century it shared the changing fortunes of Eastern Turkestan. The number of the inhabitants (previously mostly Sunni Eastern Turks) is at present given as between 20,000 and 40,000, who occupy themselves also with carpet weaving.

**AK ŠU** (Agh Šu), village near Shemakhi, (Russian Shemakhi) in Soviet Aghdarbaidžan, with a mosque, a bazar and with the ruins of 'New Shemakhi' [g.c.]. (H. SPEER)

**AK ŠUNKUR**, 'White Falcon', the name of many Turkish officers, of whom the following are the most important:

1. **AK ŠUNKUR B.** 'ABD ALLAH KASIM AL-DANLA, known as AL-HADIR, mamlūk of Malik-shāh [g.c.], who appointed him to the government of Aleppo in 480/1087. He at first supported the efforts of the Saljuq prince Tutuq [g.c.] to establish himself in Syria, but after Malik-shāh's death he, with the other governors in northern Syria and the Djazira, declared for Barkiyūruk, who was defeated and executed by Tutuq near Aleppo in Djumāda I, 487/May 1094. He was the father of Zanki [g.c.], afterwards atabeg of Mosul, and is highly praised for his justice and good government.

**Bibliography:** Ibn al-Kalānisi (Anedroz), 119-26, trans. Le Tourneau, *Damas de 1075 à 1154*, Damascus 1932, 15-17; Ibn al-Aṣṣir, x, 98, 149-51, 157-8; Ibn Khalkān, no. 99; Ibn al-Adim, *Ta'rikh Ḥaleb*, II, Damascus 1924, index.

2. **AK ŠUNKUR AL-AHMADI** [see AHMADI].

(H. A. R. GIBB)

**AK ŠUNKUR AL-BURSUKI** (AK ŠA'IN SA'IN AL-DIN KASIM AL-DANLA), originally a mamlūk of Bursuk [g.c.], and one of the principal officers of the Saljuqid sultans Muhammad and Mahmūd. He became prominent firstly through his activities as military governor (ghosn) of al-Ḥirāk, and later, at the end of his life, as governor of Mosul, which office he held simultaneously with the former. Appointed ghosn in 498/1103, his main task was to oppose the Mazyadite Arabs of Dubays [g.c.], who were infesting the environs of Baghdad. In his first government of Mosul (507/1113) his chief duty was the organization of the Holy War in the name of the sultan against the Franks in Syria, combining with this an effort to restore the Saljuqid authority in Diyār Rāsi and up to the Mediterranean. After several setbacks, due essentially to the suspicion aroused by these ambitions, and which led to his spending the years 509-512/1116-8 in partial disgrace at his fief of al-Rabba on the Euphrates, he finally succeeded, after saving Aleppo from an attack by the Crusaders supported by Dubays, in taking over the government of the entire province (518/1125), by

agreement with the leading citizens of Aleppo. He thus realized that union of a part of the Djazira with northern Syria which had served as the basis of Hamdanid power, and was to support that of Zanki [g.c.]. His life was cut short by the Bātinis of Alamūt, one of whose allies he had opposed in al-Ḥirāk, in 519/1126, before he could display his abilities, and it fell to Zanki to realize, with greater solidity, the task thus begun. But already al-Bursuki had combined, as Zanki was also to do, Saljuqid legitimism, represented by his dignity as atabeg of a prince, with an almost complete de facto autonomy at Mosul, and had effected that reinforcement of Muslim north Syria by the forces of the Djazira which was to permit the latter to break the Frankish encirclement and explain its readiness, despite its particularism, to accept his authority.

**Bibliography:** C. Cahen, *La Syrie du Nord à l'époque des Croisades*, Paris 1940; R. Grousset, *Histoire des Croisades*, I, Paris 1934; S. Le Tourneau, index, s.v. al-Borsuqi); Ibn al-Aṣṣir, x, 272, 290, 350-3, 374, 378-80, 415, 419-40, 446-7; Ibn Khalkān, no. 100; Ibn al-Adim, II, Damascus 1934, index; Ibn Abi Tāyī; and, among non-Muslim authors, Matthew of Edessa; other sources quoted by Cahen, *op. cit.*, introduction. (CL. CAHEN)

**AL-ŠAKABA**, a mountain-road, or a place difficult of ascent on a hill or acclivity. There are many places of this name; the best-known is that between Māṣīf and Mecca. Here, according to traditional accounts, Muhammad had secret meetings with men from Medina at the pilgrimages of the years 621 and 622 A. D. In 621, at 'the first 'Akaba', twelve were present, and they gave to Muhammad an undertaking known as 'the pledge of the women' (bay'at al-nisā'); at 'the second 'Akaba' seventy-three men and two women promised to defend Muhammad, if necessary, by arms, in what is known as the 'pledge of war' (bay'at al-harb). Some Western writers have held that there was only one meeting at al-Šakaba, since only one is mentioned by al-Tabari (II, 1224 f.), and since the wording of 'the pledge of the women' in the extant sources is based on Kul, *Muḥammad*, Leipzig 1930, 186. It is likely, however, that the delicate negotiations involved would require more than one meeting. (For the stone-throwing that takes place at al-Šakaba as part of the pilgrimage, see AL-DJAMRA and HADJ.) **Bibliography:** Yāqūt, III, 692 f.; Ibn Hišām, 288-300; Tabari, I, 1209-27; G. Melandri, in *MO*, xxviii, 17-58; Montgomery Watt, *Muhammad at Mecca*, Oxford, 1953, 144 ff.

**AL-ŠAKABA**, the sole seaport of the Hashimite Kingdom of Jordan, lying on the eastern side of the head of the Gulf of 'Akaba at the foot of the Djabal Unm Nunayia.

Al-Šakaba is the successor of Ayla [g.c.], from which it developed as the town grew further to the southeast. The name al-Šakaba is a shortened form of 'Akabat Ayla, 'the Pass of Ayla', which refers to the pass through the Djazir al-Nunayia from the route from al-Šakaba northeast to Ma'ān through the Wādī l-Iḥm and the Wādī Ḥimā. This pass, which was improved under the Tūfūd al-Khumarawayh (884-95), ultimately gave its name to the town itself. The term 'Akabat Ayla appears as early as the time of al-Idrisi (d. 1166), but the town was still generally known as Ayla. Ibn Batṭuta

1201-77), however, knows it only as 'Akabat Ayla (I, 256, IV, 324) and by the time of the 16th century historian Ibn l-Yāsi it was called by its present name of al-Šakaba.

At the very end of the Mamlūk period (920/1514-5) Sultan Kansawh al-Ghawri, through the agency of his architect Khayr b. al-'Alā', erected the present ruined fortified ḥaṣn at al-Šakaba in order to protect pilgrims from the attacks of predatory beduin bands.

Under Turkish rule (1516-1917) al-Šakaba, by the beginning of the 20th century, was reduced to a village of some fifty mud-and-stone huts, the inhabitants of which lived from the produce of their gardens and from the fruit of date palms, the latter of which they divided equally with the Hawayit bedouins, to whom the palms still belong. The opening of the Suez Canal in 1869 and the building of the Ḥiḡḡā railway in 1908 had deprived al-Šakaba of its only remaining importance as a pilgrimage station. When Muṣil visited the town in 1898 it was the seat of a Turkish garrison guarding the frontier with British occupied Egyptian Sinai. (It belonged to the province of the Ḥiḡḡā and was the seat of a *mukāfi* subordinated to the wālī in Djidda.)

During the sea bombardment by British and French warships which preceded the capture of al-Šakaba by Anglo-Arab forces on 6 July 1917, the town was severely damaged. Following the end of World War I, al-Šakaba was part of the Ḥiḡḡā, but with the fall of the Ḥiḡḡā to the Sa'ūdī Arabian forces in Oct. 1925 the town, along with the Ma'ān district, was annexed to Transjordan. Little change took place in the condition of al-Šakaba until 1942, when new construction was undertaken by the British forces to prepare the port as a supply port in the event of the fall of Egypt to axis armies driving from Libya. At this time a paved road was constructed from al-Šakaba to the railroad at Nakb Shīrā S. W. of Ma'ān. Following the Palestine war of 1948-9 the town grew rapidly in population and in 1954 it was projected to develop the port as Jordan's outlet on the Red Sea.

(H. W. GLIDDEN)

**'AKABAT AL-NISĀ'**, a name for the pass of Baghrās or Baylān [see BAGHRĀS].

**'AKĀ'ID** [see 'AK'ID].

**'AKĀL** [see 'AKĀMA].

**AKANŠUŠ** AND 'ABD ALLAH MUHAMMAD B. AHMAD, Moroccan historian and man of letters originating from the Berber tribe of Ida b-Kansu which inhabited Sūs in southern Morocco. He was born in 1211/1797. He studied at Fez under teachers of repute, and then obtained a post at the Sharīfian college as secretary. Promoted to the rank of vizier in 1236/1820, he was entrusted by the Sultān Mawlay Sulaymān (Mūlay Slimān) with several official missions, but lost his post on the

latter's death (1238/1822). He retired to Marrākush, where he devoted his time to the composition of poetical and historical works and became one of the most prominent representatives of the Tijdidiyya *farṣa*. He died, at an advanced age and afflicted with blindness, on 29 Muharram 1294/14 Feb. 1877, in the same town. His tomb, situated outside the Bab al-Rabā, is still visited by natives of the *Chér*. The major work of Akanšūš is a general history of Islām up to his own era, in which pride of place is given to the history of his own country and, even more specifically, to that of the 'Alid dynasty ('Alawiyya) of Morocco, from its origins up to 1282/1865. This voluminous work, a limited number of copies of which were lithographed at Fez (1330/1918), is entitled *al-Diyār al-'Arṣam al-Ḥamāsi* *fi Damaṣ al-Dawla Mawlaḥ 'Alī al-Sidqīnī*. Its chief merit lies in the fact that it constitutes the first chronicle of the reigns of the sultans 'Abd al-Rahmān b. Ḥiḡḡā and Muhammad b. 'Abd al-Rahmān, and was subsequently used extensively by Ahmad b. Khālid al-Nāsiri [g.c.] in his *al-Isṭiḡā'*. For the earlier period, the *Diyār* plagiarizes most frequently the chronicles of al-Ḥirāk [g.c.] and al-Zaynāl [g.c.].

(E. LÉVI-PROVENÇAL)

**'AKĀRIB** [see 'AKĀRIB].

**'AKARĀKŪF** group of ruins 30 km. west of Baghdad; its identification by H. Rawlinson with the town of Dur Kurigalzu, founded by the Kassites in the 14th century B. C., has been confirmed by the excavations of 1942-5 (see T. Baqir, in *Iraq*, Suppl. 1944, 1945; 1946, 73 ff.). The high tower (the ruins of the ancient *zikkurat*) drew the attention of the Arabs, and is referred to in connection with the Arab conquest as al-mawṣi (al-Balāḥūf, *Futūḥ*, 250; cf. also al-Tabari, II, 917, iii, 943). It was said to be the tomb of the 'Kaynānī' dynasty (Ibn al-Fakih, in Yāqūt), or to have been built by Kay Kā'is (Hamd Allāh, *Nuḡa*, 39) or by 'Akarākf, son of either Tahmūrah (Yāqūt, al-Kazwīnī) or of Fāris b. Tahmūrah (Ibn al-Fakih, 196) or of Sām (Abū Ḥimūd). According to a legend (already found in Hamd Allāh) the stone into which Namrud the Akkadian (see *namrud*) was at 'Akarākf; for this reason it was sometimes called Tell Nimrud. Abū Nuwās mentions 'Akarākf in a verse (*Dīwān*, Cairo 1898, 100) and al-Makhlūd (258) quotes from al-Kaḥbi a Persian tradition naming it among the seven towns of al-Ḥirāk noted for intelligence (cf. Ibn al-Fakih, 210). There was also a village, a prominent family being the descendants of Sa'd b. Zayd al-Gharābī (Ibn Sa'd, III/2, 931; al-Sam'ānī, Yāqūt). The European travellers of the 16th century and later who mention 'Akarākf (see Ritter, *Erldunde*, xi, 847-52; Tush, *De Nino urbi*, Leipzig 1845, 4) usually call it the 'Tower of Babel'.

**AL-'AKAWWAK**, 'thick-set', sobriquet of the poet 'Alī b. Djabāla. Born at Baghdad in 160/776, of a family of Khurāsāni mawālī, al-'Akawwak seems to have spent most of his life in 'Irāk, where he was the panegyrist of Abū Dulaf al-'Iḡlī [g.c.], Humayd

b. 'Abd al-Hasan al-Yusuf, and the vizier al-Hasan b. Sa'īd. The exaggerated and almost sacrilegious eulogies addressed to the two first-named excited, it is said, the hostility of the Caliph al-Ma'mūn, who had the poet's tongue torn out in 213/828. His *diwān*, a work of considerable proportions (see *Fihrist*, 1143), has not come down to us, and his poetry is known to us only through the quotations of anthologists; the long poem quoted by al-Dhahabī, *Yatimat al-Jahr*, Damascus edition, iii, is ascribed to him, but this is questionable. Al-Dhahabī had a great admiration for the way in which he recited poetry (see al-Khatib al-Baghdādī and also Ibn Khallikān); but this profuse and catholic writer quotes al-'Akawwak once only in his *Kutub al-Nayyir wa'l-Tayyib*. On the other hand, contemporaries of al-Dhahabī such as Ibn Kutayba and Abū'l-Faraj al-Isfahānī consider al-'Akawwak to be a poet of exceptional merit.

**AKBAR, ABU'L-FATH DĀULĀL-DĪN MUHAMMAD** (15 Oct. 1542-16 Oct. 1605), the greatest of the Mughal emperors of India, was born at Umarkot in Sind while his father Humāyūn, who had been ousted by the Afghans under Shīr Shāh Sūr, was escaping to Persia. A grandson of Bābur, he was both a Timurid Turk and a Çağatay Mongol. His mother, Hamida Bānū, was a Persian. After thirteen years of exile Humāyūn, because of the decline of Sūr power, decided to attempt the reconquest of Hindūstān. Little however had been accomplished before his death on 24 Jan. 1556. In fact there was no Mughal empire before Akbar, only an attempt to create one. In his early struggles Akbar owed much to his able guardian and regent Bayram Khān (q.v.). In addition to the Sūr claimants the most dangerous of his rivals was a usurping Hindu minister named Hēmi who had assumed the title of Rājā Vikramāditya. Hēmi's forces were routed at Pānpat on 5 Nov. 1556. The following year saw the surrender of Sikandar Shāh Sūr. In 1560 Bayram Khān fell from power, after which Akbar remained for about four years under the pernicious influence of the ladies of the harem and of a faction controlled by his foster relatives, the *afga khān* of contemporary Muslim historians. His personal rule therefore dates from 1564.

His annexations. In 1567 his kingdom comprised the Panjāb and Multān; the basin of the Ganges and Dīwāna between Pānpat and Allāhabād; the country between the Guntū and the foothills of the Himalayas; Owalior in Central India and Aḡmīr in Rājasthān. The country around Kābul was held by his half brother Muḥammad Ḥakīm. Kandahār belonged to Persia. Outside his dominions were the Muslim states of Guḡjarāt and Khāndeḡ; the five Deccanī sultanates of Berār, Bidr, Ahmādnagar, Bidlāpur and Golconda; and, to the south of the river Tungabhadra, the Hindu empire of Viḍḡyanagar. Kāḡmīr, Rājasthān, and Gondwana were under independent chiefs and rājās. Bidr and Bengal acknowledged an Afghān ruler, Sulaymān Kararānī. The Portuguese were firmly established at strategic points along the coast.

Between 1562 and 1576 he added to his dominions Malwa (1562), the Gond kingdom of Garha-Katanga in Gondwana (1564), Chitor (1568), Rānasthān

(1569), Kalandjār in Bundelkhand (1569), and Guḡjarāt (1573). The annexation of Bengal in 1576 made him master of the whole of northern India with the exception of lower Sind. Subsequent additions to his empire were Kāḡmīr (1586), Sind (1591), part of Orissa (1592), Baluchistan and Malakia (1594), and Kandahār (1595). As a result of his Deccan campaigns Berār, Khāndeḡ, and part of Ahmādnagar were annexed between 1595 and 1601. At his death, in 1605, his empire comprised the following fifteen *subas* (provinces): Kābul (including Kāḡmīr), Lahore, Multān (including Sind), Delhi, Oudh, Agra, Aḡmīr, Ahmādnagar, Malwa, Allāhabād, Bidr, Bengal, Khāndeḡ, Berār and Ahmādnagar (not fully subjugated).

**Administrative policy.** Akbar was not merely a conqueror. He was in addition endowed with a genius for administration to which the structure of both his central and provincial government bears testimony. The ideas of Akbar can be traced back to his immediate predecessors the Sūr Afghāns and the sultans of Delhi. The chief lesson he learned from the past was the danger of the unlimited waḡirate. In 1564, therefore, the central government was reorganized by entrusting the financial functions of the *wakūf-i mulūk* to the *diwān* or *waḡir*. From this time onwards the power of the *wakūf* was eclipsed by that of the *diwān* and the importance of the office was further lessened by keeping it vacant for long periods. Other important officers of the central government under Akbar were the *mir bahāḡī*, the *war sāmān*, and the *padr al-padr*. It is extremely difficult to define the functions of the *mir bahāḡī*, who has been referred to as the Paymaster-General or as the Adjutant-General, but the more fitting modern equivalent would be Quartermaster-General. Under Akbar the *mir bahāḡī* as administrative head of the military department was responsible for all transport arrangements during campaigns and could be placed in command of an army in the field. In accordance with Akbar's policy of separation of powers it was only on active service that the *mir bahāḡī* actually paid the troops. Normally this was the work of the *diwān*. The *mir sāmān* was in charge of the *bayāḡāt* department and was responsible for the organization of the *kāshānās*, the factories, workshops, and stores maintained by the emperor. The *padr al-padr*, the chief spokesman of the 'ulama', was the Chief Kāḡī and head of the judiciary. In the early part of Akbar's reign this official had extraordinary powers. His reading of the *khutba* in the name of a new sovereign legalized the accession. He also exercised the right of patronage recommending deserving cases to the king for *maddad-i mulūk* grants. It is incorrect to assert that in 1581 Akbar abolished this office. It is true that six provincial *padrs* were appointed but the office of *padr al-padr* continued, though shorn of its former extraordinary powers. All important officials, whether civil or military, were graded, as *amirs* or *manshabdars* on a military basis. They were divided into 33 classes and their rank and precedence were regulated by nominal commands of horse, ranging from 10 to 5000. Under Akbar there was evidently some connection between an officer's rank and the number of troops he entertained, but the exact meaning of the terms *ghāt* and *sawār* is controversial.

The provincial government was administered by a hierarchy of officials corresponding to those at the centre. The *subas* (provinces) were divided into *sarkārs* (districts) which were further subdivided

into *parganas* or *mabālis*, the lowest fiscal unit in the empire. Distance and the backwardness of communications necessitated elaborate precautions to prevent fraud and rebellion. The provincial governor was a bureaucratic head and was not allowed to develop into a feudal baron. Not only was the governor's tenure of office short but important provincial officials like the *diwān* and the *faḡḡār* (executive head of a *sarkār*) were appointed by the central government. There was also an elaborate system of espionage carried out by the *waḡīr-i nawās* (reporter) and other officials.

Akbar's revenue policy was the outcome of three experiments. In each case a different set of assessment rules was adopted but in all three the assessment was based on the area sown and varied with different crops. The first two experiments failed and it was not until the 24th regnal year (1579-80) that a stable system was introduced. This was known as the *ḡāk sāla* system because the assessment was based on the average of the previous ten years. An attempt was made to deal directly with the peasants who had to pay one-third of their gross produce to the state. It was enforced only in the six central provinces which formed the original nucleus of his empire.

His religious policy was chiefly dictated by political and dynastic considerations. His policy of *saḡh-i ḡāḡ* (universal toleration), his abolition of the *ḡitya* and of the tax formerly levied on Hindu pilgrims were aimed at securing the loyalty of his Hindu subjects, who formed the bulk of the population. It was also inextricably bound up with his conception of sovereignty and was an assertion of the supremacy of the state politically, economically, and financially. With this object he curbed the powers of the 'ulama' by the so-called Infallibility Decree of 1579 by which he was recognized as the chief authority in the realm on religious matters. Although illiterate he was genuinely interested in the study of Comparative Religion and built an 'ibādat-ḡhāna (House of Worship) where learned men of all religions assembled to discuss theological problems. These discussions convinced Akbar that there was good in all religions and prompted him to promulgate a new eclectic faith called the *ḡīn sāḡh* which he vainly hoped would prove acceptable to his subjects. It was the reversal of his policy of conciliation by his immediate successors and their gradual departure from the main principles of his rule that led to the decline of the Mughal empire.

**AKBAR, SAYYID HUSAYN ALLĀHĀBĀDĪ**, Indian Muslim poet, who wrote in Urdu under the pen-name of Akbar. Born in 1846 in Bāra, a small village near Allāhabād, he received a casual and desultory schooling. After several years' practice as a lawyer, he spent many years of his life as a judge in the service of the British government, till his retirement in 1903. He died in Sept. 1921.

His chief characteristic is his use of humour and satire to enforce his views on political and social subjects. The employment of *jeux de mots*, of which he made frequent and effective use, greatly added to his popular appeal. His command of pure Urdu was matched by his ability to bend to his purpose strange words, whether English or vernacular. From the sociological point of view, the main interest of his poetry lies in the fact that it may be regarded as a running commentary on the social foibles of his contemporaries and the political and religious trends of his times. This rôle of a humorous commentator on contemporary life earned him the title of *Lisān al-'Aḡr* or "the Mouthpiece of the Age". His criticism is not, however, the result of deep or sustained sociological thought, but is the impulsive reaction of a conservative mind to that Westernization of Indian life, which as a matter of fact had been in progress for a long time past. The shafts of his wit and ridicule simply touch the surface of things, and as the phases of life criticised by him pass away in a changing society, a considerable part of his poetry is likely to lose its topical interest for the coming generations.

His poetical compositions have been collected in four volumes and frequently published under the title of *Kulliyāt-i Akbar*. The first volume was published in 1909, the fourth in 1948. His letters, too, have been published in several collections. Shortly before his death, he composed *Gāḡḡ-nāma*, in which he set down the political views of the various parties, which took part in the anti-British movement led by M. K. Gandhī. It was edited by M. Nā'im al-Rahmān, Allāhabād 1948.

(SH. INAYATULLAH)

**AKCE**, meaning "small white", was the name given in Turkish to the Ottoman silver coin habitually referred to by European writers as the

*aspre* or *asper*, from the Greek *aspron*. The term was already in use under the Salgiukids of *Irak* during the 12th century (see al-Rawandi, *Kitāb al-Salār*, 300, where a gift of 1,000 *akles* is recorded); and since, when applied to the first Ottoman coin to be struck, under Orkhan in 727/1327, it was qualified by the epithet "Oghmānī", it would appear to have continued in use either for some other coin or as signifying "money" in a more general sense. In later Ottoman times it certainly came to bear this wider sense, as in such phrases as *salāmāt akles*, *asānāt akles*, and to have been generally used by all the northern Turkish-speaking peoples in both senses (cf. Radloff, *Wörterbuch*, s.v.). During the 14th and 15th centuries the Ottoman coin was usually called simply "Oghmānī", but from the reign of Selim I onwards, this usage being abandoned, it came to be known simply as the *akle*.

The earliest Ottoman *akle* was modelled on the *dirham* of the Salgiukids of *Rūm*; and although one issue or another of the sultan down to Murād II there appear most of the elements that were later to make up the final formulae of the *akle*'s inscriptions, it was not until the reign of Mehmed II that these were all regularly, though not always identically, combined.

The *akle* of Orkhan weighed 6 *karāt*, or one-quarter of a *mithqāl*, was 90% silver, and measured 18 mm. in diameter; and down to the reign of Murād II, though the *akle* was somewhat reduced in size, its standard of purity and even its weight were pretty well kept up. Under Mehmed II, Bayazid II, and Selim I, however, its standard was reduced by 5% and its weight to 3½ *karāt*; and although under Süleymān I and Selim II this decline was retarded, it continued, until under Murād III and his successors down to 'Oghmān II, though retaining the same standard and more or less the same diameter, it was reduced by fits and starts to a weight of no more than 2½ *karāt*, becoming thinner and thinner. Moreover, under Murād IV, Ibrahim, and Mehmed IV, its silver content was reduced first to 70 and then to 50%, though its weight and size remained roughly the same. The effect of these various debasements on its value was that, whereas 10 *akles* went to the first Ottoman gold piece, of Mehmed II, by the reign of Mustafa II, when a currency reform resulted in the first coinage of the Ottoman *kurūsh*, the rate of the gold piece (whose own weight and standard had been pretty well maintained) had risen to as much as 300 *akles*. The *akle* continued to be minted thereafter down to the reign of Mahmūd II, but from the end of the 17th century its value, which gradually declined still further, was so slight that it became little more than a conventional unit, used chiefly for accountancy purposes; and in the *tanziimat* period it was abandoned, except in connection with *waḥfs*, even for that.

(by I. H. Uzunçarşılı).

'AKD. The '*akd*, in Muslim law, is properly the legal act, whether it relates to a contract or to a simple unilateral declaration, such as a will. More

especially, however, the term '*akd* denotes the legal act which involves a bi-lateral declaration, namely the offer (*ijāb*) and the acceptance (*qabūl*). The offer by itself has no obligatory character, in Hanafite law. *Milkiyye* law differs on this point. At all events, the '*akd* is formally constituted at the moment when the acceptance is given.

It is necessary at this point to distinguish clearly between the '*akd* or contract, and simple promises ('*uḍāt*) and also allowances (*ihāshāt*), which are not binding.

The '*akd* is not merely a simple expression of agreement. Every '*akd* requires a *ṣiḡḡa*, or form, by which the wishes of each of the parties are expressed. These wishes must in principle be expressed verbally, unless a mute is involved. Writing cannot be used unless the parties are not in the presence of each other. But there is no question of an inflexible formalism. The *ṣiḡḡa* is not confined to a stereotyped form. Any mode of expression (*ṣawāb*) is valid, provided it gives the required meaning. It is necessary however to realise that *ṣawāb* de *futuro* can in no way validly express the will to contract. *Ṣawāb* de *praesenti* only bind the contracting party if the will to contract is established independently. There is no necessity to try to establish this intention (*niyya*) if the *ṣawāb* are in the past tense.

The '*akd* should therefore reflect a mutual understanding which has already been reached. It is concluded in order to secure for this agreement its legal effects. Thus the effect of a contract of sale is the immediate transfer of the ownership of the object of sale to the vendee. This conveyance cannot be deferred. In the definition of the '*akd*, there is no question of obligations being incurred by one party or the other by virtue of the contract. The '*akd*, in Muslim law, is not so much an act giving rise to obligations as a legal act creating a new legal situation or modifying an existing one. The vendor is naturally obliged to deliver the object of sale, just as the purchaser is obliged to pay the price. These obligations, however, are not considered to be effects (*ḥukūm*) of the contract, but are properly considered to be contractual rights (*ḥuḳūq al-'akd*).

If the obligations of the two contracting parties are discharged as soon as mutual agreement is reached, then this does not constitute an '*akd*, but only a *mu'āḥāt*, a mutual delivery of the object of sale and of the sale price. This delivery is certainly valid for *res vides*. It is also valid, according to some legal doctrines, for articles of value, if there has been an effective fulfilment of the contract by at least one party. But, in principle, the '*akd* postulates a *ṣiḡḡa* which necessarily creates, in law, a new situation.

It should also be noticed that, in certain contracts, the material delivery of the object of sale is regarded as a condition of the fulfilment of the '*akd*. This position obtains as regards loan of fungible and not fungible things, pledge and gift which, in Muslim law, are equivalent to "real" contracts.

The '*akd* must comply with a condition of unity in time and space. The '*akd* constitutes an indivisible whole. The *negotium* (*mu'āḥāt*) is one and indivisible, in the sense that the offer cannot be accepted in part, even when it involves two distinct things. Similarly, the offer cannot be accepted by one of its recipients to the exclusion of the other. Finally, the contract is rendered null and void if one of the objects of the contract proves to be an asset *extra commercium*.

This conception of the contract as an indivisible unit gives great rigidity to the structure of the '*akd*. Thus the '*akd* cannot comprehend more than one

*negotium*. On the other hand, the '*akd* must be concluded at one and the same sitting (the contract meaning or *mu'āḥāt al-'akd*). In short, the contracting parties must assemble in one and the same place. The contractual act thus takes place under the symbol of the three unities (see Ch. Chehata, *Théorie générale*, no. 116).

From this it follows that any clause added to the contract will be declared inoperative unless it is implied by the nature of the contract itself, so that it can be smoothly integrated into its structure. Such clauses are termed *essentia* and *naturalia*. All other clauses (*accidentalia*) will be considered invalid. Thus the inalienability clause added to a contract of sale will be deemed null and void.

Does this mean that contracts in Muslim law are all formulated contracts, and that the parties cannot, by mutual agreement, conclude contracts which have not been anticipated by the Law (*shar'ī*)? The answer usually given is that Muslims are bound by their stipulations (*shurūṭ*) (q.n.). But at the same time every type of contract is considered on its merits and pronounced legal or otherwise on the basis of the Kur'ānic texts, the *ḥadīth* or the *qiyāma*. It must moreover be realised that the conditions governing the formation of contracts are tantamount to precepts of an authoritative nature, and that the various regulations laid down by jurists concerning contracts entail the sanction of nullity, which considerably limits the area of contractual freedom. On the other hand it should not be forgotten that the Muslim social order, in matters concerning contracts, is based on two main principles: the struggle against usury and any suspicion of usury (*ribā* and *ghuḥḥāt al-ribā*), and the exclusion of all risk (*ḍaḥar*) from transactions.

The '*akd*, once drawn up in accordance with the requisite conditions, cannot in principle be vitiated by some fault in the agreement, unless there is a question of constraint (*ikrāh*). Constraint is usually the subject for a separate chapter in works on *fiqh*. The party which has suffered constraint can revoke its contractual obligations. In the case of fraud, on the other hand, the contract can be challenged only if the fraudulent actions have inflicted on the deceived party excessive loss (*ḡhunāb al-ḡibh*). Errors, such as a fault in the agreement, pass almost unnoticed. The party which is deceived as to the quality of the article can only withdraw from its contractual obligations if the quality has been made the subject of a special stipulation in the contract. The contract will then have to be cancelled, not on account of the error, but on the basis of the resolutive clause.

An '*akd* which does not satisfy the required conditions is in principle ineffective, and is termed null and void (*bāṭil*) (q.n.). Hanafite doctrine distinguishes, however, between the invalid contract and the irregular (*fasīd*) contract. The contract will be considered null and void only if one of the conditions regulating the conclusion of the contract happens to be unfulfilled. In all other cases, the contract will simply be irregular. The irregular contract, however, is, like an invalid contract, an act devoid of legal consequences. The advantage of the distinction between these two categories appears only when the protection of a third party is involved. Thus a person acquiring property by virtue of a '*akd* contract can validly alienate it in favour of a third party, if he has previously taken possession of it. The alienation in this case arises from a *non dominus*, but it is considered valid, because the third party, which has acquired the property from

its owner, could be ignorant of the irregularity (*fasāḍ*) attaching to that owner's title. This measure of protection is at the basis of the theory of *fasīd* contracts in Hanafī Muslim law. (See Ch. Chehata, in *Travaux de la Semaine de Droit Musulman*, Paris 1953, 36 ff.)

It should, however, be noted that certain contracts are neither valid nor invalid, but belong to a third category. The '*akd* is then said to be *muḥḥal*, as, for example, in the case of a contract concluded, without the *awḥāḍ* of his guardian, by a minor who is not without powers of discrimination. Unless gratuitous transactions are involved, transactions concluded by minors who are not without powers of discrimination are not null and void. They are simply non-effective (cf. Art. 108 of the German civil code). The ratification (*ijāza*) of the guardian gives them full and absolute effect. Similarly a contract agreed to by a *non-dominus* is considered simply to be non-effective, prior to the ratification of the *verus dominus*. In the meantime, the contract has no legal effects whatever. It is in a state of suspense (*muḥḥal*) between the parties and equally as regards any third party.

If an '*akd* is to have effect on other than the contracting parties, representation is required. In Hanafī Muslim law the agent (*wakīl*) does not, in principle, represent his client. In order that the '*akd* may produce its effect directly on the client, the agent must act in the name of his client (*alīeno nomine*). But he then assumes the role of a messenger a spokesman pure and simple (*rasūl*). If he acts in his own name (*proprio nomine*), which is the usual function of an agent, the '*akd* will still produce its effect in regard to the client, but the obligations arising from the contract will not be binding on the client; they will be binding on the agent alone. Thus the legal representative of a person acquiring property will find himself bound to pay its price himself, while the property will go directly to his client. The distinction, already noticed, between the effects of the contract (*ḥukūm*) and rights arising from the contract (*ḥuḳūq al-'akd*) is clearly illustrated here. (See Chehata, *La représentation dans les actes juridiques en droit musulman hanafite*, *L'après les textes de Shaybānī*, to appear in the Proceedings of the Congress of Comparative Law, Paris 1954.)

The effective '*akd* is in principle binding (*lāzim*). There are, however, several exceptions to this rule; for instance agency, gratuitous loan, pledge, partnership, suretyship, security and gift are considered, among others, to be contracts which are essentially revocable. In all these contracts one of the parties is free, depending on the circumstances, to withdraw from its contractual obligations by a simple unilateral declaration. (In the case of gift, however, a judicial decree is necessary.) Moreover, contracts of lease can always be rescinded if one of the parties lodges a plea (*ruḍḍa*) on any grounds whatever. Finally, a special clause can be inserted in general in any contract, to confer on one party, or on both parties equally, the right to withdraw (*fasḥ pa'amtan*, called in Muslim law *ḥāyir al-shar'*).

In conclusion it may be mentioned that mutual agreement between the parties can always put an end to a contract. This is termed *khāla* (*mutawāḍi'at*), and is discussed at length in works on *fiqh*. But the '*akd* cannot in principle be cancelled on the grounds of non-fulfilment. Thus the vendor, in default of a special clause, cannot demand the rescission of the sale in a case where the purchaser has not paid the agreed price. (See also *muḥḥal*.)

(CHAPIK CHEBATA)

**AKHDARIYYA** is the name of a well-known difficult law question about inheritance which belongs to the *masā'il mulāḥabā* (i.e. questions "called by special names"). When a woman leaves behind as her heirs: 1. her husband, 2. her mother, 3. her grandfather, and 4. her sister (whether she be her *shahiba*, i.e. her full sister, or her *uḥḍā* i.e. her half-sister on the father's side), then her husband gets  $\frac{1}{2}$ , the mother  $\frac{1}{4}$  (cf. Kur'an, iv, 12-13), so that there would only remain  $\frac{1}{4}$  of the inheritance for the grandfather and the sister. The latter two are generally considered, when they inherit together, as *'asabāt*, that is the sister inherits half as the grandfather's part, and together they get everything that remains when the *ahbāb al-farā'id* (i.e. the heirs to whom the Kur'an assigns a definite part of the inheritance) have been satisfied.

Now the grandfather can, according to the current interpretation of Kur'an, iv, 12, in any case lay claim to a sixth part of the whole inheritance. But then the sister would get nothing. This is actually the doctrine of the Hanafis. According to them, the grandfather here excludes the sister from the inheritance. But the other schools of *fiqh* are of opinion that in this case the grandfather and the sister are not to be regarded as *'asabāt*, but that in the same way as the husband and the mother, they get the parts to which the Kur'an entitles them. Then the division is as follows:

the husband inherits  $\frac{1}{2}$ ,  
the mother inherits  $\frac{1}{4}$ ,  
the grandfather inherits  $\frac{1}{4}$ ,  
the sister inherits  $\frac{1}{4}$ .

By means of *ṣawī* (q.v.) these nine sixths are reduced to nine sixths.

Then the husband would receive  $\frac{1}{2}$ ,  
the mother  $\frac{1}{4}$ ,  
the grandfather  $\frac{1}{4}$ ,  
the sister  $\frac{1}{4}$ .

But as the sister can after all only lay claim to half the grandfather's part, the right proportion between these two parts has again to be re-established. Together they inherit  $\frac{1}{2}$  =  $\frac{1}{2}$ , but the grandfather receives  $\frac{1}{4}$  and the sister  $\frac{1}{4}$ .

About the meaning of the name *akhdariyya* the Muslim scholars hold different opinions. Some say that the question itself is *akhdar* (i.e. troubled, obscure), or that the otherwise generally accepted principles are "troubled, disturbed" in this case; others believe *akhdar* to be the name of a man, to whom 'Abd al-Malik b. Marwān submitted this question.

**AKHD** [see 'AḤḤA, IGHWAN, MU'ALIM].  
**AKHD TEKKE** was between 1882 and 1890 the name of a district (*ṣaḥā*) in the Russian territory (*oblast'*) of Transcaucasia, which had been conquered by the Russians in 1881. It comprised the sub-districts of Atek (q.v.) (chief place: the village of Kaakhka) and Durūn (q.v.) (Dārūn; chief place: Baghirdon). Since 1890 the district is called 'Ashkhabad (q.v.). The name Akhd (which is of modern origin) applies to the oases on the northern slope of the Kopet Dag and Kūren Dag; Tekke refers to the Tekke or Teke (q.v.) Turkmen, the present inhabitants of this region. The Islamic geographers of the Middle Ages have no special name for the region, which was inhabited by Iranians, masters in the art of irrigation. Here was situated the town of Nāsā (q.v.) or Nūd, now in ruins, the border fortress of Shahrīstān (three parasangs to the north of Nāsā) and Farāwa (Afrawa) near the present Kifl Arwat. In the 16th-17th century the country came under Uzbek rule and was called Tagh Boyu ("mountain side") in contrast to Su Boyu, "water side" (i.e. Kh'Arīm proper). At that time the town of Nāsā seems to have still existed, but subsequently it was completely ruined owing to the neglect of irrigation; Durūn (Dārūn) is also mentioned at this time. At the time of the Russian conquest the country had no towns; 'Ashkhabad and Kifl Arwat came into being only under Russian rule. The district suffers from earthquakes (for instance in 1893, 1895, 1929, 1948).

**AKHDALCIKH** [see AKHBĀR].

**AKHBARNAR** [see WUDJUM].

**AKHBAR** [see TA'RIKH].

**AKHBĀR MADJM'Ō'A**, title of a short anonymous chronicle recording the conquest of al-Andalus by the Arabs, the period prior to the foundation of the Marwānid amirate of Corboba, and the history of the amirate itself up to the reign of 'Abd al-Rahmān III al-Nāsir. This text, published on the basis of the *manuscript* of the Bibl. Nat. in Paris, and translated into Spanish by Lafuente y Alcántara (Madrid 1867), has had little documentary

interest since the discovery of the greater part of the *Muḥabbi* of Ibn Ḥayyū. It is an ill-proportioned and relatively late work, probably contemporary with the reconquest of Valencia. In it are found lengthy passages from earlier chronicles, notably from that of 'Isā b. Ahmad al-Rāzī. The fact that this text does not refer to the sources which it transcribes or transposes has deceived Dozy (preface to his edition of the *al-Bayān al-Muḥabbi* of Ibn 'Abdīr, *op. cit.* 184-85, 10-12) and Ribera (introduction to his translation of the *Iḥḥāb* of Ibn al-Kāṭiyya, Madrid 1926, XIII ff.) into supposing it to be an original work. The extremely debatable study and philosophical conclusions reached by the non-Arabist Spanish historian C. Sanchez Albornoz, in his work *El 'Aḥḥā māyū'a*, *cuestiones historiográficas que suscita*, Buenos Aires 1944, need only be mentioned here.

(E. LÉVI-PROVENÇAL)

**AL-AKHDAR**, "the green", a vulgar form currently used in North Africa for the personal name al-Khidr (q.v.). Various santos, especially at Constantine, are known by this name.

**AL-AKHDHĀR**, ABŪ ZAYD 'ABD al-RAḤMĀN b. SAYYID MUḤAMMAD al-Sa'galla, Algerian author of the 16th/16th century. He wrote (1) *al-Sulām al-Murawwān* (composed in 942/1534), a short versification of al-Aḥḥār's (q.v.) *Isḡhāḡ* on logic; this little work soon became extremely popular and acquired numerous commentaries (one by the author himself and glosses; it has often been lithographed or printed, in Bā, Bālik (edilio princeps of 1241 in *Majma'at* *Muḥammad al-Mawḥid*, Cairo and Lucknow; French transl. by J. D. Luciani, *Le Soudam*, Algiers 1921. Very popular, too, is his (2) *al-Dīḥār al-Maḥmūd* fi *Sadāq al-Thalāṭh al-Funūn*, a versification of the *Talḥīq al-Muḥabbi* (Brockelmann, I, 353), to which the author himself supplied a commentary (composed in 950/1543); in this form, or with commentaries by other writers, it has often been lithographed or printed in Cairo (first in 1282). Also printed or lithographed are (3) *al-Durra al-Bayḍā' fi Aḥḥār al-Funūn wa'l-Aḥḥā'*, a metrical treatise on arithmetic, inheritance and legacies (composed in 950/1543); and (4) *Nazm al-Sirāḡ fi 'Im al-Falah*, a metrical treatise on astronomy (composed in 959/1552-3); and (5) a *Muḥabbar* *fi'l-Hilāl*, a popularized astronomical treatise on civil duties according to the Maliki school. Several other works of his exist in manuscripts. He is buried in the *zāwya* of Bentiyū (al-Baḥr, *al-Muḥabbi*, 52, 72), the modern Ben Thious, s.w. of Biskra, and his tomb is still visited.

(J. SCHACHT)

**AL-AKHFASH**, ("nyctolope" or "devoid of eyelashes"), cognomen of a number of grammarians listed by al-Suyūṭī (*Mushir*, Cairo, undated, II, 282-3), viz.: Abū 'Iḥḥāṭh, Sa'd b. Ma'sada, and 'Alī b. Sulaymān, see below; 'Abd. al-Ḥalī, b. al-Baḥārī, pupil of al-Aḥḥā'; Ahmad b. 'Imrān b. Salama al-Aḥḥā, died before 250/863, author of a *Ḥaḥḥ al-Muḥabbi*, grammarian, lexicographer and poet (see Ben Cheshir, *Classes des savants de l'Ifrīqiya*, 34); Ḥārūn b. Mūsā b. Sharīf, d. 271/884-5; Ahmad b. Muhammad al-Mawḥid, tutor of Ibn al-Djinnī; 'Abd al-'Azīz al-Andalusī, tutor of Ibn 'Abd al-Barr; 'Alī b. Muhammad al-Idrīsī, d. after 450/1058; Khāṣ b.

'Amr al-Yaḥḥūr al-Balansī, d. after 460/1068; 'Alī b. Imād b. Raḡīb al-Fātimī. To this list may be added 'Alī b. al-Mubārak (Brockelmann, S. I, 165), and a traditionist named al-Ḥuḥayn b. Mu'āḥḥ b. Ḥarb, d. 277/890 (see Ibn Ḥaǧǧar, *Lisān al-Misīn*, II, 313-4). The three following are the most famous; the first two of these belong to the school of al-Buḥār.

I. — **AL-AKHFASH al-AKHBAR**, ABŪ 'Iḥḥāṭh 'Abd al-Hamīd b. 'Abd al-Majīd, d. 177/793, pupil of Abū 'Amr b. al-'Alā'; he was the first, it is said, to provide ancient poems with an interlinear commentary, and he collected together numerous dialectal terms; his principal pupils were Sībawayh, Abū Zayd, Abū 'Ubayda and al-Asma'ī (q.v.).

**Bibliography:** Strāḡ, *Aḥḥār al-Nawāyīn* (Krenkowski, 52; Zubaydī, *Tabaḥḥi*, Cairo 1954; Suyūṭī, *Mushir*, II, 241, 249; Ibn Taghribirdī, I, 48; Brockelmann, S. I, 165.

II. — **AL-AKHFASH al-AWḤAT**, ABŪ 'Iḥḥāṭh Sa'f b. Ma'sada, the most famous of all the Akhḥāḥ, *maḥḥ* of the Tāminite clan of Muḥabbi b. Dārim; born at Balḡh, he was a pupil of the Mu'tasidite Abū Shāmur, but more particularly of Sībawayh, whom he survived although superior to him in age, and it was he who gave instruction on the Book and made it widely known; he died between 210 and 218/825-835. Nothing has been preserved of his own works (*Fihrist*, I, 52). Al-Thālibī (d. 427/1035) made use of his *Kitāb Ḥaḥḥ al-Kur'ān*, and his *Kitāb al-Ma'ḥḥ* is frequently quoted in the *Khāṣna* of al-Baḥḥāḥ (I, 391; II, 300; III, 36, 327).

**Bibliography:** Ibn Kutayba, *Ma'ārif* (Wiesbaden), 271; Asharī, in *MQ*, 1250, 22; Ibn al-Aḥḥārī, *Wuḥḥ*, 184-8; Zubaydī, *Tabaḥḥi*; Strāḡ, *Aḥḥār al-Nawāyīn*, 49-51; Ibn Khallikān, no. 250; Yāqūt, *Iḥḥāḥ*, IV, 242-4; Yāqūt, *Dīḥān*, II, 61; Suyūṭī, *Buḥḥa*, 258; id., *Mushir*, II, 253, 287; Brockelmann, S. I, 165.

III. — **AL-AKHFASH al-ASGHAR**, ABŪ 'Iḥḥāṭh 'Alī b. Sulaymān b. al-Mufaḥḥāl, pupil of al-Mubārraz and Thālib; he gained distinction by introducing the grammatical studies of Baḥḥāḥ into Egypt, where Ahmad al-Naḥḥās was his pupil; a grammatical work which he wrote was studied and annotated in Spain (see *BAH*, IX, 313-4). He died in 315/927.

**Bibliography:** Brockelmann, S. I, 165. On the subject of these grammarians, see also Flügel, *Die grammatischen Schulen der Araber*, 61 ff. (C. Brockelmann-C. Flügel).

**AKHI**, designation of the leaders of associations of young men organized as guilds in Anatolia in the 13th-14th centuries, who adopted the ideals of the *futuwwa* (q.v.) and were recruited mainly among the craftsmen. Ibn Battīḥā (II, 260) connects the name with the Arabic word for "my brother"; this explanation is based on anything more than an identity of sound, it would offer an instance of a "title in forms of address" similar to A. sayyidī, T. ḥāḥḥ, *begum*, etc. It is more likely, however, that the homonymy of the two words is accidental, though it was willingly adopted by the Akhḥā; occasionally also it is borrowed in the Persian translation *biḥār* (cf. Tieschener-Schumacher, *Yāqūt*, 38). In reality it is a Turkish word (cf. J. Dony in *Jā*, 1920, 182 f.; H. H. Schander, in *OLE*, 1928, 1049, n. 1), which is already found in Uyghur in the form *akhi* "generous" (A. von Gabain, *Altürkische Grammatik*, glossary, s.v.; *Turkische*, VI, 1-4). The word occurs in the same form and with the same meaning (cf. also *akhiḥ*, "generosity" in Middle Turkish (Kāshgarian); in al-Kāshgarian, *Dīḥān* *Lughāt al-Turk* (akhi, "al-dīḥāḥ"), I, 84 —

fact, ed. 57; *al-Bihar*, II, 129 — fact, ed. 520; C. Broelmann, *Mittelalterlicher Wortschatz*, v.v.), and in the didactic poem *‘Atabet al-Ushsh’* by Edib Ahmed b. Mahmud Yukneli, ch. ix (ed. R. Rahmeti Arat, Istanbul 1951, 58/66, index, s.v.); under the title *Hibet al-Ushsh’*, ed. Nedjib ‘Asim, Istanbul 1334, 52/5; cf. J. Deny in *RMF*, 1925, 219, n. 1; *ahf er*, ‘the generous one’, and *ahf bal*, ‘the generous’; the opposite is *ahsh* and *ahshila*, or *ahshil*, also *ahshil* and *ahshilil*. In the latter work the form *ahsh* occurs also as a variant reading for *ahf*, and this is the form which is exclusively used in Rüm-Turkish. It is found several times in the oldest Rüm-Turkish literature, as a vocative “oh generous one, oh noble one, oh hero” constituting the rhyme-word at the end of a line; for instance in the *Kühâ-i Dede Korkut* (ed. E. Rossi, fol. 65, three times; ed. Kiliç Rıfat, 16; ed. Gökyay, 9), in two poems of Yunus Emre (ed. Burhan Ünad, II, 344, 361; ed. Abdülhak Gölpinarli, 117), and also elsewhere (e.g. Enveri (Mükrimün Khalil), 43). The word passed from the general to the particular meaning, i.e. possessor of *fatuwa* (P. *fatuwat*, T. *fatuwat*), by acquiring the full implications of the Persian word *fatuwat*, which is lower in turn had received as a translation of Arabic *fatwa*, *al-fatwa* (cf. H. H. Schaeder, loc. cit.).

Akhi, as a term qualifying its bearer as possessing *fatuwat* (*akhi fatuwat* or *fatuwat-dar*), always precedes the name and occurs occasionally with reference to persons even earlier than the 7th/13th century. So for instance it is applied to the 3rd shaykh Akhi Faraj Zandjeli (d. c. Baghdad 437/9 June 1065), and the teacher of the poet Nisami (b. 515/1141) is also said to have borne that designation. It is, however, only in the 7th/13th, and more especially the 8th/14th century, that the name occurs frequently, in the whole of the Middle East, but predominantly in Anatolia; it gradually disappears again in the course of the 9th/15th century.

In the more particular sense, Akhiism is the specific form assumed by the *fatuwat* organization in late- and post-Seldjuk Anatolia. It is well attested here by a literature of its own (the Persian *Futuwwat-nama* of Nisami, written in 669/1250 in N. E. Anatolia, being a *mathnawi* of 880 couplets; the Turkish *Futuwwat-nama*, in prose, by Yahya b. Khalil al-Bughdâli, probably from the 8th/14th century; the important chapter on *fatuwat* in Gülshahr’s old-Ottoman version of ‘Attâr’s *Manâzil al-Tayr*, studied by F. Taeschner in *SBPAW*, 1932, 744-60), as well as by allusions in various authors (the most impressive being Ibn Battûta’s vivid account, II, 254-154, especially 260 ff., the chapter on *al-ahdiyya al-fayân*), and by inscriptions and documents. (A list of the references, to which many additions could now be made, in *Islamica*, 1929, 29-47.) ‘Ashikpasha-râde (Giese), 201, 213 (= Istanbul ed. 205), names the *ahdiyyân*, together with the *ghaziyân*, *ahdân* and *hâdiyyân*, as the four groups of “travelers” (*misâfirler ve sayyâklar*) in Rüm (Anatolia) (for comments on this statement see P. Wittek, in *Byzantion*, 1936, 310). The wording of the sentence seems to imply that these groups came to Anatolia from abroad. They can perhaps be connected with the flood of *darwishes* and related figures from the east (Kharâshân and Turkistân), who are known from other sources as well to have come to Anatolia in the Mongol period (second half of the 13th century). Some early mentions of *ahdiyyân* in Iranian territory in pre-Mongol times would bear this out. The earliest mentions of *ahdiyyân* in Anatolia (especially in Adhli,

*Manâzil al-Tayr*, cf. Cl. Cahen, see below) also go back to relations with Iran. On the other hand, in considering the forms of organization of Akhiism, the connection with the courtly *fatuwat* at the caliphs’ court in Baghdad ought not to be passed over; this is made likely by the relations, repeatedly attested, between the caliph al-Nisr b. Dhî al-Falâh (575-622/1180-1225), the patron of the *fatuwat* [g.z.], and the Seldjuk sultan of Rüm.

During the disintegration of the state of the Rüm Seldjûks and the division of Anatolia into a number of Turkish principalities (second half of the 13th century), the *ahdiyyân*, who according to the contemporary or slightly later authors (such as Ibn Bihî, Aksarayî, the Paris Anonymous and Adhli) were leaders of bands (*frunâ*), showed a remarkable activity, reminiscent of the activity of the *waywâd* [g.z.] in Baghdad and the *ahdiyyân* [g.z.] in Syria a century before. In the first half of the 14th century, the *ahdiyyân* appear in the account of Ibn Battûta, to whom the *ahdiyyân* extended hospitality in every town during his journey through Anatolia, ca. 1333, as an important element of cohesion in the motley conglomeration of states in Anatolia at that period. In towns where no prince resided, they exercised a sort of government and had the rank of *amir* (Ak Sarây, Ibn Battûta, II, 286; Kayasiriye, II, 288 f.); sometimes they exercised judicial authority (Konya, Ibn Battûta, II, 281). Their position seems to have been especially strong in Ankara, at the time when the authority of the Mongol governor residing in Swik did not reach so far. Shâvar al-Dî, the richest and most powerful of these *ahdiyyân* of Ankara, calls himself in his tomb inscription of 731/1330: *ahdiyyân mu‘azzam* (Mubârek Ghâlib, *Ankara*, II, 15 f., no. 20; *Islamica*, 1929, 44, no. 3b). According to Negri (Taeschner), 52 (= ed. Ankara, 190-2), it was from their hands that Murâd I accepted the town in 762/1360-1. We find *ahdiyyân* also in the entourage of the first Ottoman ruler; some of these *ahdiyyân* took part in the conquest of Bursa (for details see *Islamica*, 1929, 30). Basing himself on this fact, Fr. Giese (ZS, 1924, 255, 258) considered the *ahdiyyân* as the troops with whose help the Ottomans founded their power, and surmised that they themselves were members of *ahdiyyân* organizations. This is, however, little likely, in view of the urban character of Akhiism and the fact that its associations were concentrated in towns.

Wittek has shown with much probability that the role attributed by Giese to the *ahdiyyân* belongs in reality to the *ghazis*, fighters for the faith, who constituted a military counterpart to the *ahdiyyân* (on the first in ZDMG, 1925, 288 f., and then frequently). On the other hand it results from a *wasfiyya* of Murâd I, of 767/1366, and an inscription in Hâdjîdî Belâzîb, of 769/1368, that Murâd, probably for political reasons, joined the still powerful *ahdiyyân* organization (see Fr. Taeschner, *War Murâd I Grossmeister oder Mitglied des Achmedbâd, Orions*, 1933, 23-31). This was followed, however, by the decline, rather than the advancement, of Akhiism, as it seems that the Ottoman sultans, when they had no further need of the *ahdiyyân*, dropped their relations with them.

The *ahdiyyân*’s own literature does not allude to any activity in public life. Here the *ahdiyyân* organization appears as a half-religious, *darwish*-like society. It comprised three grades: *yigit* (“young man”, translation of A. *fatâ*, designated the ordinary unmarried member of the organization); *ahdiyyân* (president of a corporation of *fatâ* and owner of a *shaywa*, meeting-house, of which there were sometimes more than one

in a town); and *ghaysh*. The latter grade seems to have played practically no active role; probably it refers to the leader of a *darwish* settlement, to which the members of the corporation felt themselves attached. Such attachments seem to have varied with the individual corporations; there are known to have been relations between *ahdiyyân* and the Mewlewis, Bektashis, Khawetis, and probably yet other orders. The ordinary members were again divided into two classes: they were either *kashis*, “word-members”, when they made a general profession only (“by way of speech”), or *sayfis*, “sword-members”, who probably were the active members. Their symbol was, according to Ibn Battûta, II, 264, a knife (*shâkî*); they covered their heads with a white woolen headscarf (*kâlawusu*), from the end of which three hung down a piece of cloth one ell long and two fingers in breadth (the resemblance to the head-covering of the later Janissaries, the *hale*, is noteworthy). According to Ibn Battûta, the members of an *ahdiyyân* corporation met every evening in the house of their leader, the *ahdiyyân*, bringing him their daily earnings, which served to cover the expenses of the club premises and the communal meal, of which these *ahdiyyân*, especially passive travellers, would be invited. The lodging and entertaining of travellers was considered by the *ahdiyyân* as their main function. According to Ibn Battûta, they also played a political role by fighting tyrants and murdering their adherents; this statement may be an echo of the frequently attested activities of the *ahdiyyân* in earlier times, which found expression in revolts and similar demonstrations.

As regards other customs and their code of honour, the *ahdiyyân* accepted the general rules of *fatuwat* [g.z.], T. *fatuwat*. As in the *fatuwat*, so also among the *ahdiyyân*, the initiation of novices (*terbiye*) into the association by their girding, the cutting of their hair, the passing round of a cup of salted water and putting on the trousers, was of central importance. Their religious-political position, however, was not fixed: some elements in the custom and theory of the *ahdiyyân*, as for instance the intense cult of ‘Alî, shows a Shi‘ite colouring; yet they no doubt considered themselves to be Sunnis and like all Turks followed the Hanafî rite. (Ibn Battûta, as a Maliki, fell in Sinop under suspicion of being a Shi‘ite, i.e. Shi‘ite, because of a minute discussion of the ritual of prayer and had to clear himself by eating roasted hare (II, 352 f.).)

In the 15th century information about Akhiism becomes more and more rare and finally ceases. Sometimes the word *ahdiyyân* occurs, but merely as a proper name. A *molla* *ahdiyyân* is named under Mehmed II; a family called *ahdiyyân*, *ahdiyyân* members occupied high judicial posts, survived into the 17th century. Also place-names in which the word *ahdiyyân* occurs in various combinations are not uncommon in Anatolia and Rumelia. But it seems that Akhiism disappeared in the course of the 15th century. Its tradition survived only in some elements of the Turkish guilds (cf. *sinir*), in whose organization (which according to Sayyid Mehemmed b. Sayyid *ahdiyyân*’s *Grand Futuwwat-nama* (composed in 1324) had nine grades) the *ahdiyyân*, also called *ahdiyyân*, occupied the seventh grade. The *ahdiyyân* tradition was especially cultivated in the guild of the tanners, who had as their patron Akhi Ewrân [g.z.], a semi-mythical figure, who, if he is historical at all, must have lived in the first half of the 14th century. The president of the tanners’ guild bore the title of *ahdiyyân* Baba [g.z.]. Moreover, among the tanners the

*Futuwwat-nama* of Yahya b. Khalil al-Bughdâli continued to be read, revised and copied.

The designation *ahdiyyân* occurs sporadically also outside Turkey, but the evidences are too scanty to allow of any definite conclusions as to its exact significance. The most striking case is appearance of a man called *ahdiyyân* [g.z.], “little *ahdiyyân*” in *Algharbayân* after the decline of the Ilkhâns of Persia. The word *ahdiyyân* occurs, in a weakened sense, several times in the *diwan* of “Khatâ’r”, i.e. Shâh Ismâ‘îl, as one of the designations given to his followers (V. Minorsky, *The Poetry of Shâh Ismâ‘îl I*, BSOAS, 1942, 1030a; M. Fud Koprulu, *Türk Halkedebiyatı Ansiklopedisi*, no. 1, Istanbul 1935, 304).

Koprulu Armağanı. Cf. also FUTUWWA. (FR. TAESCHNER)

**AKHI BABA**, in popular parlance also **AHU BABA** or **EHİ BABA**, title of the shaykh of the tekye of Akhi Ewrân [g.z.] in Kirsehir. Sometimes also his delegates to the Turkish guilds (cf. *sinir*) in Anatolia, Rumelia and Bosnia, especially those of the tannery and other leather workers (saddlers and shoemakers), as well as the heads of these guilds, were given the title of Akhi Baba (more correctly *Akhi Baba wehîl*). The main task of the Akhi Baba, or of his delegate or local representative, was to carry out the initiation of apprentices to these guilds by the ceremony of the girding (*baghak* or *pehlîmal baghakmak*), this carried with it some fees. The Akhi Baba succeeded little by little in extending their ascendancy over other guilds and conducting the girding ceremony in them also. Thus they brought under their control almost the whole Turkish guild organization, both in Anatolia and the European provinces (but not, however, in the provinces with Arab population), acquiring for themselves a position of considerable power, and for the tekye of Kirsehir great riches. Only a few guilds managed to escape their control; among these were the guilds of Ankara, which had formerly been the stronghold of *ahdiyyân*. His influence even reached as far as the Crimea, where also the tanners’ guild had precedence in all celebrations of the guilds (E. Bulatov, in *Očerki Rossi*, ed. V. Pansky, Moscow 1840, II, 139-54; V. Gordlewskiy, *Organizatsiya*

*tachov v khrimshikh Tatar. Trudi etnografiko-arkheologicheskogo Muzei, pri I. Mstovkovom Gosudarst. Universitete, iv, Moscow 1928, 36-63).*

The Akhi Babas claimed to be descendants of Akhi Ewırân. The local representatives of the Akhi Baba were elected by the members of the respective guilds, but did not necessarily belong to them, and any persons who were in any way tainted could be chosen. They had, however, to receive a licence (*ajdat-nâme*) from the Akhi Baba of Kirsehir and a diploma (*berât*), confirming the appointment, from the government. The Akhi Baba of the tanners was at the same time the head of the whole guild organisation in his town. He could, however, be deposed.

With the decline of the Turkish guilds, following on the penetration of Western economic systems, the journeys of the Akhi Babas of Kirsehir, as well as the sending of delegates by him, fell into disuse. A delegate of the Akhi Baba came to Bosnia for the last time in 1886-7 (Hamdiya Kreslevijaković, *Esmâ-i Öhrî u Bosni i Hercegovini, Sarajevu, in Zbornik Narodni život i običaji južnih Slavena*, Zagreb 1935, 201-47). In the provinces which remained part of the Ottoman Empire, this practice ceased only at the time of the abolition of the old guilds in 1908.

(Fr. TAESCHNER)

**AKHI EWİRÂN**, semilegendary Turkish saint, patron of the Turkish tanners' guilds. His tomb sanctuary in Kirsehir (built in the 9th/15th century, with inscriptions of 854/1450 and 886/1481; the last in the name of 'Alî' al-Dawla b. Süleymân Beg, probably of the family of the Dîw 'I-Kadr, and thus brother-in-law of Sultan Mehmed II), connected with a *tekke*, was a frequented place of pilgrimage. Taşköprüzâde (on margin of Ibn Khalkalân, 15; Turkish text of Moghî, 33; German trans. by O. Roscher, 6) mentions him amongst the *shaykh*s of the period of Orkân. His name first occurs in a Turkish *mathnawî*, *Kerâmât-i Akhi Ewırân bâba (sharâ)*, by Gülshehr, which was composed probably after the author's *Mantik al-Tayr* (finished in 717/1317)—from which it has many borrowings—and not long after the saint's death. He is next mentioned in the *Wâsiyat-nâme* of Hâdîdî Bektaşî, written in the time of Murâd II (E. Gros, *Das Wâsiyat-nâme des Hâdîdî Bektaşî*, Leipzig 1927, 82-93). While in Gülshehr's *mathnawî* Akhi Ewırân's figure is given only a slight touch of the miraculous (it is noteworthy that there is as yet no mention there of his relation with the tanners' craft), in the *Wâsiyat-nâme* it is already fully elaborated with legendary features (there is also mention of relations with the tanners); it is worth noting that here Akhi Ewırân is presented not as a disciple, but as a friend of Hâdîdî Bektaşî. According to 'Alî Emîrî (OTEM, 1335, 467 f., note) and M. Djewdet (*Dihân 'alâ Fasl 'al-Akhiyya al-Fayda*), Istanbul 1351/1932, 279-82) there exists a document of endowment (*wakfiyye*) by Akhi Ewırân dating from 706/1307-8 (in a copy published by C. H. Tarim, *Kirsehir Tarihi*, Kirsehir 1938, 84, even bears the date of 676/1277), where the full name of the saint is given as al-Shaykh Nasir (Tarim: Nasir) al-Din Pir-i Pirân Akhi Ewırân. The document can, however, easily be recognized as a forgery, as Şayyakh Hâmid Well (d. 815/1412), named in the *Hâdîdî Bayrak* Well (d. 833/1428-9) is termed in it; it was

probably fabricated in the first half of the 15th century, in order to give legal sanction to the possessions of Akhi Ewırân's sanctuary in Kirsehir.—The importance of the sanctuary as a place of pilgrimage is attested by Sîdî 'Alî Re's (*Mir'ât al-Memâlik*, Istanbul 1313, 163; Engl. transl. by A. Vambéry, *The Travels and Adventures of the Turkish Admiral Sîdî Ali Re'i*, London 1869, 105), who visited it in 674/1275 on his return from India. Also an Anatolian cities besides Kirsehir boasted of the possession of the grave, or at least of a memorial, of the saint, for instance Traperunt (a *makâm* on the Boz Tepe), Konya (in the quarter of Sîrâll), Niğde and İrma. All these were, however, more or less forgotten, and only the sanctuary of Kirsehir retained its position.

In addition to the aforementioned writings, legends of Akhi Ewırân are occasionally found in authors such as 'Alî, *Künâh al-Akhiyya*, v, 64; Ewliya Celebi, *Siyâhat-nâme*, I, 594 f.; in the literature of the tanners' guilds, which continued the akhi tradition (often in the form of appendices bearing the title of *Memâlik* to the *Faiṣṣat-nâme* of Yahyâ b. Khâlid al-Burghâlî, [cf. 283ff.]) in oral traditions, recorded for instance by K. Kassim, *Türkische Sprachproben aus Mittelanatolien*, iii, Helsinki 1936, 99 ff., nos. 22, 23 and 25, and by W. Ruben [see BIBL.]. For the most part they deal with the saint's work as a tanner (or gardener) or with his name (Ewırân or Ewren, "snake, dragon"); for this reason Gordievsky suspects a survival of a snake cult. In the tanners' guild literature the legend is found that his original name was Mohâmîd, that he was a son of al-'Abbâs, the Prophet's uncle, and that he had been specially commended by the Prophet. (This anachronism was censured in the work of Muṣṭafî Belghirdî, who criticized the Shî'ite tendencies which were displayed in the literature of the guilds, in a work entitled *Nisâb al-Intisâb wa-Adâb al-Intisâb*, composed in 1620.) In the *'Adâb-ı Mâğrib* of the Djelwetî *shaykh* Sayyid Muṣṭafâ Hâjîm (d. 1197/1783), quoted by 'Alî Emîrî (loc. cit., 464-6), the saint, under the name of Sayyid Ni'mat Allâh Akhi Ewırân Well, is brought, along with Hâdîdî Bektaşî Well and Sayyid Edehîlî, into connection with Ghâzî 'Oghmân's girding with the sword. As patron of the Turkish tanners, a *titile* was ascribed to him which went back to Zayd Hâdîlî, patron of all the tanners, other *shaykh*s go back to Manṣûr 'Abîd, i.e. al-Hallâj.

The sanctuary of Akhi Ewırân in Kirsehir played a great role into the first years of the 20th century, as the *shaykh* of the monastery, who bore the title of Akhi Baba (i.e.) controlled, partly personally, partly through his representatives who resided in the various towns, the guilds of the tanners and of all kindred leather workers (saddlers, shoemakers) in Anatolia and the European provinces of the Ottoman Empire, and gradually succeeded in extending his influence over almost the whole of the Turkish guild-organization.

**AKHIJÖK**, "little akhi", an amir of unknown name in Tabriz, in the 8th/14th century, follower of the Central Mamluk Ashraf, who was defeated and executed by Dîlâz Beg, khân of the Golden Horde. When after Dîlâz Beg's death his son, Berdi Beg, who had been left by his father as governor in the conquered city, left Tabriz in order to secure his father's throne for himself (738/1337), Akhijök succeeded in obtaining possession not only of Tabriz, but of the whole of Agharbaydân, and in defending them for some time from the Dîlâzîd sultan of Baghdad, Uways, son of the "Great Hasan" (Hasan-i Burgul). When, however, Uways captured Tabriz in 760/1359, he ordered the execution of Akhijök, who had taken part in a conspiracy against him. During his short rule Akhijök corresponded with the Mamluk Empire of Egypt (he was addressed by the Mamluk chancery simply by the title of "akhi", al-khalibhandi, *Sûlt. al-'Aṣṣ*, vii, 28, cf. W. Björkman, *Beiträge zur Geschichte der Staatshandels im islamischen Ägypten*, 128). His fame spread as far as Anatolia, where a chapter was devoted to him by the old Ottoman poet Ahmedî in his famous *İshend-nâme*.

TABRIZ and UWAYS; D. Spuler, *Die Mongolen in Iran*, 137; Fr. Taeschner, *Der Akhijschah von Tebriz*, in *Festschrift Jan Rypka*, Prague 1956. (Fr. TAESCHNER)

**AKHIR-İ CÂRSHAMDA** [see SAPAR].

**AKHIRA**, fem. of *akhîr*, "the last", is a term used already in the Qur'ân for the life to come, according to the commentators properly *al-dâr al-akhirâ*, "the last abode", as opposed to (*al-dâr* or *al-hayât*) *al-dunyâ*, "the nearer or nearest abode or life", i.e. the present world. A synonym is *ma'âd*. The same antithesis is expressed by the terms *dâr al-bahâ*, "the abode of everlasting existence", and *dâr al-fana*, "the abode of transitoriness", and by the terms *'âle* and *'âle*. *Âkhirâ* also denotes the condition of bliss or misery in the hereafter, again as opposed to *dunyâ*, the lot of man in the present world, and in particular its pleasures. From these meanings derive more technically theological and philosophical definitions, such as the state of resurrection whether corporeal or incorporeal, or, if resurrection of the body is denied, a spiritual state. See also *AKHİR*.

**Bibliography:** Lane, *Lexicon*, s.v.; A. Sprenger (ed.), *Dictionary of the Technical Terms*, s.v.; Ghazâlî, *Thaḥd 'Ulûm al-Dîn*, *hiṣṣ* 40 and passim; Fakhr al-Din al-Râz, *Mubashar*, *ruḥ* 5, *hîm*, 2. (A. S. TRUITON)

**AKHISKHA**, the Persian and Turkish name of a town, in Georgian AKHAI TSIGHE, "New Fortress", situated on the Roshk river (left tributary of the upper Kur), centre of the Georgian province Samtskhe (later Sa-atabago) which is mentioned among the conquests of Hâblî b. Maṣlama (under Mu'âwiyâ), al-Balâdhuri, 203.

Under the Mongols the local rulers (of the Djakî'e family) became autonomous and received the title of *atabeg*. The name Kurkîra found in Persian and Turkish sources refers to these rulers of whom several bore the name of Kuarkîr (see Brunsen, *Histoire de la Géorgie*, ii). In 1579 Akhal Takhe was occupied by the Ottomans who succeeded in implanting in this region Islam and Ottoman customs. In 1625 the Turkish pashas took over the administration. Akhal Takhe became a considerable strategic point and one of the chief Caucasian slave-markets, cf. Hâdîdî Khallîfâ, *Dîkhân-nâmâ*, 108 f. In 1529 the town was incorporated by the Russians. After the revolution it forms part of the Georgian S. S. Republic. (V. MINORSKY)

**AKHLÂK** (plural of *akhlâq*, "innate disposition"), ethics.

(i) Survey of ethics in Islam; (ii) Philosophical ethics.

(i) SURVEY OF ETHICS IN ISLAM.

1. Islamic ethics took shape only gradually and the tradition of the different elements of which it is composed was not finally established before the 5th/11th century. Unlike the Greek world, in which popular ethics were refined and reshaped by philosophical reasoning without any break between them, and with no perceptible influence of any foreign doctrine, so that eventually philosophy came to express the moral values by which the lives of the educated classes were governed, in Islam ethics appear in their matured state as an interesting and, on the whole, successful amalgamation of a pre-Islamic Arabian tradition and Kur'ânîc teaching with non-Arabic elements, mainly of Persian and Greek origin, embedded in or integrated with a general-Islamic structure. The praise of, and value attached to, good character (*ḥuṣn al-akhlâq*) is common enough among traditionalists, mystics, philosophers, and those writers who aim at giving practical advice to rulers and "civil servants". But their ideas of moral perfection are drawn from widely different sources, although all of them, in various ways, try to conform to the basic standards of Islam (which are in themselves not static); hence the process of assimilation and eventual integration of these different and sometimes conflicting trends extended over a considerable time.

2. It would be erroneous to assume that the different kinds of morality which found literary expression in successive periods from the age of the pre-Islamic poets to the 5th/11th century present a cumulative process, in the sense that each new type as it emerged replaced or suppressed the earlier types. On the contrary, they co-existed for a long time, in varying strength. The tribal *summa* of the pre-Islamic Arabs, based on usage and custom, described by I. Goldziher (*Musammât al-Andalus*, i) and others (e.g. B. Fârûs, *L'homme chez les Arabes avant l'Islam*, Paris 1912), by no means died out with the advent of Islam, and since pre-Islamic literature eventually became part of the accepted Arabic humanities, the values expressed in it were never entirely forgotten: a high sense of personal honour (see *IRB*), courage (see *HAMASA*), loyalty (see *KARILIA*), hospitality (see *one's fellowtribesmen* [see *IRB*]), self-control (see *IRIL*), and a secular spirit which could never be completely quelled by the prevailing religious morality (cf. also *serwewa*). The preaching of Muhammad obviously produced a radical change in moral values as well, based on the sanctions of the new religion, and fear

of God and of the Last Judgment: kindness and equity, compassion and mercy, generosity, self-restraint, sincerity, moral fellowship of the Believers are among the new virtues to replace tribal morality, and to become the pillars of an ethical society or, at least, the programme for such a society.

The religious ethic of the Qur'ān was subsequently expanded and pointed in immense detail by the traditionists in the form of *ḥadīth* (q.v.), professedly based upon and expounding the *sunna*, or model behaviour, of the Prophet, but frequently supplementing this source by traditions of the Companions and by adaptation of materials from the cultural traditions of the older religions. The importance of the *ḥadīth* in forming and maintaining the common ethical ideas of the Muslim Community in all ages and all regions has been incalculable; but in addition it was largely responsible for the ethical framework of the developing Islamic Law (see *SHAR'Ā*), and for laying the foundations which made possible the process of integration described above. It may be said broadly that the whole corpus of *ḥadīth* constitutes a handbook of Islamic ethics, inasmuch as in the general Muslim view the correct performance of religious duties and the right understanding of religious doctrine are inseparable elements of the moral life. Within this comprehensive structure, however, certain forms of conduct were more particularly designated by the term *adab* (q.v.), which in this early religious context had a definitely ethical connotation (see, e.g. Wessink's *Handbook*, s.v. *Adab*). It is tempting to imagine (though it might be difficult to prove) that it was the capture of this term for the very differently motivated ethic of Persian origin expounded by the 2nd/3rd century writers (see § 4 below) which led to the substitution of the term *akhlaq*, which appears in various traditions extolling "good *akhlaq*" (see Wessink, *Handbook*, 118 and B. Faris, *Makhrim al-Akhlaq*, *Rend. Linc.*, 1937, 47 = *Mabāhith 'Arabiyya*, Cairo 1939, 21 ff.). The tradition of the Prophet used as a proof-text by later writers on Islamic ethics: "I have been sent to fulfil the virtues which go with nobility of character (*makhrim al-akhlaq*)", does not occur in the canonical books of tradition (cf. B. Faris, loc. cit.). Under this title several collections of ethical *ḥadīth* were made from the 3rd/4th century onwards, e.g. by Ibn Abi 'I-Thayyā (Brook, I, 160), al-Ghazālī (Brook, S I, 270), and al-Tabarī (Brook, S I, 317, S I, 709), the last-named being the classical Shī'ite book on the subject (cf. also B. Faris, 411-2).

3. The refinement and development of moral thought on the basis of the *ḥadīth* was carried further by both of the religious movements which began to develop within Sunnī Islam in the 3rd/4th century. In theological circles, on the one hand, the conflict with the antedeterminist trend of the Mu'tazilī (q.v.), and the consequent emphasis laid by the Mu'tazilī theologians on moral decision and individual responsibility, produced an elaborate discussion and analysis of these topics (see *KADAR*); and it was through both the Mu'tazilī movement, which in its turn was connected with Greek thought and Christian-Hellenic apologetic works, and the conflict with the antedeterminist trend of the orthodox reaction to it (see *KALAM*) that the reception of Greek philosophical ethics was prepared and made possible. On the other hand, the anti-intellectual and ascetic mystical movement of Sūfism (see *TASAWWUF*) produced a somewhat divergent type of Islamic ethics, which was gradually to become more and more influential and eventually almost dominated in the Islamic world. For the Sūfī preachers, poverty,

self-humiliation, and complete surrender of personality became the highest values in life. It may be sufficient here to mention one eminent early Sūfī writer, al-Muḥāsibī (d. 213/837), who had a decisive influence on al-Ghazālī when he made Sūfism a definite part of Islamic ethics in his fundamental *Revivification of the Religious Sciences* (see M. Smith, *An early Mystic of Baghdad*, London 1935, and *JRAS*, 1936, 165).

4. The introduction of Persian moral thought into the Islamic tradition preceded the acquaintance with Greek ethics. Its main representative is Ibn al-Mukaffā' (q.v.), and—apart from *Kalīla wa-Dimna*, a work which deserves to be mentioned in this context—its main content is to be found in the two *adab* works ascribed to him, the *Adab al-Kabīr* (Fr. translation by C. F. Destrie, Brussels 1902, from the Dutch of G. van Vloten; German trans. by O. Rescher, *MSOS*, 1917) and the *Adab al-Saghir* (German trans. by O. Rescher, 1915), whose authenticity has been doubted but not disproved by G. Richter (*Jal.*, 1930, 278) and F. Gabrieli (*RSO*, 1932, 219 ff.). These works (cf. also ARABISCH, *STUTTGART*) are not based on any philosophical principle, but rather remind the reader of Greek rhetorics, giving the rulers, "civil servants" and persons who wish to advance in life advice on how to be successful. The Islamic allusions contained in this literature are at first simple and formal, but the connection of this tradition with religion is steadily emphasized; Islam is regarded accordingly in the character of a state religion, linked to the sovereign power as religion had been linked with political power in the old Persian state (cf. A. Christensen, *L'Iran sous les Sassanides*, Copenhagen 1944, ch. III): "religion and government are sisters". The advice, conveyed in a pleasing and effective style, is based on opportunist considerations and the recognition of force, which the intelligent man (*al-'arif*) will know how to deal with properly. In the course of a century or so, however, this originally foreign *adab* tradition was more or less adopted into Islamic standards, and was finally received into the accepted body of Islamic *adab* in the *U'yūn al-Akhbar* of Ibn Kutayba (d. 276/889-90). This work, which may be called the first comprehensive manual of Islamic ethics, brought together and to a remarkable degree integrated the Qur'ānic, pre-Islamic and Persian contributions, and by excluding the irreconcilable elements of the two latter, practically defined and standardized the component elements of the orthodox morality in its pre-philosophical and pre-Sūfī stage. Related types of literature are the "Mirrors of Princes" (see *MAKIL*) and popular wisdom in apophthegmatic form (see *IKHMA*).

5. Philosophical ethics, derived from the Greeks, was introduced at first by the limited circles who devoted themselves to the study of philosophy. The details of its development amongst the Muslim *falāsifa* are studied in the next section. As is pointed out in §§ 8-10 of that section, philosophical ethics exercised an influence on *adab* literature, and what is of even greater importance, philosophical ethics in the form given to it by Miskawayh was fully accepted by such an influential theologian as al-Ghazālī and in this way was integrated with religious tradition. Miskawayh's doctrine became known also through another channel, viz. the Persian works of authors such as al-Tūsī and al-Dawūdī. On the other hand, the purely Sūfī mystic gained through the great Persian poets an

immense influence in the eastern Islamic world, including Turkey—an influence which was paralleled and reinforced in all countries by the powerful social position occupied by the Sūfī orders and the extension of their lay membership to all classes.

6. During the last century, the strong revision from Sūfism in orthodox Muslim circles has had a parallel effect on Muslim ethical thought, which in reaction from the extreme passivity of the Sūfī ethic has tended to swing towards an activist ethic, rather guardedly expressed by such leaders as Ḥasan al-Dīn in al-Aḥḥād and Muḥammad 'Abduh, and in more outspokenly "Mu'tazilite" terms by others. Outside theological circles, the same trend, reinforced by the influence of western philosophies, together with internal social and political developments, has stimulated more evolutionary types of ethical theory, notably those of the Turkish sociologist Ziyā Gökalp and of the Indian poet Muḥammad Iqbal, all of which, however, are most properly to be regarded as representing transitional phases in modern Muslim thought.

(R. WALTER and H. A. R. GIBB)

#### (II) PHILOSOPHICAL ETHICS.

1. In the classification of the various branches of philosophy, *akhlaq* is considered, together with politics (*al-'ilm al-madani*), see *MAKIL*), and economics (*taḥdīr al-mawāl*) (q.v.), as a part of practical philosophy. Galen's work *Fi 'l-Akhlaq* is described in Hunayn's treatise on the Syriac and Arabic Galen-translations in the following terms: "Galen dealt in it with different *ḥayāt*, their causes, signs and treatment" (ed. Bergsträsser, no. 119; cf. Seneca, *Epist.* xiv, 65). Al-Ghazālī uses almost the same words when he says (*al-Munqidh*, 99) that *akhlaq* as a branch of philosophy consists in "defining the characteristics and moral constitutions of the soul and the method of moderating and controlling them". The same definition still occurs in Ibn Sadr al-Dīn al-Shīrāzī (d. 1036/1626-7), quoted by Ḥajjīdī Khalīfa, s.v. *akhlaq*: "It is the science of virtues and the way how to acquire them, of vices, and the way how to guard against them. Its subject is: the innate dispositions (*akhlaq*), the acquired virtues, and the rational soul as far as it is affected by them". *Akhlaq* as a philosophical doctrine of ethics appealed at first only to the limited circles of persons interested in Greek philosophy. But since its representatives insist that philosophical ethics are not meant to contradict religion but either to supplement or confirm it, these ideas could eventually be integrated with the religious tradition and retain some influence even in later centuries.

2. Greek moral philosophy was conveyed to the Arabs in several different ways which eventually converged. Standard works of the classical days of Greece read in the late philosophical schools, like Plato's *Republic*, *Timaeus*, *Leves*, were known in the original and in commentaries and summaries (cf. *ARABICA*). Aristotle's *Nicomachean Ethics*, divided into eleven books, were known in Ṭahāb b. Hunayn's translation. Books viii-xi of the Arabic text, corresponding to vi-x of the usual division, have been traced in a Moroccan manuscript (cf. A. J. Arberry, in *BSOAS*, 1955, 1 ff.). The same manuscript contains a summary of the *Nicomachean Ethics* by Nicolaus of Damascus (1st century B.C.). Porphyry's commentary (cf. *Fihrist*, and J. Bidez, *Vie de Porphyre*, Gand-Leipzig 1913, 56<sup>a</sup>-58<sup>a</sup>) was translated into Arabic and most probably extensively used by Miskawayh in chapters 3-5 of his *Tahdīb*

*al-Akhlaq* (see § 2 below). The Arabs knew also a late Greek summary of the *Nicomachean Ethics* ("Summary of the Alexandrians"); extracts in MS Tawmūr Paḡba, *akhlaq* 290, no. 167; this work was translated into Latin by Herman the German in 1243 or 1244 (cf. *Aristoteles Latinus*, ii, Cambridge 1955, 1308). Al-Fārābī wrote a commentary on the introduction of the *Nicomachean Ethics* which is referred to by Spanish authors of the 12th century (cf. M. Steinschneider, *Al-Fārābī*, St. Petersburg 1869, 60). The Kugler's Middle Commentary (written in A. D. 1177) is preserved in a Latin translation by the same Herman in 1240 (cf. *Aristoteles Latinus*, ii, 1308) and in a Hebrew translation of 1321 by Samuel b. Judah of Marseilles (M. Steinschneider, *Die hebr. Übersetzungen*, 217).

Among Greek works less known in the Western tradition but widely read in the Arab world are three treatises by Galen, (i) *Ἐπεὶ ἔχουσιν*, *Fi 'l-Akhlaq*, lost in the Greek original and preserved only in Arabic guise, (Arabic Epitome published by F. Kraus in *Bull. of the Fac. of Arts of the Univ. of Egypt*, vi/7, 1939; cf. R. Walzer, in *Classical Quarterly*, 1949, 88 ff.; idem, in *Harvard Theological Review*, 1954, 243 ff.; S. M. Stern, in *Classical Quarterly*, 1956, 13) (*How a man may discover his own vice* (cf. *Corpus Med. Graec.*, v, 4, 11); Hunayn, *Risāla*, no. 118), (ii) *Good men profit by their enemies* (lost in the Greek original; Hunayn, no. 121). Both of these two latter treatises were used by al-Rāzī (see § 5 below), all three by Miskawayh (§ 7 below). A treatise by Themistius is quoted under a wrong name by Miskawayh (see below); another one attributed to him survives in Arabic (ed. L. Cheikh, *Maḥ.*, 1920, 887-9, tr. M. Bouvier, *Arch. de Philosophie*, 1924, 15 ff.). There were, no doubt, some other late Greek books from which middle-platonic Greek thought, only slightly touched by neoplatonic ideas, was handed down to the Arabs. Among other pre-neoplatonic treatises studied by Arabic writers on moral philosophy are the *Pinar* of Cebes ("Kābis the Platonist"), reproduced in Miskawayh's *U'yūn al-Akhbar* (ed. Badawī, 229 ff.; separate editions by Elchman, Leiden 1640 and R. Basset, Algiers 1898); the neopythagorean Bryson's *Ὀλογοισμός*, preserved only in Arabic translation and extensively quoted by Miskawayh (ed. M. Plessner, Heidelberg 1928); the *Golden Verses* ascribed to Pythagoras (see *FUTURAGRAM*) and a pseudo-platonic *Ethiologia* concerning the education of young men, two "pythagorean" documents by which Miskawayh was impressed (cf. F. Rosenthal, in *Orientalia*, 1947, 104 ff., 383 ff.).

3. Al-Kindī's ethical treatise (*Fihrist*, nos. 790-1, 793-6, cf. also F. Rosenthal, *al-Sarakhī*, ii A, 10-2, 16-7) were apparently appreciated by subsequent Islamic writers. His treatise *On freedom from Grief* (ed. H. Ritter, R. Walzer, *Shukū' al-Kindī II*, Rome 1958; M. Pohlenz, in *GGU*, 1958, 104 ff.) was used by Miskawayh (*Tahdīb*, 70 ff.), Ibn Sīnā and others. Another quotation in Miskawayh (61) may derive from al-Kindī's lost work *Fi 'l-Akhlaq* and is also found in al-Ghazālī (*F. Ruhādī*, in *Rasā'id* [Abū Rida], 177-8) and elsewhere in his *Rasā'id*. In the moral philosophy, not unlike the Stoics, Galen and other late Greek philosophers, on the threefold platonic partition of the soul into a rational, spirited and appetitive part or soul or faculty, and on a platonic definition of the four cardinal virtues, wisdom, valour, temperance and justice (cf. *PADR*); these in their turn are each associated with a number of subordinate virtues. This scheme may, though

different in detail, be compared to the Stoic arrangement of the virtues and vices, or, e.g., to the pseudo-Aristotelian *De virtutibus et vitiis* (transl. in the 11th century by Ibn al-Tayyib (Bruck, S. I, 884). The Aristotelian definition of virtue as the mean between two extremes is combined with the platonising view (cf. Porphyry, *Ἀποφάσεις*, ch. xxiii, 2 and I. Goldzahn, *Maḥṣūn al-Nafs*, 20). Although the evidence available in the few extant works of al-Kindī is obviously slight, it seems probable that Miskawayh based himself in the first chapter of *Tahdhīb al-Akhlaq* on al-Kindī's treatment of the virtues and vices. There is on the whole nothing ultra-neoplatonic in al-Kindī's platonising popular philosophy, in which platonic, peripatetic and stoic elements are blended in a way not uncommon in hellenistic and later popular Greek moral treatises.

4. The Christian Kustā b. Lūḳā's treatise *About the causes of the differences which exist between men with regard to their characters, ways of life, desires and considered moral choice* (ed. P. Sbath, in *BIE*, 1947) is based on the Platonic tripartition of the soul and on the whole on ideas to be found in Galen.

5. Al-Kindī's treatise *On Spiritual Medicine* appears to be lost but al-Rāzī's brilliant treatment of the same subject is available in a critical edition of the Arabic text (*Opera Philosophica*, ed. Kraus, 15-96, Eng. tr. by A. J. Arberry, *The spiritual Philosophy of Rhazes*, London 1930). As was to be expected in this Muslim "Platonist", it is written in an uncompromisingly platonic vein, and the Aristotelian elements found in al-Kindī and Miskawayh are missing. It should be studied together with his autobiographical defence of the philosophical way of life (*Opera*, 98-112; French transl. by P. Kraus in *Orientalia*, 1935, 300 ff.; English tr. by Arberry in *Islamic Review*, 1949). Al-Rāzī's version of Greek moral philosophy did not, however, influence the main trend of philosophical ethics in Islam.

6. The treatise *Fi Tahdhīb al-Akhlaq* of the Jacobite philosopher Yahyā b. ʿAdī represents another variant of late Greek thought. There are no specifically Christian ideas in it; Aristotelian influence is, as in al-Rāzī, non-existent. It is based on the platonic tripartition of the soul, but the 21 virtues and corresponding vices are neither specifically referred to the three souls nor subordinated to the four cardinal virtues and their contraries (which are listed among them). This scheme probably depends ultimately on some lost pre-neoplatonic Greek original. His concluding chapter on the perfect man who bases his life on the requirements of his intellectual soul and has trained himself to love every human being combines stoic and neo-platonic language, and is not very different from the thought of al-Fārābī (q.v.).

7. The most influential work on philosophical ethics is *Tahdhīb al-Akhlaq* of Miskawayh (fl. 421/1030) (analysis of its contents in de Boer, 507, and Donaldson, 127-133; Eng. tr. by A. J. M. Craig in course of publication). Miskawayh firmly rejects the pre-Islamic Arabic poets as educators, but is not unsympathetic to the Persian tradition of ethics. In many striking passages he insists on the agreement of Greek moral philosophy with the basic tenets of Islam. He tries, however, to reconcile revealed and philosophical truth on the basis of rational thought, and for this reason his views are not acceptable to a primarily religious thinker, except with a certain shift of emphasis. The few Greek writers mentioned by name and quoted, sometimes at considerable

length, are all of the later centuries of the Roman Empire: Galen (see § 2 above), Bryson (on the right upbringing of children; *ibid.*), Porphyry as a commentator on Aristotle's *Ethics*, and Themistius, wrongly quoted under the name of Socrates (cf. F. Rosenthal, in *IC*, 1940, 403). References to Plato and Aristotle occur within the context of these late works. Although al-Kindī is only twice mentioned by name, Miskawayh is probably in al-Kindī's debt to a much greater extent (see § 3 above). In chapters 3-5 he follows rather closely a neo-platonic commentator on certain sections of the *Nicomachean Ethics*, which recalls the known teaching of ethics in the later Peripatos and the extant commentaries on the *Ethics* without being identical with any of them. But at the same time he stresses the platonic elements to be found in the *Ethics* to make out Aristotle to be a more decided platonicist than he was. Miskawayh's own contribution to this inherited interpretation, if any, was (apart from demonstrating the compatibility of Greek philosophy with Islam) to emphasise the neo-platonic aspects of this moral philosophy still further (cf. R. Walzer, *Some aspects of Miskawayh's Tahdhīb al-Akhlaq*, *Mélanges Latins de la Vierge*, Rome 1956).

8. The influence of philosophical ethics on *adab* literature has been noted by de Boer, who singles out as an instructive example *Adab al-Dunyā wa ʿDīn* by al-Mawardi (d. 450/1038). In this work the presentation of the traditional ethical materials is refreshed and "modernized" by the inclusion of materials from the later centuries, including both philosophical and ascetic ideas; these are combined with the older materials somewhat unsystematically, but in a direction not dissimilar from that taken later by al-Ghazālī. (German transl. by O. Rescher, 1932-3.)

9. A much more far-reaching and fundamental synthesis was carried through by al-Ghazālī (d. 505/1111), who on the one hand discarded the merely formal and superficial elements of the *adab* tradition, and on the other firmly based his exposition on the penetrating spiritual analysis developed by the ʿāḫī teachers (see sect. I, § 3 above). At the same time, he evidently regarded Miskawayh's treatise as "reasonable in itself and supported by proof", and agreed that its contents "did not contradict the Book and the Sunna". Hence the philosophical ideas of Greek origin which Miskawayh discussed and explains became part of the generally accepted educational theory to be found in the *Ḥiyāʾ ʿUlūm al-Dīn*, in which the section on self-discipline (and book of the 3rd quarter) is based on Miskawayh's *Tahdhīb al-Akhlaq*. Miskawayh's influence is also unmistakably traceable in other works of al-Ghazālī, and his ethical theory was in this way eventually integrated with the religious tradition. (Cf. A. J. Wensinck, *La Pensée de Ghazālī*, Paris 1946, esp. chap. II; M. Plessner, op. cit., II, Ritzer, *Al Ghazālī, Das Elusive der Glückseligkeit*, Jena 1925, and see al-Ghazālī.)

9. How successful the Ghazālīan synthesis was in influencing later ethical literature and thought is a question which still awaits investigation. The literary evidence suggests *prima facie* that its influence, if anything, was indirect, and that the diverse trends of ethical thought continued to exist side by side. The influence of Miskawayh's work was perpetuated chiefly in Persian literature; the Shīʿite Avicennian, Naṣr al-Dīn al-Ṭūsī, follows Miskawayh closely, as he himself avows, in the section on ethics of his *Aḥḥādāt Nāṣiri* (completed 633/1233) (cf. Plessner, loc. cit.). Two centuries

later, al-Dawānī (d. 907/1501), the author of the *Aḥḥādāt Dīnīyāt* (Eng. trans., with valuable notes, by W. E. Thompson, *Practical Philosophy of the Muhammadan People*, London 1899; short analysis by Donaldson, 184), selected his basic material from Ṭūsī's work, but he also refers to al-Ghazālī as an additional Islamic authority. (For Persian *akhlaq* literature cf. H. Ethé, in *Gr. I. Ph.*, ii, 346 ff.)

*Bibliography* to (i) and (ii): No comprehensive history of Islamic ethics has yet been written. D. M. Donaldson, *Studies in Muslim Ethics*, London 1951, is of unequal value. There is a brief but suggestive survey by T. J. de Boer in Hastings' *Encyclopaedia of Religion and Ethics*, vol. V, 1912, s.v. Ethics and Morality (Moslem). Scattered materials are to be found in a number of works; in addition to those mentioned in the article, different aspects are dealt with in the following: G. Richter, *Studien zur Geschichte des islamischen arabischen Fiktionenspiels*, Leipzig 1932; D. B. Macdonald, *The Religious Attitude and Life in Islam*, Chicago 1909; C. E. von Grunebaum, *Medieval Islam*, Chicago 1946, etc.; L. Gardet, *La Cité musulmane*, Paris 1954. (R. Walzer).

**AKHLĀT** or **KHLĀT**, town and fortress at the N.W. corner of Lake Wān.

(i) Pre-Mongol; (ii) Mongol and Ottoman periods.

In Armenian the town is called *Khlāt*, the name being possibly connected with the ancient inhabitants of the country, the Urartian *Khlads*. It lies half-way between Sipan Dağ and Nimrud Dağ on the route taken by invasions from Mesopotamia into eastern Armenia. Al-Balādhūri, 200, reckons it to Armenia III, which in the Arab view included Kālikāis (Erzerum), Arğīsh and Bahmays (i.e. either Apahonik, where Manāzger lies, or Bzunikh, the district of Akhlāt).

Under ʿUmar, ʿIyād b. Ghann made a treaty with the Akhlātians (al-Balādhūri, 176, 199). For four centuries Akhlāt was ruled in turn by Arab governors, Armenian autonomous princes, and Arab local amirs of the Kays tribe (Constantine Porphyrogenitus, ch. 41, ed. and tr. Moravcsik-Jenkins, Budapest 1949, 198-205; cf. J. Markwart, *Sudarmenien*, 501-5, and M. Canard, *Hamdānides*, I, 471-8). Among the episodes of this period may be cited: in 316/918 the attack on Akhlāt by the domestic John Curcuas (see Ibn al-Aḥḥār, viii, 146); in 328/939 the arrival of Sayf al-Dawla (Ṭaḥḥāḥ Maṣṣāḥīrīn, see M. Canard, *Sayf al-Dawla, Aghlabi-Paris*, 1934, 268; *idem*, *Hamdānides*, I, 478-89); in 335/964 the occupation of Akhlāt by Naḍīā (Miskawayh, II, 201 etc.).

Towards 375/983 Akhlāt became part of the dominions of the Kurd Bādh (Asolk of Taron, iii, ch. 14) and was associated with the Marwānīd (q.v.) princes until the battle of Manāzger (463/1071), after which Alp Arslan himself is said to have taken it (Ṭaḥḥāḥ Maṣṣāḥīrīn, fol. 145v). In 493/1100 it was occupied by the Turkish amir Sukmān al-Kuṭbī and for over a century remained the capital of the dynasty known as Shāh Arman (q.v.). In 604/1207 it was captured by the Ayyūbīd al-Awḥad, son of al-ʿĀdil, and on his death in 609/1212 passed to his brother al-Aḥḥār. In the interval, the Georgians twice reached Akhlāt (605/1208 and 607/1210). In 627/1230 it was stormed after a six months' siege by the Kh'ārim-shāh Djalāl al-Dīn Mangubermi, who was, however, shortly afterwards defeated by al-Aḥḥār in alliance with the Rūm Salḡūkid ʿAlāʾ al-Dīn Kaykubād I at Arzindān. In 633/1233

Kaykubād in turn seized Akhlāt, and held it in spite of a coalition of the Ayyūbīd princes against him.

*Bibliography*: A full bibl. of Akhlāt is given in A. Gabriel, *Voyages archéologiques dans la Turquie Orientale*, Paris 1940, I, 241-51 (with plates, II, 85-90); for the inscriptions, Abdurrahman Serif, *Ahlāt Kütahleri*, İstanbul 1932 (corrections and additions by J. Sauvaget, in Gabriel, *op. cit.*, 346-50, and *RCEA*, nos. 3886-2, 4440, 4682, 4696, 4782-3, 4807-2, 4996, 5038, 5116-9. E. Honigsmann, *Östergate d. Byzanz*, *Reisch*, Brüssel 1935, passim; V. Minorsky, *Studies in Caucasian History*, London 1953, index; Le Strange, 183; H. F. B. Lynch, *Armenia*, London 1901, II, 280-97; Bachmann, *Kirchen und Moscheen in Armenien u. Kurdistan*, Leipzig 1913, 58. (V. MINORSKY.) (ii) After the battle of Kōse Dağ (647/1243) Akhlāt was captured by the Mongols (642/1244); see Tomaszek, in *SIAM*, 131, no. IV, 31 ff.; Abu ʿl-Fidaʾ (Beiske-Adler), IV, 4721, who, however, confirmed the native princes in their possessions (confirmation of a Georgian princess in her possession in Akhlāt: Cyriac of Gandja, 440, cf. B. Spuler, *Die Mongolen in Iran*, 330, n. 1). The definitive occupation by the Mongols of Akhlāt and the neighbouring lands of Upper Mesopotamia and the Armenian highlands followed only after their capture of Baghdād (656/1258), in conjunction with Hulāgū's advance into Syria in 658/1256-66 (Spuler, op. cit., 55). Thereafter Akhlāt belonged to the kingdom of the Ilkhāns and their successor states (Djalālīrīds, Aḥ Koyunlu), and was also a mint-city of the Ilkhāns. In 644/1246 the city was largely destroyed by a severe earthquake.

In one version of the legend of the foundation of the Ottoman empire Akhlāt is mentioned as the starting-point of the Oghuz tribe to which Ertogrul, the alleged father of ʿOthmān, belonged; he is said to have moved westwards from Akhlāt under pressure from the Mongols. Neshrī, however, denies the identity of this Ertogrul with ʿOthmān's father (Ṭaḥḥāḥ, ed. Taschner, 21-2; the statement is missing in the Ankara ed.). According to Ewliya Ceḥelī (iv, 140) tombs of the ancestors of the Ottomans were shown in Akhlāt. The city appears to have come into Ottoman possession only under Selīm I; in 955/1548, however, it was captured by Shāh Tahmasp and levelled to the ground. Sulaymān I, under whom it was finally incorporated in the Ottoman empire, built on the lake shore a citadel (completed in 963/1555 according to Ewliya Ceḥelī), in the vicinity of which a smaller new town arose. During the Ottoman period, Akhlāt remained under the rule of local Kurdish chieftains, and was brought under direct Ottoman administration only under Maḥmūd II in 1847. At the end of the 19th century, according to Cusinet, the *hadd* of Akhlāt had 23,659 inhabitants (16,635 Muslims, 6609 Gregorian Armenians, 210 Orthodox Greeks, 250 Yāzides). It is now the capital of a *hadd* (ilāḥ) in the wilāyet (il) of Bitlis in the Turkish Republic; population of the town (1945), 3,124, of the *hadd*, 13,702.

The mediaeval town (Eski Akhlāt), on the slope of the mountain, is in ruins and uninhabited; the new town, with a large Ottoman *kale* (on the main gate an inscription of Selīm II, 1568) lies to the E. of it on the lake shore. The latter contains two mosques of the 16th century (Iskender Paṣṣā Djalāmī), with inscriptions from 972/1564 and minaret from 978/1570, and Kādī Mahmūd Djalāmī, dating from 1006/

1597). Between the medieval and the modern towns there is a famous cemetery with richly ornamented tombstones from the 13th-16th centuries (among them a "ram" stone from 1401) and many funeral buildings (*turbe* or *kubbeds*) from the Seljuks, Mongols and Turkmen periods. The most noteworthy among them are: Ulu Künbed (undated); Şahîdî Ağa Künbedi (1273; now disappeared); İki Turbe (cf. Bughayir Ağa, d. 1281, and his son İsmail Ağa, d. 1279); Bayındır Medjid (182/183) and Turbe (189/189-2); of special interest, one built by Baba Dîrî (1317); Şahîdî Nâdim al-Dîn Turbesi (1222); Hasan Paşahîş Turbesi (1275); and Erzen Künbedî Turbesi (1306-7).

**Bibliography:** In addition to the works mentioned under İi, Hâdîdî Khallîf, *İzâh-ı nâmâ*, 413 f.; Ewliyâ Celbi, IV, 134-42; Sâmi, *Kâmil al-Âsâr*, I, 464; Râşid, *Nom. géogr. anat.*, II, 376; V. Culnet, *La Turquie d'Asie*, II, 364-6. (F. TÄSCHNER)

**AKHMIM**, town in Upper Egypt on the east bank of the Nile about 312 m. from Cairo. Its name reflects the Coptic name, *Shimo*, the Greek *Chemmis*, and the place is called Panopolis in Byzantine texts. It was the chief town of a pagarchy (*kura*), and later, from the time of the reformation of the Filialist caliph al-Mustansir, of a province. In the 12th/18th century the town lost its position of chief city and was incorporated in the province of Gîrgî. In the middle ages, Akhmim was surrounded by rich areas of cultivation, with plantations of date palms and fields of sugar cane. Al-Yâkûbî mentions it as a centre for the manufacture of leather mats. There was a toll-house there, and the strictness of the officials around the indulgence of Ibn Dîjarî. The population to-day still includes a considerable number of Christians. The town was the birthplace, at the end of the 2nd/8th century, of the mystic Dîwî 'I-Nûn.

All the Arab writers have enthused over the ancient temple of Akhmim, (of which no trace now remains), which was particularly famed owing to its traditional association with Hermes Trismegistus. Most of the accounts record the usual legends which have grown up around relics of Egypt under the Pharaohs. The delightful description given by Ibn Dîjarî, however, merits special attention. He displays a keen power of observation, intelligently used. The temple was destroyed in the course of the 8th/14th century, and the materials used to build a *wadûd*. But it appears that some of the materials had previously been pillored; historians of Mecca mention the erection in the *haram* of columns originating from Akhmim.

The town has no history. It was sacked at the beginning of the 12th/18th century during the struggle between the Manîkî chiefs, and the governor, Hasan Akhmîdî, was put to death; the latter had restored, in 1124-10/1702-4, the principal mosque, an act which is commemorated by inscriptions.

**Bibliography:** Ya'kûbî, 332 (trans. Wiet, 187); Makhlûf, 201; Idrîsî (Dory and de Goeje), 46-7; Ibn Dîjarî 60 ff. (trans. Gaudeloy-Demoulin, 66-70; trans. G. Brault, 23-25); Ibn Battûta, I, 103 ff.; Yâkût, I, 186; Makhlûf, *Khûlîd* (Wiet), IV, 134-8; Maspero and Wiet, *Matériaux*, MIFAO, XXXV, 6-7; Djabarti, I, 47, 98; Wiet, *L'Égypte de Méridien*, 205-10. (G. WIET)

**AKHMINKH** [see IDNÎS].

**AL-AKHRRAS**, 'Abd al-Ghaffâr b. 'Abd al-Wâhid b. Wâhid, Arab poet of 'Irâk, born at al-

Mawâsil about 1220/1805, died at al-Basra 1290/1874. After settling in Baghdad, he established a connection with the *waḥid* Dâwūd Pâghâ. The latter, at his request, sent him to India for treatment to correct the defective power of speech which had gained him his sobriquet of al-Akhras ("the mute"), but he refused to undergo the operation. The panegyrics he addressed to Dâwūd Pâghâ and 'Abd al-Bakî, and also to various men of note at Baghdad and al-Basra, appear to have secured him his livelihood, but the fame which he enjoys in 'Irâk rests on the remainder of his work, which embraces every category of classical poetry: *ghazal*, elegy, threnody, satire, descriptive verse, personal glorification. He even composed some *muwashshahât* and wrote some notable *basīd* songs which led to his being dubbed the "Abū Nuwâs of the 10th century". His *diwân*, although incomplete, was compiled through the efforts of the nephew of 'Abd al-Bakî, Ahmad 'Izzat Pâghâ al-Fârûkî, and published in Constantinople in 1304/1886, under the title: *al-Firds al-Anjar fi Sh'ir al-Akhras*.

M. al-Basir, *Nahd al-'Irâk al-Adabiyah fi 'l-Karn al-Tâsi* 'Aghar, Baghdad 1935/1946, 114-29; H. Péris, *La litt. arabe de l'Islam par les textes*, 28; Brockelmann, S II, 792 and references quoted. (Ch. PELLAT)

**AKHSIÂN** [see SÂLÂT].

**AKHSIKATH** or **AKHSIKATH** (Sogdian, "city of the prince"), in the 4th/10th century capital of Farghâna and residence of the *amir* and his lieutenants (*ummad*), on the north bank of the Sir Daryâ (Jaxartes), near the mouth of the Kasânay, at the foot of a mountain. Ibn Khurrâdhbih, 208, calls the place Madinat Farghâna, "the city of Farghâna"; according to Ibn Hawkal (Kramers), 512, it was a large town (1 sq. mile) with many canals and a citadel under the Friday Mosque, the governor's palace, and the prison. The city was then enclosed by a wall with five gates, outside of which stretched extensive suburbs and gardens. There was a market-place both in the city and the suburb, and there were rich pastures in the vicinity (al-Istakhfî, 333; al-Makhlûf, 271; al-Karwînî, II, 156; *Hadûd al-Islâm*, 72, 116).

The town was apparently destroyed during the wars of the Kh'ânshâh Muhammad II, at the beginning of the 13th century, and the succeeding Mongol invasions (Sharaf al-Dîn 'Alî Yazdî, *Zafar-nâmâ*, Calcutta 1885-8, I, 441, II, 633; here also the form Akhsikant). The capital was transferred to Andijân, but for some time Akhsî, as the town was called at the time of Bâbur (see transl. of Beveridge, 1907), still remained the second town of Farghâna. As late as the 11th/17th century Namangân, the present capital, was considered only one of Akhsî's less important sisters (*jawâb*); cf. *Bahr al-'Asdar*, in H. Ethé, *India Office Cat.*, no. 575, fol. 108v. The ruins, near the villages of Akhsî and Shahand (700 steps from west to east, 600 steps from north to south, about 150 feet above the level of the Sir Daryâ), with the old citadel, Idî Akhsî, were explored in 1885 by N. I. Veselovskii (cf. *Sredneasiatskii Vvedeniye*, Tashkent, July 1896).

**Bibliography:** Schwarz, *Iran*, II, 269 (incidental reference, Farghâna is not dealt with in the book); Le Strange, 477 f.; 480; K. Müller, *Mappae arabicae*, Stuttgart 1926-31, IV, 78-82, 808-918. (B. SPULER)

**AL-AKHITAL**, "the loquacious", the sobriquet of the Arab poet GHAYTH b. GHAYTH b. AL-SALT, who died probably before 927/10. He belonged to the great tribe of the Taghlib (cf. of northern Syria, which remained entirely Christian, of the Monophysite persuasion. By his mother Layla he was connected to another Christian tribe, that of Iyâd. He was born either at Hira (see *al-Ghâni*, VII, 170), or near Rusafa (Sergiopolis); his date of birth is uncertain, but may have been about 26/40. He remained a Christian all his life, and was unmoved by the efforts of prominent members of the Umayyad dynasty to convert him to Islam. Although a Monophysite, he maintained good relations with the Melkite family of the Sargîdî. In his poetry, certain features prove his zeal for his faith and even indicate a certain ostentation in asserting it (see *Diwân*, *passim*). His moral standards, however, do not seem to have differed markedly from those of the society in which he lived. He repudiated his wife and married a divorced woman. He seems to have been a heavy drinker, passing his time in taverns in the company of singing girls of easy virtue.

All his life al-Akhital followed the fortunes of the reigning dynasty. During the reign of Mu'awiyah, he became embroiled in political affairs. He was the close companion of Yazîd I, whom he lauded in his panegyrics, and of others of the Umayyad line Zayd and al-Hajjâj. Under 'Abd al-Malik, he actually became official poet to the Caliph (see *al-Ghâni*, XII, 172-6). He remained in the service of the successors of 'Abd al-Malik, and in his poetry attacked all opponents of the dynasty (see *Diwân*, 58, 73, 93, 204, 277 etc.). Lammens has clearly shown the historical interest of such compositions.

The poet's whole career was dominated by verbal warfare with his contemporary, the poet Dîjarî. In his diatribes he was supported by the poet al-Farazdak who, although a Taminite like Dîjarî, was in antagonism with his fellow-tribesman. It is almost impossible to dissociate here the accounts of these three men. It is clear that in this sphere al-Akhital and Dîjarî perpetuated the pre-Islamic tradition and simply expressed the sentiments of their particular group. In this respect, the poems of al-Akhital show how the old bedouin themes break through the religious veneer.

Under Walîd I, it appears that al-Akhital was not held in such high favour (see *al-Ghâni*, VII, 179 ff.). He died, probably shortly before the end of Walîd's reign, and left no offspring.

The poems of al-Akhital have reached us in a recension of al-Sukkarî, compiled with the aid of material collected by Ibn al-A'râbi (see Brockelmann, S I, 94; and *Fikhrî*, 78, 158). This recension is available in provisional editions; Salhânî, *Diwân al-Akhital*, Beirut 1892-2, is in part completed by the same, *Diwân al-Akhital*, Beirut 1905, (photographic reproduction of a Baghdad MS.) and by Griffin, *al-Akhital*, Beirut 1906 (reproduction of a Yemen MS). In order to produce a counterpart to a compilation containing the epigrammatic poems between Dîjarî and al-Farazdak, the poet Abû Tamâm composed, in the 3rd/9th century, a *Nahdî Dîjarî wa 'l-Akhital*, which presents the verbal content between the two rivals. A MS of this work exists at Istanbul.

The works of al-Akhital, like those of Dîjarî and al-Farazdak, have their origin in contemporary events, and reflect the feuds and political controversies of the time. The bedouin tradition is always apparent in them. The *Diwân* comprises panegyrics in

*hâjida* form and also a large number of epigrammatic poems. The poetical forms, the stereotyped terminology and the language resemble, with but slight variations, those of the other contemporary poets. It is highly probable (as Baghshîr thought) that the vogue which al-Akhital enjoyed during his lifetime was the result of an infatuation on the part of the Rab'ite Arabs, who rejoiced at finding in him a champion worthy to stand against those of the Bakrite and Taminite Arabs (see al-Marzubânî, *al-Muwashshah*, 138). Later, however, when the literary centres of 'Irâk evolved their poetic ideal, it became the fashion to draw comparisons between the works of al-Akhital, al-Farazdak and Dîjarî. People succumbed to this taste for "assessments of comparative merit" so engrained in mediaeval oriental scholars, and this type of critical comparison became a regular subject for debate, which al-Hamadîhî parodied in his *Makhlûf* at the end of the 4th/10th century. It is possible that as early as the end of the 2nd/8th century or the beginning of the 3rd/9th the grammarians and philologists of Basra and Kûfa had indicated their preference for al-Akhital (see the judgments of Abû 'Ubayda, al-Asma', and Hammâd "the Reciter" collated in *al-Ghâni*, VIII, 284 ff., 297, 303). Al-Akhital does not seem to have kept his place in Arabic literature in the eyes of later generations (cf. for example the rather cautious judgement of Tâhî Husayn in *Hadîth al-Araba*, II, 77 ff.) Up to the present time al-Akhital has, in the West, been the subject only of biographical studies.

(R. BLACHÈRE)

**AKHTARÎ** is the *takhallus* of Muḥib al-Dîn Muḥtaf b. Shams al-Dîn al-Karabîshîrî (d. 968/1561). He wrote an Arabic-Turkish Dictionary (952-1545), known by the name of *Akhṭarî Kabir* (there are also concise recensions), and printed at Constantinople (1242, 1256, 1292). Cf. Flügel, *Die arab. pers. u. türk. Hss. zu Wien*, I, 119-120.

**AKHUND** (Akhund, Akhund), title given to scholars. In Eastern Turkistan it is used after the name as "Mister", in Western Turkistan it is given to "ulama" of high rank, in the district of Kâzin to the chief *imâm* of a place. In Persian it is current since Timurid times in the sense of "schoolmaster, tutor". The word probably comes from Persian *khând* (*kh'and*, *khând*), from *khândān* [q.v.].

**AKHUND-ZĀDA**, Mirzâ Fatḥ 'Alî (1812-78) was the first writer of original plays in a Turkish idiom. The son of a trader who hailed from Persian Āgharbaydîn, he was born in 1812 (according to Cafersûli) or 1813 (according to the *Soviet Encyclopaedia*, 1950) in Shîrî, the present-day Nûshîr. Thanks to the assistance of a relative he was able to avail himself of a good literary and philosophical education, which brought him into closer touch with liberal ideas than the actual calling which he intended to follow, that of an

Islamic theologian. After instruction from a divine in Gandja (Karabagh) Akhund-zada finished his training at the newly-opened Russian intermediate school for Muslims at Shkhi. It is possible that Akhund-zada was in his early days brought into touch with modern trends in Islam owing to contacts with the reformers Djamāl al-Dīn Afghānī and Makhūm Khān. Influence of this nature, however, as reported by Kōberli on the basis of comments of members of Akhund-zada's family, can scarcely be proved. In his youth Akhund-zada wrote in the style of Persian poetry, one of his works being an elegy on Fushki's death.

He received a stimulus to activity as a dramatist from the advancement of the theatre in Tiflis by the military governor, Prince Worontsov (1844-48), in whose government chancellery he was employed as oriental interpreter. Between 1850 and 1857 Akhund-zada wrote six comedies and a historical narrative in Aḡharī Turkish, the titles being as under: (1) *Hikāyet-i Mollā İbrahim Khālī-i Kīmī-yāgar* ("Story of M. I. Kh. the alchemist"), 1850; (2) *Hikāyet-i Moustair Jourdan Hehtim Nabātāt ve-Mostafā Shāh Dādāğeri-Meghar* ("Story of M. Jourdan and Mostafā Shāh, the well-known magician"), 1850; (3) *Sergizishāh Wezīr-i Khān-i Serāh* ("Adventures of the Vizier of the Khān of S."), 1850; (4) *Hikāyet-i Khēri-i Gudar-hasan* ("Story of the bear that caught the robber"), 1852; (5) *Sergizishāh Merd-i Khānī* ("Adventures of the miser"), 1852-53; (6) *Hikāyet-i Wukala'-ye Murād'sa* ("Story of the attorneys in the lawsuit"), 1855; and the historical-satirical narrative, *Alāmdād Kuvchek* ("The betrayed stars"), 1857. In the plays and in the narrative the author gave play to his progressive ideas in opposition to feudalism, the practice of highway robbery, the prevalent corruption of justice and the superstition then rife in the Caucasus. Now and again he preaches loyalty to the Russian authorities in order to facilitate the transition of the Transcaucasian Muslims (the term "Aḡharī Turks" was not yet in use in the 19th century) to modern civilization.

Several of the plays were published in Russian translation in the official Government journal *Kavkaz*, and performed in Russian at Tiflis and St. Petersburg. The first performances in the original language were given by pupils of Aḡharbaydjan state schools at the end of the 1870's. A complete Aḡharī Turkish edition of the plays and the narrative appeared in Tiflis in 1859; a second was brought out in 1918 by the Ministry of Culture of the A.S.S.R. to mark the 125th anniversary of the writer. (In the 1920's, frequent separate editions for school use had already appeared.) The plays were translated into Persian by Muhammad Dīq'ar Munghī; no. 1 was translated, into French by Barbier de Meynard, *JA*, 1886; no. 2 into German (after the Persian) by A. Wahlund, Vienna 1889, and into French (after the Turkish original) by L. Bouvat, Paris 1906; no. 3 into English (after the Persian) by W. H. O. Haggard and G. le Strange, *The Vase of Lankurin*; no. 4 into French by Barbier de Meynard, in *Recueil de textes et de traductions*, Paris 1889; no. 5 into French by L. Bouvat, *JA*, 1904; no. 6 into French (after the Persian) by Allières, in *Deux comédies turques*, Paris 1888; the narrative was edited and translated by L. Bouvat, *JA*, 1903.

Besides his activity as a dramatist, which earned him the name of the "Caucasian Gogol" or the "oriental Molière", Akhund-zada wrote treatises on political science against absolutism and theocracy,

and also two memoranda on an alphabetical system of his own invention, designed to render the Islamic tongues, especially the Turkish idioms, more tractable and thus more capable of progress.

**AKHİR** (see AMRĀKĪR).

**'AKIDA** (A.), creed; but sometimes also doctrine, dogma or article of faith; and hence 'akā'id (pl.), articles of faith, is also used for "creed".

1. The Development and Use of the Form. The documents to which the terms 'akida or 'akā'id are applied vary in length, and the longer ones cannot be sharply divided from the comprehensive theological treatises (e.g. al-'Akida al-Nidmiyya by al-Diwayni). The terms, however, may usefully be taken to signify compositions where the chief interest is in the formulation of doctrine or dogma, and not in intellectual discussion or argument about it. The earliest and simplest creed is the *ghāhida* or confession of faith [q.v.], and this alone appears to be used liturgically. Though the term 'akida is usually not applied to the *ghāhida*, there is a sense in which most of the later creeds are expansions of it. Sectarian discussions, however, also led to the development of doctrine, and an important source of the later creeds is the succinct formula defining the position of an individual, school or sect on some disputed point. The *Fikr Akbar* I attributed to Abū Hanifa is a collection of such formulae, since it does not mention belief in God and in Muhammad's apostleship, but only the attitude of the Hanafī school on matters on which they rejected views of the Khawāridj, Shī'a and Dīhmiyya. The later creeds are usually statements of the doctrinal position of the various theological schools, orthodox and heretical, and are often the subject of many commentaries and glosses. Sometimes an 'akida is intended as a catchism to be learnt by children. Creeds are often built round either the *ghāhida* (as al-*ghazālī*'s) or the tradition, which elaborates a Kur'ānic formula, that faith is faith in God, His angels, His books, His prophets, etc. (as Birgwi's). Sometimes they are included in legal treatises, as introductory statements of what it is obligatory for a Muslim to believe. The development of the literary form and of its contents has been studied by Wessneck (see *Bibl.*).

2. The Development of Dogma. While the statement of the faith, it seems likely, was constantly being more accurately formulated during Muhammad's lifetime, the development of dogma is generally regarded as beginning with the caliphate of 'Alī and the appearance of the Khawāridj and Shī'a as distinct religio-political parties, the one making justice according to the Scripture the supreme principle, while the other looked for a leader from the household of Muhammad. For at least the first two centuries of Islam religion and politics were

inextricably mingled, but the topic has not been fully investigated. The exclusiveness of the Khawāridj was opposed by the inclusiveness of the Mu'tazila, who refused to treat Muslims who had committed grave sins as unbelievers (and could therefore remain loyal to caliphs of whom they disapproved). As these sects had many subdivisions with differing views, there was a great variety of doctrine by the middle of the 2nd/8th century. In the second half of that century elaborate intellectual arguments about doctrine appeared, inspired partly by Greek and Christian thought. This may be regarded as the beginning of *kalām* or theology [q.v.]. It influenced the formulation of dogma to the extent that some philosophical terms were introduced into the theologians' creeds, e.g. when they said that God is neither substance nor accident (*jawhar*, 'arad'), or when al-Sanūfī prefaces his creed by distinguishing between the necessary, the impossible and the possible. The opposition to this intellectualizing tendency, which probably always existed, found its chief exponent in Ibn Taymiyya. The statements of their position by Shī'is often contain, besides their specifically mystical teaching, a section dealing with their attitude on matters of dogma.

3. The main Dogmas of Islam. No creedal statement has been accepted even by all Sufi Muslims as the standard account of Islamic dogma. The following brief account has been compiled from various creeds (chiefly those of al-Baḡdādī, al-*ghazālī* and Naḡm al-Dīn al-Nasafī), though not in their precise words. Short comments have been added. For fuller details see the articles referred to below.

(a) God [see *ALLĀH*] is one; there is no god except Him; He has no partner nor wife; He neither begets nor is begotten.—This article of faith belongs to Muhammad's Meccan period, though it was given no emphasis in the earliest passages of the Kur'ān. It soon became necessary, however, to insist that Muhammad's doctrine was incompatible with the vague monotheism apparently current in Mecca, which, while acknowledging God as supreme, tolerated lesser deities. Hence in the later Meccan *sūrah*s strict monotheism was vigorously proclaimed, and *shirk* [q.v.], the giving of partners to God, i.e. polytheism, became a serious sin. When the Muslims came into closer contact with Christians, they regarded the current interpretations of the doctrine of the Trinity as an infringement of this article of faith. This is the point chosen for emphasis in the first clause of the *ghāhida*.

(b) God exists; His existence is rationally proved from the originated character of the world.—When the Muslims had to defend their religion against materialists and other unbelievers, some of them offered rational proofs of the existence of God. These were given at length in the theological treatises, and came to influence the creedal statements (cf. al-Baḡdādī, Naḡm al-Dīn al-Nasafī). Some schools (cf. al-Sanūfī) treated existence (*wuḍūd*) as one of God's attributes. This implied a distinction between essence and existence which was opposed by the early Ash'ariyya and Ibn Taymiyya.

(c) God is eternal; His existence has neither beginning nor end.—This calls for no comment except on the difficulty of translation. Arabic has no single word for "eternal". *Kādim* (properly "old" or "ancient" and *azālī* mean "being from eternity" or "having no beginning", while *hāḡim* and *abādī* mean "being to eternity" or "having no end" (cf. ARAB, *ETERNAL*). Consequently the renderings in European languages

sometimes puzzle the uninitiated, e.g. "priority" and "continuance" for the hypostatized attributes *hidam* and *hādā*. Perhaps "pre-eternity" and "post-eternity" might be suggested.

(d) God is different from created things. He does not resemble any of them, and none of them resembles Him. He is not a body nor a substance nor the accident of a substance. He is not bounded nor limited in any way; He does not have a position in space; He may not be said to be in any direction. He sits on the throne (*'arsh*), but only in the sense in which He Himself intended. He is above the throne and the heavens, but at the same time is "nearer to man than his jugular vein" (Kur'ān, I, 16/15). He is not subject to movement or change or suffering.—The otherness (*muhābala*) of God is presupposed in Islamic thinking from the Kur'ān onward, but only gradually became an explicit article of faith; al-Sanūfī makes *muhābala* one of the negative attributes of God. At an earlier period the main body of Muslims came to regard the Muḡhabbiha (those who made God resemble man) as unorthodox (cf. *raṣā'id*). This was chiefly with regard to the interpretation of the anthropomorphic expressions in the Kur'ān, such as God's sitting on the throne and having hands and a face. At the other extreme from the Muḡhabbiha were those, like the Mu'tazila, who interpreted the terms metaphorically. The central position was that of those who said the terms were to be taken neither literally nor metaphorically but *bi-lā hayf* ("without how"), i.e. without specifying their manner or modality, or, as it was sometimes expressed, "in the sense in which God intended them" when He used them in the Kur'ān. It was emphasized that God was not corporeal and not material, and those who held that view were sometimes called Muḡjassima. From the 5th/11th century onwards the followers of al-Ash'ari and other orthodox theologians, but not the Hanābila, largely abandoned *bi-lā hayf* and accepted metaphorical interpretations of anthropomorphic terms.

(e) God will be seen by the faithful in the world to come.—This article occasioned great difficulty because of God's incorporeality. The Mu'tazila and others denied the possibility of any vision of God. Dirār suggested that a sixth sense would be created. Eventually, however, it was generally agreed to accept the doctrine *bi-lā hayf*, and to avoid any inferences from it which involved corporeality.

(f) God is eternally powerful (or omnipotent), knowing (or omniscient), living, willing, hearing, seeing, speaking. He is so by the attributes of power, knowledge, life, will, hearing, sight and speech. These attributes are eternal; they are not God, yet not other than God. His power extends to everything, and no inadequacy or weakness characterizes Him. He knows everything, even what is concealed and secret, even the creeping of a black ant on a rugged rock on a pitch-black night.—These seven attributes (*sifāt* [q.v.]) received special attention from the theologians from the 3rd/9th century on. The discussion probably arose out of the question whether the Kur'ān was created or uncreated (see below). If the Kur'ān was uncreated, it was an eternal entity existing in relative independence of God's essence, even though it was His speech. For the Dīhmiyya and Mu'tazila this view was unsatisfactory, and they asserted that God does not possess attributes of power, knowledge, speech, etc., which are distinct from His essence. In their view it is by His essence that He knows. Opponents called this

in 'fū, "stripping" (see, God of His attributes), and the upholders of it Mu'attila. Those who held that God knows by an attribute of knowledge, neither identical with His essence nor distinct from it, are sometimes known as Sāṭiyya, and include the Ash'ariyya and other orthodox theologians. The points at issue were discussed with much subtlety in al-Sanā'ī and al-Faḥḥālī a further distinction is drawn between God's power and His "being powerful" (*kaṣa* *ḥādīṣa*), etc.; the first group is known as al-ma'mūnī and the second as al-sifāt al-ma'nawīya (perhaps to be rendered "attributes which are hypostatized concepts or aspects" and "attributes connected with hypostatized concepts"). It was doubtless because of their importance in popular religion that hearing and seeing were retained among the seven.

(g) The Qur'ān (4:1) is the eternal and uncreated speech of God. This eternal speech is repeated by men's tongues, written in their copies of the Qur'ān and remembered in their hearts, yet it is distinct from its material embodiments.—The doctrine of the uncreated character of the Qur'ān was developed and advanced in order to justify its position as the chief foundation of law and doctrine. The opponents, who included the Ijāhiyya, the Mu'tazila, and the central government of the caliphate from about 217/832 to 234/849 (cf. *MUSK*), were sympathetic politically to certain groups of the Shi'a; and the Shi'a tended to set the imamate above the written scripture. (It is still the view of the Shi'a that the Qur'ān is created.) The Māturīdiyya and other followers of Abū Hanifa rejected the Ash'ariyya's view that the eternal speech of God can be heard.

(h) God's will is supreme and always effective; "what He wills exists, and what He does not will does not exist". Thus He wills all things, good and evil, though He does not command or approve of all. There is no obligation of any sort upon Him, e.g. to do what is best for men, or to reward them for good works, or to command them to do only what they are able to perform. Actions are good or bad because He commands or forbids them, and not in themselves; He could, if He so willed, change what is good and bad.—The sovereignty of God's will in the world was thought to be impaired by the Mu'tazila's assertion of man's free will, and was vigorously re-asserted by the orthodox. The Mu'tazila also held that God was bound by our (see human and rational) conceptions of good and bad. Al-Ash'ari and some of his followers opposed this, maintaining that good and bad had been known only by revelation. They further asserted that God may punish one who obeys Him, that He may change a faithful man into an infidel (and that therefore when one says "I am a believer" one ought to add "if God will" (cf. *ISTIGHYAT*), and that God may impose on men duties that are beyond their powers. The Māturīdiyya took a contrary view on these and similar problems, though affirming the sovereignty of God's will against the Mu'tazila. The later and more intellectualistic theologians emphasize the supremacy of God's will at the time of events, but in the earlier and more popular creeds, the stress is on God's determination of events beforehand (cf. *SAḤĀB*); and thus al-Ash'ari himself includes in his creed the doctrine that whether a man dies or is killed his death takes place at his appointed term (*qadā* *qāṣ*)."

(i) Man's acts are created by God, but are nevertheless properly attributed to man. They proceed from a power (*ḥada*, *istiḥāṣa*) in the man, but this power is created by God; God does so at the moment

of the act, not before it.—The leading orthodox theologians all try to find a middle way between absolute determinism (*ḡiaḥ*) and absolute free will (*ḡiaḥ*). The argument of the Mu'tazila, that God's justice (*ʿadl*) presupposed that men could properly be punished or rewarded for their acts, forced orthodoxy to deny that men were mere automata. The Ash'ariyya (and others before them—cf. *JRAS*, 1941, 234-47) used the vague word *ḡiaḥ* (q.e.) or *istiḥāṣ*, "acquiring", to describe the relation of man to his act. They held that, though the act proceeded from a power in the man, this power was created by God at the moment of the act for this specific purpose and no other. The Mu'tazila on the other hand held that the power was created before the act and was power to do either the act or its opposite.

(j) God is also characterized by active attributes (*sifāt ḡiyya*), such as creating and giving sustenance.—Some, especially the Ash'ariyya, held that God cannot be called creator, sustainer, etc., until He has created or given sustenance; as this implies the existence of originated beings, these attributes cannot be eternal. On the other hand, some, like the Māturīdiyya, held that God is eternally creator, etc.

(k) Only those names (or attributes) are applicable to God which are to be found in the Qur'ān and sound traditions, or are sanctioned by *ijmāʿ*.—The Mu'tazila argued that names might be applied to God by inference. It is commonly held that there are 99 names (cf. *AL-ASMAʿ AL-ḡUSNĀ*), but in fact more are found.

(l) The questioning by Munkar and Nakir, and the punishment of the tomb, are realities; so also are the signs of the end, such as the slaying of the Dajjāl by 'Isa.—Between death and the resurrection on the Last Day men will be questioned in the graves by two angels, Munkar and Nakir, and rewarded or punished. Various signs of the coming of the Last Day are also mentioned. These are popular beliefs, based on Tradition and not on the Qur'ān, but they have been incorporated into the creeds (cf. *ʿAḡḠĀB AL-SABR*). Among the Shi'a special emphasis is laid on the Return (*raḡʿa* (q.e.)), i.e. of the Mahdi and of a limited number of very good and very bad people; this is for the punishment of the latter and the glorification of the household of Muhammad (cf. D. M. Donaldson, *The Shi'a Religion*, London 1913, 236 f.). This return to earth before the Last Day, though "a preliminary judgement", is to be distinguished from God's final judgement.

(m) God will judge all men on the Last Day (cf. *KIYAMA*). The balance (*miḡāl*), the bridge (*sirāt*) and the pool (*ḡaḡ*) are realities.—The central fact of judgement is prominent in the Qur'ān, and the balance on which men's deeds are weighed is hinted at (cf. Wessicini, *Muslim Creed*, 167 ff.). The pool or basin of Muhammad, from which he quenches for ever the thirst of his followers, and the knife-edge bridge over the pit of Hell, from which the wicked fall down, come from popular conceptions. The various ideas were reconciled with one another only by the later systematizers.

(n) Certain persons, and notably Muhammad, will be permitted by God to intercede for others on the Last Day (cf. *SHAFʿĀʿĪ*). Muhammad will intercede for sinners of his community.—This was denied by the Mu'tazila on Qur'anic grounds, but ultimately gained general acceptance.

(o) Paradise and Hell already exist, and will continue to exist eternally (cf. *ḡANNA*, *ḡARĤAM*). Grave sinners of the Muslim community will be

punished in Hell, but not eternally. No monotheist will remain eternally in Hell.—The Ijāhiyya and other sects held that Paradise and Hell would not be created until the Last Day and would cease to exist after a time, but the majority rejected this view. There are some divergences about the precise fate of Muslims who are sinners, but it is generally agreed that by intercession of otherwise they will eventually be released from Hell, if they enter it at all.

(p) Prayers for the dead and alms offered on behalf of them are advantageous to them.

(q) God has sent to mankind messengers (*rasūl*) and prophets (*nabīyāt*). The prophets are above saints and angels. Muhammad is the seal of the prophets and the most excellent of them.—The *Fikḥ Akḡar* ascribed to al-Shāfiʿi says there are 120,000 prophets and 312 messengers.

(r) Prophets are preserved (*maʿiḡa*) from all sin by God.—This was the view of the Māturīdiyya and other followers of Abū Hanifa, but the Ash'ariyya admitted that they might commit light sins.

(s) The best of men after the prophets are Abū Bakr, then 'Umar, then 'Uthmān, then 'Alī.—This assertion of the acceptance of the first four caliphs in order made in opposition to the Shi'a who held that 'Alī was best.

(t) No Companion of Muhammad is mentioned except for good.—This was to bury the quarrels about rights and wrongs of 'Uthmān, of Talha and al-Zubayr, etc. It was directed mainly against the Shi'a.

(u) Unbelief (*kuf*), or the status of being an unbeliever, does not necessarily follow the commission of sin by a believer.—This was directed against the Khawāridj, who excommunicated anyone guilty of sin.

(v) Faith is knowing in the heart, confessing with the tongue and performing works. It increases and decreases (cf. *IMAN*).—Many others, however, notably the Ash'ariyya, said that works were not a part of faith, and that faith did not increase and decrease.

(w) Faith and unbelief are due to God's guidance and abandonment (*ḡiḡāḡ*) respectively.

(x) (Some later creeds also contain articles about the nature of knowledge and true report, and other philosophical matters.)

**Bibliography:** A. Selected Creeds:—(1) *Fikḥ Akḡar* I (c. 1500/15); (2) *Wasiyyat Abū Hanifa* (c. 210/215); (3) *Fikḥ Akḡar II* (c. 250/255); these three works with commentaries were published in a composite volume in Hyderabad, 1321/1903; all are translated and commented on by Wessicini, op. cit. infra; tr. of (1) by J. **ʿAKIP PASHA** [see MUHAMMAD ʿAKIP PASHA].  
**ʿAKIK** (a), *nomen univale*: 'Akika is the name of the cornelian, which is found in Arabia—in various colours and qualities, of which the red shade is especially in demand. The cornelian has old been exported from Yaman (al-Shīr) via Sanʿā to the ports of the Mediterranean; and also from India. It was used for seal-rings, for ladies' ornaments and even costly mosaics, for example in the mihrāb of the great mosque at Damascus (according to al-Makdisī, 157). It was used as a medicine for the preservation of the teeth; superstitious belief ascribed to the cornelian in the sealing the power of soothing the heart—especially in battle—and of stopping hemorrhage. Even Muḥammad is said, according to some traditions, to have shared this belief and to have confirmed the power of the seal to give happiness and to protect from poverty. (Similar beliefs attached to the cornelian also in Europe, cf. *Handwörterbuch d. Deutschen Aberglaubens*, s.v. Karneol.) Down to the present day the cornelian has remained a favourite neck-ornament for women, and the name ʿakik has been transferred to any kind of necklace which is of a red colour, whether made of glass or shells or other materials.

**AL-AKIK**, the name of a number of valleys, mines, and other places in Arabia and elsewhere. When applied to valleys, 'Akik is used in the sense of a bed cut by a stream; when applied to mines, it may refer either to stones such as the cornelian ('akik) or more generally to any mineral cut away from its source. The name is much used by the Arab poets, who do not always make clear which of the many 'Akikas they have in mind.

The best known of the 'Akikas is the valley passing just west of Medina, from which it is separated by Harat al-Wabra. It continues northwards to join Wādī al-Hamā (q.v.), the classical Idam, which empties into the Red Sea south of al-Waḡḡ. The mountain 'Ayr south of Medina rises above the right bank of al-Akik, which draws much of its water from the neighbouring lava beds. After heavy rains the valley is filled with a broad river which has been compared with the Euphrates; when the rains fall, only the wells remain to stake the thirst of men, beasts, and plants.

In the Prophet's time the first stage of the route from Medina to Mecca ran through al-Akik to Dhū Ḥuḡayfa, as does the present road. Numerous traditions speak of the fondness Muḥammad had for al-Akik, the 'blessed valley' in which he was once told to pray by a messenger from God. As the valley lay within the territory of Muzayna, Muḥammad gave it as a *ḡaṭ'a* to Bilāl b. al-Harith of this tribe. Muḥammad also established a reserve (*ḡima*) for the Muslims' horses at al-Nakī, Bilāl having done nothing to improve his land, the Caliph ʿUmar took most of it from him and distributed it among deserving Muslims. For several generations thereafter the valley flourished: wells were dug, gardens and fields abounded, and the country houses (*ḡuḡra*) of 'Alids and other Medinan notables witnessed parties where the entertainment was hardly in keeping with the sober spirit of the first days of Islam. (Cf. H. Lammens, *Traité de l'Islam*, 98; idem, *Le régime de Meḡḡa*, index—with further references.) Saʿd b. Abī Waḡḡas retired to his estate in al-Akik on the election of ʿAlī as Caliph. The poets lavished praise on the lovely scene and the famous wells, particularly Biʿ Rūma (now known as Biʿ ʿUḡḡan after ʿUḡḡan b. ʿAḡḡan, who bought it from its Jewish owner and gave its water to the Muslim army) and Biʿ ʿUḡḡa b. al-Zubayr. The water of al-Akik was so sweet that it was sent all the way to Hārūn al-Raḡḡid in ʿIrāq. With the decline of ʿAbbasid power and the increase of insecurity in al-Hijāz, the valley lapsed into its old somnolence, to remain there for centuries.

Another 'Akik, sometimes called 'Akik Dhāt ʿIrāq by the older authors, extends northwards from the vicinity of al-Tāḡīf along the inner side of the main mountain range of al-Hijāz. Some writers state that this valley is connected with 'Akik al-Madina, but recent hydrographic studies have shown that it empties instead into a large swampy basin called al-Akūl between Mecca and Medina.

A great valley in Central Arabia was known in classical times as 'Akik al-Yamama or 'Akik Tamra. Although the descriptions given by the

older authors are meager, there is little doubt about the identification of this valley with the present Wādī Dawadī [q.v.], a small settlement in which still bears the name Tamra, while a nearby salt flat in the valley bed is still called al-Akik. According to al-Hamadī (I, 152), Tamra was a town with 200 Jews. The same authority may well be mistaken in connecting the name of this valley with Maʿdīn al-Akik, a mine he places in the vicinity, no trace of which has been found. Other mines with the same name are mentioned, but in such general terms that identifying them may be a hopeless task.

In addition to various other valleys named al-Akik in Arabia, there has been at least one in ʿIrāq south of the Euphrates (cf. W. Wright, *Opuscula arab.*, 110; *Hamāsa*, I, 468; *Aḡḡānī*, VII, 123; al-Dinawarī, 260). On the Sudanese shore of the Red Sea a village named 'Akik (without the definite article) stands on a gulf of the same name southwest of Sawḡīn.

**Bibliography**: Hamdānī, index; Bakrī, *Maʿḡḡim*, s.v. and 'al-Nakī'; Yāḡḡū, s.v.; *Aḡḡānī*, index; Samḡḡdī, *Waḡḡaʾ al-Waḡḡaʾ*, Cairo 1326, II, 286-226; Shakhī Aḡḡānī, *al-Iḡḡānī al-Liḡḡ*, Cairo 1350, 211-4; M. **ʿAKIKA** (a) is the name of the sacrifice on the seventh day after the birth of a child. According to religious law it is recommendable (*mustahab* or *sunna*) on that day to give a name to the new-born child, to shave off its hair and to kill a victim, for a boy two rams or two he-goats, for a girl one of these according to the Shīʿites, but in both cases only one according to the Mālikites. If the offering of the 'akika has been neglected on the seventh day, it can be done afterwards, even by the child itself when it has come of age. The greater part of the flesh of the sacrifice is distributed amongst the poor and indigent, but a meal (*waḡḡa*) for the family is recommendable.

Some of the older scholars amongst other Dāʿūd al-Zāḡirī have looked upon the offering of the 'akika as a duty. Abū Ḥanīfa on the contrary regarded it as optional.

The shorn hair of the child is also called 'akika, and the law recommends to the faithful to spend a sum not less than the weight of this hair in silver (or gold) in almsgiving.

The 'akika sacrifice was doubtless derived from old Arabian heathenism. The Prophet is said to have observed: "When some one wishes to offer a sacrifice for his new-born child, he may do so". In heathen times it was the custom to wet the child's head with the blood of the animal. According to some traditions Muḥammad had allowed the idiom to do the same. The jurists still maintain that this custom is not desirable (*sunna*) but it is done, e.g. in Palestine.

According to Doughty (*Travels in Arabia Deserta*, I, 452) the 'akika is one of the most frequent sacrificial ceremonies in the Arabian desert, but there it is only performed at the birth of a boy, never when a girl is born.

**ʿAKIL** [see BAḡḡI].

**ʿAKIL** a. **ABī TALīb**, elder brother of ʿAlī, who was 20 years his junior. After fighting against the Muslims at Badr, where he was taken prisoner and ransomed by al-ʿAbbās, he became a convert to Islam. The sources give contradictory information as to the date of this event (after the capture of Mecca, according to al-Balāḡḡurī; shortly before or after the pact of al-Hudaybiyya, according to Ibn Ḥaḡḡar, etc.), as well as on his participation in the Khaḡḡar and Muta expeditions, the capture of Mecca, and the battle of ḡuḡḡayn. During the struggle between ʿAlī and Muʿāwīya, he ranged himself on the side of the Umayyads because his brother, it is said, refused to draw on the state coffers in order to pay a debt to him, but the estrangement between the two brothers probably had political causes. Yet ʿAkil would never allow anyone to insult ʿAlī in his presence.

He had "an extremely prosperous household" and a considerable entourage. He died, probably in 50/670, and was buried at Medina. He left several sons who joined al-ḡuḡḡayn at the time of his rebellion against Yazīd; one of them, Muslim, was killed by Ibn Ziyād, and others either six or nine in number, fell at Karbalāʾ. ʿAkil left a reputation not only as a great authority on genealogies and the history of Kurayḡ, on the strength of which he became one of the four arbiters (*ḡaḡam*) of Kurayḡ, and was summoned by ʿUmar to assist in compiling the *ḡuḡḡ*, but also as a man endowed with great natural eloquence; his swift and pungent retorts are often quoted by the historians.

**Bibliography**: Ibn Saʿd, *iv*, 28-30 and index; *Djāḡḡ*, *Bayān*, index; Ibn ḡuḡḡayn, *Maʿḡḡar*, index; Balāḡḡurī, *Anḡḡ*, ms. A series of anecdotes, translated from Balāḡḡurī, are to be found in Caḡḡatī, *Anḡḡ*, 37 A.H. and 176, and several other quotations exist in his *Chronographia*, 50 A.H., no. 39, 551. (L. VECCEIA VAGLIERI)

**ʿAKILA**, one of the most significant institutions of Muslim penal law as regards both the origins and the sociological evolution of that law.

The term *ʿakila*, pl. *ʿawākil*, denotes, as its ety-

mology would suggest, the group of persons upon whom devolves, as the result of a natural joint liability with the person who has committed homicide or inflicted bodily harm, the payment of compensation in cash or in kind. This compensation is called *diya* (q.v.), *ḥabl*, pl. *ḥabā*, and also *ma'wala*, pl. *ma'walāt*, from a root meaning 'to bind, shackle': the Arab lexicographers readily explain that it referred originally to the camels of the *diya*, which were given 'shackled' to the victim or his inheritors (cf. Ibn Qutayba, *Adab al-Kātib*, 1346 A. H., 32; Lā, xli, 487-8, which has a detailed account); but the classical jurists prefer to relate it to the idea of a 'restraint' operating against the exercise of private revenge (cf. Germani *supra*). The original meaning is perhaps to be found in the classical expression *'akabū l-ḥabīḥ*, 'to pay the compensation for the victim of a murder', which possibly meant at first 'to prevent the victim [from avenging] himself'.

This institution has its roots in the ancient Arab tribal principle of joint responsibility (Procksch, *Über die Blutnache etc.*, Leipzig 1899, 56-61; Morand, *Étude de droit musulman algérien*, Paris 1930, 60-7; *ibid.*, *Introduction, à l'étude du droit musulman algérien*, Paris 1921, 210-12; Lammens, *Arabie occidentale*, 189). In Islam, it seems to be a survival not easy to reconcile with the individualist tendencies of religious doctrine which find expression, in the field of moral responsibility, in the Qur'ān (vi, 164): 'no soul bears another's load.' *Fikḥ*, however, approved of it (protests were raised by the McTearlie Abū Ḥafṣ al-Asamm, and in Khāridjite circles), and several 'hadiths' of the Prophet (conveniently grouped, with a commentary, in al-Shawkānī, *Nayl al-Awtār*, 1357 A. H., vii, 86-6) gave it the tardy support of Tradition: the *Muwatta'* of Mālik only takes cognizance of such versions as are irrelevant to the question of the *'ākila*, which it discusses at considerable length without invoking any decision of the Prophet. Its incorporation into *fikḥ* was accompanied, however, by the imposition of highly restrictive regulations and even, in one of the principal schools of law, by an appreciable change in the principle of joint responsibility.

Firstly, as was to be expected, *ta'ākul*, or joint liability by *'ākila*, is not permissible between Muslims and non-Muslims (it is allowed between *dhimmīs*, the conditions varying according to the school). Secondly, a factor of much greater importance, four other basic restrictions are laid down in the formula, valid in principle for all the orthodox schools: *lā ta'ākul 'l-'ākilat 'amīn* *wa-lā 'ahd 'wa-lā ṣubḥ 'wa-lā 'irḥām*. '*'ākila* does not intervene in the case of an intentional act, or a slave, or a compromise or a confession'. The first of these restrictions, which limits the legal function of the institution to the case of non-intentional homicide or injury (*ḥabbā'* [q.v.]) — and most of those who allow this supplementary category include the quasi-intentional — is extremely important; there is a clear connection between it and the distinction drawn in the Qur'ān (ii, 178; iv, 92) between intentional and non-intentional homicide. The intentional act of a minor or an insane person is counted by the majority of authors as tantamount to a non-intentional act. The second restriction apparently denotes the grammatical vindication of this was given by the grammarian al-Asna'ī to the Hanafī ḥabl Abū Yūsuf) that if the victim is a slave, and not the guilty party — a slave, the *'ākila* of the guilty party does not intervene; but the Hanafīs, followed with some hesitation by the Shāfi'īs, see

the matter in a different light. The two remaining restrictions mentioned in the formula are represented by the jurists as seeking to prevent any collusion prejudicial to the members of the *'ākila*.

Even more drastic is the Hanafī innovation which affects the members of the *'ākila* themselves. Among the pre-Islamic Arabs, only the relatives by parentage, real or fictitious, were concerned. The Muslim jurists have not departed from this customary view, with the exception of the Hanafīs of Irāk, who have accepted and confirmed an Umayyad administrative practice (Schacht, *Origins*, 207) which gave precedence to the joint liability between companions-in-arms entered on the same pay-roll or *diwān*. This tallied with the tendency towards state control, because the authorities would in this way directly guarantee compensation for the victim, by means of official deductions from pay. The experiment made by some early Mālikīs, obviously following the example of the 'Irākīs, of taking the *diwān* into account to a certain extent, was unsuccessful (compare 'Abd al-Wahhāb, *Fikḥ*, ii, 194, with al-Bāḍī, *Mudawwān*, vii, 113-4).

The schools of law are thus virtually unanimous on the point that the *'ākila* comprise, as in the pre-Islamic period, the *'asaba* (cf. *māṭn*) of the guilty party, that is to say, the male relatives or agnates, after whom come, in the case of a freedman, the patron and his *'asaba* (an old Shāfi'ī ruling in favour of the reciprocal obligation of the freedman towards the patron has not been generally accepted). As regards the agnates, the old system of kinship is seen here in all its force and clarity, more plainly even than in the rules governing inheritance; moreover, the agnatic relationship, in such a conservative question of penal law, continues to be interpreted with the greatest strictness: Mālik, for example, stipulates that neither the husband nor the son of a woman who is a guilty party, although they are her heirs, can be a member of her *'ākila*. The Shāfi'īs are alone in excluding from the *'ākila* the ancestors and descendants of a man who is the guilty party, though the Hanbalīs are undecided on this point (Ibn Qudāma, *al-Mughnī*, 1367 A. H., vii, 784). Minors and insane persons are excluded from the *'ākila*, as are women. As regards the guilty person himself, it is certain that originally he was not party to the *'ākila* which intervened on his behalf; although certain Mālikīs have incorporated him in it, it can be confidently asserted that this is in imitation of the Hanafīs — an additional modification to be attributed to the latter (Brunschwig, in *Studia Islamica*, iii, 69).

Hanbalism has not completely excluded from the *'ākila* either the agnates or the patron by right of manumission; it even includes the contractual patron, to whom it alone of the orthodox schools accords legal status; and it places no limitations of time or degree on the agnatic relationship. But agnates and patrons, under this system, only play a supplementary role. Further, Hanbalism justifies its *'ākila* either the agnates or the military *diwān*, to the *'asaba* by declaring itself faithful to the traditional idea of an overriding duty of 'mutual assistance' (*naṣra, laḥiqa*) as the basis of penal solidarity, and by adding the changes which had occurred during the first century of Islam in the very composition of the natural group of mutual aid; thus there was initiated among the members of the *'ākila* a development of doctrine which led to the acceptance of the principle that, in default of the *diwān*, members of the same *sub* or of the same

profession, in a given locality or district, should between them perform the function of *'ākila*. Further developments occurred among the mediaeval Hanafīs, but the various jurists trod divergent and confused paths (the classical works on *ḥibḥ*, through being over-condensed, give the illusion of a unified doctrine); some left the judge considerable scope for the exercise of his own discretion, others were inclined to provide a definitely geographical basis for the institution, at least in the absence of agnates.

As a result of the dislocation of the tribes under Islam and their dispersal over vast areas of territory, the problem of a limitation either, again, of a geographical nature, or connected with the degree of kinship, arose in the other schools, in which the role of the agnates retained its original importance. The Mālikīs had early signified their decision (*Madaṣṣana*, xvi, 198) that there should be no *ta'ākul* between the people of Egypt and Syria, for example, because they constituted different *diwāns* (a faint echo of the *diwān* theory); and the Shāfi'īs, who to begin with saw no impediment in any distance, however remote, wondered in their turn whether relations who were near at hand might not be called upon in preference to more closely connected relatives who lived at a distance (compare al-Shīrāzī, *Muhaghghah*, ii, 214, with *K. al-Umm*, vi, 203). The Hanbalīs were not inclined to take geography into account at all; but, while the Shāfi'īs rejected joint liability between tribes considered to be related, they, on the other hand, limited the institution to that fraction of the tribe in which kinship was clearly established (*Mughnī*, vii, 786, 788). Again, within the framework of the social changes occasioned by Islam, and as a mark of its distrust of Bedouin life, there is recorded the attempt of several doctors to prevent *ta'ākul* between townsmen and nomads: the Hanafī al-Sarāḥī emphasizes this point (*Mabāṣiṭ*, xvi, 132-3); the Mālikīs, notwithstanding the *Madaṣṣana*, loc. cit., on the whole refused to follow this path (al-Bāḍī, *al-Munakhāḥ*, vii, 98).

Attention must be drawn here to a theoretical discussion, which occurs in detailed works of *fikḥ*, on the nature of the obligation devolving on the *'ākila*, and which is notable as an interesting example of Muslim legal thought, rather than for its problematizing interest on practical solutions. Does this obligation rest on the *'ākila* 'per se' (*ibtidā'*)? This is the technical significance of this term, which is sometimes not fully understood, that is, are they considered as debtors 'per se', or does it result from a legal 'transfer' (*intihāl*) from the guilty party, the 'acceptance of responsibility' (*ṭahammul*) being made by the group? The second hypothesis allows emphasis to be placed on the idea of the 'salvation' (*ṭaḥḥīṭ*) and the 'generous help' (*muwadda'*) which, although obligatory, are afforded by the *'ākila* to the guilty party. Hanafism seems to adhere to this theory. The other schools are undecided; the *ibtidā'* of the responsibility, which they hesitate to affirm or maintain, would doubtless tally better with the rival theory with the primitive conception by which the clan, jointly responsible, feels itself bound to offer reparation collectively, as much or even more on its own behalf as on behalf of the guilty party.

Again, as regards the amount of *ḥabl* and the modalities of the payment incumbent upon the *'ākila*, Muslim law has shown a tendency to restrict and regulate the institution. The Shāfi'īs alone have remained faithful, or have returned to their allegiance,

to the settlement of the compensation by the *'ākila*, whatever the amount may be (theoretical discussion by al-Shāfi'ī, *Riḍāla*, ed. Shāhīr, Cairo 1929, nos. 1019 ff., and *K. al-Umm*, vii, 207). The Mālikīs, on the other hand, followed by the Hanbalīs, have fixed, perhaps in conformity with an old government decision (*K. al-Umm*, loc. cit.; Schacht, loc. cit.), a minimum, representing a third of the whole *diya*, below which the *'ākila* are not liable. The Hanafīs, in the same way, but acting with greater moderation, have absolved the *'ākila* from responsibility for sums less than 500 *dirhams* or — what amounts to the same thing according to them — 1/20th of the whole *diya*, the legal rate for head injuries which 'lay bare' (*muḍḥaba*) the skull. Below these minima, therefore, the responsibility rests on the guilty party personally.

All the schools have given their assent (exceptions apart) to the general rule, deriving almost certainly from Umayyad practice, which allows the *'ākila* to discharge its liability by three consecutive annual payments (according to some to commence from the date of the injury, according to others from that of the agreement between the parties, or from the date of the conviction, instead of by the immediate payment of the whole). But they again reveal an appreciable difference of opinion on the method of assessment among the members. The Hanafīs, who like accountancy, and who are anxious to embarrass each member as little as possible, have opted for an extremely low *maximum*, to be the same for all — three or four *dirhams* per head. The Shāfi'īs, who aim at relieving the poor, have fixed two rates of contributions according to means, very similar to the preceding ones, but in this case revolving round a *minimum* — 1/3 *dirḥam* for the rich, 1/4 for persons of more moderate means, proceeding from the nearest agnates to the most distant. The Mālikīs and Hanbalīs refuse to lay down any fixed amount; each of the agnates, in order of kinship, must pay according to his means; this was undoubtedly the ancient method. In an organized State, if an equal assessment is refused, the case must be referred to a judge; the schools concerned agree on this.

The *'ākila* reappears in a closely-connected penal institution, the *ḥudama* [q.v.], but in slightly different forms from the ones just described.

The Islamic Shāfi'īs have made virtually no innovations on the subject of the *'ākila*. Their fundamental solutions are those of the orthodox doctors, with a preference now for one school, now for another. In their eyes, the persons jointly responsible are first and foremost the agnates; the guilty person himself, minors and the insane, and the *diwān* too, are included; the priority accorded to, or rather imposed upon, relations german as against consanguineous relations of the same degree is debated by the orthodox, who in general disallow it. The minimum sum involving the *'ākila* is that laid down by the Hanafīs; the minimum devolving on each member is fixed either in accordance with Shāfi'ī doctrine, or by the magistrate; payment is made, as in the case of the *Sunna*, in three annual instalments.

Finally, can *fikḥ* be said to have succeeded in its effort to preserve, and at the same time to delimit, the function of the *'ākila*? The reply can only be in the negative. In general, large sections of the old Muslim penal law, even though based on the Qur'ān, fell rapidly into disuse, when faced with competition from the secular, and highly arbitrary, justice of rulers; there was even greater reason why this

should occur in the case of an institution such as the *'ahila*, which was extra-*'ku'*anic and no longer corresponded to social reality as far as an increasing number of Muslims were concerned. The evolutionary process initiated during the first centuries of Islam by Hanafism, in the sense of joint liability on a territorial basis, was indecisive, and unsatisfactory in many respects; taken a stage further by the Hanafis in the course of time, it even went as far as the doctrine, put forward by some, that the public treasury, i.e. the state, was responsible in the absence of family or of a military *diwan*. Instead of this solution, which was hard to admit, some authors advocated that the *diya* should be placed to the sole charge of the guilty person—this being the germ of a theory of civil liability which was not further developed (Tyan, *Le système de la responsabilité individuelle en droit musulman*, Beirut 1926, 123-8; Abou Haïf, *Le Dik en droit musulman*, Cairo 1932). It seems that collective responsibility to *day* exists only in societies where the joint responsibility of the tribe is still an active force, for example among the Arabic-speaking nomads (the literature on the subject is summarized in Grail, *Das Kerkennien der heutigen Beduinen*, Bonn 1932), or among the settled Berber populations; customary law then predominates, only influenced in varying measure by Muslim law.

**Bibliography:** In addition to the references quoted in the text, all the general works on *fiqh*. For the three principal orthodox schools see Bercher, *Les Dik et les Primes de droit commun prises par le Coran*, Tunis 1926. For reference on the Maliki school Arévalo, *Derecho penal islámico*, Tangier 1939, 40-44. Bourham, *De la vengeance du sang chez les Arabes d'avant l'Islam*, 1933-44, is of no value. (R. BROUSSEAU)

**AKINDJIL**, irregular cavalry during the first centuries of the Ottoman Empire, based on and primarily for service in Europe. Their name derives from the verbal noun *akın* (from *ak-<sup>1</sup>* 'to flow, to be poured out'), which means a "raid, incursion into enemy territory". *Akindji* is "the name given to those who carry out *akın*s on foreign territory to reconnoitre, plunder, or spread destruction". (M. Zeki Pakalın, *Osmanlı tarih devrimleri ve terimleri sözlüğü*, Istanbul 1946, i, 36). The treasurer of Mehmed II, G. Angelidelo, in his recollections on the account of the campaign against Uzun Hasan (1473), gives the best description (trans. Charles Grey): "Besides the five columns we have mentioned, there was also another of the Agazi, who are not paid, except by the booty which they may gain in guerilla warfare. These men do not encamp with the rest of the army, but go traversing, pillaging, and wasting the country of the enemy on every side, yet keep up a great and excellent discipline among themselves, both in the division of the plunder and in the execution of all their enterprises. In this division were thirty thousand men, remarkably well mounted..."

Tradition ascribes the formation of these auxiliary troops, comprising contingents from the Turcoman tribes of Anatolia, to Salâhûddin; and in fact, although accurate information is lacking concerning the battle in the plain of Brusa at the end of the 13th century between Ertoğrul, supported by the *akindji*, and the Byzantine-Tatars, it seems probable that this tradition contains the truth. The term *akın* is also used in connection with naval expeditions. Enverli (ed. M. H. Yinanç, Istanbul 1928, 24) records an *akın* made along the Bosporus with

35 ships. Negârî mentions the *akindji* *hâdîrlar*, or "akindji judges". These irregular units of the Ottoman army established themselves, as the Turks gradually advanced into the northern Balkans, in strategic and wellprotected localities. Firîz Bey of Vidin was ordered by Bâyezîd I to make an *akın* on Wallachia, and in 1391 the Turks (*akindji*) for the first time advanced north of the Danube. Later they numbered not less than 40-50,000 horsemen. They were commanded by what were virtual dynasties of local chiefs (*berg*); Evrenos-oghullar (the descendants of Evrenos Bey [q.v.], at Gümüldüz, Serez, Ighodra) in the north-west; Mihâl-oghullar, descendants of Kösê Mihâl [q.v.], a Greek renegade of the family of the Palaeologi (Serbia, Hungary); Tâhîr-oghullar (Guederevo-Semenovo, Greece, Wallachia and in the direction of Venetian territory); Malko-oghullar, originally from Bosnia where they were known as Malkovitch (Hungary, Wallachia, Moldavia and Poland); Kâsim-oghullar (at Vienna, 1329).

Towards the end of the 16th century, the *akindji* lost some of their thrust and importance. In the course of the ill-fated expedition of the Grand Vizier Kojâ Sinân Pasha against Mihâl Vîsâr of Wallachia (1595), they were almost annihilated at Giurgiu (Yerköy) on the Danube they remained on Rumanian territory, where "the root of the *akindji* was severed and they withered away". Again in 1604, Sultan Ahmad I issued orders to 'Alî Bey Mihâl-oghlu to join the expedition against Hungary. But the *akindji* rapidly adapted themselves to new forms of warfare. They became artillerymen, armourers, and drivers, and demanded to be entered in the army muster-rolls and to be paid regularly. The statistician of the decline of the Ottoman empire, Koî Bey, in his *Risâle* (ed. A. Wefik Pasha, London, 1279/1862, 17) written in 1630, stated that "the *akindji* contingents (*akindji* *hâdîrlar*) had become either paid troops or regular soldiers, or had relinquished their positions (*akindji* *hâdîrlar* *idârî*); scarcely 2000 *akindji* remained". Their individuality became lost in the main body of the regular Ottoman forces.

'**AKK**, old Arabic tribe, probably identical with the 'Ayyikiz ('Ayyikiz) of Ptolemy, vi, 7, 423. H. Reckendorf considered the name 'Akk as a place-name; but it occurs as a personal name in Thumidic inscriptions. At the beginning of the 7th century the territory of the 'Akk in the Thāma of Yaman stretched from Wādî Mawr, over Surūd, to Wādî Sahām (i.e. between modern Lahayya and Hudayya), where it met that of the Ash'ar. At that time they

participated in the Meccan cult. Earlier a colony of the 'Akk was to be found in 'Akk (Tanra) = Wādî al-Dawādî. No information is available concerning their adherence to Islam. In the revolt of al-Aṣad, which broke out during the last year of the Prophet's life, they took sides against him, so that the representative of Medina, Tāhir b. Abl Hāla, was able to remain in their territory. On the other hand, after the death of Muḥammad a group of 'Akk and Ash'ar assembled at 'Akk near Suḥr (in the territory of a sub-tribe of 'Akk of the same name), but they were annihilated by Tāhir and a chieftain of the 'Akk themselves. During the wars of the conquests some groups from the tribe came to Syria (they settled in the valley of the Jordan), and from there to Egypt and the Maghrib, also to Kūfa and Persia. Members of the tribe were prominent in the conquest of Egypt and in the battle of Siffin on the Syrian side). In Arabia, the tribe preserved its old territory, and even extended it to the north and south.

Wüstenfeld, Table A2, shows the divisions of the emigrant 'Akk, the *Turfa* those of the tribe in its primitive seat in the 13th century. In the tradition of Medina (Ibn Ishāq) the 'Akk are counted among the 'Ash'ab, in that of Khurāsān among the Ard Shānā's through 'Udhān, which is often corrupted into 'Adnān). Both versions are easy to understand: when Kūfa was founded, the 'Akk were assigned to the "seventh" of the *lūḥ* (b. Nizār b. Ma'add b. 'Adnān), while in Khurāsān they were assigned to the Ard.

'**AKKĀ**, the Akco ('Akkā) of the Old Testament, the Ptolemais of the Greeks, the Acre of the French, town on the Palestinian seaboard. 'Akkā was captured by the Arabs under the command of Shurabīl b. Ḥasana. As the town had suffered in the wars with the Byzantines, Mu'āwīya rebuilt it, and constructed there naval yards which the Caliph Hishām later transferred to Tyre. Ibn Tūlūn constructed great stone embankments round the port; al-Makdī, whose grandfather executed the work, gives an interesting description of their construction. The port became subsequently one of the naval bases of the Fātimids in Syria. The Crusades marked a new epoch in the history of the town. After an unsuccessful attempt, Baldwin I succeeded, in 1107/1104, in gaining possession of this important port, which then became the central point in the Christian possessions in the Holy Land. Al-Idrīsī's description of 'Akkā belongs to this period: a large straggling town, with many farms, a fine, safe harbour and a mixed population. After Saladin had won the great battle of Karn Hattin, 'Akkā surrendered to him in 583/1187. But since possession of 'Akkā was vital to the Christians, they again laid siege to the town. The siege lasted for two years, and finally (1191) the arrival of Philippe Auguste and Richard Cœur de Lion led to the capture of 'Akkā by the Christians. From 626/1229 onwards, 'Akkā was the principal centre of Christian power in Palestine, and received the name of Saint-Jean d'Acre, after a splendid church built there by the Knights of St. John of

Jerusalem. In 690/1291 the Sultan al-Malik al-Ashraf gained possession of 'Akkā and put an end to Christian domination in Palestine. The town was completely destroyed, and for long remained a heap of ruins, with few inhabitants. Towards the middle of the 18th century, a revival took place, when Shāykh Zāhir, who had founded a kingdom in Galilee, made 'Akkā his capital. The town was rebuilt, and flourished still more during the reign of terror of Ahmad al-Djazzār (1775-1804). It was during his rule that Napoleon conducted a fruitless siege of the town, which was protected by the British fleet. 'Akkā continued to prosper under the peaceful rule of al-Djazzār's successors, but in 1832 it was taken by Ibrahim Pasha and razed. It rose yet again, only to be bombarded in 1840 by the Turkish fleet supported by the British and the Austrians. Since then the town has witnessed a certain revival.

**AKKEMAN** (see AK KIRMAN).

'**AKL**, intellect or intelligence, the Arabic equivalent to Greek *νοῦς*.

(1) In neoplatonic speculation, which in many respects resembles the late Greek doctrine of the Logos and also in many respects corresponds to the Logos christology, 'akl is the first, sometimes the second, entity which emanates from the divinity as the first cause, or proceeds from it by means of intellectual creation, *nafs* and *fabā'* etc. coming after 'akl in succession. As first created entity the 'akl is also called "the representative" or "the messenger" of God in this world. The neoplatonic idea of 'akl as first creation also appears in the hadīth: "The first thing created by God was the 'akl etc." (cf. I. Goldziher, *Neuplatonische und gnostische elemente im Hadī*, ZA, 1908, 317 ff.). (Cf. also *PALESTA*, *ISHWĀN AL-SAKĀ'*, for the role of 'akl in Ishwānīlism, *ISHWĀNĪYYA* and *DURĪ*; for 'akl in *akl* theosophy, e.g. Ibn 'Arabī and *ABD-AL-RAZZAK AL-RĀSHANĪ*.) (I. DE BOER)

(2) According to the theologians (*mudabbirīn*), 'akl is a source of knowledge and, as such, is the antithesis of *sakl* or tradition (see e.g. I. Goldziher, *Vorlesungen über den Islam*, ch. iii); the words *ifra* and *fabā'* (*qūma*) are also used for it. 'Akl is thus a natural way of knowing, independently of the authority of the revelation, what is right and wrong. (Thus it corresponds to the *λόγος* of the Stoics, which is understood by this term as "natural light" (*lumen naturale*), which was their criterion for distinguishing between good and bad.) This 'akl, possessed by all human beings, is also called *al-ra'y al-muṣṭarak* (al-Fārābī, *R. fi 'Akl* (Bouyges); cf. the *σοφία* of the Stoics and the *κοινὴ γνώμη* of Alexander of Aphrodisias, *De anima* (Brundage) Allied to this meaning of 'akl is the view qualified by al-

Fārābī (op. cit.) and Ibn Sīnā (*al-Hudūd*) as that of the *maʿān* (*al-djūhar*), according to which 'akl must lead to praiseworthy conduct, so that a man of bad character, however ingenious he might be, is not an 'akl (cf. the *ḥēthos logos* of the Stoics and the distinction made by Aristotle between *ἐφροσύνη* and *σοφροσύνη*, *Nic. Ethics*); 'akl here means "wisdom".

(5) The philosophers of Islam followed in their accounts of 'akl Aristotle and his Greek commentators, more especially Alexander of Aphrodisias. According to them 'akl is that part of the soul (for their psychology in general see *SAVS*) by which it "thinks" or "knows" and as such is the antithesis of perception. Mostly, however, 'akl is not regarded as a part of the soul at all, which is then restricted to the lower mental functions, but as an incorporeal and incorruptible substance differing in kind from the soul—an ambiguity which also pervades Aristotle's psychology. 'Akl is broadly divided into the theoretical (*al-naẓari*) and the practical intellect (*al-'amalī*); the former apprehends the quiddities or universals, while the latter deliberates about the future actions and through the appetitive faculty moves the body to the attainment of the good.

The development of the theoretical intellect in man is the most widely and richly discussed subject of the doctrine. In a brief and rather obscure passage (*De anima*, iii, 3) Aristotle had said that the potential intellect in man is actualized by an eternally actual intellect (an application of the general Aristotelian principle that for the realization of a potentiality the agency of something already actual is necessary); the latter acts upon it as light acts upon our faculty of sight or art on its material. The disparity between the two analogies obscures Aristotle's view of the relationship between the passive and active intellects, but it was Alexander's interpretation which provided the basis for the Arabs' discussions. According to Alexander (op. cit.) our intellect is initially a pure potentiality which is actualized by the active intellect which is God; when our actualized intellect is not operating, it is *intellectus in habitu*, which in actual operation becomes *intellectus in actu*. Most of the succeeding commentators, especially Thānis and (pseudo-)Philoponus (Stephanus), reject Alexander's equation of the active intellect with God and declare it to be a part of the human soul. According to Muslim philosophers, the active intellect ('akl 'aṣaf) is the lowest of the separate intelligibles, which gives individual forms to material objects and universal forms to the human intellect—hence its name: *waḥd al-ṣawar* (*dator formarum* of the later scholastics). According to al-Fārābī (op. cit.) the first stage of actualization consists of the abstraction of forms from matter by the "light" of the active intelligence; the second stage is reached when in this actualized intellect ('akl bi 'l-f'i = *intellectus in effectu*) reflects upon itself and attains to a knowledge of the categories and becomes 'akl *muṣtaḥḍ* (*intellectus acquisitus* or *adeptus*). According to Ibn Sīnā (*al-Ḥikma*), *De anima* the potential intellect ('akl bi 'l-hawāṣi, or 'akl kayḥān = *intellectus potentialis* or *materialis*) reaches the first stage of its actualization when it acquires the axiomatic truths (this is called 'akl bi 'l-malakā = *intellectus in habitu*), the second stage (called 'akl bi 'l-f'i = *intellectus in actu*) when it acquires the secondary intelligibles from the primary intelligibles or axioms, the final stage ('akl *muṣtaḥḍ* = *intellectus acquisitus*) when it actually contemplates these intelligibles and becomes similar to the active

intellect, Ibn Sīnā, inspired by Neo-platonism, affirms that the universal cannot be acquired by abstraction from the particulars, but by direct intuition from the active intelligence. The final stage of human bliss comes when the human intellect becomes one with the active intellect, which happens, according to al-Fārābī and Ibn Sīnā, only after death, although Ibn Ruṣḥd allows such a union during earthly life.

One of the chief difficulties of this whole Greco-Arabic doctrine is the individuality of intellect which they affirm to be incorporeal and therefore, according to their general principle of individuation by matter, universal. Although its individuality is recognized, seeing that the subject of thought is the individual "I", the basic principle of their theory of knowledge, viz. that of the identity of subject and object (a principle laid down by Aristotle in order to ensure the objectivity of knowledge, but rejected by Ibn Sīnā), prevented the formulation of the individual ego. This difficulty culminated in Ibn Ruṣḥd (*De anima*), who declared the intellect to be one for all humanity, while recognizing that his theory did not do justice to the individuality of the act of thought.

(6) The Muslim philosophers recognized a hierarchy of separate intelligences ('akal *muṣṭarāḥ*), each lower one emanating from the higher. These incorporeal beings, usually ten in number and endowed with life, intuitive thought and bliss in varying degrees, create and govern their respective spheres which themselves are regarded as being possessed of souls. Like the Greco-Christian thinkers (e.g. (pseudo-)Philoponus, *De anima* (Hayduck), 327), the Muslims identified the separate intelligences with certain angels, the lowest of these, the active intellect, called Gabriel, being the ruler ('akl) of the sublunar sphere.

'AKLIYYĀT, (a.), technical term in 'Sim al-ḥakām (scholastic theology). Its use is common (see the commentators on al-Taṭṭarānī, al-Baḥārī etc.), as expressing a certain concept, and to denote a genus of theological dissertations, which go back at least to the 6th/12th century with Faḡhr al-Dīn al-Rāzī, and are clearly stated in the 8th/14th century by al-Iḍḡī, al-Taṭṭarānī and al-Djurgānī. The term refers to the earlier expression *al-ṣulūḥ al-'akliyya*, derived from *faḡḥa*, signifying the rational (and natural) knowledge which the reason ('akl) acquires by itself. Al-Ghazālī uses this phrase freely (cf. *Ihya*, iii) and opposes it to *al-ṣulūḥ*

*al-ḡharīyya* wa '*l-diniyya* (revealed and religious knowledge). According to Mu'tazilite tradition and Sa'ādiya al-Fāyūmī, 'akliyyāt denotes that which is accessible to the reason and especially, on the ethical level, the natural values of law and morals. Cf. the Mu'tazilite MS *al-Madḡimāt* *fi'l-Muḥit* (abridged from the Muḥit of the *Kaḍī* 'Abd al-Djabbār, end of the 10th century) by Ibn Mattawayh (Berlin, MS Glaser 526; information supplied by G. Vadjia).

In classical Islam, this distinction operates also within the "religious sciences". Traces of it are found from the time of the first Mu'tazilite disputation, when 'Sim *diṣ* is sometimes subdivided into 'Sim 'aklī and 'Sim ḡharī. In later works (Aḡḡarī and Hanafī-Māṭrīdī schools), 'akliyyāt denotes the aggregate of subjects in *ḥakām* (i.e. "religious science") which are amenable to reason; that is to say subjects the fundamentals of which, even when they are provided by the *ḡhar*, can be "proved" by "apologetic arguments" (*ḥāṭi*). These are contrasted with the subjects called *saṁ'iyyāt*, *ex auctoritate*, the fundamentals of which derive only from Kur'ānic or traditional texts (*ḥādīṭ*, *ijmā'*). In this latter category, reason only intervenes to resolve arguments of expediency. Two kinds of problems are considered as 'akliyyāt: (1) the purely rational subjects of *ḥakām*, which deal with "essentials and accidents", subjects which are in the strict sense "rational", and which assemble the products of logic, natural philosophy, and ontology; (2) *ḡḡiyyāt*, which deal with (a) the existence of God (*wuḡḡid Allāh*), and his attributes (*ḡḡāḡ*), with the exception of the three attributes of Sight, Hearing, and Speech, and of the "vision of God" (*ḡḡāḡ Allāh*), which are considered as *saṁ'iyyāt*; and (b) the "acts of God" (*af'āl* *ḡḡāḡ*). The *ḡḡiyyāt* must always have a scriptural basis, but a basis which reason, for its part, can prove by apologetic arguments. The other subjects, such as prophecy, eschatology, the "statutes and the names", the "command and prohibition" (*imāma*), are *saṁ'iyyāt*. The great classic of al-Djurgānī, the *Sharḥ al-Mawḡib* (8th/14th century) for example, has six principal sections; five of these treat of 'akliyyāt, and one only, the final section, comprises all the subjects called *saṁ'iyyāt*. (L. GARDET)

AL-AKRA' = HĀBIS b. 'UKĀL = MUHAMMAD b. SUFYAN b. MUḡĀRĪT' b. DARIM, Tamimite warrior. Al-Akra' is an epithet ("bald"); his proper name (Fīris i Dull 2) is disputed. He is said to have been the last judge in the *djāḡiyya* at 'Ukāz, having inherited this office (which was a privilege of Tamīm) from his ancestors; he performed this duty until the rise of Islam, giving his judgments in *saḡ*ī' (al-Djabbār, *Bayān*, i, 236). He is said also to have been the first to prohibit games of chance (*ḡimār*), but was accused of partiality in the controversy between Baghlā and Kalb. He took part and was captured in the battle of Zuhāla (or Salāmā), according to al-Balāḡhūrī and Yāḡūt; and was freed by Bistām b. Kays. Another exploit of al-Akra' was the raid on Naḡrān after the battle of al-Kulāb al-ḡhānī (see al-Nabāḡī, 46, 448; Ibn Ḥabīb's statement (*Muḡabbar* 247) that he took part in al-Kulāb al-awwal is due to a confusion with his ancestor Suṭyān; see *Aḡḡānī*, xi, 67). Ibn Ḥabīb also states that he was one of the *djāḡidīn*, who succeeded in uniting a whole branch of his tribe, the Banū Ḥanzala, under his banner. According to Ibn Kutayba (*al-Ma'āḡir*, 194) and Ibn al-Kalbi (quoted in the *Iḡḡāḡ*) he was a Zoroastrian (*maḡḡḡī*); this is of importance for the estimation of Persian influence on some sections of Tamīm.

Nothing is known of his attitude towards Muhammad up to the time when he joined the Prophet in al-Sukra during the expedition to Mecca in 8/530. He took part in the conquest of Mecca and was one of *al-mu'allafā ḡulāḡuhum* who were presented with gifts, which gave occasion to a famous verse of 'Abḡb b. Mirdās. He took part also in the battle of Hunayn and refused to return his booty, in spite of the Prophet's request. (For Muhammad's somewhat negative opinion of him see also Ibn Ḥishām, iv, 139.) He participated later in the deputation of Tamīm to the Prophet, the traditional account stressing his arrogant conduct; nevertheless, he was appointed to collect the *ḡadāḡ* of part of the Banū Ḥanzala (*al-Anṣāb*, x, 970). Together with other chiefs of Tamīm, he interceded for the captives of the Banū 'l-Anḡar, and was a witness to a letter despatched by the Prophet to Naḡrān.

During the *riḡḡa*, according to Sayf (al-Tabarī, i, 1920), al-Akra' and al-Zubīrān proposed to Abū Bakr to guarantee the allegiance of Tamīm against the grant of the *ḡharāḡī* of Bahrayn, and it was only 'Umar who prevented Abū Bakr from accepting the proposal. In view of the situation of Tamīm at this period, this tradition does not seem trustworthy, but it may reflect 'Umar's attitude towards al-Akra' (cf. *Bayān*, i, 235, and 'Uṣṣun al-Aḡḡār (Cairo), i, 83). Sayf relates also that he took part in the battle of the *riḡḡa* alongside ḡhālīd b. al-Walīd, and was in the vanguard at the battles of Dūmat al-Djandal and al-Anḡar. His name is last mentioned in 32/552-3, when he was sent by al-Aḡḡar b. Kays to subdue Ṭijrān; he must have been a very old man at that time. Al-Balāḡhūrī mentions that his descendants lived in Khurāḡān.

'AKRAB (a.), scorpion. This branch of the *arāḡḡida*, which is met with as far north as lat. 43°, includes, in Asia and Africa, some species whose sting produces effects of a more or less serious nature, and sometimes even death. For this reason the scorpion has always haunted the imagination of oriental peoples; it has found a place among the stars (a constellation and the 8th sign of the Zodiac are named after it), and has played some part in the magic and the interpretation of dreams. As a protection against its sting, magic formulas and, later, verses of the Kur'ān, were used, engraved on rings and other talismans; according to the Traditions, Muhammad saw no objection to this practice. The observations of Arab naturalists, who claimed that the scorpion escaped from pain and intense heat by committing suicide, and that the female carried its young on her back and ultimately perished in this way, have been confirmed in modern times.

The behaviour of the scorpion when confronted by human beings, and the effect of its sting on different victims, were noted at an early period; different species were identified; but above all, efforts were made to discover a remedy against its sting. The best method, apart from sucking the venom from the wound, was to cut the animal open and place it on the affected part. The scorpion was played an important part also in Arab medicine; its ashes were an effective remedy against calculus; its roasted flesh would cure the eye complaint known as *rib al-sabal*. Scorpion oil (*dahn al-akārib*), prepared in various ways, was considered to possess particularly curative powers; it was used in the treatment of malignant sores, sciatica and pains in the back, orchitis, and falling hair. In addition, cases are quoted in which hemiplegia and fever were cured by a scorpion sting.

On the use of scorpions in war see al-Djābir, *Hayawān*, v, 358; Elliot and Dowson, *History of India*, v, 550-1. In Arabic literature, the name "scorpion" occurs quite frequently, and always typifies treacherous hostility (*Hamāsa*, ed. Freytag, 105, verse 1; 156, verse 2; *Hadisat al-himn*, no. 3, verse 24; *Maṭaladīyāt*, ed. Thorbecke, no. 19, verse 12; Nāḥiyya, ed. Ahlwardt, no. 1, verse 4), or mockery ('Urwā, no. 15, verse 2), or calumny ('Urwā, no. 5, verse 6; Farazdaq, *Dihān*, no. 61, verse 3), and similarly in proverbs (Freytag, *Proverbia*, no. 902). The three coldest days of winter (the new moons of November, December and January) were, on account of their "biting" cold, called "the three scorpions" (*Calendrier de Cordoue*, 10).

**'AKRABĀ'** is the name of two localities:  
1. A place on the frontier of Yamāma, famous for the bloody battle in which Muṣayyima and the Banū Hanifa were defeated by Khālīd. In its neighbourhood was a grove (*kaḥlāb*), surrounded by a wall and, before this battle, known by the name of "Rahmān's garden"; later on it was called "garden of death".

**Bibliography:** Tabari, i, 1937-1940; Balādhurī (de Goeje), 88; Yāqūt, *Mu'jam* ii, 226, iii, 694-2. A place of residence of the Ghassanid princes in Ḥawāṣin; it is probably identical with the present 'Akraḥ' in the province of Ḥaḥl.

**Bibliography:** Yāqūt, iii, 695; Noldeke, in ZDMG, xxix, 430; cf. in ZDFV, xli, the map of the Ḥawāṣin A B 3. (F. BOUTI)  
**AKRĀBĀDHIN**, or *Karābādhin* from Syriac *grādhān*, reproducing Greek *γρᾶδῖον*, "small treatise", was used by the Arabs as a title of treatises on the composition of drugs, or pharmacopoeias, while the simples which went into the composition were designed by the term *al-sadiya al-murāda* [q.v.].

The practice of pharmacology. In the hospitals pharmacological instruction very early made an important part of the medical training. That the big hospitals had a pharmacist on the staff we can infer e.g. from the *al-Sayda fi 'l-Tibb* of al-Mirīnī. The rapid increase in the materia medica, not only of Greek but also of Iranian and Indian origin certainly called for a special body of

men and for the separation of the pharmaceutical from the medical profession. In ordinary outdoor practice the doctor may have prescribed and compounded his own mixtures (cf. C. Elgoud, *A medical history of Persia and the Eastern caliphates*, Cambridge 1951, 273 f.). As a rule drugs were bought separately from the druggist (cf. al-'Aṣṣār), and then compounded. The *muṣṭash* had to give heed to the various ways in which drugs were adulterated (cf. Ibn al-Uḥḥuwwa, *Ma'ālim al-Kurba* (Levy), ch. 25). The practice of preparing substitutes for certain simple drugs is attested by the philosopher al-Kindī who wrote a treatise containing recipes for the preparation of substitutes for rare drugs (*Kitāb al-'Iṭr wa 'l-Ta'wīd*, (K. Garber), Leipzig 1948).

Pharmacological literature. Galen's *De medicamentorum compositione secundum locos et genera* had been translated into Arabic, under the title *Kitāb Tarkīb al-Aḍwiya*, by Ḥubaysh from the Syriac of Hunayn b. Isḥāq (cf. G. Bergsträsser, *Hunayn bin Isḥāq über die syrischen und arabischen Gabeisungsverfahren*, Leipzig 1925, 23 f.). We are told that surgeons, before they could practise, were obliged to make themselves masters of this work (cf. Ibn al-Uḥḥuwwa, ch. 45).

The first pharmacopoeia to receive universal acceptance throughout the caliphate was written by the Christian physician Sūbūr b. Saḥl (d. 235/869), of the staff of the hospital of Iḡḡuday Sūbūr. According to Ibn al-Nadīm (Fihrist, 297) it contained 22 chapters, according to Ibn Abī Usayb'a (*'Uyūn al-Aḥḥād*, i, 161) 17 chapters. It was in common use until the publication of the *Akrābādhin* of Amīn al-Dawla Hibat Allāh b. Sa'īd b. al-Tilmīdh (d. 560/1165). Ibn al-Tilmīdh was a court physician to al-Muḥtafi and to his successor al-Mustajīd and attached to the 'Aḥḥadī hospital in Baghdad. Besides the *Akrābādhin* in 20 chapters he wrote a compendium *al-Maḥḥad al-Biharī* (written for use in ordinary hospitals (Ibn Abī Usayb'a, i, 276). Manuscripts of these works or of parts of them have come down to us (Brockelmann, i, 642 and S I, 888), as have also manuscripts of the *Akrābādhin* of the famous physician and philosopher Abū Bakr Muḥ. b. Zakariyyā' al-Kāzī (Brockelmann, i, 269). Of 14 the pharmacopoeias written in the East, the *Akrābādhin* of Badr al-Dīn Muḥammad b. Bahrām al-Kāzī, who wrote in the year 590/1194, is also worth mentioning. In this work, of which several manuscripts have come down to us, the author quoted the *Hāwī* and the *Tibb al-Mansūrī* of al-Kāzī, the *Kānūn* of Avicenna and other works (Ibn Abī Usayb'a, ii, 31). Of the great medical compilation written by Naḥīm al-Dīn Mahmūd b. Yūsuf al-Shīrāzī (d. 730/1320), the 5th part, containing a treatise on compound drugs, was edited by F. F. Guigues (thesis, Paris 1902).

In Egypt the Jewish physician Mūsā b. al-'Aṣār (Moses b. Eleazar) wrote an *Akrābādhin* for the Fatimid caliph al-Mu'izz (Ibn Abī Usayb'a, ii, 36). In the hospitals of Egypt, Syria and Ṣūṣ the *al-Dawār al-Biharī* of Abū 'l-Faḍl b. Abī 'l-Bayṭār (publ. by P. Shacht in *BE*, 1933, 15-28) was in common use until it was replaced by the *Minhādī al-Duhān* of Ibn al-'Aṭṭār al-Isrā'īlī which was published in Cairo in 658/1260 (Brockelmann, i, 648).

In Muslim Spain the study of the text of Dioscorides seems to have inspired an exclusive confidence in the simple drugs. We are informed by Ibn Abī Usayb'a (ii, 49) that the famous physician Ibn

Wafid (d. after 460/1068) very seldom prescribed a compound drug. Like his contemporary 'Abd Allāh b. 'Abd al-'Azīz al-Bakrī, who wrote an inventory of the plants and trees of al-Andalus (Ibn Abī Usayb'a, ii, 52), Ibn Wafid seems to have been an enthusiastic adherent of the Dioscoridean tradition in medicine. This is true also of al-Shāhīdī, the most important pharmacologist of Muslim Spain. In the Latin tradition the *Grabin* of Mesue Junior (according to Leo Africanus this work was written by a certain Māsawayh al-Mārīndī, who died in Baghdad in 1015, and translated into Latin by a Sicilian Jew) was for centuries the recognized authority on pharmacy throughout Europe and became the basis of later official pharmacopoeias.

For the medical principles underlying the composition and administration of drugs see *TIBB*.

(B. LEWIN)

**'AKRABĀ'** [plural: 'Akārib], a South Arabian tribe in the neighbourhood of Aden. Their territory, stretching on the coast line from Bū'r Ahmad to Ra's 'Imrān, is very small (a few square miles only). It is crossed by the lower part of the river (Lahij), which here is nearly always dry; as rain is almost lacking, the soil is barren and yields but little fruit. The chief town is Bū'r Ahmad, with a few hundred inhabitants and the castle of the sultan. The 'Akārib, according to the Rasūlīd al-Aḥḥadī, *Turjāt al-Aḥḥadī* (Zettersteden), 56, 57, belonged to the Kaḍā'a (text obscure; according to 56 to the branch of Banū Majīd, according to 57 to that of al-Shawālī). The identification by A. Sprenger, *Die alte Geogr. Arabien*, 80, with the Agraai of Pliny, is very doubtful. Their chief, Maḥdī, threw off the allegiance of Lahij and became independent about 1770. Haydara b. Maḥdī, a descendant of the former, signed a treaty of friendship with the British in 1839. 'Abd Allāh b. Haydara various treaties in 1857, 1863, 1869, and the treaty of protectorate in 1888. (The animosity always latent between them and the 'Abdālī led to open war as late as 1887, when the latter besieged Bū'r Ahmad; peace was restored by British intervention.)

**Bibliography:** H. v. Maltzan, *Reise nach Südarabien*, Braunschweig 1873, 314-23; C. U. Aitchison, *A collection of Treaties etc.*, xi, 99, 158 ff. (J. SCHLEISER-M. M. STERN)

**AKRĀB** [see KURĀB].

**'AKS** [see BALĠĠĠA].

**AKSARĀ'** [see AK SARĀV].

**AKḤAM** b. SAYFĪ b. Rīyān b. al-Ḥārith b. MUKHARRAB, ANḤ HAYDA (or Abū 'l-Haffād, *Anḥ*), the verse quoted there is, however, attributed in *K. al-Mu'ammari*, 92, to Raḥī' b. 'Uzayy, also tribe of Tamīm, was one of the judges of the *al-Balāḥiyya*. The biography of Akḥam consists mostly of legendary stories. Numerous traditions tell of missions by kings and chiefs to ask advice from him. The utterances of Akḥam contain wise sayings about life, friendship, behaviour, virtue, women, etc. His personality as reflected in these sayings may be compared with that of Luḥmīn, to whom some of the wise sayings attributed to Akḥam are actually attributed in other traditions.

Akḥam is famous as one of the *mu'ammari*. Muslim tradition tries to bring him into relation with the person of the Prophet and stresses that Akḥam approved of Islam; he is even said to have, spurred on by his people to embrace Islam, and to have died as a martyr on his way to the Prophet, but these traditions are certainly spurious.

Akḥam is said to have had descendants in al-Kūfa, particularly the *kaḥī* Yahyā b. Akḥam.

(M. J. KRISTE)

**ĀL** (ar.), the definite article, see *TĀ'ĀL*.

**ĀL**, the clan, a genealogical group between the family (*ash*, *'ā'ila*, [q.v.]) and the tribe (*bayy*, *hablā*, [q.v.]), synonym of *'aḥḥad* [q.v.]. In this sense, the word occurs in the title of sūra iii, *sūrat al-Imrān*. The *āl* of the Prophet are the descendants of Ḥāshim and al-Muṭṭalib; when the *Shī'a* restricted this concept to his nearest relatives and descendants (see *ASH*, *al-BAY*), the Sunnis enlarged it so as to include all his followers (cf. Lane, *Lexicon*, s.v.). Later, the term came to mean the dynasty of a ruler, e.g. *āl 'Uḥḥmān*, the Ottoman dynasty, *āl Bū Sa'īd*, the dynasty of the rulers of 'Uḥmān and Zanabir, *āl Fayyāl al-Su'ūd*, the official title of the Saudi Arabian dynasty. (E. J.)

**ĀL**, demon who attacks women in childbirth, a personification of puerperal fever; cf. ZDMG, 1882, 85; Goldziher, *Arab. zur arab. Philologie*, i, 116; H. A. Winkler, *Salomo und die Karina*, 104-7. (A. HAFNER\*)

**ĀL** [see SARĀB].

**ĀLA** "instrument", "otensil" (synonym of *add* plural *adawāt*).

i. In grammatical terminology, *āla* and *add* are found in expressions like *ālat al-ta'wīf* "instrument of determination" (= the article *al*), *ālat al-taḥḥīḥ* "instrument of comparison" (= the particle *ka*) etc. The term *āla* (like *add*) does not seem to have been used by the Arab grammarians of the 3rd/9th century; in works such as that of Ibn Fāris, the word *add* is only met with once. Towards the end of the 13th/14th century the term *harf* ("particle") may be regarded as signifying also the grammatical "instruments" later called *āla* and *add*. This usage seems to imply a distinction between the idea of "casual action" (connected with *harf*) and the idea of "syntactic function" (represented by *āla* and *add*), leading to the expression of "determination", "finality", "comparison".

**Bibliography:** Ibn Fāris, *Saḥīḥ*, 102; al-Tahāwī, *Kaḥḥīf* *al-ḥalālāt al-Fawān*, ed. Sprenger, Calcutta 1862, art. *add* and *āla*. (R. BRACKEN)

ii. In the classification of sciences *āla* is the name of such attainments as are acquired not for their own sake (as an end in itself), but "as a means to something else", as e.g. philosophical sciences and logic, as ancillary studies of the religious sciences and *'alim al-dīnya* in contrast to *al-'ulūm al-shar'īya*. Cf. the expression *āla al-mundāma*, i.e. knowledge and accomplishments which are useful in social intercourse. Consequently that what is called *āla* differs from what is called *adab* [q.v.] only in so far as the former takes into account the attainments in the religious sciences, i. e. The appellation *āla* corresponds exactly to the expression *ἐπὶ τῶν* in the classification of the philosophical sciences by Tyrannion of Amisus;

see H. Ueumer, *Philologie und Geschichtswissenschaft* Bonn 1889, 21.

*Bibliography*: *Ghazālī*, *Ḥayy*, *Kutāb al-ʿIlm*, ch. II (*Ḥikāf al-Sāda*, I, 149); Suseok Hurgonje, *Mekka*, II, 206; Goldthorpe, in *Stenographische Zeitschrift*, 114 (with further references). (I. GOLDTHORPE)  
iii. Logic is called *alā*, following the peripatetic view according to which it is an instrument (*ḥayy* 'yawl', not a part of philosophy (cf. Goldthorpe, in the bibliography of II, above); S. van den Bergh, *Aurores Epitome de Metaphysica*, 145; al-Bīrūnī, introd. to *al-Ḥayyāna* (ed. M. Meyerhof, in *Quellen u. Stud. u. Gesch. d. Naturw. u. Med.*, 1932); and MANTIKH.

For other meanings of *alā* see *ḤAYY*, NAWBA.

**ALA DAGH** (ʿā), 'mountain of various colours', name of various mountains. (1) In N.W. Anatolia, near Bolu. (2) In the Taurus range. (3) In E. Anatolia, near the springs of the Murād Şu, N. E. from Lake Wān; it served as summer headquarters for the Ilkhānids. (4) In N.E. Persia, S. of the Atrak. (5) In Central Asia, between Drungaria and the basin of Lake Balkash. (6) Between the Isik Kōl and Aloua Ata. (7) In Siberia (in Russian Kunzets Mountains), N. of the Altai Mountains. (8) The local pronunciation for the last three is *Ala Taw*.

**ALA SHEHR**, 'the motley-coloured town', town in Anatolia at the foot of the Boz Dağ (ancient Tmolus), near the Kuzu Cay. In antiquity and in Byzantine times the town, called Philadelphia after its founder, Attalus II Philadelphus, played an important role (see Pausanias, *Strabo*). It was taken, together with the other towns of Phrygia by Süleyman b. Kathunagh in 1075 or 1076, but was recaptured by the Byzantines in 1093 and served as an important base in their operations against the Saljuks. According to Ibn Bībī (Houtsma), 37, the battle between the emperor Theodore Lascaris and the Saljuks Kay Khusrav I, in which the latter lost his life (607/1210), was fought near the town (here called for the first time *Ala Shehr*), but this is not borne out by the Byzantine historians. The town was besieged by the Gerniyan-oghlu Ya'qub I in 1305, but was relieved by the Catalan mercenaries; as a result of repeated sieges by the Gerniyan-oghlu (1307 and 1324), the town was reduced to the payment of tribute. Subsequently, the tribute was paid to the Aydin (though the statement of the *Düstūr-nāme-yi Isfahānī*, that it was actually captured by the Aydin-oghlu Timur Beg in 1335, does not seem to correspond to reality). *Ala Shehr* was captured, the last of the free Greek cities in Asia Minor, by Bāyezīd I in 1394/1391, but passed in 1402 into the possession of Timur, and subsequently into that of Ḥumayd Beg, until it came finally under Ottoman dominion in the reign of Murād II. In Ottoman times the town did not preserve its former importance and was only the capital of a *ḥaḍā* (of the *vilāyat* of Aydin, later of Manisa). Between 1291-25 it was occupied by the Greeks. In 1890 the town had 17,000 Muslim, 400 Greek inhabitants (Cuiet); in 1945 the town counted 8,883 inhabitants (all Muslims), the *ḥaḍā* (I, 115) 59 km. 45, 794.

**'ALĀ' AL-DAWLĀ** (see KAWAWAYMA).

**'ALĀ' AL-DAWLĀ AL-SIMNĀNĪ**, RUKN AL-DIN ABU 'L-MAKKĪM AHMAD B. SHARAF AL-DIN MUH. B. AHMAD AL-BAYRĀNĀKĪ, important mystic, born in Dhu 'l-Hijja 659/Nov. 1261 in Simnān (Khurasān) of an illustrious and rich family (see SIMNĀNĪ). When he was fifteen, he left Simnān and entered government service. Under the Ilkhān Arghūn his father became governor of Baghdād and the whole of Iraq, his paternal and vicar, and his maternal uncle *ḥādī* 'l-mawālīd. In the course of a campaign in 683/1284 against Arghūn's uncle, Simnānī experienced near Ka'bin a vision of the other world, and though he remained until mid-Sha'bān 685/beg. Oct. 1286 in the service of the Ilkhān, he was then allowed to go on leave to Simnān, where he found his way, after examining his conscience, to Sunni Orthodoxy and Sūfism. He performed spiritual exercises with the aid of Abū Ṭālib al-Makkī's *Kut al-Kawāb*, until he made the acquaintance of *Aḥḥā* Sharaf al-Dīn Sa'd Allāh, by whom he was taught a particular form of remembering God's (*dhikr*), viz. throwing the head swiftly hither and thither; this resulted after only one night in powerful manifestations of light. Simnānī decided to join as a novice Nūr al-Dīn 'Abd al-Rahmān al-Kasrīkī al-Isfahānī, by whose command Sa'd Allāh had visited him; so in Muharram 686/Febr.-March 1287, instead of returning to Tabriz, he travelled in *ḥif* dress to Baghdād, where Kasrīkī lived. He was, however, stopped in Hamadān by Arghūn's men and was carried to Shārizayr, where Arghūn was founding the city of *Shārizayr* (later completed by Ulgıyāt). He succeeded, as a result of successful disputations with Buddhist monks (*ḥāḥḥā* < *ḥāḥḥā*), who played a great role at the court, in appeasing the Ilkhān's anger, so that he was asked to remain at court at least as a Sūfi. After staying, rather unwillingly, for eighty days, Simnānī escaped to Simnān, which he reached in Simnān 686/Oct. 1287. Arghūn, having ascertained that he had not gone to Baghdād, left him alone. Sa'd Allāh, who had in the meantime visited Baghdād, brought for Simnānī the *ḥayyā* of Kasrīkī, in whose name he entered the *ḥalwa* in Simnān, in Shawwāl 687/Nov.-Dec. 1288. After the dismissal of his father and the execution of his uncle, (for the date see SIMNĀNĪ; 'Alā' al-Dawla's own statements vacillate), he succeeded in reaching Baghdād, where for the first time he met his *shaykh* Kasrīkī personally (Ramādān 688/Sept. 1289). Simnānī entered the *ḥalwa* in the Masjid al-Khalifa and undertook, in obedience to an order by Kasrīkī, the pilgrimage to Mecca and Medina. He returned to Baghdād in Muharram 689/Jun. 1290, entered the Baghdād for the second time in the *Shūṭiyya*, and, after returning to Simnān, where he began to instruct Sūfis in the *ḥikmah* al-Sakkāfi. After a life of extensive educational and

literary activity he died in his monastery, Süfiyāhād-Khūṭānīd, in Simnān, on 22 Rajab 736/6 March 1345.

Simnānī was a Sūfi; he condemned the *Shūfi* tendencies of Ulgıyāt and praised the amir Ḥubān, who did not share them. In spite, however, of his zealous advocacy of war against unbelievers, he rejected the idea of a revolt against *Shūfi* oppression and advised, with Hasan al-Baṣrī, to show patience under oppression, though not to withhold exhortation or prayer for improvement. In the *Shūfi* he appreciated the love of the Prophet's family, but deprecated their hatred of 'Alīya. He adapted the *Shūfi* belief in the disappearance of the twelfth Imām to his doctrine of the *ahādī*, who according to him, was raised after his disappearance to the grade of *ḥaf* and then, after 19 years, died. By his *shif* affiliation he was a Kubrawī (Simnānī-Kasrīkī, d. 717/1317 — Ahmad al-Jurāfānī, (Görpānī), d. 669/1270 — Rajā' al-Dīn 'Alī al-Lālā, d. 642/1244 — Naḍīm al-Dīn al-Kubrā, d. 618/1221), but he also venerated, in addition to this line, other *shaykh*s, and more especially Abū Ḥaf's Umar al-Suhrawardī (d. 632/1234). He also took as a model the Kubrawī Majd al-Dīn al-Buḥārī (d. 616/1212), whose name he sometimes inserts between Lālā and Kubrā. He was impressed by Djalāl al-Dīn al-Rūmī, but advised caution. He admired also Ghazālī, but blamed in him the excess of theory over experience and the abundance, in some of his writings, of philosophical (Avicennian) ideas. Simnānī's main opponent was Ibn 'Arabi, against whose pantheistic ideas he kept up continuous polemics, not only in his books, but also in his correspondence with 'Alā al-Razzāk al-Kāshānī (d. 730/1330). He accused Ibn 'Arabi of idolizing a verb (*ḥayy*), by his identification of Being (*wujud*) and God; he himself considers Being as an attribute (*ḥayy*) or accident, which, though it is eternally inherent in God, is distinct from His essence (*ḥayy*). For this reason the last degree of the mystic is not *taḥḥīd*, but '*ḥayy*. The only presence of man in God is the grace of inner purity (*ḥayy*), by which he is enabled to reflect the higher things. To become a mirror in this sense is the aim of manhood and mysticism. Simnānī's doctrine was later elaborated by the *ḥayy* Ahmad al-Sirhindī (q.v.), d. 1035/1626) who opposed this reversion to *ḥayy*, *ḥayy*, to the *wujud* of Ibn 'Arabi.

Simnānī shared with Kubrā a strongly mediomystic nature and a preference and capability for visionary experience. He had a particularly refined feeling for spiritual vibrations in his environment; out of a deep sense of the living presence of Khadīr, he insisted on saying 'the Lord' Khadīr; and at places where he attempted to contact the spirits of the great dead (*ḥayy*), he registered the slightest oscillations of experience. Like most of the Kubrawīs, in mystical training he accepted the so-called 'eight conditions of *ḥayy*' (see Meier, *Faḥḥ*, index), about which we have different statements by him. In addition to the particular *dhikr* of Kasrīkī (cf. above) he had another, viz. the recital of certain formulae in four beats; the *ḥayy* being drawn as it were from the navel, the *ḥayy* sunk into the right side of the breast, the *ḥayy* raised from there, and the *ḥayy* thrust into the left side of the breast, the heart (cf. for the recital of this *dhikr* in two beats Naḍīm al-Dīn al-Dāya, *Mirdād al-ḥayy*, Teheran 1312/32, 151, and for another practice, 'Alā' Nāsaf, in *WZKM*, 1933, 163). Simnānī also practised listening to music (*ḥayy*) and fed in his monastery passing

travellers. The greater part of his possessions he left as *ḥayy* for the Sūfis of his persuasion; he disagreed with the view that the Sūfi must have no material possessions, though he demanded that each individual should give away all he had. He denounced begging and in general insisted, in the interest of humanity, upon the most intensive cultivation of the soul, another feature which connects him with Kubrā and his disciple, Sayf al-Dīn al-Bāḥarī. Simnānī aspired to a great number of disciples, hoping that there would be amongst them at least one chosen one. His most important, and for a time most beloved, disciple seems to have been 'Alī al-Dīn, who became teacher of 'Alī al-Hamadī. Names of other disciples are to be found in *ḥayy* al-Sistānī's collections of Simnānī's apophthegmata, and those in *ḥayy*, *Nafāḥāt al-Uroa*, 510-14 and the *ḥayy* al-'Askānī, *al-Durar al-Kāmina*, I, 251. Some of them bore the title of *ḥayy*.

There exists as yet no critical bibliography of Simnānī and none of his works has been published. For the works in Persian, cf. the catalogues of MSS and for those in Arabic, Brockelmann, II, 263, S. II, 281 (eleven *ḥayy* al-Sayyid *ḥayy* and *Tadh* al-Sayyid, *Maḥḥā*, *Maḥḥā* al-Kawāb, *al-Uroa* I, *al-Khawāb* and *Safaw* al-Uroa belong together as different versions of the same work and can be exactly dated: the first 711/1311 (MS *Shahid* 'Alī 1378, not 1328), the second Ramādān 720/Oct. 1320-23 Muharram 721/Dec. 1321, and the last *ḥayy* al-Dīn 728/Oct. 1328-18 Dhu 'l-Hijja 728/Dec. 1328. Some of the surviving MSS are excellent; MS 'Aḥḥā I 482 of the *Uroa* reproduces the autograph, Lālel 1432 of the *Safaw* is dated Süfiyābād 733/1333 and was thus written in the lifetime and perhaps under the eyes of the author). The book *Fadh* al-Sharīf (MS Fayd Allāh 2135, not 2133) should probably be called more correctly *Fadh* al-Tarīk; it is once quoted by Simnānī himself, in accordance with the sub-title of part I, as *Tabyin al-Mahmūd wa-Tabyin al-Daradīst* and dates from 712/1312-3. The treatise *Mā lā ḥadd fi 'l-Dīn* is in Persian and the treatise on Simnānī's *ḥayy* affiliation, also in Persian (MS Paris 159, 10) is called not *Tadh* al-Kubrā, but *Tadh* al-Maghāyib. Of great importance for Simnānī's biography and mystical and Sūfi collection of his sayings, made by his disciple Ḥabīb al-Sistānī and preserved in several MSS under the titles of *Ḥayy* *ḥayy*, or *Mafḥūḥ* al-Shaykh 'Alā' al-Dawla-yi Simnānī, etc. On this is based the greater part of *ḥayy*, *Nafāḥāt*, 504-15.

*Bibliography*: Autobiography in *Maḥḥā* 'Uroa, *Safaw*, *ḥayy* al-Sistānī and *ḥayy*, see above; Nūr al-Dīn Djalāl Badakhshī, *Khūṭānīd al-Mahmūd* (MS Berlin, in Persch no. 6, 6; MS Oxford, in Etbe, no. 1264); Dawlatshāh, 251-2; 'Alī b. al-Husayn al-Wāḥid al-Kāshānī, *Rasāḥ* 'Ayn al-Hayāt, lith. Lucknow 1905, 35 (correspondence with 'Alī al-Rānīnānī); 'Abd al-Husayn Nawwātī, *Ridāḥ* *ḥayy* al-Sayyid, Teheran 1324, 29-30; Rūḥ Kull Khān Ḥudayyat, *Riḥ* al-'Arifin, Teheran 1316, 178; and other biographical collections; W. Ivanov, in *JASS*, 1923, 299-303; Maulavi Abdul Hamid, *Cal. of the Arab. and Pers. MSS in the Or. Publ. Libr. at Banikpore*, xiii, no. 905; Mir Valiuddin, in *IC*, 1951, 43-51; F. Meier, in *Id.*, 1957, 14 f.; idem, *Die Faḥḥ* al-Jamāl des Naḍīm al-Dīn al-Kubrā, Mainz 1956, 164-165 (F. MEIER).

**'ALĀ' AL-DIN** (see *GHURIDS*, *KHARIZMIYĀN*, *SALJUQS*).

'ALĀ' AL-DĪN BEG (commonly 'ALĀ' AL-DĪN PAŞHA), son of 'Oghmān, the founder of the Ottoman state. His figure remains enigmatic, owing to the absence of reliable documents and the tendentious, and rather legendary, character of the early Ottoman chronicles—the same circumstances which are the cause of so many uncertainties in early Ottoman history. In some sources he is called Erden 'Alī (Ibn Taghribirdī and Ibn Hadjar), or 'Alī. According to the historians he and Orghān were born of the same mother, Māl Khātūn, daughter of the aghā Edebalı; according to a document of 724/1324, however, Māl Khātūn was the daughter of a certain 'Umar Bey—thus there seems to be some error. There are conflicting statements as to whether he was a younger, or an elder, brother of Orghān. The historians relate that after the death of 'Oghmān, 'Alā' al-Dīn (who is said to have stayed during his father's lifetime with Edebalı in Bilejik) refused the offer made by Orghān to assume the direction of the affairs of the state and retired to his property situated in Kotra (or Kudra) in the district of Kere, between Brusa and Mihallıç. H. Hüsnü al-Dīn has put forward the suggestion that in reality the two brothers were rivals for the throne and that this fact was purposely distorted in the historical tradition. (Ibn Taghribirdī and Ibn Hadjar say: "Erden 'Alī succeeded his father".)

According to tradition 'Alā' al-Dīn for some time occupied the post of vizier and commander-in-chief; in effect, in a *wahy* by him, dated 733/1333, he bears titles which imply a military position. H. Hüsnü al-Dīn holds that 'Alā' al-Dīn, while he was commander-in-chief, was never a vizier, but that his figure was conflated with that of a certain 'Alā' al-Dīn Paşa, who was in fact 'Oghmān's and Orghān's vizier. (He is mentioned in a *wahy* of Asporjiz Khātūn, Orghān's wife, dated 723/1323.)

The establishment of various Ottoman institutions are ascribed to 'Alā' al-Dīn: the choice of the coniform cap of white felt as official costume and the organization, together with Djenderli-rāde Kara Khaml, of Ottoman infantry (*yaya*). The responsibility for the introduction of an Ottoman coinage is also credited to him by late historians. (Cf. ORGHAN.)

'Alā' al-Dīn died about 1333; the various accounts concerning the circumstances of his death in late authors (such as Nizāmī and Belgh) are not worthy of credit. His tomb is in 'Oghmān's mausoleum in Brusa.

Descendants of 'Alā' al-Dīn are mentioned in the latter half of the 15th century by Neghri and 'Aghāpaşa-rāde, in the 16th century in land-owners, in connection with *wah* established by their ancestor.—'Alā' al-Dīn founded a *taba* in the Kükrül quarter of Brusa and two *monques* in the fortress of Kaplıda.

'ALĀ' AL-DĪN MUHAMMAD B. HASAN (see ALAM7).

'ALĀ' AL-DĪN MUHAMMAD KHALDĪ (see DİHL, SULTANATE OF).

ALABA WA 'L-KILĀ', 'Alava and the forts', a geographical expression used in the 2nd-3rd/8th-century by Arab chroniclers to denote that part of Christian Spain which was most exposed to the attacks of summer expeditions (*al-shi'a*) sent from Cordova by the Umayyad army. The term Alaba was used more especially to denote the northern part of the Iberian peninsula beyond the left bank of the upper valley of the Ebro. This region was bounded on the west by the territories of Bureba and Castilla la Vieja ("Old Castile" = *al Kila*), which stretched from the left bank of the Orghān, opposite the Puncobro pass as far as the outskirts of the present town of Santander. Alaba to-day the name of a Spanish province, the capital of which is the modern town of Vitoria.

**Bibliography:** E. Lévi-Provençal, *Hist. Esp. Mus.*, i, 143 D. 1. See also AL-ANDALUS (I. LEVI-PROVENÇAL).

ALADDIN (see ALP LAYLA WA-LAYLA).

ALADJA (r.; originally a diminutive of *ala* = spotted, variegated) = chints with coloured stripes (cp. Yule and Burnell, *Hobson-Jobson*, s.v. *Alpja*, 8 and 736); it is also found in geographical names (see for example the next article).

ALADJA DAGH, "mountain of various colours", a name often employed for mountains in Turkish speaking countries; it is the name e.g. (1) of a mountain S. W. of Konya; (2) a mountain, constituting a spur of the Kara Dag in the S. E. part of Kars, near which the Russians defeated the Turks on 16 Oct. 1877.

ALADJA HISAR, "the motley-coloured fortress", the Turkish name of the town of Krusovats, on the south side of the Western Morava. The town was the capital of Serbia under Lazar (who assembled there his army to march against the Turks, and lose his empire, at Kosovo, in 1389) and his son Stephan. It was occupied by the Turks in 1428, after the accession of George Brankovitch, who made Semendria his capital. The town played a role in the Serbian wars and Muhammad II established there a gunfoundry. Aladja Hisar was the capital of a *sandjak* in the eyalet of Rüm-el *g.* The Austrians occupied the town for a short while in 1737; a second occupation lasted from 1789 to 1791, when the town was restored to Turkey by the treaty of Sistova. It was occupied from 1806 to 1813 by the Serbian insurgents of Kara George; in 1833 it was ceded to the autonomous principality of Serbia as one of the "six districts" (cf. G. Gravier, *Les frontières historiques de la Serbie*, Paris 1919, 67 ff.); the small garrison of the citadel, however, had to be starved into surrender.

'ALĀ'YYA (see ALANVA).

'ALĀKA (see ANSA).

'ĀLAM, plural *'ālam* (a), i. "simplist, flag", used in the latter sense concurrently with the Arabic *liwa'*, *rāya*; the Persian *band*, *dirafsh*; and the Turkish *bayrak* = *liwa'*, *sandjak*; see SANDJAK, and compare the Latin *signa*.

It is known that when, before the advent of Islam, the Kuraysh waged war on another tribe, they received from the hands of Kusayy the *liwa'*, a piece of white cloth which Kusayy himself had attached to a lance (Cassius de Perceval, *Essai*, i, 237-8). During Muhammad's lifetime, flags were called indifferently *liwa'* or *rāya*, less commonly 'alam. Tradition, however, says that the flag ('alam) of the Prophet was called 'uhāb. Other traditions contrast the *rāya*, the Prophet's black flag, with his *liwa'*, which was white (*Kans al-'Ismā'il*, iv, 18, no. 346; 45, no. 99). In another tradition the proposal is made to Muhammad that the faithful should be called to prayer by the raising of a *rāya*, but he will not consent to this method of summoning them (*Ibid.*, iv, 264, no. 5461). In yet other traditions, however, *liwa'* and *rāya* appear to be synonymous (*Ibid.*, v, 268, no. 5357; 269, no. 15158). The use of the *rāya* does not seem to have been confined exclusively to Muslims, since, at Badr, Talha carried the *rāya* of the idolaters (*Ibid.*, 269, no. 1565).

Later, flags played an important part in Islam. The Umayyads adopted white, the 'Abbasids black, and the Sh'ites green. Representations of flags occur frequently on various objects, especially in miniatures. One of the oldest representations is that shown on a Persian lustre-ware plate, which unquestionably dates from the 10th century (*Survey*, pl. 577). For other later drawings of flags, see Kratchkovskaya in *Ar. Islamica*, iv, 468-9. Compare also the Moorish flag of the 14th century preserved in Toledo cathedral (Kühnel, *Maurische Kunst*, pl. 149). Banners and standards were also used in Egypt and Syria during the Mamlūk period (see Leo A. Mayer, *Mamlūk Costume*, s.v. *Banner*; Makhlūf, *Étude*, i, 21 ff.; *Al-hisār al-bardī*). There may at this period have been some differentiation in the use of the various words meaning "flag".

In epigraphy, an inscription of Khytāy balances the words *sayf* and *balam* with *band* and 'alam, which seems to suggest that the first term denotes a military standard, the second a religious flag (see J. David-Weill, *Catalogue général du Musée arabe du Caire, Bois à Épiphras depuis l'époque mamlouke*, 57-8; Gauderoy-Demombynes, *Ibn Fadl Allāh, Masālik al-abḥār fi mamālik al-amḥār*, XLV-LVI and 26). Numerous flags with religious inscriptions are preserved in museums; they usually date from the 17th or 18th century and the majority derive from the countries of the Middle East and North Africa. (Cf. among others, a Turkish flag, C. J. Lamm, *Mamlūk Musci Vannors*, *Arshob* 1940; *En Turkish Fans*, *Malmö* 1940.) Some flags are still used in processions conducted by the religious orders.

For Turkish standards see TOEM, SANDJAK. For the emblem of the crescent see DİHL, for that of the lion and the sun, *siḥḥ* u-*ḡuḡḡ*. For heraldic symbols, see *ANSA*.

ii. Proper noun, see ISM.

'ĀLAM (a., pl. 'ālamān, 'ālamīn), world.

1. The word is found as early as the Kur'ān, where in borrowed formulae we have references to the *rahb al-'ālamīn* and the seven *amānat*. Allah is its lord and creator who has created it for man as a sign of his omnipotence. This transitory world (*dunyā*) is of little value—"not worth the wing of a midge" is the traditional expression—in comparison with the next (*ākhirā*). We are told very little about the structure of the world (cf. the article *ḤAKĀL*); the subjects of interest, in the Kur'ān as well as in Tradition, are God, the spiritual world and man.

This became altered as Islam took over the inheritance of Hellenistic eclecticism and especially through the translation of Indian and Greek works on science and philosophy. The huge figures with which the Hindus operated were, it is true, ridiculed, nor were the fables of the ancient Greeks about an endless plurality of worlds beside or in succession to one another, believed nor, from the theological point of view at least, was the belief in the eternity of the world accepted; on the whole however, the picture of the world as given by Greek science was accepted. The teaching of Plato and Aristotle that there is only one universe was naturally easy to reconcile with the monothemism of Islam; cf. *Kur'ān*, xii, 21: "If there were in these two worlds gods in addition to Allah, both (heaven and earth) would perish".

On the scientific development of the cosmogonic teachings of Aristotle and Ptolemy in Islam, see the articles *ḡuḡḡ* (Astronomy and Astrology) and the article *Sun*, Moon and Stars in Hastings, *Encycl. of Rel. and Ethics* (by C. A. Nallino). Here we must confine ourselves to the speculations of the theologians and philosophers regarding the origin and nature of the world in relation to the existence of God and man. They are mainly based on Plato's *Timaeus* or Aristotle's *Ἠερί οὐρανῶν* and Book A of his *Metaphysics* and also on the commentaries of Simplicius and Johannes Philoponus. Of the greatest importance for the Islamic elaboration of the Greek philosophy we have the neo-Platonic "Theology of Aristotle" and to some extent the tradition of Christian dogmatics. In reference to Aristotle's work *Ἠερί οὐρανῶν* ("On the Universe"), it should be noted that according to Hellenistic tradition the title of the Arabic tradition is *fi 'l-Sama' wa 'l-'Ālam* ("On Heaven and the World"). Augustin Müller (*Die griechischen Philosophen in der arabischen Uebersetzung*, Halle 1873, 51) therefore suggested that the Arab translators of the Aristotelian work had added to it the *Ἠερί κόσμου* which is three hundred years later and influenced by the Stoics. But so far no translation of this work ascribed to Aristotle has been found.

All Muslim thinkers ascribed that God is the author of the world although they used different expressions for the coming into existence of the world in distinction to the existence of God: creation out of nothing, emanation (*ḡayf*) or manifestation (*taḡallī*). The image most used, whether emanation or manifestation was talked of, was that of light (*nūr*) which disseminates itself timelessly.

In general, the theologians who adhered to tradition said that the reason for the world was the all-powerful will of God. Mu'tazil thinkers

laid more emphasis on the benevolent wisdom of the Creator, who orders everything well for the good of his servants. Mystics talked a great deal about the overflow of divine love; finally the philosophers in the narrower sense, as well as a few speculative theologians, regarded the world as the product of pure thought, in itself accidental, but necessary on God's part.

The world forms a whole, a unity in plurality. Even the atomist theologians, who denied any interconnection in nature, were of the opinion that no part of the world but only the whole could be destroyed at once by an act or an omission of God.

The world is a plurality. The traditional distinctions between heaven and earth or between this world and the next continued. But Hellenistic mediatorial theories complicated this originally simple universe. From Plato came the distinction between the visible world of beings (*κόσμος ὁρατός*) and the spiritual intelligible world (*κόσμος νοητός*). Aristotle rather emphasised the distinction between our earthly world of origin and decline (*ἅλως ἄρως ἡ γῆ*) and the world of the heavenly spheres. The world of heaven controlled by exalted spirits or souls, consisting of one element entirely, the ether, and provided from eternity with the most beautiful motion revolving in a circle, is far more perfect than the earthly world with its four elementary circles and motions of various kinds. Then came the Stoics who brought God and the world together and worked out a theodicy. Finally came the Neo-Pythagoreans and Neo-Platonists, who took over a great deal from Aristotle and the Stoics, but with Plato, and much more decidedly than he, transferred the central point into the world of God and of pure spiritual existence.

This is the starting point of the cosmological speculations of the Muslim thinkers just as it was for the Gnostics and the doctrine of the Eastern Christian church. Since God is the highest being and everything in the most exalted sense, so also is He the first world. The mystics in Islam (cf. al-Djīlī, *al-insān al-kāmil*, ch. xff. and Horten, *Die philosophische System von Schirāzī*, Strassburg 1911, 36, 276 f.) in so far as they were influenced by Christian dogmatics, ultimately talked of five worlds: 1. the world of the divine being; 2. of His names; 3. of His qualities; 4. of His actions; 5. of His works. Others established mediation between God and the world by triads and tetrads. Emphasis on three qualities of God was very common: power, knowledge, and life (in speculation these were no doubt interpreted as the power of the Creator, the knowledge of the *ʿālm* and the life of the soul). God's spheres of activity in the world were determined according to his qualities. When for example al-Ghazālī speaks of three worlds (*ʿālam al-mulk, al-malakūt, al-jabarūt*), this looks like a triad for the spheres of the Creator's power (for Ghazālī's immediate sources see Wensinck (*Ibīl*)).

To distinguish three or four worlds the philosophers as a rule used the neo-Platonic terminology from the "Theology of Aristotle": the world of the mind (*ʿālm*), of the soul (*nafs*) and of nature (*tabʿa*). The soul of man is there the centre of interest which, although associated with a mortal body, remains, in so far as it is intelligent, always associated with the highest world, its origin and the goal of its long march through the intermediaries of the world soul and the world intelligence. From the point of view of this soul, only two worlds

are as a rule mentioned: the physical and the spiritual, the lower and the upper world. If it is desired to define more closely the sphere ruled by the soul it is called the world of the heavenly spheres and its site (*ʿālm*) is transferred to the sphere of the fixed stars. The world of pure intellectual being has a superheavenly site (*al-ʿālm al-ʿālī*) and nature has its special sphere of operation in the sub-lunary world.

It is not possible here to go into the modifications of this cosmogony in the different philosophers. The main object in all cases is to indicate the different stages of being and parallel with them the stages of cognition. The world is a man on a large scale and man a little world. Now man is made up of a natural body, a conceiving soul and a pure intelligence. The sub-lunary world is therefore also called the world of sensual perception (*shakāda*, *hiss*); the world of the heavenly spheres that of allegorical conception (*uḥm*, *lahayyūl*), if we assume, e.g. with Ibn Sīna that the souls of the spheres possess a power of imagining (Ibn Ruḡḡd denies this); and the super-heavenly world that of pure thought or of intellectual observation (*ʿālm, nazar* etc.).

Of the great deal that could still be said let us only emphasise one thing in conclusion, that is the optimism of the philosophers, who with the Stoics regard this beautiful world as the best possible and with Plato and Aristotle they make it last for ever. Al-Fārābī, for example ("Model-State", Arab. text, ed. Dieterici, 27), sees in the present order of the universe God's goodness and justice. According to the general philosophical view, evil and wickedness are only imperfections without real existence. Even the *ikhwān al-ṣafā*, although they call the physical world a hell for fools and a purgatory for the wise, are quite aware of the amenities of this world and appreciate the splendid life of its kings. The mystics also can be optimistic: everything comes from God and returns to Him. All thus endeavour to regard the relatively better as allied to the absolutely good.

Wensinck, *On the Relation between Ghazālī's Cosmology and his Mysticism* (in *Verh. Ak. Amsterdam*, vol. lxxv, ser. A, no. 6, 1933). (T. de Boer)

2. **ĀLAM AL-JABARŪT**, **ĀLAM AL-MALAKŪT**, **ĀLAM AL-MUṢṢALĀH**. *Ālam*, "world", is used here in the gnostic sense of "sphere of existence". The idea is a common one, and is derived from a dual stream of influences—Plotinian and Iranian: Ismaʿīlī traditions, the Hellenistic philosophers (*kalāsā*), notably al-Fārābī, and the ṣūfī schools. Introduced by the Ṣūfīs of the early centuries of Islam, it became one of the themes of al-Ghazālī, and was adapted and developed by the "master of the *isrāʾ*" and his school. Later, it was widely adopted by the ṣūfīs of the *wahdat al-wujūd*.

Platonist and Neoplatonist stream of influence: the world of sensual perception: *ʿālam al-mulk*, *ʿālam al-ḥakā*, is distinguished from the world of the mind or the world of ideas (*maʿānī*, *muṣṣalāh*). The latter is the *ʿālam al-muṣṣalāh* (or *muṣṣalāh*), translated by Henry Corbin as "world of archetypal images".

Oriental gnostic stream of influence: opposed to the *ʿālam al-mulk* are the worlds of the *malakūt* and

the *jabarūt* (Aramaic terms); and, transcending them both, the world of the *lāhūt*.

*Lāhūt* (antonym of *nāsūt*, "humanity"): the incommunicable world of the divine essence—a word occurring frequently in Hallajian terminology. In general: the world of absolute divine transcendence, and therefore absolutely superior to all other "spheres of existence". For some supporters of Monist tendencies, *malakūt* and *jabarūt* are, as it were, assumed by *lāhūt*; this is then the *ʿālam al-ghayb*, the world of Mystery (uncreated).

*ʿĀlam al-mulk*, a term of Kurʿānic origin, "the world of kingship" (synonyms: *ʿālam al-ḥakā*, *ʿālam al-shakāda*, the latter expression being frequently used by al-Ghazālī); it is the world of becoming, the world here below.

*ʿĀlam al-malakūt*, similarly of Kurʿānic origin, (cf. *Kurʿān*, vi, 75; vii, 185; xxiii, 88; xxvi, 83): "the world of Kingdom, of Sovereignty", of which the *ʿālam al-mulk* is the contingent reflection. It is the world of immutable spiritual truths (*ḥakāʾ*), and hence of the angelic beings, to which are added the *asmi* of Islamic tradition, the Preserved Table, the Pen, and the Scales (see *AL-WAʿD WAʿL-WAʿL*), and often also the Kurʿān. The spiritual reality (*ruh*) which is in man belongs to it. So too do the separated intellects, and hence the human *ʿālm* which partakes of them. Al-Djurdjānī (*Taʾrīḥ*, 24) includes the *nafus* (souls) which are sometimes assigned to the *ʿālam al-jabarūt*. Common synonyms: *ʿālam al-ghayb*, *ʿālam al-amr*. This "world of Sovereignty" recalls the "City of the Angels" of Gregory of Nyssa.

*ʿĀlam al-jabarūt*, a term originating in Tradition, occurring in various *ḥadīṡ* (see A. J. Wensinck, *La pensée de Ghazālī*, 81 p. 2), "the world of (divine) Omnipotence". In general, the place of *barzakh*, an "intermediate" world (some texts, however, are inclined to put this last near to the *malakūt*). To it belong, according to al-Ghazālī, the impressionable and imaginative faculties of the human soul. Sometimes, however, as is pointed out by al-Djurdjānī, following Abū Ṭālib al-Makkī (*Taʾrīḥ*, 77), *jabarūt* is the world of the divine Names and Attributes. Al-Kāshānī assigns to it *ḥadīṡ* (decree of divine predestination); the Preserved Table has also been assigned to it.

*The mutual interrelation of these various "worlds".* (1) The *ʿālam al-muṣṣalāh* can coincide either with the *malakūt*, or with the *jabarūt*, or with both together. It is in fact stated (al-Ghazālī) that the world of sensual perception is the reflection, the image, the copy of the *ʿālam al-malakūt*; cf. the "shadows" of the cave of Plato. In so far as the *ʿālam al-muṣṣalāh* denotes the idea of archetypal images, it also recalls the *jabarūt* and the *barzakh*. To sum up: *malakūt* is the world of pure self-existent intelligibilities; *jabarūt*, the world of the archetypal images and symbols of the contingent world, evoking the idea of "transcendental imagination", in Heidegger's acceptance. According to the Avicennian cosmogony, the active intellects belong to *malakūt*, the celestial souls to *jabarūt*.

(2) Whether this hierarchy of "worlds" is considered as real or as a privileged myth, the *falāsifa*, al-Ghazālī, and the *isrāʾīyyūn* teach, from the standpoint peculiar to each school, how man can elevate himself from the *ʿālam al-mulk* to the two superior worlds. This is the *ḥaḡf* ("unveiling") or *muḡāḡha*. Al-Ghazālī (*Iḡyāʾ*, ii, 17-19) tells us that the heart (*ḥaḡf*) has "two doors", the one open towards the world of the *malakūt*, the other towards the world of the *malakūt* or *shakāda*. Further, referring

to the relationship of the macrocosm-microcosm, the same author sees in man—body, psychic faculties, and spirit—a reflection of the three worlds—*malakūt*, *jabarūt* and *malakūt*. It can happen, however, that the relationship between the two worlds is reversed. The following summary classification can be made: the world of *amr* is opposed to the (perceptible) world of *ḥakā*, and the *amr* combines *jabarūt*, *malakūt*, and *muṣṣalāh*.

(3) Some ambiguity exists regarding the mutual relation between *malakūt* and *jabarūt*: (a) the thesis of al-Ghazālī (cf. above): *malakūt*, the world of intelligible realities to which belong the Angels, "light-substances" (cf. the Ghazālīan text of the *Muḡāḡha al-Amr*) is practically synonymous with *ʿālam al-amr*, the world of Command, of the divine Logos uncreated. The *jabarūt* becomes therefore a refraction of the light emanating from this higher world into an intermediate world of archetypal images, and is *therefore* accessible to the insight of a prophet or a gnostic (*ʿīrī*), who borrows from it symbols for the instruction of the people. In the *Iḡyāʾ*, al-Ghazālī compares the journey through the *ʿālam al-mulk* to the progress of man on earth; that through the *ʿālam al-jabarūt* to a voyage on a ship; that through the *ʿālam al-malakūt* to the progress of a man with the power to walk directly on the waters. Clearly, therefore, the *jabarūt* is the "intermediate" world, "in contact with both the others". It "can be manifested in the visible world, although the eternal Power has linked it to the world of the *malakūt*", says al-Ghazālī in the *Imāʾ*. The superiority of the *malakūt* is also affirmed by Ibn ʿAlīʾ Allāh of Alexandria, etc. (b) In other texts, particularly, it seems, those representing the Ṣūfī line of thought of the *wahdat al-wujūd* (see *ALLĀH*), which itself had its origin in a Plotinian-gnostic tradition, superiority is accorded to the *jabarūt*. Thus in the Turkish dictionary *Maʾrifet-nāme* (cf. Carra de Vaux, in *Bibl.*) the following hierarchy in descending order is given: (1) *ʿarḡ* (divine Throne or Tabernacle), (2) *jabarūt*, (3) *kūrī* (divine Seat), (4) *malakūt*, (5) human works, including Paradise. (The according to W. Montgomery-Watt, apocryphal) Ghazālīan text al-Durra al-Fāḡhira states: the race of Adam, and the animals, belong to the world of the *malakūt*; the angels and the *ḡinn* to the world of the *malakūt*; the "elect among the angels" to the world of the *jabarūt* (cf. Wensinck, op. cit., 99). Or again: the Kurʿān (uncreated), the substantial World of God, "exists personally" in the *jabarūt*, while *islām* (*islām, pāw, naḡr*) belongs to the *malakūt*.

Al-Suhrawardī, "master of the *isrāʾ*", brings together in the same passage (*Iḡmāt al-Iḡrāk*, ed. Corbin, 156-7) the "light which permeates the world of the *jabarūt* and the entities of the *malakūt*". Other passages from the same work sometimes treat of the *jabarūt*, sometimes of the "victorial lights of the *malakūt*", both worlds being the hierarchized places of archangelic or intelligible irradiations (*isrāʾīḡāt*).

The mutual interrelation between the supra-sensory worlds can thus vary. Each case where the worlds are mentioned must be considered in its context, while the indications derived from the etymology can serve as an orientation.

AL-ʿALAM AL-SHANTAMARĪ [see AL-SHANTAMARĪ]

ʿALĀMA, mark of ratification or initialing used in the Muslim west, from the time of the Muʿniyyid dynasty, on all official chancery documents. This ʿalāma, in principle inscribed by the sovereign's own hand in the space provided for the purpose at the head of the document, beneath the *basma*, consisted of a *ḥamza*, which varied under the different dynasties: *al-hamza l'ilāh*, under the Muʿniyyids and Saʿdiyya; *al-hamza l'ilāh wa l-shukr l'ilāh*, under the Hafsīds; *lā ḥaḍra l'ilāh* under the Nasrīds of Granada. The ʿalāma was gradually replaced by illegible arabesque initials, and supplanted, in modern times, by the seal in indelible ink. At the beginning of the 13th century, the chancery Abu l-Walīd b. al-Aḥmar devoted a short treatise, *Mutaʿadda* al-ʿAlāma, to the formula of ratification (cf. *Heptémer*, 1934, 200).

(E. LÉVI-PROVENÇAL)

ALAMAK [see AL-ANBAR].

ʿALAMGIR [see AWRANGZIB].

AL-ʿALAMĪ, the name of an old Jerusalem family, the *nisba* being to one ʿAlam al-Dīn Sulaymān (d. 720/1318). The family traces its descent to Ibn Maḡbir and may have been one of the many Maḡbir families which immigrated to Jerusalem in the 14th century, though Maḡbir al-Dīn hints (ii, 616) that it was of Turcoman origin. Two sons of ʿAlam al-Dīn: Mūsā (d. 802/1399) and ʿUmar (d. 806/1403), succeeded one another as governors of the city (*naib al-saltana*), and keepers of the sacred places of Jerusalem and Hebron (*naib al-karamayn*), and at least three other members of the family became chiefs of police (*amir ḥāḡib*) before this post was merged into the governorship by al-Aḡraf Iḥāl about 857/1453. Muhammad al-ʿAlamī (d. Jerusalem 1035/1628), for whose works see Brockelmann, S II, 470, was one of the more famous ḡafīh al-shaykh of his day in Syria. He conceived the plan of building a mosque near the site of the Place of Ascension on the Mt. of Olives, which the Christians of Jerusalem at first thwarted by appealing to Con-

stantinople. But Shayḡh Muhammad enlisted the support of Shayḡh Aṣʿad b. Ḥasan, the *mufti* of Constantinople (al-Muḥibbī, i, 396), after whom the building, when completed, in 1052/1616 was called al-ʿAṣʿadiyya, and where Muhammad was later buried. Muhammad's teaching was carried on by his nephew Ṣāliḥ (d. 1055/1643), who also became *Shayḡh ḥāḡib* in Jerusalem. Arab travellers to the city in the 18th century mention several ʿAlamīs, chiefly as lecturers at the Aḡṣā Mosque and Hanafī *madrasa*. Early in the present century the Alamīs re-entered administrative life with Fayḍ Allāh (who was also the author of the Concordance of the Kurʿān, *Faḥḥ al-Rahmān*, Cairo 1927, 1935) and his son, Muṣā (still alive).

(W. A. S. KHALID)

AL-ʿALAMĪ, MUHAMMAD B. AL-TAYYIB, Moroccan poet and man of letters belonging to the branch of the *ghurafa* ʿAlamiyyūn (or descendants of the Moroccan saint ʿAbd al-Salam b. Maḡbir [q.v.], who is buried among the *ḡhāḡib*, in *Djabal al-ʿAlam*, north Morocco). Born and educated at Fās, he lived for a while at Mikās, at the court of Maḡwīlī Imaʿnī, and died at Cairo on his way to the Arabia to perform the pilgrimage, in 1234 or 1235/1271-3. He has left a work, which is at once an anthology of poetry and a compilation on certain technical subjects, in which there is much information on Moroccan literary life at the beginning of the 13th/13th century; this work, entitled *al-Anīs al-Maḡrib* *fi-man laḥṭaḥa man ʿUḍāʾ al-Maḡrib*, was hitherto known at Fās in 1335 A.H.

ALAMŪT. (i) The fortress; (ii) the dynasty and state.

(i) THE FORTRESS.

The ruins of the fortress of Alamūt are situated on the summit of a lofty and almost inaccessible rock in the heart of the Alburz mountains two days' march north-north-east of Karwin. According to Ibn al-Aḡlir (x, 131), an eagle indicated the site to a Sassanide king, who built a castle there, hence the derivation of Alamūt from *al-wāḡ*, 'eagle' and *al-maḡhī*, 'teaching'. In 246/860 the ʿAlid al-Ḥasan al-Daʿī Iḥāʾ al-Hakk rebuilt the castle. Hasan-i Sabbāḥ, the founder of the Assassins, seized Alamūt in 483/1090 and made it the headquarters of the Order. The Mongols took Alamūt in 554/1257 but the Assassins regained it in 572/1275, only to lose it finally soon afterwards. In Salawīd times, Alamūt was used as a state prison or 'castle of oblivion'. Remains of the walls and buildings are still to be seen.

regarding the identification of Alamūt), *Some Tamasī Strongholds in Persia*, *JG*, xii, 18-27; F. Stark, *The Valleys of the Assassins*, London 1934. (L. LOCKHART)

(ii) THE DYNASTY.

Alamūt was the center of a *Shīʿite* state between 483/1090 and 654/1256 with territories scattered unevenly from Syria to eastern Iran, ruled by the head of the Nizārī Ismaʿīlī [q.v.] sect, sometimes called the Assassins.

The state grew out of an attempt by the Ismaʿīlīs of Iran to break the power of the Sunnite Salḡūks on behalf of the Fātimid rulers of Egypt. Their revolt began in the last years of Malikshāḡh's reign, spreading especially during the troubled time of Barkīyārūq; Ismaʿīlīs seized strongholds in Kūhstān, Kūms, Fārs, al-ʿLjāsīra, Syria, and Iran supported by Ismaʿīlī troops intervened in the civil war. Among the leaders the most important were the learned ʿAbd al-Malik b. ʿAtṭāḡh, daʿī (chief propagandist) of Isfahān, his son Ahmad b. ʿAtṭāḡh, who seized *Shāḡhīz* near Isfahān in 494/1100, and Hasan-i Sabbāḡh [q.v.], who seized Alamūt in Daylamān in 483/1090. On the death of the *imām* al-Mustansir of Ismaʿīlīs in 487/1094 the Ismaʿīlīs of Iran supported the claims of his son Nizār; when Nizār was defeated they refused to recognize al-Mustaʿī, and carried on their revolt independently of Egypt, under the name of Nizārī [q.v.].

With the concentration of Salḡūk power in the hands of Muhammad Tāpār the tide turned against the Ismaʿīlīs; Shāḡhīz fell in 500/1107 and Alamūt was in grave danger when Muhammad's death, in 511/1118, allowed the Ismaʿīlīs a time of recuperation. By this time the leadership was clearly in the hands of Hasan-i Sabbāḡh at Alamūt. He controlled an essentially independent state consisting of the strongholds in the Rūdḡār district around Alamūt, of the fortress of Girdkūh near Dāmḡhān in Kūms, and of numerous towns in Kūhstān south of *Khurāsān*. In addition, he was the leader of most of the Ismaʿīlīs under Salḡūk rule in Iran and the Fertile Crescent and even a few partisans of Nizār in Egypt. With a later small addition in Syria, the territory of the state remained substantially the same till its end, while the importance of Ismaʿīlī adherents in the surrounding lands seems to have declined rapidly.

The history of the state was dominated by a sustained hostility between the Ismaʿīlīs and the surrounding Sunnite and even *Shīʿite* populations; a hostility expressed on the one side in repeated massacres of all suspected Ismaʿīlīs in a town and on the other side in assassinations of their most active enemies, such as Nizām al-Mulk [q.v.]. Assassination was not in itself unusual at that time, but Ismaʿīlīs produced a special terror. Especially in the earlier years, Ismaʿīlīs owing allegiance to the sect leadership at Alamūt lived interspersed among the people, keeping their unpopular faith secret with *Shīʿite* *kābiya*. Those detailed to get rid of some persecuting *ḥādī* or *amīr* sometimes stalked their victim with signal devotion, finally killing him spectacularly in public. Any public murder therefore was likely to be Ismaʿīlī; hence a nickname of theirs, al-*ḡhāḡib*, has become the word *assassin* in Western languages. (There is no evidence that the use of the drug *ḡhāḡī* entered in any way into the assassinations.) Eventually, at least, assassins being as a weapon became institutionalized, assassins being

kept in readiness at hostile courts and their services perhaps even hired out to friendly rulers. Suspicion and war almost never ceased between the Ismaʿīlī state and the surrounding peoples; raiding Ismaʿīlī villages and slaughtering their inhabitants was considered a pious act among the Sunnites, while the Ismaʿīlīs in their isolated districts maintained a united front against outsiders until the end.

Hasan-i Sabbāḡh died in 518/1124, leaving the leadership to one of his generals, Bāḡr-i-ʿumūd, as daʿī of Daylamān, Buzurg-umūd's son Muḡammad succeeded him in 532/1138. During these two reigns defense against Salḡūk rulers, especially Sandjar and Mālmūd, alternated with local raids against mountain rivals or nearby towns like Karwin. Of symbolic importance were the assassinations of two ʿAbbāsīd caliphs, al-Mustarshīd and al-Rāḡhīd. Meanwhile, after playing a calamitous role in the politics of Aleppo and Damascus, the Syrian Ismaʿīlīs finally acquired for the state the fortresses of a part of *Djabal Bahra*, north of the Lebanon.

Muḡammad's son, Hasan II, who succeeded in 557/1162, declared himself in 559/1166 no longer simply daʿī but *ḡhāḡī*, plenipotentiary of the long-hidden *imām*; and probably hinted that he was himself that *imām*, proclaiming the Day of Resurrection, the spiritual consummation of the world, he abolished the *Shīʿite* *gharʿa* law as inconsistent with the mystical life in Paradise to which Ismaʿīlīs were henceforth called; thus consecrating irrevocably the breach with the Muslim community at large. Some objected to the new order, and in 575/1166 Hasan was murdered; but his young son Muḡammad II took firm control and carried through his father's policy. Henceforward the ruler of Alamūt was regarded as an ʿAlid *imām*, lineal descendant of Nizār. But external relations remained much as before; Muḡammad had a long and relatively peaceful reign, troubled toward its end by the enmity of the *ghāḡ* *ḡhāḡ*. During his reign Syrian Ismaʿīlīs was dominated by the able Rāḡhīd al-Dīn Sīnān [q.v.], who acted with apparent independence of Alamūt in his quarrels and rapprochements with Aleppo and Saladin, with the Crusaders, and with the Nuṣayrī mountaineers about him. But after his death in 589/1193 the authority of Alamūt was unquestioned.

The son of Muḡammad II, Hasan III, succeeded in 607/1210 and declared himself a Sunnite Muslim, ordering all his followers to accept the Sunnite *gharʿa*, and allying himself with, among others, the caliph al-Nāṣir. The Ismaʿīlīs accepted his decrees outwardly; he made minor conquests in alliance with Urbāq of *Āḡharbāyḡḡ*. But when he died in 618/1221 (perhaps by poison) his young son who succeeded, Māḡammad II, was not brought up a Sunnite; and though officially Hasan's decrees probably stood, in fact the *gharʿa* was dropped and the state resumed its political isolation.

Nevertheless, a broad Islamic outlook was maintained. Naṣr al-Dīn Tūd [q.v.] and other scholars were attracted to its fortresses; and ambitious quarrels were carried on with *Djālāl al-Dīn Mangūḡ* [q.v.] and then with the Mongols; allies were sought even in western Europe. But the Sunnites' ingrained hatred finally prevailed. The Mongol Hūḡāḡ's first objective in Iran was to destroy the Ismaʿīlī state. Muḡammad had developed a degenerate character and his refusal to negotiate frightened his generals, who were evidently hoping to circumvent him when a courier murdered him, in 653/1255.

After ambivalent negotiations and the fall of many fortresses, his son Kh<sup>h</sup>urshid surrendered unconditionally in 634/1256. He was soon killed, and the Isma'ili of Daylam, Kōmis, and Rūstān were massacred; the survivors never succeeded in re-establishing the state. The Syrian fortresses survived the Mongols only to be taken by Baybars of Egypt, who however left them as an autonomous community, furnishing assassins to their new overlords.

(M. G. S. HODGSON)

**ALAN** (in Arabic usually taken as al-Lān), an Iranian people (Alan < Aryan) of Northern Caucasus, formerly attested also east of the Caspian sea (see al-Bīrūnī, *Tahdīd al-Amākin*, ed. A. Z. Validi, in *Iran's Picture of the world*, 57), as supported by local toponymy. The Alans are mentioned in history from the 1st century A.D. to 371 when they were defeated by the Huns. Together with the Vandals, a part of the Alans migrated to the West across France and Spain, and finally took part in the creation of the Vandal kingdom in North Africa (418-534). On conquering this kingdom Justinian assumed the title of king of "Vandals and Alans". The Alans remaining north of the Caucasus became neighbours successively of the Bulgars, the Turks and the Ephraims, who pushed them out of the plains towards the mountains. In 719/737 Marwān b. Muḥammad "entered the Ephraim country from the direction of Bab al-Lān (Darial)", see al-Balādhurī, 207 (Ibn al-Athīr, v, 160).

The Alans were the ancestors of the present-day Ossets whose name (in Georgian: Oset<sup>h</sup>) is derived from As (very probably the ancient Aorsi). Ibn al-Ma'ūdī, ii, 10, 12: al-Arsiya guards in Ephraim who were apparently a sister tribe of the Alans. The Armenian Geography calls the westernmost Alans "Ashtigēn" (As-Digor), and the Digor are the western division of the present-day Ossets, while "Asi" in Oset refers to the still more western region near Mt. Elbrus, which the Ossets must have occupied too in earlier days.

The Alans were converted en masse under the Byzantine Patriarch Nicholas the Mystic between A.D. 901 and 935, though al-Ma'ūdī, *Murāghā*, ii, 43, states that in 320/932 they apostasized (probably temporarily) and expelled their bishops and priests. According to Ibn Rūsta, 148, only the chief of the al-Lān was a Christian. Muslim authors do not know any other peoples between the dominions of the Alans and those of the Šāhīn al-Sarīf, the ruler of the Daghistān Avar, who also professed the Christian faith. The tribe Dikhiš (Rūhiš-As) which Ibn Rūsta, 148, mentions as the noblest tribe of the Alans, may correspond to the Roxalāni of the western authors, and the name Twila (see *Mudād*, 445) would probably be read Tuwila-As and refer to the Tuwila living now across the

Caucasian range. The Alan capital Magas mentioned in the *Murāghā*, ii, 42, should be read \*Magas and explained in Arabic as *ghibbina*, "a city" (not *diya* as in the Paris edition).

The Alans (or Ās) are frequently mentioned at the time of the Mongol invasion when they were Greek Christians. Their settlements in the 13th century extended towards Darband and the estuary of the Volga. The Alans had close relations with the Byzantines, the Georgians and the Russians (the latter called them Yail).

The Mongol conquest led to a further dispersion of the Alans, whose military contingents and settlers are known even in China. The Persian sources know the Ās as Christians at the court of the Mongol sovereigns, but according to Ibn Batūta (Defremery), ii, 448, the Ās in Sarāy on the Volga were Muslims.

**ALANYA** ('ALĀ'YYA, 'ALĀVĀ), port in South Anatolia, 36° 32' N, 32° E, at the foot of a mountain 250 m. high and towering above the sea; capital of the *hādā* of the same name, which belongs to the *vilāyat* (formerly *sandjak*) of Antalya. In 1945 the town had 8884, the *hādā* 37, 971, inhabitants. The name is derived from the Rūm Saldjuk sultan 'Alā' al-Dīn Kaykūkhād I, who, in 1220, conquered, and adopted as his winter residence, the castle on the mountain. This had been in the possession of a Greek, or Armenian, baron, called by Ibn Bībī (Houtsma), iii, 234-44, iv, 97-103, Kir Fārd, and was known, on account of its beautiful situation, as Galanoros (E. 1020/650; hence the name of Galanoros in Shāh-nāma in medieval European sources). From 692/1293 'Alā'YYa belonged to the principality of Karaman; Ibn Batūta (ii, 257 f.) found there in ca. 1333 Yūsuf Beg as prince of the Karaman. According to al-Makrizī (*al-Sulūk*, s.a.) the town was sold by the Karaman to the Mamlik sultan Barsbay in 850/1447; but according to the Ottoman chronicles the town was, later in the 15th century, in the possession of a descendant of the Saldjuk dynasty. In 876/1471-2 'Alā'YYa was captured by Gedik Ahmed Paşa, Mehmed II's general (*Nāghī* (Taschnker), i, 205 f.). From then 'Alā'YYa remained in Ottoman hands and was the capital of a *vilā* (*sandjak*) in the *vilāyat* of İvel (Kāthib Çelebi, *Dihā-nāma*, 611).

The old town of 'Alā'YYa was situated on the mountain, which slopes steeply to the W. and S., but descends more gradually to the E. and N. To the north it is connected with the mainland only by a narrow neck of land, and thus forms together with the latter two bays, of which, however, only the eastern one served, and serves still, as a harbour. The old town on the mountain is surrounded by a wall which starts from a strong octagonal tower in

the NE side of the peninsula on the eastern shore, made of red sand-stone (hence the name Kīlī Kūle) and dated 623/1226, and ascends up to the summit of the mountain at the southern end of the peninsula. The area so enclosed is further divided by two transverse walls, of which the upper, southern one encloses, together with the outer wall, the citadel (İç Kā'fe) lying at the summit, the other the outer fortress (Dış Kā'fe). In Turkish times, the citadel served as barracks for the garrison; it is uninhabited today, but contains the ruins of a Byzantine church. The outer fortress was the residential area of the old town; it contains a *hāsh* (caravanserai; see i, 109), a *hakekāt*, as it is called, stated of the early Ottoman period, an old, though in its present state only Ottoman, mosque (Kā'fe Djāmi') and the *hürbe* (from 628/1230) of a certain Akşehbe Sultān. The mosque called after 'Alā' al-Dīn, situated outside the outer fortress, does not seem to be very old. On the shore there is an arsenal (*feriye*) built, according to its inscription, by 'Alā' al-Dīn Kaykūkhād I; it consists of five large barrel-vaults with five arched openings in each partition-wall, the only building of its kind yet known from the Saldjuk period.

The old town is at present but sparsely populated; a new town arose at the foot of the mountain on the isthmus and on the mainland. It contains no monuments worthy of mention.

Not far to the east of 'Alā'YYa in the coastal plain on a rivulet, it is to be found the ruin of a small, kōhā-like building of the Saldjuk period, mainly consisting of a barrel-vault in the middle of an area surrounded by a wall. It was probably the country-house of a Saldjuk nobleman with a garden. On the line of the wall lies the ruin of a small Christian church.

**ALARCOS** (see AL-ARAK).

**ALAVA** (see ALABA wa 'L-KILĀ).

**ALAWI** ('Alāwī < Alī 'Alī, according to v. Maltzan, *Reise*, 336), tribe and district on the caravan route 'Adan-Kā'aba-San'a', the smallest among the "nine cantons" of the Western Aden Protectorate. It lies between 'Amrī (N) and Haw-shāhī (S) territory and formerly belonged to the 'Amrī (v. Maltzan, loc. cit.), but later it became semi-independent and signed a treaty with the British in 1895. Population: 1000-1500. The *ghaydh* lives at al-Sawda, which is the only place of some importance, with a landing ground for aircraft.

**'ALAWIS** ('ALAWIYYA), the reigning dynasty in Morocco.

Morocco at the advent of the 'Alawid dynasty. When the 'Alawid *Shurafā* (see *sharīf*) succeeded in asserting their sovereignty over Morocco, the country was rent by a serious political, social and religious crisis. The great movement of maraboutism and xenophobia for which the growth of Sūfism and Sharīfism and the development of the religious brotherhoods had for long paved the

way, and which had manifested itself as early as the 15th century, the period of incursions by Portuguese and Spanish Christians on the coasts of Morocco, assumed a new form. While the two Sa'fīd *mağāhīn* established at Fez and Marrākūsh crumbled into ruin, strong provincial factions, based on a religious allegiance, divided up the country and warred amongst themselves. The marabouts of al-Dila' (i.e.), supported by the Berber population of the Middle and Central Atlas, some of whom began to move down into the Atlantic plains, seemed to be on the point of establishing a Šūhādīl domination in Morocco. Morocco needed rehabilitation, organization, and also pacification, because anarchy and brigandage continued to spread. The 'Alawids, if they were not faced with the task of overcoming the preceding dynasty, had to meet difficult problems on every side.

The establishment of the dynasty. The 'Alawids, of Hasanid descent, had come from Arabia to Tāhālt at the end of the 13th century. For a long time they played no part in politics. But, in the anarchy which marked the decline of the Sa'fīd dynasty, the inhabitants of Tāhālt, threatened simultaneously by Abu 'l-Hasan al-Samālī and by the marabouts of al-Dila', adopted as their leader Mawlay al-Sharīf. His son Mawlay Maḥammad (sic), who succeeded him during his lifetime in 1035/1655-6, strove for a period of twenty years to organize a small principality in eastern Morocco, but left no permanent structure. Maḥammad's brother, Mawlay al-Rašīd [s.v.], took up his task with greater foresight and determination. The moment was favourable; the country was tired of anarchy and the great marabout organisations were beginning to decline. It was in order to escape from his brother Mawlay Maḥammad that Mawlay al-Rašīd, after the death of their father, al-Sharīf, in 1069/1659, sought his fortune in Morocco. He had managed to collect a small force and, after obtaining funds by killing a rich Jew, Ibn Maḥ'al, he succeeded in establishing himself in eastern Morocco with the aid of the Ma'kil Arabs and the Ayt Inassen Berbers. Gradually he extended his kingdom, and made Tāra his provisional capital. In 1076/1666 he seized Fez; from then on he assumed the role of sultan and applied himself to the subjugation of the marabout powers which shared the Atlantic seaboard of Morocco. First he conquered northern Morocco, and then he defeated the Dila'ites and took possession of their *ziyāya*. In 1079/1669 he entered Marrākūsh, and occupied Sūs and the Anti-Atlas. But he died at Marrākūsh in 1082/1672 without having consolidated his achievements.

Thus the Filālī Sharifs had achieved power as a result of a personal venture which for long was situated half-way between banditry and war, and which reached its climax with the conquest of the Morocco of the plains and oases. With a few Arab tribes forming his only genuine support, Mawlay al-Rašīd, thanks to the weak state of the country and the decline of the great marabout organizations, had successfully carried out the task of regrouping and of imposing law and order. But, in this country, practically everything had still to be put in order. Although the marabout crisis had suddenly ended, the Arab problem, always serious, was about to find a parallel in a formidable Berber problem, the essential phase of which was to be the push of the Šūhādīl of the Atlas towards the north and west. The tasks of organizing an army, re-forming a government, and of establishing the place which

Morocco intended to hold in the Mediterranean theatre, still remained.

Mawlay Ismā'īl (1082-1139/1672-1727) and the consolidation of the dynasty The work of pacification accomplished by al-Raḥmān proved imperfect. His brother and successor Ismā'īl (g.s.) (1672-1727) had to face two rival claimants to the throne and to suppress numerous revolts both in the towns and among the tribes. He deprived Fez and Marrākush, to which he had been obliged to lay siege, of their status as capital cities, and installed himself with his government at Mīknaa. Mawlay Ismā'īl had first of all to solve the problem of the army. He had recourse first to the old expedition of the Arab gīḥ, to which he added the Ma'kūl Arabs of the oases and to which he gave the name of gīḥ of the Uḍayya. But more especially he pressed into service the descendants of the black slaves who had been imported in large numbers by the Sa'ādiyya; these were the 'ahid al-Buḥārī; but this black militia never had any great military value.

Mawlay Ismā'īl, who from the beginning of his reign had been unsuccessful in his Algerian ventures and had had to conclude peace with the Turks on the usual terms, succeeded in recovering from the Spanish Ma'nūna, Mahdiyya and al-Ara'ish (Larache). The British evacuated Tangier. Mazagan, Ceuta and Melilla remained in Christian hands.

Nearly the whole of his long reign was devoted to the suppression of internal revolts, risings by pretenders, and rebellions on the part of the tribes. The task was a heavy one; the country had a long tradition of anarchy, and the crushing financial burdens which the sovereign imposed on conquered territory were a clear incentive to revolt. The hardest campaigns were those against the Siḥbiyya Berbers. With the aid of some of these, Mawlay Ismā'īl pacified for a time the Middle Atlas. But he never succeeded in occupying the whole of Morocco. Mawlay Ismā'īl's diplomatic relations with Europe have often given rise to misconceptions. The sovereign hated the Christian world. His European policy, based on a desire for holy war and on cupidity, and implemented with reluctance, was fundamentally negative. In spite of the efforts of the European nations, the crying problem of the captives was not settled. Foreign trade continued to be negligible. Morocco isolated itself to an increasing extent from Europe and also from Turkish Algeria; the seeds of revival could not be planted from without.

At home, Ismā'īl had strengthened the dynasty's position and pacified part of the country, but he had failed to resolve either the Arab or the Berber problem. After his death the black militia proved to be the principal fomenters of trouble. Ismā'īl had not remedied Morocco's deep-rooted disorders, nor had he set the country on a new path. At his death, the ensuing anarchy was worse than ever.

The period of anarchy (1139-70/1727-57). For a period of thirty years, various sons of Mawlay Ismā'īl were elected and deposed by the 'ahid, the gīḥ and even by the Berber tribes, who had come down into the plains. Seven rulers came to the throne. One of them, Abū al-Ḍaḥabī, reigned twice, and 'Abd Allāh (g.s.), on four different occasions. This was one of the darkest periods in Moroccan history. Anarchy and brigandage laid waste the subject territory and the large towns.

The rehabilitation under Muhammad b. 'Abd Allāh (1170-1204/1757-90). Muhammad, when he was elected sūltān in 1170/1757, had already, as *ahid* of his father at Marrākush, accomplished

work of importance. Muhammad had no more ability than his predecessors or his successors to devise new solutions or to undertake a real reorganization of the country. He failed to settle any of the major problems which confronted him. Conscious of the limitations of his resources, he gave his kingdom, as far as he was able and as far as the country itself allowed him, peace and prosperity. He organized the collection of taxes, minted a sound currency, and built up a small army from the remnants of the gīḥ and the 'ahid, and a few contingents from subject tribes. Despite his alliances with the Berbers, he was unable to check the encroachment of the Siḥbiyya tribes on the plains, the road from Fez to Marrākush via the Tādla was cut.

He had the good fortune to recapture Mazagan, which the Portuguese evacuated in 1182/1769. After two defeats at Ceuta and Melilla, he made peace with Spain. He realised that a certain minimum of foreign trade was indispensable to Morocco; accordingly he signed treaties of trade and friendship with the principal European powers. He tried in vain to concentrate the majority of the European merchants and consular officials in the new town of Mogador, planned by European architects, which was commenced in 1179/1765.

The end of the reign of Muhammad b. 'Abd Allāh was marred by the rebellions of his son and heir apparent, al-Yazīd.

The conservative policy of the 'Alawids: prelude to the Moroccan crisis (1204-1311/1790-1894). The short reign of al-Yazīd (1204-6/1790-2) was marked by conflict with Spain and a serious revolt in southern Morocco. On the death of this fanatical and bloodthirsty sultan, his brother Sulaymān rid himself of two rivals and gave Morocco a brief respite from warfare. Up to the end of the 19th century, Morocco was spared crises concerning the succession; in each case the heir designate succeeded to the throne without difficulty.

The Sultān Sulaymān 1206-38/1792-1822 (g.s.), 'Abd al-Raḥmān b. Ḥishām (1238-70/1822-59) (g.s.), Muhammad b. 'Abd al-Raḥmān (1276-90/1859-73), and Mawlay al-Ḥasan (1290-1311/1872-94) (g.s.) were practical rulers endowed with common sense. But their policies, though persevering and flexible in detail, were not progressive. Throughout this period the internal problems of Morocco remained the same. The army was weak: the 'ahid had been suppressed but the gīḥ, restored to a position of supremacy, remained undisciplined and largely ineffective. The best troops were the contingents of the adherent tribes, which were mustered on the eve of an expedition. The energies of the sultans were entirely directed, not always with success, to levying the taxes in the subject territories. They had given up all pretensions to the pacification of the *biḥd al-siba* (g.s.), which gradually increased in size.

In order to put down local revolts and to secure payment of the taxes, the 'Alawid sultans of the 19th century spent part of their time conducting *harak* over their territories; the effect of these was often limited and temporary. Diplomacy was employed rather than force; and attempts were made to secure the aloof homage of the tribes which lived in actual independence. By all these means, the *mahḥan* endeavoured to save face, if not at home, at least in the eyes of Europe. It avoided headlong collision with the powerful unsubdued

groups; the latter were, for their part, incapable of uniting against the central power. At the end of the 19th century, however, Mawlay al-Ḥasan had the good fortune to bring within his orbit the powerful *ahid* who had established themselves in southern Morocco.

Both the military and political activities of the sultans were limited in scope and exhausting. Their financial resources, though administered with care, remained exiguous; the smallness of the sums at the disposal of the *mahḥan* precluded any works of a lasting character.

In a Morocco which clung obstinately to a sort of paradoxical mediaevalism, European interventions steadily became more pressing, and questions of foreign policy eventually, at the beginning of the 20th century, took pride of place over domestic matters. The fate of Morocco, the last Mediterranean country to stand aloof from the modern world, was not settled either because rivalries between the powers and above all the desire of France, the country principally interested, for peace, long preserved it in its existing condition. Morocco, however, imprudently provoked two wars with European powers. 'Abd al-Raḥmān gave his support to 'Abd al-Kādir b. Muḥyī'l-Dīn (g.s.) in his conflict with France. The Moroccan troops were defeated on the 14th (28 Djumādā I 1260/15 July 1844) and the forts of Taza and Mogador were captured by the French fleet. The sultan hastened to conclude peace. His son and successor, Muhammad, as a result of frontier incidents, declared war on Spain. The Spanish army, marching from Ceuta, occupied Tetuan and was advancing on Tangier when Great Britain negotiated peace. The 'Alawid dynasty emerged unscathed from these two adventures into which it had been led by its xenophobia and its attachment to the holy war. Nevertheless European penetration increased during the reign of Mawlay al-Ḥasan (g.s.). In 1287/1880 the Convention of Madrid gave rulings on questions of trade and protection; European trade in the ports expanded. Every endeavour of Mawlay al-Ḥasan was directed towards the maintenance of his authority in the subject territory, and the preservation of an independence which was in increasing jeopardy. This unstable and paradoxical position could only last so long as the diplomatic façade constituted by the Sharīfian empire remained intact.

The Moroccan crisis and the establishment of the French Protectorate (1311-30/1894-1912). The internal disintegration of Morocco grew more rapid during the first years of the 20th century. 'Abd al-'Azīz (g.s.) was only fourteen when he succeeded his father Mawlay al-Ḥasan. Until 1900, the vizier Bā Ahmad exercised the real authority and in all respects continued the practices of the preceding reign. Despite the blundering good intentions of the sultan and his attempts at reform, the *biḥd al-mahḥan* itself was breaking up; a pretender unrelated to the dynasty, the *rigī* Bū Ḥinād (Abū Ḥanūza), installed himself at Tādla and defied the Sharīfian armies. The dynasty was tottering. Thus Morocco advanced involuntarily to the forefront of the diplomatic stage. Mounting confusion in the country set at naught the agreements concluded by the chancelleries of Europe with a view to the preservation of peace. The main episodes in this crisis had their origin in military or other moves on the part of Germany, which was trying to prevent the expansion of French influence in Morocco. The final act of the Conference of Algiers, convened to

resolve the first of these clashes, proclaimed the independence of the sultan, the inviolability of his empire, and economic equality among the Powers, while, however, recognizing a certain privileged position for France.

The murder of French dependents and agitation on the Algerian border induced France to pacify the Oujda region and to occupy the Chaouia. A new diplomatic crisis ended with the Franco-German agreement of 1909. France and Spain increased their activities in Morocco.

During all these events the 'Alawid dynasty, engrossed in domestic disorders and preoccupied with its own defence, was singularly inactive. 'Abd al-'Azīz was replaced by his brother Mawlay 'Abd al-Ḥafīz, who had rebelled against him at Marrākush. Finally the incident at Agadir, which for a moment threatened the peace of Europe, led to a new Franco-German agreement which gave the Reich compensations in Equatorial Africa and made possible the signature of the Protectorate agreement (11 Rabī' II 1330/30 March 1912). The 'Alawid dynasty, which had seemed on the point of collapse, could thus, under French protection, maintain its position and enter a new phase. Mawlay 'Abd al-Ḥafīz, who showed extreme ill will in promulgating the reforms anticipated in the Protectorate agreements, abdicated in 1913 and was replaced by his brother, Mawlay Yūsuf, who was succeeded in 1927 by his son Sīdī Muḥammad; the latter was replaced in Dhū 'l-Hijja 1272/Agust 1923 by Sīdī Muḥammad b. Mawlay 'Arafa.

Bibliography: Arabic sources. The Arabic sources have been listed and appraised by E. Lévi-Provençal, *Les Historiens des Chérifs*, Paris 1922. Three recent works which give detailed information may be added to this list: Ibn Zīdān, *Iḥāf al-'Alam al-Nās bi-Djama' al-Ḥabīb al-Hādī al-Muknās*, Rabat 1929-33; 'Abbās b. Ibrāhīm al-Marrākushī, *al-'Alam bi-man Halla Marrākush wa-Āghmāt min al-'Alam*, Fez 1936 ff.; Muhammad al-Muwakkīt, *al-Sa'ida al-Abadiyya fi 'l-Ta'rif bi-Mashāhīr al-Hadra al-Marrākushīyya*, lith., Fez 1335-6. Essential texts in translation are: Zayyūn, *al-Tarjūmān al-Ma'vū 'an Dima' al-Maḥrib wa 'l-Maḥrib*, extract edited and translated by O. Houdas, *Le Maroc de 1631 à 1812*, Paris 1886; Nāṣir, *al-Itihād*, trans. Fumey in *AM* ix, 1906 and 1907; al-Bulāl al-Bakīyya, partial trans. by L. Couloumier, *Chronique de la vie de Moulay al-Ḥasan, AM* viii, 1906. European sources. *Les sources inédites de l'Histoire du Maroc*. Second series: *Dynastie filalienne, Archives et Bibliothèques de France*, 5 volumes published up to December 1909; *Journal du Consulat-Général de France à Maroc* (1767-1783), initiated by the Consul Chénier, published, with an introduction and commentaries by Ch. Penz, Casablanca 1943; of the numerous travels and memoirs, the following are noteworthy: Moaette, *Relation de la captivité du Sieur Mouaette dans les royaumes de Fez et de Maroc*, Paris 1682, reprinted in part at Tours 1863 and 1927; Mouette, *Histoire de la conquête de Moulay Archy, connu sous le nom de roi de Taflet et de Moulay Ismail*, Paris 1683; and *Sources inédites*, Second series, France vol. II; G. Huet, *Efterretninger om Marokko og Fez*, Copenhagen 1779; German trans. under the title of *Nachrichten von Marokko und Fez*, 1781; L. Chénier, *Recherches historiques sur les Maures et l'Histoire du Maroc*, 1878, 3 vols.; G. Lemprière, *Voyage dans l'empire de Maroc et le royaume de Fez fait pendant*

In October 1935, Sidi Muhammad b. Mawlay 'Alfara went to reside in Tangiers, and a Council of the Throne was instituted in the Sharfian Empire; Sidi Muhammad b. Yusuf was installed on the throne again on 16th November 1955. (Ed.)

ALAWITES (see MUSAYR).

ALAY, a Turkish word probably derived from the Greek *alagion*, which was applied to certain divisions of the Byzantine army (cf. Köprülüzaade Mehmet Fuat, *Bizans Müesseselerinde Osmanlı Müesseselerine Te'viri*, *Türk Hukuk ve İktisat Tarihi Mecmuası*, I, 277), signifying in Ottoman usage "a troop", "a parade", and hence "a crowd", "a large quantity", and used from the time of the 19th century military reforms to denote "a regiment". The most important parades to which the name was given were the *hıld alay*, held on the occasion of the sultan's visit to Eyyûb in his girding with the sword of 'Othmân; the *alay-ı hümayûn*, held on his departure from or return to the capital whether in connection with a campaign or for some other reason; the *siyer alay*, held at the early on the despatch of his annual gift to the Holy Cities; the *Mevlid* and *Bayram alayları*, held for his visitation of mosques on the Prophet's Birthday and the two 'ids; and the *valide alay*, held on the translation of a new Valide Sultan from the Old to the New Sarây. The word also figures in designations such as *alay beyi*, applied to officers commanding the feudal cavalry of a *sandjak* or *vilâyet* and themselves *fel-holders*, and *alay sarayları*, applied either to *forwards* whose duty it was to clear the route for processions or to those who conveyed commands in battle by shouting. The Alay Köhüsi was a pavilion in the Topkapı Sarây built in the reign of Murâd III from which sultans might view parades.

'ALĀYA (see 'ALANVA).

ALBAIGIN (see GHARBĀTA).

ALBARACIN (see KAZIR, BASO).

ALBISTAN (see ELBISTAN).

ALBUFERA (see BALANSHIVA).

ALBURZ (now usually pronounced Elburz), in Old Persian *Harā Berezaiti* or "High Mountain", is a mountain chain which, besides separating the Persian central plateau from the Caspian depression, links the Caucasus range with the Paropamisus. The average height of the western portion is just under 10,000 feet, culminating in Dāmāwād (q.v.), which is 18,600 feet high. The northern slopes of the range are densely wooded, but vegetation is scanty on the southern side because of the much lower rainfall.

Firdaws gives the name Alburz to a mythical mountain in India. The first Persian geographer to apply the name to the range was Hāmid Alīsh Mustawfī.

Alburz or Elburz is not to be confused with Elbruz, the Caucasian peak. Cf. *Le Strange*, 368 note. (L. LOCKHART)

ALGACER DO SAL (see KASR AB DANIS).

ALGALA (see AL-KA'Ā').

ALGANTARA (see AL-KANTARA).

ALGAZAR, Spanish (from Arab. *al-baṣ*) : castle, citadel (Portug. *Alcazar*). Famous are the Alcazars of Seville, Cordova, Segovia, Toledo etc. Alcazar is also a frequent name of places, e.g.: Alcazar de San Juan, a town in the Spanish province of Ciudad-Real; Alcazarquivir, the Spanish name of Bājir al-Kabir (q.v.), a town in Morocco.

ALF LAYLA wa-LAYLA, "Thousand nights and one night" is the title of the most famous Arabian collection of fairy-tales and other stories. One often reads or hears nowadays "like a fairy-tale from the thousand-and-one nights", and, indeed, the fairy-tales are the most striking part of the collection. Like all Orientals the Arabs from the earliest times enjoyed imaginative stories; but since the intellectual horizon of the true Arabs in ancient times before the rise of Islam was rather narrow the material for these entertainments was borrowed mainly from elsewhere, from Persia and from India, as we gather from the accounts of the Prophet's competitor, the merchant al-Nadr. In later times when Arab civilization had grown richer and more comprehensive the literary influence from other countries was, of course, much stronger. An attentive reader of the "Nights" will soon be astonished by the manifold variety of their contents: they resemble in a way an Oriental meadow with many different beautiful flowers interspersed with a few weeds. On the other hand, the reader will notice that these stories comprise a very wide field: there are stories of King Solomon, of the kings of

ancient Persia, of Alexander the Great, of the caliphs and the sultans on one side, and stories in which guns, coffee and tobacco are mentioned on the other side.

Its appearance in Europe. The entire work is enclosed in a "frame-story", and this was known in Italy in the Middle Ages. Traces of it are to be found in a novel by Giovanni Sercambi (1347-1424) and in the story of Astolfo and Giocundo which is told in the 28th canto of *Orlando Furioso* by Ariosto (beginning of the 16th century); travellers who had been in the East may have brought this knowledge to Italy. But the whole *Alf Layla wa-Layla* came to Europe in the 17th and 18th centuries. The French scholar and traveller Jean Antoine Galland (1646-1715) published it for the first time. Travelling in the Near East at first as a secretary of the French ambassador, then as a collector of objects for museums commissioned by amateurs, he had known the world of the Orient, and his attention was directed to the great number of stories and fables told there. After his return to France he began in 1704 to publish his volumes *Les mille et une Nuits contes arabes traduits en Français*. By 1706 seven vols. had appeared; vol. viii appeared in 1709, vols. ix and x in 1712, vols. xi and xii in 1717, two years after Galland's death. This delay in the appearance of the later vols. is significant for Galland's difficulties as to material and also for his indifference to this side of his work as a scholar.

He was a born story-teller; he had a flair for a good story and a knack of re-telling it well. Thus he adapted his translation to the taste of his European readers, changing sometimes the wording of the Arabic text and paraphrasing things that were foreign to Europeans. Hence the great success of his "Nights". But he was also fortunate in the material which fell into his hands. He began by translating Sindbād the Sailor from an unidentified MS; then he learned that this was part of a great collection of stories called "The Thousand and One Nights"; then he had the luck to have sent to him from Syria four vols. of a MS of that work which, except for a small fragment found by Nāḥid Abbott, the oldest known, and contains the best surviving text. The first three of his vols. are still in the Bibliothèque Nationale, but the fourth is lost. In the first seven vols. of his translation he exhausted his three vols. of Arabic text which we still have and added Sindbād and Camalzaman (Kamar al-Zamān) from unidentified MSS. Then for lack of material he stopped for three years until his publisher forced his hand by issuing, without authority, vol. viii containing Ganem (Ghānim), translated by Galland from an unidentified MS, and two stories, Zayn Alasnam (Zayn al-Anām) and Codadad (Khaddād), translated by Pétis de la Croix and intended for his *Mille et un jours*. Again Galland was completely out of material and stopped; he was also tired and disgusted for the whole matter. But in 1709 he met a certain Maronite from Aleppo, Hannā, brought to Paris by the traveller Paul Lucas, and at once recognized that he had got an oral source of the story material. Hannā told him stories in Arabic, and Galland inserted in his *Journal* abstracts of some of these. But Hannā also gave him transcripts of some. In this way the last four vols. of Galland's translation were put out; his *Journal* gives full details. Hannā's transcripts have vanished, but two Arabic MSS of Aladdin have since come to light and one of Ali Baba. This, then, is the origin of the book which made the "Nights" known to

Europe and which in the French text and in very many translations from the French became the "Arabian Nights" for the great multitude of readers. For details see H. Zotenberg, *Histoire d'Alf Layla wa-Layla*, avec *Notice sur quelques manuscrits des Mille et une nuits et la traduction de Galland*, Paris 1888. This contains the Arabic text of Aladdin ('Alī al-Dīn) and a study of certain MSS of the Nights and of the entries in Galland's *Journal*. See also V. Chauvin, *Bibliographie arabe*, iv, Liège 1900, and D. B. Macdonald, *A bibliographical and literary study of the first appearance of the Arabian Nights in Europe*, *The Library Quarterly*, vol. II, no. 4, Oct. 1932, 387-420.

For more than a century Galland's French version meant the Nights for Europe, and two of his stories whose original Arabic texts were not known were even translated into Oriental languages. But meanwhile other MSS, more or less connected with the Nights, were brought to light and, from these, various supplements to Galland were translated and published. Just as the MSS of the Nights themselves varied enormously as to the stories which they contained, so these translators were prepared to attach to the Nights any story that existed in Arabic. The following supplements, partly separate and partly attached to editions of Galland, are of importance in themselves and as signs of the interests of their times. For further details on all of them see Chauvin's *Bibliographie*, iv, 82-120.

In 1788 there appeared as a supplement to the *Cabinet des Fées*, vols 38-41, a series of tales translated from the Arabic by Denis Chaviv. It is significant for the interest at the time in the whole subject of the Nights that there appeared, 1798-1799, three separate English translations of this supplement. In 1795 William Beloe published in the third vol. of his *Miscellaneous* some Arabic stories which had been translated for him orally by Patrick Russell, the author of *The Natural History of Aleppo* (1794). In 1800 Jonathan Scott translated in his *Tales, Anecdotes and Letters* certain stories from the MS of the Nights brought from India by James Anderson, and in 1811 to his edition of an English version of Galland he added a vol. of new stories from another MS, the Wortley Montague MS now in Oxford. In 1806 Causin de Perceval had already added two vols. of supplement to his edition of Galland. But Edouard Gauttiev in his *proposed* edition of Galland (1822-1823) went much farther: besides two vols. of new tales drawn from all manner of sources he freely inserted others in the course of Galland's Nights. Von Hammer in his *Die noch nicht überlieferten Erzählungen der Tausend und einen Nacht*, Stuttgart 1823, had a much firmer foundation and used a real recension of the Nights. He had acquired in Egypt a MS of the recension now known as Zotenberg's Egyptian Recension, which through numerous editions has become the Vulgate text of the Nights; see the editions, below. Von Hammer's French translation of a number of stories not in Galland is lost, but Zinsinger (1823) translated it into German, and this version was rendered in English by Lamb (1826) and in French by Trébutien (1828). In 1825 M. Habicht began to publish 15 volumes professing to be a new translation but consisting really of Galland's text with some supplements from Causin, Gauttiev and Scott, and an ending from a so-called Tunisian MS. He began also to publish an Arabic text. From this text, later on also from Galland, from Gotha MSS and from a text printed in Egypt, Weil published his translation within the years 1837-1867.

Editions and translations. The main editions of the Arabic *Alf Layla wa-Layla* are the following.

1. The first Calcutta Edition: *The Arabian Nights Entertainments; In the Original Arabic, published under the Patronage of the College of Fort William*; By Shoukht Uthud bin Moosumund Shirwanee of Yumunee, Calcutta, vol. I 1814; vol. II 1818. It contains only the first two hundred Nights and the story of Sindbad the Sailor.

2. The first Bâlik Edition, a complete Arabic edition, printed in 1251/1835 (from MSS found in Egypt) in the State Printing Office at Bâlik near Cairo founded by Muhammad 'Alî.

3. The Second Calcutta Edition: *The Alf Laila or the Book of the Thousand Nights and One Night*, Commonly known as "*The Arabian Nights Entertainments*", now, for the first time, published complete in the original Arabic, from an Egyptian manuscript brought to India by the late Major Turner, editor of the *Shah-Namâh*. Edited by W. H. Macnaghten, Esq. In four volumes, Calcutta 1839-42.

4. The Breslau Edition: *Tausend und Eine Nacht Arabisch. Nach einer Handschrift aus Tunis herausgegeben von Dr. Maximilian Habicht*, Professor an der Königl. Universität zu Breslau (etc.), nach seinem Tode fortgesetzt von M. Heinrich Leberecht Fleischer, ordentlichem Prof. der norddeutschen Sprachen an der Universität Leipzig, Breslau 1825-43. D. B. Macdonald, in his article on Habicht's Recension in *JRAS*, 1909, 685-704, and in his article *A Preliminary Classification of some MSS of the Arabian Nights*, in the *E. G. Browne Volume*, Cambridge 1922, 304, discussed the value of this edition. His expert opinion is that Habicht willfully created a literary myth and enormously confused the history of the Nights because a Tunisian recension of the Nights never existed, and out of many stories which had come to him from many sources he constructed a new recension of the Nights much in the same way that he had constructed his translation described above. However, Macdonald acknowledged that Habicht's texts are given verbatim without any attempt at correction, and are, therefore, "vulgar" in the exact sense whereas all other texts have been grammatically and lexicographically "improved" by learned shaykhs.

5. Later Bâlik and Cairo Editions. In the latter half of the 19th century and in the beginning of the 20th century the complete text of the first Bâlik edition, in the main the same as the second Calcutta edition, was several times reprinted. They are representatives of Zotenberg's "Egyptian Recension", which is the result of a compilation made by a certain shaykh in the 18th century, according to a notice in U. J. Seetzen, *Reisen durch Syrien, Palästina, Phönicien, die Transjordan-Länder, Arabien, Petraea und Unter-Aegypten*, Berlin 1854-5, iii, 188; the name of the shaykh is not known, but this notice confirms Zotenberg's hypothesis. The Jesuit Press at Bayrūt has published an independent but expurgated edition from another MS of the same recension (1889-90).

From the Egyptian Recension have been made all the modern western translations. Lane's translation, incomplete but with a very valuable and full commentary, began to appear in parts in 1839 and was finished in 1841. It was made from the first Bâlik edition. Payne's translation from the Macnaghten edition, complete and privately printed, appeared in 9 vols. 1882-84. Three additional vols. contained tales in the Breslau and 1st Calcutta editions (1884), and a 13th vol.

(1889) contained Aladdin and Zayn al-Ashraf. Since Payne's death in 1916 there have been a number of complete reprints. The translation by Sir Richard Burton, also from the Macnaghten edition, is very largely dependent upon that of Payne and often reproduces Payne verbatim (10 vols., 1885; 6 supplementary vols., 1886-8). Besides the Sinners' edition (12 vols., 1894) and Lady Tennyson's edition (6 vols., 1886-8) it has been completely reprinted several times. On the strange relation between the versions of Payne and of Burton see Thomas Wright, *Life of Sir Richard Burton* (2 vols., London 1906) and *Life of John Payne* (London 1919), and for an attempt at a comparative estimate of the above English translations see Macdonald's *On translating the Arabian Nights*, *The Nation*, New York, Aug. 29 and Sept. 6, 1900. In *Kielian's Universal-Bibliothek* (1893-97) Max Henning published a German translation, 24 small vols.; it is somewhat expurgated and rather prosaic and gives only half the verses. The first 17 vols. give the Nights from the Bâlik edition and vols. 18-24 various supplements, largely translated from Burton. In 1899 J. C. Mardrus gave a French translation of the Nights published from the Bâlik edition of 1835. His translation is not very trustworthy, and it incorporates tales from all manner of other collections than the Nights. Moreover there are translations of the Nights in Spanish, English, Polish, German, Danish, Russian, Italian. The Spanish translation is by Vicente Blasco Ibañez; the English by E. Powys Mathers; the Polish translation is incomplete. The German translation by E. Littmann appeared in Leipzig, 6 vols., 1918; first re-edition Wiesbaden 1923, second re-edition third, 1924. It contains the complete translation of the second Calcutta edition and the following stories: "*Alif al-Din and the Magic Lamp*", from the Paris MS edited by Zotenberg (cf. above); "*Ali Baba and the Forty Robbers*", from the Oxford MS edited by Macdonald (*JRAS*, 1910, 221 ff., 1913, 41 ff.); "*Prince Ahmad and Pari Banu*", from Burton, i.e. an English rendering of a Hindustani version derived from Galland; "*Abu'l-Hasan or the Sleeper Awakened*", from the Breslau edition; "*The Craft of Women*", from the first Calcutta edition; and the end of Sindbad's sixth journey and his seventh journey, from the first Calcutta edition; supplement in the *Story of the Brass City*; the end of the *Story of Sindbad* and the *Seven Viziers*; *The Story of al-Mas'ûdî*; the *Story of al-Din Baybars*; *al-Banadhar* and the *Sixteen Guardians*, from the Breslau edition; *The Jealous Sisters*, from Burton-Galland; *Zayn al-Ashraf*, from a Paris MS edited by F. Groff; *The Nocturnal Adventure of the Caliph, Khudâkâd and his Brothers*, "*Ali Khawidja and the Merchant of Baghdad*", from Burton-Galland.—The Danish translation by J. Oestrup was published at Copenhagen in 1927. The Russian translation by I. Kozlovsky appeared in 1914, the Italian translation by F. Gabrieli in 1949.

Problems of origin and evolution. When the Arabian Nights first became known in Europe they served only for the entertainment of European readers; but at the beginning of the 19th century western scholars began to take an interest in the question of their origin. Silvestre de Sacy, the founder of modern Arabian philology, discussed this question in several dissertations: *Journal des savants*, 1817, 678; *Recherches sur l'origine du recueil des contes intitulés les Mille et une nuits*, Paris 1820; in the *Mémoires de l'Académie des Inscriptions & Belles-Lettres*, x, 1833, 30. He denied, correctly, the possible authorship of one single writer and believed

that the book was written at a very late period without Persian and Indian elements; therefore, he regarded as spurious a passage in *Murâdj al-Dhahab* of al-Mas'ûdî (written in 336/947 and re-edited in 346/957) referring to these elements. This passage, published by Barbier de Meynard in Arabic and French (*Les papyrus d'or*, iv, 89), reads in English: "The case with them (viz. some legendary stories) is similar to that of the books that have come to us from the Persian, Indian (one MS has here: Pahlaw) and the Greek and have been translated for us, and that originated in the way that we have described, such as for example the book *Hasir Afina*, which in Arabic means "thousand tales", for "*afina*" is in Persian *afsinâ*. The people call this book "Thousand Nights" (two MSS have here: Thousand Nights and One Night). This is the story of the king and the vizier and his daughter and her servant-girl; these two are called *Shirâzâd* and *Dinâzâd* (in other MSS: and her nurse; in again other MSS: and his two daughters)".

In *al-Fihrist* by Muhammad b. Ishâk b. Abi Ya'qûb al-Nadîm (written in 377/987, ed. Flügel, I, 104), the *Hasir Afina* are mentioned as a recension of the frame-work story is given. The *Fihrist* adds that *Abû 'Abd Allâh b. 'Abdûl al-Djâhizî* (d. 331/942), the author of the *Book of the Viziers*, began to write a book in which he selected a thousand stories from the stories of the Arabs, the Persians, the Greek and other peoples. He collected four hundred and eighty stories, but he died before he had attained his purpose, i.e. to complete a thousand stories.

Contrary to de Sacy, Joseph von Hammer (*Wiener Jahrbücher*, 1819, 236; *JA*, 2e série, x; 3e série, viii; Preface to his *Die noch nicht übersetzten Erzählungen* (see above) maintained the genuineness of the passage in al-Mas'ûdî with all its consequences. William Lane tried to prove that the whole book was the work of one single author and had been written in the period 1475-1525 (Preface to *The Arabian Nights Entertainments*, London 1891-41).

The discussion was resumed by de Goëje (*De Arabische Nachtverhalen*, *De Gids*, 1886, iii, 385, and *The Thousand and One Nights* in the *Encycl. Britannica*, xxii, 316). He collated the passage in the *Fihrist* (see above), in which the *Hasir Afina* are said to have been written for Humayr (var.: Humâni), the daughter of King Bahman. With a passage in *al-Tahiri* (9th century), i, 688, where Esther is called the mother of Bahman and the name *Shahrazâd* is assigned to Humayr; and consequently tried to show that the frame-work story of the Nights was connected with the Book of Esther. August Müller seems to have been the pioneer towards a freer attitude to his *Sandukchreiben* on the subject to de Goëje (*Bussenberger Beiträge*, xii, 222) and in his article in *Die deutsche Rundschau*, xlii, July 10, 1887, 77-96. He distinguished various layers in the work, one of which he supposed to have been written in Baghdad, whereas to another and larger one he assigned an Egyptian origin. The idea of various layers was worked out with greater accuracy by Th. Nöldeke (*Zu den ägyptischen Märchen*, *ZDMG*, 1886, 68) who gave an approximate definition of the texts, by which each could be recognized.

The contents of the Nights were described and considered by Nöldeke several times. In this respect Oestrup's *Studier over 1001 Nat.*, Copenhagen 1891, are of special importance; they were translated into Russian by Krymski (*Istledovanie o 1001 nodi*,

Moscow 1905, with a long introduction) and into German by Rescher, "*Oestrup's Studien über 1001 Nacht*" aus dem Dänischen (nebst einigen Zusätzen), Stuttgart 1925, and a French résumé with notes was published by Galtier, Cairo 1912. Other ingenious discussions of the subject were given by Horowitz, mainly in his article *Die Entstehung von Tausendundeiner Nacht*, *Die Review d'Enschon*, no. 4, April 1927; idem, in *IC*, 1917; See also Littmann, *Tausendundeine Nacht in der arabischen Literatur*, Tübingen 1923, and *Die Entstehung und Geschichte von Tausendundeiner Nacht in der Anhang* to Littmann's translation (mentioned above).

The earliest testimony to the existence of the book of the Thousand Nights was discovered by Nabia Abbott, *A Ninth-Century Fragment of the "Thousand Nights"*, *New Light on the Early History of the Arabian Nights*, *Journal of Near Eastern Studies*, 1940. After that the work is mentioned by al-Mas'ûdî and in the *Fihrist* (see above). In the 12th century a collection of tales called "*The Thousand Nights and one Night*" was known in Egypt as we learn from a certain al-Kurtî who wrote a history of Egypt under the last Fatimid caliph (1160-71) and al-Ghazâlî, who died in 505/1112, transmitted in his anthology a tale of the Nights, as Torrey recognized (*JAGS*, 1894, 42 f.). A MS discovered by H. Ritter in Istanbul which is of the 13th or 14th century contains four stories that are in the Egyptian recension. These stories are not stated to be a part of the Nights; they will be published and translated by H. Wehr on the basis of preliminary studies by A. von Bulmerincz. Then follow Galland's MS and a number of other MSS of the Nights which cover the period from the 15th to the 18th centuries.

We know then that in the common form of the Nights there are a *Baghdâd* and an Egyptian part. Oestrup grouped the separate tales into three layers of which the first one was to comprehend the fairy-tales from the Persian *Hasir Afina* with the frame-work of the book, the second those which had come from Baghdad, and the third the stories which had been added to the body of the work; certain tales, as for example the extensive chivalric romance of 'Umar b. al-Nu'mân, were inserted when the number row was taken in its literal sense. But the *Story of Sal and Shams* in a Tübingen MS, which is professedly a part of the Nights and which was edited as such by Seybold, certainly never was an integral part of them, because in it a Muslim is converted to Christianity; in the true Nights Christians, Zoroastrians and pagans often adopt Islam, but a Muslim never adopts another religion.

The following forms of the Nights were established by Macdonald (*The earlier history of the Arabian Nights*, *JRAS*, 1904, 353 ff.)—meaning by that any collection of stories fitted into the frame-work which we know: i. The original Persian *Hasir Afina*, "Thousand Stories". ii. An Arabic version of the *Hasir Afina*, iii. The frame-work story of *Hasir Afina*, followed by stories of Arabic origin. iv. The Nights of the late Fatimid period; to its popularity al-Kurtî testifies. v. The recension of the Galland MS. From notes in it that MS was in Syrian Tripoli in 943/1536 and at Aleppo in 1500/1592; it may, of course, be older. But it was written in Egypt. There remains the at present still unsolved problem of the relations between it and the other old and independent MSS; there are according to Macdonald at least six such MSS which must be considered.

Nabia Abbott (see above) stated the following six

forms. I. An eighth-century translation of the *Hasid Afsana*. According to her belief this was most probably a complete and literal translation, perhaps entitled *Alf Khowala*. II. An eighth-century Islamic version of the *Hasid Afsana* entitled *Alf Layla*. This could have been either partial or complete. III. A ninth-century composite *Alf Layla* containing both Persian and Arabic materials. While most of the former came undoubtedly from the *Hasid Afsana*, other current story-books, especially the *Book of Sindbad* and the *Book of Shams*, are not improbable sources. The Arabic materials, as Littmann had already pointed out, were not so slight or insignificant as Macdonald believed them to be. IV. The tenth-century *Alf Sagar* of Ibn 'Abdū. Whether this was meant to include, among other materials, all the current *Alf Layla* and to supersede it, is not clear. V. A twelfth-century collection augmented by materials from IV and by Asiatic and Egyptian tales of local Egyptian composition. The change of title to *Alf Layla wa-Layla* belongs, in all probability, to this period. VI. The final stages of the growing collection extending to the early sixteenth century. Heroic tales of the Islamic rounder-circades are among the most prominent additions. Persia and 'Irak may have contributed some of the later predominantly Far Eastern tales in the wake of the thirteenth-century Mongol conquest of those lands. The final conquest of Mamlūk Syria and Egypt by the Ottoman Salīm I (1512-20) closed the first chapter of the history of the Arabian Nights in its oriental homeland.

The title "Thousand Stories" may have been changed to "Thousand Nights" when, with the Arabs, the frame-work story and other stories were combined; that cannot have been done later than the 9th century. Originally "1000 stories" meant only a very large number of stories; in the same way it is said of Shahrāzād that she had collected "a thousand books". For the simple mind even 100 is a high number, and "before 100 years" means—even for Oriental historians—the same as "a long time ago"; therefore the number 100 must not be taken in its exact sense. But 1000 is almost the same as "innumerable". And the Book of the Thousand Nights which was known at Baghdad scarcely contained a thousand separate nights. But why was 1000 changed to 1001? This change may partly owe its origin to the superstitious aversion to round numbers common among the Arabs as among other peoples. But it is very likely that it was also influenced by the Turkish idiomatic use of *bin bir* "thousand and one" for a large number; in Anatolia there is a ruin called *Bin-bir-kilise* "1001 Churches", but there are, of course, not nearly so many there. In Istanbul there is a place called *Bin-bir-direk* "1001 columns"; but there are only a few dozens of them there. The Turkish alliteration *bin bir* points to the origin of the Persian idiom *hasid yek* "1001" and of the title *alf layla wa-layla*. Since the 12th century Persia, Mesopotamia and Syria and the other countries of Eastern Islam were under the influence of the Turks. Thus the title "1001 Nights" at the beginning meant only a large number of nights, but later on the number was taken in its literal meaning, and it became necessary to add a great many stories in order to complete the number 1001.

The various component elements. If then India, Persia, Mesopotamia, Egypt and in some way the Turkish materials in the frame-work of the Nights we must assume that materials derived from all these countries and peoples are to be found

in them. The first outer tests might be the proper names. There are Indian names like Sindbad, Turkish names like 'Alī Baba and *Kāshān*; the names Shahrāzād, Dīnāzād, Shāhrazād are Persian and occur, as do Goiege has shown, in Persian legends; so also Bahārīn, Rustan, Ardāghī, Shāhīr and many others are Persian. However, by far the majority of names are Arabic, i.e. old Arabic names used among the Arabian bedouin and later Islamic names. Greek and European names occur in a few cases in stories treating of the relations between Muslims and Byzantines and Franks. Egyptian names refer to places and to months in their Coptic forms. Of Hebrew names chiefly Solomon and David occur; both play an important rôle in Islamic tradition. Besides them Asaf, Barakhiyā, Bulūkiyā and others are named. But since in very many cases stories are transferred to other persons and frequently persons without names act in them the question of the names must not be stressed.

However, the frame-work system, which is very common in India but very rare in other countries, is a test of the Indian origin of certain parts of the Arabian Nights. In the Indian popular books it usually runs like this: "You may not do such and such a thing or else you will go the same way as so and so."—"How was that?" asks the other, and then the admonisher begins his story.

The foreign elements in the Nights have been carefully studied by Oestrup. One of the interesting statements he made was that in the Iranian fairy-tales the demons or supernatural powers act on their own account and independently, whereas in the more recent tales, especially in those from Egypt, they are always subject to some talisman or magic object; hence its outer decides the development of the action, not the Djinn and 'Ifrits themselves. Only a short summary of the foreign elements in the Nights can be given here.

The frame-story is of Indian origin. That it consists of three different parts which originally were independent stories was shown by Emmanuël Cosquin in *Études folkloriques*, Paris 1922, 265. These parts are: 1. The story of a man who was grieved by a diabolical wife, whose grief was alleviated when he saw that a high personality had the same misfortune. 2. The story of a demon or a giant who his wife or his captive betrayed with many other men in the most audacious manner. This is the same as the tale told by the seventh vizier in the *Story of Sindbad the Wise*. 3. The story of a clever girl who by her skillful telling of stories averts an evil threatening her or her father or both of them. Of these three parts only the third one seems to have belonged to the original frame-work story, as indicated by al-Mas'ūdī and by the *Fikrīst*; in it, then, only the cruel king, the clever daughter of the vizier and her true old nurse were known. It is probable that the story of the clever daughter of the vizier came at an early date from India to Persia, where it was "nationalized" and combined with the other two parts of the frame-story. A number of tales in the Nights are of Indian origin; such are the stories of pious men that remind us of Buddhist and Jainist saints, the fables of animals, the story-cycles of Sindbad [g.v.] *the Wise*, and of *Djalād* and *Shimān*. Indian motifs are to be found in different passages of the Nights; such are, e.g., the *Story of the Magic Horse*; the poisoning by means of the leaves of a tree (by the physician Dībān), a practice which points to Indian customs (cf. Gildemeister, *Scriptura Arabum De Rebus Indicis loci et opuscula*, Bonn

1838, 89). All this passed through Persian before it reached the Arabs.

Quite a number of tales are of Persian origin, especially those fairy-tales in which the ghosts and the fairies act independently; see above. The tales which Oestrup enumerates as being of Indian-Persian origin are the following: 1) *The Story of the Magic Horse*; 2) *The Story of Hasan of Basra*; 3) *The Story of Sayf al-Mulūk*; 4) *The Story of Rāmar al-Zamān and of Princess Budūr*; 5) *The Story of Prince Badr and of Princess Dīnawar of Samand*; 6) *The Story of Ardāghī and Hayāt al-Nafas*. And according to him the relation between the *Story of 'Alī Shāh* and the Persian original, the former containing many details which occur in the probably later narrative of Nūr al-Dīn 'Alī and the *Girdle-girl*, also to be found in the Nights, is uncertain. The *Story of the Jealous Sisters* and the *Story of Ahmad and Parī Dānā* that are found only in Galland give a strong impression of being originally Persian, but Persian prototypes of them have not become known as yet.

Baghdād is situated in the region of ancient Babylonia; it is, therefore, probable that ancient Babylonian ideas should have survived there until Islamic times and might be reflected in the Nights. Even a whole story, the *Story of Haykār the Wise*, in which an MSS appears as a part of the Nights, is of Old Mesopotamian origin; it probably dates back to the 7th century B.C., and it found its way through the Jewish and Christian literatures into Arabic literature. Bihār the Ever-Youthful, has a Babylonian prototype; the journeys of Bulūkiyā and the water of life fetched by Prince Ahmad may reflect motifs of the Babylonian epic of Gilgamesh. But Nāzīr and the water of life were probably transmitted to the Arabs by the Romance of Alexander, and the journeys of Bulūkiyā became known to them through Jewish literature. Above all, the frequent anecdotes about the 'Abbasid caliphs and their court and also some anecdotes about their subjects belong to the Baghdad recension of the Nights. The *Story of Sindbad* [g.v.] *the Sailor* found its definite shape probably in Baghdad, the romance of 'Umar b. al-Nu'mān [g.v.] contains Persian, Mesopotamian and Syrian materials; the romance of 'Aḡlīb and Ghārīb points to Mesopotamia and to Persia; the story of the clever slave-girl *Tawaddūd* [g.v.] originated in Baghdad and was in some respects reshaped in Egypt. The Stories of Bulūkiyā, of Sindbad [g.v.] *the Wise*, and of *Djalād* and *Wird Khān* were certainly known in Baghdad. But there is no certain proof that all these tales were parts of the Baghdad recension. The same is to be said of the four stories of the Istanbul MS found by H. Ritter (see above); it contains four of our Nights stories but does not refer to *Alf Layla wa-Layla*. These stories are: 1) *The Story of the Six Men*, i.e. of the six brothers of the barber of Baghdad; 2) *The Story of Dīwanār the Sea-girl*; 3) *The Story of Budūr and 'Umayr b. Dīhawar*; 4) *The Story of Abū Muhammad the Slave*.

Egyptian origin is to be postulated of the stories in which the tricks of clever thieves and rogues are related, of the tales in which the ghosts and demons appear as servants of talismans and of magic objects, and of stories that might be called "bourgeois novels", some of which resemble modern romances of adultery. All these stories date, of course, in their present form from the time of the Mamlūk sultans and must have been composed in Egypt. But some of the motifs go back to Ancient Egypt. The clever rogue 'Alī al-Zaybak and his companion Ahmad al-Danaf

have their prototype in the bold *condottieri* Ananiā, and the treasure of Rhampsinit is found in the story of 'Alī al-Zaybak, as Nöldeke pointed out. The monkey-scribe in the story of the three dames of Baghdad may have his prototype in Thot, the scribe of the Egyptian gods who is often represented as a monkey, or in Hanuman the monkey-leader of the Indian *Ramayana*. It has also been suggested that the ancient story of the Egyptian shipwrecked person is to be connected with Sindbad's journeys, and that the story of the capture of Jaffa by Egyptian warriors hidden in sacks recurs in the story of 'Alī Baba; but these connections are not very likely; see Littmann, *Tausendundeine Nacht in der arabischen Literatur*, 22.

For possible Greek influences in the Nights see von Grunbaum, *Medieval Islam*, Chicago 1946, Chapter Nine, *Greece in the Arabian Nights*.

The various literary genres. It remains to give a summary account of the different classes of literature represented in the Nights; it is here, of course, impossible to mention every one of all the stories, as has been done in the *Anhang* to Littmann's translation. There six main groups were distinguished: 1) Fairy-tales; 2) Romances and novels; 3) Legends; 4) Didactic stories; 5) Humorous tales; 6) Anecdotes. A few examples of each group must suffice here.

1. The frame-story consists of three Indian fairy-tales. The tales which come first in all manuscripts (*The Merchant and the Djinn*; *The Fisherman and the Djinn*; *The Porter*; *The Three Calenders* and *The Three Dames in Baghdad*; *The Hunchback*) belong to this class; they are themselves examples of the frame-work system and contain some traits which remind us of Indian prototypes and even of some motifs which have parallels in stories from farther east. The best known fairy-tales are those of 'Alī al-Dīn and the Magic Lamp and 'Alī Baba. Other examples are *Kamar al-Zamān and Budūr*, *The Jealous Sisters*, *Prince Ahmad and Parī Dānā*, *Sayf al-Mulūk*, *Hasan al-Basri*, *Zayn al-Aynān*.

2. The longest romance is that of 'Umar b. al-Nu'mān [g.v.] and his Sons; it has been discussed by Paret (*Der Ritterroman von 'Umar an-Nu'mān*, Tübingen 1927), and by H. Geigroire and R. Goossens (*EDM 1934*, 213). Byzantine *Ephe* and *Arabische Ritterromane*. The Story of 'Aḡlīb and Ghārīb is the model of an Islamic popular romance. The stories of *The Porter* and *The Three Dames*, of 'Alī al-Dīn *Abū 'L-Shāmāl*, of Nūr al-Dīn and Shamī al-Dīn, of Nūr al-Dīn and Maryam the *Girdle-girl* might be called "bourgeois" romances or novels, as also the story of *Abū K'ir* and *Abū Šir*.

Here the love-stories may be added. There are a great many of them in the Nights, and they comprise three groups: a) ancient Arabian life before Islam; b) urban life in Baghdad and Basra, love-affairs with girls or slave-girls in the cities or in the palace of the caliphs; c) love-novels from Cairo which are sometimes frivolous and lascivious. See Paret, *Frühislamische Liebesgeschichten*, Bern 1927.

Also the stories of rogues and of seafarers are to be mentioned here. For 'Alī al-Zaybak see above; many short stories of the guardians are told before the rulers of Egypt. The famous story of Sindbad [g.v.] *the Sailor* is based on a book *The Wonders of India*, which contained adventures and sailors' yarns collected by a Persian sea captain at Basra in the 10th century. The first part of the story of *Abū Muhammad the Slave* is composed of sailors' stories and motifs of fairy-tales.

3. There are a few ancient Arabian legends inserted in the Nights: *Īlām al-Jāhīl*, from the City of Columns; *The Brass City*; *The City of Latta*, which refers to the conquest of North-western Africa by the Arabs. Other legends refer to pious men and women, among them to pious Israelites (these need not necessarily be due to Jewish authors); the legend of *The Pious Prince*, who was a son of Harūn al-Rašīd and became a dervish, is reminiscent of the famous legend of Alexius.

4. Didactic stories, fables and parables, especially of animals, are known to many peoples and have found their way into the Nights also, where most of them seem to have originated in India, as e.g. the two long cycles of *Sinbad* (q.v.) the Wise (*Sinbad*) and of *Qabā'id* and *Wird Khān*, and many of the fables of animals, but they were sometimes remodelled in their Arabic forms. The long story of the clever slave-girl *Tawaddad* (q.v.) (in Spain *la doncella Todor*, in Abyssinia *Taudad*) with its probable Greek prototype correctly discussed by Horowitz belongs in this category.

5. Humorous tales are the stories of *Ahū 'l-Ḥasan* or *The Sleeper Awakened*, of *Khālifa the Fisherman*, of *Dī'āfar the Barmakid* and the Old Bedouin, and of *Alī the Persian*; the latter is a typical story of lies. In the stories of *Mā'rūf the Cobbler* and of the *Hunchback* there are many humorous traits.

6. The group of anecdotes comprises here all the stories that are not classified in the preceding groups. Collections of anecdotes are the stories of the *Hunchback* and of the *Barber and his Brothers*, and they are combined to a comedy of great style. The other anecdotes are to be divided into three groups: those of rulers and their circles, those of munificent men, those taken from general human life. Those of rulers begin with Alexander the Great and end with the Mamlūk sultans: a few of them refer to the Persian kings, a very large number of them refer to the 'Abbāsid caliphs, above all to Harūn al-Rašīd who became the ideal ruler in the opinion of later Muslims. Some of these anecdotes may not originate from Baghdad but from Egypt where they were ascribed to him. The munificent men about whom the Nights tell are mainly *Īlām al-Jāhīl*, *Mā'rūf the Barmakid* and the *Barmakids*. The anecdotes from general human life are of several kinds: they tell of rich and poor, of young and old, of sexual abnormalities (*Wardān and the Woman with the Bear*; *The Princess and the Monkey*), of bad eunuchs, of unjust and of clever judges, of stupid schoolmasters (a type known in Greek and Roman literature as well as in modern Egyptian Arabic tales). The *Naturalist's Adventure of the Caliph* transmitted only by Galland contains three long anecdotes told at large and intermingled with motifs from fairy-tales.

There are about 1420 poems or fragments of poetry in the 2nd Calcutta edition, according to Horowitz (in *Festschrift Sachau*, Berlin 1915, 375-9). Of these a number of 170 repetitions must be deducted, so 1250 insertions of poetry remain. Horowitz has been able to prove that these insertions whose authors he could discover are to be dated from the 12th to the 14th centuries, i.e. from the Egyptian period of the history of the Nights. These poems and verses are mostly of the kind that they might be omitted without disturbing the course of the prose texts, and, therefore, have been later added to them. Bibliography: Has been given in the course of the article. Here special attention should be called to Oestrup's *Studier* and their annotated translation by Rescher (see above), to N. Elisséeff,

*Thèmes et Motifs des Mille et Une Nuits*, Beirut 1949, and to the full bibliography given by Brockelmann, II, 72-4, S II, 59-63. For the influence of the Arabian Nights on European literature cf. *The Legacy of Islam*, 199 ff.; Cassel's *Encyclopaedia of literature*, s.v. (E. LITMANN).

ALFARD (see *NUṢṢ*).

ALFONSHO, the transcription adopted by the majority of the Arab chroniclers of al-Andalus for Alfonso, the name of several monarchs of Christian Spain in the Middle Ages. The forms *Ighfōnshu* and *al-Ighfōnshu*, however, which correspond to the old Latin-Gothic form *Ilfedonso*, are also occasionally found.

(i) GEOGRAPHY.

Algeria comprises the central section of North Africa (also called Maghrib, Barbary, Africa Minor, the Atlas region [cf. MAGREB]) and a large part of the Sahara, and has an area of 2,191,464 sq. km. Situated between latitudes 37° and 19° N., it is bounded by Morocco and Spanish Río de Oro in the West, by French West Africa and French Equatorial Africa in the South, and by Libya and Tunisia in the East. Algeria proper, which extends roughly to the southern slopes of the Saharan Atlas, covers only 14.6% of this area, or 320,000 sq. km. It is 1000 km. long, with 1,300 km. of coastline; it is 350 km. in breadth at the Moroccan frontier and 240 km. at the Tunisian, and extends from lat. 32° 1' to 35° 1' in the West, and from lat. 34° 9' to 37° 1' in the East. Tlemcen is at the same latitude as the oasis of Biskra. Algeria proper is a plateau with a mean altitude of 900 m. It is traversed by the Atlas Mts., a southern branch of the Alpine chain, which were thrown up in a series of folds during the tertiary and at the beginning of the quaternary period, on the edge of the hard Saharo-African platform. They are divided into two main groups, the Tell Atlas in the North and the Saharan Atlas in the South, which come together in the east and enclose upland plains.

The Tell. The Tell Atlas in relief presents a complex picture, by reason of its excessively folded structure and of the extensive erosion caused by the Mediterranean rains and by the fact that its coastline is near sea level. The successive ridges rise parallel to or at an angle to the coast, cut by deep transverse valleys and separated, in the West, by longitudinal depressions. South of the hills of the Sāhil (Sāhil) of Oran, Dahmā, and Beni Mender, and the mountains of Zaccar (1,579 m.) stretches a depression 350 km. in length, following the line of the Sebkhā of Oran, the low marshy plains of the Mactā and the Mina, and the valley of the lower Chéfil (Sāhil). It is

bounded in the South by lines of hills which rarely exceed 2000 m.: the Tessala, Ouled Ali, and Beni Chougman mountains, and the great massif of the Ouassenis (Wangharts) and the Matmata which rises between the Chéfil valley and the high plains. To the West of the valley of the Mina, the inner plains are dominated to the South by table-like limestone and sandstone formations, which rise to between 2000-1500 m.: these are the plateaus of Oran.

To the East of Algiers and the hills of the Sāhil the mountain formations are higher and more massive. Between the plains of the Mitidja and Bône (Bône) there is no important depression, except that of the Wādī Sāhil-Soummam with its western extension. The mountains of Kabylia, between the Mitidja and the Edough, are of great size and are dominated by a "limestone spine" formed by the Djurdjura (highest peak Lilla Khadidja, 2,308 m.) (see KABYLIA), the Babar (Bābar) (2,004 m.), and the highest peaks of the Numidian chain. To the South, the Mitidja and the Medea mountains, the Biblis ranges, and the Constantine and Medjerda mountains, composed of non-durable mud and schistose material, have comparatively soft or deeply-furrowed contours. The littoral, precipitous and rocky nearly everywhere, affords scant natural

shelter against the N-W gales; the bays of Mers el Kebir-Oran (Mars al-Kabir), Arzew, Algiers, Bougie (Bijlāya) and Bône face East.

The High Plains. The high plains, wrongly termed high plateaus, are monotonous expanses broken by isolated rocky humps whose moderately-folded structure makes them similar to the Saharan Atlas. Situated below the Tell Atlas, and subject to a climate which is already arid, they form a succession of enclosed basins: the wādīs discharge their alluvia and their waters into *sebkhas* (or *sahras*), whose surface in summer sparkles with salt, while their margins (*ghoff*) have a covering of salt-loving plants. The high plains of the West, with the Gharbi (gharbi) and Cherqui (gharbi) shotts (2000 m.), the Zaires (800 m.) and the shallow basin of the Hodna (q.v.) (400 m.), drain partially into the sea. East of the mountains of the Hodna (1,590 m.) and the Belemra (2,094 m.), the high plains of Constantine are 900-1200 m. above in mountain masses which are extensions of the mountain chains of the Hodna, the Belemra and the Aurès.

The Saharan Atlas is formed, from Morocco to Biskra, by a group of asymmetrical minor ranges running SW-NE, the debris of moderately-folded ranges; they are separated by large depressions and

are half-buried under their own detritus. The Ksour (Kštr; 2,236 m.), the Amour ('Amūr [g.s.]; 2,008 m.) the Ouled Nail and the Zibān (or Zāb) mountains drop towards the NE.; they are easily negotiated. East of Biskra, the Aurès (see AWRĀS) is the largest and highest Algerian massif (Djebel Chella, 2,129 m.), and is a succession of peaks and depressions running SW-NE.

**The Desert.** The varied terrain of the Atlas region contrasts with the extremely monotonous expanse of the desert; for instance its severe plateaus or *hamada*, its immense plains which constitute enclosed basins and which are partly covered with sandy or pebbly *reg*, and finally its *erg*, vast agglomerations of sand-dunes which cover only 1/3 of its surface (see AL-SAHRĀ').

The climate is Mediterranean in the Tell Atlas, but it deteriorates in the high plains and the Saharan Atlas where it becomes an arid without actually becoming a desert climate. On the littoral the variation in the mean monthly temperatures is small, because of the humidity. The climate is becoming continental; considerable heat has been known in depressions sheltered from the sea winds, with cold winters in the mountains and on the high plains. Everywhere, except on the littoral, where it rarely occurs, the *sirocco* (*shēllū*) brings temperatures of 104° F and higher several times a year; in winter, on the other hand, snow covers the principal massifs for 2-3 weeks.

The summer is dry, apart from a few storms, and rain falls principally from October to May. The massifs of the Tell Atlas to the East of Algiers receive more than 31 ins. of rain, and sometimes more than 39 ins. The plains of the West, and the Hodna, receive only some 7-11 ins., except on their northern boundary, and the Saharan Atlas 11-15 ins. on its northern slopes. The desert receives less than 7 ins.

Only the main rivers of the Tell Atlas have water all the year round, and even then their summer flow is very small; these are Mediterranean torrents whose spate is sudden and violent. Such are the Tafna, the Macta (formed by the confluence of the Sig and the Halra), the Sphal (Chellū), the Sebū (Sebān), the Wādī Sūq, the al-Wādī al-Kabīr, the Seybīs (Seybouse), the Mergēra and its tributary, and the Wādī Melleg (the lower courses of the last two belong to Tunisia). Not one of them is navigable; some are used for irrigation. On the high plains and in the Saharan Atlas the *wadī* contain water for only part of the year, and then only in their upper courses; many only contain water after heavy rains.

The vegetation has been much impaired by man. Thin forests of non-deciduous and resinous trees still cover the Tell mountains and certain more arid massifs; there are cork-trees on the siliceous and well-watered mountains of the Kabylas and the Bône region; evergreen oaks, or holm-oaks, indigenous to the soil, even in the Aurès; Aleppo pines on the limestone of the Aurès; cypresses on mountains already dry; Barbary thorn and Kermes oaks in the Oran Tell, and thorny-sown junipers on the drier slopes. A few well-watered peaks still support plantations of cedars. Agricultural expansion and the demand for timber and charcoal have caused the forests to recede; the area under cultivation has chiefly increased at the expense of dense thickets of wild olive and manna trees. Only the more important episodes in its history will be mentioned here.

In the middle of the 15th century, North Africa was invaded by the Arabs, the propagators of Islam. The military power of Byzantium rapidly

annually are the regions of the steppe, a formation characterized by the scarcity of bushes and trees, especially of the latter, and by the presence of perennial herbaceous plants such as alfalfa (10 million usable acres) and esparto, of small ligneous plants such as the artemisia, salt-loving plants growing on the saline soil of the *ghārs*, and of an annual herbaceous vegetation which burgeons every spring. The desert is only an open steppe without alfalfa.

Algeria, therefore, comprises two great natural regions in addition to the desert: a Mediterranean region, where the cultivation of cereals, wheat and barley, and trees like the olive, the fig and the almond is practicable without irrigation, and consequently where a sedentary mode of existence possible: it is known to the indigenous peoples as the Tell; and, secondly, the steppes, where cultivation is not practicable without irrigation or flood waters, and which is devoted to the breeding of livestock on a migratory basis, and to nomadism: natives know this area and that of the desert under the common name of Sahara. This distinction between Tell and Sahara is a fundamental one in the history of the country no less than in its geography.

### (II) HISTORY.

#### (1) To the 16th century.

The region which later became known as Algeria presents a framework not readily acceptable to the historian of Muslim North Africa. The frontiers which are shown on the map cannot set bounds to his field of study; they only assume any significance with the establishment of the Turkish regime in Algiers in the course of the 16th century. During the nine hundred years prior to this event, the future Algeria, which comprises what the Arab writers call central Maghrib (al-Maghrib al-Awsat) together with part of Ifrikiya (or near Maghrib), was closely linked with the two neighbouring countries, being almost always a vassal state subject to rulers coming from these countries or in fear of their domination. Although, in comparison with the two other subdivisions of Ifrikiya or Maghrib, this central region appears to be a large rural area with few towns, populated by nomadic shepherds and hill farmers, it has nevertheless through the centuries played a not inconsiderable part in the history of the Muslim West. Only the more important episodes in its history will be mentioned here.

In the middle of the 15th century, North Africa was invaded by the Arabs, the propagators of Islam. The military power of Byzantium rapidly

disintegrated; but the reduction of the Berbers was a more difficult task. Resistance was primarily organized in central Maghrib; inspired, it is said, by Kusayla (g.s.), chief of the Awrāba, native bands among which, near Biskra, engaged Ukba b. Nāh' (g.s.)—a battle in which the latter lost his life (56/582). The Awrāba in particular seems to have been used as a strongpoint in the struggle against the Arabs; it was in the foothills of this mountain massif that the Kāhina (g.s.), legendary queen of the country, witnessed, after a brilliant success, the destruction of Berber independence (74/693).

The central Maghrib again became the centre of autochthonous resistance in the 2nd/8th century, when the Berbers had become converted en masse to Khāridjism. Tlemcen, where Abū Kurā, chief of the Banū Ifran (g.s.) (148/765), was in command, was at first their chief centre. In the 3rd/9th century Thiert (near the modern Tiaret), capital of the Rustamids (g.s.) *umma*, became the centre of Berber Khāridjism.

The position of this central region, on the borders of the territory which the Agglabids of al-Kayrawān held in the name of the 'Abbāsids, explains how the Fātimids (g.s.) power was engendered there among the Kutāma (g.s.) Berbers of Lesser Kabylia at the end of the 3rd/9th century. These new masters, however, were not accepted without a struggle; the Awrāba and its environs witnessed the terrible revolt of the Man with the Donkey, in which the Fātimid cause was nearly lost (see ABŪ YAẒĪD AL-NURKĀN).

Taking over the role of the Kutāma, the Šinhādja (g.s.; see also ZIKRIS) of central Maghrib became, in the 4th/10th century, the most useful allies of the Fātimids and supported their policy of opposition to the Zanāta (g.s.), who were vassals of the Umayyads of Spain. The Zanāta were for the most part nomads, and frequented the central and western plains. The Šinhādja were settled tribes, and inhabited the central and eastern mountain regions; they founded or developed towns, such as Aghir and the Ka'fa, capital of the Šinhādja Banū Hammād (see HAMMĀDĪS). This latter kingdom experienced the repercussions of the serious events which occurred in Ifrikiya. The invasion of the Banū Hūl (g.s.) Arabs in the middle of the 5th/11th century, which destroyed the kingdom of al-Kayrawān, caused an influx into the Ka'fa of merchants and artisans, and palaces were built there which betrayed the influence of Fātimid Egypt and of Persia. But it was not long before the Arab scourge menaced; in their turn, the Banū Hammād, who engaged in a Būdjīya (Bougie). While, in what was later the province of Constantine, the power and prosperity of the former rulers increased, the future provinces of Oran and Algiers acquired new masters. Emerging from Morocco, the Almoravids (5th/11th century) (see AL-MURĀVIṬŪN) overran the country as far as Algiers; the Almohads (6th/12th century) (see AL-MUWAḤḤIDŪN) and Mu'wīnids extended their sway over the whole of North Africa. Both dynasties, which had in addition annexed Muslim Spain, enriched the cities of their Berber dominions, particularly Tlemcen, with the products of the magnificent civilization of al-Andalus.

At the beginning of the 7th/13th century, the great Almohad empire collapsed, and Tlemcen, which had escaped ravages at the hands of the Arabs and the Almoravids Banū Ghāniya (g.s.), became the capital of the Banū 'Abd al-Wād (see 'ABD AL-WĀDĪS), formerly Zanāta nomads. This new kingdom achieved real economic prosperity; but it was constantly

threatened by the Marinids, its Moroccan neighbours, and, at the beginning of the 10th/16th century, it was annexed by the Turks of Algiers.

It was the appearance of the Spanish off the small Berber port of Algiers which led to Turkish intervention in the central region of North Africa. For made Algiers the centre of a vassal State. For nearly three centuries piracy, a substitute for holy war, provided the Regency of Algiers with important resources. The country itself, which later became Algeria, and which was divided into three provinces, to some extent evaded the control of its Levantine masters, and its nomadic and settled populations pursued in relative independence an archaic mode of existence, the history of which is, and will doubtless long remain, obscure to us.

#### (2) The Turkish period.

The establishment of the Turks in Algiers was not the result of a deliberate policy of expansion planned and carried out by the Ottomans. It was, on the contrary, at least at its inception, a private venture by two Turkish corsairs, known as Western sources as the Barbarossa brothers, 'Arūḍ (g.s.) and 'Iskayr al-Dīn (g.s.). These two, with a great reputation for valour gained in hunting down Christian vessels in the Mediterranean, came to the rescue of Islam in

Africa, which they saved from the hands of the Spaniards. In 921/1516, the inhabitants of Algiers appealed to 'Arbi, who proclaimed himself sultan, and occupied Miliana, Medea, Tunes and Tlemcen. He was killed at Tlemcen after resisting siege by the Spanish for six months (924/1518). Khayr al-Din restored the situation, which had been reversed momentarily critical by the death of his brother, by presenting the Ottoman Sultan Selim with the newly-acquired territories, thus gaining both increased prestige and the military and financial aid which he needed. He extended his authority over Collo, Bône, Constantine and Cherchell, and 1529 forced the surrender of the Peñon of Algiers, a fort which the Spanish had erected on an inlet some 300 yards from the shore. In 940/1533, Khayr al-Din was appointed commander-in-chief of the Ottoman fleet, and was replaced at Algiers by *heylerbeyis* who administered the country either directly or through lieutenants until 995/1587. Aspirations to independence on the part of some of these officials led the Ottoman Government, in 1587, to replace them by *pašas* appointed for a term of three years. The *pašas* were eclipsed, after 1070/1659, by the *aghas* of the army corps, who were in turn succeeded by a new power, that of the *deys*, who ruled until the capture of Algiers by France. The triennial *pašas*, *aghas* and *deys* were more often than not tools in the hands either of the army corps (*odja*), recruited primarily from the townsmen of Anatolia, or of the *pašas* of *al-ru'us*, a guild of corsair captains which, for three centuries, furnished the Algerian treasury with the greater part of its resources. The four *aghas* who reigned successively from 1659-71 were all assassinated, and fourteen of the twenty-eight *deys* met the same fate.

The internal organization of the Algerian State is obscure; the scant information of a reliable nature which is available to-day deals for the most part with the era of the *deys*. The *deys*, when they managed to stay in power, governed as absolute sovereigns assisted by a council (*divan*) composed of the *khaznadars* or *khaznads* (treasurers), the *aghas* of the camp (commander of the troops), the *başı al-harbi* (head of naval administration), the *başı al-maldit* (trustee of vacant estates), and the *khadij al-hayat* or *al-khadjas* (receiver of tribute).

With the exception of the district of Algiers itself which constituted the *dār al-sultān* and was divided into seven regions (*ustan*) administered by Turkish *kādīs* under the direct control of the *dey*, the whole country was divided into three provinces (*beylik*), each under a *key*, which anticipated the later French provinces. These were the province of Tifarit, with Medea as its chief town; the eastern province with Constantine as its centre; and the western province, the capital of which was successively Māzina, Mascara and, after 1792, Oran. The *keys*, appointed and dismissed by the *dey*, ruled their provinces with absolute authority, assisted by *kādīs*. In the eyes of the central government, they were no more than revenue collectors, tax-farmers who contracted, usually having bought their offices, to pay into the state coffers large sums, the size of which was determined in Algiers. The sum contracted was payable during the financial year, the commencement of which coincided with the appointment of the *key*, in several instalments, effected by the *key*, his lieutenant and a courier. The *key* appeared in person at Algiers during the spring following his appointment and thereafter every three years. His lieutenant travelled to Algiers twice a year, spring

and autumn, and the courier, whose office was occasionally discharged by an official described in the archives at Algiers as *wakil-i sūphāyān*, went to the capital regularly every month, or every two or three months. The sums remitted to the Treasury by each official remained constant, but each official remitted a different amount. This organization seems to have been designed solely to enable the *dey* to exercise the closest supervision of the provincial governors, and to dismiss them at the slightest sign of any shortcoming.

This preoccupation with financial matters was apparent throughout the internal organization of Algeria under the Turks. All commissions and offices involving the collection of taxes, dues, imposts or fines were farmed out by the State for sums payable, according to circumstances, in one or more annual instalments. Such a system gave rise to a host of abuses and led to exploitation of the people on such a scale as to render any attempt at winning their sympathies impossible. Moreover, Turkish ascendancy existed more in theory than in fact, and in the garrison-towns in the interior of the country (Bijāya, Bordj Lehaou, Constantine, Medea, Miliana, Māzina, Mascara, Tlemcen) the Anatolian *yoldaks* had often the appearance of troops under siege. In order to maintain their own position, the Turks were obliged to inflame tribal rivalries; the *mağhzen* tribes, when they espoused the Turkish cause, secured not only various financial advantages but also the right to oppress subject tribes (*ra'ida*) and to exterminate rebel tribes. At the same time, the Turks established military colonies (*rumeli*) on all the main communication routes. Thus the Kabylia massif was ringed with posts responsible for ensuring the free passage of troops. Finally the Turks endeavoured to conciliate the religious orders. But they were not entirely successful, and the revolts which broke out at the beginning of the 19th century in the province of Oran and in the Babir Kabylia were the work of the powerful Dārkaia order encouraged and supported by the Sharifs of Fez.

The Turks had no thought of improving the territories they conquered. The future of Algeria, they considered, did not lie in its hinterland. They had come by sea, and they continued to look seawards, and Mediterranean piracy provided the major part of their revenue. The 17th century was the golden age of privateering. In Algiers, about 1650, there were nearly 35,000 captives in the city prisons. Spain made several unavailing attempts to capture Algiers (1541, 1565, 1775). But thereafter French and British naval demonstrations checked the Algerian mariners' piratical career, and their power declined. Their crews became less audacious. Only one *ra'ida*, Hamidā, deserves mention in the 18th century for the temerity of his exploits. After the middle of the century Algiers, impoverished and shorn of its former importance, suffered a decline in population, a decline hastened by famine and plague. In 1836, after the Congress of Vienna, when Lord Exmouth and the Dutch admiral Van der Capellen, the representatives of Europe, arrived to bombard the town, there were only 1,200 slaves in the prisons. On the eve of the French invasion, Algiers, which had at one time had 100,000 inhabitants, had been reduced to barely 40,000.

To sum up, little is known even now of the history of Algeria under the Turks: it is a period which has not aroused much interest. At that time, however, the frontiers of the region situated between present day Morocco and Tunisia, corresponded for the

first time with the frontiers drawn on the map of Barbary as we know it to-day. Moreover, the fusion between the Arab and Berber elements of the population had become more complete. Algeria entered on its career as an up-state, and Algiers attained the status of a capital.

**Bibliography:** An up-to-date bibliography is given by Ch. A. Julien, *Histoire de l'Afrique du Nord de la conquête arabe à 1830*, 2nd ed., t. II by R. Le Tourneau, Paris 1933, 346 ff. ### (3) After 1830.

Following a dispute concerning the supply of wheat, the *dey* of Algiers Husayn insulted Deval, the French Consul. The Government of Charles X instructed the fleet to blockade the old pirate stronghold. In 1830, influenced by considerations of internal policy, Polignac, the chief minister, decided, despite British objections, to send an expeditionary force to Algiers. The *dey* surrendered on 5th July and embarked with the majority of his janissaries. France, which did not aim at permanent occupation, entered into negotiation with the other powers. At first the July Monarchy was perplexed by the 'embarrassing legacy' of the previous régime of Algeria, and began with to confine itself to a limited and temporary occupation. It was not until 1834 that a Governor-General was appointed following the report of an 'African Commission'. Until 1841 the French occupation, frowned on by the Chambers, was limited to possession of the principal ports and their environs.

Meanwhile, the situation had changed in the interior. The Turks, the *bul-oghles*, and the former *mağhzen* were harassed by the Arabs, and various native states came into being. The *hey* of Constantine, Ahmad, consolidated his power within his province. In the west, after a period of anarchy, the people accepted or were subjected to the rule of the marabout 'Abd al-Kādir [s.], who was conspicuous for his bravery, his diplomacy and his organizing ability. French policy vacillated between collaboration with the former *mağhzen* and dealings with the new Arab chiefs. But although 'Abd al-Kādir twice agreed to sign treaties which strengthened his position, Ahmad refused, and repulsed a French army before Constantine in 1836. The following year a new expedition captured the town, and France decided to effect a definitive occupation of the eastern province. In 1839 'Abd al-Kādir declared war on France. The conduct of operations during Marshal Valée's governorship was apathe-

tic. General Bugeaud was despatched to Algeria with a large force and, by employing new tactics, he succeeded, between 1841 and 1847, in crippling the power of 'Abd al-Kādir, in suppressing the risings organized in the mountains by religious agitators, in defeating in 1844 the army of the Sultan of Morocco, who supported the rebels, and in beginning the subjugation of the nomads of the south. He put in hand the organization of indirect rule through 'Arab bureaux', and encouraged European colonization in the coastal plains by populating villages, virtually military colonies, which were designed to consolidate his work.

These colonies were reinforced in 1848 by an influx of Parisian workers who formed forty-two new villages, followed by colonists of all kinds, who were given small grants of land by the State or who set themselves up on their own account.

The occupation of the country proceeded under the Second Republic, and at the beginning of the Second Empire, by the annexation of the oases and of Kabylia. In order to protect Algeria from the nomads of the south, and to control the desert trade routes, fortified posts were established on the plateaus, and columns scoured the Saharan borders. Kabylia, which was independent during the Turkish era, had already been penetrated by two expeditions under Bugeaud, and by the campaigns of Saint-Arnaud and Randon. France was thus enabled to extend her control over the Kabylia of the Babors, the Oued Sahel region and the Sébaou valley. The Kabylia confederations of Djurdjura held out longer, and were subjugated by Marshal Randon in 1857. France allowed the people to retain their municipal organization and their customs. Since that time peace in Algeria has not been disturbed by any general uprising. The insurrection of 1871 was the result of Germany's defeat of France, of the reduction in the strength of the garrisons, and the discontent of the great Mokran family. The Medjana, both the Kabylia, parts of the department of Algiers, and the southern half of the department of Constantine, rebelled. The rebels massacred colonists, and threatened the Mitidja. Admiral de Goydon, appointed Governor-General of Algeria, restored order. The rebels were heavily fined, and over a million acres of land were confiscated and set aside for colonization. Again in 1881 a comparatively serious revolt broke out in the south of the department of Oran, led by Bū 'Amāma. This led to the establishment of a line of permanent posts on the southern edge of the plateaus. A revolt in the Selt (Selt) and Guelma (Kālamā) areas in 1945 caused the death of about 100 Europeans, but was of short duration and was severely repressed.

The organization and colonization of Algeria since the time of Bugeaud have passed through several phases characterized by the application of quite distinct methods. The Second Republic favoured a policy of assimilation and of French colonization. The civil territory of the three departments was placed under prefects responsible for the administration of the colonists. The remainder was in the hands of the military authority under the control of the Governor-General, the supreme head of the 'Arab bureaux'. The native population was governed by Muslim chiefs, appointed and supervised by the military administration. This organization continued to exist under the Second Empire. Under Randon's governorship, European colonization was increased and the economic framework of the country was built up. Algeria was visualized as a source of

tropical foodstuffs; but the crop which succeeded best was corn, the colonists' crop until about 1881. An economic crisis and the increasing claims of the colonists, who were handicapped by the limited scope of their concessions and who wished to acquire land made available through the establishment of cantonnements, led the Government to renew the policy of assimilation. From 1858-60, the country was governed from Paris by a Ministry for Algeria and the Colonies, entrusted at first to Prince Napoleon, and then to the Comte de Chasseloup-Laubat. The disorder of the administration forced Napoleon III to restore military government under Marshal Fillesieu and, after the latter's death in 1864, under Marshal MacMahon. During this period, despite opposition from the colonists, the Emperor tried to make Algeria an "Arab Kingdom". He protected the tribal collective lands by the *senatus consultum* of 1863; by that of 1865, Muslims were allowed to adopt French nationality.

In 1870 the colonists expelled the imperial agents and set up the revolutionary government of the "commune" of Algiers. The Government headed by Thiers decided on the establishment of a civil administration. From that time, although the first two governors, Admiral de Gueydon and General Chanzy, came from the armed forces, the civil territory increased steadily in extent and the "Arab bureaus" gave way to "mixed communes".

Complete administrative and financial autonomy was achieved in 1900. The powers of the Governor General were increased, and the budget was henceforth voted by the "Délégations financières", a body representing the various economic interests in the country. Algeria was empowered to raise loans in order to improve its industrial plant, ports, roads, railways, dams etc. An era of prosperity was inaugurated. More varied types of crops were grown, and over an ever-increasing area. European colonization was stimulated; the outlay necessitated by increasingly scientific agricultural methods gave it a capitalist character unknown before the large-scale cultivation of the grape and of citrus fruits. New mines of iron, zinc and phosphates were developed. The native population increased as the result of a high birth-rate coupled with a decreased mortality rate, the product of more hygienic methods. The economic achievement was very considerable, but social policy continued to be paternal in spirit.

Algeria played a prominent part in the 1939-45 war. After the Anglo-American landings in 1942, a French liberation force was organized there which took part in driving the Germans and Italians out of Tunisia, and participated in the Italian campaign and in the fighting in France. In recognition of the services rendered by Muslims during this common effort, the political régime was improved by the creation of an Algerian Assembly, elected by universal suffrage and consisting of two houses, European and Muslim, with equal rights. The work of economic development was resumed on a more generous scale; a comprehensive scheme for the education of Muslims was drawn up, and an era of social reform was ushered in.

### (iii) POPULATION.

**Demography.** The total population of Algeria, according to the census of 31 Oct. 1948, is 8,681,785, which represents a large increase as compared with previous censuses. It comprises 7,721,678 Muslims and 960,107 non-Muslims; the latter include 576,686 French and 45,586 other Europeans, of whom  $\frac{1}{2}$  are Spanish. More than 75% of the Europeans live in the cities. In the country they are found chiefly in the Tell, especially in the wine-growing and market gardening districts. In the department of Oran most of the French are of Spanish origin.

The majority of the Muslims live in the rural areas, and the movement to the towns is a recent phenomenon:  $\frac{1}{5}$  of them now live in them. They form the majority everywhere except in Algiers and Oran. The population of the largest towns (1948) is as follows:

	Muslims	Non-Muslims	Total
Algiers (incl. suburbs)	225,539	247,722	473,261
Oran (incl. suburbs)	99,672	174,036	273,708
Constantine	77,089	37,249	114,338
Bône	56,614	44,541	101,155

There are five other cities of from 50-100,000 inhabitants: Tlemcen, Philippeville, Sidi-bel-Abbes, Mostaganem, and Sétif, all situated in the Tell. The distribution of the population in the administrative districts and its density per sq. km. are as follows:

Department of Oran	1,990,729	density 30
Department of Algiers	2,275,896	density 50
Department of Constantine	3,108,165	density 35
Southern Territories	186,993	density 0.4

The most populous regions are those of the Tell Atlas where the density per sq. km. generally exceeds 50 and sometimes 60 (Tizi, the Algiers district, the Kabylia); it reaches 114 in the purely rural and mountainous *arrondissement* of Tizi Ouzou, but drops to between 10 and 30 on the high plains of Constantine (except in the NW) and in the Awra and the Hodna, to less than 10 on the steppes, and less than 1 in the desert.

**Ethnography.** The Muslim peoples of Algeria, the Berbers (q.v.), have an obscure origin. Of white race, they are, and apparently have been since remote antiquity, of various physical types. The influx of foreigners has not been on a large scale in the course of the centuries, except for that of the Arabs (i.e., Muslims from the East) in certain

regions, and of Mediterranean elements in the cities, where the most recent arrivals are the Andalus (Muslims returning from Spain), Turks and Europeans. But although most of the population calls itself Arab because it speaks Arabic, although the descendants of Turks who married Algerian women call themselves *hal-d-egle* (*hal-d-eghli*), although the older citizens, of considerably mixed origin, pride themselves in the term *hadjar* while others boast of being "Andalus", the bulk of the population has changed little, anthropologically, and has remained Berber. In the Saharan oases the coloured Haratin (see HARTATIN) cultivate the soil, and the coloured races of the Sudan were for long sold as slaves (*ghid*) in the towns. In practice, the terms "Arabs" and "Berbers" are used for Arabic-speakers and Berber-speakers.

25% of Algerian Muslims still speak Berber; they are chiefly the Shāwīya (Chaouia), who spill over extensively from the Awra, and the Kabyles (*ahab'ud*) west of Djidjelli; there are also the Beni Menacer of the mountains between Tunes and Cherchell, and small groups in the Mitidja Atlas, the Wardaras (Ouarsenis Mountains and, in the South, the mountains of the Ksour. In the Sahara Berber is spoken by the Tuareg (q.v.), by the Māzites (q.v.) and some Ksourians (villagers) of the Saoura, Gourara, Wargla and the Wadi Righ (Oued Righ). The Berber dialects, which vary from district to district, do not constitute a literary language; Berber is not written, and its literature is transmitted orally. From the 13th century onwards, Arabic was propagated far more by the nomads than by the towns. The sedentary Arab dialects are localised in the cities, in eastern Kabylia and the Trāra; everywhere else Berber was pushed back by the bedouin dialects.

The Arabs, who have thus furnished 71% of Algerians with dialects derived from their language, have gradually converted them all to Islam (except for 130,000 Jews, at the present day). Virtually the only rite practised in Algeria is the Mālikite; there are a few followers of the Hanafī rite among people of Turkish descent in Algiers and Tlemcen. The Māzites (q.v.) and the Khāridjites heretics, form a separate community.

Of the fundamental practices of Islam, which are the same everywhere, the five daily prayers are regularly performed in Algeria only by a minority of the population; the pilgrimage to Mecca, to which people now travel by sea or air, is performed by about a thousand believers a year; and the Ramadan fast is the most universally respected religious obligation.

Islam in North Africa is characterised by the development there of religious brotherhoods and of the cult of saints or marabouts. The religious brotherhoods once played a considerable part in political affairs, as a result of their moral authority in an Algeria in which law and order had not yet been fully established. Their importance has since greatly diminished; they maintain, on the whole, good relations with the French authorities, but they are strongly criticised by the townspeople. It is impossible to state the number of their adherents with any accuracy (250 to 450,000?). The most important is the Rahnāniyya which comprises more than half the *shāwīya*, notably in eastern Algeria; next come the Tayfāviyya, still active in the province of Oran; the Shābābiyya, whose adherents are primarily recruited in the department of Algiers; the Tighāniyya in department of Constantine; and the Kādiriyya; there are also a few Dārkwā in Oran, and 'Isāwa and

'Amāriyya in Constantine. [Cf. the articles on these orders.]

The saints, or marabouts (cf. Wāli), are not necessarily members of the brotherhoods. In former days some of them played a considerable moral and political role, especially in western Algeria where numerous marabout families or tribes still survive, such as the Awlad Sidi Shaykh (Ouled Sidi Sheikh) of Southern Oran. Some of them trace their origin to the Prophet's family (though 'Ali and Fātima); these are the *ghawā'iz* (*ghawā'iz*) (cf. *Shāwīya*). At the end of the Middle Ages, and later, many are said to have come from Morocco and Sakīyat al-Hamra' (Saguiet el Hamra, Rio de Oro), but the majority pass as natives of the country. They all transmit the *baraka* to their descendants, if any. But many marabouts have never existed, and their cult is proof of the persistence of pre-Islamic nature cults involving trees, springs, rocks, and mountains (for instance Lalla Khadija at the highest point of the Djurdjura). The marabout cult has sometimes gained non-Muslim adherents. Pre-Islamic practices survive in various rites involving magic and sorcery; in the belief in the evil eye, and in sundry agricultural rites. All the non-orthodox popular practices are still widespread in certain country districts, especially among the women.

Islam, in Algeria as elsewhere, has permeated social life. Although the life of the Kabyles in the West, and of the inhabitants of the Awra and of the Tuareg of the Sahara, remains faithful to customs which owe nothing to Muslim law, the private life of the majority of native Algerians is regulated by this law, especially as regards the law of succession, which, in detail, is extremely complex, and personal status. Polygamy, although of course authorized, is in fact not prevalent, particularly in the towns. Mālikite law does not forbid child marriage, and the young girl's consent to their own marriage, which is arranged by their father, is not required (the right of *diyar*); women can be repudiated by their husbands without any formality or indemnity, a practice which encourages "successive polygamy". Agrarian law in Algeria has undergone a radical transformation through the influence of French law.

**Ways of life.** Social life and economic activity are bound up with the way of life of the various elements of the population.

The tribes of the steppes and the desert, consisting of shepherds who breed sheep, goats, camels and horses, are still more or less nomadic. Omitting the Tuareg and the Shāwīya who are pure Saharans (see AL-SAHARA), only those tribes will be mentioned which roam between the desert and Algeria proper. Some still spend the summer in the Tell. The Arab (Lahra) of the Laghwa region, and the Said Aba of the Wargla neighbourhood are almost solely pastoral in their way of life, and spend the summer in the Serson and on the southern slopes of the Wangharis. The nomads of the Touggourt Territory, owners of palm-trees and with fewer flocks, spend the summer in the high plains of Constantine; they include the Ouled Djedi and Bouzard of the Oued Djedi, the Arab Shērāka (Cheraga), the 'Amir and Ouled Sidi Salāh of the dependency of Biskra and the Arab Gheraba and the Ouled Moulet of the dependency of Touggourt. Other tribes, which live in the valleys of the Saharan foot-hills, cultivating a certain amount of grain and grazing the pastures, spend the summer with their flocks in the Saharan Atlas; for instance the Awlad Sidi Shaykh, the Awlad Nail of the south and the Nememcha in the east.

The steppes are the province of the semi-nomads who, for 6-8 months of the year, remain close to their barley and wheat fields and their winter pasture grounds. The 'Amr and the Awlad Naïl of the north use the pasture grounds of the southern valleys of the Saharan Atlas and the folds of the high steppes, and spend the summer in the Atlas. The semi-nomads of the high steppes, cultivators of grain crops and collectors of alfalfa, spend the summer with their flocks on the southern slopes of the Tell Atlas. The Hamian, to the west, are former camel nomads. The tribes of the Hodna have no alfalfa and in the summer migrate with their flocks and as labourers to the high plains of Constantine.

The breeding of the horse, formerly used in battle, is on the decline; so also is that of the camel, the beast of burden and trade, owing to the competition of rail and road. Sheep breeding, which flourished between 1880 and 1920, is giving way to the cultivation of cereals. The collective ownership of agricultural land is developing into family ownership and even into private ownership; the tents, made of camel hair, goat's hair and wool, formerly grouped in great *douars*, are dwindling; they are only used as temporary dwellings by the semi-nomads, who spend the winter in huts or houses. The economic and social unit, which among the nomads is the tribe or a subdivision of the tribe, is a smaller subdivision or the patriarchal family among the semi-nomads.

In the principal mountain masses the inhabitants often still retain their Berber dialects and customs; but their way of life depends on local conditions. The Awlalis is the stronghold of the Shāwīya, who are both agriculturalists and breeders of sheep and goats. Their terraced fields, usually irrigated, support cereals and, depending on the altitude, date-palms, figs, apricots and nuts. Although principally village dwellers, they undertake a winter migration, and to some extent follow a semi-nomadic existence, in the direction of the plains of the north and south; they spend the summer on the upland pasture grounds with the exclusively pastoral people. Their lofty villages, surrounded by fortified granaries (see AGADIR), are still under the effective authority of *djemā'as*. Among the Kabyles, only those of the Tell (Djurdjura, Soummam, Biskra, Guegouga) have retained their traditional dialects and customs. Their terraced fields chiefly support olive and fig trees; they lack cereals and livestock. For want of space they are emigrating in increasing numbers; principally to the towns of Algeria and to France. The village (*ladrar*), whether its quarters (*gharraba*) are combined, separate or scattered, runs the economic, social and political unit; the *djemā'a* officially maintains its traditional authority in Kabylia of the Djurdjura. The Kabyles of the east are Arabised. Like their non-Kabyle neighbours of the Dône region, they live in large clearings where they cultivate barley, sorghum and a few fruit trees; they breed cattle and sheep etc., and work in the forests, mainly stripping cork. Their neighbours have huts made with branches; they live in houses grouped in hamlets and are emigrating in large numbers. In western Algeria the way of life of the Beni Meneker (Berber-speaking) and of the Trāra (Arabised) recalls that of the Kabyles of the west. The inhabitants of the high valleys of the Wanzharis and the Oran plateaus, once almost all semi-nomads, now have no more than a few tents.

The fertile plains and hills of the Tell, formerly coveted and menaced by both nomads and mountain

dwellers, and only insufficiently exploited by people living in huts and tents and gaining a livelihood from the cultivation of cereals and extensive stock-breeding, have greatly changed in appearance. In the areas of dense colonization, some of the former *fellahs* have become agricultural labourers while others have profited by the examples before their eyes. The local populations everywhere, whose numbers have greatly increased, have considerably extended the area devoted to the cultivation of cereals, at the expense of rearing of livestock. The old semi-nomad tribes of the high plains of Constantine are now bound to the soil. Tribal connections are forgotten; society is crumbling, but private ownership of property still remains vested in the family. French schooling, military service, and emigration—usually temporary—to the towns or to France accentuates individualism and family autonomy.

Individualism is getting the upper hand in the cities, without causing loss of solidarity between men of the same origin. The partly-Turkish bourgeoisie of the ancient cities of Algeria (Algiers, Constantine and Tlemcen) has been to a large extent regenerated by people of rural origin; artisans have gradually disappeared. Both old and new towns now have a prosperous or rich bourgeoisie of landed proprietors and a few business men, a middle class of civil servants, members of the liberal professions and various employees, and a large proletariat, burdened with an excessive number of rural immigrants with no manual skill and potentially only mediocre labourers.

Economy. The native elements remain the dominant factor in the Algerian economy. They cultivate nearly  $\frac{3}{4}$  of the grain lands, sowing almost entirely barley and wheat, and nearly  $\frac{2}{3}$  of the bearing olive trees and of land devoted to pulses and tobacco. They own more than 90% of the date palms and nearly all the fig trees. They own 95% of the sheep and goats. The colonists, on the other hand, cultivate the vine almost exclusively, and are almost alone in growing early vegetables and citrus fruits. A fundamental problem is how to increase the volume, still very low, of the native output, as a whole, and to improve the quality of livestock. Some Algerians have been trained in fishing by Frenchmen of Spanish or Italian origin. The native peoples provide only the labour force and fill a few lower grades in the mines (iron and phosphates, especially lead and zinc), but they are employed in large numbers in the transport services. Industry, still undeveloped despite recent efforts, finds in them an ample source of labour, both of skilled craftsmen and specialists. Short-term emigration to the industrial cities and to dockyards in France assures an abundant flow of money into the country.

#### (iv) INSTITUTIONS.

Algeria is part of the French Union as defined by the constitution of 27 October 1946. In it Algeria holds a peculiar position, which was defined by the law of 20 September 1947 entitled "the Algerian Statute". At the head of Algeria, there is a Governor with wide powers. The inhabitants are represented by an elective Algerian assembly which not only has financial powers, as had the "Délégations financières" which it replaces, but also part in the initiation and adaptation to the country of the laws, the principal legislative body being the French Parliament.

Personal status had previously been defined by the law of 7 May 1946, an entirely new law which bears the name of its author, Lamine-Gueye, and which proclaimed the equality of the inhabitants of the country: "all subjects of French nationality of the departments of Algeria enjoy, without distinction of birth, race, language or religion, the rights attaching to the status of French citizens and are subject to the same obligations". But since alongside the Europeans, who are mainly French, lives a large Muslim majority, whose private life is largely regulated by Muslim law, it is laid down that "citizens who do not possess French civil status keep their personal status as long as they have not renounced it". The citizens of French status are French citizens by birth, Algerian-born Jews, who have been citizens since the Crémieux decree of 24 October 1870, a few Muslims who have applied for French citizenship as a result of the facilities given by the *senatus-consultum* of 14 July 1866 and by the law of 4 February 1919, and finally naturalised foreigners, especially pursuant to the law of 26 June 1889. Citizens of local status are all the other Muslims. For these, the following matters remain subject to Muslim law (and, for certain Berber-speaking areas, to customary law): "marriage, marital authority, married women's rights, divorce, repudiation, affiliation, paternal authority, majority, minority, deprivation of control over property, emancipation, and guardianship" (J. Lamberg). For foreigners the regulations are in general similar to those in force in France. Foreign Muslims, mainly Tunisians and Moroccans, have in certain cases, e.g. before the courts, the same status as Algerian Muslims.

**Political Organisation.** The Governor, General "represents the Government of the French Republic throughout Algeria... he resides at Algiers". The Algerian Assembly is composed of 120

members: 60 representatives of each of the two Colleges, elected for 6 years by universal suffrage, with two ballots on a single member basis, half the members being replaced every 3 years. The first College comprises citizens of French civil status. All other citizens of local status belong to the second College. The electoral laws are similar to those obtaining in France, but Muslim women do not vote. All citizens are eligible without distinction for election to one or other college.

The peoples of Algeria are represented in the Parliament of the Metropolis by 30 deputies in the National Assembly (15 per College), by 14 Councillors of the Republic (7 per College), and by 12 elected persons in the Assembly of the French Union, 6 of these being elected by the Algerian Assembly and 6 by the general councils.

**Administrative organisation.** The three departments (Algiers, Constantine and Oran), whose prefects have wider jurisdiction than in the metropolis, are divided into *arrondissements* (7, 7 and 6). Their general councils are made up of 2/3 of citizens of French status and 2/3 of elected Muslims. The communes are large and varied in character. Where the non-Muslim French are found in sufficient numbers, they are *Communes de plein exercice* (with full powers) in which both Colleges are represented (3/5 and 2/5); dependent on the mayor, where needed, are the *ba'ids* (*caids*) of the *douars* (sections of communes), subdivisions which have their own elected representatives, the *djemā'a* (*djemda*). The "mixed Communes", destined eventually to disappear, are headed by officials of the Algerian civil service. These preside over the municipal committee which consists of elected members, the *ba'ids*, and the presidents of the *djemā'a* of the various *douars*. In those areas with native populations which have reached a sufficient stage of development there have recently been set up "municipal centres" which, under the control of a civil servant, are undergoing their apprenticeship to public life.

The increase in the size of the departments has gradually pushed back towards the Sahara the former military districts, which have become the Southern Territories. Covering an enormous area, two of them, stretching on the Saharan Atlas and the high steppes of the west, the four Territories have at their centres Colomb-Béchar, Laghouat (Laghuât), Tougourt and Ourgla (Wargla). They are under the direct authority of the Governor General, acting in the capacity of a prefect; the military commanders who are subordinate to him have the administrative powers of a sub-prefect. The Territories used to be divided into dependencies (*ancesses*) which have become the basis of the present communes: 10 mixed communes under civil administrators, and 9 "native communes" under officers for Saharan affairs or administrators. The *ba'ids* of the *douars* are subordinate to them, and members of the *djemā'a* are elected representatives. The Algerian Statute provides for the gradual conversion of the Southern Territories into civil districts.

**The Judicial System.** The judicial system is closely modelled on that of the Metropolis. Algiers is the seat of a Court of Appeal; there are 17 assize courts (with French and Muslim jurors) and 17 courts of first instance. Questions concerning the personal status and the inheritance of French Muslims are dealt with by the *ba'ids* of the 84 principal *mahallas* (*mahalla*) and by the *ba'ids* (*ba'ids* (*ba'ids*)) of the 23 dependencies. But their jurisdiction is always optional and the interested parties can refer to the

justices of the peace, judges of common law in Muslim matters who apply the provisions of Muslim law, or to the French judicial authorities and to French law. The Kabyles of the west, the majority of whom have preserved their own customs, do not have *baḍū*. (Cf. also 'Kis').

#### (v) LANGUAGES.

##### (i) The Arab dialects of Algeria.

The territory forming the present Algeria was arabised during two distinct periods, in common with North Africa in general. The first period commenced with the Muslim invasions at the end of the 1st/7th century. Although not important from the point of view of their ethnic contribution, these invasions had a considerable military, political, religious, and therefore linguistic, effect. They affected primarily the urban centres. The conquering Arabs established garrisons there, distributing units of the eastern *ḡana* throughout the countries which they wished to control and administer. Just as Idrisid Fez and Aghlabid al-Kayrawān arabised the rural and mountain regions around them, so Tlemcen and Constantine, in Algeria, caused the regions which lay between them and the sea, namely Trāra and eastern Kabylia, to forsake the native idiom and adopt the language of the conquerors. Later, the Shī'ite propaganda, by directly linking the Berber tribes to the Shī'a movement, very probably played a part in imposing Arabic on certain peoples in the north of the department of Constantine. The arabisation of this first period is responsible for the Arabic spoken in the old centres and in the adjacent mountainous regions; thus its various forms can be called "pre-Hillal dialects".

The invasion of the Banū Hilāl, the Sulaym and the Maḥal inaugurated the second period of arabisation. It began halfway through the 4th/11th century, unleashing the turbulent throng of Bedouin tribes against "perfidious Maghrib". This time the ethnic contribution was important. The movement of populations which was brought about by the invasion of these new-comers threw Barbary into a ferment, and resulted in the widespread diffusion of the language which they brought with them. Not merely small districts but vast areas abandoned Berber for Arabic; at first, no doubt, it was the steppes and high plains devoted to the pastoral life, where the nomads felt at home; then, as a result of the alliances which were offered to them or which they imposed, vast settled regions of the Tell and even of the Sahel. Important transfers of populations continued to take place up to the end of the 8th/14th century; for example the establishment of the Hillal Dawlida in northern Constantine province, and of the Maḥal (Uḡayy) Aḡlāḡ and the Hillal Zughba in 'Amir between Tlemcen and the sea. Through contact with the Bedouin Arabs or under their tutelage, entire Berber tribes, sharing a common mode of existence with the Bedouin, turned to Arabic; for example the Sadwiliḡ of western Constantine

province and sections of the Zanāta of northern Oran. Arabisation has continued until our own times, penetrating the mountain massifs and ancient Saharan centres which remained the strongholds of Berberism. An unpublished work of al-Sabbāḡ on the life of the great saint of the Chelīf, Sīdī Ahmad b. Yūsuf, gives us an idea of the linguistic state of this region in the 10th/16th century, and quotes phrases in *lughat zanādiyya*. Berber was still spoken in the Chelīf at that period, but now Arabic alone is spoken, except in the mountain massifs of the Banī Menqer and Wangharis which skirt the region. One is tempted to consider that the propagation of the conquerors' language was particularly encouraged by the Turks between the 9th/15th and the 13th/19th centuries. In the northern regions which they endeavoured to control, they executed large transfers of rural and Bedouin groups, on a scale surpassing that of the dynasties which preceded them in central Maghrib.

The upheaval of populations in the course of centuries has been so great that linguistics cannot provide any ethnic criteria. It is doubtless permissible to conjecture that the groups which have remained Berber-speaking include a large proportion of elements of Berber origin, but nothing enables us to assess the proportion of the elements of Arab origin among the Arab-speaking populations. It is more likely that the latter are largely composed of arabised Berbers. No shibboleth, or linguistic criterion, enables us to establish the ethnic origin of the various groups; no dialectal indication, as far as we know, makes it possible to identify the Berber groups converted to Arabic such as the Uḡlāḡ, the Huwāra, the Sindjāḡ, the Aḡlāḡ, the Luwāra or the Kutāma, etc.

As regards the Arabic dialects introduced by the invasions of the 5th-6th/11th-12th centuries, it is generally considered that the territory of the Sulaym was definitely to the east, and that of the Maḥal more to the west. The territory of the Hillal cannot be defined exactly: it was certainly centrally situated, but probably encroached on the territories to the east and west. The dialectal variations of the language which they spoke or which they disseminated are known as "Bedouin dialects".

(A) Pre-Hillal dialects. Included in this category are village (or mountain) dialects, and urban dialects (Jewish and Muslim).

(a) Village dialects. These are represented by two groups which have been clearly identified but have not been the subject of equal study; namely, Oran dialects, and Constantine dialects. The former embrace the mountain massif of the Trāra, which extends from the *paḍlī* of Moghniyya (Marina) as far as the sea, and is bounded approximately by the course of the Tafna to the east, Nadrāma (Nédrona) is the urban centre. This region belongs to the Uḡlāḡ and the Kilmīyya, and is crossed by the route connecting Tlemcen with the ports of Hunayn and Araghīn (Rachgoun). Its arabisation dates probably from the Idrisid era. The second group corresponds to eastern Kabylia, and is completely mountainous, having the form of a triangle whose apexes are *Dijidjila*, Mila and Collo. Historically, the region represents the seaward expansion of Constantine and Mila, which were Arab garrisons towns in the Aghlabid period. This is the former Kutāma country, the centre of the Fātimid movement.

These dialects are characterised phonetically as follows: uvular *ḥ* is changed into velar *k*, e.g. *ḥalb* for *hāl* "heart"; *ḥ* is pronounced as a palatal,

and often, with a marked degree of palatalisation, *ky*, or as an affricate *ḫḫ*, *ḫḫ*, *ḫḫ*, as a fricative *ḫ*, with a voiceless *ḫ* (Trāra, e.g. *ḫḫḫ*, *ḫḫḫ* for *ḫḫḫ*, "dog"; the interdentals *ḫḫ*, *ḫḫ* disappear, confounded with *t*, *d*, *ḫ*; *t* becomes the affricate *ḫ*; *ḫ* often becomes *f*; the voiced sibilant is pronounced *ḫ* when it is single, *ḫḫ* when it is doubled; diphthongs with a short element are resolved, *ay* becoming *f*, *aw* becoming *ḫ*; there is a very marked decay of the short vowels especially in eastern Kabylia, where the neutral vowel *e* predominates; changes occur in the syllabic structure which derive, in words containing short vowels, from the phonetic influence of radical consonants, rather than from etymology; the labials *m* and *b*, and the uvular *ḫ*, have the ability to assimilate the *f* or the article, e.g. *ḫḫ-bāb*, "the door", *ḫḫ-bawḫ* "the corn".

Morphologically these dialects are characterised as follows: by the constant reconstruction of defective verbs, *nāḫ-nāḫ-nāḫ*, *yemāḫ-yemāḫ* "to forget", *ḫḫḫ-ḫḫḫ-ḫḫḫ*, *yehḫḫ-yehḫḫ* "to weep", and of verbs hampered on the first radical, *ḫḫḫ-ḫḫḫ-ḫḫḫ*, *yehḫḫ*, *ḫḫḫ* "to eat"; by the use of *-ayen* as a sign of the dual in nouns of measure, *yām-yāmāyēn* "two days", *ḫḫḫ-ḫḫḫāyēn* "two spans"; by the adoption of plural forms, *ḫḫḫḫ* "coffers" and of diminutives, *ḫḫḫḫ* "small key" (with a short vowel in the final syllable), for all quadriliterals; by the substitution in the case of diminutives for the form *feyl* (cl. *fayl*) of *feyyel* "small child", from *fel*, as in *feyyēn* (cl. *fayyēn*) "small garden", from *ḫḫḫ*; by the confusion of gender in the expression of the second person, both in the verbal endings and in the inflexions of the independent personal pronouns, *ḫḫḫ* "thou (m. or f.) hast struck", *ḫḫḫ* "thou (m. or f.) wilt strike", *ḫḫḫ* "thou" (m. or f.); by the frequent usage of the form *yām* for *āma* "I"; by the pronunciation *w* of the 3rd person masc. sing. pronominal affix, after a consonant, *ḫḫḫ* "he has struck him", *ḫḫḫ* "his son"; by the constant use of *-ayyāḫ-ayyāḫ*, *ḫḫḫ-ḫḫḫ*, etc. pronominal endings suffixed to the duals of nouns denoting parts of the body. On all these points of morphology, the dialects of Trāra and those of eastern Kabylia are analogous, but they differ in certain other respects; in the plural persons of the imperfect of sound verbs with radical stems, the Trāra dialects have a doubled form *yehḫḫḫḫ*, while the rural *Dijidjila* have the non-doubled form *ḫḫḫḫ*, from *ḫḫḫ* "to strike"; similarly in the case of nouns with a short vowel and final *-at*, the former have *reḫḫḫḫ*, the latter *reḫḫḫḫ* "thy neck", from *reḫḫḫ*; in the perfect of hollow verbs, the Trāra dialects follow the sequence, as regards the radical vowel, of short with changing quality, or long with pure quality, according as the vowel occurs in a closed syllable or not, *ḫḫḫḫ* *ḫḫḫḫ* "to sell", while the rural peoples of *Dijidjila* maintain the same vowel quality and follow the sequence semi-long/long, *ḫḫḫḫ* *ḫḫḫḫ*; to express the continuous or customary present, the Trāra use the imperfect of the verb, without any special verbal prefix, while the rural *Dijidjila* make free use of the prefix *ḫḫḫḫ* (probably derived from the verb *ḫḫḫḫ* *ḫḫḫḫ*, *ḫḫḫḫḫḫ* "he is writing, I am writing").

As regards syntax and vocabulary these dialects are characterised as follows: by the extensive use of an indefinite article *wāḫḫ* or *ḫḫ*; the latter is especially prevalent in eastern Kabylia; by the disappearance of the direct construct relationship (except in groups in which the idea of a possessive relationship impresses itself strongly on the speaker),

and by the expression of this relationship by means of the particles *ḫḫ*, *ḫḫḫ*, and especially in Collo, *ḫḫḫ*; by the impossibility, in the *Dijidjila* region, of expressing the noun of kinship unless it has a pronominal suffix denoting the person with whom the relationship is established: *amamū dāḫḫḫ* "his uncle (to him) of Keddūr". In both groups specifically Berber features have survived and been integrated into the grammatical system, such as the use of the genitive link *ḫḫḫḫ* among the Trāra, e.g. *ḫḫḫḫ* *ḫḫḫḫ* "the father of Fāḫḫḫ", or the use of the demonstrative *ḫḫ*, which in the *Dijidjila* region plays the role of a logical copula, as in *ḫḫḫḫ d-ḫḫḫḫ* "his brother (the one who) is the *ḫḫḫḫ*"; or again, the transference of the number and gender of the Berber word to the Arabic word which has superseded it, e.g. in eastern Kabylia, *ḫḫḫḫ*, a feminine treated as a masculine (Berber *adār* is masculine "foot", *ḫḫḫḫ*, masculine changed to feminine (Berber feminine *ḫḫḫḫ* "wool", *ma*, a singular considered as a plural (Berber plural *aman*) "water"; and finally, certain elements of vocabulary have survived, such as words of Berber forms with the prefix *ḫḫ* (not taking the Arabic definite article), or of the form *t...t*, most of them associated with rural life (dwellings, domestic life, domestic utensils, country life, agricultural implements, animals, plants, etc.).

These two types of village dialects unquestionably possess considerable points of difference; but they have certain features in common with the dialect of the Moroccan *Djibāla* to the west. The Oran group is nearer to the Moroccan group than to the Constantine. To the ears of townsmen, and with even more reason to those of the Bedouin, the speech of the *Djibāla*, the Trāra, and the rural *Dijidjila* sounds like a foreign tongue, whose sounds, syntax and vocabulary seem to them alien to Arabic. It is, however, Arabic, and even Arabic of an ancient stock, as is witnessed by certain archaisms, such as the preservation of the old monoliteral *ḫḫ* "mouth" in the Nedroma district, and of the final *ḫḫḫḫ* among the rural *Dijidjila*; but at the same time it is an Arabic in which appears the Berber method of presenting ideas, and through which the substratum of Berber vocabulary often emerges; an Arabic, finally, which, retaining the marks of the bilingualism which preceded the supersession of Berber by Arabic, is still handled by those, whose ancestors had adopted it, with a beginner's clumsiness.

(b) Urban dialects. These do not form a homogeneous group, and the listing and description of these dialects is far from complete. They are divided into two classes—Jewish and Muslim.

Jewish dialects. The North African Jews are almost entirely city-dwellers in Algeria. Apart from the semi-nomadic group of the Bahbiyya in the Souk-Ahras region, now dispersed, they all live in towns. Only those Jewish communities which, because of their populosity and strong social cohesion, constitute societies distinct from and virtually alien to the Muslim majority around them, possess any special form of Arabic; for instance the communities of Oran, Tlemcen, Miliana, Média, Algiers and Constantine. Although the Jewish dialects differ from one city to another, they share certain common characteristics.

The phonetic system is rather changed in these dialects, especially as spoken by women: loss of the interdentals *ḫḫ*, *ḫḫḫ*, which revert to *f*, *d*, *ḫ*; the unvoiced dental *t* becomes the affricate *ḫḫ*, in Oran and Tlemcen, a change which leads to confusion with the fricatives *ḫḫ* and *s* and the sibilants *f* (*ḫḫ*) and *s*;

the excessive rolling of *r*, very noticeable in Algiers; a general inability correctly to pronounce back consonants; thus *ʔ*, glottal check, for *h*, in Algiers, and, in Tiemcen and Oran (as in Jewish Fez), *h* for *ʔ*, and *ʔ* for *h*; the muting of the aspirate, especially in Algiers; the decay of the short vowels, in which the neutral sound *ə* predominates; an excessive syllabic curtailing which gives the impression that the language consists wholly of consonants, where the only vowels are those which are absolutely indispensable to the pronunciation of the consonants and to the definition of morphological groups; e.g. *yikbu* 'they write', *ɣabtu* 'she has struck him', *ɣebu* 'my neck', etc. Schematically, the morphology has forms analogous to, if not identical with, those described in respect of the village dialects, especially as regards the communalisation of paradigms and the strengthening of grammatical forms; it is characteristically Arabic.

The dialects used by the Jewish communities differ from those of the urban Muslims primarily in vocabulary. The vocabulary, largely Arabic, nevertheless contains a considerable foreign element—important borrowings from Spanish—some dating from the first period (imported in the 14th and 15th centuries by Spanish-speaking Jewish émigrés from Spain), and some from the second period (the Jews of Algeria, particularly of Algiers and Constantine, had continuous intercourse with the Jews of Leghorn), these last coinciding chronologically with the Spanish contribution of the second period; borrowing from Turkish, common to both the Jewish and the Muslim dialects; a few Berber loan words; and finally considerable borrowings from Hebrew, especially of words appertaining to the intellectual or religious life. It should be emphasised that the Jews of Algeria write their Judaeo-Arabic in a special cursive Hebrew, and not in Arabic characters. But their more rapid Europeanization, stimulated by the progressive dislocation of communities and the break-down of the division into quarters, is leading to the substitution of French for the traditional dialect among the younger generation, and also of the latin script for the Hebrew cursive.

Muslim dialects. The Muslim urban populations present great human, and therefore, linguistic, variety. Some of them preserved the use of the Arabic of the first stratum, such as is found in Tiemcen, Nédroma, Cherchell, Dellys, Djidjelli, and Collo. On the other hand, at Tenès, Milana, Médéa, Bida, Bougie, Mila, Philippeville, and Constantine, it is only discovered among the older generation, and seems doomed to early extinction, if, indeed, it has not already disappeared. The old cities everywhere bear the marks of the external influences to which they have been subjected in the course of centuries, and to which they are still subject; that of the rural populations and that of the Bedouin. The populations of certain towns are replenished by the contributions of their surrounding rural areas, as for instance in the cases of Nédroma, Djidjelli and Collo, where the dialect tends to conform to that of the surrounding villages. In other cases, the townsmen have borrowed the language of the neighbouring Bedouin collective, or sedentary Bedouin, groups; for instance, in Tiemcen, Tenès, Bida, Milana, Médéa, Mila, Philippeville, and Constantine. Although, on the whole, the language of these old centres has remained urban, there are others where the Bedouin dialect is almost completely dominant: for instance, in Great Montaganan, Mascara, Mascara, and Bône (and similarly, in the extreme east of the Maghrib, at

Tripoli and Benghazi). The case of Algiers and its environs, and that of Bougie, are more complex still. Algiers and the Fals form a melting-pot for urban elements, for old-established rural sedentary population, for newly-arrived rural elements, and for Bedouin who, after a period of acclimatisation in the Chélli and the Mitidja, flock to a city life which, although of a proletarian nature, attracts them; Kabylia, moreover, disgorges its emigrants there in an unending stream. The Kabylia element, indeed, has so far taken possession of Bougie as to render this ancient capital and mediaeval centre of Arab culture, a Berber-speaking city.

Phonetically, the urban Muslim dialects have on the whole the same characteristics as those of the village dialects and the Jewish dialects. Only the ancients in Tenès, Cherchell, Dellys and Constantine have preserved the interdental *ʔ*. In Médéa, Bida and Algiers both the fricative and the occlusive pronunciation are heard together. *ʔ* is everywhere converted to the affricate *ʃ*. The voiced sibilant is variously pronounced: *ʒ*, with an initial dental, in Tiemcen, Tenès, Cherchell, Médéa, Bida, Algiers, Dellys, Mila, and Constantine; elsewhere as *ʒ*. The exaggerated rolling of *r* could be said to be a typically urban 'articulatory disease'; its presence in the Jewish dialects has already been noted; it is common in Constantine, Djidjelli, Cherchell, Tiemcen and Nédroma (and similarly at Tunis and Fez). The use of *ʔ* for *h* is a simple glottal check, as in Tiemcen; at Djidjelli, a back *ʔ* is substituted for *ʔ*; but in all the other towns, it remains *ʔ*. Ibn Khaldun based the essential difference between the dialects of the sedentary peoples and the dialects of the Bedouin of the Maghrib on the contrast between the unvoiced *ʔ* voiced *ʒ*, in the back velar. This distinction still exists; but the flow of nomadic elements into the cities has introduced *ʒ* there; this has occurred at Tenès, Milana, Médéa, Algiers itself, Mila and Constantine (where the two sounds, in the same words, are sometimes heard from the same mouth). Elsewhere, the presence of a *g* in a word stamps it as a loan word from Bedouin dialects. Everywhere the aspirate *ʔ* is a weak consonant, liable to become mute, thus in Tiemcen *ʔim* is used from *ʔim* 'here they are', and at Nédroma, *maʔandā-ʔ* for *maʔandā-ʔ* 'she has not'.

The morphological forms contain both similar and dissimilar elements. Among the former should be noted reconstruction of defective verbs, for instance of *ʔhda* 'to take' and of *ʔhā* 'to eat'; the general use of the plural quadriliteral form *ʔaddeh* 'coffers' and the diminutive *ʔafek* 'small key', and of the trilateral diminutive *ʔafek* 'small child'; the frequent use (except at Constantine, Mila, Philippeville) of a sort of curious adjectival diminutive *ʔhber* 'somewhat large' from *ʔhī*, *ʔhīhīl* 'blackish' from *ʔhī*, already vouched for in al-Andalus; the pronunciation *w* or *s* of the pronominal affix of the 3rd person sing. masc., after a consonant. The feminine *ʔh* is peculiar to Cherchell; elsewhere it is invariably *ʔh*, for the 3rd person pronominal affix: *ʔh* is doubtless an importation from al-Andalus, and there is evidence of other such importations in the Cherchell dialect. In the 2nd and 3rd persons plural of the independent pronoun, the Cherchell dialect is also distinctive, using the forms *ʔastaman*, *ʔamān*, while elsewhere the forms always used are *ʔastam*, *ʔam*, or *ʔastamān*. Although used are *ʔastam*, *ʔam*, or *ʔastamān*, for Tenès, Bougie and Djidjelli make no distinction between the genders of the 2nd person sing. of pronouns or verbs, *ʔasta* 'thou'

(m. and f.), *ʔast* 'thou hast struck' (m. and f.), Milana, Cherchell, Médéa, Bida, Algiers and Dellys differentiate between them, *ʔasta* 'thou' (m), *ʔanti* 'thou' (f.), *ʔastu* 'thou (m.) hast struck', *ʔastu* 'thou (f.) hast struck'; differentiation of gender again disappears in the eastern dialects, in Collo, Mila, Philippeville and Constantine, but the feminine form *ʔanti*, *ʔastu*, is extended to both genders; in Tunis the form is confined to the independent pronoun. The syllabic treatment of the persons of the plural, in the first form of sound verbs, produces a remarkable variety of forms: for 'they strike' *ʔaddeh* is the form used in Tiemcen, Nédroma, Montaganan, Tenès, Milana, Cherchell, Médéa, Bida, Algiers, Dellys and Collo; but *ʔaddeh* is used at Bougie, Djidjelli, Philippeville, and occasionally in the suburbs of Algiers, and *ʔaddeh* (with the stress on the first syllable) at Mila and Constantine. The attachment of personal affixes with an initial vowel to feminine nouns of the form *ʔaʔaʔaʔa* poses the same problem of syllabic economy, to which according to dialect, the same solution is reached; for 'my neck' *ʔaddeh*, *ʔaddeh* and *ʔaddeh*, *ʔaddeh* - *ʔ* 'she has struck him', is pronounced throughout western and central urban Algeria *ʔaddeh*; in the Fals of Algiers it is sometimes *ʔaddeh*; throughout the east, *ʔaddeh* (as in the cities of Tunisia). In all the cities, the plural of nouns of colour admits of a prolongation of the vowel *u*, which is known in the village dialects: e.g. *ʔaddeh* 'red' (even expanded to *ʔaddeh* in Nédroma and Djidjelli), except in Dellys, where *ʔaddeh* is used, and in Collo, Mila, Constantine, and Philippeville, where the only form current is *ʔaddeh*, the form used in the urban and rural dialects of Tunisia. To indicate the possessive relationship, the urban dialects only use the method of direct connexion (*ʔaddeh*) to a limited extent; more often they have recourse to an analytical method, the governing word being linked to the governed by prepositions of dialectal origin, namely *di* (*ʔaddeh*), *ʔaddeh*, in use from Tiemcen to Djidjelli, or the rival *ʔaddeh* (*ʔaddeh* from Tiemcen to Dellys), which prevails in Constantine, Collo often uses the relative *ʔaddeh* as a particle of connexion: *ʔaddeh ʔaddeh ʔaddeh* 'the people of the *ʔaddeh*'. Every urban dialect possesses characteristics peculiar to itself, but the points of difference are becoming progressively less, only what is common to all being retained, and these dialects are gradually merging into a sort of *ʔaddeh* of the towns. The constant growth of relations between urban centre and urban centre inspires the desire, conscious or unconscious, to eliminate dialectal peculiarities, and to produce a language which will be understood everywhere, which will avoid ambiguities, and which will not occasion surprise or be the target for mirth. This tendency towards uniformity is perhaps strengthened by a certain concern for purism awakened by listening to wireless broadcasts, which are heard in many homes and in a still greater number of shops, and in every café and meeting-place. Feminine society, which has always constituted an important factor in linguistic conservatism, is being profoundly influenced by the radio, which brings into the home a 'universal Arabic' and effects its general adoption, and also by urban life, which affords ever greater freedom, and provides women with more and more opportunities for contact with the outside world. It seems that the time is not far off when the urban Muslim dialects of Algeria will have the featureless appearance of uniformity, and will no longer preserve traces of their original characteristics except those

fossilised in songs, proverbs, and a few ready-made expressions.

(B) Bedouin dialects. In so far as they are known (and knowledge of them is only approximate and incomplete), the Bedouin dialects of Algeria present the appearance of a composite and heterogeneous mass. The glosses which some have attempted to trace form a complex picture; the interpretation of this picture, if it seeks to take an overall view, ignores the diversity of the material and glosses over numerous contradictions.

The following are the identifying marks of a Bedouin dialect. (a) Phonetic. A fairly general retention of the interdental *ʔ*, *ʔ*, *ʔ*; an occlusive pronunciation of the unvoiced dental *ʔ*, except in certain oasis dialects in which it is affricated as at Beni Abbès in southern Oran, or Touggourt in southern Constantine; the voicing of the back velar, *g*, *h*, only appearing in loan words and especially in the vocabulary of law and religion; an occasional preservation of short vowels, often complicated by a change in quality attributable to the influence of adjacent consonants or, sometimes, to that of stress. (b) Morphological. A certain conservatism which preserves in the verbal and nominal forms traces of the ancient tongue; differentiation of gender in the second person singular of verbs and of the independent pronoun: *ʔaddeh* 'thou (m) hast struck', *ʔaddeh* 'thou (f.) hast struck', *ʔaddeh* 'thou (m), *ʔanti* 'thou (f.)'; a fairly widespread use of the dual, going beyond the limited use for nouns of measure and nouns denoting parts of the body which occur in pairs. (c) In syntax and vocabulary. A restricted use of the indefinite article *ʔaddeh*, the use of the undefined noun often being sufficient to indicate a state of indefiniteness; the frequent expression of the possessive relationship by the old method of direct connexion; the use of a vocabulary more exclusively Arabic than that of the sedentary populations.

This group of characteristic forms constitutes a common basis of the Bedouin dialects. They possess other peculiarities, but either they do not all possess them or they are not alone in possessing them: for instance the preservation of the diphthongs *ay*, *aw* their contraction to *ʔ*, the sedentary dialect usually resolving them into *ʔ*, to *ʔ*; the use of the form *ʔaddeh*, not *ʔaddeh* 'hand', and of the preposition *ʔaddeh* (*ʔaddeh*), to the exclusion of *ʔaddeh*, *ʔaddeh*; the use of the plural form *ʔaddeh* (not *ʔaddeh*) 'coffers' and of the diminutive *ʔaddeh* (not *ʔaddeh*) 'small key', for quadrilaterals, and of the diminutives *ʔaddeh*, *ʔaddeh* (not *ʔaddeh*) 'small child' for trilaterals with a short vowel; the existence of a plural form for trilaterals with a doubled medial consonant and short vowel, *ʔaddeh* from *ʔaddeh* 'old, tough', and of a plural *ʔaddeh* from *ʔaddeh*, e.g. *ʔaddeh* from *ʔaddeh* 'deceived, afflicted'; the preservation, in the numerals from 11-19, of the *ʔ* of *ʔaddeh*, e.g. *ʔaddeh* 'fifteen' (especially in southern Oran), the sedentary dialects habitually having *ʔaddeh* etc.

In order to attempt a provisional draft classification of the Bedouin group, only a limited number of these dialectal features which may properly be called distinctive will be selected, some phonetic, other morphological (but not distinctions of vocabulary, an enumeration of which would lead us too far afield).

(1) The pronunciation of the voiced sibilant: *ʔ* is the pronunciation of the Bedouin dialects of eastern Algeria. The line of demarcation *ʔ/ʔ* passes

to the east of Philippeville, Constantine and Ouled Rahmoun, curves south of Barika, keeps to the south of Hodna and veering north, reaches the neighbourhood of Mansoura des Bibans. It is also identical with that of the high plains and the Saharan regions of the centre and west of Algeria: the line of demarcation *dj* passes to north of Ain Bessem in the direction of Champagny, leaves Média, the Djebel and the Ouarensen to the south and, at the altitude of Teniet el-Haddj, crosses the Sersou, proceeds to the south of Trézel and north of Frenia and Saïda, and swings north towards Mercier-Lacombe, Saint Denis du Sig and the approaches of Tlemcen. *dj* therefore represents the pronunciation of the regions of Constantine, Saint Arnaud, Sétif, Bord Bou Arreridj, Barika, Média and the Hodna; of the Algerian Sahel, Mitidja, the valley of the Chélif, Dahra, the plateau of Mostaganem, the mountains of Mascara and the plain of Macta; constituting a more northerly Bedouin group.

(2) The change of the velar fricative *gh* to the occlusive back velar *k*. This characterises the Saharan Bedouin dialects (with the exception of certain oasis dialects), but also extends over a considerable area to the north towards the high Algerian plains: the line of demarcation *gh/k* commences south of Ain Sefra, passes to the east of Mecheria, turns back towards the Khrouf, follows the Cherqui chéfi, leaves Trézel to the west, crosses the Sersou, passes to the south of Teniet el-Haddj, Berronagha and Ain Bessem, passes over the Hodna at the altitude of Mella, skirts Barika, El Kantara and Biskra, and plunges southwards, leaving Mrakir, Djennat and Touggourt to the East.

(3) The pronunciation *ak* after a consonant of the 3rd person sing. masc. personal affix. This is characteristic of the Bedouin dialects of (i) Oran. The line of demarcation *ak/a* commences at Mostaganem, goes down towards Uzés-le-Duc, leaves Tizet and Trézel to the east, follows the eastern prong of the Cherqui chéfi, and passes approximately half-way between Gervilly and Aflou: the Ouled Sidi Cheikh use *ak*, but the Doui Menia and the sedentary peoples of the Saura use *a*; the Bedouin outskirts of Tlemcen and the region which lies towards Ain Temouchent and Oran also use *ak*. (ii) Eastern Constantine, comprising: to the north, the eastern outskirts of mountains of the Collo region, which are a continuation of the Kroumirs and Magdols of Tunisia; to the south, the nomads of western Soud and of the Saharan zone which skirts southern Tunisia (the *ak* frequently being curtailed to *a*); this form is found among a considerable proportion of the Bedouin of Tunisia, and throughout Libya; all the rest of Algeria, both north and south, uses the forms *a*, *u*.

(4) The structure of the 3rd person feminine of the perfect of sound verbs, when followed by a personal affix with an initial vowel, e.g. *dhaphet + k* "she has struck thee": (i) *dhaphet* is the pronunciation of north-eastern Constantine, as far as a line which starts to the east of Philippeville, reaches Jamnappe and the Khrouf, turns westwards, touches Chateaudun-du-Ramel, and proceeds in the direction of Périgotville; of the region situated to the south of this line, namely the high plains of Sétif as far as Bordj Bou Arreridj, and also of the eastern Sahara as far as the outskirts of Biskra and Touggourt; of the Algerian Tell where the voiced sibilant is pronounced as *dj*; and finally of north and west Oran, following a line which passes south of Annai-Mousa, swings southwards between Tizet and Frenia,

follows the Cherqui chéfi and again swerves south, leaving Mecheria and Ain Sefra to the east; (ii) *dhaphet* is the pronunciation of the Constantine region, of Ferdjona, and of the environs of Ferdj-Mzala as far as Gueorgour; (iii) *dhaphet* (with the stress on the first syllable) extends south of a line joining Bordj-Bou-Arredj and Colbert throughout the Hodna, south-west Constantine and the central Sahara; it is the pronunciation of all the Algerian nomads (including Teniet el-Haddj) who pronounce the voiced sibilant as *f*; and it is also the pronunciation which prevails in eastern and southern Oran.

(5) The syllabic structure of the imperfect of sound verbs, first form, in the plural: *yedhaph + u* "they have struck"; and that of the trilateral noun *fa'la'ti* with a suffix commencing with a vowel: *rakhal'ti* "my uncle"; (i) *yedhaph, rakhal'ti* with the stress on the first syllable is found throughout the Constantine region except in El-Kantara, on the high Algerian plains and in the whole of the east, central and west Sahara; the dialects of the south-east have a clearly-defined tendency to prolongate the vowel receiving the stress; (ii) *yedhaphu, rakhal'ti*, with doubling of the medial and stress of the second syllable, is prevalent in El-Kantara and the region of Philippeville; these are the forms in use in the north of Algeria, wherever the voiced sibilant is *dj*, including Teniet el-Haddj; they are also used throughout north and west Oran; the dividing line *yedhaphu/yedhaph* passes between Tizet and El-Ousseukh, follows the northern edge of the Cherqui chéfi, and swings south, leaving Mecheria to the west and Ain Sefra to the east.

(6) The conjugation of defective verbs (imperfect and imperfect *ai*): *mghā - yemghā* "to go" and *nsā - yensā* "to forget": (i) northern Constantine, from the Tunisian frontier as far as a line which drops rapidly from Bône towards Ain Bédia, and the eastern Sahara as far as Sidi Ouba and El-Oued, use the forms *mghā (mghā) - mghā - yemghā - yemghā*; *nsā (nsā) - nsā - yensā - tensā - yensā*; (ii) central Constantine, from the northern boundary delineated above as far as the outskirts of Biskra and Mdoakal, along a line which follows the Hodna depression and rises again towards Mansoura des Bibans as far as Kabylia, has forms which are completely resolved: *mghā - mghā - yemghā - yemghā*; *nsā - nsā - yensā - tensā - yensā*, analogous to those of the sedentary dialects; (iii) throughout Bedouin Algeria, from the Sahara to the sea, and in a large part of Oran, bounded on the east by a line which, starting from the outskirts of Oran itself, passes to the south of Saint Denis-du-Sig and to the north of Cacherou, leaves Frenia to the east and proceeds southwards, passing between Aflou and Gervilly, the conjugation of verbs with imperfect *i* and imperfect *a* is characterised by a peculiar usage: *yemghā - yemghā* on the one hand, *yensā - tensā - yensā* on the other; this usage is found again in western Oran, from a line running east of Tlemcen, passing east of the Horneyan, and curving westwards north of Ain Sefra; (iv) central Oran, comprising the regions of Ain Temouchent, Sidi bel-Abbès, Mascara, Saïda, Mécène, Gervilly, Ain Sefra and Ouled Sidi Sheikh, has the forms *yemghā, tensā, yensā*.

By drawing up a table of all the different characteristics, there emerge, despite the overlapping and contradictions which blur the boundaries and split up geographical areas, four, or perhaps five distinct basic groups.

(i) The Bedouin dialects of eastern Constantine, the region of La Calle and Souf (Cantineau's group

E); the pronunciations are *f, gh, ak, dhaphet, yedhaphu, rakhal'ti, mghā - yemghā, nsā - yensā - tensā - yensā*. The final *y* vowel tends to become *i* (*imāla*); diphthongs are generally reduced to *f, s*.

(ii) The Bedouin dialects of central and western Oran (Cantineau's group D); the pronunciations are *f, gh, ak, dhaphet, yedhaphu, rakhal'ti, yemghā, tensā - yensā*; diphthongs are either correctly preserved *ef, ou*, or reduced to *f, s*.

(iii) The Bedouin dialects of central and Saharan Algeria (Cantineau's group A); the pronunciations are *f, s* for *gh, u, dhaphet, yedhaphu, rakhal'ti*; diphthongs are either correctly preserved or reduced to *f, s*.

(iv) The Bedouin dialects of the Tell and of the Algerian-Oran Sahel (Cantineau's group B); the pronunciations are *dj, gh, u (n), dhaphet, yedhaphu, rakhal'ti*; diphthongs are sometimes preserved sometimes reduced to *f, s*, and final *u* is pronounced *o*.

These two last groups have the same conjugation of the defective verb: *mghā - mghā - yemghā; nsā - nsā - tensā - tensā - yensā*.

(v) The dialects of the high plains of Constantine, covering the north of Hodna and the belt which extends roughly from Bordj Bou Arreridj to the valley of the Seybouse, occupies an intermediary position between groups i, ii and iv, and the sedentary dialects (Cantineau's group C); the pronunciations are *dj, gh, u, dhaphet, yedhaphu, rakhal'ti*; the diphthongs are reduced to *f* and *u*, and the conjugation of the defective verb is completely restored, as in the urban and village dialects; these dialects can be regarded as a complementary group, if not as an independent one: they are the dialects of the old Zirid state of the Ka'fa, a centre of sedentary peoples buried beneath the mass of the Bedouin.

It cannot be pretended that any interpretation of this classification can be other than a hazardous and debatable undertaking. Having due regard to the delicacy of the task, it may be hazarded that group i is connected with the Tunisian group which W. Marçais considers Salaynit; following him let us call it group S. Group ii is probably an extension of the eastern Moroccan group, which G. S. Colin considers Ma'kili; let us call it group M. Group iii comprises the most truly Sahara Bedouin elements, at once the most imposing and the most united, including the Chaamba, the Larbaa, the Ouled Nail, the Arab Cheraga; the dialectal area of these nomads extends over a wide area of the north—more to the east than to the west—covering the nomad's pasture grounds and the grazing lands of the high plains. The northern part of their domain forms a large zone of transition shared with group iv. They are grouped in the valley of the Chélif, and stretch as far as the environs of Relizane and Mostaganem in the west, and into Mitidja and as far as Kabylia in the east. Let us call group iii H and group iv H', conjecturing a vast implantation there of Hilali Arabic, the Arab element (perhaps that of the Abijidj and the Zughba) intermixed with a Zenata element. The proportion of Arabised Berbers is doubtless more considerable in the north of the high plains and along the Tell Atlas. Group v, an extremely complex group, is inserted like a wedge between the still Berber-speaking groups of Kabylia and the Chaouia region; it is to be perhaps connected with an implantation of Hilali Arabic (Riyāh?) in the formerly 'Adijia and Kutāma territories; let us call it H'.

We do not profess to define the precise disposition of the zones of transition between the various groups, or to determine the possible preponderance in them

of one type of dialect as opposed to another. It is, however, suggested that group H' succeeded, in the course of centuries, in spreading further afield, to the detriment of groups H and H', as a result of the political superiority enjoyed by those forming that group: it was a case of warlike pastoral nomads, imbued with the spirit of conquest, confronting people who were at the same time small agriculturalists and semi-nomadic, semi-settled. In the same way group H' must have impinged strongly on the territories of the settled regions of western Constantine: hence the presence of sedentary dialectal forms emerging from the superimposed Bedouin dialect as surviving witnesses to a group of dialects which have been superseded. On the other hands, more recently we see that not only is Bedouin linguistic expansion being checked, owing to the decline of the pastoral life, to its geographical limitation and even, at many points, to its disappearance, but that the sedentary dialectal elements are gaining ground, especially in the northern areas.

Although any forecast must be risky, one is inclined to believe that the social changes whose effects are daily experienced by the Arabic-speaking peoples of Algeria can divert the spoken idiom into new channels. In the land in which they live, the towns, few in number, enclosed with walls whose gates were closed at nightfall, have remained, for thousands of years, alien intruders in a rural and pastoral, composite and inorganic world. The towns of modern Algeria, whether legacies of the past or recent creations, some of them populous centres, all of them centres of economic activity, exercise a magnetic influence on many a district of the former Regency, even the most distant, to which they represent labour markets and a source of livelihood; and, one might add, melting-pots in which is being produced a *hoise* of Algerian Arabic which is capable of causing the extinction of the old regional dialects. ALGIERS (see AL-JAZĀ'IR).

ALGOL (see ALGOL).

ALGOMAZIA (see ALGOMAZIA).

ALGORITHMUS is the old name for the process of reckoning with Arabic numerals. In mediaeval treatises the word is spelt in various ways: e.g. *Algorismus, Alchorismus, Alchorismus*, etc., corruptions of the *nisha* of the oldest known writer on Arabic arithmetic: Muhammad b. Mūsā al-Kh̄wārizmī (q.v.). His book was translated into Latin in the 12th century by an unknown author, and the only known copy at Cambridge has been edited by B. Boncompagni (*Trattato d'arismetica* i, Rome 1857). It opens with the words: "dixit Algorithmus", the word is here correctly given in the form of an Arabic *nisha*, i.e. as a proper name; it is strange that it should afterwards have come to mean the new process of reckoning with Arabic figures, as contrasted

with the system of counting by the Greco-Roman abacus. Of the numerous attempts to explain the word it is enough to mention a derivation from a philosopher Algus, and a supposed origin from the Arabic article al combined with the Greek ἀριθμός, hence the form 'Algarithmus'. The right explanation was given by M. Reimond in his *Mémoire sur l'Inde*, 309-4. In the year 1840, before the Cambridge manuscript had been edited, but the false acception prevailed, and Algorithm (or Algorism) is still used in the sense of 'system of numeration, arithmetic'.

'ĀLĪ, MUṬAṬṬA B. 'ABD AL-MAWLA CEMELI, one of the most outstanding representatives of Turkish literature of the 16th century. Born at Gallipoli in 948/1541, from the age of 10 he studied under Surlat, great expert in Persian language and literature, and then under the Arab poet Muḥyī 'l-Dīn. In 965/1557 he presented to the heir-apparent Selīm his work entitled *Mīrā' u-Mā*, a step which determined his future career (see Dory, *Cat. cod. or. bibl. Acad. Lucd. Bataviae*, i, 128). He became a member of the circle of his fellow-citizen Muṣṭafā, tutor to the prince, and was for a long time attached to this important figure as a private secretary. Selīm II, on his accession, confirmed him in this post, and about the same time he made the acquaintance of Niḡmāddīn, through whom he acquired knowledge of numerous events. In 976/1568 he accompanied Muṣṭafā to Egypt, but this visit was abruptly terminated by the latter's dismissal. In 1570, Muṣṭafā was placed in command of the army charged with the conquest of Cyprus, and 'ĀlĪ, as his secretary, witnessed the achievements of the Ottoman fleet and army. During the following years he lived in Rumelia, and in 980/1572 he compiled the *Heft Maḡlūḡ* or *Heft Duḡlān* (MS Laleli, Istanbul, no. 2174; printed edition in the collections of the *Ḥikān*) in which he described, in a pompous style, the end of the reign of Süleymān I and the accession of Selīm II. About the same time he compiled a collection of poetry in Turkish, consisting mainly of *ḡazels* and *ghazals*. He also produced a Persian *divān* (see Flügel, *Die arāb., pers., und türk. Hss. der K.K. Hofbibl. zu Wien*, i, 651).

'ĀlĪ is, however, only ranked as a second-rate poet, as his poetry shows little feeling or sensibility. In 1577, he was again Muṣṭafā's secretary when the latter was placed in command of an expedition to Persia; he was the author of numerous victory proclamations sent from the Caucasus. He took advantage of his stay in those areas to collect a mass of information on the customs and legends of the populations of the Caucasus, and especially those of Gilān, Shīrwān and Georgia. After the dismissal of Muṣṭafā, 'ĀlĪ returned to Istanbul, the sudden death of his protector placed him in a difficult position, but did not interfere with his literary activity. He dedicated to the Sultan his *Muḥāḡ al-'Aḡāḡ* which gives an account of the miracles of the Creation and the Prophets (MSS: Istanbul Üniversitesi Kütüphanesi, nos. 17397-96; Esad Efendi Kütüphanesi, no. 2407; cf. Flügel, *loc. cit.*, ii, 94; Pertsch, *Verz. d. türk. Hss. ... zu Berlin*, i, 36, 158). Some afterwards he completed the *Nurānī-nāme*, which deals with the expedition to Iran (Esad Ef. Kütüp., no. 3433; Rieu, *Cat. of the Turk. MSS.*

in the *Brit. Mus.*, p. 61). The ceremony of the circumcision of the heir-apparent Mehmed, one of the most magnificent ceremonies which took place in the Ottoman Empire, was the occasion of a descriptive work which gained him an introduction to the prince: *Diḡān al-Ḥabār der Maḡlūḡ al-Sār* (Istanbul, Nuruosmaniye Kütüp., no. 4318).

In 995/1586 he compiled the *Mandābīḡ al-Huḡarīn*, in which he collected important material on some hundreds of calligraphists, miniaturists, illuminators and bookbinders (see Flügel, *loc. cit.*, ii, 386; edited by İsmail Mahmūd Kemāl, Istanbul 1926). The *Zubdat al-Tawārīḡ*, the Turkish translation of an Arabic work, dates from the same period (Flügel, *ibid.*, ii, 90; 1st. Univ. Kütüp., nos. 2378-2386). Interested in mysticism and pantheism, he gave in the *Ḥilyat al-Ridḡāl* (Rieu, *loc. cit.*, p. 19; Pertsch, *Die türk. Hss. ... zu Göttingen*, 75; 1st. Univ. Kütüp., nos. 1329, 404) detailed information on the saints, their hierarchy and their influence; he also composed a *divān* entitled *Lā'ihāt al-Ḥabībāt* (Rieu, *loc. cit.*, 264; 1st. Univ. Kütüp., nos. 651, 1902). Appointed *kātib* of the Janissaries, then *deftār emīn*, he applied himself to tracing the course of history down to his own times; he wished, however, to produce his work at Cairo, then the greatest book centre of the Muslim world. Mehmed III who, on his accession, accorded him privileged treatment, appointed him *deftār* of Egypt, but the hostility of certain *wazīrs* caused him to lose this post. From 1000-1007/1592-9 he wrote his great work, *Kunūḡ al-Ḥabār*, in four parts (printed at Istanbul between 1277/1866 and 1285/1869 in 5 vols., covering the period up to the reign of Mehmed II; no printed edition of the remaining 150 years exists). In the first part, he recounts the ancient legends concerning the prophets. In the second, he treats of Muhammad and Islam. He was so convinced of the important role played by his nation in the development of Islam that he entitled the third part 'The Turko-Tatar chapter'. The fourth part is devoted to the formation of the states and to Ottoman history. A geographical dictionary is appended to the work. The *Kunūḡ al-Ḥabār* is among the most important Ottoman historical works. Although the information given by 'ĀlĪ on the pre-Islamic period is of no great value, on the subject of Ottoman history, especially that of the 16th century, he is extremely valuable. His passion for truth even leads him to criticize the actions of certain sultans, and in general he speaks favourably of non-Muslims. His style, poetical to begin with, becomes more simple as he proceeds. Later he wrote a historical summary of the Muslim World, entitled *Fuṣūḡ al-Hall wa 'l-'Asāl* (Istanbul, *Ḥikān*), which is one of the most popular works in Turkish (see, e.g., the MS in Nuruosmaniye Kütüp., no. 3399). As a reward for his literary activities he was appointed *paṣṣa* of Ḥabībīn in 1008/1500 he wrote his last work, *Ḥadīḡ al-Ḥabībīn min al-'Asāl* (Istanbul, MSS: Esad Ef. Kütüp., no. 2407; Cairo, *Ḥadīḡ al-Ḥabībīn*, *Cat. des ouvr. livres*, 1907), a short but significant work. He died the same year. 'ĀlĪ is a particularly attractive character: although, in the circles in which he moved, violence and intrigue seem to have the rule, he showed himself always to be loyal, kindly and upright. His intense and serious explanation why he failed to win the goodwill of the rough and unpollished men of that period; even the Grand Vizier Siyāwush Paṣṣa, a remarkable man, viewed him with contempt. On the other hand, every writer of the period was his friend.

**Bibliography:** His life and works have been described by J. von Hammer-Purgstall, *Gesch. d. osman. Reiches*, iv, 308, 651 ff.; *idem*, *Gesch. d. osman. Dichtkunst*, iii, 115 ff.; by Mehmed Tāḡir b. Rif'at, *Muawwizhāt*, 'Oḡḡamāsyās

'ĀlĪ b. al-'ABBĀS AL-MAḡḤḤ, medieval medical writer, commonly known to the West as Haly Abbas. He was born in al-Aḡḡāḡ, the Fenn stock, as his title al-Maḡḡḡ shows. He probably moved to Shīrāz at an early date, for he made his medical studies under a physician of that city, Abū Māḡīr Mūsā b. Sayyār, and dedicated his magnūm opus to its ruler, 'Aḡḡad al-Dawla the Buwayhid. This book he named the *Kāmil al-Sīnā'a* or *K. al-Maḡḡ*; the medieval Latin translators named it the *Liber Regius*. It derives its title from the dedication to 'Aḡḡad al-Dawla. The exact date of 'ĀlĪ's death is not known. It occurred between 985 and 995 A.D.

The *Kāmil al-Sīnā'a*, upon which the importance of 'ĀlĪ b. 'Abbās depends, was deliberately written to fill mid-way between the lengthy al-Ḥabībī and the brief al-Manṣūrī, both works of al-Rāzī. It was immediately recognised as a master piece and was adapted as the chief textbook of medicine for students. Some hundred years later it was overshadowed by the *Kānūn* of Ibn Sīnā. But it remained sufficiently popular to be translated into Latin in full by Stephan of Antioch in 1127 and this translation to be printed in Venice on 1492 and in Lyons in 1523. The surgical section of the book had already been translated by Constantine the African in the 11th century and was used by the School of Salerno. (Printed in *Constantini Africani Opera Reliquia*, 1539). The Arabic text was reproduced in Cairo, Būlak 1294/1877, and in 1903 the anatomical section was translated into French (P. de Koning, *Trois traités d'anatomie arabe*, Leiden 1903, 90-127).

Browne, *Arabic Medicine*, Cambridge 1921, 53 ff.; D. Campbell, *Arabic Medicine*, London 1926, 74; C. Elgoud, *Medical History of Persia*, Cambridge 1951, 155.

(C. ELGOUT)

'ĀLĪ B. 'ABD ALLĀH B. AL-'ABBĀS was the ancestor of the 'Abbāsids. According to Muslim tradition, 'ĀlĪ was born in the year 40/661, the very same night in which the caliph 'ĀlĪ was assassinated; but there are also other statements concerning the year of his birth. His mother was called Zur'a bint Mīshrah. His grandfather al-'Abbās was the uncle of the Prophet, and on account of his high birth and his personal gifts 'ĀlĪ attained to great distinction. He was looked upon as the handsomest and most pious of his time, and received the surname of 'al-Saḡḡīddīn' (he who prostrates himself often) because of his constant praying. His piety did not prevent him from plotting secretly against the Umayyads, and was therefore banished from the capital by the caliph al-Walīd I. He went to live in the province of al-Shārah on the border between Arabia and Palestine. Here he died in 117/735, 6 or 12 in the village of Hunayma. This place remained the headquarters of the 'Abbāsid propaganda, after 'ĀlĪ's son Muḡammad, the father of the future

caliphs al-Saffāh and al-Manṣūr, had been recognised as the head of the 'Abbāsids.

(K. V. ZETTERSTEDT)

'ĀLĪ B. ABĪ TĀLĪB, cousin and son-in-law of Muḡammad, and fourth caliph, was one of the first to believe in Muḡammad's mission. Whether he was the second after Khadīḡa, or the third after Khadīḡa and Abū Bakr, was much disputed between Shī'ites and Sunnis. He was at that time aged 10 or 11 at most, and Muḡammad had taken him into his own household to relieve the boy's father Abū Tālib, who had fallen into poverty. One narrative, which is open to criticism on several counts, represents 'ĀlĪ as having occupied the Prophet's bed on the night when the latter left Mecca for Medina, so that the conspirators, on entering the house in order to kill Muḡammad, were surprised to discover his young cousin sleeping there. After restoring to their owners the objects which Muḡammad was holding on trust, 'ĀlĪ rejoined the Prophet at Kubā. Some months later, he married Muḡammad's daughter Fāṭima (q.v.), and of their marriage were born al-Ḥasan and al-Ḥusayn (q.v.). During the lifetime of Fāṭima 'ĀlĪ took no other wife.

Military exploits. In Muḡammad's lifetime 'ĀlĪ took part in almost all the expeditions, often as standard-bearer, twice only as commander (at Fadak in 6/628, and in al-Yaman in 10/632). He always displayed a courage, which later on became legendary; at Badr he killed a large number of Kurayshites; at Khaybar he used a heavy door as a shield, and the victory of the Muslims over the Jews was due to his ardour; at Hunayn (8/630) he was one of those who stoutly defended the Prophet. After the Prophet's death, he took no part in any military expedition, for reasons unknown. 'Umar is said to have prevented the Kurayshites from going out to the provinces, but 'Uthmān removed all obstacles to their movements. It is possible that 'ĀlĪ himself had no wish to absent himself from Medina; perhaps it was simply his state of health which kept him from fighting, although several feats are attributed to him at the battles of the 'Camel' and Siffin, in 36/656 and 37/657, when he was already thirty years old.

In addition, 'ĀlĪ performed several other functions for the Prophet. He was one of his secretaries, and on occasion was charged with missions which might be called diplomatic; on two occasions he was deputed to destroy idols. He executed with his own hand enemies condemned to death by the Prophet, and with al-Zubayr supervised the massacre of the Banū Kurayya (3/627). In 9/631 he read to the assembled pilgrims at Mīnā the first seven verses of the *Sūra Baqara* (ix).

Dispute with Abū Bakr. During the election of Abū Bakr (q.v.) as Muḡammad's successor, 'ĀlĪ, with Talha, al-Zubayr, and several other Companions, remained apart in the Prophet's house to watch over his body and prepared for his burial. Although solicited to do so by al-'Abbās and also, it is said, by Abū Sufyān, he made no effort to keep the control of the Community in the hands of the Hāshimīyās. When those persons who had at first abstained from recognizing Abū Bakr gradually accepted his election, 'ĀlĪ maintained his refusal for six months. His position was complicated by a

question of inheritance; Fātima had asserted a claim to the lands held by her father, which Abū Bakr firmly rejected on the ground of Muhammad's saying that "Prophets have no heirs". Whether 'Alī really hoped to succeed Muhammad is doubtful. The Arabs as a rule chose as their chiefs men of mature age (in 11/635 'Alī was a little over thirty) and showed no inclination to legitimism. The 'Shī'ites, by inventing or interpreting in the light of their beliefs certain words said to have used by Muhammad concerning 'Alī (see Wessink, *Handbook*, s.v. 'Alī), have always maintained that the Prophet intended to transmit the succession to his son-in-law and cousin, but it is certain, in any case, that in his last illness he did not express this desire.

Relations with 'Umar. According to the Muslim authors, 'Alī was a valued counsellor of the caliphs who preceded him; but although it is probable that he was asked for advice on legal matters in view of his excellent knowledge of the Qur'ān and the *sunna*, it is doubtful whether his advice was accepted by 'Umar on political questions. In regard to the famous *dhimma*, at least, 'Alī held a view entirely opposed to that of the caliph, for on being questioned on this subject by 'Umar he recommended the distribution of the entire revenue without holding anything in reserve (al-Balādhurī, *op. cit.*, *Annals*, A.H. 40, § 275). During the lifetime of 'Umar (and of 'Alī), all military or political, either military or political, except the lieutenant of Medina during 'Umar's journey to Palestine and Syria (al-Tabarī, i, 2404, 2522); for this reason he alone was absent from the meeting at Dībāya (q.v.) at which the military commanders and leading personages convoked by 'Umar gave approval to measures of the greatest importance on the regulation of the conquests and the *dhimma*. Further evidence of 'Alī's lack of complete agreement with the policies of Abū Bakr and 'Umar is contained in the received tradition relating to the *gharā* (see 'UTHMĀN b. 'AFRĀS), according to which 'Alī, on being asked by 'Abd al-Rahmān b. 'Awf whether he engaged himself to follow, together with the Qur'ān and the *sunna*, the word (*kalām*, *strat*) of the preceding caliphs, gave an evasive answer.

The Opposition to 'Uthmān. During the caliphate of 'Uthmān, 'Alī, with other Companions (notably Talha and al-Zubayr), frequently accused him of deviating from the Qur'ān and the *sunna* of Muhammad, particularly in the application of the *hadd* (see AL-HURMUZĀVĪ). 'Alī insisted upon the duty of applying the divine Law; he was among those who demanded that the legal punishment for drinking should be inflicted on al-Walīd b. 'Ukba, viceroy of Kūfa, and in some accounts is said to have carried out the whipping with his own hand. With 'Abd al-Rahmān b. 'Awf he reproached 'Uthmān with introducing *bida*, such as making four *ruk'as* at 'Arafāt and Miqāt in place of two (cf. Wessink, *Handbook*, s.v. 'Alī). But on political questions also he ranged himself with 'Uthmān's opponents and was denounced by them as their chief, or one of their chiefs, at least morally. E.g. (r) when Abū Uthayr al-Ghifārī (q.v.), who preached against the misdeeds of the powerful, was exiled from Medina, 'Alī with his sons went to salute him on his departure in spite of 'Uthmān's prohibition, and provoked thereby a violent dispute with 'Uthmān. (2) When the rebels who came from Egypt to Medina opened negotiations with 'Uthmān, 'Alī was their intermediary, or one of their intermediaries (see e.g. al-Tabarī, i, 2966). (3) When they returned

later on to Medina and besieged "the House," they asked 'Alī to put himself at their head (idem, i, 2965), although he refused. Nevertheless by his attitude he encouraged the rebels during the siege, and there are reasons for suspecting him to have been in agreement with them in demanding the caliph's abdication, at the same time that any participation by him in the bloody conclusion of the conflict is to be excluded. (4) After his election as caliph, his partisans included those persons who are known to have been hostile to the government on economic questions, such as al-Ash'ar (q.v.), Ibn al-Kawwā, Sa'sa'a and other (al-Mas'ūdī, iv, 561; al-Tabarī, i, 2916, 2908, etc.). His own programme in face of the various financial demands put forward by the *muhātala* (division of the surplus of the revenues, distribution of the domanial lands, etc.) is not known. It is recorded only that on becoming caliph he distributed the entire sums which he found in the *bayt al-mal* of Medina, Basra and Kūfa, and the whole of the provisions collected in the *bayt al-mal* (cf. also *Annals*, 40 A.H., § 276-80), an action which is to be regarded not simply as a demagogic gesture but as the consequence of the view that he had previously expressed to 'Umar. He is said also to have wished to distribute the Sawd (i.e. the domanial lands in al-'Irāq), but to have refrained through fear of legal disputes (al-Balādhurī, *op. cit.*, *Annals*, 40 A.H., § 276-80).

Apart from this, there is no statement which authorizes us to regard him as an extremist; on the contrary, he was hostile to the Saba'iyya, the followers of 'Abd Allāh b. Saba' (q.v.), and when they exalted him beyond measure he hid himself of them; he tried to cut himself loose from the *nawf*, the besiegers of "the House" (cf. 'Uthmān and their adherents, as seen at Medina and Kūfa). By his extreme attachment to Islam 'Alī was driven to attach an absolute superiority in merit to priority of conversion and to services rendered to Islam in its early days, over other claims such as nobility of birth and political or administrative ability. In his conflict with the government he continually appealed to the duty of applying the Qur'ān and the *sunna* of the Prophet, which in his view were being neglected. Whether by this policy, or because, aiming to defend the right of the Hāshimīd house to the caliphate, he was bound to oppose the principle which extended this right to the whole of Muhammad's tribe, he set the Quraysh against him, although himself of Quraysh; in return he had the support of most of the Ansār, of the other non-Qurayshite Arabs who had been amongst the Old Believers, of the *muhātala* in the provinces, and the depressed classes in general (*Agħābi*, xi, 31).

Election of 'Alī and early measures. When 'Uthmān was killed the Umayyads fled from Medina and the opposition remained masters of the situation. Since 'Alī was the person for whom they had most respect, he was invited to return to the caliphate. The traditions on the manner and circumstances of his election (the most commonly accepted date is 18 Dhū 'l-Hijja 35/17 June 656) are contradictory in regard to his willingness to accept it. His partisans on the other hand were ready to employ violence against those who refused to recognize him (including Talha and al-Zubayr); nevertheless there were some who would not yield and who left Medina, e.g. 'Abd Allāh b. 'Umar, Sa'd b. Abī Wakkās, al-Mughira b. Shu'ba, Muhammad b. Maslama al-Anṣārī, Usama b. Zayd.

Mu'āwiya was therefore able to maintain that the election was invalid because made by a minority; to this 'Alī replied that the election of the caliph was a right of those persons (Ansār, Muhājirīn, or Badī-combatants) who were present in Medina at the relevant time. What is certain is that 'Alī allowed himself to be nominated also by the rebels who had 'Uthmān's blood on their hands. This was an error, in that it exposed him to accusations of complicity in their crime, although some traditions represent him as vainly endeavouring to rid himself of the most serious of his partisans. In spite of counsel by Ibn 'Abbās to go slowly, 'Alī at once took some of the measures demanded by the opposition from 'Uthmān: he removed the governors appointed by the latter and wherever possible replaced them by governors of his own party, and satisfied the populace by distributions of money, made with a laudable equity. The report of 'Uthmān's murder and of 'Alī's protection of those guilty of it had in the meantime provoked strong reactions in Mecca, Syria and Egypt. Mu'āwiya, governor of Syria and cousin of 'Uthmān, accused 'Alī of complicity with the murderers and refused to pay homage to him. 'Alī hastily collected troops to force him to obedience, but another serious rebellion compelled him to delay action in Syria, while Mu'āwiya for his part maintained a prudent waiting policy.

Rebellion of 'Āsh'ar, Talha and al-Zubayr. Although 'Alī had supported the opposition against 'Uthmān, she had gone on pilgrimage to Mecca during the siege of "the House". On her way back she learned of the events in Medina, and in consternation, especially at the news of 'Alī's election, returned to Mecca and engaged in active propaganda against the new caliph. Four months later she was joined by Talha and al-Zubayr, and shortly afterwards 'Alī learned that all three, with several hundred troops, were marching to al-'Irāq by sidetracks. He immediately set out in pursuit, but could not overtake them. The rebels expected to find in al-'Irāq the forces and the resources which they needed. 'Alī was absolutely compelled to prevent them from seizing this province, since Syria obeyed only Mu'āwiya. Egypt was in anarchy, and the loss of al-'Irāq would have involved also the loss of the eastern provinces dependent on it.

The three insurgents proclaimed that the *hadd* must be re-established for all alike, and that a "reform" (*islāh*) must be put into effect (al-Tabarī, i, 3093, 3131, 3132). Since these influential leaders were in part responsible for the fate of 'Uthmān, the reasons for their rising to demand vengeance for his murder, and the meaning which they attached to *islāh*, are obscure. Social and economic motives, inspired by fear of the possible influence of the extremists on 'Alī, seem to provide a more convincing explanation than personal feelings for their action, and especially for the effect which it produced. The moderates amongst those opposed to 'Uthmān had no doubt desired a change of policy, but not one so radical as that now foreshadowed.

While the insurgents occupied Basra, and there massacred many of the *nawf*, 'Alī sent his supporters to Kūfa to invite its population to take his part, and when he had collected an adequate force he marched towards Basra. Since both parties aimed at a peaceful settlement of the dispute, an agreement was negotiated according to which 'Alī should disengage himself from the *nawf* (while guaranteeing their lives), but this was not the conclusion of the affair which the extremists of his party meant to

reach. A brawl provoked by them developed into a battle, which became famous in Muslim annals as the "Battle of the Camel" (15 Dhu'l-Hijja 36/9 Dec. 656) (see AL-ḤAWARĪ), and in which Talha and al-Zubayr lost their lives, while 'Āsh'ar was promptly ordered by 'Alī to return to Medina under escort.

Conflict with Mu'āwiya. Following on this success, 'Alī had hopes of regaining the allegiance of the governor of Syria by opening negotiations with him, but in vain. Mu'āwiya demanded the surrender of the murderers of 'Uthmān in virtue of a verse of the Qur'ān (xvii, 32/35) which forbids the slaying of any person save for just cause (*illā bi-l-ḥakk*), at the same time according the right of vengeance in the case of anyone slain unjustly (*muzlīm*) to his *walī*, i.e. his near relative. Mu'āwiya maintained that 'Uthmān had been killed unjustly; consequently, he proposed to exercise the right accorded by God. In the meantime, he would hold to his refusal to pay homage to 'Alī. The sources pass vaguely over the thesis maintained by 'Alī in rejecting Mu'āwiya's demand, except for the explicit statement in the *Wak'at Siffin* of Nasr b. Mu'āwī al-Minkarī (570): since 'Uthmān was killed by the people, who were outraged by his arbitrary actions, the murderers should not be liable to the *lex talionis*. In reality the struggle had much deeper causes; what was at issue was the pre-eminence of Syria or of al-'Irāq, and probably also two different conceptions of the policy to be followed in the government of the Muslim State.

'Alī, finding that Mu'āwiya was not to be won over, passed to the offensive; the two armies, each some tens of thousands strong, faced one another on the plain of Siffin (q.v.). After some skirmishing, interrupted by a truce in Muharram 37/June-July 657 and some parleys, battle was joined; there was a week of combats between horsemen and foot-soldiers, followed by a violent conflict (the "night of clamour", *laylat al-harir*, 10 Safar 37/28 July 657). Mu'āwiya's star seemed to be sinking, when 'Amr b. al-'Ās advised him to have his soldiers hoist copies of the Qur'ān on their lances. This gesture, famous in Muslim history, did not imply surrender; by this means Mu'āwiya invited the combatants to resolve the question by consultation of the Qur'ān. Weary of fighting—the number of the killed is swollen in the sources to 70,000 or even more—the two armies laid down their arms. 'Alī was forced by his partisans to submit the difference to arbitration, as proposed by Mu'āwiya, and further to choose the arbitrator for his side from among the "neutrals". So sure were his followers that they were in the right! In these decisions the *ḥarā* (q.v.), of whom many were in his army (though they were represented in Mu'āwiya's army also), played a large part.

Appointment and task of the arbitrators (*ḥakīm*). A convention was drawn up at Siffin itself (Safar 37/657), by the terms of which the two arbitrators, Abū Mūsā al-Ash'arī (q.v.) for 'Alī and 'Amr b. al-'Ās (q.v.) for Mu'āwiya, would announce their decision at a place halfway between Syria and al-'Irāq in the presence of witnesses chosen by themselves; the date fixed for the meeting was Ramaḍān, but the arbitrators might advance it or postpone it until the end of the year 37. In the two versions of the convention which have come down to us the points to be examined by the arbitrators are not defined; all that is said is that they were to consult the Qur'ān "from the first to the last sūra" and, in default of clear indications in the sacred Book, the *sunna* of the Prophet, excluding what

might give rise to divergences, L. Vecchia Vaglieri (see the art. cited in the Bibliography) has shown that their task was to determine whether the acts of which 'Uthmān was accused were or were not *ahādith*, arbitrary actions at odds with the divine Law. If the caliph were guilty, his murder could be regarded as an act of justice; but if he had committed no errors, the conclusion must be that he had been killed unjustly (*mazlūm*). and in consequence Mu'āwīya was justified in claiming the right of vengeance. But this was not all, for a decision in favour of Mu'āwīya would inevitably involve, for 'Alī, the loss of the caliphate.

Protests against the arbitration. While awaiting the verdict, the armies returned to their bases. But already at Siffin certain individuals had protested against recourse to arbitration with the cry *lā ḥukmā illā li'Allāh*, literally "No decision save God's". The phrase implied that it was absolutely improper to apply to men for a decision since, for the case in dispute, there existed a divine ordinance in the Qur'ānic verse *alīs, Rūq'*: "If two parties of Believers fight with one another, make peace between them, but if one rebels (baghat) against the other, then fight against that one which rebels (allatī tabghit), until it returns to obedience to God...". In fighting against his opponents 'Alī had appealed to this verse, since in his view the "rebellious party" had been, firstly, that of 'Āṣidha, Talha and al-Zubayr, and now that of Mu'āwīya. The dissidents maintained, very logically, that it was his duty to continue to fight against Mu'āwīya, as no new fact had intervened to alter the situation.

During the return to Kūfa, those who had first raised the cry *lā ḥukmā illā li'Allāh* (hence called al-*muhakkima al-dā*) persuaded many other partisans of 'Alī that the arbitration was a sin against God, by substituting the judgment of men for His prescription. A group of some thousands proclaimed their repentance and stopped at Harūrā, near Kūfa (whence their name of Harūrīs [q.v.]). The caliph, on a personal visit to their camp, succeeded in reconciling the dissidents, all or in part, evidently by making concessions to them. After his return to Kūfa, however, he denied from the *misbah* the reports which asserted his intention to convene the convention of Siffin. When it was learned that he had sent Abū Mūsā to the meeting with 'Amr, a group of dissidents, 3,000 or 4,000, secretly left Kūfa, and some hundreds more left Basra. The rallying-point chosen by these dissidents, called, *Khawāridj* [Khāridjites (q.v.)], was al-Nahrāwān, on the canal of the same deriving from the Tigris.

The arbitration (*hakama*). Mu'āwīya, with his escort, was the first to arrive at the meeting place of the arbitrators (Ramaḍān 27/Feb. 658). 'Alī, excusing himself on the ground of the troubles caused by the dissidents, did no more than send Abū Mūsā with the escort and his cousin Ibn 'Abbās as his representative. The sources give vague or contradictory statements on the place and date of the meeting, some placing it at Dīmāt al-Djandal (now al-Djāf), approximately halfway between Syria and al-'Irāk, as stipulated in the convention, others at Adhruh, between Ma'an and Petra. There are many grounds (see the art. cited above) for believing that a first meeting in the presence of six persons only was held at Dīmāt al-Djandal, and a second meeting (see below) at Adhruh in Shā'ban 38. At the former, the arbitrators must have reached an agreement on the result of their investigations, and this result was that 'Uthmān had committed no breach of

his trust, since only on this ground can the later events be explained. A passage in *Wak'at Siffin* (618 f.) explains why their verdict is known to us only indirectly: as a measure of precaution, "the two men agreed at Dīmāt al-Djandal to say nothing". But though the verdict was not promulgated, it is certain that it became known to both parties; the Syrians, perhaps in the enthusiasm of the moment, took the *bay'a* to Mu'āwīya (Jihz 'I-Ka'da 37/April 658; al-Tabarī, ii, 199), while 'Alī publicly protested against both arbitrators, proclaimed that their sentence was contrary to the Qur'ān and the sunna, and that he was therefore under no obligation to submit to it. Thereupon he assembled his forces and set out to engage Mu'āwīya in battle again. On reaching al-Anḥar, he turned aside towards al-Nahrāwān, in the conviction that it was necessary first of all to destroy this centre of insurrection. Mu'āwīya, in the same month in which 'Alī was engaged with the Khāridjites, took possession of Egypt (Safar 38).

Battle of al-Nahrāwān. 'Alī first tried to re-enlist the Khāridjites in his forces by a declaration that he would take the field again against Mu'āwīya, but without effect. The dissidents demanded that he should confess himself guilty of an act of impiety (*kufr*), which he indignantly refused to do. After promising the *amān* to those who should submit—and there were some—he attacked the rebels (9 Safar 38/27 July 658). It was a massacre rather than a battle, and it seems that 'Alī was the first to regret it. This action, condemned by contemporary opinion,—for many sincere believers, of well-known piety, had fallen on the field—had very serious consequences for him; the defections, which had already begun, increased, and he was forced to return to Kūfa and to give up the campaign against Mu'āwīya.

Conference of Adhruh. The situation was completely changed after these events. Henceforward the opposing parties were no longer a caliph and a rebel governor, but two rivals for the supreme office in the State. While Mu'āwīya had gained ground, 'Alī was struggling in a morass of difficulties: he had been discredited in the eyes of the Muslim community by the verdict of the arbitrators, and he had lost many of his supporters by his refusal to submit to their decision after consenting to the *lakḥim*, by the massacre of the Khāridjites, and in general by his vacillating policy. This was the position when the arbitrators and many eminent persons (with the exclusion of 'Alī and also, it should seem, of his representatives) met at Adhruh in Shā'ban 38/January 659. In this conference the meetings attended only by the arbitrators and certain personages must be distinguished from the final plenary session. In the former the verdict of the arbitrators was promulgated (several sources assert that Abū Mūsā recognized that 'Uthmān had been killed unjustly), and the selection of a new caliph was discussed. The information given in the sources is rather discordant, except as regards the final scene. It can be gathered that 'Amr maintained the case of Mu'āwīya against Abū Mūsā's preference for 'Abd Allāh b. 'Umar, who for his part refused to stand for election in default of unanimity; Abū Mūsā then proposed, and 'Amr agreed, to declare both 'Alī and Mu'āwīya deposed and to remit the choice to a committee. In the public discourses that followed, Abū Mūsā observed this agreement, possibly adding some counsel in which he alluded to his preference for the son of 'Umar; 'Amr in his

turn declared 'Alī deposed and confirmed Mu'āwīya. Several modern historians have adjudged this scene entirely improbable, but this negative attitude towards traditions which are nevertheless explicit and fairly concordant on this point is due to an inadequate appreciation of the preceding events explained above. In the light of these the final scene at Adhruh can readily be accepted. The unexpected declaration of 'Amr seems to have been a strictly personal proposal on his part, which, as a man charged with a grave responsibility, he believed himself entitled, if not in duty bound, to advance. But this declaration, which obviously contravened the agreement previously reached (since Abū Mūsā reacted to it with indignation), was generally judged in later times as a treacherous trick, and was certainly a disloyal act. It is worthy of notice that even in the plenary assembly no voice was raised on behalf of 'Alī; the clash which followed 'Amr's declaration was a reaction against the Umayyads, not in favour of 'Alī. In any case the conference had entirely negative results, for the participants separated without taking any decision on the caliphate.

Last years, death and burial of 'Alī. 'Alī continued to be regarded as caliph by his partisans, though their numbers were daily diminishing, and Mu'āwīya by his. In 39/659 the situation was still uncertain. 'Alī, confined to Kūfa, remained passive even when Mu'āwīya made small expeditions into the heart of al-'Irāk and of Arabia. In Khurāsān and the East Arab rule was thrown off (see 'Abd al-Raḥmān b. Samura), but a rising in Fārs was skillfully put down by Ziyād b. Abīhi [q.v.], as governor for 'Alī. In 40/660 'Alī enjoyed no authority in the two Holy Cities, and could not stop an attack by Mu'āwīya on al-Yaman. Finally, a Khāridjite, 'Abū al-Raḥmān b. Muljān al-Murādī (see *raḥ* MULJĀN), in revenge for the men slain at al-Nahrāwān, struck 'Alī with a poisoned sword before the door of the mosque of Kūfa. He died about two days later, being then 62 or 63 years of age. A questionable tradition asserts that Ibn Muljān was only one of a group of fanatics who plotted to rid Kūfa of the three persons regarded as responsible for the civil war, and that Mu'āwīya and 'Amr were to have been assassinated at the same time.

'Alī's burial place was kept secret, evidently for fear lest his body should be exhumed and profaned. It was not until the time of Hārūn al-Rashīd that it was announced that his tomb had been identified at a spot some miles from Kūfa, where a sanctuary subsequently arose; a mosque, al-Najāt [q.v.], grew up there, surrounded by an immense cemetery, due to the aspiration of pious Shi'ites to be buried in the vicinity of their Imāms.

Personal details. In person, 'Alī is represented as bald, affected by ophthalmia, stout, short-legged and broad-shouldered, with a hairy body and a long white beard covering his chest. In manner he was rough and brusque, apt to give offence and, unsovereign. He had two nicknames: *Haydar*, "lion", and *Abū Turāb*, "dustman", a name probably given to him contemptuously by his enemies, but which was afterwards interpreted as an honorific by invented episodes (see Nöldeke in *ZDMG*, 1898, 30). He had fourteen sons and nineteen daughters by nine wives and several concubines; of his sons, only three, al-Ḥasan al-Husaynī and Muḥammad b. al-Ḥanāfiyya, played a historical role, and five in all left descendants. He was reputed to have a profound knowledge of the Qur'ān, of which he was one of the best "readers"

(Suyūṭī, *Iḥāṣ* [Sprenger], 169, 171; the statement that he compiled a recension is to be rejected; *Geich*, des *Qur.*, ii, 8-15). Many political discourses, sermons, letters and wise sayings (*hiṣām*) have been ascribed to him; these can be read in *Nahḍ al-Balāgha*, a collection of the 5th/11th century, which includes here and there old historical texts and the passages of *adab* (see *al-Maḥārī al-Raḥīl*). On the *diwān* (in which some poems are perhaps authentic) and the prose works attributed to him, see Brockelmann, I, 43 f., S. I, 73 f. His gifts as an orator were doubtless remarkable, but the same cannot be said of his poetic art (H. Lammens, *À propos de 'Alī b. Abī Tālib, Études sur le siècle des Omeyyades*, 1930, 1-11).

Personality. The personality of 'Alī is difficult to define, since the historian finds no sure guide either in his actions or his discourses, or in the data supplied by the sources. His own will was paralysed or modified by events and the constraint of his partisans. His discourses are obscure in form, and it is not easy to distinguish the genuine from the forged. Since the conflicts in which he was involved were perpetuated for centuries, the sources are sometimes tendentious, and, though less idealizing or hostile than has been asserted, more often reticent. The hostile judgment of Lammens (especially in *Fāṣma* and *Mo'awana I'*), sometimes obtained by forcing the texts, is to be rejected. The milder presentation of Caetani which, while exposing the weaknesses of 'Alī, gives due weight to the pressure of circumstances upon him, remains vague in its general lines. Neither Lammens nor Caetani has brought out the religiosity of 'Alī and its reflections in his policy. There is an abundance of notices on his austerity, his rigorous observance of religious rites, his detachment from worldly goods, his scruples in regard to booty and retaliation; and there is no reason to suppose all these details invented or exaggerated, since all his actions were dominated by this religious spirit. Without attempting to decide whether his devotion to Islam was always wholly unmixt with other motives, this aspect of his personality cannot be disregarded for the understanding of his attitude towards his psychology. He engaged in warfare against "erring" Muslims as a matter of duty, in order "to sustain the Faith and to make the right way (al-ḥadā) triumphant" (al-Balādhuri in Caet., 40 A.H., § 235, d, etc.). After his victory at "the Camel", he tried to relieve the distresses of the vanquished by preventing the enslavement of their women and children, in face of the protest of a group of his partisans; when battles ended, he showed his grief, wept for the dead, and even prayed over his enemies. Even the apparent ambiguity of his attitude towards the Harūrīs can be explained by his fear of disobeying God; though persuaded by them that the arbitration was a sin, he recognized also that to infringe the convention of Siffin was equally a sin, and in this painful dilemma chose to allow the arbitration to proceed. Obedience to the divine Law was the keynote of his conduct, but his ideas were governed by an excessive rigorism, and it was perhaps for this reason that his enemies described him as *makhḍūf*, "narrow-minded". Imprisoned in his strict conformism, he could not adapt himself to the necessities of a situation which was very different from that of Mohammad's time; thus he lacked that political flexibility which was, on the other hand, one of the pre-eminent qualities of Mu'āwīya. His programme, rather than uncertain, was utopian;

probably he himself discovered the impossibility of realising it when the power came into his hands, and this may have contributed, along with the external events, to his discouragement in his last years. Caetani observed that the half-divine aureole which soon encircled the figure of 'Alī was derived not only from his relationship with the Prophet, but also from the personal impression which he left on his contemporaries; but he did not indicate the qualities which gave rise to the legend. If it is recognized that he was a profoundly religious spirit, and that he supported by his authority a programme of social and economic reforms, at the same time placing them on a religious basis, this question also may find its solution. [For Shi'ite doctrines and legends concerning 'Alī see 307a.]

**Bibliography:** The basic historical sources, with many additional texts *adab*, *hadith* and other works, are translated or summarized in Caetani, *Annali* (of which vols. ix and x (1926) are devoted to the caliphate of 'Alī). Further materials in Nasr b. Muḥsin al-Mimkāni, *Waḥid al-Sifīn*, ed. 'Abd al-Salām Muḥammad Ḥabīb, Cairo 1971 (the lith. ed. Tehran 1302 and abridged ed. Bayrūt 1340 are much inferior), and Muḥibb al-Dīn al-Taharī, *al-Riḍā' un-Nādira fī Manāḥib al-'Aḥbar*, Cairo 1327, ii, 153-249. Studies: A. 'ALĪ b. AL-DIAHM b. RABĪE b. AL-DIAHM al-Sāmī, Arab poet, of Banī Sāmā b. Lu'ayy, a tribe from Babrayn, whose claim to descent from Quraysh was disputed. His father al-Diahm moved from Khirāṣān to Baghdad and was appointed to various offices under al-Ma'mūn and al-Walīd; the poet's brothers also were prominent in official and literary circles. 'Alī was born probably c. 188/804, and received his education in Baghdad. Under al-Mu'tasim (228-27/833-42) he held *maḥallim* jurisdiction in Hulwān, but, perhaps because of his support of Ahmad b. Hanbal in opposition to the Ma'tazīa, did not become prominent as a court poet until the reign of al-Mutawakkil (232-47/847-61). For some time he enjoyed, as a *nadīm*, the intimacy of that caliph, but fell from favour owing to his freedom of speech and the jealousy of his rivals. After a year's imprisonment was sent to Khirāṣān, and suffered further punishment there before being released, when he returned to lead a disorganized life in Baghdad. After the murder of

al-Mutawakkil (which he lamented with fiery denunciation of all those involved) he set out to join the volunteer *ghāṣi* troops on the Syrian borders, and was killed on the way by a raiding party of Kalb, in 297/863.

Only a selection from his *diwān* has been preserved (ed. Khālīl Mardān Beg, Damascus 1949). It shows him to have been a gifted poet, whose verse is above all the simple expression of his own emotions, whether in praise or satire, in patient acceptance of adversity or reckless adventure. It is noteworthy also as displaying the attitudes of the Khurāsānī Arab supporters of the 'Abbāsid caliphate in opposition to Shi'ite and other unorthodox views. He was in friendly relations with Abū Tamīm (p.), who made him the subject of two poems, but was on the contrary coarsely satirized by al-Buḥārī (Istanbul 1300, ii, 99, 107) for his hostility to 'Alī b. Abī Talīb.

'ALĪ b. HUSAYN ZAYN AL-'ABIDIN (see ZAYN AL-'ABIDIN).

'ALĪ b. 'ISĀ b. DĀ'UD b. AL-DĪARĪRĪ, 'Abbāsid vizier, b. 245/859 into a family of Persian origin settled at Dayr Kunnān on the Tigris below Baghdad, who had probably turned Christian before the adoption of Islam. Many of his relatives, including his father and grandfather, were officials in the 'Abbāsid administration, and he himself seems to have received his first secretarial employment at the age of nineteen or twenty. In 278/892, on the formation of the *diwān al-dār* by Ahmad b. al-Furāt, both 'Alī and his uncle Muḥammad b. Dā'ud were employed in that department as secretaries under Ahmad's brother 'Alī, and some seven years later, when independent departments for the Western and Eastern provinces were created, 'Alī b. 'Isā and his uncle were appointed to manage them respectively. During the later years of al-Mu'tasim's caliphate, a feud developed between members of the family of al-Dīarīrī and the brothers Ahmad and 'Alī b. al-Furāt, and this came to a head on the death of al-Mu'tasim in 295/908, when, after the latter's brother al-Mu'tadid had succeeded as caliph largely owing to the exertions of Ibn al-Furāt, the Banu 'l-Dīarīrī engineered a conspiracy to depose him in favour of 'Abd Allāh b. al-Mu'tazz (p.). 'Alī b. 'Isā was given control of the *diwān* in the short-lived government of Ibn al-Mu'tazz and was consequently fined and banished to Mecca on the restoration of al-Mu'tadid.

In Mecca, during the first vizierate of Ibn al-Furāt, 'Alī was kept under surveillance until Ibn al-Furāt's fall in 299/912. In 300/913 he was recalled at the suggestion of the general Muḥsin (p.), to succeed al-Khāṣānī as vizier. His first term in office lasted exactly four years, and was marked by strenuous efforts on his part to rehabilitate the state finances. Although he succeeded in augmenting the revenues, his reduction of expenditure earned him the dislike of the court, including the irresponsible and extravagant caliph. During his first year as

vizier he despatched an embassy to the Karīmīya, which secured the release of the 'Abbāsid prisoners of war; and since for some ten years, whether or not partly as a result of this approach (which was repeated in 303/916), the Karīmīya remained quiescent, this action later gave 'Alī's enemies a pretext for alleging that he was in league with the sectaries. The economy in military expenditure on this front was, however, offset by the cost of expeditions against the Fātimids in Egypt (301/914) and other rebels in 'Irāq (303/916); 'Alī found himself unable to pay certain troops at the capital, who mutinied; and in the next year Ibn al-Furāt, by promising to furnish supplies of money to the caliph and his mother, and engaging the influence of the powerful *kahramāna* Umm Mūsā, whom 'Alī had offended, was reappointed vizier. Although 'Alī was fined, imprisoned, and impeached (though unsuccessfully) for complicity in the rebellion of Yūsuf b. Abī 'l-Sāḍī, which broke out shortly before his dismissal, the caliph began, little more than a year later, to consult him on whom to appoint in his rival's place; and early in 306/July 918 Ibn al-Furāt was dismissed and Ḥāmid b. al-'Abbās made vizier. Shortly afterwards, on Ḥāmid's proving quite incompetent, 'Alī was induced to accept office as his deputy, and it was not long before he exercised all real power. An attempt by Ḥāmid to regain his position by undertaking to raise extra revenues from the Sawād, al-Ahwāz, and Isfahān, produced a sharp rise in the price of grain at Baghdad, followed in 308/920-1 by prolonged popular riots. 'Alī therefore managed affairs on his own, but refused the office of vizier in the following year. He again incurred unpopularity by his measures of economy, which was rendered more than ever necessary by heavy expenditures on expeditions for the second expulsion of the Fātimids from Egypt and the defeat of Ibn Abī 'l-Sāḍī, and in 311/923 Ibn al-Furāt was reappointed vizier for the third time.

'Alī, once more arrested and questioned on his management of the finances and his relations with the Karīmīya (who raided Bagra four days after his dismissal), was cleared on the second charge but forced into signing a bond for 300,000 *dirhams*, and was subsequently tortured, by Ibn al-Furāt's son al-Muḥsin. He was nevertheless helped to pay off his fine and again allowed to retire under surveillance to Mecca, whence, after more than one attempt on his life by his guardian, he was exiled to San'ā, remaining there until the summer of the following year, when, on the execution of Ibn Abī Usayfī, he was appointed Overseer of Egypt and Syria. Three years later, at the end of 314/beginning of 927, he was recalled and reappointed to the vizierate.

His second term of office lasted little more than a year. The 'Abbāsid government was by now hopelessly insolvent; the Byzantines were tempted by its evident weakness to advance into Muslim territory and took Samarra (Samarra); and the Karīmīya, after taking Kūfa and defeating Ibn Abī 'l-Sāḍī, advanced on Baghdad and came near to taking it too. 'Alī was forced to apply to the caliph and his mother for funds for the defence of the city and to raise the pay of the mutinous soldiery; and though, when he sought to resign in consequent despair over the finances, al-Mu'tadid refused to allow him to do so, he was dismissed shortly afterwards and imprisoned.

On al-Mu'tadid's second deposition nine months later, 'Alī was released; and on the caliph's restoration ('Alī's partisan Muḥsin then becoming all-

powerful) he was appointed to deal with *maḥallim* and subsequently, in 318/930, made head of the *diwān* and general adviser first to his cousin Sulaymān b. al-Ḥasan b. Maḥlād and then to the latter's successor in the vizierate, al-Kalwādī. Towards the end of 319/931, however, on the appointment of his second cousin and enemy al-Muḥsin b. al-Kāsim, he was again exiled, this time to his native Dayr Kunnān, though he was soon allowed to return to the capital. During the reign of al-Kāfir he held a minor fiscal office for some months; and after the accession of al-Rāḍī he was once more arrested, fined, and momentarily exiled to al-Sāfiya (near Dayr Kunnān), at the instance of Ibn Mukla, who, however, at the end of 323/935, was obliged to enlist his help in negotiating peace with al-Ḥasan b. Abī 'l-Ḥayḍī the Ḥamādīn (afterwards Nāṣir al-Dawla), with whom 'Alī had been accused of intriguing.

In the summer of 325/936, 'Alī, having as usual declined the vizierate for himself, acted as general assistant to his brother 'Abd al-Rahmān for three months. In 328/940, on the accession of al-Mutakī, he was again appointed to deal with *maḥallim*, and a few months later he again acted as assistant to 'Abd al-Rahmān, though for little more than a week. These were his last appearances; and apart from expressing the view, which was acted on, that the Christian relic known as the 'Image of Edessa' should be handed over to the Byzantines in exchange for an undertaking to refrain from attacking that city in 332/944, he played no further part in public affairs. Six months after the arrival of the Buwayhid Mu'izz al-Dawla in Baghdad, he died at the age of eighty-nine (29 Dhū 'l-Hijja 334/1 Aug. 946).

Comparatively little is known of 'Alī's private life. He had two sons, probably by different wives; Ibrahim, who became secretary to the caliph al-Mut'ī in 347/958-9 and died in 350/961; and 'Isā, b. 302/914-5, who likewise became secretary to al-Tāḥ, earned some reputation as a traditionalist and student of the 'Greek' sciences, and died in 391/901. 'Alī's ascetic tendencies in religion seem to have been intensified by an attraction to *siḥr*. He is known to have been a friend of the *shīf* al-Shūbī, and his dealings with al-Hallāj, whom, when the latter was accused of heresy in 303/917, he examined, but declined to try when he was further accused in 306/918, suggest that there existed a secret sympathy between them. Some of 'Alī's letters to al-Mu'tadid's Sībīan physician, Sīnā b. Ṭāḥit, are quoted by Ibn al-Kutīb and Ibn Abī Usayfī; according to the latter, also, the philosopher al-Rāḍī addressed a medical treatise to 'Alī, who displayed much interest in the improvement of public health, himself founding a hospital in the Harbiyya quarter of the capital. Other foundations of his were at least one mosque on his private estates, a well (called after him al-Dīarīrīyya) at Mecca, and another well and an *asṣudat* at San'ā. He was also the author of three, possibly four, books, none of which appear to be extant.

(H. BOWEN)

'ALI b. 'ISA was the best known oculist (*khabbā*) of the Arabs. His work, the *Tadhkirat al-Khabbān*, deserves the greater claim to our attention from the point of view of the history of civilization in that it is the oldest Arabic work on ophthalmology, that is complete and survives in the original. The name of the author is also recorded in the inverted form: 'Isā b. 'Alī. Preference is to be given to the latter form as follows from a reference in Ibn Abī Usāib'a (*'Uyūn al-Anbā'*, i, 240) and from quotations in later authors such as al-Ghāfilī, Khāliq b. Abī T-Mahāsīn and Salāh al-Dīn. The uncertainty as to the form of the name is due to confusion with the court physician of the Caliph al-Mutawakkil, 'Isā b. 'Alī, who lived some 130 years earlier (*Fihrist*, i, 297, 10; Ibn Abī Usāib'a, i, 203), and also wrote medical treatises. 'Alī b. 'Isā's life falls in the first half of the 5th/11th century; for (according to Ibn Abī Usāib'a, i, 240) he was a pupil of Abū 'l-Faraj b. al-Tayyib, the commentator on Galen, at Baghdad, who died in the third decade of the 5th/11th century (according to Ibn al-Kifī, ed. Lippert, 223). 'Alī, who, like his above mentioned teacher, professed the Christian religion, seems likewise to have practised at Baghdad. We know nothing of the external details of his life. As a physician he was full of foresight and prudence and of kindly feeling. This is evidenced by many a counsel given to the ophthalmic surgeon in the interests of the patient.

His *Tadhkirat al-Khabbān* (promptuary for oculists),—sometimes also designated *Kisālā* (epistle), on account of the introductory words— is a very detailed treatise. According to the Preface, it is the first book treats of the anatomy of the eye, the second of diseases externally visible and their treatment (diseases of the lid, of the corners of the eyes, of the conjunctiva, cornea, uvea, cataract and its operation), the third of hidden diseases and their treatment (visual illusions, diseases of the albumen, crystalline lens, spots of vision, long-sightedness, short-sightedness, blindness during the day, and during the night, diseases of the vitreous humour, of the retina, of the visual nerve, of the choroid, of the sclerotic, squinting and weak sight). After a chapter on the preservation of health, the work closes with an alphabetical treatment of 141 simple remedies and their particular action on the eye.—We cannot judge to what extent the work can lay claim to originality, since the older Arabic works on the subject are not preserved. 'Alī himself observes in his Preface: "I have searched the works of the Ancients throughout, and merely added the little of my own thereto, which I have learned publicly from the teachers of our own time and which I have acquired in the practice of this science". He mentions the work of Hunayn together with Galen as his principal sources. In addition he cites in the *Tadhkirat* the Alexandrians, Dioscorides, Hippocrates, Oribasius and Paulus.

The comprehensiveness of his work laid the

foundation of his fame (cf. 'AMMār); it has been considerably used by later Arab oculists—until the present day—both for the practical and theoretical portions (Ibn al-Kifī, *loc. cit.*; "the physicians of this branch work at all times in accordance with this"), and has frequently been quoted whole chapters at a time. A commentary on it, written by Dāniyāl b. Shā'ya, is mentioned by Khāliq b. Abī T-Mahāsīn (*q.v.*) in the introduction to his ophthalmological work. This commentary is not preserved; on the other hand a large number of manuscripts of the *Tadhkirat* itself have come down to us. Even in the Middle Ages it was translated into Hebrew and twice into Latin (*Tractatus de oculis Jesu b. Hali*, Venice 1497, 1499, 1500; edited once more by Pansier with a second translation, made from the Hebrew version, under the title *Epistola Theophrasti Italici de cognitione infirmitatum oculorum sive Memoriale oculiarum quod compilavit Ali b. Issa*, Paris 1903). That the great importance of the *Tadhkirat* in the history of medicine has been entirely unrecognized is due to the barbarous character of the Latin translation and the fact that whole sentences are frequently omitted therein. So the continuity is destroyed and the sense made unrecognizable.

A German translation of the *Manual for oculists* based on the Arabic manuscript is contained in vol. i of *Die arabischen Aquarellate nach Otto Neudörfer* by H. Hirschberg, J. Lippert and E. Mittwoch, Leipzig 1904.

**Bibliography:** cf. the introduction of the last-named work; Brockelmann, i, 635, S I, 884. (E. MITTWOCH)

'ALI b. MAHDI (see MAHDI).

'ALI b. MAS'UD (see 'ALI SHAMS).

'ALI b. MAYMUN b. Abī Bakr al-IDRISI AL-MAGHRIBI Moroccan mystic of Berber (though pretended 'Alid) origin, born about 854/1450. In his youth he is said to have been the *amir* of a *kabila* of the Banū Rāghid in the Jibal al-Ghumār, but to have relinquished that position because he was unable to enforce among his people the prohibition on wine-drinking. In 901/1495-6 he left Fez, visited Damascus, Mecca, Aleppo, and finally settled at Damascus where he died in 917/1511.

His mysticism was of a moderate character; in his *Bayān (Ghurāt al-Islām bi-Wasā'if Sin'ay al-Mulafakhiha wa 'l-Mulafakhiha min Abī Mīr wa 'l-Shām wa-mā yalīhi min Bulād al-'Ard)*, he inveighed against the religious and social abuses which he had noticed in the East (cf. Goldziher, in *ZDMG*, 1874, 293 ff.). He wrote this work at an advanced age (he commenced it on 19 Muharram 916). On his mystical writings, among which an apology for Ibn 'Arabi calls for special comment, see Brockelmann, II, 124; S II, 132. See also Tāsh-köprü-zāde, *al-Shakā'ib al-Mu'maniyya* (in the margin of Ibn Khallikān, *Būlak* 1299), I, 540.

(C. BROCKELMANN)

'ALI b. MUHAMMAD (see SULAYMID).

'ALI b. MUHAMMAD AL-ZANDJĪ, known as SĀHIB AL-ZANDJ, was the leader of the Zandj (*q.v.*), the rebel negro slaves who for fifteen years (255-270/868-883) terrorised southern 'Irāk and the adjoining territories. He was born in Wazran, a village near Rayy, and is said by some authorities to have been of Arab origin, being descended from 'Abd al-Kays on his father's side and from Asad on his mother's. His name is generally given as 'Alī b. Muhammad b. 'Abd al-Rahīm. According to Ibn al-Djawāl (*al-Muntazam*, Hyderabad 1357, v, 2, 69) his real name was

Būhūdī, Al-Būhūdī (*Chronology*, 332; translation, 330) states that he was known as Al-Burkū' (the veiled one). He himself claimed to be an 'Alid, and gave his pedigree as 'Alī b. Muhammad b. Ahmad b. 'Isā b. Zayd b. 'Alī b. Husayn b. 'Alī b. Abī Tālib (al-Būhūdī, *loc. cit.*; al-Mas'ūdī, *Murūdj*, viii, 12; al-Tabarī, iii, 172; who gives a slightly different pedigree. On an 'Alid of this name, whose father died in prison under Abū-Musta'in, see al-Mas'ūdī, *Murūdj*, viii, 404 and Abū 'l-Faraj al-Ishāfah, *Mahāfil al-Tālibiyyin*, Cairo 1949, 672 and 689). After a first attempt to win support in Bahrain, where he is said to have had family connexions, he sought to exploit the disturbed state of Basra in order to establish himself there. He failed, however, and only escaped imprisonment by fleeing to Baghdad. Not long afterwards new disturbances in Basra favoured his return. This time he sought for support among the negro slaves working in gangs on the salt-flats east of Basra. After a period of preparation he openly declared himself on 26 Rāmādān 255/5 September 866. Though claiming to be an 'Alid, and using the title of Mahdī, he did not adopt the Shi'ite doctrine, but instead professed the equilibrium creed of the Khāridjites. After a long period of military successes, including the temporary captures of Ubulā, Ahwāz, Basra and Wāsit, the Zandj armies were at last overcome by a major expeditionary force mounted by the regent Muwaffak, and besieged in their capital al-Mughāra. The Zandj leader refused the offer of a free pardon and a safe pension, and after the final assault on 2 Safar 270/11 August 883, his head was taken on a pole to Baghdad.

**Bibliography:** The fullest account is that of Tabarī, iii, 172-178; 1835-2103. Further details will also be found in Mas'ūdī, *Murūdj*, viii, as well as in Yā'qūt, *Hamza Istahli* etc. For studies on the Zandj revolt see T. Noldike, *Sketches from Eastern History*, London-Edinburgh 1892, 146-175; Fayyāl al-Sinnir, *Tawarīkh al-Zandj*, Baghdad 1954; and 'Abd al-'Azīz al-Dūrī, *Darādāt fi 'l-'Uṣūr al-'Abbāsiyya al-Mutakhkhkha*, Baghdad 1945, 75-106. On the coins of the Zandj see P. Casanova in *Revue Numismatique*, 1893, 510-6; and J. Walker, in *JRAS*, 1933, 651-6.

(B. LEWIS)

'ALI b. RABBAN AL-TABARĪ (see AL-TABARĪ).

'ALI b. SHAMS AL-DIN was the author of a history of Gilān entitled *Tārīkh al-Īlāhī*, and covering the years 850-920 (1475-1514). According to the introduction, the book would appear to have been written by Sultan Ahmad Khān, but 'Alī seems to be the real author. The work has been edited by B. Dorn, *Muhammedanische Quellen zur Geschichte der sūd. Kustendänder des kaspiischen Meeres*, vol. II, Cf. the preface of this volume, 13 f.

'ALI b. YUSUF b. TASHUFIN, Almoravid amir and second sovereign of the Tāshufinid dynasty, who ruled over a large part of the Maghrib and of southern Spain from 500/1106 to 537/1143.

The reign of 'Alī, who succeeded his father Yūsuf b. Tāshufin at the moment when Almoravid power was at its greatest on both sides of the Straits of Gibraltar, was marked by a series of events of which hitherto the main facts were known, but the exact course of which was not always clear, owing to a lack of detailed sources old enough to be reliable. To-day, there is available on the one hand the volume of the *Ḥamā al-Diyān* of Ibn al-Katān, and the *Memoirs* of the companion of the Mahdī Ibn Tūmār, al-Bayḍāq, on the disintegration of

Almoravid power before the onslaught of the Almohad rising, and on the other the unpublished fragments of the *al-Bayān al-Maghrib* of Ibn 'Idhārī on the reign of 'Alī b. Yūsuf, fragments which were to a large extent borrowed from the work of the historian Ibn al-Sayrafi (*q.v.*), the contemporary of the Almoravids. This information derived from the chronicles of the 5th/11th century has only a supplementary value; sometimes it must even be regarded with caution or even rejected, on account of its lack of objectivity and of its pro-Almoravid bias. This is particularly the case with the *al-Ma'djīb* of 'Abd al-Wāhid al-Marrākushī, hitherto considered an essential source for the Almoravid period, which despite some picturesque and probably accurate accounts of the court at Marrākush, must be used with great care.

The reign of 'Alī b. Yūsuf lasted for 37 years, despite the difficulties which faced him from the beginning—difficulties which soon appeared to be of little consequence compared with the danger occasioned by the rising in the Atlantic mountain region and the preaching of *tauhid* by Ibn Tūmār (*q.v.*). The first danger which 'Alī had to face, from the time of his accession and in the years following, arose from disputes between members of his own family and the chiefs of the *murabit* movement, who belonged to two related, but not solitary clans, namely the Lamtūna, the clan of the ruling branch, and the Masfūda. Under the Almoravid régime, in which maternal relationship on the father's side was of less importance than uterine kinship, and in which legitimate Tāshufinid amirs were only designated by the name of their mother (Ibn 'Abīsha, Ibn Gannūma etc.), disputes over precedence and conspiracies against the reigning prince were, as was the case a few decades earlier at the Shīhājī courts of the Zīnids of Ifrīkiya and al-Andalus, mainly the work of the royal princesses (*ummahāt*), with the aid of their immediate kin and *muwallid*, in favour of their own sons.

Yūsuf b. Tāshufin had seen this danger so clearly that he was careful not to designate as his successor one of his sons by a Shīhājī wife, not even his eldest son, Abū 'l-Tāhir Tamīm, offspring of his marriage at Agadīt to the influential Ifrīkiyā Zaynab, who predeceased him by ten years. His choice fell on 'Alī, born at Ceuta of his union with a Christian captive from Spain, in 477/1084, two years before the battle of al-Zallāka. This young man of 23 years was enthroned without opposition at Marrākush on the death of his father, i. Muharram 500/2 September 1106, with the apparently disinterested support of his elder brother Tamīm. But he was obliged immediately to bring to his senses a son of his brother Abū Bakr b. Yūsuf, Yahyā, who was in command at Fez and who submitted without delay. Relying on the judgement of his Andalusian advisers, who had belonged to his father's entourage, 'Alī embarked on a policy of the pendulum swing, he was obliged to follow throughout his reign, namely, constantly to move, like pawns on a chess-board, the majority of the Almoravid amirs, including his brother, who held provincial governorships in the chief towns of Maghrib and Andalusia. The Almoravid governors received threatening letters of recall to the ruler's side, were dismissed or restored to favour, and were in addition assisted in their duties by administrative inspectors (*muwajir*) and secretaries of chancery, who were almost all Andalusians; such is the record of the greater part of the annals of his reign. It will not be recalled here in detail, but this

lack of continuity in the tenure of the important military and regional commands already shows that the structure inherited by 'Alī b. Yūsuf from his father was not resting securely on its foundations.

On the other hand, the fortunes of war for long smiled on the Almoravid sovereign in his *ghidād* expeditions against the Christians of Spain, led by himself or by one of his generals. The aged Alfonso VI had never abandoned the hope of revenging his defeat at al-Zalika; but he suffered a further humiliation in Shawwāl 501/end of May 1108, when Tamīm, the elder brother of 'Alī, defeated under the walls of the fortress of Uclés (*U'alīq*) the Castilian troops of Count García Ordóñez, accompanied by the infant Sancho, the son of Alfonso VI and Mora Zaida, the step-daughter of al-Mu'tamid b. 'Abbad. The Christian general and the infant were overtaken and killed a few days later at Belinchón, not far from Uclés. Alfonso VI, aged and broken by this blow, had nothing to wait for but death, which overtook him barely a year later, on 30 June 1109. The throne of Castile was occupied until 1126 by his daughter Urraca. Meanwhile, the young kingdom of Portugal was becoming organised, and in Aragon, Alfonso the Warrior sited at the capture of Saragossa, which the Almoravids had finally taken from the Hūddids in 503/1110; Alfonso added it to his own dominions nine years later, in 512/1118.

All the chronicles mention the four successive crossings of 'Alī b. Yūsuf to al-Andalus; the first voyage, in the year of his accession, took him no further than Algeciras; the second was a *ghidād* expedition in the summer of 503/1109, which led to the temporary occupation of Talavera, on the Tago; the third, also inspired by the motive of holy war, was marked by a resounding success—the capture of Còlumbra in Safar 511/June 1117, after a siege of twenty days. On his fourth crossing, in 515/1121, 'Alī b. Yūsuf did not go beyond Cordova. But the operations of the Almoravid generals against Spanish Christendom continued without respite, both in Aragon and in New Castile. One of the last notable victories of the reign was that of Fraga, in the region of Lérida: this town, besieged by Alfonso the Warrior, was relieved by the Almoravid general Yahyā b. 'Alī b. Ghāniya, who inflicted a crushing defeat on the King of Aragon, 23 Ramaḍān 528/17 July 1134.

'Alī b. Yūsuf, despite some unadmitted good qualities, was far from possessing the stature of his father Yūsuf b. Tāshufīn. Although he spent the greater part of his reign in Morocco itself, he seems to have devoted his special attention to Spain and to have reserved the majority of his military forces for the *ghidād* against Christendom, only retaining, for the security of his capital and to guard the Moroccan mountain region, light forces usually composed of Christian mercenaries, under the command of the celebrated Catalan Reverer (*al-Rubayr*). This policy brought about the downfall of his kingdom. From the moment when the history of the reign of 'Alī b. Yūsuf became identical with that of the return of Ibn Tūmart (*q.v.*) to Morocco, the preaching of *fanā* and the first military ventures of the Almohad chiefs, the game was lost, in defiance of strong and immediate measures against the rebel movement. 'Alī b. Yūsuf was gradually forced to face the facts: he had been unable adequately to strengthen the structure bequeathed to him by his father, and had allowed ever larger cracks to appear in it. Soon it collapsed, but the son of Yūsuf b. Tāshufīn was not himself present at this dramatic

climax; he died on 8 Rabi' al-ṣavīr 537/8 January 1143, exactly five years before the capture of Marrakech by 'Abd al-Mu'izz, leaving his son Tāshufīn to succeed him on his tottering throne.

Despite these ultimate misfortunes, the reign of 'Alī b. Yūsuf must be considered one of the most brilliant periods in the history of the Muslim West. The pro-Almoravid historians (followed by Dozy) have tried in vain to disparage the Almoravids; to-day it must be admitted that the first third of the 6th/11th century coincided with a positive renaissance of Spanish civilisation, both in al-Andalus and the Maghrib. The sovereign's literary circle was of the same quality as during the era of the *Isa'īy*. Cordova once more became the intellectual and social capital of the kingdom. Ibn Kurrām gives us an attractive picture of it in his *saḍā*, and at Seville, the medieval Ibn 'Abdūn gives us information on the urban economy and the part played in it by the representatives of Almoravid authority.

At the same time, however, the hand of Mālikism in its most intransigent form continued to retard the wheels of society. The *ṭabā*, almost all of whom were natives of al-Andalus, were in a dominating position both at Marrakech and at Cordova. They promulgated *asāw-de-lā*, and burned the *Bayt* of al-Ghazzālī in the parvis of the great mosque of Cordova as early as 503/1109. They fulminated against the laxity of morals and against innovations, in the knowledge that the sovereign would lend them an attentive ear. But the other Almoravid nobles and their wives paid no heed to their sermons. A steadily widening rift developed between the Lamiṭian aristocracy and the population of the towns. 'Alī b. Yūsuf did not possess the necessary energy to seal it up in time.

**Bibliography:** Of the Arabic sources, the most important (*Nazm al-Djuman* of Ibn al-Kattān and *Bayān* of Ibn 'Idhārī) still unpublished are to be published by E. Lévi-Provençal. Documents *indépendants d'histoire almoravide*, Paris 1925, index. For details of the other sources, belonging to later historiography, and assessed at the beginning of the article ('Abd al-Wahid al-Marrākushī, al-*Ḥulal* al-Mawḡiyya, Ibn Khaldūn, the Khalkhān, Ibn al-Khaṭṭāb, Ibn al-Aṭhīr, al-Nuwayrī, al-Nāṣirī, etc.), see the bibliography of the article *al-Mawḡiyya*. Cf. also the short work, now out of-date, of F. Codera, *Decadencia y desaparición de los Almorávides en España*, Saragossa 1899; E. Lévi-Provençal, *Reflexions sur l'empire almoravide au début du XI<sup>e</sup> siècle, Islam d'Occident*, I, Paris 1948, 230–56. (E. LÉVI-PROVENÇAL) 'ALĪ b. SĀLĪH (see *wisā*) 'ALĪSĪ.

'ALĪ AKBAR KHITĀT, author of a description of China in Persian (*Khidāy-nāma*), which was finished in 922/1516, and originally intended for the sultan Selīm, but later dedicated to Sulaymān. The book is not a travel-book, but a systematic description in twenty chapters, based partly on observations by the author himself, partly on information collected by him in China. The work was translated into Turkish in the reign of Murād III, probably in 990/1581 (Istanbul 1270/1854); the translation served as the basis for the studies of Fleischer and Zenker.

**Bibliography:** Storey, I 431; H. L. Fleischer, in *Berichte der Kgl. Sachs. Ges. d. Wissensch.*, III, Leipzig 1851, 317–27; J. Th. Zenker, *Das chinesisches Reich nach dem türkischen Khatainame*, ZDMG, 1861, 785–803; Ch. Schefer, *Trois chapitres*

*de Chatsay-nama, Mélanges Orientaux*, Paris 1883, 31 ff.; P. Kahle, *Eine islamische Quelle über China um 1500*, AO, 1934, 91–110; IĀ, s.v. (by A. Zeki Velidi Toğan).

'ALĪ AMİRĪ, Turkish historian, b. in 1274/1857 at Dıyar Bahr, d. at Istanbul 21 December 1923 (1342). An official of the financial administration, he was primarily interested in the history of the Ottoman Empire, and he took advantage of his appointment to different towns to transcribe Arabic and Turkish inscriptions, to study local history and above all to seek out old documents and historical and poetical manuscripts. In this way he built up a library of unpublished and rare manuscripts, which later enriched the National Library of Istanbul. He published the review *Ta'ribh wa-Eḍbiyyāt*, edited the *Divān Luḡāt al-Turk* of Mahmūd Kāshghari, and was a member of various learned societies. He wrote historical and literary works, but is principally known as an editor of texts. He also helped to classify the archives of the Sublime Porte at Istanbul, and gave his name to one of the catalogues: *Alī Emiri ta'ribh*.

The description of numerous MSS. in *Istanbul Kütüphanesi Türk-Coğrafya yazınları*, fasc. 1 to 10, Istanbul 1943–51, and *Istanbul Kütüphanesi Türkçe yazma eserleri kataloğu*, 2nd series, fasc. 1 (15th–16th centuries), Istanbul 1947.

(R. MANTRAN)

'ALĪ 'AZİZ EFENDİ, GIRIDILĪ, Turkish diplomat and writer, d. 19 Rabi' al-ṣavīr 1213/29 Oct. 1798. He was born in Crete, where his father Tāhidjī Mehmed Efendi was *hacı*. Son of a wealthy father, he lived a carefree life until circumstances constrained him to enter the service of the state (*muhassıl* of Chios, ca. 1792–93 in Belgrad). In 1211/1796–97, he was appointed ambassador to Prussia, arrived in Berlin early in June, 1797, and died there in the following year. Of his achievements as a diplomat little is known; he owes his fame to his writings. 'Alī Efendi, who knew Persian, French, and even some German, is an interesting forerunner of the 19th century Turkish movement of Westernization and self-interpretation. In his treatise *Wārādāt* (unpublished, MSS in Istanbul Üniverste Kütüphanesi, nos. T 3383, T 3470, T 1698, and Millet Kütüphanesi, Ali Emiri, Ser'ye 1154/43) 'Alī Efendi defends the irrationalism of mystic religiousness (he himself was the disciple of a certain Shaykh Kārim Ibrahim of Abana near Sinop) with arguments tinged with 18th century rationalism. He accepts the vacillation of the God-searching soul between faith and scepticism, and offers the story of his own salvation, modestly admitting its inapplicability to others. An exposé of the ideas of mysticism, and, especially, of the supernatural powers of the *shaykh*, is also found in 'Alī Efendi's famous book of fairy tales, the *Muḥabbayyāt al-Ladīm-i Ilāhī* (written in 1211/1797–98, printed in Istanbul, 1268, 1282, 1290), based mainly on Petis de la Croix's *Les Mille et un jours* (first printed in 1710–12), but handling its material freely and adding many new stories of various character. This book, which was as the first modern educational novel in Turkish; beside fantastic tales, it contains also stories depicting life in 18th century Istanbul with charming realism. 'Alī Efendi has also left poems, mostly in

the 66th tradition. Finally, he is supposed to have written a (now lost) opus containing his discussions with European philosophers.

Gibb, *The Story of Iṣṣād, a romance by 'Alī 'Asā Efendi the Cretan*, Glasgow 1884 (translation of the second of the three parts of *Muḥabbayyāt*). (A. TIETZE)

'ALĪ BABA (see ALĪ LAYLA WA-LAYLA).

'ALĪ BEY, a Caucasian by birth, was for nearly 20 years the chief personage in Egypt. He had been brought there at an early age, and had been offered as a gift to Ibrahim Katkhuda, who was the real master of the country from 1156 to 68/1743–54. Before his death, the latter conferred on 'Alī the rank of *bey*, and made him a member of that curious council of "Powers", whose turbulent authority grew in proportion as the Pasha nominated by the Porte became a shadowy and passive spectator. This Ottoman governor, in order to survive, concerned himself with preserving an apparent neutrality in face of the sanguinary conflicts between the *beys*, a neutrality which he abandoned in order to hasten to the aid of the victor.

'Alī distinguished himself at the beginning of his career by the successful defence of a pilgrim caravan against Arab tribes. Appointed *bey*, he was plunged into an atmosphere of intrigue; each character in the drama was obliged to have recourse to murder, and was himself shadowed by assassins. At first, 'Alī Bey maintained an attitude of prudent watchfulness, confining his activities to enriching himself by every means, and was thus able to collect a substantial number of *mamlūks*. This policy bore fruit when, from the year 1177/1763, his peers recognised him as their leader. In the course of the following year he conferred the rank of *bey* on his *mamlūk* Muḥammad Abū 'l-Dhahab (*q.v.*), the man who was destined to overthrow him. This rise to power, not achieved without setbacks and disputes, was abruptly checked: 'Alī Bey, forced to take refuge in Syria, established relations with 'Umar al-Zāhir, the ruler of Acre. Through the good offices of the latter, 'Alī Bey returned to Egypt, with the support of the Porte, and again assumed his prerogatives as *shaykh al-balad*.

Two years later, 'Alī Bey had to flee again, but he returned to the capital at the head of an armed force in 1181/1767. A new Ottoman governor was obliged to confirm 'Alī Bey as *shaykh al-balad*; however, alarmed by the latter's independent attitude, he tried to provoke a rising against him. It was a failure, and the Pasha was forced to resign. 'Alī Bey did not trouble to leave his ambitious designs, and he refused to tolerate the presence of an officer who had any influence. He showed his hostility to the Porte and reduced the number of his Janissaries. Nevertheless he did not throw off the mask completely, and did not refuse the Sultan's request to send a contingent for the war against Russia. He was then denounced at the Porte as a traitor, and accused of having mobilised these troops to aid the Russians; a firman was issued at Constantinople condemning him to death.

Informed of this, 'Alī Bey replied with an arrogant declaration of independence. From then on, 'Alī Bey became entangled in a diabolical web and was

forced to keep his forces in the field without respite. First, he subdued the Arab tribes of Upper Egypt, and intervened at Mecca to install there a pretender to the shari'ate who had sought his protection. The expedition was under the command of his right hand man, Muhammad Bey Abu 'l-Dhahab.

Conscious of his power, 'Alī Bey struck coinage in his own name: the coins still bore the sultan's name, but the initials of the master of Egypt were inserted under a date which no longer represented the date of the sultan's accession.

He then proceeded to invade Syria with a huge army, again under the command of Muhammad Bey Abu 'l-Dhahab. Negotiations with the Egyptians set on foot but there was no time for them to yield results. The whole of Syria was speedily conquered, but events took an unexpected turn when Muhammad Bey Abu 'l-Dhahab, after his victorious entry into Damascus, led his army back to Egypt to seize possession of it from his master. 'Alī Bey decided to flee from Cairo in Muharram 1206/April 1722, and took refuge once more with the Pasha of Acre. He set about raising another army, with the help of some Russian equipment, and, after a series of successful skirmishes, confronted his rival at Silihiyya, in the eastern part of the Delta. His army was defeated, and 'Alī Bey, mortally wounded on the field of battle, died a few days later, 15 Safar 1207/8 May 1722.

It is difficult accurately to assess the autonomy of 'Alī Bey. As already noticed, the form of his coins was unusual, although 'Alī Bey had declared that the Ottomans had seized control of the country by force, aided by the treachery of the population. A document dated at the beginning of 1206 A.H., shortly before his final departure from Cairo, supplies evidence that he had not dared to proclaim himself officially sovereign of Egypt. It consists of a long inscription carved on the drum of the cupola of the tomb of al-Shāfi'ī; it makes no reference to the Ottoman Power, but does not mention 'Alī Bey either, merely stating that the order to restore this tomb was given by the "powerful master of Egypt, who has increased the prestige of this country by his authority".

From a personal al-Djāhizī, one gets the impression that 'Alī Bey was in many respects a repulsive character, but the morals of the time and the environment must be taken into consideration, and one could express agreement with a contemporary judgment: "He was an extraordinary man, who only lacked a different education and a larger state to have astonished the world".

'**ALĪ EFENDI** [see 'alī].

'**ALĪ B. SHIHAB AL-DIN B. MUHAMMAD AL-HAMADĀNĪ**, šūfī saint and the apostle of Kāshnir, born in Hamadān of a notable family of sayyids (claiming descent from 'Alī b. Husayn, grandson of the imam Zayn al-'Abidin), on 22 Rajab 714/22 Oct. 1314. His chain of initiation went back through two links to 'Alī al-Dawla al-Simnānī, and through him to Najm al-Din al-Kubrā. He led the itinerant life of a *darwīsh* and is said to have visited all parts of the Muslim world. He arrived for the first time in the valley of Kāshnir in 774/1372, during the reign of Shihab al-Din, accompanied by 700 sayyids; he remained for four months and then left for the Hūdūd. He came to Kāshnir for the second time in 781/1379, during the reign of Kutb al-Din, and remained for two years and a half. For the third time he visited Kāshnir in 785/1383, but left it after less than a year for Turkestan. He died however, after having passed through Faḡhā, near Kūnār, on 6 Dhū'l-Hijja 786/18 Jan. 1385; his body was carried to Ghutān, where his mausoleum is still extant in modern Kūbā (cf. Sufi, *Kashir*, I, 116 ff.). The *Khāshā-yi Shāh-i Hamadān* in Sīringar, reputedly built on the site where the saint performed his prayer, is a well-frequented place of pilgrimage (cf. R. Ch. Kak, *Ancient Monuments of Kashmir*, London 1931, 27 ff.). This *Khāshā* and the mosque in Tāsl, built by 'Alī's son, Muhammad (774/1278-84/1290), during the reign of Shihab al-Din, were centres of Islamic propaganda in Kāshnir. A favourite pupil of 'Alī was Ishāq Khattānī, who was in his turn the spiritual master of Muhammad Nūrbaḡhshī, founder of the Nūrbaḡhshīyya.

The best known of his works are the *Awad-i Fāṭhiyya*, a collection of prayers in Arabic, and the *Dhāḡirat al-Mulūk*, on political ethics (Lahore 1323; lit. Annistār) cf. also H. Ethé in *Gr. I. Ph.*, II, 340). His teachings have received as yet little attention; for a preliminary study (more especially of his theory of dreams) and a translation of his *Risāla-yi Manāwīyya*, see F. Meier, *Die Welt der Erbilder bei Alī Hamadān*, *Iranica Jahrbuch*, xvii, 1905, 115 ff.

**Bibliographie:** Nūr al-Din Dīnār Badakhshī (a pupil of the saint), *Khāshā al-Manāwīyya* for MSS see Storey, *Nafahāt al-Uns*, 315; Khāndamīr, *Habīb al-Siyar*, Teheran, II, 87; Nūr Allāh Shushtārī, *Madāris al-Ma'mūn*, Teheran, 311; Rieu, *Cat. (S. M. STERN)

'**ALĪ ILĀHĪ** ('defilers of 'Alī'), a vague and popular designation of sects connected with, and issued from, Shī'a extremism (*ghulāt*, [g.u.]). In Persia and Kurdistan it covers chiefly the Ahl-i Hakā [g.u.] and Kīlī-bagh [g.u.], but may occasionally refer to such smaller communities as Sarī, Nāshak [g.u.] etc. (Eti.)

'**ALĪ KHĀN** b. AHMĀD b. MUHAMMAD MA'ŪM b. Ibrāhīm SADR AL-DIN AL-HUSAYNĪ AL-MADANĪ, author of biographical works and a book of travels, b. 13 Jumādā I 1052/12 August 1642 in Medina. His father was a descendant of Ghīyāth al-Din al-Shīrāzī. His father was since 1055/1644 in the service of the prince Shihāshāh 'Abd Allāh b. Muḥammad b. Kutb Shāh. 'Alī joined him in Haydarābād in 1068/1657. His father died in 1083/1672, a year after the death

of his patron, Shihāshāh 'Abd Allāh, and 'Alī himself incurred the displeasure of the ruler, Abu 'l-Hasan. He succeeded, however, in escaping to the court of Awrangzīb, who made him *shāh* and *diwan* at Bārhūpūr. He went on the pilgrimage, and visited Baghdad, Najaf and Karbalā'. In Shirāz he taught at the Manṣūriyya madrasa and died in that town in 1117/1705 or 1120/1708.

In 1074/1663 he wrote a description of his journey from Mecca to Haydarābād, entitled *Sulwāt al-Ḥarīb wa-Umāt al-Arīb*. He is best known for his work on the poets of the 11th century A. H., which he wrote in 1084/1672 on a suggestion of 'Alī al-Kūhshīrī. *Kāshāna: sulwāt al-'Asr fī Mahāshīn A'yan al-'Asr*, Cairo 1324, 1334. As a supplement to the commentary on his own *Radīyya* he gives biographies of writers on rhetoric, and also wrote, in addition to various treatises and poems, a biographical collection of Imāmī Shī'a.

'**ALĪ KHĀN** [see MARDĪ 'ALĪ KHĀN].

'**ALĪ KUCŪK** [see BEGTEDİNS].

'**ALĪ B. MUHAMMAD AL-KŪSHDĪJĪ**, 'ALĀ' AL-DIN, astronomer and mathematician, b. in Samarkand, d. in Istanbul, on 3 Shābān 879/19 Dec. 1474. He received his surname from his father, who served as the *Lahawar* (*hukūdār*) of Ulugh Beg. He studied mathematics and astronomy in his native city under the *amir* Ulugh Beg [g.u.], who was at the same time an able astronomer, and Kādī-zāde-i Rūmī, one of the rectors of the celebrated madrasa in Samarkand which was especially favoured by the *amir*. 'Alī al-KūshdĪjī succeeded Kādī-zāde as director of the renowned observatory of Samarkand, and took part in the compilation of the *Zīj* *Gurkhān*, the principal author of which was the *amir* himself (cf. its preface). 'Alī al-KūshdĪjī is said to have left secretly for Kirmān, in order to perfect himself in his studies, and on his return to have presented his patron with his *Hall al-Aḡḡāl al-Kamar*.

After the murder of Ulugh Beg, 'Alī al-KūshdĪjī fled Samarkand and stayed in Tahrīz with the Ak Koyunlu ruler Urūn Ḥasan. He was sent by this ruler on an embassy to the Ottoman sultan Muḥammad II; he went back to Tahrīz to accomplish his political mission, but subsequently returned to Istanbul to establish himself there definitely. He was appointed as professor of sciences in the madrasa of the Aya Sofiya and greatly influenced the development of the sciences in Turkey. He composed in Kirmān a commentary, dedicated to Abū Sa'īd Khān, on Nāyir al-Din Tūsī's *Tadhīr al-Kalām*; he also wrote on grammar and rhetoric. His main works are the *Risāla fī 'l-Hay'a*, *Risāla fī 'l-Hisāb*, and a commentary on Ulugh Beg's *Zīj*. (The *Risāla al-Fāṭhiyya* and the *Risāla Muḥammadiyya* are Arabic translations of the *Risāla fī 'l-Hay'a* and the *Risāla fī 'l-Hisāb*.)

'**ALĪ MARDĀN**, honorific title given to 'Alī b. B. 'Alī Tālīb by the Shī'ites, being an abbreviation of 'Alī *shāh-i mardān*, "Alī, king of mankind".

'**ALĪ MARDĀN**, a *Khāldījī* adventurer who acquired power in Bengal, centring upon the capital Lakhnawātī, in the first decade of the 7th/13th century. Appointed to the iqā' of Nārān-gō-e-Mālī, Khūtyār al-Din Muhammad Bahā'iyār Khāldījī, he took advantage of the latter's defeat by the Hindu Rai of Kānupur, says Minhāj al-Sirāj, to murder his master at Dīwot on a sick bed. This occurred in 602/1205-6. 'Alī Mardān, however, was later imprisoned by Muhammad Shīrān, putting him in the charge of the *ahwāl* of Nārān-gō-e. 'Alī Mardān, in collusion with the *ahwāl*, managed to escape to the court of Kutb al-Din Aybak and accompanied him to Ghazni where he became a captive of Tāj al-Din Yildūz when the latter captured Ghazni from Kutb al-Din Aybak (605/1208-9). After about a year 'Alī Mardān escaped and presented himself again before Aybak at Lahore. He was treated with favour and was assigned the territory of Lakhnawātī. According to the *Tahabāt-i Nāṣiri*, 'Alī Mardān proceeded to Dīwot, assumed power there and brought the whole of Lakhnawātī under his sway. On the death of Kutb al-Din Aybak in 607/1210, 'Alī Mardān had the *ahwāl* read in his own name and was styled Sultān 'Alī' al-Din. He brought the Khāldījī nobles of Lakhnawātī under control and overawed neighbouring Hindu chiefs. His overbearing behaviour caused discontent among the Khāldījī nobles and under the leadership of Malik Husayn al-Bīḍar, they conspired against him and slew him. 'Alī Mardān ruled for something over two years, the probable date of his death being 610/1213.

**Bibliography:** Minhāj al-Sirāj, *Tahabāt-i Nāṣiri*, trans. Raverty, I, 572-80; Sir Jadunath Sarkar (ed.), *History of Bengal*, II, Dacca 1948; *Cambridge History of India*, III, 50 ff.

(P. HAKOV)

'**ALĪ MARDĀN KHĀN**, a Bahā'iyārī chief who rose to prominence in the troubled period following the assassination of Nādir Shāh in 1747. In 1763/1750 he captured Isfahān, and, in conjunction with Karīm Khān Zād [g.u.], placed Ismā'īl, a grandson of Shāh Sultān Husayn, on the throne. 'Alī Mardān's oppressive measures led to an open breach with Karīm Khān, who, fearing for his life, attacked and defeated him. 'Alī Mardān Khān fled, and was subsequently assassinated by Muḥammad Khān who, according to Mirzā Sādk, the author of the *Tārīkh-i Gūtt-gūshā*, was a relative of Karīm Khān.

This 'Alī Mardān Khān is not to be confused with his contemporaries and namesakes (a) the wālī of Luristān, a Fāyīl Lur who was wounded at Guñābād in 1722 and later vainly endeavoured to relieve Isfahān, and (b) 'Alī Mardān Khān Shāmīl, whom Nādir Shāh sent as ambassador to Delhi and Constantinople.

**Bibliography:** Mirzā Sādk, *Tārīkh-i Gūtt-gūshā* (quoted by Malcolm, *History of Persia*, London 1825, II, 116-8); Rūḡ Kull Khān Hādīyāt, *Rasād al-Sulṭān-i Nāṣiri*, Teheran 1853, II, 7-9; Hammer-Purgstall, IV, 477, 478 (this authority's reference to 'Alī Mardān's earlier career, iv, 478 is inaccurate); O. Mann (ed.), *Maḡmūl al-Tārīkh-i ḥa'ndīdī*, 7, 8.

(L. LOCKHART)

'ALĪ MUHAMMAD SHIRAZĪ (see 348f).

'ALĪ PASHA 'ARABADJĪ, Ottoman Grand Vizier. Born at Oğhri between 1620 and 1622, died at Rhodes 16 Sha'bān 1104/25 April 1693. At first *imam* to various eminent people, then *kethüdā*, he became *agha* of the Janissaries in 1701/02, and later *waṣir* and *baṣmāḥim* of the imperial stables. Through the support of the *hādī* *Ta'asher* Yahyā Efendi and the Shāykh al-Islām Abū Sa'īd-zāde Feyḍ Allāh Efendi, he succeeded Köprülü-zāde Muṣṭafā Paṣha, killed at Szalankamen as Grand Vizier, on 6 Dhū 'l-Hijja 1102/30 August 1691. Showing no desire to place himself at the head of the army against the Austrians, 'Alī Paṣha succeeded in dissuading his opponents either by bribery or by dissimulation. As a result of this policy he incurred the hostility of the sultan, who eventually dismissed him (28 March 1692), and replaced him by Hādījī 'Alī Paṣha. 'Alī Paṣha 'Arabadjī was exiled to Rhodes, but as he represented a possible source of trouble and conspiracy, his enemies obtained his death warrant, and shortly afterwards he was executed at Rhodes. His cognomen is derived from the fact that he sent off one of the officials whom he had dismissed in an *on-car*.

*Bibliography:* Rāḥiḥ, *Ta'riḥ*, II, 166 ff.; 'Oḡhman-zāde *Tā'ib*, *Hadīth al-Waṣar*, 118 ff.; Firdūllī *Mehm* *Agā*, *Silāḥat* *Ta'riḥ*, II, 596-634; *IA*, s.v. (by Reşad Ekrem Koçu).

(R. MANTRAN)

'ALĪ PASHA ÇANDARLI-ZADE (d. 1407), son of Çandarlı Khān al-Ṭā' Paṣha, was, like his father, *hādī*, then *hādī* *Ta'asher*, and finally Grand Vizier, and also combined the functions of *waṣir*, that is to say head of the administration and finance, and of army commander, perhaps after the death of his father in 1387. After having directed a campaign in Anatolia against the Karamānīd 'Alī Bey, he conducted the skilful operations in Bulgaria which led to the capture of several fortresses (Pravadi, Tırnova, Shēhirköy etc.) before the battle of Kosova (20 June 1389), in which he played a decisive part. Murād I was killed in the battle, and was succeeded by Yıldırım Bāyazīd I, who appointed 'Alī Paṣha Grand Vizier. 'Alī Paṣha accompanied the Sultan in the campaigns in Greece and Bosnia, and played an important part at the siege of Constantinople, commenced in 1391, but abandoned as the result of the invasion of eastern Anatolia by Timur. After the battle of Ankara (1402) in which Bāyazīd I was taken prisoner, 'Alī Paṣha saved the heir apparent Sulaymān and took him first to Bursa and then to Adrianople. Up to the time of his death in Rādjāb 809/January 1407, 'Alī Paṣha remained Grand Vizier to Sulaymān Çelebi, and his skilful diplomacy secured for the latter mastery over the Ottoman territory from Ankara to the Aegean Sea; deprived of his *waṣir*, Sulaymān Çelebi succumbed to the attacks of Mehmed Çelebi, later Mehmed I (1410).

'Alī Paṣha Çandarlı-zāde, like his father, made a contribution to the organisation of the Ottoman administration, notably by codifying the functions of the *hādīs*, by creating the corps of the *it'āghān*—pages from whom numerous imperial officials were recruited, and by making the *waṣirs* persons of influence and respect. The chroniclers have criticised his predilection for the pleasures of life—a taste which he communicated to Bāyazīd I, and have stated that he was not loved either by the people or by government personnel. 'Alī Paṣha was buried at Izak (Nivara) in his father's tomb. At Bursa, a quarter, a mosque and a convent bear his name.

*Bibliography:* *Agāh* *Paṣha-zāde*, *Ta'riḥ*, Istanbul 1332, 70, 71, 76, 77; Mehmed Neḡhī, *Ḍiḥān-nūmā*, Ankara 1940, I, 220 ff.; Sa'ād al-Dīn, *Tāḍī al-Tawārīḡ*, I, 138 ff.; Gibbons, *The Foundation of the Ottoman Empire*, 173-2, 199-200, 234; J. von Hammer, *Histoire de l'Empire Ottoman*, I, 1-3, 262-77; I, 6, 116-20, 241; I, 8, 105, 125, 135-40; F. 'ALĪ PASHA ÇORLULU, Ottoman Grand Vizier. Born about 1670, the son of a peasant or barber of Corlu, he was adopted for his good looks and intelligence by a courtier of Ahmed II and placed as a probationer in the Galata Sarayı, whence he entered the Palace service, rising by way of the *seferi nda* to be *siḥāḥ* under Muṣṭafā II. As *siḥāḥ* he greatly enhanced the importance of his office, whose occupant thereafter replaced the Dār al-Sa'ade Aghas as intermediary between the sultan and the Grand Vizier and the Bāb al-Sa'ade Aghas as controller of the *it'āghān*, and composed a *niḡm-nāme* re-defining the whole hierarchy of the *enderin*. At the onset of the revolution of 1703 he was ousted from this position by the influence of the Shāykh al-Islām Feyḍ Allāh and the Grand Vizier Rāim Mehmed and given the rank of *waṣir*. But on the accession of Ahmed III he was made a *hādī* *waṣir* and continued as such, except for a short interval during 1709, when he was appointed *waṣir* of Tripoli in Syria, until his elevation to the Grand Viceroy in May 1710.

Çorlulu was the first competent Grand Vizier of the reign, and for four years he enjoyed great favour with the sultan, becoming a *dāmād* in 1708 by marrying Emīne Sultān, a daughter of Muṣṭafā II. He devoted himself in particular to the redress of abuses in the standing and feudal armies, the reduction of state expenditure, and the improvement of the Arsenal and the fleet. But he was so far determined that the Porte should not be involved in war that he neglected not only the opportunity provided by the outbreak of the War of the Spanish Succession for a possible recovery of the Morea from Venice, but also that provided by the invasion of the Ukraine by Charles XII of Sweden, which might, if assisted by Ottoman forces, have obviated the threat offered to the Ottoman Empire by the designs of Peter the Great. He was criticised by his enemies on both counts; and after Charles's defeat at Poltava and his flight into Ottoman territory, the king himself refused to accept presents sent to him by Çorlulu or to deal with him, on the ground that he had been led to expect assistance from the Crimean Tatars that had not been forthcoming. This was perhaps due to a misunderstanding; but it was fatal to Çorlulu. Ahmed lost confidence in him, and he was accordingly dismissed in June 1710 and banished, whilst on his way to assume the governorship of Kefe in the Crimea, to Mitylene, where he was executed in December of the following year at the age of about forty.

Çorlulu 'Alī Paṣha was the founder of a number of fine monuments, notably two *ḡdām* mosques at Istanbul, at the Çarshī Kapı (where he is buried) and the Tersāne, and a school and fountain at his native Corlu.

(H. ROWES)

'ALĪ PASHA DĀMĀD (1667-1716), Ottoman Grand Vizier. Born at Sölüz near Nicaea in 1667/1669, he entered the Seraglio of Ahmed II, and filled successively the posts of *hādī*, *riḥāḥdār*, *ḡhāḥdār* and *siḥāḥ*; he exercised great influence over Sultan Ahmed III, who came to the throne in 1703, and who made him *waṣir* and gave him his daughter Fātima in marriage (Rabī' I 1121/May 1709); he had a hand in the appointment and dismissal of *waṣirs*, including Köprülü-zāde Nu'mān Paṣha and Balladī Mehmed Paṣha. The Grand Vizier Khodja Ibrahim Paṣha was condemned to death for attempting to assassinate Dāmād 'Alī Paṣha, and the latter then became Grand Vizier (Rabī' II 1125/April 1713). One of his first acts was to sign with Russia the peace of Adrianople, which fixed the frontier between the two countries between the Samara and the Orel (5 June 1713). Wishing to erase the treaty of Karlowitz, he undertook the Morean campaign, for which the motive was the attack by Venetians and Montenegros against Turkish vessels; in 1715, Dāmād 'Alī Paṣha occupied Napoli de Romania, Argos, Corin, Modon, Malvania, and, in Crete, La Suda and Spina Longa. At the same time he had to suppress the revolts of 'Oḡhman-oglu Naṣh Paṣha in Syria, of the bandit 'Abbās in Anatolia, and of Kayrās Bey in Egypt.

In 1716, he initiated an expedition against Corfu, but Venice and Austria concluded an offensive and defensive alliance which forced him to send his troops to Belgrade. The Austrian army, led by Prince Eugene, met the Ottomans at Peterwardein on 16 Sha'bān 1128/5 August 1716; Dāmād 'Alī Paṣha was mortally wounded by a bullet in the forehead during the battle, while the Turkish troops had already begun to retreat. He was buried in the garden of the mosque of Sulaymān I at Belgrade; 70 years later, when he captured this town, the Austrian general Landau transferred the tomb to the forest of Hadersdorf at Vienna. While the campaign against Austria was in progress, Turkish forces were disembarked at Corfu, but the news of the death of the Grand Vizier resulted in the evacuation of the Turkish troops from the island (July-August 1716).

Dāmād 'Alī Paṣha was at once a fine military leader and a great statesman; he displayed a shrewd political sense, suppressed a number of abuses, restricted and controlled the expense of the Seraglio, prohibited the system of giving presents, regulated the movements of government personnel, and restored to their former state estates which had been converted into *malikāne*. He patronised men of letters, especially the historian Rāḥiḥ, and displayed great interest in science and poetry. He reopened the school for *it'āghān* at Galatasaray, which had become a *madrasa*. He built a mosque at Ayvansaray.

(by M. Cadi Bayyus).

(R. MANTRAN)

'ALĪ PASHA GÜZELUDE ("the handsome"), (d. 1600) Ottoman Grand Admiral and Grand Vizier. Born at Istanbul (Ces), he was successively *bey* of Damiette, and *beyleheri* of the Yaman (1602), Tunis, Morea and Cyprus. In November 1617, he succeeded Khallāḥ Paṣha as *kapudan-ı deryā*; in August 1618, a storm off the Dalmatian Coast caused

the loss of eleven vessels of his fleet; dismissed at the accession of Muṣṭafā I, he again became *kapudan-ı deryā* shortly afterwards. On 16 Muharram 1029/23 December 1619, he succeeded Öküz Mehmed Paṣha as Grand Vizier following intrigues among the intimates of Sultan 'Oḡhman II, who loaded him with gifts. He became notorious for his confiscation of property and extortion of money, in which he spared neither Muslim nor Christian; the Venetian dragoman Boriss, being unable to pay the 100,000 taleros demanded, was strangled; the Greek Skarlati, provider of the *oḡḡak* to the Janissaries, was forced to pay an enormous sum; the Greek patriarch obtained his release by paying 30,000 ducats on top of the 100,000 demanded. 'Alī Paṣha was trying to incite the Sultan to a campaign against Poland, when he died of calculus (15 Rabī' I, 1030/8 March 1621). He was buried at Beḡhikāgh, near the tomb of Yahyā Efendi. He also received the cognomen of Çelebi ("the elegant").

(R. MANTRAN)

'ALĪ PASHA HAKİM-OḢULU, Grand Vizier under the Ottoman sultans Mahmūd I and 'Oḡhman III. His father, Nuh Efendi, the physician of Muṣṭafā II, was a Venetian renegade. 'Alī Paṣha was born on 15 Sha'bān 1100/4 June 1689; brought up in the seraglio, he held various administrative posts at Istanbul, and then in the provinces; in 1722 he was appointed as governor of Adana and subdued the tribes of Cilicia; in 1724 he became governor of Aleppo, and in the same year distinguished himself at the siege and capture of Tabriz. Appointed *waṣir* in 1725, he was successively *beyleheri* of Anatolia, *ser-āsher* of the East, governor of Siwas, and governor of Diyarbakir. In 1730, again *ser-āsher* of the East, he defeated Shāh Tahmāsp III at Kuridīn (15 Rabī' I 1144/15 September 1731), and captured Hamadīn, Urmīya and Tabriz. He became Grand Vizier soon after the peace called after Ahmed Paṣha, 15 Ramaḡān 1144/12 March 1732. His first term of office as *waṣir* was marked by wise administration and currency reform. In the field of foreign affairs, the Marquis de Villeneuve, the French ambassador, urged the Grand Vizier to conclude an alliance with France against Austria, but the conditions put forward by 'Alī Paṣha (and suggested by Ahmed Paṣha Bonneval) prevented the conclusion of the treaty. Dismissed on the resumption of hostilities with Persia (22 Safar 1148/14 July 1735) 'Alī Paṣha was exiled to Mitylene, then appointed governor of Bosnia, where he held the Austrians in check for three years, successfully defended Travnik, and, on 4 August 1737, defeated Marshal Hédberghausen near Banjaluka. In 1740 he was sent to Egypt, where he suppressed a *ma'mūlūk* revolt; in 1741 he was made *beyleheri* of Anatolia, and on 15 Safar 1152/22 April 1742 he became Grand Vizier for the second time. The following year he was dismissed for wishing to lead in person the eastern expedition against Nādir Shāh of Persia. Governor of Bosnia in 1744, then of Aleppo (1745), he was nominated commander-in-chief of the eastern army, but in the meantime peace was signed with Nādir Shāh (1746). Governor of Bosnia, then of Trebizond, he was made Grand Vizier by 'Oḡhman III on his accession 4 Rjūmāḡā 1158/16 February

1755; this third term of office as Grand Vizier only lasted 53 days; the *sittâde* Bîyîk 'Alî Âghâ succeeded in securing his dismissal and his exile to Cyprus; but in the course of the year he was appointed Governor of Egypt, and in 1756 *beylerbeyi* of Anatolia. Recalled in 1757, he retired to Kutahya, where he died 3 Eth. 1 Hicdja 1171/14 August 1758. He was buried in the tomb adjoining the mosque which he was responsible for building at İstanbul (1752-4). He was reputed to be a learned, shrewd and liberal man, but quick-tempered and extremely severe in his dealings with officials guilty of extortion.

'**ALİ PASHA KHADIM**, OTTOMAN Grand Vizier. At first *âghâ*, then *beylerbeyi* of Karaman and subsequently of Rumelia, he distinguished himself in the course of a campaign in Wallachia (1485); *na'azir* in 1486, he defeated the Mamliks of Egypt at the battle of Aghîsâyir in Cilicia (1492), took the fortresses of Coron and Modon (1500), and was appointed Grand Vizier the following year in succession to Mesli Pasha. Dismissed in 1503, he again became Grand Vizier in 1506 and remained in office until his death. He strove to secure the succession of the *ghâzî* Ahmed, second son of Sultan Bâyezîd II, against the *ghâzî*-side Korkud, whom he defeated in 974/1508; he also defeated prince Selim, who had rebelled against his father, at Çorlu (1511). He died while engaged in suppressing the revolt of Kara Bîyîk-oglu, at Gökay, between Siwâs and Kayseri (1511): he was the first Grand Vizier to die on the field of battle; his death shattered the hopes of the *ghâzî*-side Ahmed. A skilful and upright statesman, esteemed by Sultan Bâyezîd II and by the people, 'Alî Pasha was in addition the patron of men of letters and of science, notably of the poet Meslî and the historian İdrîs Bîttâl. He built at İstanbul the mosque known as 'Alîk 'Alî Pasha (1496), together with the adjoining *medrese*, school and *şemsire*; he was also responsible for the *hamâm* at Karagümrük and a mosque at Yâsıncı, and it was he who converted the monastery church of Saint Saviour in Chora into a mosque, known as *Ka'riyye Dîvânî*.

'**ALİ PASHA MUBÂRAK**, EGYPTIAN statesman and man of letters. Born in 1209/1823 in Bîrinbâl (Dakahlîyya province) he gained admission to the recently founded government schools of Kasr al-'Ayni and of Abî Zâ'bal, and studied at the polytechnic (*maktaba khâssa*) of Bûlâk. In 1260/1844 he was sent to France as a member of the 'Mission égyptienne' and was trained as an officer and military engineer. On his return to Egypt in 1266/1849-50, he won the favour of 'Abbâs I and began a distinguished career first in the topographical department of the Ministry of War, then as Director of the military training college at Mîdiyat. During the Crimean War he held appointments in İstanbul, in the Crimea and in Gümüşkhâne. Under Sa'îd he resigned, but under İsmâ'il he occupied once after

another almost all the ministerial posts and other offices of state. Everywhere he introduced reforms, though often acting with well-meant zeal rather than with thorough understanding. To him is due the establishment of printing-offices and the printing of textbooks, especially technical ones, the construction of a barrage in the Nile, near Cairo (*al-banâdir al-khayriyya*) which was, however, not very successful, of railways and irrigation-works, the foundation of the Dâr al-'Ulûm, a teachers' training college on the model of the 'École normale supérieure' and of the Khedivial Library (1870). In matters of education he obtained the advice and cooperation of the Swiss educationalist Ed. Dor Bey (d. 1880). During his last tenure of office as Minister of Education in the government of Riyâd Pasha (from 1888 onwards), the defects of his administration became more and more apparent, and he had to resign, following the intervention of Sir Alfred (later Lord) Milner, in 1891. He died in Cairo on Djumâdî I 1311/14 Nov. 1893.

His publications are concerned with education, engineering, etc.; during his last period of office he published a reader for schools. His principal work, *al-Khitât al-Djadida al-Ta'rifîyya*, Bûlâk 1306/1888-9, in 20 parts, compiled with the help of numerous assistants, is intended to be a modern counterpart of al-Makrîsî's *Khitât*. It contains descriptions of Cairo (i-vi) and Alexandria (vii) with biographies of the famous men buried in these cities; descriptions of the other principal places of Egypt, with biographies (viii-xvii); descriptions of the Nilometer (xviii), of canals and dams (xix) and of the coinage (xx). Part xi, s.v. Bîrinbâl, contains his autobiography. His sources for the biographies are al-Sakhlâwî, al-Sha'rîfî, al-Suyûtî, al-Mubîbbî and al-Djannârî; for the historical and archaeological part he also uses European works, including the writings of de Sacy and Quatremère. It is a useful compilation but must be used with caution.

'**ALİ PASHA MUHAMMAD AMİN**, OTTOMAN Grand Vizier, born in İstanbul in February 1815, his father being a shopkeeper of the Egyptian Market. At the age of fourteen he obtained his first government post in the secretariat of the imperial *divân* and, whether because of his short stature, or of his ability, acquired the nickname 'Alî. In 1833, having already learnt some French, he was appointed to the translation department of the *divân*, and three years later was sent with a mission, first to Vienna, where he remained some eighteen months, and then, in 1837, to St Petersburg. On his return he was appointed interpreter to the *divân*; in the following year he accompanied Mustafa Reşid Pasha (s.c.) to London as Counselor, on the latter's appointment as Ambassador; and in 1839, on the accession of 'Abd al-Medjîd, they returned together to İstanbul.

In 1840, 'Alî first deputized for the Counselor to the Ministry of Foreign Affairs and then replaced him. In 1841 he was appointed Ambassador in London. Returning in 1842, he was made a member of the *medjlis-i sulh*; and in 1843 he deputized for Şehîkî Endî, the Minister of Foreign Affairs, until his replacement by Reşid Pasha.

During Reşid Pasha's tenure of the Ministry of Foreign Affairs 'Alî, who then again became Counselor of that department, was also appointed *beşlikçi* of the *divân*; and when in 1846 Reşid was made Grand Vizier for the first time 'Alî replaced him as Foreign Minister. In April 1848, after 'Alî had been raised to the rank of vizier, both Reşid and he were simultaneously dismissed, but were restored four months later and remained in office until 1852, when, on Reşid's again being dismissed, 'Alî succeeded him as Grand Vizier, with Fu'âd Pasha as Minister of Foreign Affairs.

His first Grand Vizierate, however, lasted only two months; and it was not until November 1854, after the outbreak of the Crimean War, when Reşid again became Grand Vizier, that 'Alî returned to high office, as Foreign Minister. In the interval he had been appointed first *wâlî* of İzmir (January-July 1853) and then *wâlî* of Khûdâvendigâr (April-November 1854), also assuming whilst in the latter post, the presidency of the newly formed High Council of the *tanzimat* (s.c.). He continued to hold this position while Foreign Minister, as which in March 1855, at the conclusion of the war, he was appointed a delegate to the preliminary peace conference in Vienna. Then, in the same year, on Reşid's resigning the Grand Vizierate, 'Alî again replaced him in that office, so that it fell to him in February 1856 to draw up and promulgate the famous *ahd-i imzâ* of that year, and in the following month to sign the Treaty of Paris as first Ottoman delegate. Within the next two years, however, the disputes of the western Powers over the affairs of the Principalities led first to 'Alî's resignation and replacement by Reşid Pasha in November 1856 and then, in August 1857, to Reşid's dismissal and replacement by Mustafa Nâsîl Pasha, with 'Alî as Foreign Minister. 'Alî retained this post under Reşid during the latter's last tenure of the Grand Vizierate, and on Reşid's death in January 1858, replaced him in that office for the third time.

In 1859 'Alî was again dismissed for having suggested a cut in palace expenditure as one remedy for the financial crisis that then faced the Ottoman government. But after resigning the post of Grand Vizier Kibrîlî Mehmed Emin Pasha during the latter's tour of Rumelia in the summer of 1860 and then for Fu'âd Pasha as Foreign Minister during his absence in Syria, in July 1861 'Alî was once more first appointed Foreign Minister himself and then, after the accession of 'Abd al-'Azîz, Grand Vizier for the fourth time. The same month, later, in November 1861, although the new sultan, finding him too deliberate in action, dismissed him in favour of Fu'âd, 'Alî returned to the Ministry of Foreign Affairs. Moreover he continued in that office under successive Grand Viziers until February 1867, when, on the resignation of Muterjîm Rûşdî Pasha, he took his place. On this occasion he remained Grand Vizier (it was his fifth term) for as long as four years, until his death.

'Alî was more or less self-educated, poverty having obliged him, in order that he might earn his living, to forge the receipt of an *idjâz* sent by the Bâyezîd *medrese*, where he began the study of Arabic, later continued with Ahmed Djewdet Pasha (s.c.). But he was of a high natural intelligence; though shy and reserved, he was notably witty; he acquired a mastery of French; and from the date of the Paris peace conference he enjoyed a European reputation as an outstanding diplomatist of perfect

manners and rare integrity. Among his countrymen he became unpopular. He was in fact secretive, solemn, and overbearing, and was regarded as vindictive. During his final Grand Vizierate 'Abd al-'Azîz would have been glad to get rid of him, but recognized 'Alî's standing in Europe to be such that he could not afford to; and 'Alî profited by this security to insist on his correct treatment by the sultan, on his right to have all governmental matters of importance to be referred to him, and on the immunity of ministers and officials from banishment (in the bad old way) except after due trial.

Both 'Alî and Fu'âd owed all their official training and advancement to Reşid Pasha. But when in 1852 'Alî took Reşid's place as Grand Vizier, the latter was hurt; and from that time on a coolness, which was exacerbated by calculators, and even a certain rivalry, developed between 'Alî and Fu'âd on the one hand and Reşid on the other, although 'Alî was not thereby prevented from serving under Reşid on two further occasions. All three were regarded as pillars of the *tanzimat* movement. But whereas it was in part Reşid's object to educate the Ottoman public in self-government, 'Alî was of an authoritarian temperament and after Reşid's death was bent rather on the firm establishment of the rule of law and the consequent limitation of the sultans' autocracy. The maintenance of the Empire now depending on the goodwill of the Powers, it was above all his constant concern to forestall their complaints and intervention. But by devoting too little attention to the internal reforms by the promise of which their favour had been gained, he contributed to its decline. However, in 1868, during his last Grand Vizierate, the *medjlis-i sulh* was replaced by a Council of State (*shûrâ-yi devlet*) on the one hand and a High Court of Justice (*divân-i âhkâm-i âdiyye*) on the other, with the aim of separating the judicial from the executive powers of the government; soon after an Imperial School (*maktab-i sultânî*) was opened in the Ghalata Sarâyi, where the instruction, on European lines, was in French and the pupils were non-Muslim as well as Muslim; and in 1869 a Ministry of the Interior was created. During the same period education was also promoted by an increase in the number of the Rihâzîyya schools; the army and navy were overhauled; the fleet was enlarged; and an agreement was concluded for the construction of railways in Rumeli.

'Alî's most notable actions at this time were his agreement to the evacuation of the Serbian fortresses by Ottoman troops (1866); his visit to Crete in 1867 for the insurance of the island, as a result of which he formulated the *shûbâ-nâme* under which it was governed for the next thirty years (1868); his success in causing the Powers to oblige the Greek government to desist from aiding the Cretan rebels; his restraint of the Khîdvî Ismâ'il from exercising powers beyond those already conceded to him; and his opposition to the formation of the Bulgarian Exarchate, which was consequently delayed till 1870, and to the absorption by Rome of the Armenian Catholic Church.

Owing to his lack of interest in the movement for an Ottoman constitution, 'Alî was savagely attacked during the last years of his life by its most ardent advocates, the refugee Yeni Oghmaâlî (Yeni Tursî) party, of whom, however, he recognized after his death, that they had done him an injustice; and he was further successively distressed by the death in 1869 of Fu'âd Pasha, after which he made himself responsible for the Ministry of Foreign Affairs as

1755; this third term of office as Grand Vizier only lasted 53 days; the *sittâde* Bîylîk 'Ali Âghâ succeeded in securing his dismissal and his exile to Cyprus; but in the course of the year he was appointed Governor of Egypt, and in 1756 *beylerbeyi* of Anatolia. Recalled in 1757, he retired to Kutahya, where he died 3 Eth 1126 (1774 August 1758). He was buried in the tomb adjoining the mosque which he was responsible for building at İstanbul (1752-4). He was reputed to be a learned, shrewd and liberal man, but quick-tempered and extremely severe in his dealings with officials guilty of extortion.

To him is due the establishment of printing-offices and the printing of textbooks, especially technical ones, the construction of a barrage in the Nile, near Cairo (*al-banâdir al-khaysariya*) which was, however, not very successful, of railways and irrigation-works, the foundation of the Dâr al-'Ulûm, a teachers' training college on the model of the 'École normale supérieure' and of the Khedivial Library (1870). In matters of education he obtained the advice and cooperation of the Swiss educationalist Ed. Dor Bey (d. 1880). During his last tenure of office as Minister of Education in the government of Riyâd Pasha (from 1888 onwards), the defects of his administration became more and more apparent, and he had to resign, following the intervention of Sir Alfred (later Lord) Milner, in 1891. He died in Cairo on 12 Jumâdî I 1311/14 Nov. 1895.

His publications are concerned with education, engineering, etc.; during his last period of office he published a reader for schools. His principal work, *al-Khitât al-Djadida al-Ta'rifîyya*, Bûlâk 1306/1888-9, in 20 parts, compiled with the help of numerous assistants, is intended to be a modern counterpart of al-Makrîsî's *Khitât*. It contains descriptions of Cairo (i-vi) and Alexandria (vii) with biographies of the famous men buried in these cities; descriptions of the other principal places of Egypt, with biographies (viii-xvii); descriptions of the Nilometer (xviii), of canals and dams (xix) and of the coinage (xx). Part xi, s.v. Bîrînâh, contains his autobiography. His sources for the biographies are al-Sakhîwî, al-Sha'irî, al-Suyûtî, al-Mubîddî and al-Djannâtî; for the historical and archaeological part he also uses European works, including the writings of de Sacy and Quatremère. It is a useful compilation but must be used with caution.

'ALI PASHA MUHAMMAD AMİN, OTTOMAN Grand Vizier, born in İstanbul in February 1815, his father being a shopkeeper of the Egyptian Market. At the age of fourteen he obtained his first government post in the secretariat of the Imperial *diwân* and, whether because of his short stature, or of his ability, acquired the nickname 'Âli. In 1833, having already learnt some French, he was appointed to the translation department of the *diwân*, and three years later was sent with a mission, first to Vienna, where he remained some eighteen months, and then, in 1837, to St Petersburg. On his return he was appointed interpreter to the *diwân*; in the following year he accompanied Mustafa Reşid Pasha (s.c.) to London as Counselor, on the latter's appointment as Ambassador; and in 1839, on the accession of 'Abd al-Medjîd, he returned together to İstanbul.

In 1840, 'Âli first deputized for the Counselor to the Ministry of Foreign Affairs and then replaced him. In 1841 he was appointed Ambassador in London. Returning in 1842, he was made a member of the *medjlîs-i salt*; and in 1843 he deputized for Şehîkî Endî, the Minister of Foreign Affairs, until his replacement by Reşid Pasha.

During Reşid Pasha's tenure of the Ministry of Foreign Affairs 'Âli, who then again became Counselor of that department, was also appointed *beşlikçi* of the *diwân*; and when in 1846 Reşid was made Grand Vizier for the first time 'Âli replaced him as Foreign Minister. In April 1848, after 'Âli had been raised to the rank of vizier, both Reşid and he were simultaneously dismissed, but were restored four months later and remained in office until 1852, when, on Reşid's again being dismissed, 'Âli succeeded him as Grand Vizier, with Fu'âd Pasha as Minister of Foreign Affairs.

His first Grand Vizierate, however, lasted only two months; and it was not until November 1854, after the outbreak of the Crimean War, when Reşid again became Grand Vizier, that 'Âli returned to high office, as Foreign Minister. In the interval he had been appointed first *wâlî* of İzmir (January-July 1853) and then *wâlî* of Khûdâvendîgâr (April-November 1854), also assuming whilst in the latter post, the presidency of the newly formed High Council of the *tanzîmât* (s.c.). He continued to hold this position while Foreign Minister, as which, in March 1855, at the conclusion of the war, he was appointed a delegate to the preliminary peace conference in Vienna. Then, in the same year, on Reşid's resigning the Grand Vizierate, 'Âli again replaced him in that office, so that it fell to him in February 1856 to draw up and promulgate the famous *ahd-i imzâ* of that year, and in the following month to sign the Treaty of Paris as first Ottoman delegate. Within the next two years, however, the disputes of the western Powers over the affairs of the Principalities led first to 'Âli's resignation and replacement by Reşid Pasha in November 1856 and then, in August 1857, to Reşid's dismissal and replacement by Mustafa Nâsîl Pasha, with 'Âli as Foreign Minister. 'Âli retained this post under Reşid during the latter's last tenure of the Grand Vizierate, and on Reşid's death in January 1858, replaced him in that office for the third time.

In 1859 'Âli was again dismissed for having suggested a cut in palace expenditure as one remedy for the financial crisis that then faced the Ottoman government. But after resigning for the first time as Grand Vizier Kibrîlî Mehmed Emin Pasha during the latter's tour of Rumelia in the summer of 1860 and then for Fu'âd Pasha as Foreign Minister during his absence in Syria, in July 1861 'Âli was once more first appointed Foreign Minister himself and then, after the accession of 'Abd al-'Azîz, Grand Vizier for the fourth time. The same month, later, in November 1861, although the new sultan, finding him too deliberate in action, dismissed him in favour of Fu'âd, 'Âli returned to the Ministry of Foreign Affairs. Moreover he continued in that office under successive Grand Viziers until February 1867, when, on the resignation of Muterjîm Rûşdî Pasha, he took his place. On this occasion he remained Grand Vizier (it was his fifth term) for as long as four years, until his death.

'Âli was more or less self-educated, poverty having obliged him, in order that he might earn his living, to forgo the receipt of an *idjâzât* from the Bâyezîd *medrese*, where he began the study of Arabic, later continued with Ahmed Djewdet Pasha (s.c.). But he was of a high natural intelligence; though shy and reserved, he was notably witty; he acquired a mastery of French; and from the date of the Paris peace conference he enjoyed a European reputation as an outstanding diplomatist of perfect

manners and rare integrity. Among his countrymen he became unpopular. He was in fact secretive, solemn, and overbearing, and was regarded as vindictive. During his final Grand Vizierate 'Abd al-'Azîz would have been glad to get rid of him, but recognized 'Âli's standing in Europe to be such that he could not afford to; and 'Âli profited by this security to insist on his correct treatment by the sultan, on his right to have all governmental matters of importance to be referred to him, and on the immunity of ministers and officials from banishment (in the bad old way) except after due trial.

Both 'Âli and Fu'âd owed all their official training and advancement to Reşid Pasha. But when in 1852 'Âli took Reşid's place as Grand Vizier, the latter was hurt; and from that time on a coolness, which was exacerbated by calculators, and even a certain rivalry, developed between 'Âli and Fu'âd on the one hand and Reşid on the other, although 'Âli was not thereby prevented from serving under Reşid on two further occasions. All three were regarded as pillars of the *tanzîmât* movement. But whereas it was in part Reşid's object to educate the Ottoman public in self-government, 'Âli was of an authoritarian temperament and after Reşid's death was bent rather on the firm establishment of the rule of law and the consequent limitation of the sultans' autocracy. The maintenance of the Empire now depending on the goodwill of the Powers, it was above all his constant concern to forestall their complaints and intervention, but by devoting too little attention to the internal reforms by the promise of which their favour had been gained, he contributed to its decline. However, in 1868, during his last Grand Vizierate, the *medjlîs-i salt* was replaced by a Council of State (*shûrâ-yî devlet*) on the one hand and a High Court of Justice (*divân-i âhkâm-i âdiyye*) on the other, with the aim of separating the judicial from the executive powers of the government; soon after an Imperial School (*maktab-i sultânî*) was opened in the Ghalata Sarâyî, where the instruction, on European lines, was in French and the pupils were non-Muslim as well as Muslim; and in 1869 a Ministry of the Interior was created. During the same period education was also promoted by an increase in the number of the Rihâzîyya schools; the army and navy were overhauled; the fleet was enlarged; and an agreement was concluded for the construction of railways in Rûmêli.

'Âli's most notable actions at this time were his agreement to the evacuation of the Serbian fortresses by Ottoman troops (1866); his visit to Crete in 1867 for the insurance of the island, by which he formulated the *shûbâ-nâme* under which it was governed for the next thirty years (1868); his success in causing the Powers to oblige the Greek government to desist from aiding the Cretan rebels; his restraint of the Khîdîw Ismâ'il from exercising powers beyond those already conceded to him; and his opposition to the formation of the Bulgarian Exarchate, which was consequently delayed till 1870, and to the absorption by Rome of the Armenian Catholic Church.

Owing to his lack of interest in the movement for an Ottoman constitution, 'Âli was savagely attacked during the last years of his life by its most ardent advocates, the refugee Yeni Oghmaâlî (Yeni Tursî), many of whom, however, recognized after his death, that they had done him an injustice; and he was further successively distressed by the death in 1869 of Fu'âd Pasha, after which he made himself responsible for the Ministry of Foreign Affairs as

well as the Grand Vizierate; by the defeat in 1870 of France, on whom he had long particularly lent; and by the consequent denunciation by Russia of the Black-Sea clauses of the Treaty of Paris. Exhausted by overwork and these calamities, he fell sick in the summer of 1872, and died after a three months' illness on 7th September, aged fifty-six, at his seaside villa at Bebek on the Bosphorus.

'ALİ PASHA RIZVÂN BEGOWIC (see RIZVÂN BEGOWIC).

'ALİ PASHA SEMİZ, Ottoman Grand Vizier, born at Brassa in Herzegovina, he was carried off at an early age during a *devşirme* operation to be brought up at Istanbul; in 1931/1546 he became *agha* of the Janissaries, and later *beylerbeyi* of Rumelia. Appointed governor of Egypt in 1549, he took part in Sulaymân I's Persian campaign, and succeeded Rustam Paşa as Grand Vizier on 26th July 1561, a post which he held until his death in Dhû 'l-Kâ'dî 972/June 1565. Immediately after his appointment, he negotiated with the Austrian ambassador Busbecq a peace treaty which was signed at Prague 1 June 1562. But the peace policy of 'Alî Paşa was wrecked by the new Emperor Maximilian II; on the death of the Grand Vizier, Sultan Sulaymân I had to undertake a fresh campaign against Austria. An intelligent and shrewd man, 'Alî Paşa was famous for his corpulence (hence his cognomen Semiz, "the fat") and his wit.

'ALİ PASHA SÜRMELİ, Ottoman Grand Vizier. Born in Dimetoka, he entered the financial administration and was eventually appointed *defterdar* in 1688; he was dismissed the following year, but in 1703/1691 was again *defterdar* and *azîr*. Successfully governor of Cyprus and Tripoli in Syria, he became Grand Vizier on 16 Rajab 1101, 23 March 1694 in the place of Bozoklu Mustafa Paşa, and conducted the Hungarian campaign, during which he unsuccessfully besieged Peterwarden. Sultan Mustafa II, on his accession, retained 'Alî Paşa in his post, but forced him to

undertake a new campaign against Hungary; a revolt of the Janissaries led to his dismissal on 18 Ramadan 1106/22 April 1695; condemned at first to exile, 'Alî Paşa was later executed on 4 Shawwâl 1106/18 May 1695. He instituted the practice whereby the Council of Ministers met four days a week, and changed the Egyptian crown lands, let at fixed perpetual rents, into fiefs on a life tenure. He was extraordinarily extravagant, and loved luxury; he owed his cognomen to his habit of using combs.

'ALİ PASHA TEPEDELENLİ, governor of Yanya (Janina). Born probably in 1744 of a family descended from a Melend *dervîş* of Kütahya, who migrated to Rumelia. His grandfather and father had in turn held the *muteslimlik* of Tepedelen in the Epirus; but being left fatherless as a child 'Alî was brought up by his bold and ambitious mother, a native of Koniza, in an atmosphere of constant warfare between rival chieftains of the region.

After attacking himself in turn to the Wardens of the Passes (*derband bağbashi*) and the *mutasarrıf* of Delvine (Delvino), of whom he facilitated the murder after marrying his daughter, in 1774 he was himself made *mutasarrıf* of Delvine with the rank of *mîr-i mirân*, and shortly afterwards, though only temporarily, that of Yanya as well. In the following year he was transferred to Tirhala (Trikala); in 1786 he was appointed Warden of the Passes in addition; and after the outbreak of war in 1787, having meanwhile exchanged Tirhala for Yanya, he fought with distinction on the Austrian front and afterwards took part in the suppression of a rising in Serbia. Although in 1790 he incurred the displeasure of the Porte so far as to be dismissed from the Wardenship, in view of his further prowess in the war, his conduct in continually adding without warrant to the territory under his control was overlooked; and in 1792, after the restoration of peace, he and his son Well al-Dîn were appointed joint Wardens for the specific purpose of preventing the passage of Albanians into Rumelia, where their employment for the suppression of outlaw bands had only added to the prevailing disorder. Shortly afterwards 'Alî Paşa's influence was increased by the appointment, as a reward for his efforts to overcome the rebel Paswan-oğlu, of another son, Muhtâr, to the *sandjak* of Eğriboz (Negropont) and Karli-ili.

One of 'Alî Paşa's main concerns during and after the war of 1787-92, which had encouraged the Orthodox inhabitants of Suli to rebel against Ottoman rule, was to reduce them to obedience, though he was unable to do so finally before 1802. In the meantime, after the transference of the Ionian Islands and the "four districts" of Preveze (Preveza), Parga, Vonitz (Vonitz) and Butrinto from Venetian to French sovereignty by the Treaty of Campo Formio in 1797, 'Alî Paşa not only sent a contingent to assist the conquest by Russo-Ottoman forces of Corfu, but also occupied Butrinto and, after several successes against the French, took possession of Preveze and Vonitz as well. By the settlement of 1802 the "four districts" were to be incorporated in the *sandjak* of Yanya. But it was not until 1819 that the incorporation of Parga, after various vicissitudes, was in fact effected.

In April 1802 'Alî Paşa was appointed *mâfi* of Rumelia. The Albanian irregulars employed to suppress the brigandage and revolts that were again rife in the province at this time had themselves nurtured at Edirne; and it was thought that 'Alî Paşa was alone capable of pacifying them and overcoming the general disorder. However, his success in inducing many of the outlaws to return to their homes so far provoked the hostility of the many Rumelian *çetve* which interest it was to resist any thorough pacification, that in 1803 his appointment was revoked. He was then given the *sandjak* of Tirhala in addition to Yanya; but it was sought to counterbalance his influence in Albania

by replacing him in Rumelia by İbrahim Paşa, the *mutasarrıf* of İğkōdra (Scutar), whose authority among the Ghegs of the north was little less than 'Alî's own among the Tosks of the south.

After the resumption of the European war in 1803 close relations were established between 'Alî and the French, who supplied him with weapons, munitions, and even gunners. But after Tilsit in 1807, when the Ionian Islands were relinquished by Russia to the French, the latter then proposed regaining the "four districts", occupied Parga, and instigated a revolt of the Greeks of Tirhala against 'Alî's authority, which, however, was suppressed by his son Muhtâr.

In 1810, after first marrying two of his sons and a nephew to daughters of the *mutasarrıf* of Awlonya, and then contriving that the latter should be attacked in his capital, 'Alî Paşa was able to appropriate this *sandjak* as well, under the pretext of flying to the relief of a relative. Mahmūd II was enraged by this episode, but powerless to refuse the appointment of Muhtâr Paşa to Awlonya in place of the dismissed governor. No less unwelcome to the Porte were 'Alî's acquisition of Eğri (Argyrocrastron) in the following year, and still more his invasion of the Gheg country, where, after overcoming some local resistance, he was able to add the fortresses of Tirana and Pekin (Pekine) and the *sandjaks* of Ohrid and Elbasan to his dominions.

In the face of repeated protests from Istanbul 'Alî Paşa sought to excuse this high-handed conduct, and in the war with Russia resumed in 1809 sent a considerable force to the sultan's aid under the command of Muhtâr and Well Paşas. He also assisted the British forces in their occupation of the Ionian Islands; and in view of these services and his advanced age no attempt was made by the Porte to unseat him before 1820. Then, however, owing in the first place to his falling out with the all-powerful *reis* of Hâlet Efendi, and the latter's wish to divert Mahmūd from his intention of abolishing the Janissaries; in the second place to the intrigues of certain Phanariot Greeks, who saw that he constituted an obstacle to the already projected insurrection in the Morea; and finally to the attempted assassination contrived by 'Alî Paşa, of Paşa İsmâ'il Bey, a former *kâğız* of Well Paşa in Istanbul, in April 1820 he was dismissed from his Wardenship of the Passes and ordered to withdraw his troops from all regions outside the *sandjak* of Yanya, while Well Paşa was deprived of his governorship of Tirhala. Since there was little doubt that arms would be needed to secure his obedience, all the governors of adjacent provinces had previously been warned to hold themselves in readiness to apply it; Khurshid Ahmed Paşa, recently made governor of the Morea, was appointed to command all the troops engaged in operations against him; and a flotilla was ordered to the Albanian coast. 'Alî Paşa responded by concluding an agreement for mutual aid with the Greek rebel leaders and seeking to provoke revolts also in the Aegean islands, Serbia, and the Principalities; on which the Porte in turn deprived him of his vizirate, dismissed him from Yanya, and ordered him and his whole family to reside at Tepedelen.

'Alî Paşa was in fact deprived of all his acquisitions except Yanya itself, in the well stocked citadel of which he was then besieged, while three of his sons and a grandson, the governors of districts formerly in his control, surrendered. Owing to his

provocation of a mutiny by the Albanians of the besieging force, a rising of the Sulistes, and the outbreak of the Greek revolt, it was not until the siege had continued for two years that 'Alî Paşa could be induced to give in. He then died on condition that his life should be spared, retiring with a few supporters to a neighbouring monastery. But Khurshid Paşa's guarantee was repudiated by Hâlet Efendi, whose purposes it suited that the trouble at Yanya should continue. 'Alî Paşa, on learning that his execution had been ordered, decided to fight. He was accordingly attacked and died from a shot wound on 24 January 1822.

Tepedelenlî 'Alî Paşa attained some celebrity in Europe owing to his being visited by various writers, notably Lord Byron, and to his efforts to resist help from both the French and the British in the prosecution of his ambitions. He was brave, bold, and clever, but treacherous and wholly self-seeking. Having acquired great riches, he maintained a semi-royal state, surrounded by a strange entourage of European officers, Greek doctors, poets, *dervîşes*, astrologers, and the leaders of brigand bands. Of all the contemporary Muslim rebels against the Ottoman power he contrived to do it most harm, by facilitating the beginning of the Greek revolt.

'ALÎ AL-RİDÂ, ABO 'L-HASAN B. MUSA AL-DÛR eighth Imam of the Twelver Shî'as, was born in Medina in 148/765 (al-Safadî) or, according to other and probably better informed authorities, in 151/768 or 153/770 (al-Nawbakhtî, Ibn Khallikân, Mirhâ'and). He died in Tûs in 203/818; the sources agree on the year, but differ as to the day and month and of Safad or Tabat, al-Safadî; Ramadan—al-Safadî; 13 Dhû 'l-Kâ'da or 5 Dhû 'l-Hijja—Ibn Khallikân. His father was the Imam Mûsâ al-Kârim, his mother a Nubian *umum walad* whose name is variously given (Shahd or Nadjîyya—al-Nawbakhtî; Sukayna—Ibn Khallikân; Khayzurâ—Ibn al-Jawzi). For the greater part of his life he played no political rôle, but was known for his piety and learning. He related traditions from his father and from 'Ubayd Allâh b. Artâb, and gave *fatâwâ* in the mosque of the Prophet in Medina. His first appearance on the political stage was in 201/816, when the Caliph al-Ma'mûn summoned him to Marw and appointed him as heir to the Caliphate, giving him the title of al-Rîdâ. The sources agree that 'Alî al-Rîdâ was reluctant to accept this nomination, owing only to the insistence of the Caliph. The 'Abbâsîd and 'Alid princes and dignitaries, led by al-Ma'mûn's son al-'Abbâs, took the *bay'a* to the new heir, who was dressed in green.

their descendants that the loyalties of the different groups of the *Shi'a* [g.s.] were given. The claims made by the *Shi'a* on behalf of the 'Alids were broadly of two kinds. For the extremist *Shi'a* the 'Alid Imāns were the spiritual as well as the religious and political heirs of the Prophet, whose spiritual inspiration they retained or resumed. For the moderate *Shi'a* they were the legitimate heirs of the Prophet as heads of the *Umma* of Islam, with a better claim to the succession than that of the reigning Caliphs, whom the *Shi'a* regarded as usurpers. The early 'Alids, with the possible exception of Muhammad b. al-Hanafīya and the more probable exception of his son Abū Ḥāshim, seem consistently to have refused to have any dealings with the extremists, or countenance their ideas (e.g. *al-Ḥusnā*, vii, 24 and viii, 33). On the other hand they seem to have acquiesced—if somewhat passively—in the political claims made on their behalf by the moderate *Shi'a*. The numerous traditions in which 'Alids reject and denounce the claims of their own supporters (e.g. Ibn Sa'd, v, 77, 158, 215, 218) are almost certainly due to Sunni propaganda, and a more accurate reflection of the political views and claims of the house of 'Alī will be found in the letter written by the Hasanid pretender Muhammad b. 'Abd Allāh [g.s.] to the Caliph Ma'nūr in 147/86 (al-Tabarī, iii, 209 ff.), and in the verses of such pro-'Alid poets as Kumayy and Kutayyir. Muhammad's letter is also interesting in that the writer claims pure Arab descent on both sides, without admixture of foreign or slave blood—thus accepting the aristocratic Umayyad principle of succession, which had excluded sons of slave mothers like Maslama—and rejecting the Islamic rule followed by the Husaynids (several of whose Imāns had slave mothers), and, later, by the 'Abbāsids. In the early period the claims of the 'Alids were based on descent from 'Alī the Prophet's kinsman rather than from Fātima his daughter, since according to the ideas of the time kinship with the Prophet in the male line was more important than descent from him in the female line. (Thus in the revealing speech attributed to 'Alī at Siffin, he speaks of himself only as "cousin of the Prophet", *Murādī*, iv, 335). Claims based on kinship could thus be advanced on behalf of descendants of 'Alī by wives other than Fātima, and even of collateral descendants of Abū Tālib (see *ANL al-BAYT*). Only after the usurpation of 'Alid claims by their 'Abbāsid cousins was stress laid on direct descent from the Prophet via Fātima. In the development of this new claim, the sixth Imām Dījā' al-Sūkī seem to have played a role of some importance.

After the abortive rising of al-Husayn and the massacre of Kurbalā in 61/60, when most of the 'Alids were killed, the 'Alid pretenders remained politically inactive, giving recognition and sometimes even help to the ruling house (examples in al-Tabarī, ii, 3, 409, 420, 1138; al-Ya'qūbī, ii, 298 ff.; Ibn Sa'd, v, 83, 199; Buhl, 369). They preferred to reside in Mecca or Medina, far from the main political centres, and while maintaining their claims did little to advance them. Such action as they took may be qualified as litigious rather than rebellious, concerned with their estates rather than with their political rights (cf. I. Hrbek, *Muhammadi Nachlass und die 'Aliden*, Arch. Or., 1950, 41-9). In the tradition this passivity is naturally given a religious colouring, and appears as the prototype of the characteristic *Shi'a* practice of *taqiyya* [g.s.].

Towards the middle of the 8th century growing discontent brought new opportunities to the 'Alids.

In ca. 122/740 Zayd b. 'Alī b. Husayn [g.s.] led the first 'Alid bid for power since Kurbalā. After his death, closely followed by that of his son Yahyā [g.s.] in ca. 123-6/743-4, the 'Alid bolt was shot, and both the cause and the opportunity were taken over by the 'Abbāsids. The first major expression of 'Alid anger and disappointment at the 'Abbāsid victory was the revolt of the Hasanid brothers Muhammad and Ibrahim b. 'Abd Allāh [g.s.], in Medina and Basra, respectively. Both movements were choked in blood, and the Caliph Manṣūr adopted a policy of violent repression towards the 'Alids, great numbers of whom were arrested and put to death (cf. al-Tabarī, iii, 443-6; *Murādī*, vii, 404; *Mahāsil*, 178 ff.). Al-Mahdī dealt more kindly with the 'Alids, as part of a general policy of appeasement, but when this failed to gain 'Alid goodwill, it was abandoned by al-Hadi, whose harsh actions drove the 'Alids to open revolt. The rising of Husayn b. 'Alī [g.s.], known as Shihb Fakhkh (after the place of his death), in 160/786 was soon suppressed, (Tabarī, iii, 531-9; *Mahāsil* 431 ff.), but Idrīs [g.s.], a brother of the ill-fated Muhammad b. 'Abd Allāh, escaped to Morocco where he founded the first 'Alid dynasty. Hārūn al-Raḡhīb eased the severities of al-Hadi, but after the revolt of Yahyā b. 'Abd Allāh [g.s.] in 176/793-4 he resumed the strict surveillance of the 'Alids, and the Husaynid Mūsā al-Kāẓim [g.s.] died in prison. Meanwhile, in 175/791, some Zaydids (of the line of Zayd b. Hasan) took refuge in Daylām, where in 250/864 they were able to establish the first of a series of local dynasties. Al-Ma'nūn on his accession faced the pro-'Alid revolts of Abu 'Isa'rya [g.s.] in association with the Hasanid Muhammad b. Ibrahim, called Ibn Tabāṭaba [g.s.] in Mesopotamia in 199/814, and of Muhammad b. Izzā'far [g.s.] known as Muhammad al-Dībāḡī, in Mecca in 200/815-6. His subsequent nomination of the Husaynid 'Alī al-Riḡā [g.s.] as his heir and his adoption of a pro-'Alid policy brought some alleviation, but did not save him from a further 'Alid rising, that of 'Abd al-Raḡhīb b. Ahmad in the Yemen in 207/822-3. Under al-Ma'nūn's successors relations between 'Abbāsids and 'Alids again deteriorated, reaching their lowest point with the insults and persecutions of al-Mutawakkil. Al-Muntasir is reported to have treated the 'Alids with consideration, but the revolts continued. Most of them were suppressed, some few resulted in the appearance of local dynasties of 'Alid stock, in such remote places as Morocco, Yemen, and the Caspian provinces of Persia.

Most of the rebels and pretenders of the early 'Abbāsid period came from the line of al-Hasan, that of al-Husayn preferring a life of tranquil piety. It was however the latter that came to have the greatest influence. After the death in 148/765 of Izzā'far al-Sāḡīk [g.s.], the sixth Imām in the line of Husayn, the succession was disputed between his sons Ismā'īl and Mūsā al-Kāẓim [g.s.], Ismā'īl, whose claims were accepted by the sect known as Ismā'īliyya [g.s.], sired a line of Imāns from whom came the Fātimid Caliphs (some authorities however doubt the authenticity of their pedigree). Mūsā's line ended with their estates rather than their Imāns, known as Muhammad al-Mahdī ca. 260/871-4. After this the aspirations of their followers (see *ANL al-ASMA'IYYA*) became eschatological rather than political, since they could offer no real alternative to the 'Abbāsid Caliphate, which was therefore accepted even by *Shi'a*ite dynasties such as the Būyids.

Many dynasties claimed to be of 'Alid descent. They may be grouped as follows:

- 1) Hasanids: a) N.W. Africa—Idrīsids [g.s.], Sulaymānids [g.s.], Sharīfs (Sa'dūddīn [g.s.], Fāfāls, [see 'ALAWITS]). b) Yemen—Sulaymānids, Banū Uḡayyir, Rāssids [g.s.]. c) Mecca—Sulaymānids, Banū Uḡayyir, Banū Falaṣṣa, Banū Kaṭāda [see WAKKA]. d) N. Persia—Zaydids, 'Alids. e) Ghāna—Banū Sāḡīk [g.s.]. f) Āmul—Hasanids. g) Cordova and Malaga—Hammūnids [g.s.].
- 2) Husaynids: a) Hīrīkiya and Egypt—Fātimids [g.s.]. b) Medina—Banū Muhannā [g.s.].
- 3) Unknown: Mecca and Medina—Banū Mūsā.

**Bibliography:** Genealogies of the descendants of 'Alī were compiled from an early date. One of them was that of the 10th century 'Alid genealogist Akhū Mubsh, who wrote a "complete account" of all the progeny of 'Alī, in an attempt to disprove the legitimacy of the Fātimids. This work is lost, but is preserved in excerpts in Makrīfī's *Itihās al-Hawādī*, [Shayrawān], Cairo, 1948, 4 ff. and in Ibn Ayyub al-Dawādī, *Kanz al-Dīwar*, Vol. vi, MS Saray, Ahmed III, no. 2932, 5 ff. where the source is named. A parallel account of the descendants of 'Alī will be found in the *Sūhāb al-'Abbāsī* of Abū 'Ismā'īl Muhammad al-Maḡhūrīn (gh. 15th century), Cairo 1306. Slightly different versions are given by Tabarī (b. 3471 ff., followed by Ibn al-Aḡrī iii, 333-4), and by Ma'nūnī (*Tanbīh*, 28 and *Murādī*, v, 148). Among later works on 'Alid genealogy mention may be made of the *Umdat al-Tālib fi Anshā' al-Abī Tālib* of Ahmad b. 'Alī... b. Muhannā, Bombay, 1318. Biographies of 'Alids will be found in Abū 'I-Faraj al-Isfahānī's martyrology, *Mahāsil al-Jāhiliyyīn*, Cairo 1949, (cf. *Murādī*, vii, 404, where martyred 'Alids are listed), as well as in general works such as the *Tahabāt* of Ibn Sa'd and the *Anshā' al-Aḡraf* of Balāḡhūrī (the 'Alids appear in vol. 10). On the role of the 'Alids in the Umayyad and early 'Abbāsid periods see Fr. Buhl, *Alidernes Stilling til de Shi'itische Begrunder under Umayyaderna, Österrigt ser det Kgl. Danske Videnskabsnens Selskabs Forhandlinger*, 1920, no. 5, 355 ff.; F. Gabrieli, *Al-Ma'mūn al-'Alidī*, Leipzig 1929; H. I. Hasan, *Ta'wīḡ al-'Alawī*, Cairo 1948, ii, 113 ff.; 'A. A. al-Dūrī, *Al-'Asir al-'Abbāsī al-'Awwal*, Baghdad 1945. Genealogical tables of the descendants of 'Alī, showing the interrelation of 'Alid dynasties, will be found in Zambar, ii, A-E. On the status and organisation of persons descended from the Prophet in later times see *SA'YIR* and *SHAMIR*.

**ALIF** (see *ANL al-'ĀL*).

**ALIGARH**, town (27° 53' N., 78° 4' E.) and district in the Meerut (Mīrat) division of Uttar Pradesh (formerly the United Provinces). In 1947 the district (1946 sq. miles = 5024.5 sq. km.) had 1,372,64 inhabitants (786,381 Muslims) and the town 112,625 (51,712 Muslims). The town was at first called Koil (Kol) and the citadel, built in 1542, was named Aligarh (high fort) when Nadīf Khān restored it in 1776; previously it had been called Ramgarh, occasionally Sābitgarh after one Sābit Khān or Muhammadgarh.

Koīl, which was certainly an old town, was captured towards the end of the 13th century by Kath al-Dīn Ayyub and was usually subject to Delhi, being a fief of Balhan's eldest son c. 1270. It was ruled from Dīwarpur in 1393 and was independent for a time from 1447. In 1785 Maharāts of the Scindia family captured it but were driven out by Lord Lake in 1803. It was often described by Muslim writers, e.g. Ibn Baṭṭūṭa (iv, 6).

Modern Aligarh owes its place to its university. In 1871 (Sir) Sayyid Ahmad Khān [g.s.] began to collect funds, some Hindus contributing, for a boys' school to be run more or less on English lines. In 1875 the high school was started and three years later it was raised to a second grade college. The institution then became a school and the Muhammadan Anglo-Oriental College. Sir Sayyid kept the management in his own hands during his lifetime and had excellent helpers in the first principals, Th. Beck and (Sir) Theodore Morison. Finance was a trouble and there was opposition to this breach with traditional Muslim education. Entrance to the college was never restricted to Muslims and the language of instruction was English except in religious subjects. After the founder's death the management was put in the hands of Muslim trustees. In 1904 353 boys were in the school, 269 students in the college and 36 students of law; of the total 76 were Hindus. In 1909 there were eight teachers of European origin and for some years the professor of Arabic was a European. Later the number of teachers who were not Indians was much reduced. In 1920 the college was created a university and an intermediate college was established for the first two years of the university course, following the recommendations of the Calcutta Commission. At the same time the non-cooperation movement caused trouble, resulting in the foundation of the National University; this was active for two years or so and existed in name for some time longer. Aligarh University continued to develop; in 1929 teachers of Yūnānī (Unani) medicine appeared on the staff; in 1932 the intermediate college was absorbed in the university and new laboratories opened; in 1934 a college of Yūnānī medicine was started and in 1938 an institute of technology and electrical engineering and a Yūnānī hospital were opened. Women were admitted to some degrees in the same year and later further concessions were made to them. In 1945 an agricultural college was opened and in 1947 the staff is found grouped in four faculties, arts, science, engineering and technology, and theology. The separation of Pakistan from India caused a great upheaval and many of the staff left but their places were filled, the university survived and still flourishes. Aligarh has always upheld the Muslim ideal of opening the road to education to the needy; it is to be feared that the pursuit of this ideal may clash with the purpose of a university. In the year 1946-7 there were 3506 students of whom 775 were graduates and 501 first degrees were given in the faculties of arts, science, commerce and engineering; in the following year the numbers were 4285, 1186 and 305.

(A. S. TRISTON)

'ĀLIM (see 'ULAMĀ).

'ĀLIMA, in the Egyptian dialect of Arabic *'ālime*, *'ālime*, plural *'awālime*, literally "a learned,

expert performers, the name of a class of Egyptian female singers forming a sort of guild, according to the sources of the 18th and 19th centuries. They were engaged to perform in harems at celebrations of marriages or births, during Ramadan and on other occasions. Their art included the improvisation of poems of the *masnawi* (g.a.) type, singing and dancing. They withdrew from Cairo during the French expedition. Well-informed travellers were careful to distinguish them from the *ghawazi* (sing. *ghawize*) who sang and danced primarily in the streets, making a speciality of lascivious dances and often becoming prostitutes (the most accurate descriptions are those of Savary, *Lettres sur l'Égypte*, Paris 1766, I, 149 ff., and Villoteau, *Description de l'Égypte*, Paris 1825, XIV, 169-82; useful information is contained in Sonnini, *Voyage dans la haute et basse Égypte*, Paris, year VII, II, 372 ff.; Chabrol in *Deser. de l'Égypte*, Paris 1826, XVIII, I, 173 ff., 212 ff., 330; Lane, *Modern Egyptians*, London 1836-7, I, 226, 261; II, 65 ff., 270 ff., Laetzy-Hadji (Baron Taylor), *L'Égypte*, Paris 1836, 203-5. The Arabic word for them, as used by the travellers appears in French, from the time of Savary (loc. cit.; cf. *Journal encyclopédique*, 1787, II, 519 ff.), in the form *almd*, later *almd*, and in English (first recorded in 1814 by Byron, *Corsair*, II, 8) as *alma* or *almah*. But Baedeker, *Ägypten*, Leipzig 1877, I, 25-6 states that '*aulim* of the better class only survived in the harems of the most eminent houses, a debauched type was frequently to be seen in the streets accompanied by one or two, usually blond, musicians. Travellers regularly confused the *alimas* with the *ghawazi*, who were however expelled from Cairo to Upper Egypt in 1834 by Muhammad 'Alī. The latter were found in large numbers at Kene, Esne, Luxor (Baedeker, *Ägypten*, Leipzig 1901, II, 81 ff., 258). Flaubert in 1850 associated with them there, and refers to them as *almds* (*Voy. en Orient*, Paris 1949, 63 ff.). Most of the *aulim* and *ghawazi* held an annual reunion at Tantā on the occasion of the *masnawi* of Sidi Ahmad al-Badawi (Baedeker, loc. cit., I, 25, 245; cf., referring to the year 1865, A. Rhone, *L'Égypte à petites journées*, Paris 1877, 172-8, and, as late as 1913, the parade of prostitutes, in J. W. Mc Pherson, *The Mounds of Egypt*, Cairo 1913, 220 ff., s.v. *raby*; P. N. Hamond, *L'Égypte sous Méhémet Ali*, Paris 1843, I, 314-20; Prisse d'Avances, *Poëtes mémoires secrets sur la cour d'Égypte sous d'une étude sur les almds*, Paris 1920. Auriant, *Kendishah Harem, Calcutta de Flaubert*, Paris, 1943.

**ALINDJAK** or **ALINDJA** (in Armenian Erindjak, a district of the province Siunik\*), now ruins within the Naghshewā territory of the Azerbaijan Soviet Socialist Republic. The river Alindja flows into the Araxes near Old Djulfa. The ancient fortress Alindjak stood some 20 km. above its estuary on the right bank of the river, on the top of an extremely steep mountain (near the village Khānāskā). The fortress played a considerable role at the Timurid and Turkman period.

**Bibliography:** V. Minorsky, *Caucasica*, Jā, 1930, 93-4, 112. (V. MINORSKY)  
**ALISA** (or **ALVARA**) B. UGHU'U (or **YAGHU'U**), the biblical prophet Elisha. The Kur'an mentions him twice (VI, 86 and XXVIII, 26, second Meccan period) together with other apostles of Allah, without special comment. The Arabs have considered the first syllable as the article (discussion of variant

readings in al-Tabari, *Tafsir*, VII, 156 ff.). Muslim tradition identifies Alisa' with the son of the widow who sustained Elijah during the famine (I Kings XVII, 9 ff.). This son, a paralytic, was cured by Elisha (Elijah) and became his disciple, his companion and, eventually, his successor. Because of his parentage, some authors call him Ibn al-Adhū (son of the old woman), but others, including al-Tabari (loc. cit. and *Annals*, I, 515) give this sobriquet to Elisha (Ezekiel). In traditional Muslim chronology, Alisa' is placed much earlier in date than Tūlūt (Saul), and it is he who is said to have been evoked by the witch of Endor. His identification with one of the prophets of the Ark of the Covenant is a further detail derived from the history of Samuel. Some identify him with al-Bhūth (g.a.), or even with Dhū 'l-Kifl (g.a.), who is generally regarded as his successor.

**Bibliography:** In addition to the references quoted in the article, see Tabari, I, 542 ff., 559; Kūnā' (Eisenberg), 248-50; Thālabī, *Asmā' al-Mudallāh*, Cairo 1370/1951, 239 ff.; J. Horowitz, *Koranische Untersuchungen*, 152.

(M. SELIGSON-G. VAJDA)

**ALJAMIA**, Spanish transcription of the Arabic *al-ʿadamiyya* ("non-Arabic"), a term used by the Muslims of al-Andalus to denote the Romance dialects of their neighbours in the north of the Iberian peninsula—dialects now also called *al-ʿadamiyya*. It was only in the latter Middle Ages that the Spanish equivalent of this term, *aljama*, acquired the particular meaning which is attributed to it to-day, namely: a Hispanic Romance language (Portuguese, Galician, Castilian, Aragonese or Catalan, depending on the district) written, not in Latin, but in Arabic characters. The literature in *aljama* which has been preserved is therefore termed *aljama* literature.

This *aljama* literature, of which there exists a number of manuscripts, has been the subject of numerous studies in Spain itself, especially towards the end of the 19th century. It comprises a general works of a religious or legal nature in addition to poetical compositions, usually didactic in tone, and a few works of fiction in prose. In considering this literature, a distinction must be made between the works written in Spain itself, before the expulsion of the Moors by Philip III in 1609, and those, more numerous, written after that date, in particular by the Moorish communities established in Tunisia (see **MORISCO**). In the first group, the most important work, which apparently dates back to the 14th century, is the anonymous *Libro de Yūsuf*, by R. Menéndez Pidal, who has edited and commented on this poem (*Poema de Yūsuf: materiales para su estudio*, in *Revista de Archivos, Bibliotecas y Museos*, VIII, Madrid 1902; new edition, Granada 1952), thinks it is the work of an Aragonese Morisco. It consists of a version in Spanish verse of Kur'an, XII (*Surat Yūsuf*), embellished with elements borrowed from Muslim legends of the prophet. In the second group, the poetical compositions of another Aragonese Morisco, Muhammad Rabadān, a native of Rueda de Jalón, deserve special mention; composed about 1601, they consist of strophic poems which narrate,

following in general Abu'l-Hasan al-Bari, the various episodes of the *sira* of the Prophet. About the same period (beginning of the 17th century), an account of a pilgrimage to Arabia was composed, also in rhymed strophes, by a Morisco known as Albalchante (*al-baldhi*) of Puay Masadān. An anti-Christian polemical poem composed in 1627 by Juan Pérez, a Morisco from Alcalá de Henares, who had emigrated to Tunisia, and whose original name was Ibrahim Taybil, must also be mentioned.

Dating from the same period are the Muslim apologetics written in *aljama*, for instance that composed in 1615 by 'Abd al-Karīm b. 'Allī Pérez. To this literature also belong some apocryphal narratives concerning the Prophet or one of his Companions (for instance Tamīm al-Dīrī). Others recount biblical episodes or are biographies of more or less legendary characters (especially Alexander *Dhū 'l-Karnayn*).

Finally attention must be drawn to the discovery of private letters written in *aljama*, the most characteristic—write, hardly later than the capture of Granada in 1492 by the Catholic Kings—has recently been published in facsimile by I. de Las Cagigas *Una Carta aljamíada granadina*, in *Arábica*, 1934, 271-5. (E. LÉVI-PROVENÇAL)

**Bibliography:** Manuscripts: There are scattered MSS at Paris, Algiers, Aix-en-Provence, Uppsala, the British Museum, Cambridge, the Escorial. For the few MSS at Toledo see: A. González Palencia, *Noticia y Extracto de MSS árabes y aljamíados*, in *Miscelánea de Estudios y Textos Árabes*, Madrid 1915. The three main collections are: (1) that of the Biblioteca Nacional, Madrid (see F. Guillén Robles, *Catálogo de MSS árabes*, etc., Madrid 1889); (2) the "manuscritos de la Junta" now at the Escuela de Estudios Árabes, Madrid. This is particularly interesting as preserving almost intact a large hoard of MSS found at Almonacid in 1884 (see J. Ribera and M. Asín, *Manuscritos árabes y aljamíados de la Biblioteca de la Junta*, Madrid 1912, which also includes a description of MSS at Saragossa). (3) For the Gargayans collection at the Real Academia de la Historia, Madrid, the only description is in E. Saavedra, *Índice de la Literatura Aljamíada*, appendix to his *Discurso*, in *Memorias de la Real Academia Española*, VI, Madrid 1878, still a fundamental work, but made before the discovery at Almonacid. On the spelling of the text, see J. D. M. Ford, *Old Spanish Subjunctives*, Boston 1906. Published works in *aljama*: P. G. J. Ribera and M. M. Sánchez, *Selección de textos aljamíados*, Saragossa 1888; H. Morf, *Poema de José*, in *Gratulationschrift der Universität Zürich an die Universität Zürich*, Leipzig 1883; K. V. Zetterstéen, in *MO*, 1921, 1-174; R. Menéndez Pidal, and I. de Las Cagigas, see above. In accurate transliteration: J. Cantónau, in *Jā*, 1927, 9-17; J. N. Lincoln, in *American Geographical Review*, 1939, 183 ff.; idem, in *Publ. Mod. Lang. Assoc.*, 1937, 651 ff.; A. R. Nykl, *A Compendium of Aljamíada Literature*, in *Revista Hispanica*, LXXVI; M. J. Müller, in *SBBayr. Ak.*, 1860, 201 ff.; M. Schmitt, in *Romanische Forschungen*, 1901, 315 ff.; D. Lopes, *Textos em aljamia portuguesa*, Lisbon 1897. In free transliteration: F. Guillén Robles, *Los aljamíados*, 3 vols. (Madrid 1883-6; idem, *Leyendas de José y de Alejandro Magno*, Saragossa 1888; *Historia de los amores de París y Viana*, in *Revista Histórica*, 10, XXII, Barcelona 1876; M. de Pano y Ruete, *Las Coplas del Peregrino de Puay*

*Monjón*, Saragossa 1897; P. Longia, *Vida Religiosa de los Moriscos*, Madrid 1913; J. Sánchez Pérez, *Partido de Horencas entre los Musulmanes del Rito Maloquí*, Madrid 1914. Works written in Latin characters: 'Isā b. 'Ibrāhīm, *Suma de los Principales mandamientos*, ed. P. de Gargayans, in *Memorial Histórico Español*, V, Madrid 1853; H. E. J. Stanley, *The Poetry of Mohammed Rabadan*, in *JRAS*, 1867-72. Studies: J. Ribera, *Disertaciones y Opúsculos*, I, Madrid 1928, 493 ff.; P. G. J. Ribera, in *Homage to Colera*, Saragossa 1904, 537-49; R. Basset, in *GSAL*, 1893, 3-81; J. Oliver Asín, *Un morisco de Fuen, administrador de Lope*, in *Arch.*, 1933, 417-38; J. Morgan, *Mohammedanism fully explained*, London 1723-5; A. González Palencia, *Historia de la literatura aljamíada-española*, Barcelona 1945, 305-9. (L. P. HARVEY)

**'ALKAMA** B. 'ABADA AL-TAMIMI, surnamed al-Fahl, early Arab poet, was active in the first half of the 6th century. His poetry relates to the Lakhmid, which took place between the Lakhmid and the Ghassanids; as the spokesman of his tribe he is reported to have obtained, by reciting a *hujā* (no. 2, ed. W. Ahlwardt, *The Diwan of the six ancient Arabic poets*, London 1870), the release of his brother Sha'n and the other Tamimites whom the Ghassanid king, al-Harith b. Djabala (ca. 529-569), had taken prisoner. Arab tradition connects 'Alkama with Imru' al-Kays (d. ca. 540), with whom he is supposed to have fought and won a literary contest as a result of which Imru' al-Kays divorced and 'Alkama married the empress Dujāna. The style of their work would bear out the suggestion of some sort of artistic association such as the anecdote implies. The oft-remarked similarities between 'Alkama (cf. Ahlwardt), and Imru' al-Kays, 4 (Ahlwardt), indicate a certain confusion of the two literary personalities on the part of the *ruwā*. Already Ahlwardt, *Bemerkungen*, 68 ff., noted that in all likelihood 'Alkama is the older ode. 'Alkama shares with Imru' al-Kays a predilection for the longer and more tranquil meters. Stylistic and thematic kinship justifies the grouping of the two poets together as representatives of a distinct "school". A certain enrichment of the techniques of description may possibly be traced to 'Alkama. The poems Ahlwardt, 8 and 12, are spurious, so the chronological conclusions which Nöldeke (*Die Ghasanischen Fürsten aus dem Hause Gafna's Abh. Abad.*, D. Wissenau, Berlin 1887, 36) and, following him, Brockelmann (I, 48) have based on them must be dismissed. The Arab critics include 'Alkama among the *hujāl* or powerful poets (literally "stallions").

**Bibliography:** The *Diwan* of 'Alkama was first published, together with a German translation, by A. Socin, Leipzig 1867, then the text alone, by Ahlwardt in the edition mentioned above; text with commentary by al-'Alam al-Shantamari, by Muhammad Ben Cheneb (Algiers 1951); further references: *Aghād*, VII, 127-8; XXI, 271-3; de Slane, *Le Diwan d'Aswad 'Adhān*, Paris 1857, 80; Caussin de Perceval, *Essai sur l'histoire des Arabes*, II, 314; G. E. von Grunbaum, in *Orientalia*, 1930, 328-45. (G. E. VON GRUNBAUM)

**AL-'ALKAMĪ** is, on the authority of the geographers Kūdhama and al-Masūdī, the name used in the 3rd-4th/10th-11th centuries for the western branch of the Euphrates, between its bifurcation at or near the modern Hindiyya Barrage (44° 16' E, 36° 40' N) and its loss in the medieval Great Swamp. The proportion of Euphrates water using this or the eastern (al-Sūrā', or modern Hilla) channel, has

varied from period to period throughout medieval and modern times; the western branch has finally been dominant, and the eastern merely a controlled canal, since the early 20th century; but al-'Alkāmī, using a bed not necessarily identical with the modern "Hindiyā river", probably represented the main stream. It passed by the important towns of al-Kāntara (on both banks) and Kūfa (right bank). The name of the river Ibn al-'Alkāmī [e.g.] was taken from the river.

*Bibliography:* Le Strange, 74; S. H. Longrigg, *Four Centuries of Modern Iraq*, Oxford 1925, 311; cf. also al-FARĀHĪ (S. H. LONGRIGG).

ALKANNA [see al-HINNA?]

ALKĀS MIRZĀ (or ALKĀS, ALKĀSP), second son of Shāh Ismā'īl I of the Safawī dynasty, and younger brother of Shāh Tahmāsp I. Born Tabriz 921/1515-6, he fought a successful action at Astarābād against the Uzbeks in 939/1532-3. In 945/1538-9 he subdued Shirvān, and was made governor of that province by Tahmāsp. He rebelled soon afterwards, but was granted a conditional pardon through the intercession of his mother Khān Beg Khānum. At the instance of Tahmāsp, he fought an inconclusive campaign against the Circassians, but again rebelled, minting his own coinage and including his name in the *shāhī*. In 953/1546-7 Tahmāsp launched his second Georgian expedition, and from Gāndjā dispatched 300 men against Alkās, Alkās, worsted in several engagements, fled to Constantinople via the Kōpāsk plain and the Crimea (954/1547-8).

He incited Sulaymān I to send another expedition against Persia, and in 955/1548-9 he was sent ahead of the main Ottoman army which advanced on Tabriz via Sīwās and Erzurum. The success of Tahmāsp's policy of laying waste the countryside obliged Sulaymān to retire from Tabriz after only five days. Alkās accompanied Sulaymān at the capture of the fortress of Wān, and interceded for the garrison. But he had fallen in Sulaymān's estimation because his presence in Persia had not evoked the support promised, and Sulaymān willingly agreed that Alkās should leave Baghdad and raid Persia with a force of irregulars (he refused to allow him any Janissaries). Alkās marched to Hamadān, where he destroyed the palace of his brother Bāhrām and captured his son Bādī' al-Zamān Mirzā, and thence to Rum, Kāhīn and Isfahān. Then, instead of complying with Sulaymān's order to rejoin him, he went on to Shīrāz, and sent a conciliatory letter to Tahmāsp. (Ibn al-Hidjāz 955/January-1549). Proceeding towards Baghdad, he was opposed by Muhammad Pasha, Governor of Baghdad, and fled to Ardānā, where he was handed over to Tahmāsp by Sulaymān Beg, the ruler of Ardānā, on condition that his life was spared. According to Tahmāsp's own account, Alkās was imprisoned at Alandī, where he was killed a few days later, ostensibly as the result of a private feud, but probably by Tahmāsp's connivance.

(R. M. SAVORY)

ALLĀH, God the Unique one, the Creator and Lord of the Judgment, polarizes the thought of Islam; He is the sole reason for its existence.

ALLĀH was known to the pre-Islamic Arabs; he was one of the Meccan deities, possibly the supreme deity and certainly a creator-god (cf. Kur'ān, xlii, 16; xlix, 63, 65; xxxi, 23; xxxix, 38; xliii, 87). He was already known, by Antonomasia, as the God, al-*Ilāh* (the most likely etymology; another suggestion is the Aramaic *Alāhā*—For *Alāh* before Islam, as shown by archaeological sources and the Kur'ān, see *ilāh*).

But the vague notion of supreme (not sole) divinity, which *Alāh* seems to have connoted in Meccan religion, was to become both universal and transcendental; it was to be turned, by the Kur'ānic preaching, into the affirmation of the Living God, the Exalted One.

I. ALLĀH IS THE SUR'ĀN.

A Muslim tradition tells us that *shā* *surā* *xcvi* was the first to "come down" to the Prophet Muhammad; so the mission entrusted to him was from the first the preaching of the Word of *Alāh* ("Preach", *xcvi*, 1 and 3). *Alāh*, as is said to Muhammad in the first *surā*, is *thy Lord* (*rabbaka*, *xcvi*, 1), Creator of man, the Very Generous, "Who teaches man that which he knew not" (*xcvi*, 3). The great Kur'ānic leit-motiv, *bismillāh al-Rahmān al-Rahīm*, "in the name of God, the merciful Benefactor" (cf. R. Blachère's translation), opens the announcement of the imparted message and is repeated at the head of each *surā*. It may be that it contains a reference to the *Rahmān* of pre-Islamic south Arabia, and that *Rahmān* should be taken as a divine proper name. The fact remains that the root *RHM* came to connote, in the course of the Islamic centuries, precisely the concept of benefaction, of clemency, of mercy, and that the expression *rahmat Allāh*, "God's mercy", was to become, in the spiritual writers, as it were an evocation of the mysterious profundities of divinity in its relations with man.—Hence, from the beginning of Muhammad's preaching, the affirmation of God, *Alāh*, as benefactor, creator, bountiful, imparting instruction to men through a messenger, of whom He is, in a special way, the Lord.

(A) *The great themes.*

From a historical point of view, we shall accept the distinctions generally admitted to exist (with some differences as to detail, see Nöldeke, Grime, Blachère) between the three Meccan periods and the Medinan period, distinctions which roughly agree with some Muslim traditions (cf. *sur* *lxv*). But although these various periods give us a multiplicity of perspectives and new flashes of illumination, there is strictly speaking no progressive revelation of *Alāh*. The Kur'ān is not a theological exposition of the existence, nature and attributes of God. Muslim faith has always regarded the text of the Kur'ān as God's Word made manifest to man, in which God says what He wishes about Himself, God is "the benefactor Who teaches the Preaching" (iv, 1-2), which is addressed to "the pious who believe in the Mystery" (*ghayb*) (ii, 2-3). God remains mysterious, unapproachable (xlii, 50-51). He is declared in His transcendent perfections and in His dealings with the world; and every action of the Almighty (*al-'Alīm al-'Alīm*) is the restatement of the inscrutable mystery, for "the sight cannot perceive Him, while He can perceive the sight" (vi, 103).

Without a risk of breaking the very rhythm of *suras* and verses, it is not easy to pick out, still less easy to classify, the themes concerning God. Three seem to us to predominate, but they must be taken as a whole.

1. *God of creation, judgment and retribution.* He is "creator (*khalīq*) of all things" (xlii, 16). He is the absolute originator (*hādī*). He creates what He wishes (xlii, 49; v, 17) by His command (*amr*), by the *kun* ("Be!") which causes existence (e.g. xxxvi, 82; xi, 117). He is the bestower of all good, the supreme judge (*hākim*) and "the justest judge" (*adl*, 8).

The oldest *suras* proclaim God's unlimited sovereignty (*rabbūbiyya*) over His creation, particularly His human creation, and His attributes of sovereign judge and king (*malik*). The final shock is given to minds and hearts by the news of the Judgment (*yawm al-dīn*; see all *suras* *lxvi*) and the imminence of the Hour (lii, 50-57; liv, 1, etc.), which is known to God alone (e.g. lxxix, 43-44; xliii, 85). The manner of this preaching may vary, but never its essential contents. For variations of theme relate less to God in Himself than to relations between God and the community of believers, depending on obstacles encountered or successive organizations. Thus, for example, the dichotomy of the Elect and the Damned (*lxxiv*) at the end of the first Meccan period, and the Medinan leit-motiv of the "hypocrites" (*munaḍḍikān*) "whom God will mock" (ii, 15).—The Meccan *suras* of the first two periods stress the eschatological advent of the Hour; in them, God appears essentially as the sovereign judge, having jurisdiction because He is the omnipotent creator of man (cf. lxxviii, 17-19, which follows logically on lxxiii, 6-8; lxxx, 18-21; xiv, 48, etc.). The theme of retribution is resumed however in the Medinan *suras* (xxxiii, 63; xiv, 25-26, etc.). Here and there perspective doubtless changes. At Mecca there is blunt teaching, intended to bring about an admission of faith in the mystery of God, the Judge and Creator, by means of the rhythmic rapping-out of asseverations. At Medina the same mystery is as it were recalled; presented to the heart's recollection (*dhikr*), as a witness to the eschatological value of daily life itself, urging the Muslim, whether he be "believer" or "hypocrite", to be constantly mindful of the Hour, in his every action; therefore urging the "hypocrite" to the "return", to conversion.

The same variations and resumptions of a single theme recur in the presentation of the divine management of human history. The Medinese *suras* relate in minute detail the story of Adam, proceed to the history of the prophets, from Noah to Jesus, and state what God's will is of the community of believers. But there it appears as a sequence of discontinuous interventions and revelations (cf. *hadar*) of God, which, as the Meccan preaching had already said, encompasses all things, both in and out of time. For God is "the King of life and death" (xcii, 13); a theme constantly reverted to later, e.g. xv, 23; ii, 258, etc.). From the very first *suras* Noah is evoked (liii, 52), and Abraham and Moses (lxxx, 19; liii, 36-37), and the tribes of Thamūd (xci, 17) and 'Ād (lxi, 51, etc.). In the second Meccan period, God's plans for the Nations, for Thamūd and 'Ād, mingled with intimations of the Judgment (cf. lix and lxxix); to the second and third Meccan periods belong the most fully developed accounts of the history of the prophets. Mixed with the theme of the judgment of peoples, that of the judgment of every individual human being is constantly stated.

2. *God, Unique and One in Himself.* In all of the earliest *suras*, God is *thy* Lord. Subsequently He is called Creator, Benefactor, Help, Judge. He is the Most High (lxxx, 1). He is given these names by virtue of those attributes of His godhead which have

some connection with man. The particular attribute of His godhead in which the faith of Islam was to have its focus is first stated as an answer to man's errors and impieties: God the One.

*Sūra* liii, 39 and 43, contain a condemnation of the Meccans who have been accustomed to ascribe partners and daughters to Allāh. For Allāh is *waḥid*, sole divinity. "Your God is One" (xxxvii, 4), the believers are told. The assertion is constantly repeated throughout the Book, constantly restated in the Medinan period (e.g. ii, 163). It is the very core of the preaching concerning God: "It has been revealed to me only that your God is One God"; Muhammad says again and again (e.g. xli, 5, etc.).

But in a verse of the first Meccan period is found what is perhaps a stronger affirmation that Allāh is One in Himself. In relation to man, sole divinity, *waḥid*; in Himself, One in His nature of deity, *ahad* (xcii, 1).—Sole and One, the two Names come together in the Unity, the *tawḥid*, and its absolute transcendence. Such is the meaning of the "witness" of Islam, the *shahāda*. As early as that 73rd *surā*, which, according to the traditions, gave rise to the conversion of 'Umar, the assertion appears: "There is no divinity—save Him (*ahwā*)!" (lxxiii, 9). The second Meccan period declares: *innam Allāh—ilā ilāh* *lā ilāh* *illā* *And*, "I, I am God—there is no divinity save Me" (lx, 14); and that the mystery of this divine "I" is the Real (*ḥaqīq*, xx, 114; xviii, 44).—Lastly, the short *surā* xcii, of uncertain date (referred by some to the Medinan period), is known as the *surā* of Unity (*tawḥid*) *par excellence*: God Alone, the Master, not begetting and not begotten; without equal: an assertion of the unity of the divine nature as such, its intrinsic mystery unfathomed (cf. xliii, 91).

3. *God omnipotent and merciful.* The twofold aspect of the mystery of God in relation to His creation: Lord of the worlds (lxxxiv, 29; a very frequent expression) in His unquestioned omnipotence and His forgiving benevolence, is found in all periods of the Kur'ān alike, with varying shades of expression and emphasis. The quality of omnipotence is the first enunciated. He is "the Lord of Easts and Wests" (lxx, 49; cf. lxxii, 9); but it is precisely this which encourages the believer to see in Him a protector, a surety (*waḥid*, lxxii, 9) and to exalt that power of mercy and forgiveness on which the text is so insistent. The names *rahmān*, *rahīm*, *ghafūr*, *ghabūr*, benefactor, merciful, forgiving, overlooking, are among those which occur most frequently. What is first brought into notice is, on the one hand, the inscrutable omnipotence of God and, on the other hand, the total and trusting committal of oneself which is demanded by night, by way of response to this omnipotence, of all who devote themselves to the Lord. A text of the Medinan period (iv, 3) makes the "committal to God" (*tdāw*) into the religion itself, but already in the eschatological *suras* of the first period, the believer is exhorted to entrust himself to the gracious bounty (*ni'ma*, xciii, 32) of the Lord. God is the refuge and the guide (xciii, 6-7); the whole of *surā* lv (of the second Meccan period, according to Grime; with later additions, according to Bell) proclaims the wrath of the Merciful, Lord of majesty (*djalāl*) and generosity (*ikrām*), against those who reject His benefactions.

(B) *The Signs and Names of Allāh.*

Thus God, through His prophets, is continually revealing to man the unexpressed mystery of His

for certain criticisms raised in Islam against its legitimacy). We shall take it in its established form, assuming a knowledge of its historical origins, the influences it underwent, the formation of the various schools (see *taḥṣīl*). A reminder: 1) under the Umayyads: the Muḥāḍites, Kadārites, Ḍabābites; 2) the Muḥāḍites, originally political (1st/2nd century), then doctrinal (2nd-3rd/8th-9th centuries), who triumphed under Ma'mūn but were subsequently regarded as "heterodox" for centuries; 3) from the 4th/10th century onward, the official Aḡharite and Hanafite-Māturīdite lines. The conclusions vary with the diverse attitudes towards the relation of reason ('aql) and the Law (shar'), or of reason ('aql) and tradition (naql, taḥṣīl), or of rational ('aql) and authoritarian (naql) proofs.

The 'ilm al-halām came to sustain itself by means of two other "religious sciences": 1) the science of *ḥadīth* provided texts regarded as authoritative proofs, which took up one theme or another of the Kur'anic teaching, in a picturesque, even mythical, manner (cf. the six "authentic" collections, *ṣaḥīḥ*, particularly the *ṣaḥīḥ al-bayḥaqī* of Buḥārī or *corpus*). Numerous traditions relate, on the one hand, to God's mercy and forgiveness (e.g. "My mercy outweighs My wrath or takes precedence of it", Buḥārī, *Taḥṣīl*, 169, 175); on the other hand, to His absolute kingship ('I am the King; where are the kings of the earth?" id., 167, 181); on the one hand, to human responsibility (texts in Buḥārī or Muslim, chap. *Kadār*), on the other hand, to the preordained decree (e.g. these oft-quoted *ḥadīths*: "All the hearts of mankind are like one single heart between two of the fingers of the Merciful", and: "These for heaven, and I care not; those for hell, and I care not"). Many *ḥadīths* had great influence on the formation of current notions and the popular attitude concerning God.

2) The science of *tafsīr*, or exegetic interpretation, played a leading part in the use and understanding of those Kur'anic verses which speak of God, particularly the anthropomorphic passages.

*Ḥadīth* and *tafsīr* were employed in various ways by the schools of *ḥalām*.

If we refer to the problems of the *ḥalām* (which is, in its essentials, of Muḥāḍite origin), we find two great principles directly concerning God: 1) the principle of *taḥṣīl* or divine unity; 2) the principle of 'aql, or the justice of God in connection with the requital of human actions. As against the "free-thinkers" of their day, the Muḥāḍites had presented themselves as "the people of unity and justice", *aḥl al-taḥṣīl wa 'l-'aql*. These problems continued to inspire later schools. Only their titles changed. The great classic manuals of the Aḡharites and Māturīdites (e.g. *Sharḥ al-Mawāḍif* of Ḍurḍjānī, *Makṣid* of Taḥṣīlī, etc.) called the first principle *waḥdīyāt Allāh wa 'l-ṣifāt* ("the existence and attributes of God"), and the second *ḥukūmah al-'aql* ("the actions of the Exalted One"). Here are the main questions raised in connection with both.

#### (A) *Taḥṣīl*.

##### 1. The Existence of God (*waḥdīyāt Allāh*).

All schools agree in quoting those Kur'anic verses (cf. above) which bid the reason to "reflect on the signs of the universe", and "use them to the affirmation of the Creator. But: (a) according to the Muḥāḍites, there is involved in this an obligation inherent in the nature of reason, prior to the promul-

gation of the Law; (b) according to the Māturīdites, reason should, by rights, have been able to attain to the knowledge of its Creator, but was actually brought to it by the promulgation of the Law; (c) for the Aḡharites, the employment of the reason and of reasoning in order to rise to God, is a purely legal (revealed) obligation. Cf. al-Ḍurḍjānī, *Sharḥ al-Mawāḍif*, Cairo 1325/1907, I, 251 ff. In other words: if the Law had not laid down the obligation, human reason could never have attained to the existence of God (cf. al-Ḍurḍjānī, *al-Makṣid*, Cairo, s.d., 77-8). The affirmation of the existence of God, for the Aḡharite school as a whole, is therefore the result of a rational ('aql) argument, prescribed by an argument of authority (here, *ḥadīth*).

Whatever the nature of this obligation, the schools are as one with regard to the rational argument itself. What is involved is a proof of the existence of God a *novissime* mundi, linked with the entirely contingent and perishable character of the world, as the Kur'ān teaches and reason can convince itself. For the *ḥalām*, the temporal beginning and end of the world are demonstrable truths. There is then an inference (*istidlāl*) which proceeds, with no universal middle term, from this utter inadequacy of the created to the necessary (*waḥdīyāt*) existence of the Creator, Who alone exists from all eternity and alone is self-subsistent (truth being *ḥaqīqīyāt*).

This inference, in the early days of the *ḥalām* (Muḥāḍites as well as Aḡharites) was set out as a piece of reasoning in two terms. Among the later *mutakallimīn*, more directly imbued with the Aristotelian logic, it frequently took the shape of a syllogistic deduction (both forms are found in al-Ḍurḍjānī). The argument is given in all the manuals as a "decision" (*ḥaḍf*) proof. Only rarely, under influences proceeding from the *jalāfa*, does it take the form of the proof a *contingentia mundi* in the strict sense. The world is *muḥdath*, and in the treatises of *ḥalām* this term stays very close to its etymological sense of "begun" in time (see the works of Wessink and S. de Beaucourt, cited in the bibliography, on the proofs of the existence of God).

#### 2. The Attributes of God (*ṣifāt Allāh*).

(a) *Relations between essence and attributes*. This was one of the most controversial topics. Some old traditionists held fast to the letter of the texts and set themselves against all research that might be called rational. Their opponents, exaggerating the rigidity of the position they were attacking, called them *magṣūḥīn* ("compensators"), who give bodily attributes to God, or again, contemptuously, *ḥaḡḡīyā*. They accused them of *ḡaḡḡ*: comparing God to the created.

In their anxiety to purify the concept of *taḥṣīl*, the Muḥāḍites extolled, on the contrary, *taḥṣīl*, "withdrawal", the *ṣifāt* *remotionis* which they applied with extreme rigour: one must deny God every created thing as the Kur'ān commands. The Ḍabābites, disciples of the Ḍabābīte Ḍahm b. Salwān, had practically denied the existence of the attributes, God being known only as an inscrutable omnipotence. The Muḥāḍite *taḥṣīl*, on the other hand, took the theistic standpoint of a ruling God. They recognized the divine attributes of knowledge, power, speech, etc., but asserted that they were "identical with the essence", a distinction which was, for them, hardly more than nominal.

The "orthodox" schools likewise practised *taḥṣīl*, i.e., they denied God any resemblance to anything:

He is neither body nor substance (*ḡṣarḡ*), in the sense of bounded substance) nor accidents, nor is He localized, etc. (It must be noted that the Karrāmites had recognized God as substance, by which they understood self-existent).—The Aḡharite reform, in the name of the "golden mean", held itself equally aloof from the Muḥāḍite tendency to prove everything rationally, and from the literalism of the *magṣūḥīn*. This was the famous principle *biḥāḡ hayf wa lā taḡḡḡ*, "without 'how' or comparison". It accused the Muḥāḍite *taḥṣīl* of amounting to the same as *taḡḡ*, divesting the attributes of all reality and making of God no more than an empty concept. The Aḡharites, for their part, while recognizing the entire reality of the attributes, since the Kur'ān informs us of them, yet affirmed that this reality can in no way compromise the perfect divine Unity. Simultaneously opposing Muḥāḍites and *jalāfa*, and following al-Ḡazālī, they later arrived at this approximation: "the attributes subsist in the divine essence; they are not God and are nothing other than He".

A kindred solution was advanced by certain Aḡharites who remained faithful to the conceptual theory of "modes" (*ahwāl*) of the Muḥāḍite Abū Ḥaḡhīm: e.g. al-Ḍurḍjānī (13th/14th century); on this point the so-called "modern" school (6th-7th/12th-13th century) of Faḡḡ al-Dīn al-Rādī, Ḍurḍjānī, etc. was at variance with him. The "mode" (*ḡḡ*) is an attribute which is attached to an existing thing but is itself qualified neither by existence nor by non-existence: that is how the relation between the divine essence and the attributes is to be understood.

This difficult theological problem was served by a philosophical instrument which went on striving to improve itself, and making progress, though not without occasionally stumbling. Thus, at the beginning of the Hanafite-Māturīdite line, we find in the *Fikḡ Akḡar II* (text of the time of Aḡḡarī), that God is a "thing" (*ḡḡ*). Much though this statement might later be ridiculed by some of the *mutakallimīn*, influenced by Greek thought, as used by the ancients it is clearly to be taken in the sense of "existing reality": "Allāh is thing, not as other things but in the sense of positive existence" (*Fikḡ Akḡar II*, Art. 41 of Wessink, *Muslim Creed*, Cambridge 1902, 190). It was in this same sense that the term "body" or "bodily substance" (*ḡḡ*) was used in speaking of God; this practice of certain Karrāmites and Hanbalites was noted by Macdonald (EP).

The Māturīdites on the whole preferred not to distinguish God's attributes from Himself but to say: "God is knowing and has a knowledge which is attributed to Him in the sense of eternity", etc., thus laying stress on the divine Names (the Knowing, Willing, Powerful, Speaking, etc.).

(b) *List of attributes*. The guiding principle was to affirm no attribute not expressly indicated in the Kur'ān: the principle of *taḥṣīl*, "leaving it to God" to elucidate through scripture. The majority of the doctors of *ḥalām*, however, considered that it was not being false to the text to pass from the present participle, for example, to the noun, in accordance with the laws of language. Thus there evolved, in the course of the centuries, a list of attributes, enumerated in no particular order, to begin with (so in the *ḥalām* of al-Aḡḡarī), and then, especially from al-Ḍurḍjānī onward, sorted out and classified.

The order adopted, indeed, the appellations themselves, vary with the different schools (cf. *Sira*). To adhere to one commonly-held view, we offer the following list: 1) attribute of essence (*ṣifāt*

*al-ḡḡ*); *waḡḡḡ*, existence; in the case of God, not distinguished from essence; 2) "essential" (*ḡḡ* or *maḡḡ*) attributes, sometimes divided into (a) "negative" attributes which emphasize the divine transcendence: eternity (*ḡḡ*), permanence (*ḡḡ*), dissimilarity to the created (*al-muḡḡḡḡ al-ḡḡḡḡḡ*), self-subsistence (*ḡḡ* or *ḡḡ*),—and (b) *maḡḡ* attributes, "adding a concept to the essence": power (*ḡḡ*), will (*ḡḡ*), knowledge (*ḡḡ*), life (*ḡḡ*), speech (*ḡḡ*), hearing (*ḡḡ*), sight (*ḡḡ*), perception (*ḡḡ*): some denied that this was an attribute; 3) attributes of "qualification" (*maḡḡ*—*ḡḡ*), the *maḡḡ* attributes taken verbally: having power, willing, knowing, ... 4) attributes of action (*ḡḡ* or *ḡḡ*), designating not an intrinsic quality but a "possibility" of God, which God may or may not do: visibility (*ruḡḡat Allāh*), creation (*ḡḡ*), actual creation of the contingent world (the Māturīdite *ḡḡ*), command (*amr*), decree and predestination (*ḡḡ* and *ḡḡ*), whose relations with the divine knowledge and will vary according to the school, consent (*ḡḡ*: especially in Māturīdism), etc.

The Aḡharites and Māturīdites agree in taking the *maḡḡ* attributes as eternal, even if their object is contingent; against the Muḥāḍites who maintained, for example (school of Baḡra), that God has a "contingent" knowledge, with a beginning, of free human acts. On the other hand, Aḡharites and Māturīdites diverge over the "eternal" or "begun" character of the attributes of action: the Māturīdites generally regard them as eternal.

All but four of the attributes depend on the *ḡḡḡḡ*: they are taught by the Kur'ān but human reason can "prove" them. The other four, visibility, speech, hearing and sight ("perception" is sometimes included), depend on the *ḡḡḡḡḡḡ* and are knowable only because they have been revealed.

(c) *Two controversial attributes*. The "vision of God" (attribute of visibility) and Speech were hotly debated.

The vision of God (*ruḡḡat Allāh*) is understood as being through the eyesight, *bi 'l-ḡḡḡ*. The pious traditionists accepted it absolutely, interpreting in this sense Kur'ān, lxxv, 22-23, and numerous *ḡḡḡḡḡ*. The Muḥāḍites denied it no less absolutely, interpreting the Kur'anic text by a philosophical *laḡḡ* (cf. below). Aḡharites and Hanafite-Māturīdites upheld the vision of God, but emphasizing the *biḡḡ hayf*: every man will see God with his eyesight on the Day of Judgment, the elect will see Him (transiently) in Paradise,—but they will not see Him as one sees an object spatially situated and limited, and it is impossible to specify the manner of this vision (*ḡḡḡ*, Cairo 1348 h., 14, *Fikḡ Akḡar II*, 17).

The "traditional" (*ḡḡḡḡ*) attribute of Speech is of major importance, since by means of it God manifests Himself to men. The Muḥāḍites, precisely because of this manifestation in time, made of it a contingent "created" Speech (whence the thesis of the created, *muḡḡḡḡ*, Kur'ān). The Kur'ān is the Speech of God, but the latter is contingent. The Aḡharites, taking up that great affirmation which had earned Ibn Hanbal imprisonment and flogging, saw in it essential (*maḡḡ*) Speech, subsisting by the very existence of God. Hence the thesis of the "uncreated Kur'ān" (*ḡḡḡḡ muḡḡḡḡ*, *ḡḡḡ*, 20-22). But the school distinguished between it and its "created" expression, the Book and its recitation by human lips. In the 8/14th century, Ibn Taymiyya, meditating on and reviving the faith of the "pious ancients" (*ḡḡḡḡ*), found Muḥāḍites and Aḡharites equally

wanting: he reaffirmed the essential Speech of God, which expresses Him and sublimates in Him, and declared that this Speech, in its mystery, is Torah, Gospel, Qur'an (Futūḥ, Cairo 1329 b, v, 265-7).

### 3. *Mutaghābiḥ* Verses.

The veneration of the Qur'anic text, coupled with the inevitable mystery of the One God, soon confronted Muslim thought with the case of the "ambiguous" anthropomorphic (*mutaghābiḥ*) verses, which apparently liken God to the created. Are they to be accepted in pure faith, or should they be interpreted (*ta'wīl*) by exegesis (*tafsīr*)?

(a) The ancient traditionists took these verses at their face value. But it would be idle to bring against them an unqualified accusation of "corporealism", as their opponents did. The Ash'arites themselves declared valid the attitude of the "ancients" who, eschewing all *ta'wīl* or interpretation, took refuge in the *tafwīd* or commitment to God. God sits on His Throne (*istiwāʾ*), descends toward the earth, has eyes, has a hand, because the text says so. But no one knows the acceptation given by God to these terms; this attitude was attributed to Malik b. Anas in particular. It is hardly necessary to add that an attitude like this became "corporealist" only insofar as it tried to conceptualize itself and to justify itself discursively, but not insofar as it interiorizes itself in adherence to faith.

(b) But the Mu'tazilite schools, for their part, wished to justify dialectically the Muslim notion of God, in face of the Greek-inspired "God of the philosophers". On the one hand the emphasis placed on the Oneness of God, on the other their confidence in the rational criterion (*maʾnā ʾakhlī*), led the Mu'tazilites to an extensive use of *ta'wīl*. Their representative in *ta'wīl* was al-Zamakhshari, who adopted for his own purposes the philological method of al-Tabari. In this way "shining countenances, looking at their Lord" became, as al-Jubbaʾi suggested, "beautiful countenances, aspiring to the bounty of their Lord": the vision of God could be denied without contradicting the Qur'an.—Recourse may have to figures of speech, as well as to philology. The *miṭāḥ*, the covenant granted by God to the race of Adam in pre-eternity (vii, 172) was regarded as a metaphor (*maḥāṣ*), as were all the anthropomorphic passages.

(c) The first Ash'arites reacted against this use of reason in *tafsīr*. For them, the anthropomorphic terms, including the sitting on the throne and the motion in space, are just the expression of actions and attributes which are consistent with the divine Majesty but of which we can know neither the nature nor the manner, and which have nothing in common with the corresponding human actions or attributes. This was the *hiḍā kayf* attitude, often confused with that of the "ancients" and advanced by the master, al-Ash'ari himself.

(d) Later, under an influence picked up from the Mu'tazilites and especially from the *falāsifa* opposition, another attitude, known as that of the "moderate", was admitted into the *kalām*. *Ta'wīl* was permitted. Thus al-Djawayni, Fakhr al-Dīn al-Rāzī, etc. The "hand" of God was interpreted as "the protection extended over mankind". His "eyes" denote "the intensity of His providence and watchfulness", etc. al-Rāzī, *Kitāb Asās al-Taḥḍīd*, Cairo 1327 b, 149f. A metaphorical interpretation, into which allegory may creep, if need be, and which comes very close to the Mu'tazilite legacy, with the following differences: *if* the attitude of the "an-

cients" is regarded as valid (cf. *Asās al-Taḥḍīd*, last chapter); 2) only the specifically anthropomorphic passages are accepted as metaphors; where the "apparent" (*zāhir*) sense would lead to a real impossibility: this was the position which Tabari had already taken up. But the vision of God, and the metaphorical fact of the covenant, were maintained in their strict sense, in conformity with the Ash'arite dogmatic.

### (B) *The actions of God (af'ālūhu ta'ālā).*

(The problem of justice and retribution.)

The Qur'an teaches the two great truths of divine omnipotence and human responsibility, good works rewarded, acts of "disobedience" punished. Muslim thinkers strove tirelessly to find the solution to this apparent conflict. This was the subject of the first controversies, as early as Damascus, between Ḍjābarites, Kadariites and Muḍḡirites. The great schools of *kalām* inherited it from them.

1. The Mu'tazilites affirm human freedom: man performs, as the Qur'an expressly states, and that He rewards or punishes him, as promised. Man receives the "acquisition", the attribution of his acts (*ḥaṣḥ*, *istihāḥ*: cf. Qur'an, ii, 281; lii, 21, etc.). At the end of the last century, Ḍjāḍūrī found this formula necessary: "man is a bound being, in the shape of a free being" (*Ḥaḍḥiyya ʿala ʾl-Ḍjāḍūrī*, Cairo 1324/1934, 62). On the empirical level, man must therefore continue to act as though he were free. But he must know that everything comes to him from God. If he acts well, it is because God in His Mercy has so decreed; if he acts badly, it is because God has so willed in His justice.

This negation of ontological liberty accords with the negation of the efficacy of what the causes (*ʿasāb*): as against the "comprehensible innovation" (*biʿāḥ*) of the Mu'tazilite thesis (efficacy of the *ʿasāb*), according to a "power" created by God, and against the absolute determinism of the causes ("cause" here rendered by *ʿilla*) taught in the *falāsifa*, a thesis tainted with *ḥur* (impety). (Cf. al-Sanūsī, *Muḥaddimāt*, Algiers 1908, 108-109; al-Ḍjāḍūrī, op. cit., 28).—For the Ash'arites, there is nothing efficacious about the second causes, because there is no conservation in being, on the part of God. There are discontinuous series of instantaneous creations, temporal existentializations of the eternal *ḥaḍḥ*. At every instant (*waḥḥ*), God creates and re-creates the world and the impermanent whole, extrinsically unified, which is man, and every act of man. The world of "free" acts, as well as the causes in its entirety, is a discontinuous sequence of insurmountable divine decrees. The "causes" are but the channels, the tokens, of this divine Will, and the "laws" are a "custom of God" (*ʿunwan Allāh*); the expression is still found in Muhammad 'Abduh, *Risālat al-Taḥḍīd*, Cairo 1353, 7). It is a custom which God can always modify: as He does, for example, when He decides to give proof, by miracles (*muʾaʿjizāt*), of the mission of His prophets.

For most of the Ash'arites, though by no means all, there is an atomistic cosmology corresponding to the discontinuous view of things. Everything is but a concourse of atoms (*nukta*, *ḥurr*), connected, disconnected, reunited, by divine decrees. If it is true that al-Bisḥillān (4th/10th century) declared atomism to be "essential" (Massigron) with the Qur'anic dogma, it would, in our opinion, be going too far to see in this the pre-eminent characteristic aspect of Ash'arism, still more of all "orthodox" Muslim theology. This physico-theological atomism

an "attribute of contingent action", particularizing in time the things that are "begun", as they pass from non-being to being. As al-Ḍjāḍūrī says (*Taʾrīḥ al-ʿad*, Fligel, 1845, 181), "*ḥaḍḥ* is the relation of the essential Will to things in their individual realization"; and again: "*Kadār*, the passing of possible from non-being into being, one by one, in conformity with *ḥaḍḥ*. *Kaḍāʾ* is of the order of pre-emption (*ʿazāl*), *ḥaḍḥ* depends on the present order of things" (ibid.). It follows that one must distinguish between *irāda* and *amr*; it is the latter which is directly linked with man's obedience. God wishes the impety of the *irāda* and creates it in him, yet commands him to believe.

For man's "free" action, his *ihṭiyār*, is only a special case of more general principles. God is the creator of human acts, whatever they be. The text "God is creator of all that you do" is interpreted in the sense of a creation *ex nihilo*. True, man has a feeling of his own responsibility. This means that God sets down to his merit or demerit the action he performs, as the Qur'an expressly states, and that He rewards or punishes him, as promised. Man receives the "acquisition", the attribution of his acts (*ḥaṣḥ*, *istihāḥ*: cf. Qur'an, ii, 281; lii, 21, etc.). At the end of the last century, Ḍjāḍūrī found this formula necessary: "man is a bound being, in the shape of a free being" (*Ḥaḍḥiyya ʿala ʾl-Ḍjāḍūrī*, Cairo 1324/1934, 62). On the empirical level, man must therefore continue to act as though he were free. But he must know that everything comes to him from God. If he acts well, it is because God in His Mercy has so decreed; if he acts badly, it is because God has so willed in His justice.

This negation of ontological liberty accords with the negation of the efficacy of what the causes (*ʿasāb*): as against the "comprehensible innovation" (*biʿāḥ*) of the Mu'tazilite thesis (efficacy of the *ʿasāb*), according to a "power" created by God, and against the absolute determinism of the causes ("cause" here rendered by *ʿilla*) taught in the *falāsifa*, a thesis tainted with *ḥur* (impety). (Cf. al-Sanūsī, *Muḥaddimāt*, Algiers 1908, 108-109; al-Ḍjāḍūrī, op. cit., 28).—For the Ash'arites, there is nothing efficacious about the second causes, because there is no conservation in being, on the part of God. There are discontinuous series of instantaneous creations, temporal existentializations of the eternal *ḥaḍḥ*. At every instant (*waḥḥ*), God creates and re-creates the world and the impermanent whole, extrinsically unified, which is man, and every act of man. The world of "free" acts, as well as the causes in its entirety, is a discontinuous sequence of insurmountable divine decrees. The "causes" are but the channels, the tokens, of this divine Will, and the "laws" are a "custom of God" (*ʿunwan Allāh*); the expression is still found in Muhammad 'Abduh, *Risālat al-Taḥḍīd*, Cairo 1353, 7). It is a custom which God can always modify: as He does, for example, when He decides to give proof, by miracles (*muʾaʿjizāt*), of the mission of His prophets.

For most of the Ash'arites, though by no means all, there is an atomistic cosmology corresponding to the discontinuous view of things. Everything is but a concourse of atoms (*nukta*, *ḥurr*), connected, disconnected, reunited, by divine decrees. If it is true that al-Bisḥillān (4th/10th century) declared atomism to be "essential" (Massigron) with the Qur'anic dogma, it would, in our opinion, be going too far to see in this the pre-eminent characteristic aspect of Ash'arism, still more of all "orthodox" Muslim theology. This physico-theological atomism

is actually of Mu'tazilite origin (Abu T-Hudhayf; cf. studies by Horten and S. Pines), and matched well then with the *ḥaḍḥ*, the "power" which man was recognized as having over his acts. An impressive line of Ash'arites, al-Bisḥillān al-Jāḍī, al-Ḍjāḍūrī (with some modifications), the "freedom conservatives" of such men as al-Sanūsī, al-Laḥnī and al-Ḍjāḍūrī, remained faithful to the occasionalist atomism as being the most favoured explanation of the divine omnipotence over the world. But another line, influenced to some small extent by the disputed theses of the *falāsifa*, passed over in its silence (al-Ḍjāḍūrī, Fakhr al-Dīn al-Rāzī) or greatly modified it (al-Shāh-rānī), although still affirming the useful theses on God's *ḥaḍḥ* and *ḥaḍḥ* and the simple human *ihṭiyār*.

3. Some Māturīdites (Abū Ḥafs al-Nasafī, al-Taḥḍīr) were atomists. But we wish to lay particular emphasis on the more directly psychological aspect in which the Hanafite-Māturīdite school as a whole regarded the relations between the divine decrees and human freedom. From the first, *ḥaḍḥ* and *ḥaḍḥ* were no longer related to the divine Will, but to the divine Knowledge:—and, counter to the Ash'arites, it was *ḥaḍḥ* that was to be eternal, while *ḥaḍḥ* was connected with existentialization in time. *Kadār* was therefore an eternal foreknowledge whereby God knows, from all eternity, the beautiful (good), ugly (bad) or harmful qualities of His creatures, while *ḥaḍḥ* was God's existentialization of these same things, created with wisdom and perfection (cf. 'Abd al-Rahīm b. 'Alī, *Naḥḥ al-Farāʾid*, and ed., Cairo n.d., 28-30; and al-Ḍjāḍūrī, *Ḍjāḥara*, 66).

For the majority of the Māturīdites, there exists in things a "rational" good (beautiful) and evil (ugly), on the plane of being, not directly on the moral plane (a thesis already noted in connection with the Ash'arite al-Rāzī). On the moral plane, it is God Who directly creates the basis (*asāḥ*) of man's "free" actions, but it is man's power which makes their qualification (*ḥiṣṣa*) good or bad. (It should be noted that al-Rāzī, *Kitāb al-Arḥān*, 227, and al-Ḍjāḍūrī, *Ḍjāḥ al-Manāḥil*, viii, 147 ascribe this thesis, whose tenor is Māturīdite, to al-Bisḥillān. All that happens is willed by God; but only the good depends on His consent (*irāda*). God is not bound to be just, as the Mu'tazilites say: His action is not just because He wishes it, as the Ash'arites say: He is above all justice by reason of His knowledge and wisdom. He is unable not to be just.

4. We have no need to follow here the abundant efforts of the doctors of the *kalām* to strengthen their arguments and to resolve the objections that were constantly cropping up. Those who were not satisfied with the Ash'arite theory of *ḥaḍḥ*, of acts imposed from outside, undertook more reconduct analyses: thus we have the theory (common to Ash'arites and Māturīdites) of *irāda ʿiṣā* or "capacity" (for an act), created by God previously or simultaneously (cf. al-Djawayni, *Irḥāḍ*, ed. Luciani, 1938, 122/196, 125/201; al-Ḍjāḍūrī, *Taʾrīḥ al-ʿad*, 18, etc.); the theory of *taḥḍīd* or *taḥḍīd* (i.e., which explains the "generation" of the transitive act by the divine occasionalism; and the theory of *taḥḍīd* (i.e., "facilitation" of acts, especially of good acts, faith and obedience, which is created in man by the divine favour (*ḥaḍḥ*), and its (positive) opposite, *ḥaḍḥ* or divine "abandonment" ("creation in man of the power to disobey", according to a definition by the Māturīdite al-Taḥḍīr, *Makḥḍ*, Istanbul ed., 118), etc.

We can see that these efforts of minute analysis, applied to problems of great complexity, may well have looked like disheartening intellectual games, to those who wished to remain true to the sense of mystery of the "pious ancestors", and who refused to "prove dogma" (cf. al-Djurgānī, *Shāhīd al-Manāḥif*, I, 34-35) as the later Ash'arites aspired to do. The *kalām* had its greatest opponents (apart from the *falāsifa* opposition) in the Hanbalite and Zāhirite systems of thought, which were wedded to tradition and mistrustful of the use of reason in matters of faith. Al-Ghazzālī too was very severe with the *kalām*, on occasion. Yet it is sometimes among these opponents that we find the most pertinent bases of analysis of the relations between the free act and the divine omnipotence.

Thus Ibn Haḥm (4th-5th/10th-11th century) the Zāhirite, who denied any criological capacity to the reason (one can speak of Ibn Haḥm's "nominalism"), but it is a nominalism centred on the effective value of language and its internal laws, and who meant to hold fast to the precise declarations of the scriptures: he rejected the Ash'arite *ḥash*, since the texts, he said (*Fisāḥ*, Cairo 1347 B., III, 48) allow neither a "creation" by man of his acts (Mu'tazilite) nor an "acquisition" conferred by God (Ash'arite); but his whole refutation, highly discursive, of the opposing theories (ch. 51-52) is pertinently developed; while a valuable personal analysis is outlined in connection with *ḥash*'s (pt. 21-26 and 31).

Al-Ghazzālī, not indeed the Ghazzālī of the *Iḥṣāʾ*, who confines himself to presenting or rather to improving the theses of the Ash'arites, minimizing, moreover, the scope of the *kalām* (7-8), but the al-Ghazzālī of the *Tahḥūṭ* and, above all, of the *Iḥṣāʾ* (Cairo 1352/1933, IV, 219) carries out an extremely shrewd psychological analysis on the subject of "choice" and the relations of intellect and will in the free act. He defends an irrational concept of freedom and maintains that God alone, who acts without motive (*ghayr gharaḥ*) is totally free, with a freedom conceived as a free human choice, subject to the power of infinity. What the *mudhalīmīn* called *ḥash* is an "intermediate stage" (*Iḥṣāʾ*, IV, 220) which is not at all a participation in the divine freedom. Man acts of necessity, in the sense that everything which happens in him comes not from him but from Another; he acts by free choice, in the sense that he is the place (*maḥall*) of the free act, which operates inevitably in him after the decision of the intellect, this last being only a matter of form. And al-Ghazzālī propounds this formula, which would be well not to interpret loosely: "Man is forced into free choice" (*ibid.*).

This concern with analysis was to dwindle to vanishing point in the later manuals, which, from the 13th century onward, hardly do more than repeat the formulas of the past. At the end of the 19th century, Muḥammad 'Abduh, wishing to free himself from the dialectic of the *kalām*, confined himself to saying: "As for seeking further, for wishing to reconcile God's omnipotence and will, which are proved by the Qur'ān and rational arguments, with the free activity of man, which is shown to us by the evidence [sensory, psychological]; that means seeking to penetrate the secrets of the divine decree. We are forbidden to plunge into this abyss and to concern ourselves with that which reason is scarcely capable of attaining" (*Risālat al-Tawḥīd*, 61).

### III. VARIOUS MUSLIM ATTITUDES TO GOD.

Some pointers, chosen from the most characteristic:

1. *Isma'īlī Theology*. There is much that could be said about the "schismatic" theologies, of Khārijīte Islam on the one hand, of Shī'ite on the other. We shall confine ourselves to the Isma'īlī system, which had so many cultural contacts with the Sunni majority. Integrated in it there is a twofold line of influence: Mu'tazilite (which continued to act on the Shī'a after the condemnation of the Mu'tazilites in the time of Mutaḥakkil) and Neoplatonic (consequently, a certain influence from *falāsifa*).

We know hardly anything of the very first phase of development or of its efforts to fix in an original direction such Muslim notions as *ḥaw*, *ḥadar*, etc. Not until Abū 'Abd Allāh al-Nasafī (4th/10th century) do we find these primitive conceptions given a new setting in a largely Neoplatonic, emanationist system. Speculation was pursued, and enriched by various trends, with Abū Hātim al-Rāzī, Abū Ya'qūb al-Sijistānī, Nāsir al-Khwarazmī (in whom S.M. Stern has found a probable influence of Fārābī: theory of the ten Intellects). Through the Khawān al-Safā, Isma'īlism was to influence many *falāsifa* and even Sunni theologians, up to the time of the conflict waged by Naṣir al-Dīn al-Ṭā'ī in favour of Ibn Sīnā.

The emphasis is on the inscrutable mystery of God. A whole "negative theology" developed. No name or attribute can be attached to God in His essence. The perfect *ṭawḥīd* does not even attribute existence (Persian: *ḥāṣṣ*) to Him, and the Qur'ānic Names signify only that those who hear them come from Him (cf. Idrīs al-Karāfī, 8/14th century). The Command (*amr*), the Speech or Word (*kalām*), the Act of Creation (*ibdā'*), the Absolute Knowledge (*ilm mahdī*) are hypostatized. God is neither eternal nor existing at present. What is eternal is His Command and His Speech; what exists at present is the creation, which emanated from Him at His Command (cf. al-Makrūzī, *Kāshif*, I, 395, quoted by G. Vajda, *Juda b. Nessim ben Malka*, Paris 1954, II, chap. 1). God remains, absolutely, the Unknowable (Nāsir al-Khwarazmī). The *taḥḥūṭ*-to-*ṭūl* dilemma is absorbed into a *via negationis*, which refers the affirmation of the attributes to the Word or the Command, or to the First or Universal Intellect.—Al-Kirmānī identifies the First Intellect with the Word, and makes the *ibdā'* (Act of Creation) one of its attributes.

The emanationist system of al-Nasafī and his successors set up, in fact, the intermediary of the Universal Intellect, from which the world is produced by way of successive emanations. The echoes are heard in the *Fuṣūṣ* fi 'l-Ḥikma (which, after the researches of S. Pines, REI, 1951, 121-124, is to be ascribed not to al-Fārābī but to Ibn Sīnā), and as far as al-Ghazzālī: the word of the *Muḥḥid al-Awḥād*.

Isma'īlī religious feeling attached itself to a group of Gnostic hypostases. The Will (*irāda*), Volition (*maḥḥa*) and Command (*amr*) are sometimes "spiritual grades" above the First Intellect; most often, Will, Command and Speech are identified with one another, and the Universal or First Intellect is itself, as the "manifestation" of God, unknowable and ineffable, operated by His Command. These speculations were rooted in an allegorical *ṭawḥīd* ("hidden", *ḥafīf*, meaning of Qur'ānic verses) and thrived readily on Iranian myths. They were later interiorized by certain Shī'ite, and even Sunni, Sūfīs.

2. *Falāsifa*. It was in *falāsifa* that the term *istāḥṣiyāt* (taken up by *kalām*) gained currency as denoting the whole mass of questions concerning God. The body of problems was no longer that of the *kalām*. It came from Greece, particularly from Aristotle, but was pervaded, at least in eastern *falāsifa* (especially al-Fārābī, Ibn Sīnā) by a considerable Neoplatonic inspiration (the pseudo-*Theology of Aristotle*). Qur'ānic influence had some effect on this body of problems (e.g. the problem of the divine knowledge of individuals), but the Qur'ān had ceased to be the chief source. We do not therefore need to set out the questions in detail, as we did in the case of the *kalām*. We shall note merely that Ibn Sīnā demonstrates the existence of God by the proof a *contingentia mundi* in the strict sense (not overlooking the proof by the "idea of being", *Iḥṣāʾ*, ed. Forget, 146). The more flexible philosophic instrument of the *falāsifa* enabled them to affirm the attributes, distinct from the divine essence, by a simple, reasonable (*ma'ānī*) distinction but with a basis in reality.

The Greek contribution led to an emphasis on the necessary acts of the divine essence. God is the Thought which thinks itself (cf. Aristotle). He is the supreme Good (cf. Plato), which necessarily loves itself. He is the Intelligence, exercising intellection on itself; He is Love and the object of love for Himself: *ḥāḥ, ḥāḥ, ma'ḥā, ḥāḥ, ḥāḥ, ma'ḥā, ḥāḥ* (cf. *Nadīd*, Cairo 1357/1938, 243, 245; corresponding passages of the *Shūḥ*, etc.). We should mention here an esoteric trend, still imperfectly known, which seems to take up several themes of the Isma'īlī *via negationis* (intermediaries: *Iḥṣāʾ al-Safā*, al-Tawḥīd); and, at an earlier date, the Isma'īlī tendency, pointed out by S. Pines, of certain recensions of the *Theology of Aristotle*; see REI, 1954, 7 ff.).

The *falāsifa* do not provide us with treatises on *ḥād* or *af'āl* *ṭawḥīd*. Contrary to the *kalām*, they affirm (and set out to prove) the production of the world by way of necessary and deliberate emanation (cf. Isma'īlism), and its temporal eternity: world without beginning or end, "possible" (*muḥḥid*) in itself, necessary by Another (*ṭawḥīd*); contingent in the order of essence, determined in the order of existence. Providence (*ināya*) is the law of emanation itself, necessarily willed by the eternal thought of God.

The second cause cannot fail to act on their effects. There is no longer any problem of human freedom as against divine omnipotence (cf. *Nadīd*, 322).

Whatever solution may be adopted as regards the personal survival of the soul, the Active Intellect (*ḥād fa'āl*) appears as an intermediary between God and man, both in the order of knowledge and in the order of emanation. There is a hierarchy of discrete intellects, up to the First Cause; embracing these, there is the Universal Intellect. For Ibn Sīnā, there is a corresponding hierarchy of Souls, rejected by Ibn Rushd; the latter seems to have been the only one of the *falāsifa* to come back, by way of philosophy, to the divine knowledge of the individual in its very individuality, so forcefully taught by the Qur'ān.

What is at stake is the whole attitude of faith with regard to God. Certainly the *falāsifa* were Muslims and remained Muslims. But even though their theses might be amended, and reconciled with the affirmations of the Qur'ān, the God they proclaim is exactly the God attained through reason, and, at the highest, through the flash of intellectual

intuition. They set out to prove (their notion of prophecy comes into it: a simple privileged moment of the universal determinism) that the God of reason and the God of the Qur'ān coincide in every respect. But it is not a question of a verity of faith corroborating reason on its own plane. They treat philosophy on the one hand, the Law on the other, as two sources of equal value; the point at issue is to show that they agree. They attain this end with the help of a rational *al-ḥād*, philosophic and at the same time allegorical. God is, first and foremost, the necessary Being, *al-udhūd al-udhūd*.

The God of the great *falāsifa* is a lofty concept of Being, necessary and perfect, supreme Intelligence and supreme Love, producing the world by a mode of necessary and deliberate emanation: in short, an object not so much of faith as of philosophic experience and real intellectual intuition. The seriousness with which they pursued their researches and reasonings (notwithstanding certain setbacks) led to the integration of real riches into Muslim culture; their analyses sometimes influenced religious thought itself. But here we find ourselves on a different plane from the inscrutable mystery of the Living God, which the Qur'ān presents for the adoration of the faithful.

3. *Kalām*. We return now to the schools of Sunni *kalām*. The *kalām* no doubt despised the dialectic of the *mudhalīmīn*, those people "who have broken the religious Law into pieces"; as Ibn Rushd put it (*Faṣṣ al-Mahāḥ*, ed. and tr. Gauthier, Algiers 1942, 29). Their subtleties and debates are often confused, their philosophic arguments questionable. But when they thus set out to defend the dogmas against "those who doubt", it is certainly the God of faith that is involved. The Mu'tazilites, just as much as the Ash'arites, are "men of religion first and philosophers second" (Ahmad Amin, *Duḥā al-Islām*, Cairo 1362/1943, III, 204).

The inner attitudes of the two *kalām*'s were nevertheless different. True, the Mu'tazilites took as their starting-point the Qur'ān and the sovereign Justice of Allāh. But their idea of *ḥād* as a criterion of the Law, and later the impact of the "foreign sciences", led them to fix the sum total of faith on an idea of God as being "justified" in the eyes of human reason. They meant to serve and to purify the affirmation of the transcendent Existence, but their drastic *ṭawḥīd* reached the pitch of attenuating the very notion of divine attributes; the Ash'arites were not wrong in accusing them of that. Their attitude the mystery of the divine Oneness, the *ṭawḥīd*, is as it were encircled by a human concept; expressed negatively, no doubt, but directly attainable on a discursive level. We find something corresponding to this in tasawwuf, in the experience of *ḍiyāwūt*. In correlation, and, at the same time, as a counterpart, the *ḥād*, the divine Justice, was in a way "humanized"; there was a touch of the idea of a just human judge, raised to the power of infinity.

In its origins, the Ash'arite reaction was by no means a pure renunciation on the part of the faithful of every elaboration of the data of faith. The "conversion" of al-Ash'arī was presented as a return to the inner attitude of the "ancients" and a profession of loyalty to Ibn Hanbal (*Iḥṣāʾ*, 9). Yet the Ash'arites accepted the challenge to dialectical combat. This led them far afield; it led them to refine incessantly, but also to complicate unceasingly, a body of problems which never came to an end, as a result of the multiplicity of objections and the rise of opposing schools. Amid the welter of arguments, it sometimes

becomes difficult to trace that complete resignation, in the nakedness of faith, to the One God, Creator and Judge, which we find in the *sūras* of the Kur'ān. The negation of human freedom in its ontological reality turned many lines of thought towards a divine voluntarism, conceptualized as such. This became still more marked after the 15th century, when the Ash'arite (or Māturīdite) *kalām*, instead of regenerating itself to keep pace with its contemporary opponents, as its primarily apologetic function would seem to demand, congealed in rather stereotyped manuals. This risk of sclerosis was no doubt one of the main considerations leading to the semi-agnosticism of Muḥammad 'Abdūh.

There, we believe, lies the explanation of the half-contempt for the *kalām* in a half-contempt which sometimes grows to violent opposition, which is shown alike by the successors of the "pious ancients", notably represented by the hanbalite trend, and the mystics of the *tasawwuf*.

4. *The tasawwuf*. We cannot hope to analyse here the theological bases of the diverse Sūfī schools or their attitudes, with all their line distinctions for the first centuries; see L. Massigron, *Passions d'al-Hallāj*, Paris 1922, and *Lexique technique*, ed. Paris 1954. The important thing to note is that we are no longer dealing with a rational endeavour towards the necessary Being, as in *falaḥa*, nor, as in *kalām*, with a discursive endeavour to find "decisive" or formal arguments for the Kur'ānic doctrine about God. What is involved here is a spiritual experience, a life with God, soon to be understood as an experience of oneness, an inner realization of the *taḥṣīb*.

There were some Sūfīs (al-Hallāj, al-Tirmīdī) who rethought for themselves the dogmatic bases of their era; some (Hasan al-Basrī) who could, by stretching a point, be called "semi-Mu'tazilite"; others (Ibn Karrām) who gave their name to a theological school; some were linked to the Hanbalite way of thought; there were many Shī'ite Sūfīs, and there were many Sūfī orders who in no way challenged the regular conclusions of the Ash'arite *kalām* (al-Makkī, the al-Ḡhazzālī of the *Iḥyā'*, many Shī'ite Sūfīs, etc.). Finally, a great many, especially from the 7th/13th and 8th/14th centuries onward, permitted themselves to be influenced by an existential mysticism of Neoplatonic tendencies. — From the point of view which concerns us, we shall confine ourselves to picking out two main lines of Sūfism, according to a distinction insisted on by L. Massigron:

(a) *wahdat al-shayḥ*, the oneness of Witness, of which al-Hallāj was the exponent. It seems also to have inspired every mystic of Hanbalite influence. The union with God is achieved in God's bearing witness to Himself and to His mystery of Unity, in the mystic's heart. The divine transcendence and its absolute Oneness in relation to all creation remain the central object of the act of faith. But the meeting with God is brought about by love ("in His Essence, love, *ḥubb*, is the Essence of the essence", said Hallāj); by love, the dialogue is established between the faithful heart and God, until the supreme "I", which consummates the dialogue in unity, without destroying it. It is well known how much the official Islam of the 3rd/9th century opposed this union of love (which claimed the support of Kur'ān, *fit*, 29 and v, 59), this oneness of the Witness in the duality of nature.

Two intermediate stages. The al-Ḡhazzālī of the *Iḥyā'* (5th/11th century), who gave the *tasawwuf* citizen-rights among the recognized religious sciences: uniting, not without some eclecticism, the dogmatic

values of developed Ash'arism and the spiritual values of the love of God (*mahabbah*), of dependence and trust (*iṣṭikṭāl*), and of the diverse ascetic-mystic virtues. Another and more important intermediate stage is that of the *isrāfī* movement and its emanationism, which is by no means purely monist. The great figure of the master of the *isrāfī*, al-Sulṭān al-Rāḍī of Aleppo (6th/12th century), so well studied by H. Corbin, illustrates a quest for unity which leads to identity in the order of knowledge; but the outer garb of Iranian myth permits him, on a plane of lofty poetic intuition, to leave the Witness its transcendence.

(b) *wahdat al-shayḥ*, the oneness of Existence. — This came to dominate later Sūfism, since Ibn 'Arabī (6th/12th-7th/13th century). Ibn Taymiyya saw (and condemned) in it the influence of Ibn Sīnā (discrimination to modify and to complete, not to reject). One may say that the Ḡhazzālī of the minor works of the last period, so deeply imbued with *falaḥa*, even with Ibn Sīnā, was the forerunner of it. In it, the Neoplatonic mysticism of the pseudo-*Theology of Aristotle* meets the Ash'arite tendency which, the better to affirm the One God, denied the creature all real ontological density. In contrast with God, "sole Being and sole Agent", the created world is but impermanence. The illusory empirical existence, says the mystic, must obliterate itself (*fanā'*) in the only Existence which subsists (*baqā'*) in God. Interpreting Kur'ān, xviii, 25, the Sūfī partisans of the monism of the Being said that the human spirit, the *rūḥ*, is a direct emanation from the divine Command (*amr*), and is therefore an emanation from God Himself. Cf. already the Ḡhazzālī trend (ascription discussed by W. Montgomery Watt, *Authenticity of works attributed to al-Ḡhazzālī*, *JRAS* 1952, 1 and 2) the *Risāla Ladunniyya* (Cairo 1353/1934, 23). Following some quite different references, we have here something like an echo of the "trace of the One in us" of Plotinus, even indeed — all question of historical channels aside — of the Indian "Thou art That". The supreme mystical experience is then an experience of unity (*ittihād*), understood as identification. It readily justifies its chosen course by an allegorical and gnostic *ta'wīl* of the scriptural texts.

The *wahdat al-shayḥ*, for reasons partly doctrinal, partly historical, never aroused among the *ṣūḥabā'* and the *mutaḥallimīn* the opposition encountered in the 3rd/9th century by the *wahdat al-shayḥ*. One cannot however forget how powerfully the latter might have led the *tasawwuf* — the total dependence of the believer upon God, sovereign Judge and sovereign Only — to spiritual experience in the strict sense of the term.

5) The "pious ancients". The adherence to faith of many Sūfīs of the first centuries was in complete accordance with that of the "pious ancients". In the first centuries, Sūfī and traditionist circles often overlapped. — There was no question of a school, in spite of the fact that these people frequently set themselves in the Hanbalite tradition; it was a question of an inner attitude. This reference to the "ancients" (*asāḥ*) must be understood as a choice, much more than a chronological distinction: we find it as much in the 14th century, with Ibn Taymiyya, as at the beginning of the 15th; we find it again, systematized and with a predominant anti-Shī'ite note, among the Wahābites and neo-Wahābites, among the modern Salafīyya and their contemporary disciples (including, in some measure, the *Iḥyā'* al-Muḥammīd).

This tendency raised itself many a time against the quibbles and subtleties of the *kalām*, against an excessive confidence in rational or dialectical proofs. In his *Ḥamm al-Kalām*, al-Anṣārī claimed for the Muslim the right not to seek for explanation (*tafṣīr*) of the divine attributes, not to proceed down the "blind alley" of the Ash'arites, glossing terms and distinguishing between the attribute and its *ḥaqq*, its "mode of being" (cf. quotation from al-Anṣārī in Ibn Taymiyya, *Fatāwā*, v, 275-78). The very personality of the mystic al-Anṣārī would suffice to show us that a tendency that is truly loyal to the "pious ancients" has no grounds for condemning *tasawwuf* wholesale, as it often does nowadays, too easily confusing the *wahdat al-shayḥ* with the *wahdat al-shayḥ*, and the latter with the deviations of the "brotherhoods".

What remains affirmed is the faith in God Most High, Who speaks to men by His prophets and apostles, revealing no more of Himself than the "most beautiful Names" to whereby He indicates and conceals Himself (*al-ḥayy al-ismī*): a faith which does not require God to be explicit about Himself, while it holds fast (to His Word) and resigns itself (to Him), — in a unique act which bears witness both to the divine omnipotence and to the responsibility of the "slaves". The inner attitude of the believer is rightly then a total and confident surrender of the self, in the night, to God, to Whom one puts one's questions, but Whom one knows, according to His Word, to be the just Judge and supreme Help.

It appears that this inner attitude which has been summed up is the most characteristic mark of the Muslim faith in God; that this, first and foremost, is what the Muslim has in his heart when he pronounces the name *Allāh*. — No enumeration is needed here. In every age there have been "free-thinkers", "doubtters and deniers". In every age, intellectual researches on the *ṭāḥīyāt*, and the discursive expression of them, have abounded in Islam. Contemporary thought seems harried on all sides by the diverse trends of the modern philosophies, as it was formerly by Greek or Iranian thought. It may be that a new *kalām* will be called into being, a new "defensive apologetics", that will carry out an extensive re-examination of the questions and problems of its treatises on *wahdūt* *Allāh* and *al-shayḥ al-ḥayy*, in the varying light of the idealism, pragmatism, dialectical atheism or existentialism of the moment. But maybe it will be able to avoid the mishaps that befell the ancient *kalām* only by going beyond the "contradictory" appearances of the problems posed — by a vital recourse to God, One, Living, Master of the worlds and of the retribution of mankind, *Allāh al-wāḥid*, *al-ḥayy*, *malik al-ḥayāt*, *malik yaum al-dīn*, whereby many sincere believers and "bearers of the Kur'ān" have always endeavoured to live.

*Bibliography*: 1. *Characteristic Muslim works*: a) works, cited in the course of the article, by: Bukhārī, Muslim, Ash'arī, Ibn Sīnā, Ibn Ḥazm, Dīnawarī, Abū Ḥamid al-Ḡhazzālī, Ibn Ruḥbā, Fakhr al-Dīn al-Rāzī, Ibn Taymiyya, Sa'd al-Taftāzānī, Dīrīzādī, Sanūṣī, Bāḡdādī, 'Abd al-Rahīm b. 'Alī, Muḥammad 'Abdūh, Ahmad Amin; b) other works: Khayyāt, *Intisār* (ed. Nyberg, Cairo 1344/1925); Ash'arī, *Luma'* (ed. and English tr. by R. J. McCarthy, *The Theology of al-Ash'arī*, Beirut 1951), 6-74; 10-13; Bakīlī, *Tamīm* (ed. Khudayr and Abū Rida, Cairo 1366/1947), 152-159; 'Abd al-Kāhīr al-Baḡhdādī, *Uṣūl al-dīn* (Istanbul, 1346/1928) chap. 3-6; Dīnawarī, *Shāmil* (MS. 1290,

Nat. Library, Cairo), 150-189; Abū Ḥafṣ al-Nasafī, *'Aḥād* (ed. Cureton, 1843); Shahrastānī, *Kitāb al-Milāl wa'l-Niḥāl* (ed. Badrān, Cairo 1370/1951), esp. 8-11; Nīkāyāt al-Ḥidām (ed. Guillaume, Oxford 1934); Bayḍawī, *Tamīm* (ed. al-Anṣārī, Cairo 1324/1905), bk. II, chap. 1-3; Abū T-Barakāt al-Nasafī, *'Umda* (ed. Cureton, 1843); Abū Rida, *Iḥyā'* b. Sayyār al-Nasafī (Cairo 1365/1946), 80-98.

11. *Western works*: a) before 1910, see bibliography given by Macdonald, art. ALLĀH, II (1); b) more recent works, those of Blachère (*Le Coran*, Paris 1947, 1949, 1951), Wensinck, Vajda, Massigron, cited in the article, and also: M. #### ALLĀHABĀD (see TANRĪ).

**ALLĀHABĀD** (Ilāhābād), an important town in the State of Uttar Pradesh and the seat of the State High Court, is situated on the confluence of the rivers Gangā and Yamunā. Population in 1951: town, 366, 127, including 90, 829 Muslims; district, 2,048,250, including 12.8% Muslims.

**History**: One of the most ancient towns in India, it was known as Prayāḡ and regarded as sacred by the Hindus. When the Ghōrid Turks occupied Banārās in 1194, the town came under the Sultanate of Delhi, but presumably continued under the administration of autonomous Hindu *rājās*, the nearest important military centre of the Sultanate being located at Karā (approx.) about 45 miles to the west. With the overthrow of the independent kingdom of Dīwānpur in the 16th century and the subsequent rise of the Afghāns, the usefulness of the ferry across Prayāḡ to Dīhāt began to be appreciated. In June 1567, Akbar crossed the Gangā at Prayāḡ after defeating Khān-i Zamān, the rebel Governor of Dīwānpur. In 1574, he again passed through the town on his way to Bengal. Realising its strategic importance he decided to make it a military centre. From a small township, it became a big city and was given by Akbar the name of Bībḥās (being changed to Ilāhābād through popular usage). In 1579-80, when Akbar reorganised the administrative divisions of the empire, it became the capital of the *ṣubā* (province) of the name, thus

superceding both Karā and Dīwanpur in importance. Most of the Indian writers and European travellers visiting India during the 17th and 18th centuries testify to its importance. In 1736 the Marhātās conquered it. After 1750 it changed hands several times, till the British partitioned the citadel in 1798 and the town in 1801.

**Monuments:** The citadel built by Akbar (with Asoka's pillar and its famous inscription), and the Khusrav Bāgh, with the tombs of Prince Khusrav, his mother and his sister, are the chief monuments of the Mughal period.

**Bibliography:** *Akbar-nāma* (Bib. Ind.), ii, 296; iii, 88, 114, etc.; *Āṭin-i Akbari* (tr. Sarkar), ii, 94, 169; *Tahāsh-i Akbari* (Bib. Ind.), ii, 217, 286, 379, etc.; De Laet 62; Bernier (1891), 457; Tavernier (1923), i, 15, 95; Thevenot, 92; Nevill, *Allahabad, a Gazetteer*. (NURU HASAN)

**ALLĀHUMMA** is an old Arabic formula of invocation: "Allāh!", for which also Lahumma is found (cf. Nöldeke, *Zur Grammatik d. clas. Arab.*, 9). Whether, as Wellhausen supposes in his *Reise arabischen Heidenam*, 224, it was originally meant for the god Allāh, higher than and different from the old Arabian gods, is rather doubtful, because every god might be invoked as "the God" (just as "the Lord"). It was used in praying, offering, concluding a treaty and blessing or cursing (see Goldziher, *Abhandlungen z. arab. Philol.*, i, 35 ff.; cf. also the expression *Allāhuma hayy* = much good may it do you, al-Aḥḥāl iii, 77). The phrase *ḥayyaka 'lāhūmma*, said to have been introduced by Umayyā b. Abī Ṭ-Ṣalt (according to a statement in *Aḥḥāl*, iii, 187) and used as an introduction in written treaties, has been replaced by others by Muḥammad as being a heathen expression (Ibn Hishām, i, 747; Wellhausen, *Skizzen u. Forsch.*, iv, 264, 328). The simple Allāhūmma (Lāhūmma), on the other hand, was retained as ineffective (e.g. Kur'ān, iii, 26; xxxix, 46; *subhānaka 'lāhūmma*, s, 10), and in the same way *allāhūmma na'ām* = "certainly!", being in fact the answer on being conjured to tell the truth (al-Tabari, i, 1723). For the peculiar formula *allāhūmma minna wa-layla (o laha)* used at the family-offering, cf. Goldziher, in *ZDMG*, 1894, 95 f. (F. BOCH)

**AL-'ALLĀKĪ**, name of a wādī in Lower Nubia between the Nile and the shore of the Red Sea, 62 miles south of Aswān.

In the Middle Ages, this small valley resembled a large populous and flourishing town, because it was a gold mining area, using black slave labour. "The nuggets of gold", wrote al-Ya'qūbī, "appear in the form of sulphide of arsenic, and are made into bars". Al-Idrīsī gives more curious information. The prospectors, he tells us, took up their positions at night in order to see the gold dust glistening in the darkness and to mark the sites so that they could be recognised the next day. The prospectors then proceeded to collect and transport the auriferous sand and to wash it in tubs of water to extract the metal, which was then blended with mercury and smelted.

These gold mines, exploited in early times, were abandoned at the end of the Middle Ages. The old workings can still be seen. Gold mining has recently been resumed in the area (Umm Gharyāṣ).

**'ALLĀMĪ** (see ABŌ 'L-YAQL).

**ALLĀN** (see ALĀN).

**ALMA ATA** (formerly VERNUY), town, capital of the Soviet Socialist Republic of Kazakhstan since 1929 and administrative centre of the oblast (province) of the same name. Established in 1854 on the site of a Kazakh settlement called Almaty, in 1867 it became the administrative centre of the Russian military governorate of Semirechya. By 1871 it had been largely rebuilt on Russian lines and had become a thriving trade centre with a mixed population of 12,000 composed of Kazakhs, Dzungars, Uyghurs, Tatars, Russians and Chinese. The population rose to 45,000 in 1926 and to 230,000 in 1939. Among the many educational and cultural establishments in the city are the Academy of Sciences, 50 schools, 4 theatres and 13 cinemas.

**ALMADA** (see AL-MADĀ'IN).

**ALMADEN** (see AL-MADĀ'IN).

**ALMAGEST** (see BATLAMİYŪS).

**ALMALĪGH**, capital of a Muslim kingdom in the upper Il (qaz.) valley, founded in the 7th/13th century by Ūzr (Djawaynī, i, 57) or Būzr (Djāmāl Karḡhī, in W. Barthold, *Turkestan*, Russ. ed., i, 125 ff.), who is said to have previously been a brigand and horse-thief. According to Djāmāl, he assumed the title of Tughril Khān as ruler. Almaligh is first mentioned as the capital of this kingdom, and later as a great and wealthy commercial city. We owe our information about its site mainly to the Chinese (Bretschneider, *Med. Researches*, i, 69 f., ii, 33 ff. and index); it lay south of Lake Sayram and the Tarkī pass, north of the Il, probably northwest of the modern Kuldja.

Like other rulers of these regions, the king of Almaligh had dealings with Cingiz Khān, (whose hunting-ground was near Almaligh: Djawaynī, i, 27). He was surprised and killed while hunting by Kütlük, the governor of the kingdom of the Kara Khitay (q.v.); but Kütlük failed to capture the town of Almaligh. Ūzr's son and successor Sukhāl (or Sughūkh) Tigin married a granddaughter of Cingiz Khān (a daughter of Djūgh). On his death (851/1453-4, cf. Djawaynī, i, 58; 648/1250-1 in Djāmāl Karḡhī) he was succeeded by his son whose name (Dānīshmand Tigin) like the names of the other rulers of this line are given only by Djāmāl Karḡhī (Barthold, *Turkestan*, i, 140 f.). Almaligh in his time (beginning of the 8th/14th century) was still ruled by this dynasty. How long this line continued to reign is not known. The silver and copper coins struck at Almaligh in the 7th/13th century apparently belong to them. After Cingiz Khān's death the territory of Almaligh was under the suzerainty of Chaghatai, cf. B. Spuler, *Mongolen in Iran*, 277, note 2. The whole province to which belonged also the old Kuz Ordū = Balkhashin) was called in the 13th/14th centuries Il Arḡhū (cf. also the wāḥa Ilarghawī in Barthold, *Turkestan*, i, 138-40). Near Almaligh was situated the "hord" of Chaghatai and his successors, such as Ergene Khātūn and Tarmashghīn (Djawaynī, ii, 241, 243, 272 f.; iii, 97; Wassāf, lith. Bombay, 50; Ibn Battūta, iii, 41, 49 f.).

As a great commercial city on the main route through Central Asia to China, Almaligh is frequently mentioned by European travellers and missionaries (see I. Hallberg, *L'Extrême Orient* etc., Göteborg 1906,

17 f.; Almalēch). In 1339 some Franciscan friars were murdered in the town (cf. A. van den Wyngaert, *Sinica Franciscana*, i, 510-1; G. Golubovich, *Biblioteka Bio-Bibliografica*, ii, 72, iv, 244-8, 310-1). Here was the seat of a Roman Catholic missionary bishop and, probably, of the Nestorian metropolitan (cf. Bretschneider, *Med. Res.*, 38; Barthold, *Ostern istorii Semirečiya*, Voenyū 1898, 64-7; V. Rondale, in *Neue Zeitschrift für Missionswissenschaft*, 1951, 1-17; S. Dauvillier, in *Mélanges F. Cavallera*, Toulouse 1948, 305-7).

Like the towns on the Cū (q.v.), the Talas and elsewhere, Almaligh was completely ruined by the constant civil wars and other fighting in the 8th/14th century (cf. Bābūr, ed. Beveridge, i; Mirā Muhammad Haydar, *Tārīkh-i Raḡhādi*, tr. E. D. Ross, 364). Muhammad Haydar mentions the ruins of the tomb with the tomb of Tughril Khān (d. 764/1362-3; cf. Dugḡatari); these ruins (at present called Alimtu) lie between the Khorgos, the boundary river between the Soviet Union and China and the valley of Mažar and have been fully described by N. Pantuov, *Kavkazskiy Shornik*, Moscow 1910, 161 ff. Inscriptions from graves of Nestorian Christians have also been found there (see especially P. Kovokovos, in *Zp.*, xvi, 190 ff.).

A. N. Bernstam (*Pamyatniki staroy almalinoy oblasti po materialam ekspeditsii 1939*, *Izvestiya Akad. Nauk Kazakh SSR*, Archeol. series, i, Alma Ata 1948, 79-81) identifies Almaligh with a town (also called Alimtu = Chinese Al-i-t'u) near the modern Alma Ata; but in reality this is another, different, town having the same name (as an appellation, "apple town"); it is mentioned in 1390 in connection with Timur's campaign against Mughulistan (Yaśār, *Zafar-nāma*, i, 466 ff.; cf. F. Pétis de la Croix, *Histoire de Timur-bec*, ii, 66 ff.).

(W. BARTHOLD (B. SPULER AND O. PRITSACK))

**ALMANAG** (see ANWĀ'; TA'RIKH).

**ALMANZOR** (see AL-MANŠŪR).

**ALMĀS**—frequently regarded as a noun defined by the article (*al-mās*; correctly *al-Almās* according to Ibn al-Aḥḡir, in *L.J.*, viii, 97: the 'l' belongs to the root as in *ḥayā*), a corrupt form from the Greek ἀλμᾶς (i.e. "sea-laysal bi-'arabīyya"),—the diamond. According to the pseudo-Aristotelian *Kitāb al-Aḥḡir* which, on the basis of cognate Greek sources, agrees in the main with the statements of Pliny, the diamond cuts every solid except lead, by which it is itself destroyed. On the frontier of Burkūshān is a deep valley in which the diamonds lie guarded by poisonous snakes whose looks alone are enough to kill. Alexander the Great procured some of them by a trick: he had mirrors made in which the snakes saw themselves and died; then he had the flesh of sheep thrown down into the ravine so that the diamonds stuck to it and were brought up by vultures who seized the pieces of flesh. This story, already found in Epiphanius *De XII gemmis*, is generally known in the East (*Arabian Nights*). Al-Bīrūnī ridicules this story and asks why the snakes did not die when looking at one another, but only when seeing themselves in the mirrors. He takes the opportunity to make fun of other stories about the diamond, and also of stories retouching the death of people who looked at certain animals and stones. On the other hand, he has many valuable notices on the qualities, mining and use of the diamond. He also tells of a piece which Mu'izz al-Dawla Ahmad b. Būya presented to his brother Rukn al-Dawla al-Hasan weighing 3 mithqāl (12, 75 or even 14, 26 g.). But al-Dimashqī knows of no

diamonds heavier than 1 mithqāl. The sources differ widely about the places where diamonds are found. —Al-Thaḡhlī and al-Kawwālī relate that the pieces obtained through smashing the stone are all triangular (observation of the octagonal scissure!), and the former also says that the diamond attracts little feathers.—It is generally mentioned as being used for cutting and piercing other stones. Aristotle is said to have used it for destroying stones in the bladder. The powder of it must not touch the teeth; applied externally it is a good cure for colic and stomach-ache.

**ALMOGÁVARES**, or *Almogávares*, a name, apparently derived from the Arabic *al-muḡāḡhar* "one who makes hostile incursions", which was given at the end of the Middle Ages to certain contingents of mercenaries levied from among the mountaineers of Aragón, a tough, sober but picturesque description of them. These were the troops, fighting on foot, in the service of the Kings of Aragón and Castile, who cut to pieces the French army of Philip III the Bold during his campaign of 1585, at Roussillon, and who later, under the name of the Grande Compagnie Catalana, made daring raids in the Eastern Mediterranean.

**ALMOHADS** (see AL-MUWAHHĪDŪN).

**ALMORAVIDS** (see AL-MURĀWĪDŪN).

**ALMUNECAR** (see AL-MUNAKKAR).

**ALP** (s), *alper*, a figure which played a great role in the warlike ancient Turkish society; synonym: *Asur* (*Bakdār* [q.v.], *Asken*, *Asar* [q.v.]). (Turkish heroic tradition survived in an Islamized form and appears in Anatolia in the stories of Dede Korkud [q.v.] as well as in the poetry of *Aḡhik Paḡha* and the history of Yazdğūghlū; cf. Fuad Köprülü, *Hik.*). The word *alp*, used since ancient times among the various Turkish peoples either as an element in compound proper names or as a title, occurs frequently in proper names also of the Islamic period (cf. the various persons called Alp Tigin, the Saldjuk *amir* Alp Kosh, Alp Aḡhājī, Alp Arḡu, the Saldjuk *amir* Alp Arslan, etc.). Another form is *Ahl* (cf. the Artukids *Nadīm al-Dīn* and *Ahl* Alp, *Imād al-Dīn* Alp); the word *alpaḡha* (*yūpaḡha*,

*alpagut, alparut*, found in various dialects and as the name of a tribe under the Ak Koyunlu and the Safavids, seems also to be related.

As a title, *alp* was used by Saljuq *amirs*, and together with other old Turkish titles such as *hanq, kuluq, bilge*, was adopted by the rulers of the states which succeeded the Saljuq empire. *Alp* alone is found in an inscription of Ak Sunkur of Aleppo; in the inscriptions of the Syrian and Mesopotamian *atabegs* and of the Artukids over the titles *alp bulduq, alp hanq bulduq, alp ghazi* (cf. *BOEA*, nos. 2764, 3021, 3072, 3085, 3117-2, 3123, 3146; Van Berchem, *Amida*, 76, 92, 104, 120, 122; idem, *Arabische Inschriften aus Armenien und Diarbekr*, Berlin 1910, 148 ff.; Ibn al-Kalānī, ed. Amedroz, 284; *alp ghazi* as title of Zengi; and the dedication of a translation of Dioscorides, in MS Maḥḥad, Cat. no. 27, to a prince with the title of *alp hanq bulduq*).

Under the Ghuzids we find Nāṣir al-Dīn Alp Ghāzī as governor of Harāt (cf. also Tabakāt-i Nāṣiri, Calcutta 1846, 121; Awli, *Lubāb*, 230, 121; *Ta'rikh-i Siyān*, ed. Bahār, 388; Muḥammad b. Kayṣ, *al-Mu'jam fi Ma'ayir al-Āḥād al-ʿAdām*, 346). In Rūmīya we find in 564/1168 a *ṣāḥib-i ḥabir* Alp Dīnāl al-Dīn (see Sachau-Ethé, *Cat. Pers. MS MSS of the Bodl. Libr.*, i, 1424). A Turkish chieftain near Dīnā in the 12th century bore the title of *alp āvān* (Djauyni, ii, 46 ff.); for an Anatolian Saljuq prince with that of *alp akh* see *Bell*, 1937, 288. In India we find *alp khān* (Barni, *Ta'rikh-i Firāzshāhi*, 240, 527; *Firāzshāh*, *Ta'rikh*, i, 176, 238; Badāʾunī, *Muntahab al-Tawārīkh*, 219).

**Bibliography:** M. van Berchem, *Amida*, Heidelberg 1920, 92; Z. Gomboc, *Arpādhori etc.*, 43 ff.; M. Fuad Köprülü, *Türk Edebiyatında İlk Müslümanlar*, İstanbul 1918, 275 ff.; idem, *Les origines de l'Empire Ottoman*, Paris 1935, index; idem, in *IA*, xv.

**ALP ARSLAN** ʿADUD AL-DAWLA ABD SHUJʿA MUHAMMAD B. DAʿUD CAĞRIBEG, celebrated Saljuq sultan, the second of the dynasty (455/1063-465/1073). Born probably in 427/1030, at an early age he led the armies of his father Çağrıbeg with great success, especially against the Ghaznavids, and in 450/1058 he saved his uncle, the sultan Tughrilbeg, from the revolt of İbrāhīm lān in Persia. Two or three years later he succeeded Çağrıbeg, who had been ill for a long time, and at the end of 453/1063 he succeeded Tughrilbeg, who died childless; he thus brought under his authority all the Saljuq territories. He rid himself without difficulty of his half-brother Sulaymān, who had probably been adopted by Tughrilbeg; the vizier al-Kunduri paid with his life for the indiscretion of having at first supported his nephew. Alp Arslan was recognized by the Caliph al-Kāʾim and invested with all his predecessor's prerogatives; he enforced the submission of his uncle Yahyā al-Harātī, and defeated Kurlumugh, a cousin of Çağrıbeg and Tughrilbeg, who had been in revolt for some years in the mountains south of the Caspian, and who met an accidental death in this battle. He created difficulties for his elder brother Kawurt of Kirmān, who aspired at least to a share in the succession, by supporting against him the Kurdish chief Fadlīyā; later (in 457/1065, 459/1067 and 461/1069) he took direct action against him, and brought Fārs firmly under his control by suppressing Fadlīyā, who had come to terms with Kawurt. The latter was allowed to retain Kirmān, but as a subordinate. A demonstration of force in

Karāghānd territory and up to the Aral Sea (457/1065) reinforced the authority which his father had previously exercised there. As regards the Ghaznavids, he kept the peace concluded during the last years of Çağrıbeg's rule.

His fame in the eyes of posterity rests on his activities on the western front. Like his predecessor Tughrilbeg and his successor Malikshāh, he had the ambition to march on Egypt to destroy the stronghold of Fātimid heresy. But he realised the necessity of maintaining his ascendancy over the Turks, who constituted the military strength of the dynasty, and who were primarily interested in the richly-rewarding campaigns of a holy war (*ghazwa*) on the Christian territories beyond Adharbāyğān, where they were concentrated. Shortly after his accession, therefore, Alp Arslan conducted a series of campaigns against the Byzantines and their Armenian and Georgian neighbours, while independent bands of Turkmen raided more deeply into their territories; these campaigns also had the effect of increasing his prestige in certain autochthonous Muslim circles. In 456/1064 he captured Ani and Kars, and extracted a pledge of submission from the tiny Georgian kingdom. A further expedition against Georgia, in which the Shaddādī prince of Arrān took part, became necessary in 460/1068. The main advantages accruing from these campaigns were that the security of the Adharbāyğān frontiers was ensured, and that the Turkmen had free access to the pasture lands on the Aras. It is difficult to assess to what extent the perignations of the Turkmen, who simultaneously penetrated to the heart of Byzantine Asia Minor and permeated Muslim Diyār Bakr and Diyār Madjar, were directed by Alp Arslan; the Turkmen opened the way for him, but withdrew after having gained their booty. Moreover, their activities provoked a Armenian counterattack against the Syrian and Armenian borders of the Muslim world (1068-9), following which terms were negotiated between the two empires.

Alp Arslan then considered himself sufficiently secure against the Byzantines to listen to the appeal from rebels in Egypt and to undertake an anti-Fātimid expedition to support orthodoxy and the caliph. He occupied en route Arghūl and Mantzikert held by the Byzantines, attacked Edessa, and pushed on without delay to secure the submission of the Mirdāsī Mahmūd at Aleppo, who attempted to save himself by a last-minute recognition of the ʿAbbāsī Caliphate. The sultan's intention was to advance into Southern Syria, where various Turkmen groups had preceded him, when he heard that the Byzantine Emperor Romanus Diogenes, at the head of a formidable force, was threatening his rear in Armenia, and he had to return with all possible speed. He nevertheless succeeded in regrouping sufficient forces to give battle to the Byzantine army at Mantzikert in 461/1068. The principal chronicles are those of ʿImād al-Dīn al-Isfahānī (in al-Bundārī's version, ed. Houtsma, *Revue*, ii), the anonymous *ʿAkhbar al-Dawla al-Saljuqiyya* (ed. M. Iqbal, Lahore 1935), the *Rikāʾ al-Sūdār* of Rawandī, ed. M. Iqbal, 1927, the *Kāmil* of Ibn al-Aṭṭār, and a much-neglected work, the *Mirʾāt al-Zamān* of Sibṭ b. al-Jawzi (of which the relevant section will shortly be published). In other categories, the chief works are the *Fārs-nāma* of Ibn al-Balāʾ and the *Siyasat-nāma* of Nizām al-Mulk. The Byzantine, Syrian, Armenian and Georgian sources should not be forgotten. Later Persian historical works should be distrusted. There is no good comprehensive

of Mantzikert laid open Asia Minor to Turkish conquest. In later years there was no princely family in Asia Minor but wished to boast an ancestor present on that glorious day.

Alp Arslan himself met an unworthy end not long after his triumph. At the other extremity of his empire, relations with the Karāghānids, despite marriage alliances, were again strained. At the beginning of 465/end of 1072 he invaded their territory. In the course of a quarrel with a prisoner, the latter mortally wounded him. He died in the prime of life, at the end of Rabīʿ I/beginning of January 1073. He had nominated his son Malikshāh his heir.

In the eyes of orthodox Muslims, Alp Arslan was a leader of men and a commander capable of enforcing strict discipline, generous, just, devout, with an aversion for informers. Christians, remembering massacres such as that at Ani, ascribed to him a reputation for brutality, in contrast to his son Malikshāh, who was regarded by them in a more favourable light. Space does not permit here an account of his administration, which was essentially the achievement of his vizier Nizām al-Mulk and which is discussed in the article on the latter and in the general article on the Saljuqids. To Alp Arslan belongs the credit for singling out the Khurasānī who rose rapidly to fame and who became, under Malikshāh, the real head of the State. The influence of his new vizier may have led to the execution of al-Kunduri. Even at the height of his power, Alp Arslan appears to have deliberately refrained from setting foot in Baghdad, in order to avoid being involved in embarrassing and futile disputes with the Caliph and the Arabs of ʿIrāq such as had complicated the last years of Tughrilbeg. On the other hand, he energetically enforced in ʿIrāq the rights of the Sultanate. He saw no objection to the continued existence on his frontiers of dependent principalities, such as those of the ʿUkaylids of Mawli and the Shaddādids of Arrān. The close watch which he kept, for example, on Hāzārāp of Basra shows that he would tolerate no defection from that source, too. It is in this light, and in the light of respect for family traditions inherited from a tribal organization, that one must consider the distribution by Alp Arslan among the more important princes of his family of various appanages in the original domains of the dynasty in Khurasān.

Culturally, the reign of Alp Arslan does not seem to have been of great importance, either from the traditional Islamic, or from the Turkish, point of view. It may be of some interest to mention that the *Malik-nāma*, an anonymous attempt to reconstruct the historical origins of the dynasty, was composed for Alp Arslan (cf. Cahen, in *Oriens*, 1949).

**Bibliography:** A more comprehensive list of sources will be found under SALJUQIDS. The principal chronicles are those of ʿImād al-Dīn al-Isfahānī (in al-Bundārī's version, ed. Houtsma, *Revue*, ii), the anonymous *ʿAkhbar al-Dawla al-Saljuqiyya* (ed. M. Iqbal, Lahore 1935), the *Rikāʾ al-Sūdār* of Rawandī, ed. M. Iqbal, 1927, the *Kāmil* of Ibn al-Aṭṭār, and a much-neglected work, the *Mirʾāt al-Zamān* of Sibṭ b. al-Jawzi (of which the relevant section will shortly be published). In other categories, the chief works are the *Fārs-nāma* of Ibn al-Balāʾ and the *Siyasat-nāma* of Nizām al-Mulk. The Byzantine, Syrian, Armenian and Georgian sources should not be forgotten. Later Persian historical works should be distrusted. There is no good comprehensive

modern work either on Alp Arslan or on the Saljuqids. For their activities in the east, see the masterly account of V. Barthold, *Turkistan*, for their activities in the west see general guidance in E. Houtsman, *Die Oudgrens des byzantinischen Reiches*, Brussels 1935; Cf. Cahen, *La première pénétration turque en Asie-Mineure*, in *Byzantion*, 1948; and V. Minorsky, *Studies in Caucasian History*, Cambridge 1953. A provisional survey of Saljuqid history has been contributed by Cf. Cahen to *History of the Crusades* (Philadelphia 1955), 133-176.

**ALP TAKIN** (ALP TIGIN), the founder of the Ghaznavid power. Like the majority of the praetorians of his time, he was a Turkish slave, purchased and enrolled in the Sāmānid body guard, who progressively rose to the rank of *hādhīq al-hudūd* (commander-in-chief of the guards). In this capacity he wielded the real power during the reign of the young Sāmānid ʿAbd al-Malik I; the vizier Abū ʿAlī al-Balʿami owed his appointment to him, and did not dare to take any action "without the knowledge and advice" of Alp Takin. In order to remove him from the capital, the sovereign invested him (Dhu ʿl-Hijja 349/Jan.-Feb. 961) with the post of Governor of Khurasān, the highest military office in the empire. Dismissed from this post by Mansūr b. Nūh, of whose elevation to the throne he had disapproved, Alp Takin withdrew to Balh; in Rabīʿ I, 351/April-May 962 he defeated an army sent against him by the Sāmānid ruler, and retired to Ghazna where, after overthrowing the local dynasty, he set up an independent empire. The records disagree as to the date of his death; according to some, he died before 352/963. His learned son Abū Ishāq İbrāhīm (on whom see Ibn Hawkal, 13, 14) could only maintain his position, in face of a revolt by the former ruler of Ghazna, with Sāmānid aid. Thus the Ghaznavid kingdom only existed at first as a Sāmānid vassal state. Abū Ishāq died childless, and the leaders of the army, on which the new state was based, selected as his successor first the commander of guard Bilgā Takin (Tigin) (355-64/966-974), who left a reputation for integrity, and then Piri Takin (Tigin). During the latter's reign a final revolt by the supporters of the former dynasty was crushed. But the victor, Subuk Takin, the son-in-law and former chief officer of Alp Takin, was forced to power by the troops (Shābān 366/April 977), and became the founder of the Ghaznavid (4-1) dynasty.

**Bibliography:** A concise but comprehensive history of Alp Takin and his immediate successors, with references to all the sources, is contained in Muḥammad Nizām, *The life and times of Sultān Mahmūd of Ghazna*, Cambridge 1937, ch. I. The chief sources are Gardizi, *Zayn al-Akhbar*, ed. Muḥammad Nizām, Berlin 1928, and Djauyni, *Tabakāt-i Nāṣiri*. Nizām al-Mulk's account in the *Siyasat-nāma* (Scheler), 95-101, is an idealized version designed to place Alp Takin and Subuk Takin in a more favourable light. On the effect on the frontiers of Sīstān of the foundation of the new kingdom of Ghazna, see now, in addition to Muḥammad Nizām's sources, the anonymous *Tawārīkh Sīstān* published by Bahār, Teheran 1314, 375 ff. (W. Barthold, *IA*, Cahen).

**ALPAMISH**, One of the most famous Turkish epics (*düştan*) of Central Asia, inspired by two classical themes, (1) the quest for the betrothed and the rivalry of the suitors; (2) the return of the husband on the day of his wife's remarriage (theme of the

return of Ulysses). The Örkek hero Alpamış of the Kungurat tribe repairs to Kalmuk territory in search of his fiancée and cousin Barčin. Alpamış triumphs over his Kalmuk rivals, marries Barčin and brings her back to his tribe. The second part is the account of a further expedition on the part of Alpamış to Kalmuk territory to rescue his wife's father. Alpamış is captured and held prisoner for seven years by the Kalmuk Khān, and is finally added to escape by the Khān's daughter; he returns to his native land the very day on which his wife is about to marry—against her will—the son of a slave who has usurped his authority. Alpamış kills the usurper and regains his position as head of the tribe.

It is difficult to determine accurately the date of the composition of Alpamış, although it cannot be before the beginning of the 16th century, or later than the end of the 17th. In the *dāstān*, the Kungurat tribe lives a nomadic existence around Lake Bayan near Tirmidh (now the Surkhāda Daryā district of southern Uzbekistan). The Kungurat only moved into this area with the armies of Shaybānī Khān, about 1500. Moreover, in the three versions, Örkek, Karak and Karakalpak, Alpamış and the Kungurat are called Örkek, which postulates an origin later than the Shaybānī conquests. On the other hand, the main theme of the epic, the struggle of the Muslim Turkish nomads against the "infidel" Kalmuks, places it between the 16th and the 17th centuries, the period when the Kalmuks of the Oyrat Empire were making a series of bloody raids in Central Asia.

Zürmüskiy and Zarifov believe that they can detect, beneath the existing versions of Alpamış, an older version, now lost, dating back to the 11th-12th century, a period when the ancestors of the Kungurat were nomads near the Aral Sea (analogy with the Uygur poem *Kamur-Kayseri* or to still earlier times when they dwelt in the fringes of the Altai (analogy with the Mongol poem *Khān Khurung*)).

All the Central Asian versions of Alpamış are in verse, the prose passages serving only to mark the divisions between the various episodes of the poem. The versification is simplified. The repetition of the same rhyme divides the verse into stanzas of different length (4, 4, and up to 10 and 13 lines). This simple poetic form is perfectly suited to the way in which the poem is transmitted, whether recited by a *bakhshi* ("bard"), or chanted by a *ghā'ir* ("minstrel") with accompaniment on the *obus* (two-string violon).

Several versions of Alpamış exist: Örkek, Kazak, and Karakalpak, which correspond fairly closely to one another, but have occasional but obvious differences of detail. The best and the most popular is the Örkek version of the *bakhshi* Fādlī (Fayzī) Yuldash (born in 1873 at Kishlakh Layk in the district of Bulungur near Samarkand), the text of which was published for the first time by Hāmid 'Alimjān at Tashkent in 1939, in a slightly abridged form, under the title *Yuldash ogly Fayzī: Alpamış*. The first part of this work in abridged form has been translated into Russian verse by V. V. Derzhavin and A. S. Koletov, and the second, in *extenso*, by L. M. Pen'kovskiy. These two translations, based on 'Alimjān's text and with a preface by V. M. Zürmüskiy, were published at Tashkent in 1944 under the title: "Fayzī Yuldash: Alpamış". Finally, in 1949, L. N. Pen'kovskiy published at Tashkent the first complete translation of the Yuldash version, with the title *Alpamış, azbekshiy epos*. There are other Örkek versions, by other *bakhshis*, which are still unpublished, and about which in certain details,

The Kazak version (2nd part only) was published by Shaykh ul-Islām at Kazan in 1896, and the complete text was edited by Divaev at Tashkent in 1922, and re-edited some years later at Alma-Ata in 1935. It appears under the title *Alpamış Bayır* in the collection *Butaylar Zırrı*, Alma-Ata 1939, 249-96.

The Karakalpak version (1st part only, with Russian translation) is based on the text of Dīya Murād Bek Muhammedov, *bakhshi* of Torkul (A. Divaev, *Alpamış-Bayır, Etnograficheskie materialy*, fasc. vii in *Sbornik materialov dlya statistiki Syr-Daryinskoy oblasti*, ix, Tashkent 1903). The complete Karakalpak version was published in Moscow in 1937 and again in 1947 at Torkul and Tashkent, under the title "Aimbet uly Kaly: Alpamış".

In addition there exist two prose versions, Bagkir and Altai, which are radically different from the central Asian versions. The Bagkir version, *Alpamış hem Daryn Khāyus*, was published by N. Dimi-trova, with Russian translation by A. G. Besonov, in *Bagkirskie Naranye Shazhi*, fasc. 10, Ufa 1941.

The text of the apparently earlier Altai version *Alp-Manash*, established by N. U. Ulagayev, appears in *Altay Bayır* (the Oyrat national epic, published by A. Koptev, Novosibirsk 1941, 79-126).

The longest version, that of Fayzī Yuldash, comprises 14,000 stanzas; the Karak and Karakalpak versions are shorter and comprise 2,500 and 3,000 stanzas respectively.

(E. LÉVI-PROVENÇAL)

**ALTAI**, mighty, ca. 1000 miles long mountain system in eastern Central Asia, stretching from the Saitan Sea in the southwest to the upper Selenga and the upper Orkhon, with the sources of the Ob', the Irtysh and the Yenisei. Here, and in the adjacent country to the north-east as far as the present-day Mongolia, was the oldest home of the Turks and the Mongols and their ancestors. The Turks had here for a long time after their "refuge" in the Otukan [?] mountains. The Turkish designation for the southern Altai, as it appears in the inscriptions of the Orkhon, is Altin-ysh ("gold mountain"), in Chinese Klu-shan (same meaning). The name of Ektag, however, mentioned by the Greeks (probably Ak Tagh, "white mountain"), seems to refer to the T'ien-shan (E. Chavannes, *Documents sur les Tou-tou occidentaux*, 236-1). It is uncertain whether the modern name, which appears for the first time in the Kalmuk period, is connected with the Mongol *altan*, "gold"; the local population explains it by a false etymology as *altı ay*, "six months".

Fickler, *Der Altai*, 1925; *Bol'shaya Sovetskaya Entsiklopediya*, ii, 136-57. For its role in Turkish civilization, cf. A. von Gabelen, *Störpe und Stadt im Leben der ältesten Türken*, iiii, 1949, 30-62 and Text.

(B. SPULER)

**ALTAIANS** is the name of a Turkish tribe in the Altai mountains, partly professing, more or less nominally, Orthodox Christianity, partly Shamanistic; though Islam is not to be found amongst them, they had some contact, though possibly not an intimate one, with Islamic civilization (as attested by loan words such as *huda'y*, "God"; *shayan*, "the devil"). (Cf. for them G. Teich and H. Rüböl, *Völker ... der UdSSR*, Leipzig 1943, 28-43, 137-1, 142; W. Radloff, *Proben aus der Volksliteratur der türkischen Stämme Süd-Sibirien*, i; idem, *Aus Sibirien*, i, 250-1; *Bol'shaya Sovetskaya Entsiklopediya*, 141-1).

The name Altai has been substituted since about 1874, and more especially in the 20th century, following a proposal of M. A. Castrin, for the term Turanian [s.v.], coined by F. Max Müller, as the designation of the assumed community of the Turkish-Mongolian peoples; the even wider concept of Ural-Altaians comprises also the Samoyeds, Finno-Ugrians and Tungus. Cf. e.g. *Ural-Altaiische Jahrbücher*, Wiesbaden, since 1933; J. Benzing, *Einführung in das Studium der altaiischen Philologie und der Turkologie*, Wiesbaden 1933, with bibliography; W. K. Matthews, *Languages of the URRS*, Cambridge 1931. These peoples, however, with the exception of the Turks (s.v.), are not touched by Islam.

(B. SPULER)

**ALTAIR** [see MUGULIM]

**ALTAMISH** [see ALTUMSH]

**ALTIN**, or AL-ALTIN, town, to the north of Baghdad, between 'Ukbara and Samarra, on the eastern bank of the old course of the Tigris. As the course of the Tigris has changed (cf. *BUJLA*), 'Altin is today on the western bank, on al-Shutayta. The extensive ruins of the town are known as 'Altin up to the present day, they lie about 4½ m. N.W. of the modern town of Balad. The town is already mentioned by Ptolemy (iv, 20) under the name of Altha. According to the medieval geographers the northern limit of the Sawād or al-'Irāk was formed by 'Altin on the eastern, Harba on the western side of the Tigris. The town was a *wakf* for the benefit of the descendants of 'Alī b. Abī Tālib (Yāqūt) and some distinguished traditions of the 6th and 7th centuries A.H. came from this town. A stone dam was built for the Tigris near 'Altin, but no trace of it remains. Near 'Altin lay the convent called Dayr al-'Altin or Dayr al-'Adhārā, described, among others, by the poet Djabādhā al-Barnakī.

**Bibliography:** Makdīd, 123; Yāqūt, iii, 211, ii, 679; Shābustī, *Diyārāt* (G. Awad), 62-3; Ibn 'Abd al-Hakk, *Marāsid*, ii, 275; 'Umari, *Masālik al-Ahḥār*, i, 258 ff.; Suyūṭī, *Lubb al-Lubb*, 181; *T.A.*, i, 634; A. Souss, *Rasy Samarra*, Baghdad 1948, 183-4, 218; J. F. **ALTĪ PARMĀK** ("the man with six toes"), MUHAMMAD B. MUHAMMAD, Turkish scholar and translator. He was born in Üsküpe, where he studied and joined the *shūfī* *ḥarīq* of the Bayrūtīya [s.v.], became a preacher (*waḥīd*) and teacher in Istanbul and later in Cairo, where he died in 1033/1622-24. (1) His main work is the *Dalā'il-i Nuḥwawāt-i Muḥammadi wa-Shamā'il-i Fuḥwawāt-i Ahmadi*, a translation of the Persian *Ma'arīf-i al-Nuḥwawāt* by Muḥ' al-Dīn b. Shārah al-Dīn Farḥī, known as Mullā Miskīn (d. 907/1501-02); there are numerous manuscripts in Istanbul, Cairo and elsewhere, and printed editions of Istanbul 1257 and Böllük 1271 (see Storey, i, 188; Brockelmann, S II, 661). For a detailed account of the contents of this work, see Flügel, *Handschr.* Wien, ii, no. 1231. (2) He also translated from the Persian the *Nipāristān*, not the work of Dīlān (as in Brockelmann, ii, 590), but that of Ahmad b. Muhammad Ghāṣṣārī (d. 975/1567-68; cf. Storey, i, 214); the translation bears the title *Nuḥwāt-i Dīkārī wa-Nāḥiyyat-i Dānīn*, and exists in several manuscripts in Istanbul. (3) A further work of his is the translation of the *Kātib-i sūltān*, Dīlāmī *Lafḥ-i al-Balāḥīn*, a mystical interpretation, in sixty "sessions", of *sūra* xii by Abū Bakr b. Ahmad b. Muhammad b. Zayd Tūfī, an author of uncertain date (cf. Storey, i, 29, no. 10); a manuscript exists in the Köprülü Library in Istanbul. (4) Finally, there is his translation of a "commentary on an extract on rhetoric" (*Sharḥ Talḥīṣ al-Ma'ānī*), with the title *Kāhīl al-'Ulūm wa-Fāḥī al-Funūn*, preserved in a manuscript of the 'Usūl Library in Istanbul; this is presumably identical with his translation of the *Mufasssal* (Hādījī Khalīlī, ed. Flügel, ii, no. 3541) by Taṭṭālī (cf. Brockelmann, i, 354).

**Bibliography:** al-Muhibbi, *Khāṣṣat al-Aḥḥār*, iv, 174; Brunsal Meḥmed Tāhīr, *Uḥmūd al-Muḥallīfī*, i, 212 f.

(J. SCHACHT)

**ALTI SHAHR**, or ALTA SHAHR (the word "six" is always written *alta* in Chinese Turkistan), "six towns", a name for part of Chinese Turkistan (Sin-chin) comprising the towns of Kuia, Ak Su, Ue Turfan (or Ush Turfan), Kishghar, Yarkand and Khotan. It appears to have been first used in the 18th century (cf. M. Hartmann, *Der Islamische Orient*, i, 226, 278). Yangi Hishr, between Kishghar and Yarkand, is sometimes added as the seventh town (though it also frequently counted as one of the six, in which case either Kuia or Ue Turfan is omitted). On account of this the country is called in modern sources Dīst or Yūli Shahr, "seven towns"; cf. e.g. *Tārīkh-i Amāwīyeh*, written in 1211/1903 and printed by N. Pantason, Kazan 1905. [See the articles on each of the towns and TURKISTAN.]

(W. BARTHOLOMÆ)

**ALTILIK** [see SIKKA]

**ALTIN** or ALTUN (ʾr), Gold, also used of gold coins. The word is often met with in Turkish proper names of persons and places, e.g. Altūn Köprü, Altintash (Altuntash). See also SIKKA.

**ALTIN** (AARÖN) **KÖPRÜ**, a town of 'Irāk, built picturesque on a small rocky island in the Lesser Zab river (44° 5' E, 35° 42' N)—and in modern times overflowing on to both banks—serves as a *nāhiya* headquarters in the *ḥaḍā* of Kirkūk in the *lawa* (province) of that name, formerly in the *wilāyat* of Mosul. The Zab here forms the boundary between Kirkūk and the 'Irāk 'Irāk. Known locally in Arabic simply as al-Kanṭara, the Turkish name "Golden Bridge" is variously explained; some believe it to commemorate a Turkish or Kurdish lady of that name, others that it refers to the rich caravan-tolls of earlier days, since the place lies on the ageing Baghdad-Mosul highway; while others understand it as an abbreviation of Altın-Sö-Köprü, or the "Bridge of the Altın-Sö". But it is at least equally probable that the river name (now rarely used) itself merely reflects the town name.

The place, no more than an obscure and unrecorded village in medieval times, gained importance in and since the 11th/16th century, after the erection of the two bridges by it (it said) Sultān Murād IV and a period of settled administration. It was visited and has been described by many European travellers; and, now reckoned as healthy as well as highly picturesque, has in late years been greatly improved in cleanliness, amenities, and communications. The famous stone-built bridges, of which the southern contained an almost impracticably high central arch, were destroyed by the Turks in 1918 and later replaced by modern steel structures. The Kirkūk-Irbil branch of 'Irāk Railways crosses the Zab immediately upstream.

The inhabitants of Altın Köprü, some 3500, are mixed Kurdish, Turkoman and Arab; this applies also to the thirty villages within the *nāhiya*. Many of the latter lie within the area of the rich and extensive Kirkūk oilfield (discovered in 1340/1927, and in full development since 1353/1934); oilfield operations give employment to many of the inhabitants. Their other main occupations are those of agriculture (partly rain-fed, partly aided by modern irrigation), of services and supplies connected with road transport, of the characteristic *ḥallaḥ* (skin-supported raft) traffic on the Zab, and of wholesale and retail trade.

**Bibliography:** Turkish period, V. Cuiet, *La Turquie d'Asie*, ii, 825; S. H. Longrigg, *Four Centuries of Modern 'Iraq*, Oxford 1925, and many travellers' records, such as Niebuhr, *Reisebeschreib.*, nach Arabien, Copenhagen 1778, ii, 340; Olivier, *Voyage dans l'empire Ottoman*, Paris 1801, ii, 372; Rousseau, *Description du Pachalik de Bagdad*, Paris 1806, 85; C. J. Rich, *Narrative of a Journey to the Site of Babylon*, London 1839, ii, 10-2; Pehrman, *Reisen im Orient*, Leipzig 1865, ii, 319; Czernik, in *Petersmann's Geogr. Mittheilungen*, *Ergänzungsheft*, no. 44 (1872), 47; see also K. Rötter, *Erduunde*, ix, 637-9; E. Reclus, *Nouv. géogr. univ.*, ix, 425; G. Hoffmann, *Auszüge aus 199. Alten pers. Martyren*, 1880, 258, 263. For the 20th century, S. H. Longrigg, *'Iraq* 1900 to 1950, London 1953. (S. H. LONGRIGG)

**ALTIN ORDU**, modern Turkish notation of the Russian term "Zolotaya Orda", "Golden Horde" [see ALTIN].

**ALTINTÄŞH** (also ALTUNTÄŞH, local pronunciation ALTINTİŞH), village in Anatolia, 39° 5' N, 30° 10' E, and a *nāhiya* in the *wilāyat* and *ḥaḍā* of Kütahya (though the capital of the *nāhiya* is not in the village, but in the village of Kündükyü, a little

to the west), on the small stream in the area of the sources of the Porsuk, somewhat to the west of the Atyön Kara Hisar—Kütahya road. The village contains a *ṭarḥ* of the 19th century and a modern mosque incorporating older fragments. It stands on the site of an older and larger mosque, the building of which (of which the Rīm Salḡūḡ 'Alā' al-Dīn Kaykubād) is said to be in the museum of Ak Şehir. The inscription which is now above the porch refers to the building of a bridge and bears the date of 666/1267-8; the place has two small old bridges.

In the neighbouring Cakarsar (called by the inhabitants Cakarsar) is an early Ottoman *ḥān* (three ayes with five girders) with a remarkable porch, into which there are also built antique fragments.

Altintäşh was a stage on the highway from Bursa (and Uskudar) via Kütahya to Atyön Kara Hisar and Konya, forming the stage probably together with Cakarsar.

**Bibliography:** Cl. Hüner, *Koniat*, Paris 1897, 87, 254; 'Alī Dīnawād, *Memālik-i 'Oḡhānīyīyīn Ta'riḥ-i İne-Diğrāyā Luğāt*, 26; Fr. Terschner, *Das anatolische Wogenet*, Leipzig 1924-6, ii, index. (Fr. Terschner)

**ALTUNTÄŞH** AL-Hāḡīrī, Abū Sa'īd (his alleged second name Hārūn which occurs in a single passage of Ibn al-Aḡḡir, ix, 294, is probably due to an error of the author or of a copyist), Turkish slave, later general of the ḡhāznawī Sebük Tegin and his two successors and governor of Kh'ārim. Already under Sebük Tegin he attained the highest rank in the bodyguard, that of a "great *ḡhāḡīr*"; under Mahmūd he commanded the right wing in the great battle against the Karakhanids 128 Rabi' II 598/4 Jan. 1008, and in 401/1010 he is mentioned as governor of Harāt. After the conquest of Kh'ārim in 408/1017 he was appointed governor of the province with the title of Kh'ārim-shāh and maintained himself in this office until his death in 423/1032. Altuntäşh seems to have administered the advanced border-province with energy and foresight and to have effectively guarded it against the neighbouring Turkish tribes. As, however, by this means he established his own rule even more than that of the sultans, his measures were always regarded with suspicion both by Mahmūd and Ma'sūd, and it is said that both of them made attempts to remove the troublesome governor. For treachery. In the spring of 423/1032 Altuntäşh undertook, by order of the sultan Ma'sūd a campaign against 'Alī Tegin (cf. KARAKHANIDS) and received a mortal wound in the battle of Dabūsiyya. He succeeded as governor by his son Hārūn, but Ma'sūd bestowed the title of Kh'ārim-shāh on his own son Sa'īd and Hārūn administered the country only as Sa'īd's representative. In Ramadan 425/August 1032 Hārūn proclaimed himself independent, but was killed the very next year at the instigation of the ḡhāznawids. His brother and successor Isma'īl Khānān ruled the country till 434/1041, when he was ousted, by order of the ḡhāznawids, by Shāh Malik, the prince of Dīand. Thus the dynasty founded by Altuntäşh came to an end.

**ALUDELI** (see AL-SUTRĀL).

**'ALCOK** (see AL-ḡURK).

**AL-ALCISI**, name of a family which included a large number of savants of Bagdad in the 10th and 20th centuries. The name is derived from Ālā, a place situated on the west bank of the Euphrates, between Abū Kamāl and Rumādī; according to family tradition, the ancestors of the Alci (whose descent is traced back to al-Ḥasan and al-Ḥusayn) fled there to escape from the Mongol conqueror Hūlāḡū; their descendants only returned to Bagdad in the 11th/17th century. Among the numerous representatives of this family who have added lustre to the cultural and political history of 'Irāk are:

(1) 'ABD ALLAH SALĀH AL-DIN, forefather of the family (d. 1246/1830).

(2) ABŪ 'L. DĪNAR, MAHMŪD SHĪHĀB AL-DIN (1247-70/1802-54), son of the preceding; he was *mufī* of Bagdad for several years, but was also an outstanding professor, thinker and polemist. Among his numerous works are: *Rūḥ al-Ma'ānī* (commentary on the Qur'ān, Būlūk 1301-10/1883-1892, 9 vols.); commentaries on grammar and prosody and attempts at *maḥāḡ*; his doctrinal arguments are contained in *al-Riḡāla al-Lakariyya* (ed. 1301/1883) and *al-Aḡḡir* (ed. 1301/1883).

(3) 'ABD ALLAH SALĀH AL-DIN, brother of the preceding, (d. 1284/1867); a *ḡhāḡīr* at Bagdad, he was called "the Ibn al-Djāwī of his age and the Ibn Nabūta of his generation". (4) 'ABD AL-HAMĪD, brother of the preceding, (1232-1241/1816-1906), professor and wa'f, author of some verse and a *Naṭṭ al-La'ālī 'alā Naṣm al-Amāl*. (5) 'ABD ALLAH BAHĀ' AL-DIN, elder brother of (2) (1248-97/1832-74); *ḡhāḡī* of Basra, author of a small treatise on grammar, two texts on logic and a commentary on a treatise on mysticism.

(6) 'ABD AL-BAKI SA'ĪD AL-DIN, brother of the preceding, (1250-97/1834-79); *ḡhāḡī* of Kirkūk in 1292/1875; he wrote mainly commentaries on or adaptations of manuals on grammar or scansion, and a guide to the pilgrimage, *Awḡāḡ Manḡḡī ilā Ma'rifaḡ Manāḡī al-ḡhāḡī* (Dih. Cairo 1277).

(7) NU'ṢAḤ KHAYR AL-DIN ABŪ 'L. RABĀKĀT, brother of the preceding (1252-1317/1836-19), professor and wa'f; author of a defence of Ibn al-Aḡḡir, *Dīḡāl al-'Aynayn fi 'L-Maḡḡāma bayn al-Aḡḡir*, which caused a great sensation. He wrote two other polemical works, *al-Djāwāb al-Faḡīh* (against the Christians), and *Shāḡāḡh al-Nu'mān fi Radd Shāḡāḡhī Ibn Sulaymān*; his sermons and exhortations were collected in his *ḡhāḡīyāt al-Ma'ānī*, a work of great length which exists in several editions.

(8) MUHAMMAD ḤAMĪD, brother of the preceding (1262/1846-1290/1874-4).

(9) AHMAD SHĪKRI, brother of the preceding (1264/1848-1330/1911-2), *ḡhāḡī* of Bagra.

(10) MAHMŪD SHUKRĪ, known also as MAHMŪD AL-ḤADĪD-ZĀDA, son of (5) (29 Ramadan 1273/14 May 1857/3 Shawwāl 1342/8 May 1924); the best known of his family, a fact which is partly due to the zeal of Muḡammad Bahḡāt al-Aḡārī in publishing his works. He wrote some 10 works on history, *ḡhāḡī*, biography, lexicography, rhetoric and dogmatic controversy; on history, the most noteworthy are the *Riḡāḡ al-Arab* fi Ma'rifaḡ Aḡḡāl al-Arab (printed in 1313/1896), a history on the Arabs of the *ḡhāḡīyā* compiled in answer to a question raised at the 8th Oriental Congress (1889), and *Ta'riḡh Naḡḡā* (Cairo 1343); on biography, *al-Miḡā al-Aḡḡar* (Bagdad 1348/1930) on the savants of Bagdad in 12th-13th centuries; on dialectology, *Amḡāl al-'Aynayn fi Maḡān al-Salām*; on controversy, a series of violent polemics against Shī'ism, against the Rifa'īyya Order, in support of the neo-Hanbalite law reform, etc., notably the *ḡhāḡīyāt al-Amānī*, published under a pseudonym (Cairo 1327). He was one of the most vigorous representatives of modern Islam, striving by means of the written and spoken word and by his example to combat *ḡhāḡā*, and he may be regarded as one of the leaders of the Salafiyya movement.

(11) 'ALĀ' AL-DIN 'ALĪ, son of (7) (d. 1340/1921); a professor; his only work is a manual on grammar in verse; a collection of biographies was never completed.

(12) MUHAMMAD DARWĪḡ, son of (9) (d. after 1340/1921); professor and preacher; he wrote several unpublished works.

**'ALWA**, name of a Nubian people and kingdom. The kingdom was adjacent to that of Makura (q.v.), a little below the confluence of the White Nile and the Atbara and stretched southward well beyond the confluence of the White and Blue Nile; its capital was Sōba, near the modern Khartūm. The Christian kingdom preserved its independence even after the fall of the kingdom of the Makura and only disappeared in the beginning of the 19th century under the pressure of Arab tribes allied to the Funj. [See also NUBA, and al-NUBA.]

ALWĀH [see LAWH].

ALWAND [see AR. BUNJULK].

ALWAND KŪH or KŪH-ALWAND (ELWEND), is an isolated mountain-group lying to the south of Hamadān, and rising to a height of 15,727 feet. To the north and north-east the Alwand Kūh drops steeply off to the plain; to the north-west it is united to the Kūh-i Dā'm al-Barī, a mountain-mass of almost equal height, which is joined to the Kūh-i Alwand Kulāh by lower mountain-chains. The latter forms the north-western extremity of the entire Alwand system. The core of the real Alwand consists of granite, judging from the geological formation only at the base is there to be found isolated red clay of salt formation. Wild rocky precipices, bare cliffs and gorges alternate with fertile mountain pastures; up to nearly 7,500 feet the southern slopes are clad with groves of walnuts, mulberries and fruit trees. The Alwand Kūh is noted for its abundant water-supply. Mustawfi observes (*Nushah al-Kulāh*, Bombay 1311, 132) that in addition to the spring which rises on the highest peak, no fewer than 42 streams flow from this central portion of the mountain chain, some of which are tributaries of the Tigris, others turning eastwards, flow to the interior of Iran. As the result of the plentiful irrigation by the Alwand streams the plain of Hamadān has always been considered as the most highly favoured region of Iran. Hamadān itself, the old Ekbatana, which is built in terraces along the foot of the mountain was a favourite summer residence for the Achaemenid kings on account of its cool, lofty position (1860 metres). Two cuneiform inscriptions dating from Darius I and Xerxes I still remain as vestiges of ancient Persian times at a place named Gandi Namah (= treasure-house) on the slope of the Alwand Kūh at a height of 7,000 feet.

Oriental writers relate many legends but few facts concerning the Alwand Kūh. (They mention a source on the summit of the mountain as one of the sources of paradise—probably following old beliefs concerning the locality; cf. Jackson, *Persia Past and Present*, 146, 170-3.) Al-Karwini (682 = 1283) gives the best account; he names it Kūh Arwand. Yāqūt also uses the form Arwand, whereas other Arabic writers employ the later term Alwand (Mustawfi: Alwand Kūh). The Old Persian name Arwanda (Avesta and Pāliand: Arwand) appears in Greek writers (Polybius, Ptolemy, Diodorus) in the form *Opvῶν*. In Old Armenian the word is found as the name of persons in the form Erwand (Arwardi); cf. H. Hübschmann, *Armenische Grammatik*, Leipzig 1897, I, 40, and in *Indogermanische Forschungen*, 1904, 426. The "white mountains" mentioned in the cuneiform inscriptions are probably to be identified with the Alwand Kūh; cf. Streck in *ZA*, 1900, 372. Perhaps moreover, the "cedar-mountain" of the Old Babylonian Gilgamesh epic refers to the Alwand Kūh, as Jensen has conjectured in Schrader's *Keilschriftbibl. Biblioth.*, vi/1, Berlin 1900, 573.

Map: Iran series, 1/4 inch Sheet no. 139, G (Hamadān) June 1902. (M. Streck, D. N. Wüstner.) ALWAR (OLWER in English spelling) was a "native" state in the east of Radjasthān, India, lying between 27° 3' and 28° 13' north and 76° 7' and 77° 13' east with an area of 3, 141 square miles and a population of 861, 993 (1931 census). The languages spoken are mainly Hindi and Mewāṭi; about one fourth of the inhabitants is Muslim.

The founder of the modern state of Alwar was Pratap Singh, 1740-1791, who, between 1771 and 1776, succeeded in carving out a principality which was recognised by the Mughal Emperor Shāh 'Ālam II, and later, in 1811, by the British.

After the lapse of British paramountcy Alwar joined the Matsya Union with Bharatpur, Dholpur and Karauli; the Maharaja of Alwar became Uparajah of the new state. On the 12th May, 1949, Alwar and the other constituent states of the Matsya Union merged with the Union of Radjasthān.

The town of Alwar has some Islamic monuments, such as the mausolea of Bahādur Singh (the adopted son and successor of Pratap Singh) and of Faṭih Dījari (see Ferguson, *Indian Architecture*).

AMA [see 'ARAB].

AL-'AMĀ AL-TUTULI, "the blind man of Tudela", ABU L-'ARRĀS (or ARB. DĪR'AR) AHMAD B. 'ABD ALLĀH B. HURAYRA AL-'UTRĪ (or AL-KAYSI), Hispano-Arabic poet, b. in Tudela, but brought up in Seville; d. 525/1130-1. MSS of his *diwān*, containing classical poetry, are to be found in London and Cairo (see Brockelmann, I, 320, S. I, 480), but he is mainly famous as one of the great masters of *muwaṣṣṣah* poetry. His *muwaṣṣahs* are preserved, apart from occasional quotations in general works, in such special anthologies of the genre as Ibn Sanā' al-Mulk's *Dīr al-Tirās* (ed. Rikāby, nos. 1, 39, 34), Ibn Bughār's *Uṣṣal al-Dīwān*, Ibn al-Khāṭib's *Diwān al-Tawāriḡ* (ch. II, no. 1), and al-Safadī's *Tawāriḡ al-Tawāriḡ* (nos. 149, 164; for the last two, cf. S. M. Stern, in *Arabica*, 1955, 150 ff.); cf. MUWAṢṢAH.

Bibliography: Ibn Bāssām, *Ḍahab*, II, Oxford 749, fol. 167 v ff.; Ibn Khāṭib, *Kalā'id al-'Iḥyān*, 271-8; Safadī, *Wafī*, II, Oxford 664, fol. 73 ff.; Maḳkārī, *Analeto*, II, 139 (= 262), 235, 275, 336, 362; Ibn Sa'd, in Ibn Khāṭib, *Muḥaddith*, II, 302; H. Perle, *Public address*, index, s. v. L'Avenue de Tudela.

(S. M. STERN)

'AMĀDIYA, a town in Kurdistan, at about 100 km. north of Mosul in the basin of the Gāra river (a right tributary of the Great Zab). The town stands on a hill and is dominated by the citadel built on a steep rock. The water supplying the citadel comes from cisterns hewn in the rock. The stronghold is situated at a point which, in the east, controls communications with valleys of the left affluents of the Zab (Shamānīn, Rā-Kuṣk, Rawāḍus) and, in the west, those within the Khābūr basin. The climate of 'Amādiya is hot and unhealthy.

According to Ibn al-Aṭṭar the fortress received its name from 'Imād al-Dīn Zang who built it in 537/1142 on the spot where a mosque of ancient date stood called Aḡāh (al-Kāmil, IV, 60) or al-Shābāniyya (Ta'arūḡ al-Aḥbābiyya, *Récueil des Hist. des croisades*,

II/2, 114-5). Less probable is its attribution to the Būyid 'Imād al-Dawla (d. in 338/949, see *Nuḥḥat al-Kulāh*, 105). The original form of the name is, therefore, 'Imādiyya, but the modern pronunciation is 'Amādiya.

'Amādiya had Kurdish princes of the Bahdīnī family, originary of a place called Tārīn (cf. Hoffmann, *Ausgabe*, 222) in the territory of the Shams al-Dīn (Shamānīn). Shams al-Dīn, I, 106-5, traces their arrival back to circa 600/1203. In its heyday the principality comprised a number of adjoining territories ('Akr Shūsh, Dabūk and even Zakho). The later Bahdīnīs shifted between the Safawids and the Ottomans and were finally incorporated by the latter, under whom 'Amādiya was reckoned now to the wilāyat of Wān and now to that of Mawul. Since the settlement of the Mosul question in 1926 'Amādiya has formed part of 'Irāk.

'AMAL (A. I. 'Amal, performance, action, is usually discussed by the speculative theologians and philosophers only in connection with belief (see 'ILM, Iḥḥā) or with 'ilm and *nazar*. From Hellenistic tradition was known the definition of philosophy as the "knowledge of the nature of things and the doing of good" (cf. *Ma'āth*, ed. van Vloten, 131 f.). Many Muslim thinkers have emphasised the necessity or at least the desirability of this combination (cf. Goldziher, *Kiṭāb Ma'āni al-Nafs*, 54-60). But it is the intellectualism of the Greek philosophy, in ethics also, that explains how nine tenths of the philosophers and mystics influenced by it represented action if not of less importance than at least as dependent on knowledge. Plato placed wisdom (*sophia*) as first of his cardinal virtues, the Stoics and Neo-Platonists followed him. Aristotle also esteemed theoretical (dianoetic) virtue higher than ethical. This is the doctrine of the so-called "Theology of Aristotle", that the soul of man is elevated, not through actions but by cognition, to perceive and enjoy the intellectual world.

Different opinions on the relation between knowledge and action are given by al-Tawhīdī in his *Muḥāsibāt*, Cairo 1929, 262 ff. We shall here confine ourselves to the predominantly intellectual conception and take as an example the *Fuṣūṣ*, attributed to al-Fārābī, *Philosophische Abhandlungen*, 72 ff. [Arabic] ed. Dieterici; in reality by Ibn Sīnā, where we find the psychological and metaphysical basis of the author's teaching. He distinguishes three practical faculties of the soul, which are only briefly mentioned and two theoretical, which are discussed more fully. The activity of the vegetable and animal soul is practical as is that of the soul of man, i. e. the reasoning soul, in so far as the latter chooses not only the useful but also the

beautiful and prepares itself for the goals placed before it in this life. The theoretical faculties are of a higher rank. Beginning with sensual perception (animal soul) theoretical reason advances beyond the material world and rises to the intellectual sphere. Practical reason is only servile, theoretical however is independent (cf. al-Fārābī's *Maṣṣarāt*, [Arabic] ed. Dieterici, 47).

In conclusion it may be mentioned that the philosophers following Aristotle divided sciences into theoretical (*nazariyya*) and practical (*'amaliyya*). The latter are ethics, economics and politics.

Bibliography: A. J. Wensinck, *The Muslim Creed*, Cambridge 1932, s. index, s. v. *Works*; and T. J. de Boer, *Ethics and Morality (Maslim)*, in *Hastings' Enc. of Religion and Ethics*.

(T. J. DE BOER)

2. 'Amal (and the pl. *'amāl*), "that which is practised" and, following the usage of Kur'ān and *hadīth*, "the works". It is opposed complementarily to *nazar* (q. v.), speculative knowledge, and must be distinguished from *'aṣ'āl* (pl. *'aṣ'āl*), acts. 'Amal signifies the moral action in its practical context and, secondarily, the practical domain of "acting". In the terminology of *talāfa*, al-'ilm al-'amālī is practical knowledge, which comprises, according to the list given by al-Khū'arizmi (*Ma'āth al-'Ulūm*), ethics, domestic economy and politics, thereby reproducing an Aristotelian distinction. This then is a notion which applies to the "foreign sciences". It was used and developed in *talāfa*, particularly in distinguishing the "practical" and the "theoretical intellect". Concurrently, the idea of *'amal ṣāliḥ*, a morally good action, synonymous with *ma'rāf*, became current in Islam. But the *Risāla al-Laduniyya* (a text usually attributed to al-Ghazālī) introduced the distinction between speculative knowledge (here 'ilm) and practical knowledge ('amal) as regards revealed knowledge ('ilm *shar'ī*) itself, and it is canon law (*fiqh*) which is called an *'amālī* science. When works on *kalām* consider the nature of faith (*īmān*) and its relationships to Islam, the "external works" required by the Law are commonly termed *'amāl*. Ibn Ḥazm does the same. (*Aṣ'āl*, on the other hand, is commonly used in order to describe the human acts when discussing the question of free will.) Al-Ghazālī, especially in the *Iḥyā'*, when speaking of the faith, follows the usage of *kalām* with regard to the meaning of the term 'amal and its plural *'amāl*. He considers as permissible the following definition: *īmān* is equivalent to the sum of inward assent (*iqdāḥ*), verbal confession (*kawf*) and works (*'amāl*).

(L. GARDET)

3. 'Amal, "judicial practice". The problem of "jurisprudence" as a source of law has arisen at every period and in every province of Islam. But Morocco has provided the best facilities for studying it, since the discovery there by L. Millot in 1917 of an 'amal which has legislative force.

In Andalusia, despite controversy, there prevailed a tendency to require judges to follow "practice of Cordova". Jurisprudence entered into compendia of "formularies" (*waṭṭā'iq*), "responses" (*fatāwas*) and even "regulations" (*ḥukūm*). Part of this material was incorporated in a late manual, the *Taḥḥīṣ* of Ibn 'Āṣim (d. 829/1426), which was destined to have

In practice, letters of *amân* for individuals are attested from the late Umayyad period (104-108/723-728) onwards. The oldest grants of *amân* proper, given to whole groups for the purpose of travel or trade, are contained in the treaties between the Muslim administrators of Egypt and the Nubians and the Bedja, of 317/531-2 and 104-116/722-734 respectively. Formulations of a later period are found in al-Kalkaghānī, *Subh al-Ashā*, xii, 321 ff. (summarized in Björkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1928, 170 f.). Al-Kalkaghānī mentions, too, the issue of letters of *amân* by the Muslim political authorities to Muslims and gives examples, mostly from the later period. These are free pardons issued to rebels, and they are, strictly speaking, superfluous or even incompatible with religious law. They were, nevertheless, issued frequently, and the historians provide numerous examples of this kind of *amân*, which was on occasion unscrupulously broken, from the early regular *amân*, on the other hand, made not only diplomatic relations (cf. M. Canard, *Deux épisodes des relations diplomatiques arabe-byzantines au IX<sup>e</sup> siècle*, in *B.E.O.*, xiii, 51-69) but also between the Islamic and the Christian world down to the middle of the 6th/12th century possible, and letters of *amân* were regularly granted to traders and pilgrims. It has been suggested that the Islamic doctrine of *amân* was elaborated, on an old Arabian and Islamic basis, under the influence of the corresponding rules of Roman Byzantine law. From the end of the 6th/12th century onwards, coinciding with the increase in trade across the Mediterranean, the institution of *amân* was in practice superseded by state treaties between Christian and Islamic powers, which gave the strangers more security and rights. There are natural similarities in details, even the term *amân* is sometimes used in the Arabic versions of the treaties, and the Muslim scholars, who called upon to give *fatāwā* on questions arising out of them, naturally thought only in terms of *amân* (cf. A. S. Atiya, *An Unpublished XV<sup>th</sup> Century Fatāwā*, in *Studies zur Geschichte und Kultur des Nahen und Fernen Ostens* [P. Kahle, *Festschrift*], Leiden 1925, 55-68). Nevertheless, these treaties, which later gave rise to the Capitulations [cf. IMVIAE], did not develop out of the Islamic concept of *amân*, but represent a type of treaty which had already come into being between the trading cities of Italy and the Byzantine Empire and the states of the Crusaders (cf. R. Brunschwig, *La Berbérie orientale sous les Hafsides*, i, Paris 1908, 439-40).

**AMÂN, MİR**, (commonly spelt in English Mir Amman, an Indian writer, born at Delhi, who was active at the beginning of the 18th century at the Fort William College, Calcutta. His fame as a graceful writer of Urdu prose rests almost entirely on *Bāgh o-Bakār*, which is an adaptation of the story of the four Dervishes, entitled *Nisya Qāḥir* Darwīsh in its Persian original. It was completed in 1217/1802; and thanks to its plain and perspicuous style, has been widely used as a text-book by Western students of Urdu, and has in consequence been repeatedly printed in India. It has also been translated into English by L. F. Smith under the title of *The Tale of the Four Darweshs*, Calcutta 1813. Other translations are due to Duncan Forbes, Hollings and Eastwick. There is also a French translation by Garcin de Tassy: *Bag o Behar, Le jardin et le printemps, poème hindoustani traduit en français*, Paris 1858. Another less-known work of Mir Amman is *Gangā'i Khāsh*, which is a free translation into Urdu of *Abhāṣ-i Maḥsinī*, an ethical treatise by Husayn Wā'iz Kashifī. The date of its composition is posterior to that of *Bāgh o-Bakār*. He was stimulated to this literary activity by the Director of the Fort William College, Dr. J. B. Gilchrist (d. 1841). The writings of Mir Amman are generally reckoned among those early works which have powerfully contributed to the development of a simple, natural and direct style in Urdu literature.

Mir Amman occasionally wrote poetry under the poetical name of Lūf; but he did not excel in it and his *ghazals* seem to have been lost.

**AMÂN ALLĀH** [see AFGHANISTAN].

**AMÂNAT**, the poetical name of SAYYID ʿAMĀN ḤASAN (1231-75/1815-58), a poet of Muslim India, in whom the art of Urdu poetry reached its culminating point. He began by composing *marḥūṣas* or elegies on the tragic death of Husayn the son of 'Alī; but soon turned to the *ghazal*. His poetical compositions have been preserved in two collections, viz. *Gulastā-i Amānat*, compiled in 1260/1853, and his *Diwān*, also known as *Khāṣṣ-i al-Faṣlā*, collected in 1278 A. H. and published for the first time at Lucknow in 1285 A. H. He also wrote two *waṣṣṣas*, the second of which is longer (307 stanzas) and of a better literary quality. In the last days of his life, he became inordinately fond of composing

riddles and enigmas, which seem to have afforded him some sort of mental diversion. He is, however, chiefly remembered for his *Indar Sabā*, a musical comedy, completed in 1270/1853 and published the next year, along with *Shāh Indar Sabā*, lithographed on the margin. It took the Indian public by storm and became the prototype of many similar plays, written by various authors in subsequent years. In the *Shāh*, he reproduces the whole story and also describes the action scene by scene, for those unable to see the play on the stage.

**AMĀNUS** [see KIMA DASH].

**AMĀRA** (47° 13' E, 31° 50' N), until 1333/1914 the capital of the Turkish *sancak* of that name in southern 'Irāk, has been since 1340/1921 the head-quarter town of a *lā* of the 'Irāk kingdom, containing also the dependent *lā*s of 'Alī al-Gharbī and Ka'fā Shāh. Pleasantly situated on the Tigris left bank thirty miles from the nearest Persian hills, and potentially rich from the great flood-canal, the abundant crops of rice and dates, and the sheep-breeding of its half marshy and half corn-land territory, 'Amāra was founded only in 1279/1862 as a Turkish military post to control the ever warring Band Lām and Āl Bā. Muḥammad tribes. It grew rapidly as a local market and entrepôt, as a centre for the civil administration, as a refuelling station for the river steamers, and as from 1308/1890 as a headquarters for administering the great estates acquired for Sultan 'Abd al-Ḥamid II. The town's main population elements were, and are, Shī'ī and (fewer) Sunni Muslim Arabs, with communities of Chaldean Christians, of resident Lurs and Persians, of the 'Sabahan' silver-smiths, and, until 1370/1950, of Jews. Under the British occupation and Mandate (1334/1915 to 1351/1952) and the 'Irāk Government the town has expanded and acquired modern buildings, communications and public services; but the particularly difficult problems presented by this district in tribal administration and land-tenure remain largely unsolved.

**Bibliography:** For Turkish period, V. Cuinet, *Le Turquie d'Asie*, Paris 1892, ii, 279; S. H. Longrigg, *Four Centuries of Modern 'Iraq*, Oxford 1925; J. G. Locimer, *Persian Gulf Gazetteer*, iii, Calcutta 1908. For 14th/20th Century, S. H. Longrigg, *'Iraq* 1900-1950, London 1953.

(S. H. LONGRIGG)

**AMARKOT**, town situated 25° 22' N and 69° 71' E, in the Tharparkar district of West Pakistan (population in 1951: 5,742, including 1,957 Muslims), was, according to tradition, founded by a branch of the Sūmra Rājapūts who embraced Islam during the reign of 'Alī al-Dīn Khāldī (694/1294-718/1316). The Sūmras left the town in 847/1443 to the Sodā Rājapūts, who were expelled in 737/1330 by the Sūmras. In 843/1439 the Sodās again came into power. In 949/1542, Humāyūn, after his defeat by Shēr Shāh, sought refuge in Amarkot with the Sodā prince, variously named Bīr Sāl, Prasād or Parsiyā. Akbar was born in Amarkot on 5 Rajab 949/23 Nov. 1542. In 999/1590, when 'Abd al-Rahīm Khān

Khānān conquered Sind, Amarkot became part of the Mughal Empire, but in 1008/1599 Abū 'Kāsim Sulṭān, an Arghūn prince, drove out the Mughal commander. In 1149/1736 Nūr Muḥammad Kālhorī, the ruler of Sind, expelled the last Sodā chief and took possession of the town. In 1252/1739 Nādir Shāh, on his way back to Persia after the sack of Delhi, forced Nūr Muḥammad into submission. Later one of the Kālhorīs sold the fort to the chief of Dīwdhūr from whom it was captured by the Tālpūrs in 1248/1813, after which it lost its strategic importance. It passed into British possession with the conquest of Sind in 1843. The old fort in which Akbar was born was demolished by Nūr Muḥammad in 1746, and it was he who built the present fort. The birth-place of Akbar, about half-a-mile to the north-west of the town, is marked by a stone-slab erected in 1898.

(A. S. BAZME ANSARI)

**AL-A'MASH**, ABŌ MUḤAMMAD SULAYMĀN b. MĪNĀS, traditionist and Qur'ān 'reader'. Born in 606/770-80, he so Muḥarram 670 October 681, of a Persian father, he lived at al-Kūfa and died probably in Rabi' I 148/May 763. He received traditions from al-Zuhri and Anas b. Mālik, and his instructors in *ḥadīṣ* were: Muḥammad al-Najshī, Yahyā b. Waṭṭihāb, 'Asim; Hamza was his disciple. His 'reading', which followed the tradition of Ibn Ma'īd and Ubayy, appeared in the list of 'the fourteen'.

A great admirer of 'Alī, he is supposed to have furnished the poet al-Sayyid al-Hinayār [q.v.] with the material for the eulogies which he composed in honour of that Caliph.

**Bibliography:** Ibn Kutayba, *Ma'ārif*, Cairo 1353/1934, 214, 230, 239; Ibn al-Djazarī, *Kurrah*, index; al-Nawawī, *Tarḡīb*, 705; Ibn Abī Dawūd, *Ma'ārif*, 31; A. Jeffery, *Materials*, Leiden 1937, 314 ff.; R. Blachère, *Introduction au Canon*, 123, 127. (C. BROCKELMANN-(CH. PELLAT))

**AMASYA**, town in northern Anatolia and capital of a *wilāyet*. It preserves the name of Amaseia, under which it was known in antiquity (for its ancient history see Paul-Weissner, s.v.; F. Cumont, *Studia Pontica*, ii-iii; A. H. M. Jones, *Cities of the Eastern Provinces of the Roman Empire*, index). In 712 it was for a short time occupied by the Arabs (cf. Brooks, in *Journal of Hellenic Studies*, 1898, 191).

In the 11th century Amasya came under the dominion of the Dānişmandids, and was annexed with the rest of their territories by the Rūm Salḡīk Rūḡ al-Aḥlā II. At the division of his kingdom the Sodā Rājapūts, who were expelled in 737/1330 by the Sūmras, in 843/1439 the Sodās again came into power. In 949/1542, Humāyūn, after his defeat by Shēr Shāh, sought refuge in Amarkot with the Sodā prince, variously named Bīr Sāl, Prasād or Parsiyā. Akbar was born in Amarkot on 5 Rajab 949/23 Nov. 1542. In 999/1590, when 'Abd al-Rahīm Khān

then passed under the rule of Eretna and his successors. The amir Hādīdīl Shāhīdī seized Amasya from 'Alī Bey Eretna-oghli (Astarābād, *Baam u-Razm*, 100 ff., 137-40). Subsequently strife broke out between Shāhīdī and his confederate Malik Ahmad on the one side, and Kādī Burhān al-Dīn on the other, for the possession of the town (ibidem, 225, 235 ff.). After Shāhīdī's death, his son Ahmad managed, with the help of the Ottoman sultan Bāyezīd I, to hold Amasya against Burhān al-Dīn; finally it fell into the hands of Bāyezīd. After the latter's capture by Timur, his son, Mehmed Celebi, succeeded in escaping to Amasya, from which town he started on his campaign against his brothers. Under Ottoman rule Amasya enjoyed the special favour of the ruling house. Bāyezīd II when crown-prince was the governor of the town; Sulaymān I often stayed in it, and received there the Austrian ambassador, Busbecq. Amasya, which had been a cultural centre already in the Sāldjūq period, became one of the main seats of learning in Anatolia. In the 17th century it was described by Evliya Celebi and Kāthī Celebi. By the end of the 19th century Amasya, lying on the Samān-Siwā-Şāhrāpūt road, became an important centre of transit traffic; the Samān-Siwā railway was completed in 1930. At the end of the 19th century the town had 25,000-30,000 inhabitants (some of them Armenians), in 1940 13,732 (500 non-Turks); the whole *vilāyet* in 1950 had 165,494 inhabitants. Its economy is based on fruit, silk and textiles.

Amasya is situated on the main arm of the Yeşil Irmağ (called Toranil or Tokat Suyu), above the confluence of the Tersakan Çay, 400 m. above sea-level, in a narrow and rocky gorge, running from east to west; the gorge winds above and below the town, where its renowned orchards are to be found. The mountain on the right, southern, side of the river is called Farhād Dağı (local legend makes Farhād the founder of Amasya), while that on the opposite side contains the tombs of the kings of antiquity and the fortress. The most populous quarters and the greater part of the old buildings are on the southern side, which suffered greatly from a fire in 1915. The two sides are joined by five bridges.

The fortress, of Hellenistic origin, was restored in the Byzantine, Sāldjūq and Ottoman periods and is described by Evliya Celebi; now it is in ruins. In the fortress are the ruins of a *medrese* built by Kara Mehmed Ağa (890/1485) and of a school added by his son Mustafa Paşa (917/1511); also ruins of an 'imaret, or a *İşlavlut tekkiye* and two bays. The mosque called İsmail Mîrî was originally a Sāldjūq foundation; the inscription over the gate bears the name of Kaykubad II and the date 634/44-1237-47; but it was repeatedly restored and is now derelict. The same is true of the Gök Medrese, also belonging to the Sāldjūq period; it was built, together with the adjoining *tişbe*, by Sayf al-Dīn Turumtay, governor of Amasya, in 665/1267. Of the Ottoman mosques, those of Bāyezīd I Paşa (812/1419), of Yürük Paşa (854/1450), of Sultan Bāyezīd (892/1486), of Mehmed Paşa (921/1466), and the Pazar Džāmi'i (unknown date) deserve mention. There are, furthermore, a lunatic asylum (708/1308), the *tekkiye* of Pir İlyās (815/1412), the *medrese* of Kağıt Aghası (894/1488) and of Kōkūl Aghā; the *tekkiye* of Kāthī Celebi (824/1423), of Turumtay (677/1278), one attributed to Sultan Ma'ūd, those of Shāhīdī (783/1381), of 'Şehzade', and of various Ottoman princes; finally the

ruins of the palace built for some Ottoman princes (Beyler Sarayı). The monuments of the town have suffered from the earthquakes of 1734, 1825 and 1939. *Bibliography:* Abu 'l-Fidā' (Reinoud), *ii*, 138; Ibn Batūta, *ii*, 292; Evliya Celebi, *ii*, 135 ff.; Kāthī Celebi, *Diḡān-nisān*, 625 f.; W. #### AMAZIGH (see BERBERE).

**AMBĀLA**, town in East Panjāb, India, situated 30° 21' N and 76° 52' E, 125 miles from Delhi on the way to Sirhind. The town consists of the old town and the cantonments, four miles away. The population in 1951 was 146,728. Though the neighbourhood of Ambāla played an important role in early Indian history, the town itself is first mentioned in the *Sāfar-nāma-i Kādī Tabī Muṭṭahī* (Bīdjanawr 1909, 2 ff.), according to which it was occupied by the Muslims at the time of the second invasion of India by Mu'izz al-Dīn b. Sam in 587/1192. Eutimius (668-33/1211-36) is reported to have appointed a *kādī* here in 783/1379. From Turkish occupation the town, together with Sāmāna and Shāhābād, Bābur camped here on his march to Pānpāt for the decisive battle of 933/1526. In 956/1545 Ambāla was the scene of a severe engagement between the Nizārī insurgents from the Panjāb and the Pathān troops under Iḡlān Shāh Sūr. During the Mughal period the town was a dependency of Sirhind and was a favourite camping ground of the Mughal sovereigns on their way to Lahore or Kashmir (the place of the camp is still known as Bādhāshī Bāgh). It was also a centre of cultural activity. Two of its learned men ('Abd al-Kādir and Nūr Muḥammad) are mentioned in the *Mahābhāt* of Ahmad Sirhindī (f. no. 254, ii, nos. 56, 63, 94, iii, no. 317). A number of *madrasas* flourished here in the days of Shāhābādīn. Sikḡ Murtazāh, the commander of the *Adāb-i 'Shāmīgiri*, a collection of Awrangzib's letters, was a native of Ambāla. In 1122/1710 the town was captured by the Sikhs under Banda Bāyragt. During the anarchy which followed the rout of the Marāṭhās at the hands of Ahmad Shāh Durrānī in 1175/1761 and the decline of the Mughal empire, it was occupied in 1763 by the Sikh adventurer Sangat Singh. On his death it passed into the hands of his brother-in-law, Dhīyān Singh, who leased it to Gurbakhsh Singh Kabka; on the latter's death in 1198/1783 his widow, Ma'ī Dāya Kaur, succeeded him. She was ousted in 1808 by Ranjīt Singh, but re-instated by the British a year later. On her death in 1823 the town passed into the possession of the East India Company. During the Mutiny the town remained quiet. In 1856 it took place in 1854 the "Ambāla Trials", as an aftermath of the Ambeyla campaign against the followers of Ahmad Brīṭān. The town is a rail-head, an important military and air base, and has a busy grain market; it is famous for its "durries", or cotton carpets. It has a mosque of the Pathān period and some pillars erected by Shāh Shāh Sūr; also the shrines of Bāydar Shāh Lakshī and Shāh Tawakkul Shāh, and the congregational mosque, an imitation of the Masjid al-Aḡḡā, deserve mention.

#### AMBASSADOR (see ELĀĪ, RASŪL).

**AMBON**, the central island of the South Molucces, Indonesia, nearly one half (ca. 25,000) of the population is Muslim, especially in the northern part. Already before the arrival of the Portuguese (1512 A.D.), Islam had been introduced in Ūtū, a supply station for the East Javanese spice trade, and in some other villages; according to local tradition, this was done by chiefs who had travelled East Java, Pānā and Mecca. After the turbulent times of the 16th and 17th centuries the Muslims have remained a stationary, neglected but prosperous community, where the original language and much of the old costumes are preserved.

#### AMBRA (see 'ANBAR).

**AMĒDQJĪ** (r.), an official of the central administration of the Ottoman Empire; before the *tanzīmāt*, he was directly subordinate to the *Re'is al-Kuttāb*; he made copies of reports written by the latter, and also drafted reports on minor matters; in short, he performed all the clerical duties connected with the office of *Re'is al-Kuttāb*. Moreover, he was present at meetings between the *Re'is Efendi* and ambassadors, and kept official minutes of the proceedings. He like the *Re'is al-Kuttāb*, bore the title of *Kā'āḡāḡānī*. The name and origin of this office derives from the Persian word *amād* meaning "has come, has been obtained", an endorsement on documents acknowledging receipt of the dues payable to the *Re'is al-Kuttāb* by newly installed military personnel for their *fīnān* and *n'āmets*. The person making this endorsement was called the *Amēdqi*, and the administrative bureau where the formalities connected with these documents were completed, *Amēdī*. The terms *Amēdī Kātibī* (secretary to the *Amēdī*), and *Amēdī Kāleml* (the *Amēdī* department), were also used.

This office seems to have come into being later than the 17th century. After the *tanzīmāt*, the office of *Amēdqi* increased in importance and was also known as *Amēdī Dīwān-i Hāmāyūn*; its function was to make copies of the documents sent to the *sādrat* by other ministries and administrative departments which required the sanction of the *Pādīshāh*, after resolutions of the Council of Ministers or the *Sadr-i 'Ayyam*; in the case of documents which did not require this formality, its duty was to correct them, register them and send them to the Head Chamber-

lain; and, on the other hand, to register imperial decrees communicated to the *sādrat*. The *Amēdqi* supervised the secretaries whose duty it was to keep the minutes of the Council of Ministers. He was one of the five principal officials of the Sublime Porte; this department was more important and more distinguished than the other departments of the *sādrat*. After the proclamation of the Second Constitution, the name *Amēdī Dīwān-i Hāmāyūn* was changed to Secretariat of the Council and Interpreters' Deputations, under one official, but later (1912) it was restored. — See also my article in *J.A.* (M. TAYYIB GÖKBULGIN)

**AMĒNOKAL**, the current spelling of the Berber *amennūl*, meaning "any political leader not subordinate to anyone else"; it is applied to foreign rulers; to high-ranking European leaders, and to the male members of certain noble families; in some regions of the Sahara, the title of *amennūl* is given to the chiefs of small tribal groups, but in the Ahaggar (q.v.), it is only conferred on the overlord of a confederation of noble or subject tribes. The *amennūl* must be selected from among the Ihaggaron nobles, and his nomination is submitted for approval to an assembly of the nobles and the chiefs of the subject tribes; political succession is, in principle, transmitted, according to rules deriving from the matrilineal regime, to the eldest brother of the preceding *amennūl*, to the eldest son of his maternal aunt or to the eldest son of his eldest sister, but these rules are not always strictly observed. The *amennūl* has as a sign of rank a *drag* (*tebel*, see Ch. de Foucauld, *Dict. iv*, 1922-5), and receives tribute from subject tribal groups. His principal role was that of war leader, but in normal times, he applies the criminal law, settles disputes and concerns himself with relations with neighbouring tribes; he is always assisted by the assembly of notables which ratifies his decisions, and can dismiss him.

*Bibliography:* Duveyrier, *Les Touaregs du Nord*, Paris 1864, 307; Benhazera, *Sur moi chez les Touaregs du Ahaggar*, Algiers 1908, 107; E. F. Gautier, *La conquête du Sahara*, Paris 1910, 591; Seligman, *Les races de l'Afrique*, Paris 1935, 128; F. Nicolas, *Notes sur la société et l'état des Touaregs du Dinnik*, IFAN, i, 586; H. Lhote, *Les Touaregs du Hoggar*, Paris 1944, 154-6; G. Surdon, *Institutions et coutumes berbères du Maghreb*, Tangier-Fes 1938, 489-92; Ch. de Foucauld, *Dictionnaire touareg-français*, Paris 1952, 1213-4. (Ch. FELLAT)

**AMGHAR**, Berber word corresponding to the Arabic *ghayyāh* (q.v.), and meaning "an elder (by virtue of age or authority)". Among the Touareg, it applies to chief of a tribal group who acts as an intermediary between the *amennūl* (q.v.) and his tribe (see Ch. de Foucauld, *Dict. touareg-français*, Paris 1952, iii, 1237; H. Lhote, *Les Touaregs du Hoggar*, Paris 1944, 157-8), or even to the chief of a confederation (cf. H. Bissau, *Les Touaregs de l'Ouest Algiers* 1888, 23). In Kabyla (see A. Hanoteau and A. Létourneau, *La Kabylie et les coutumes kabyles*, Paris 1893, ii, 9) and among the Imazighen of Morocco (see G. Surdon, *Institutions et coutumes berbères du Maghreb*, Tangier-Fes 1938, 187-90), the *amghar* is both the president elected by the *djāmā'a* (q.v.) and its executive agent among the tribe or tribal groups which compose it. In the Shillū group in Morocco, the chief elected by the *djāmā'a* has the title of *mbādam* (*mukaddam*), and the *amghar* is more particularly the temporal ruler who over the authority to force and not to regular election (R.

subordinate tax collector in the provinces (Mantran and Sauvaget, *Réglements fiscaux ottomans* 20).

Muslim North Africa and Spain continued the Umayyad usage, and 'amil meant a governor or administrative officer, responsible for general administration and finance. This continued until the end of the Umayyad Caliphate (Ibn 'Idhārī, *al-Bayān al-Maḡribī*, passim; cf. Lévi-Provençal, *Histoire de l'Espagne musulmane*, I, 92).

(A. A. DONS)

'AMIL, (a): pl. 'awmil, derived from 'amila fi (= to act upon), signifies as a grammatical term a *regens*, or to express it in the way of the Arabic grammarians a word, which, by the syntactical influence which it exercises on a word that follows, causes a grammatical alteration of the last syllable of the latter, i.e. a change of case or mood. Two kinds of *regulae* are distinguished, one which can be recognized externally (*lafzi*) and one which is only to be supposed logically, but which is not expressed (*ma'nawi*).

The 'amil *lafzi* again is of two kinds: (1) the case where it concerns a whole series of mutually dependent words, which can be treated analogously according to the same rule (as for example in the *idghā* construction); (2) the case in which each *regens* requires special treatment (e.g. *b, bi, lam*); these two sub-divisions are named 'amil *hiyālī* and 'amil *sami* respectively. It makes no difference whether the *regens* is expressed as in *kama* *zayd*, or whether it must be supplied grammatically from the sentence as a form of the verb, as in *zayd fi l-dār*. Indeed the absence of a *regens* is a very frequent occurrence in Arabic grammar (cp. al-Zamakhsharī, *al-Mufaṣṣal*, index s.v. *if'āl* 'amil). This case must be distinguished from the complete absence of the *regens* in the case of the 'amil *ma'nawi*, for in this second kind it is impossible to supply the 'amil grammatically, although it can be done logically; grammarians usually cite as an example the subject of the nominal sentence, whose 'amil cannot possibly be supplied.

**Bibliography:** Sprenger, *Dict. de techn. terms*, 1045; [Djurdjānī, *Kutub al-Taṭīf* (Pittet), 150; 'Abd al-Kābir al-Djurdjānī, *Kutub al-'Asmā' al-Mi'ā' (ed. Erpenius)*. (G. WEIL)

'AMILA, an old tribe in North-Western Arabia. The reports concerning their past (al-Tabarī, I, 685; *Aghāni*, xi, 155) are unworthy of belief. In the later genealogical system the 'Amila are reckoned as belonging to the South-Arabian Kahlān (cf. *gūl*, 1204A). At the time of the Muslim invasion we find them settled S. E. of the Dead Sea; they are mentioned among the Syro-Arabian tribes which joined Heraclius (al-Baladhuri, 59; al-Tabarī, I, 2347); but do not appear again in the history of the conquest. Shortly afterwards we find them established in Upper Galilee, which is named after them [Djābil 'Amila (al-Ya'qūbī, 327; al-Makdisī, 162; al-Hamdānī, 129, 132). They play a very unimportant part and are almost completely absorbed by the Banū [Djurdjānī, 129]. 'Adī b. al-Rikāṣ, the poet of al-Walīd I, was their chief pride; he celebrated the [Djurdjānī Rawh b. Zuhā, as the *sayyid* of his tribe (*Aghāni*, vii, 179, 182); and thereby gives further proof of their importance. Ibn Durayd (*Iṭhāf*, 724-5; cf. *Idā*, ii, 86) finds few notable men among them; *sāṭir* rarely deals with them (e.g. *Hotay'a*, ix). After the 5th/11th

the 'Amila seem to have spread S. of the Lebanon, in the present district of Būd al-Shakī which is still called [Djābil 'Amila (Abu l-Fida', 228; al-Dimashqī, 221).

According to Yāqūt, iv, 291, they also occupied a part of the country of the lūmā, a day's journey to the S. of Aleppo, which he says was named after them 'Amila Mountain. This isolated reference (cf. *JA*, 1855, i, 48) is the more surprising in that the corresponding text of the *Marāṭib* gives 'Amira instead of 'Amila. To avoid the difficulty, G. le Strange (*Palestine*, 73) supposes an emigration towards the N. during the crusades, but without giving references. The Arabic historians of this period are ignorant of this change of place, and continue to use the synonymy 'Amila-Djābil (*Récueil des historiens des croisades, Hist. or.*, ii, 88 for Khallī read [Djābil; iii, 491, 543). The application to the 'Amila of the passage from the Qur'ān, lxxxviii, 3, by the poet [Djāzī is only a snare of the Tāmiṭiyya who was jealous of the favours enjoyed by Ibn al-Rikāṣ. The [Djābil 'Amila in the Lebanon was, and is, an important Shī'ite centre, and several eminent Shī'ite authors bear the *nishā* al-'Amīl. [For further details see MUYAWALLI.]

(H. LAMMERS-W. CASKE)

AL-'AMILĪ, MUHAMMAD b. HUSAYN RĪHĀ' AL-DĪN, was the *iqbal* of Bahā'ī, born in 95/1574, died 103/1619; author of several works in Arabic and Persian, on a variety of subjects. Originating from [Djābil 'Amila in Syria, he migrated to Persia, and eventually obtained an honoured place at the court of Shāh 'Abbās. The best-known of his works is the anthology *al-Kaḡhāli* ("the beggar's bowl"), frequently printed in the East; he also wrote an exposition of Shī'ite *fiqh* (in Persian), under the title of *Ḥusn al-'Alāhiyya* ('Abbās), and was the author of various works on astronomy and mathematics. As a Persian poet, he distinguished himself by a *maḡnawī* called *Nān u-Mahī* which, according to Ethé, formed a sort of introduction to the *Mathnawī* of [Djābil al-Dīn Rūmī. A second *maḡnawī* entitled *Shīr u-Shakar*, is less known.

**Bibliography:** Muhibbī, *Khatib al-Iḡār*, iii, 440-1; I. Goldziher in *SIFAC, Wien phil.-hist. Cl.*, lxxviii, 198-9; Brockmann, II, 414 S II, 395; Ethé, in the *Gr. I.* Ph. 301.

AL-'AMILĪ, AL-HURR (see AL-HURR AL-'AMILĪ). AMIN, "safe", "secure"; in this and the more frequent form *amin* (rarely *ammin*, rejected by grammarians) it is used like *amin* and (Syriac) *amin* with Jews and Christians as a confirmation or corroboration of prayers, in the meaning "answer Thou" or "so be it", see examples in al-Mubarrad, *al-Kāmil*, 277 note 6; Ibn al-Djazarī, *al-Naḡh*, ii, Cairo 1245, 421-2, 447. Its efficacy is enhanced at especially pious prayers, e.g. those said at the Ka'ba or those said for the welfare of other Muslims, when also the angels are said to say *amin*. Especially it is said after *sūra* i, without being part of the *sūra*. According to a *hadīth* the prophet learned it from Gabriel when he ended that *sūra*, and Būkhārī added the prophet not to forget him with it. At the *ajlā* the *amin* says it loudly or, according to others, faintly after the *āhika*, and the congregation repeats it. It is called God's seal (*ṭāḡa* or *ḫatīm*) on the believers, because it prevents evil.

**Bibliography:** *LA*, s.v.; *Isfīr* to *sūra* i by Zamakhsharī and Baydāwī; Wessingh, *Concordance et Index de la tradition musulmane*, s.v.; Goldziher in *RSO*, 1907, 207-9. (J. PEDERSEN)

AMIN (Ar. pl. *amān*), "trustworthy, in whom one can place one's trust", whence al-Amīn, with the article, as an epithet of Muhammad in his youth. As a noun, it means "he to whom something is entrusted, overseer, administrator": e.g. *Amin al-Waqf*, "he who is entrusted with the revelation", i.e. the angel Gabriel. The word also frequently occurs in titles, e.g. *Amin al-Dawla* (e.g. Ibn al-Tilmāḡh others), *Amin al-Dīn* (e.g. Yāqūt), *Amin al-Mullā*, *Amin al-Saltān*.

In addition to these general and undefined uses of the word *amin*, there are other more technical uses, of importance in the history of Muslim institutions. Thus *amin* is used to denote the holders of various positions "of trust" particularly those whose functions entail economic or financial responsibility. In legal works the word denotes "legal representatives"; under the early 'Abbāsids the *amin al-hum* was the officer in charge of the administration of the effects of orphan minors (Iyān, *Organisation judiciaire*, I, 384). In a wider connotation the word applied to treasurers, customs officers, stewards of estates etc. (see Ibn Mammālī, *Kawānīn al-Dawādīn* (Atiyā), ch. 3, regarding Egypt, and for the West, Lévi-Provençal, *Hist. de l'Espagne musulmane*, ii, 40, 52; Le Tourneau, *Fils avant le Prétorialis*, index, and in particular 299 n. 3; etc.).

The most important technical meaning of the word *amin* is "head of a trade guild". In this sense the word often has the plural *amīnāt* (Le Tourneau *loc. cit.*). But the use of the word *amin* in this sense seems to have been always limited to the various countries of the Muslim west; the east, in pre-Ottoman times, preferred in general the term *'arif* (q.v.), and, in modern times, has employed a variety of terms. For general information on the heads of trade guilds, and for the bibliography, see 'ARIF, *SINR*. For the Ottoman period, see *EMİN*. (CL. CAHENS)

AL-AMIN, MUHAMMAD, 'Abbāsīd Caliph, reigned 19/880-13. Born in Shawwāl 170/April 787, of Harūn al-Rashīd and Zubayda, niece of al-Manṣūr, he was thus of pure Hāshimite stock both on his father's and his mother's side; hence he was given priority in the order of succession over his brother 'Abd Allāh (the future al-Ma'mūn), who was born six months before him but of a slave mother. In fact, the first *bay'a* as heir to the throne was accorded to him by al-Rashīd in 173/792, when he was barely five years old, and it was not until 183/799 that al-Ma'mūn was designated second successor. The whole question of the double succession was settled with due solemnity by al-Rashīd in 186/802, in the "Meccan documents", designed to eliminate all uncertainty and all conflict between the two heirs. In the first of these documents, al-Amīn acknowledged al-Ma'mūn's right of immediate succession to the empire; and his virtually absolute sovereignty over the eastern half of the empire; in the second document, al-Ma'mūn took cognizance of these rights, and declared in his turn his loyalty and obedience to his brother as caliph, whether or not the latter had respected his obligations. The system of obligations and counter-obligations by these documents shows clearly that al-Rashīd recognized the delicacy of the situation created by the double nomination and by the latent conflict between the two brothers (profoundly different both in character and interests), and tried to preserve a precarious equilibrium between them by these judicial and religious formulas.

When al-Rashīd died at Jūz, on 3 Djumād II 193/24 March 809, al-Amīn was recognized as caliph

at Baghdad and throughout the empire, while al-Ma'mūn hastened to return to his fief of Khurāsān. The following year (194/810) al-Amīn, by suddenly introducing the name of his own son Mūsā in the Friday Prayer after that of al-Ma'mūn, took a step which, without formally violating the Meccan agreement, revealed his intention of setting it aside, by placing alongside his brother a later successor who suited him better. There followed a brisk exchange of diplomatic correspondence between the two brothers (supported respectively by the *waṣir* al-Faḍl b. al-Rabī', and by the future *waṣir* al-Faḍl b. Saḥl), the text of which has been preserved by al-Tabarī, and which assumed the form of political manoeuvring or a "cold war" between Baghdad and Mawr preceding the armed conflict. Al-Amīn tried to entice his brother to Court, to persuade him to give up his right to the control of several important areas of Khurāsān, and to obtain his consent to a modification in the order of succession. The respectful and prudent, but firm, resistance of al-Ma'mūn induced him to precipitate matters and, at the beginning of rajab of 810, he formally violated the Meccan documents and substituted the name of his own son for that of al-Ma'mūn (and of the third brother al-Kāsim, the future al-Ma'asim), as direct heir to the throne. To smash the resistance of al-Ma'mūn, who was declared a rebel, 'Alī b. 'Isā b. Māhān was despatched at the head of an army, an act which marked the commencement of open hostilities between 'Irāk and Khurāsān ([Djumaḡ II 195/March 812).

The war was conducted for al-Ma'mūn by his redoubtable general Tāhir b. al-Husayn (q.v.); in the first clash near al-Rayy, the latter defeated and killed 'Alī b. 'Isā, and then 'Abd al-Rahmān b. [Djābil al-Abnāwī who was sent against him with a second army. The whole province of al-Djābil fell rapidly into the hands of the Khurāsānī troops, against whom al-Amīn vainly flung contingents levied from among the Syrian Arabs. The attempt to use this Arab element as a weapon against the Persian element, which supported al-Ma'mūn en bloc, failed completely, while in Syria grave disorders occurred, and in Baghdad itself, as the result of a coup effected by 'Alī b. 'Isā, al-Amīn was temporarily declared deposed and al-Ma'mūn was recognized as caliph; but the attempt failed (Radjab 196/March 812) and al-Amīn, restored to the throne, had to face the Khurāsānī armies which were then approaching the capital. Baghdad was invested in Dhū l-Hijja 196/August 812 by two corps under the command of Harthama b. A'yān and Tāhir, who had meanwhile completed the conquest of Khurāsān; throughout the remainder of the empire ('Irāk, Mesopotamia, Arabia) al-Amīn's authority waned; he was declared deposed (*maḡhūb*) and replaced by his brother. Despite this, the desperate defence of the capital lasted for more than a year, during which there grouped themselves around the Caliph, the most turbulent social elements of the metropolis (known as "the naked", *'urān*), who in the course of bloody fighting barred the path of the besiegers. The position was not clarified until Muharrar 198/September 813, when all resistance was overcome and al-Amīn requested Harthama for a safe-conduct. But while he was making his way towards that former loyal general of his father, who had promised him his life, he was intercepted by Tāhir's men, who feared that their prey might escape, and was captured and put to death (night of 24 of 25 Muharrar 198/24-5 September 813). It

appears that al-Ma'mūn was not directly responsible for the murder of his brother which, however, was not unwise to him and which left him *de facto* and *de jure* the sole ruler of the empire.

The war between the two brothers has been viewed by some as an aspect of the conflict between Arabism and Iranism at the beginning of the 'Abbasid dynasty; in fact, it was primarily a dynastic dispute, although admittedly there were certain ethnic factors in the origin of the two rival brothers and in the deployment of the forces on which they relied for their support; but although Khurāsān and Persia in general supported the al-Ma'mūn line, it cannot be asserted that al-Amin was the conscious champion of Arabism, or that the Arabs were solidly behind him. He had the superficiality and intolerance of the hedonist, ignorant of the complexities of political intrigue, and was concerned solely to secure supreme power for himself and his descendants; the policy necessary for the achievement of this aim, conducted, incidentally, without much serious consideration, was less his own work than that of his minister and councillor al-Faḍl b. al-Rabi' [q.v.], who is depicted by the sources as his evil genius and who, in the hour of danger, abandoned him to his fate in order to secure a pardon for himself from the victor. The loyalty and obstinate resistance of Baghdad during the siege was not due so much to legitimist and dynastic ideals as to the excessive liberality of the Caliph and to the belligerent instincts of the dregs of the city, who regarded the situation as an opportunity for licence and booty. Thus al-Amin had no one actually at his side except a small group of courtiers and poets, companions of his debauches, like Abū Nuwās, who remained faithfully at his side until the end and who sincerely lamented his death in his elegies. His memory, in Muslim historiography, is associated with that of the Umayyad Caliph Yazīd II and Walīd II, who were also libertines and hedonists, but who possessed political and artistic abilities altogether lacking in the frivolous 'Abbasids. During the four years of his reign (or three years if the year of the siege is not counted), there is no outstanding administrative or political measure with the exception of the cold (and later hot) war designed to eliminate his brother who, far superior in intellect and political acumen, in the end justly supplanted him.

**Bibliography:** The chief source is Tabarī, III, 603-974 (summarized in Ibn al-Aṭṭār, VI, 152-207); other sources are Ya'qūbī, II, 493 ff., 524-38; Dīnawarī, 388-97; *Præsentia Historiarum Arabum* (de Goede), 320-324; Ibn al-Tikrākī, 291-97; *more anecdotal*, but valuable for the siege of Baghdad, Mas'ūdī, *Murājī*, VI, 415-87. Western works, apart from general histories of the caliphate, include F. Gabrieli, *Documenti relativi al califfato di al-Amin in al-Tabari*, in *Rend. Linc.*, 1927, 191-220, *idem*, *La successione di Hārūn al-Rashīd e la guerra fra al-Amin e al-Ma'mūn*, in *RSO*, 1928, 341-97. [F. GABRIELI.]

**AMINA**, a legendary wife of Solomon. He one day entrusted to her the ring, on which his dominion and his wisdom depended. She gave it to a demon who had assumed the form of Solomon, and it only returned to the king after many adventures.

**Bibliography:** Grünbaum, *Neue Beiträge zur israelischen Sagekunde*, 22 ff.

**AMINA**, Muhammad's mother. Her father was Wahb b. 'Abd Manāf of the clan of Zuhra of the tribe of Kuraysh, and her mother Barra bint

'Abd al-'Uzzā of the clan of 'Abd al-Dār. It is said that she was the ward of her uncle Wuhayb b. 'Abd Manāf, and that on the day he betrothed her to 'Abd Allāh b. 'Abd al-Muttalib he also betrothed his own daughter Hāla to 'Abd al-Muttalib (Ibn Sa'd, VI, 38). If this report is correct it may be an example of some forgotten marriage-custom. Amina seems to have remained with her own family and to have been visited there by 'Abd Allāh, who is usually said to have died before Muhammad's birth. So long as Amina lived, Muhammad was under her charge, and hence presumably lived with her family (except when sent to a wet-nurse in a nomadic tribe). Amina's death when Muhammad was six is said to have taken place at al-Abwā', between Mecca and Medina, as she returned from a visit to Muhammad's kinsmen there. Though this visit to Medina is mysterious, there are no strong reasons for rejecting the above details. The same is not true of the stories connected with her pregnancy, such as her alleged statement that she saw a light going from her, which lit up the palaces of Baḡra (Bostra) in Syria.

(W. MONTGOMERY WATT)

**AMIR**, commander, governor, prince. The term seems to be basically Islamic (Nāḥiyya, 7, 964; Ibn Durayd, *Dijma*, III, 437. In the Kor'an, only the expression *shū'ā* 'Amir is found (Sūra IV, 59, 83), but *amir* occurs often in traditions (cf. Wessing, *Concordance*, s.v.).

The sources for the early period frequently use the terms 'amīl [q.v.] and *amir* as synonyms (cf. Hamidullah, *Documents*, 36, 38, 39, 83). In the reports on the meeting of the *shūrā*, *amir* is used for the head of the Muslim community (Tabarī, I, 1840, 1841; Ibn Sa'd, II, 1, 126, 129). During the caliphate of Medina, the commanders of armies, and occasionally divisions of an army were called *amir* (or *amir al-djāysh* or *amir al-djund*), and so were the governors who were initially the conquering generals (Tabarī, *Annales*, I, 1885-4, 2013, 2054, 2512, 2593, 2606, 2634, 2637, 2645, 2662, 2775, 2864, 3057; Kindī, *governors*, 12, 13, 31, 32, 390, 392, 395; Hamidullah, 207, 257).

The Umayyads began to distinguish between administrative and financial duties. Yet during most of this period, *amir* had full powers, administrative and financial, and felt that their authority in their province was equal to that of the caliph (Tabarī, *Annales*, II, 23; Kindī, *governors*, 35; Mas'ūdī, *Murājī*, V, 308-12). The local population in the Eastern provinces saw the *amir* as a *Kāḥḥād* (Lord) (Tabarī, II, 1636) or *Shāh* (King) (Tabarī, II, 300).

The *amir* organizes the army and appoints *ṣarifs* who keep the register of their units, maintain discipline, distribute pay and report incidents. He conducts expeditions personally or through his lieutenants, and concludes agreements. He leads prayers, builds mosques and sees to the establishment of Islam in conquered territories. The administration of justice is usually in his hands and, with a few exceptions, *amir* appoints *Kādīs*. The *amir* maintains peace and order through the prefect of police (*shāḥ al-shurā*) whom he appoints. He usually has a chamberlain (*shāḥ al-bayt*) and a bodyguard. He appoints a postmaster (*shāḥ al-barīd*) to report on his subordinates and generally on matters of interest. Representatives ('*amils* or *amirs*) in

important sub-provinces are appointed with the approval of the Caliph and at times directly by him (Tabarī, II, 120, 1201, 1504).

The *amir* supervises the mint and strikes silver coins, usually with his name on them. Some *amirs* were famous for their good dharmas. But the type of currency, its weights and minting places are at times regulated by the caliph.

The *amir* with full powers is responsible for financial policy. He issues instructions about the time and methods of levying taxes, the measures used and the amounts required. An *amir* could revise the system of taxation and revise the rates of pay of the troops. The *amir* pays his troops and officials, provides funds for public works such as the construction and repair of bridges, canals, roads, public buildings and fortresses, and sends the balance of the revenue to Damascus.

The powers of the *amir* are greatly reduced, however, when the caliph appoints an *amīl* for the *sharḥ*. Ibn al-Habbāb, *amīl* of Egypt under Hishām, could even have the *amir* changed (Kindī, 72, 76; Ibn 'Abd al-Hakam, *Futūḥ misr*, 178).

The *amir* takes the *bay'a* or oath of allegiance in his province for the caliph or to the local designate. He may lead a delegation from his province to convey their views to the caliph or to offer their homage. He tries to influence public opinion in his province through tribal chiefs, poets, *qasās*, or money and threats (Balādhuri, *Anṣab*, IV/a, 101, 116-7; Pedersen, in *Mélanges Goldschmidt*, I, 232).

When the *amir* leaves his province or capital, he appoints a *shāḥ* to represent him (Kindī, 13, 35, 40, 62, 63; Tabarī, II, 1140).

*Amirs* receive salaries and administrative allowances ('*amāla*). Some *amirs* looked for other sources of wealth such as trade, appropriation of part of the revenue, speculation on the sale of crops taken in taxation, and presents. Some *amirs* amassed great wealth, and the caliphs tried to bring them to account; this degenerated to a system of tortuous investigation at the end of the appointment under the later Umayyads.

The caliph, especially in difficult times, takes the views of the Arabs of the provinces into consideration when appointing an *amir* (Balādhuri, *Futūḥ*, 146; Dīshīyārī, 37). A new *amir* usually appoints new *amirs*, especially in the later Umayyad period.

Umayyad administrative traditions were carried by the 'Abbasids, but were gradually modified by new tendencies. The 'Abbasids created a bureaucracy to replace the tribal aristocracy and stressed centralization.

*Amirs* were frequently members of the 'Abbasid family, but generally they were members of the bureaucracy, and whereas they were generally Arabs under the Umayyads, many were now Persians and later Turks. The *asḥāb al-barīd* now played a prominent role and were expected to report regularly on the actions of the *amir* and the affairs of the province. The *Kādī*, too, became practically independent of the *amir* since he was appointed directly by the caliph. The *amir's* term of office is generally short.

A new official, the *shāḥ al-naḥḥ* *fi l-maḥall*, is appointed to consider complaints about injustices of the government officials, including the *amirs*.

Most *amirs* in the early 'Abbasid period continued to be responsible both for civil and financial administration, but soon it became customary to appoint a finance officer (*simīl*) together with the *amir* (Kindī, 185, 192, 221).

The *amir* was primarily concerned with main-

taining order and ensuring the collection of taxes. *Amirs* occasionally increased taxes, abolished them or exempted people from paying arrears. Local discontent with the *amir*, especially when it led to trouble, was at times investigated and could lead to his dismissal (Dīshīyārī, 99-100; Kindī, 192; Tabarī, III, 716-721).

New developments took place before the end of the first 'Abbasid period. Ma'mūn appointed his brother Abū Ishāq *amir* of Egypt, but he stayed at the capital and sent two representatives, one for *sharḥ* and the other for *shād*. Absentee *amirs* in Egypt followed until the rise of the Tulūnids (Kindī, 185 ff.).

Another development was the appearance of *amirs* who, appointed by the caliph, were given a free hand in their province against payment of tribute. Such *amirs* established dynasties and limited their relations with the caliph to receiving his *'ahd* (decree of appointment), recting his name in the *shurḥ* and striking coins in his name. This was the case of the Aglābids and the Tāhīrids. Others shared with the caliph the attributes of sovereignty by adding their own names to his in the *shurḥ* and on gold coins, for instance the Tulūnids, the Ikhshīdids, the Sāmānids and the Hamdanids.

We further notice the rise of *amirs* who conquered their territories by force and then sought the *'ahd* of the caliph, in order to acquire a legitimate basis of their authority. Such were the Saffārids and the Ghaznawids. These *amirs* were practically independent. The Buwayhids, *amirs* by conquest, went even further. They conquered Baghdad, usurped all authority from the caliph and made him their pensioner, appointed *waḥīds*, and interfered with the succession to the caliphate. Only the fact that the Caliph was still considered the source of all political authority by the people prevented the Buwayhids from overthrowing the 'Abbasids and made them seek the *'ahd* from them.

The Umayyads in Spain called themselves *amirs* until 'Abd al-Rahmān al-Nāḥir assumed the title of caliph. Their governors and the governors of the Fātimids were called not *amir* but *adīl*.

Al-Mawardi (d. 422/1031) reflects the full development of the institution. After distinguishing *amirs* with full powers from *amirs* with limited powers, he deals with the amirate acquired by force (*imārat al-ṭalāḥ*); he admits this as lawful in order to avoid rebellion and division, on condition that the *'ahd* given requires the *amir* to follow the *sharī'a* (cf. Gibb in *Isl. Cult.*, 1937).

On the other hand, during the 4th/10th and 5th/11th centuries the traditional bureaucratic administration collapsed and was replaced by the rule of the military. This influenced the status of the amirate, and under the *Saldjūqs*, the Ayyūbids and the Mamlūks, the title *amir* was given to military officers of all ranks (also to the smaller *Saldjūq* princes). The *Djāmi'a* (d. 733/1333) reflects this development when he states that in his days *amirs* were commanders who were given fields in order to maintain their troops, and that their primary duties were military (Isl. III, 369).

**Bibliography:** the main literary source for the ancient period is Tabarī, *Annales*, supplemented by the other historians, in particular Balādhuri, Ibn 'Abd al-Hakam, Kindī, Makrīzī and Kāḥḥādī; the primary archaeological sources are the coins and (for Egypt under the Umayyads) the papyri. See also A. A. Duri, *al-Naḥḥ al-salāmiyya*, and the references given in the text. (A. A. DURI)

AL-AMIR b. ABKAM AṢṢĀH Abū 'ALT AL-MANṢŪR, the tenth Fātimid caliph, b. 13 Muharrar 490/ 31 Dec. 1096. He was proclaimed caliph as a mere child of five by the vizier al-Aḥḍal on the death of his father al-Musta'li (14 Safar 495/8 Dec. 1101). For the next twenty years the government was in the hands of al-Aḥḍal (q.v.). In 515/1121 al-Aḥḍal was assassinated by Nizārī emissaries, but the caliph was accused of complicity. Al-Ma'mūn b. al-Baṭā'ihī (q.v.) was made vizier, but was in his turn imprisoned on 4 Ramaḍān 519/1125 (and executed three years later). No new vizier was appointed, but the Christian chief collector of revenue, Abū Naḍḍāh b. Kana'ā, exercised great influence until his arrest and execution in 523/1129-30.

During al-Aḥḍal's vizierate a certain activity was shown against the crusaders and various expeditions were undertaken, under the command of Sa'd al-Dawla al-Tawāḥhī (495/1101); Sharaf al-Ma'mūn, al-Aḥḍal's son (496/1102); Ṭāḥ al-Adḥan and Ibn Rāḍī (497/1103); Ḥamīd al-Mulk (498/1104); Sa'ad al-Mulk al-Husayn, another son of al-Aḥḍal (499/1105); and later under that of al-A'azz (505/1112) and Ma'wūd (506/1113). (The main base in Palestine was 'Akkān). Nevertheless, the greater part of Palestine and the Syrian coast fell into the hands of the crusaders; Tartūs, 495/1102; 'Akkā, 497/1103; Tarsūs, 502/1109 (cf. 'AMMUN); Sayda, 504/1111; Sūr, 516/1124. Egypt itself was invaded in 511/1117 by Baldwin, king of Jerusalem, who took Farāmā and reached Tunīs; he was, however, forced to retreat because of his illness and died on the way.

A noteworthy event was the invasion by the Luṭāta in 517/1123, who reached as far as Alexandria, but were repelled by al-Ma'mūn.

During the reign of al-ʿAmir the Nizārī schism, which caused the Fātimids to lose the support of the greater part of the Ismā'īlī "diaspora", threatened Egypt itself. Al-Ma'mūn had to take police measures in order to prevent the infiltration of their agents, and a great public demonstration was held in Cairo (Shawwāl 516/1122) in order to publicize the falsity of the Nizārī claims and the legality of the Musta'li line. A document issued on this occasion has been preserved under the title of al-Ḥuday al-ʿAmīriyya (ed. A. A. Fyze, Oxford 1938).

In 522/1130 a heir, named al-Tayyib, was born to al-ʿAmir; his fate, however, is shrouded in obscurity. On 2 Dhū l-Ka'da 524/8 Oct. 1130 the caliph was assassinated by Nizārīs and a period of *confusio d'itit* followed (cf. AL-APDAL RUTAYFĀH, al-BĀḤĪ).

'AMIR, the name of a South Arabian tribe (see *Ḍihā*).

BANU 'AMIR (BANI AMOR), a camel- and cattle-owning nomadic tribe, pop. approx. 60,000, in Western Eritrea and the adjacent area of the Sudan. The tribe is divided into 17 sections, some speaking Bedja (a hamitic language) others Tigre (a semitic one), though there is a firm tradition of common descent, traced in considerable detail to the ancestor 'Amir, some 10 generations ago. This applies only to the small ruling caste (*walid*), not to the heterogeneous and much more numerous serf population (called *kedarab* or *higir*), which seems to have come under Banī 'Amir domination at different times, either through conquest or voluntary submission. A few serf groups are subject only to the Paramount Chief, while the large majority live in hereditary bondage to particular *walid* families, tributary to them and charged with all the menial tasks, especially herding and milking. The masters, in turn, are bound to protect their serfs and care for their welfare. Though tempered by personal loyalties, the caste division is kept rigid by the prohibition of intermarriage and by certain taboos imposed on the serfs. Formerly there was also a class of slaves, who were the absolute property of their masters.

The whole tribe is Muslim, though the purity of the belief and adherence to observances vary widely not only individually but among the sections. Their political unity is a tenuous one, resting on a loose federation not infrequently threatened by secession. Tribal government is in the hands of a paramount chief (*digda*) and a council of headmen (*ghorfa*) elected by the different sections. Formerly elective, the chief's office became hereditary in 1829, and since 1957 separate chiefs, though close kin, have been ruling over the Eritrean and Sudanese branches of the tribe.

The relations of the tribe with neighbouring groups were, and still are, marked by frequent raids and blood feuds. Though internal conflicts were not infrequent they never followed class lines. The modern political and economic changes, however, which seriously weakened tribal prestige, also caused the serfs to show signs of restiveness, visible in sporadic acts of lawlessness and 'passive resistance'.

'AMIR I. (al-Malik al-Zāfir Ṣāḥib al-Dīn) founded in Yemen the dynasty of the Banū Ṭāhir, after the fall of that of the Rāḥīdīs about the year 855/1451 in conjunction with his brother 'Alī (al-Malik al-Muḥḍib Shams al-Dīn). He lost his life during an unsuccessful attempt to capture the town of San'a' in 870/1466.

**Bibliography:** see the following art.

'AMIR II. (b. 'Abd al-Wahhāb, al-Malik al-Zāfir Ṣāḥib al-Dīn), was the last prince of the house of the Banū Ṭāhir; he ruled in Yemen 894/1488-923/1517. Already in 922/1516, the Egyptian admiral Husayn occupied the capital of Yemen, Zabīd, because 'Amir refused to supply the fleet sent out against the Portuguese with provisions. Husayn left his brother Barsbay behind in the city; and in the following year 'Amir, who had taken flight together with his brother 'Abd al-Malik, fell in a battle with Barsbay. As in the interval the Manlikī dynasty had been overthrown by Selīm, the Ottoman Sultan, Yemen also fell into the power of the Ottomans.

**Bibliography:** Kutb al-Dīn, in *Notices d'Extraits*, iv, 421; C. Th. Johannsen, *Historia Jemanae*, 1828, 186 f.; 229 f.; Weil, *Gesch. d. Chalifen*, v, 398 f.; Zambaur 121; O. Löfgren, *Arab. Texte zur Kenntnis der Stadt Aden*, index; Khallīd Edhem, *Duwal-i Islāmiyye*, 133 f.

'AMIR b. 'ABD AL-KAYS (later 'ABD ALLAH AL-'ANBARī, *Lib'*) and ascetic of Basra. His way of life attracted the attention of the agent of 'Ughmān, Ḥamrān b. Abīn, who denounced him to the Caliph; 'Amir was interrogated by 'Abd Allāh b. 'Amir and exiled to Damascus where he died, probably during the caliphate of Mu'awiya. His way of life seems to have consisted of various kinds of abstinence (he despised wealth and women) and pious works, and it is possible that the measures taken against him were dictated by the desire to prevent the advocacy of celibacy at a time when Islam needed fighting men; Ibn Kutayba, *Ma'ārif*, 194, states on the other hand that his puritanism led to him being suspected of Khārījism, even though these events happened between 29-35/650-6. In the eyes of posterity, 'Amir b. 'Abd al-Kays is not only an eloquent man whose sayings have been preserved, but Sūfism, which includes him among the "eight" principal *sukhād*, still recognizes him as a forerunner and attributes to him a number of miracles.

Pellat).

'AMIR b. SA'SA'SA, a large group of tribes in Western Central Arabia. It is mentioned first in a South Arabian inscription of Abrahā in 547 or 544-45 (G. Ryckmans, No. 506, in *Le Muséon*, 1953; J. Ryckmans, *ibid.*, 339-42; Casel, *Entdeckungen in Arabien*, 1954, 27-31). Judging by that inscription and by the later area of the 'Amir, their original area began to the west of the Tarāba oasis and extended towards the east, past Ranya, to the upland south of the Riyāḍ-Mecca road. Here it ended at about the 44th degree of longitude, but the north-western borderline can not be ascertained. From this area the tribe of Kilāb (b. Rabī'a b. 'Amir) advanced to the north and northeast into that territory in which the *hima* Dārīyya (q.v.) was later founded, and into the adjacent southern district as far as Siyy to the west; the tribe of Ka'b (b. Rabī'a b. 'Amir) advanced to the east and northeast into the southern Tuwayk. Only the *Hilāl* (b. 'Amir) never left their territory, Harrat Banī Hilāl = Harrat al-Nawāsif. Earlier inhabitants of the *hima*, such as a part of the Muḥārib, the *ḡ*-anī and the Kumayr (who are counted among the 'Amir in later genealogies, cf. however 'Amir b. al-Tufayl, XII, 1)

became more or less dependent on the Kilāb, whilst the Ka'b assimilated the little-known inhabitants of the Tuwayk oases, and later on settled there themselves, particularly the sub-tribes of *Ḍja'da* and *Harīḥ*. Of the sub-tribes of the Kilāb, the *Ḍibāb* migrated between the centre of the *hima* and their old villages near Turāba, the 'Abd Allāh along what is today known as 'Aḥḍ al-Sūḥayf', the *Abū Bakr* migrated from the southern *hima* in a south-easterly direction to Karīḥ = Karān on the Riyāḍ-Mecca road, and the 'Amir from the south-eastern *hima* to Damīḥ, whence both turned to the southwest into the above mentioned upland. The sub-tribes of Ka'b also migrated between their old and their new areas: the Kūshayr north of the Wādī Birk (= Birk) Surra towards the road, the 'Aḍlān went there along that Wādī, the 'Ukayl migrated from the Wādī Dawāḥir-Wādī Kanya northwards to the upland, but they also went south in the direction of Najrān. Thus the two areas of migration touched along a considerable stretch. This fact and also the fact their migrating areas were large, explains the remarkable solidarity of the Ka'b and the Kilāb, while their internal unity, as usual, left much to be desired. The Kilāb had the Ribāb and Tanīm as neighbours in the east, the Asad in the northeast and tribes of the *Ḡhātān* in the north and northwest. There was a latent state of war with all these, whilst relationships with the Sulaym, and especially the Hawāzin, in the south-west were amicable. To the south, Kilāb and Ka'b had a feud with the tribes on the border, especially with the *Khath'am*, but also with South Arabian tribes like the Murīd, Sudāḥ and *Ḍjū'n* (of Sa'd al-'Aḥḍra) which had been bedomized for some time and were pressing towards the north. They did, however, live in peace with the Bal-Hārīḥ b. Ka'b and their satellites Naḥd and *Ḍjurn* in the Najrān region, until that peace was broken by 'Amir b. al-Tufayl's marauding expeditions. Noteworthy among the "days" of 'Amir are the battle of Shīb al-Jabala (on the eastern border of the *hima*), where they repulsed an army of Asad, *Ḍhabyān* and *Dārīn-Tanīm* ca. 580).

The house of *Ḍja'far* (rather a family than a subtribe before the times of Islām) had some vague authority over the Kilāb. It held this position thanks to a pact with the 'Amir b. (b. Rabī'a), according to the later genealogy a "brother" of the Kilāb and Ka'b, without always being a match for the *Abū Bakr*, the strongest Kilāb tribe.

The 'Amir, as *Hums* (q.v.), was on good terms with the inhabitants of Mecca. Nevertheless, the relations with the rising community of the Muslims in Medina were peaceful, since both were opposed to the *Ḡhātān*. These relations were not seriously threatened—not even by the incident of Bīr Ma'ūna—until the prophet demanded not only the political, but also the religious, union of the tribes. In 629, a gang of marauding Muslims penetrated as far as Siyy; soon afterwards, the head of the older line of the *Ḍja'far*, 'Alkama b. 'Uḍāba, embraced Islam. 'Amir b. al-Tufayl, however, his opponent, remained unregenerate. After Muḥammad's victory over the Hawāzin near Hunayn (8/630), the 'Amir effected their union without further friction. There was hardly any fighting against the 'Amir in the *ribāḍ*.

The part played in the war of conquest by the 'Amir was not considerable. Yet the 'Ukayl reached Spain with the Syrian armies, and the *Ḍja'da* and Kūshayr reached Persia with those of Kūfa and Basra. Other groups followed after the conquests.

Some 'Amir settled in Northern Syria and others on the far side of the Euphrates. There they settled on the land, whilst those on this side of the Euphrates slowly reverted to a nomad existence. Here we meet of the old units of 'Amir: Kilāb, Kūlaya, 'Ajlān, 'Ukayl, as well as Numayr. The Kilāb remained on the Syrian side. From them sprang the Mirdāsid [q.v.] dynasty. The Numayr and 'Ukayl, however, went over to the Dī'fār between 940 and 955. Some decades later, their leaders attained political power there [cf. NUMAYRIS, 'UKAYLIS].

There was little immediate change amongst those 'Amir who had stayed in Arabia. Through the establishing of the *Himā*, the existing discussions between the Dī'fār on the one side and the Dībāb and Abū Bakr on the other grew worse, while the 'Ukayl temporarily occupied areas near Bīgha and Tā'fīth which had been left empty after emigration. Larger displacements did not occur until after the first 'Abbasids. The Kūlaya advanced into the steppes to the northwest until the Numayr stopped them. The Kilāb were also concerned, in the Central Arabian risings shortly before the middle of the 9th century (defeated 846). After the annihilation of the Numayr (847), the Kilāb began to advance from the west, and the 'Ukayl from the south, into areas which had been swamped by the former for so long. The expeditions of the East-Arabian Karīm al-Tamīm started a new wave of migrations: in the east, the Khafā'jā [q.v.], 'Ukayl and later the Muntalīk [q.v.], reached 'Irāk, the 'Ukayl in the west reached Palestine, and the Kilāb Transjordania.

There were no important poets among the Kilāb before the last quarter of the 6th century (Labīd, 'Amir b. al-Tufayl); among the Ka'b until shortly before the *al-Nabīgha* al-Dī'fārī. Of the poets of early Islam Tadmūn must be mentioned among the Kilāb, Ibn Muḥallab al-'Ajlānī and Muḥallab al-'Ukaylī among the Ka'b.

**Bibliography:** The *Diwan* of the poets mentioned above [cf. articles on each]: *Nabīgha Dī'fārī wa'l-Farānabī*, ed. Bevan, passim; Wāḥidī, transl. Wellhausen, 368; Wellhausen, *Skizzen*, iv, 113, 142-6; the Arabic Geographers; Max Froehner von Oppenheim, *Die Beduinen*, i, 38 f., 222-7, 281, ii, 374, iii, 12-8, 127-37, 208 ff. [cf. also HILāl, KUGAYE, NUMAYR, 'UKAYL].

(W. CASKEL)

'AMIR B. al-TUFAYL, ancient Arab hero and poet, sprung from the Mālik, the younger line of the Dī'fār b. Kilāb, belonging to 'Amir b. Sa'sa'a. In the nineties and past the threshold of the 7th century he took part in many marauding expeditions, sometimes leading his own men. After the death of his father, who appears to have fallen in the south fighting against the Khazā'am, he took over the conduct of the war until the loss of an eye at the battle of Fayl al-Rīb (against the Khazā'am, ca. 614) rendered him unsuited for this post. In the beginning he suffered some setbacks, and he himself lost sight or use of his relatives. In one battle other tribes of the 'Amir b. Sa'sa'a must have suffered grievously, for bitter reproaches were made to him from their side. The unfortunate result of Fayl al-Rīb was not his fault; nevertheless the Dī'fār held him responsible for the loss of men and horses. It is possible that this discussion formed the basis for the legal contest, or the struggle for precedence, which broke out a short time after between 'Amir and the head of the older line, 'Alkama b. 'Alīgha. Though the arbiter gave no verdict, 'Amir recovered his good reputation through this suit; the

poet al-A'ghā seems to have provided essential help in accomplishing this. After the death of his uncle 'Amir Abū Barā' (ca. 450-451), he became, formally, the head of the Dī'fār, the mightiest Beduīn leader of Central Arabia, as before he had been the greatest warrior.

Legend connects 'Amir several times with the Prophet and depicts him as his bitterest Beduīn opponent. He is supposed to have attacked Muslim missionaries treacherously at Bī' Ma'ūna and have organised a plot to assassinate the Prophet. This is true to the extent that he did not submit to the sovereignty of Medina and died a heathen, probably shortly before the taking of Mecca. The accusation of treachery goes back to an exchange of *hiǧā'a* between the poets of Medina and those of the Dī'fār (the verses of whom have been lost or suppressed). In this 'Amir was accused of occasioning the catastrophe of Ma'ūna by breaking the covenant of protection. It is true that there was an engagement of protection entered into by his uncle, only that 'Amir could not fulfil it among the Sulaym, who had killed the "holy band", in reality a pillaging expedition; cf. Lyall, *Diwan*, 84-91.

The fragmentary impression left by the *diwan* of 'Amir is caused not only by the unsatisfactory tradition. 'Amir appears really to have cultivated only the small forms of *ǧahīlī* poetry. In the case of no. 39 he created a perfect work of art through the expansion of a framework which also occurs elsewhere; no. 21 is moving through its humanity, the complaint about the loss of his eye. In no. 16 he shows himself, uplifted by a recently won victory, equal to the hurtful scorn of al-Nābigha.

(The prose texts have no independent historical value and can serve only in helping to understand the poems.)

(W. CASKEL)

AMIR AKHUR, in Persian MIR AGHUR, "high equestrian", one of the highest officials in the court of Oriental princes. Under the Mandūkā the *amir akhur* was the supervisor of the royal stables. He was generally an *amir* of a thousand and had under his orders three *amirs* of fourty. In the Cossanian period he occupied the fourth place among the grand *amirs*, cf. A. N. Poliak, *Feudalism in Egypt, Syria, etc.*, London 1939, 30; D. Ayalon, *Studies on the Structure of the Mamlūk Army, BSOAS*, 1954, 63, 68.

(D. AYALON)

AMIR 'ALI, SAYYID (1519-1528), Indian jurist and writer, descended from a Shī'ite family which had come from Khurāsān with Nadir Shāh and remained in India, finding service with successively the Mughal and Awadh courts and finally the East India Company. He was educated at the Muḥsinīya ("Hooghly") College near Calcutta, where he learned Arabic and also came into close contact with the English and their literature, as well as studying their law (see his *Memoirs*, in *IC*, 1931-2). He was in England in 1761, when he called to the Bar in 1783, and settled there permanently with his English wife (née Isabelle Ida Konstam) on retirement from the Bengal High Court in 1804. His activities were significant in many fields: as a professor of

Islamic Law, at the Bar, on the Bench, in social service, government administration, politics, and as a writer. Some of his works became, and have remained, standard authorities for Anglo-Mohamedan Law. In 1883 he became one of the three Indian members (and the only Muslim) on the Viceroy's Council, and in 1909 he was appointed the first Indian member of the Judicial Committee of the Privy Council in London. In the field of social service he sponsored a juvenile reformatory in Calcutta (Calcutta), and in London he was a protagonist in the British Red Crescent Society.

On the political front he founded in 1877 a "National Mohammedan [sic] Association", which presently was a nation-wide organization with 34 branches from Madras to Karachi; its programme was "primarily to promote good feeling and fellowship between the Indian races and creeds, at the same time to protect and safeguard Mohammedan interests and help their political training" (*Memoirs*, 1932, 20). Amir 'Ali sinned, expressed and fostered a nascent political self-consciousness in Indian Islam, disagreeing with the then conviction of Sir Sayyid Ahmad Khān [see AHMAD KHAN] as to the adequacy of modern (western) education for the Indian-Muslim community as a guarantee of its position in the country. After moving to England he was instrumental in setting up the London branch of the Muslim League (speech in *IC*, 1932, 335 ff.); his loyalty to and real affection for Britain led him, however, to resign in 1913 when the League joined with the Indian National Congress in talk of "Home Rule." He was involved in negotiations in London over the projects for political reforms in India. After the First World War he came into prominence as London champion of the *khilafat* movement; a letter to 'Ismet Paşa signed by him and the Agha Khān, being published in Istanbul before reaching the government in Ankara, roused drastic opposition in Turkey, where the *khilāfa* was presently abolished altogether.

It is, however, as a writer that his basic contribution was made. While a student at the Inner Temple, he wrote in answer to a western account of Islam a study of Muhammad's life and message, which was published in London (1873). This became the basis of a developing work which he subsequently kept revising and republishing throughout his life, under the eventual title of *The Spirit of Islam* (editions in 1897, 1922, 1932). This liberal modernist interpretation of Islam was favourably received and has remained influential in the West; its influence in the Muslim world, not least outside of India, has also been marked, and it has been translated into Turkish.

His other major book (apart from legal works), *A Short History of the Saracens* (London 1899; 10th repr. [revised] 1921; also in Urdu transl.), also contributed to a new attitude towards the Islamic past on the part of many, both western and Muslim. These two books, and the other smaller presentations on Islam which he proffered, were supplemented by a steady stream of articles, both in India and especially in Britain (chiefly in the *Nineteenth Century*), in which he pleaded the cause of Islam before the bar of world opinion. His historical significance lies in considerable part in his role in the creation of favourable appreciation of Islam in the West, and perhaps also in awakening or facilitating such a favourable appreciation of Islam among westernized Muslims.

**Bibliography:** In addition to works mentioned in the article; Bibliography of Amir 'Ali's

writings, by W. C. Smith, *Islamic Review*, London; *Eminent Muslims*, Madras c. 1922, 145-76; W. C. Smith, *Modern Islam in India*, London 1927, index; H. R. A. Gibb, *Modern Trends in Islam*, Chicago 1947, index. (W. CANTWELL SMITH)

AMIR DĀD, "amir of justice", minister of justice during the Saldjūk rule, especially in Asia Minor; other *amirs* bore this name as a fixed title (cf. Ibn al-Athīr, index s.v.).

AMIR AL-HĀDJJ, leader of the caravan of pilgrims to Mecca. In 970, after which date non-Muslims were excluded from the *ḥajj*, the Prophet nominated Abū Bakr to conduct the pilgrimage and to prevent pagans from taking part in it. In 1053 he presided over it himself. Thereafter this duty belonged directly to the caliphs, who either undertook it themselves or nominated an official to act in their place (e.g. the Governor of Mecca or Medina, a high official etc.). When the authority of the Caliph was disputed, there were sometimes several rival leaders of pilgrimages to the Holy Places (e.g. in 68/689 there were four, of whom one was 'Abd Allāh b. Zubayr). Great importance was attached to the function of presiding at the ceremonies, which entailed authority over all the assembled pilgrims (*ḥādīja* b. 'awā). When this president came from the seat of the caliphate, the sources sometimes underlined his role as leader of a particular caravan, for example by calling him *amir al-ḥādīja al-'Irāqī*. Under the shadowy 'Abbasid Caliphs of Cairo (after 660/1262) the office became secularized and nominations were made by the Mamlūk sultans. The *amir al-ḥādīja* al-Miṣrī, usually a commander of a thousand appointed annually, claimed pre-eminence at the Holy Places. The title of *amir al-ḥādīja* was sometimes used for the leaders of other caravans (Damascus, 'Irāk). Each of these had absolute authority over his own pilgrims (supply organization, travel arrangements, protection of merchants, the sick and the poor, police duties, application of Qur'anic penalties). He was assisted by a specialized staff, and took any measures necessary to avoid attack by Beduīn. The Mamlūk sultans of Cairo used their *amir al-ḥādīja* to support their policy of establishing gradual control over the *ḥijāz*, symbolized by the *maḥmal* [q.v.], and to distribute gifts or *sawā* [q.v.]. The Ottoman sultans did the same after 923/1517, but their *amir al-ḥādīja* (Cairo, Damascus and, for short periods, Yemen), were appointed for a period of years until recalled. In Egypt under the Ottomans, up to the end of the 18th century, one of the principal keys held the post. The discharge of their duties necessitated heavy expenditure, a large part of which was met by the sultans; but as a result of the fact they received many gifts; that the effects of those who died on the way without heirs legally reverted to them, and that they carried on trade on their own account, the holders of this office could make a handsome profit. It was a great honour to be required to fill the post. Ibn Sa'ūd, who ruled the *ḥijāz* from 1924-5, prohibited any practice which recalled former Egyptian or Ottoman control of the Holy Places. The military escorts and the *maḥmal* which formerly accompanied the *amir al-ḥādīja* could no longer appear in Sa'ūdī Arabia. The *amir al-ḥādīja* had now only a diplomatic role, and he ministers of their respective countries dealt with the material organization of the pilgrimages. In 1934, Egypt abolished the title of *amir al-ḥādīja*, replacing it by *ra'īs al-ḥādīja* (Head of the Pilgrimage Mission).

**AMIR HAMZA** (see HAMZA), 'ABD AL-MUTTALIB, al-AMIR al-KABIR, "great amir", title which had originally been granted in the Mamluk kingdom to "all those who had seniority in service and in years". Consequently there was a whole group of *amirs* of which every individual was called al-*amir al-habir*. In the days of Shihab al-Din al-Umari (752/1352) the title became reserved for the commander-in-chief (*atabak al-shahi*) of the kingdom. From that date onward it became the most common title of the commander-in-chief beside that of his rank.

(D. AYALON)

**AMIR KHAN**, 1768-1834, the famous Pathan predatory chief and associate of Durrani Rāh Holkar, was born at Sambhal in the Murshidabad district of Rohilkhand. As a young man he and his adherents were employed by various *saimandis* and Marāṭha officials as *ikhanda* troops for the collection of the revenues. He rapidly developed into a leader of banditti and as such was successively employed by the rulers of Bhopāl, Indore and Dharwar. In 1798 he received the title of *sahib* from Durrani Rāh Holkar. The following year he plundered Sagar and the surrounding country. In 1809, in combination with the Pindaris, he planned to attack Berar but his designs were frustrated by Lord Minto's despatch of troops to that area. By the year 1817 the strength of his army had increased to 8,000 infantry, 20,000 cavalry, and 200 guns. In the same year, realising the strength of the British, he concluded a treaty with Lord Hastings, the governor-general, by which, provided he disbanded his army, he was guaranteed in the possession of his territories. He thus became the founder of the state of Tonk [q.v.], which, since 1948, has been merged into the Union of Rājāstān.

(C. COLIN DAVIES)

**AMIR KHUSRAW** Dihlawī, the great Indo-Persian poet, was born in 651/1253 at Patiyālī in the district of Etah, Uttar Pradesh, India. His father, Sayf al-Din Mahmūd, was a Turk who had entered India in the time of Sultan Shams al-Din Iltutmish under whom he took service as an army officer. His mother was a daughter of 'Imād al-Mulk, master master of the kingdom. Amir Khusrāw, according to his own statements, early showed great promise as a poet. From the age of eight when his father died, Amir Khusrāw was cared for by his maternal grandfather. After the latter's death, Amir Khusrāw took service under 'Alī al-Dīn Khwāh Khān, nephew of Sultan Balban and then with Nāṣir al-Dīn Bughrā Khān, son of the sultan, when he was appointed governor of Sāmāna. After accompanying Bughrā Khān to

Bengal, Amir Khusrāw returned to Dihli and accepted the patronage of the sultan's eldest son, Muhammad Kā'ān Malik and accompanied him to Multān. In 683/1284, Muhammad was killed in battle with the Mongols and Amir Khusrāw himself was captured only to escape soon after. He returned to Dihli and attached himself to Malik 'Alī Sarāḡdār Hātam Khān and went with him to Oudh when Sultan Mu'izz al-Dīn Kaykubād went to meet his father Bughrā Khān in 686/1287. Hātam Khān was appointed governor of Oudh and Amir Khusrāw remained with him for two years before seeking permission to return to Dihli, where he accepted the patronage of the Sultan.

In the reign of Jalāl al-Dīn Khālji 689/1290-695/1295, Amir Khusrāw was given a royal pension of twelve hundred tankahs annually and, according to Ibrāhīm, was a great favourite of the Sultan. But on the murder of Jalāl al-Dīn Khālji the poet transferred his allegiance to his assassin 'Alā' al-Dīn Khālji who confirmed him in his pension but proved an exacting patron. 'Alā' al-Dīn Khālji's reign, 695/1295 to 715/1315, saw Amir Khusrāw's most prolific period. Amir Khusrāw also enjoyed favour under Sultan Kutb al-Dīn Mubarak Shāh 716/1316-720/1320 and Ghīyāth al-Dīn Tughluq, 720/1320-725/1325.

During his lifetime, Amir Khusrāw became a disciple of the Sūfī saint Nizām al-Dīn Awliyā of Ghīyāthpūr and when the poet died in 725/1325, a few months after the accession of Sultan Muhammad Tughluq, he was buried at the foot of Nizām al-Dīn Awliyā's grave.

The following works of Amir Khusrāw are extant.

- (1) *Five dhawns*, viz., (a) *Tahsil al-Sighah*, poems of adolescence collected about 671/1272; (b) *Waqf al-Nasab*, poems of middle life collected originally about 683/1284; (c) *Ghazal al-Kamāl*, poems of maturity collected originally about 693/1293; (d) *Bahiyat Nahiyya*, collected about 716/1316; (e) *Nihāyat al-Kamāl*, collected about 725/1325.
- (2) *The Khamsa*, viz., (a) *Maṭla' al-Amr*, 698/1298; (b) *Sāṭir al-Khusrāw*, 698/1298; (c) *Khamsa-i-Sikandarī*, 699/1299; (d) *Haḡḡ Bihāḡ*, 701/1301; (e) *Madḡniyya*, 701/1301.
- (3) *The Ghazaliyyāt*, or lyrical poems.

- (4) *The Prose Works*, viz., (a) *Khāṣṣa' al-Futūḡ*, the victories of Sultan 'Alā' al-Dīn Khālji; (b) *Aḡḡ al-Fawā'id*, a collection of the sayings of Nizām al-Dīn Awliyā presented to the saint in 719/1319; (c) *Fāḡḡ al-Khusrāw*, completed in 719/1319, specimens of elegant prose composition.

- (5) *The historical poems*, viz., (a) *Kirān al-Sa'dayn*, completed in 688/1289, a *maṭnawī* on the meeting of Sultan Mu'izz al-Dīn Kaykubād and his father Nāṣir al-Dīn Bughrā Khān on the banks of the Sarḡj in Oudh; (b) *Mu'āḡḡ al-Futūḡ*, a *maṭnawī* on four victories of Jalāl al-Dīn Firuz Khālji, completed in 690/1291 and forming part of the *Ghazal al-Kamāl*; (c) *Qusṣa-i-Khāḡḡ Khān* or 'Aḡḡa, a *maṭnawī* completed in 715/1315 on the love story of Khāḡḡ Khān, son of Sultan 'Alā' al-Dīn Khālji, and Devalī, the daughter of Rājā Karn of Nahrwāla, with a later continuation telling of Khāḡḡ Khān's estrangement from his father, his confinement in the fortress of Gwalior, his blinding and eventual murder at the instigation of Malik Kāḡḡ; (d) *Nasb Suprā*, a *maṭnawī* describing the glories of Sultan Kutb al-Dīn Mubarak Shāh Khālji's time, completed in 718/1218; (e) *Tughluq-nāma*, a *maṭnawī* on the victory of Ghīyāth al-Dīn Tughluq over Khusrāw Khān in 720/1320.

Amir Khusrāw and the History of his Times. The works of Amir Khusrāw provide the fullest single expression extant of medieval Indo-Muslim civilisation. They reveal, as perhaps does no other surviving body of Indo-Persian literature of the time, the religious, ethical, cultural and aesthetic ideas of courtly, educated and wealthy Indian Muslims of the 8th/14th and 9th/15th centuries.

Amir Khusrāw was not a historian. No more in his "historical poems" than in his *dhawns* and *ghazals* does he attempt a critical account of the human past. Amir Khusrāw went to please his patrons by appealing to their imaginations, emotions and to their vanity as courtly educated Muslims. For Amir Khusrāw the life of man in history is a pageant of stereotyped formal action by god-like sultans and great men, who personify Muslim ideals of conduct.

(P. HARDY)

**AMIR MADJLIS**, master of audiences or ceremonies, one of the highest dignitaries of the Saldjūqs of Asia Minor (see SALJŪQ). In the Mamlūk kingdom the *amir madjlis* had charge of the physicians, oculists and the like. The sources do not elucidate the connection between the rank of *amir madjlis* and this particular task, which seems to be of no special importance. Although the rank of *amir madjlis* was in the early Mamlūk period superior to that of *amir silāh* [q.v.], neither of them was of great significance at that time. In the Cossanian period the *amir madjlis*, though inferior to the *amir silāh*, was third in importance amongst the highest *amirs* of the kingdom.

(D. AYALON)

**AMIR al-MU'MININ**, "Commander of the Believers" (the translation "Prince of the Believers" is neither philologically nor historically correct), title adopted by 'Umar b. al-Khaṭṭāb on his election as caliph. *Amir*, as a term designating a person invested with command (*amr*), and more especially military command, it is in this general sense compounded with *al-mu'minin* to designate the leaders of various Muslim expeditions both in the lifetime of the Prophet and after, e.g. Sa'd b. Abi Waqqāṣ [q.v.], the commander of the Muslim army against the Persians at Kādisiyya. Its adoption as a title by 'Umar may more probably, however, be connected with the Kur'ānic verse "Obey God and obey the Apostle and those invested with command" (vi, 58/62). From this time until the end of the Caliphate as an institution, *amir al-mu'minin* was employed exclusively as the protocollary title of a caliph, and among the Sunnīs its adoption by a ruler implied a claim to the office of caliph (see *IGAL*), whether in its universal significance (as by the Unayyads, 'Abbāsids, and the Shī'ite Fatimids) or as implying independent Islamic authority (as by the Unayyads in al-Andalus from 576/928 [see 'ABD AL-RAHMAN III], the Mu'minids in the Maghrib [see E. Lévi-Provençal, *Troisième septième officiales almohades*, *Revue*, 1944, 11 f.], and several of the minor dynasties in al-Andalus before and after the Muwahhid conquest). The Mu'minid caliphate was claimed from 650/1253

by the Hafsids *amirs* of Ifrīqiya, and was after the extinction of the 'Abbāsid caliphate at Bagdad in 656/1258 fleetingly recognized as the universal caliphate by the Mamlūk sultans of Egypt, until their establishment of the new line of 'Abbāsid caliphs in Cairo [see 'ABBAKIDS]. In the Maghrib itself the Hafsids claim was contested by the Marīnids in Morocco, who also adopted the title of *amir al-mu'minin* in the 10th/14th century, and were followed by all the succeeding dynasties in Morocco.

By the political jurists the title *amir al-mu'minin* was interpreted in a general sense, without special reference to command in the Holy War, except in so far as the proclamation of *ghidāh* remained a prerogative of the caliphate. In other Muslim circles, however, especially among the Zaydis (see below), its association with active provocation of the *ghidāh* still survived. In this sense it was occasionally employed by the early Ottoman sultans (see H. A. R. Gibb, in *BIM*); but it was never formally adopted by their successors as implying a claim to the universal caliphate, even after the occupation of Egypt by Salīm I in 922/1517. In the same sense it was assumed by various leaders of Muslim armies in West Africa [see AHMAD AL-GHAYE and AHMAD LOHIO], and is still employed as the style of their successors in N. Nigeria.

Among the Shī'as, the Imāms in general limit the title to 'Alī b. Abi Tālib exclusively; the Imāds apply it to such of the Fātimid caliphs as each sect recognizes; while the Zaydis regard it as legitimately claimed by any 'Alid who seeks to establish his claim by force of arms (hence its present use by the Imāms of al-Yaman). Among the Khawārij the title was rarely used, except by the Rustamids [q.v.] of Tabāst.

Very occasionally the term is applied in a figurative sense to outstanding scholars; e.g. the traditionist Shū'ba b. al-Hajjāj is described as *amir al-mu'minin* in *Ṭarīḡ* (Abū Nu'aym, *Ḥilyat al-Awliyā*, vii, 144), and the grammarian Abū Hayyān al-Gharnāṣī as *amir al-mu'minin* in *Ṭ-ṭaḡḡ* (Makkar, *Analyses*, 826).

Gibb, *Some Considerations etc.*, *Archives d'Histoire et de Droit oriental*, iii, Wetteren 1948, 401-10. See also general works under *IGAL*.

(H. A. R. GIBB)

**AMIR al-MULIMIN**, i.e. lord of the Muslims, a title which the Almoravids first assumed, in contra-distinction to *Amir al-Mu'minin* [q.v.]. The latter title was born by the independent dynasties; the Almoravids, however, recognized the supremacy of the 'Abbāsids and did not wish to arrogate to themselves this title of the Caliphs. So they established a kind of sub-caliphate with a title of their own. Afterwards the African and Spanish princes bore either the one or the other of these, according as they sought after the independent caliphate or recognized any supremacy.

**AMIR SILAH**, grand master of the armour. In the Mamlūk kingdom he was in charge of the armour-bearers (*silāḡḡdriyya*) and supervised the arsenal (*silāḡḡkhāna*). It was his duty to bear the sultan's arms in public ceremonies and to convey them to him in battle and other occasions. In the early Mamlūk period the office of *amir silāh* was not

very high (cf. *AMIR MAJLIS*); under the Circassians it was the second office among the highest *amirs* of the kingdom. The *amir silah* had the right of sitting at the *ra's al-ma'ayana* in the sultan's presence.

**Bibliography:** L. A. Mayer, *Suzani's Heraldry*, index; D. Ayalon, in *BSOAS*, 1924, 60, 66, 69.

**AMIR AL-UMARA'**, chief Emir, commander-in-chief of the army. As the name shows this dignity was originally confined to the military command. But the pretorians continued to become more powerful, and already the first bearer of the title, the eunuch Müni, soon became the real ruler, for it was to him that the weak and incapable Caliph al-Mu'tazz owed his rescue on the occasion of the conspiracy on behalf of 'Abd Allah b. al-Mu'tazz in 296 (908). After the appointment of Muhammad b. Bal'ak the governor of Wasit in 324 (Nov. 936) as *Amir al-Umarā'* by the Caliph al-Rādi, this desperate ruler could not but hand over to him the entire civil authority, and his name was even mentioned in the public prayer together with that of the Caliph. So the Emir became in reality virtuous rulers, while the Caliphs sank more and more to mere shadows of their former power.

This title is very rarely met with in Mamlūk sources. According to one source it was synonymous with *kabakbār*, a title given to the *adib al-'asābir*. It seems, however, that other *amirs* also bore the same title. Cf. D. Ayalon, in *BSOAS*, 1954, 59.

In Ottoman usage *amir al-umara'* and its equivalent *mir-i mirān* are common synonyms for *beylerbeyi* [q.v.].

**AMIRGHANIYYA** (see *AMIRGHANIYYA*).

**'AMIRI** (not *Amiri*, as often implied in literature), territory of the 'Amir, a sub-tribe of the *Quda'a*, forming one of the 'nine cantons' in the Western Aden Protectorate, with some 27,000 inhabitants (Brit. Agency, 1948). The sultan (*amir*) resides at *Dālī* (Dhāl), a small town on the south-eastern slope of *Ḍabal Dhībat*, about 10 miles south of Ka'taba and the border of Yaman. According to von Maltzan the name *Shāhī* was applied not only to the country and the capital (*Bilād Shāhī*) but also to the reigning sultan, a *mamlūk* of the *Zaydi* Imāms of Yaman who had made himself independent and created fairly good order in the district. A treaty with the British was signed in 1904 and supplemented in 1924 by an adviser agreement with the Government of Aden, which gives instructions to the tribal guards of the *amir*. *Dālī* has a permanent military landing ground for aircraft. A sub-grade school has an average of 30 pupils.

(O. LÖFGREN)  
**'AMIRIDS**, the descendants (and clients) of al-Mansūr b. Abi 'Amir (q.v.), in the first place his sons 'Abd al-Malik and 'Abd al-Rahmān (q.v.). 'Abd al-'Azīz al-Mansūr, a son of 'Abd al-Rahmān, founded the dynasty of the 'Amirids in Valencia where he ruled 422-53/1022-63. He was succeeded by his son 'Abd al-Malik al-Mansūr (q.v.), 453-7/1061-5. After a ten years' interval under al-Ma'mūn of Toledo, 'Abd al-Malik's brother, Abū Bakr b. 'Abd al-'Azīz

ruled in Valencia 468-78/1075-85. In this last year the city was wrested from Abū Bakr's son, the *hādī* 'Uthmān b. Abi Bakr, and fell into the power of al-Rādi, who had been dethroned in Toledo. (For further details, see *AL-ALAWI*). — To the former clients of the house belong Muḥarrak and Muḥarrak, who ruled Valencia for a short time from 407/1010-1 onwards, and Muḥammad al-'Amirī (q.v.), who became the ruler of Denia and the Balearic Islands.

(C. F. SEVONEN\*)

**AL-'AMK**, large alluvial plain of northern Syria, situated N-E of Antioch and framed in the tectonic depression which separates the Efrās Daḡh, or Amanus, from the Kurd Daḡh, and which stretches as far as the lower spurs of the Taurus. With a mean elevation of 250 ft. above sea level, it is largely covered by a lake fringed with marshes, called *Buhayrat Anṭakiyya* ('the lake of Antioch') or *Buhayrat Yaḡrā*, and in Turkish *Al Denir*; fed from the north by the 'Afrin (q.v.) and the Kara Su, streams which are violent when in spate, the lake discharges its waters in the direction of the Orontes which, before receiving this outlet, the *Kūṭūk 'Asī*, follows the depression without discharging its waters into it; it flows several metres above the depression and is separated from it by an alluvial or rocky shelf. The marsh, which varies in size with the season, lends itself to the raising of buffalo and to fishing (tele and silurids); see the alternative name *Buhayrat al-Sillaw*, which appears in the 'Casal Sallor' (of the Crusaders), while the perpetually flooded areas bordering the marsh are reserved for the extensive cultivation of cereals.

About the 9th century before Christ, Assyrian inscriptions point to a kingdom centred on the plain of Antioch, the lake being perhaps of less consequence than now, named 'Unki; the toponym, Semitic in origin and vouched for by the Aramaic stele of King Zakir, derives from a common noun which still has the meaning in Arabic of 'depression', or more exactly, according to Ibn Khurraḍādhbih (97), 'any prairie surrounded by mountains'; this explains the title 'amk Thirā formerly given by historians to this country, at distinct from the 'amk Mar'aḡh (q.v.) further north.

As a corridor region connecting the approaches to Antioch, the plain of the 'Amk, under the name of Amīyūs Pedion, was the site of important battles in the Hellenistic era. After the Muslim conquest, it became part of the disputed zone between the Arabs and the Byzantines, to whom it was given by the treaty of 591/606. Guarded by various forts which cut it off from the Syrian hinterland (Artāsh, 'Imm, Hārim, Tifn), it was, like Antioch, momentarily reconquered by the Muslims; the latter had to cede it to the Crusaders, and it was only finally recovered by Nūr al-Dīn in 543/1149 after the battle fought near Yaḡrā, a place situated north of the lake where the sultan Kayr-bā later camped during his famous tour of inspection of the Syrian territories. During the Mamlūk and Ottoman periods, the 'Amk formed part of the province of Aleppo, and was crossed by the routes from Antioch to Aleppo (via *Ḍijar al-Hādī*, south of the lake) and from Antioch to Mar'aḡh, and by the post road Ayyas-Baḡhras-Aleppo, which passed to the north of the marsh after crossing the Amanus by the Baytān pass (see *AL-ALAWI*). The numerous projects under the French mandate, designed to increase the value of the plain and to drain the lake, all failed to provide a satisfactory solution. The return to Turkey in 1939 of the *sandjak* of Alexandretta, which included the 'Amk, deprived

the plain of its position as a corridor region, which was one of the main reasons for the interest displayed in it, and explains its present neglected state.

**AL-'AMMA wa'-KHASSA** (see *AL-ERASSA*).  
**'AMMÂN**, capital of the Hashemite Kingdom of Jordan. Population (1953) approximately 208,304 plus a small floating population, chiefly refugees from Palestine of about 30,000.

The site has been occupied since earliest pre-historic times. The Citadel Hill (*Ḍjabal al-Kāfa*) is undoubtedly the site of the ancient city often referred to in the Old Testament as *Rabbath Ammon*, 'Rabba of Ammon'. Of this ancient city little now remains save some tombs on the hill sides, and a short stretch of Iron Age city wall, perhaps 9th or 8th century B.C. The early Israelites (c. 1300 B.C.) failed to secure control of either the city or the district until the determined assault of David in the 11th century B.C. During this attack occurred the episode of Uriah the Hittite, whose name was still traditionally associated with the site in the 10th century A.D. (al-Makdisi, 173). Under Solomon 'Amman regained its independence. In common with the rest of the country it became a vassal of Assyria during the 8th and 7th centuries B.C., but maintained a precarious independence during the Babylonian period. When Ptolemy Philadelphus (285-247 B.C.) conquered the town he renamed it Philadelphia, by which name it was known in Roman and Byzantine times. The Seleucid King Antiochus III captured it about 218 B.C. In the first century B.C. 'Amman joined the league of the Decapolis, and the Nabateans occupied the city for a short time, but were driven out by Herod the Great about 30 B.C. From him the Romans took over and rebuilt it on the standard Roman provincial plan, with theatres, temples, forum, nymphaeum and a main street with columns. Some of these monuments still exist. In Byzantine times 'Amman was the seat of the Bishopric of Philadelphia and Petra, one of the sees of Palestina Tertia under Bostra. This title is still held by the Greek Catholic Bishop. (For details of ancient history, see Pauly-Wissowa, s.v. Philadelphia.)

Excavation on the Citadel on the site of the present Museum have shown that it was still flourishing when it was captured by the Arab general Yazīd b. Abi Sufyān in 14/635, almost immediately after the fall of Damascus, and on the Citadel at least there were some fine private houses of the Umayyad period. These are of some importance archaeologically, as only the palaces of the Omayyad Caliphs have so far been excavated, and they give us the

first evidence of how the ordinary man lived in this period. There is also a square Ghassānid or Umayyad building on the Citadel.

In common with the rest of Jordan, a decline apparently set in with the removal of the Caliphate from Damascus to Baghdad. Ibn al-Fakih, 105, writing in 292/903, mentions 'Amman as belonging to Damascus. Al-Makdisi, writing some 80 years later (373/983) gives a rather full account of the city as it then was (175); quoted by Yāqūt, iii, 760. Al-Makdisi puts the town in the district of Filastin and calls it the capital of the Balāḡ district (156; cf. also 180, 184).

Yāqūt, iii, 710, in 622/1225 refers to it as the city of *Dalīyanus* or the Emperor Decius, and connects the legend of Lot and his daughters with 'Amman. He still calls it one of the fruitful towns of Filastin and capital of the Balāḡ. But al-Dimashqi, 213, writing about 699/1300, assigns it to the Kingdom of Karak and says that only ruins remain. Abū 'l-Fida', 247, writing a mere 20 years later says 'it is very ancient town, and was ruined before the days of Islam'.

It is difficult to account for this sudden drop in the town's fortunes, for no historical or natural catastrophe has been recorded from this period. Therafter writers are silent on the subject of 'Amman, and when the first western travellers started to penetrate east of the Jordan in the early 19th century, it was no more than a very small village. In 1825/1828 a group of Circassians were settled there by the Turkish authorities, but it remained a mere handful of houses for many more years.

The first systematic exploration of the town and its environs was that made by Major Conder and his party in 1881, when the ruins of the mosque with a square minaret, perhaps the one mentioned by the al-Makdisi, were still standing. They were still there when the much fuller survey of Butler was carried out in 1907, but he considers the main wall to have been either Roman or Byzantine. Exactly when it was destroyed cannot be ascertained probably soon after the first World War.

In 1340/1921 'Abd Allah b. al-Ḥusayn (q.v.) made it the capital of Transjordan, and it has grown steadily ever since. Its greatest period of prosperity came during and immediately after World War II since the end of which the city has increased in size at least 50%. It is now the capital and administrative centre for the Kingdom on both sides of the Jordan, and contains the Royal Palace, Houses of Parliament and head offices of all the Ministries. Some new Government buildings, including a Museum, and Schools have been erected during the last few years, but in the early days of its growth many monuments of the past have disappeared.

'AMMÂN, MÎR (see AMÂN, MÎR).

'AMMÂR, BAKR, a family of kâids who governed the principality of Tripoli (in Syria) for forty years preceding the capture of the town by the Crusaders in 1102/109.

The first ruler of the family, Amin al-Dawla Abû Tâlib al-Hasan b. 'Amâr, who had been kâid of the town, declared himself independent after the death of the Fâtîmid governor, Muḥammad al-Dawla b. Bazzâl in 462/1070. He made the town an important intellectual centre and founded a rich library.

On his death in 474/1072 his two nephews quarrelled about the succession. Djalâl al-Mulk 'Alî b. Muhammad succeeded in evicting his brother. The authority of Djalâl al-Mulk must have been considerable, as he maintained himself for almost thirty years. In 473/1081 he took Djabala from the Byzantines. He manoeuvred as well as he could between the Fâtîmids and the Saljûkîds, as Ibn al-Kalînî has pointed out: "The towns on the sea, Tyre and Tripoli, were in the hands of their kâids who were their independent rulers. Not satisfied with renouncing the authority of the *amir* of the armies Baḥr al-Djannâlî, they tried to obtain the good will of the Turks by diplomacy and presents".

The last ruler, Faḡhr al-Mulk 'Amâr (brother of the preceding), succeeded in 497/1099, and for some years withstood the attacks of the Crusader Raymond of St. Gilles and his successor. In 501, however, he decided to leave the town in order to seek help against the Franks. The inhabitants, however, faithful to the Fâtîmid dynasty, called in the Egyptians, but in spite of the great efforts made by the Fâtîmids, they were driven in Tyre eight days after the fall of Tripoli. Faḡhr al-Mulk passed first into the service of the Saljûkîds, then of the princes of Mosul, and finally that of the 'Abbasid caliph and died in 512/1118-9.

A fragmentary inscription by Djalâl al-Mulk is extant, in which his name figures alone. One can therefore conclude that the Banû 'Amâr had detached themselves from the Fâtîmids and that this action drove them towards the caliphate of Bagdad; they proceeded, however, with caution, as their subjects showed 'Alid sympathies.

'AMMÂR, BAKR (or BAKR) ṬĀBĪT, dynasty which ruled in Tripoli (of the West) 727/1322-803/1400. Its founder, Ṭābīt b. 'Amâr, a Hawwâra Berber, died after a rule of a few months, and was succeeded by his son Muhammad. During the reign of Muhammad's son, Ṭābīt, the Genoese surprised and plundered Tripoli (756/1355); Ṭābīt was killed by the neighbouring Arab chiefs with

whom he was seeking refuge. In 771/1370 or 772/1371 Abû Bakr b. Muhammad expelled from Tripoli the governor of the Banu Maḥdî of Kâbi (Gadès), Abû Bakr died in 792/1392 and was followed by his nephew 'Alî b. 'Amâr. In 802/1398 the Hafsid Abû Fâris succeeded in arresting 'Alî whom he replaced by two members of the same family, Yaḥyâ b. Abû Bakr and his brother 'Abd al-Wâḥid. On 6 Rajab 803/1 May 1401 Abû Fâris captured Tripoli, imprisoned the brothers and brought to an end the dominion of the 'Amârîds.

(G. WERT)

'AMMÂR b. YÂSIR b. 'AMIR b. MAJIK, ARU 'c-YASZÂN, a Companion of the Prophet, had a partisan of 'Alî. His father, a *mawla* of the Muḥabbidite Abû Hudhayfa, had married one of his master's slaves, Sunayya, who was manumitted, but Yâsir and his family remained with Abû Hudhayfa. They were early converts to Islâm, and suffered severe tortures. 'Amâr is said eventually to have emigrated to Abyssinia; after the *hijra* he returned to Medina. He took part in the early campaigns, and fought at Badr, at Uhud, and, in general, in all the battles of Islam, who at the time of the *saḥâba* between the Muḥadjirîn and the Ansâr, paired him with Hudhayfa b. al-Yamân. Under Abû Bakr, he lost an ear at the battle of Yamama; in 21/641 he was made governor of Kûfa by 'Umar; in this capacity he took part in the conquest of Khuzistân. He was from the first a partisan of 'Alî; from 35/656 onwards, 'Alî placed exceptional confidence in him. He was the owner of the Camel (see AL-DJANAK), he helped to rally the population of Kûfa to 'Alî, and he was one of those who led the Prophet's widow 'Âṣṣa prisoner to Basra. He lost his life at Siffin (37/657) at an extremely advanced age. Several centuries later, his tomb near Siffin was still pointed out.

'Amâr was considered to have an excellent knowledge of the Traditions of the Prophet, and in addition owed his renown to his great piety and to his devotion to Islâm. Later, writers hostile to the Umayyads did not fail to glorify him by inventing *hadîths* in his favour, and by discovering in the Qur'ân allusions referring to him, 127: iii, 62; vi, 52, 122; xvi, 43, 108, 114; xxvii, 4, 61; xxxvi, 1; xxxix, 121; a notable prophecy attributed to Muhammad concerns the death of 'Amâr at the hands of the "rebel band", which he condemns to Hell.

'Amâr had a son, Muhammad, also famous for his knowledge of *hadîth*, and a daughter, Umm al-Hakam.

(H. RECKENDORF)

'AMMÂR AL-MAWSILÎ, ARU 'c-KASIN 'AMMÂR b. 'Alî, one of the most famous, and certainly the most original of Arab oculists. He lived first in 'Irâq, then in Egypt; he travelled widely, as he himself informs us in his book, and on his travels, which took him to Khwârizm in one direction, to Palestine and Egypt in the other, he practised his profession and performed operations. His work on ophthalmology was composed in Egypt, in the reign of al-Hâkim (969/1020); thus he was a contemporary

of the more famous, but less original, oculist 'Alî b. 'Iṣṭāḡ [q.v.]. If 'Alî's *Taḡḥîr* became for the Arabs the standard work on ophthalmology and overshadowed 'Amâr's work, the reason lies in the greater completeness of the former. 'Amâr's book has a strictly logical arrangement and is extremely succinct, as even the title shows: *al-Musṭahabb fi 'Ilâḡ al-'Ayn*. After a preface containing an account of its compilation, the book deals first with the anatomy of the eye, then with diseases of the eyelid, the corner of the eye, the conjunctiva, the cornea, the pupil, the albugenae, and the visual nerves. The descriptions of the diseases and of their treatment are in general very clear, and often, especially when he describes operations which he performed himself, of a dramatic vividness. This is more especially the case in the six cases of operation for cataract described by 'Amâr; in effect, his most significant achievement was the radical operation for soft cataract by suction through a hollow metal tube invented by him. Salâh al-Din of Hamât (end of 7th/13th century) has borrowed that part of 'Amâr's book almost verbatim in his *Nûr al-'Uyûn*. At an earlier date al-Ghâṣikî (6th/12th century) made considerable use of 'Amâr's book in his medical work *al-Murâḡ*.

The Arabic original is preserved in MSS of the Escorial. There is a Hebrew translation of a slightly different version by Nathan ha-Meahlî (13th century). The Latin *tractatus de oculis Cananensium* is, however, a forgery. German transl. by J. Hirschberg, J. Lippert and E. Mittwoch, *Die arabischen Augenärzte nach dem Quellen bearbeitet*, Leipzig 1905, ii.

(E. MITTWOCH)

'AMMÂRIYYA, Algerian religious order deriving its name from Amâr Bî Senna, born about 1712; his tomb is situated at Bâ Hamâm in the province of Constantine, which is also the site of the parent foundation (*adwya*) of the order. Actually, the order was only founded in 1822 by al-Hâḡḡî Mubârak (Embârek) al-Maghribî al-Bukhârî. According to Depont and Coppolani, *Les Confréries religieuses musulmanes*, Algiers 1897, 356-7, the order comprised, at the end of the 19th century, 26 *adwiyas* and 6,435 adherents.

'AMMURIYA, Arabic form of the name of the famous stronghold of Amorium (Syria: Amûrîn) in Phrygia, situated on the great Byzantine military road from Constantinople to Cilicia, S-E of Dorylaeum, S-W of Ankara, and S. of the Upper Sangarios (Sakarya). The site of the town for long remained unknown. Its ruins were discovered by the English traveller Hamilton about 7½ m. E. of Emirdağ (formerly 'Ashtly) near the village of Hamza Haçîl and Hisar, at a place which, he said, was called by the inhabitants Hergan Kale. The name Hergan Kale is unknown to-day, and the ruins are called Asar (or, according to Murray's plan, Asar Kale). The name Hergan Kale was also recorded by Texier, and was reproduced along with that of Asar Kale on Kiepert's map (scale 1: 400,000, sheet B III Angora). The name Amorium, according to Ramsay, survived in the name of the plain which stretches to the east: Haḡḡîḡî 'Umar (Haçîmîr)-owa.

Amorium, fortified by Zenon (474-91) as Ma'sûd, *Murâḡ*, ii, 337, says that it was built by Anastasius (491-518) — was on several occasions

threatened, besieged or captured by the Arabs. Mu'awwiya reached it in 25/646; 'Abd al-Rahmân b. Khlîd b. al-Walîd forced it to capitulate in 46/66; it was occupied in 49/66 in the course of Yazîd's expedition against Constantinople, but was retaken by Andreas, the general of Constans. In 89/708, Maslama b. 'Abd al-Malik defeated a Byzantine army before Amorium. In 98/716, at the time of Maslama's expedition against Constantinople, it was besieged by one of his lieutenants, and relieved by the future emperor Leo the Isaurian. Leo subsequently made it a formidable stronghold, which successfully resisted al-Hasan b. Kaḥḥaba in 162/779, in the reign of al-Mahdî, then in 181/797, in the reign of Hârûn al-Rashîd. It only fell in 223/838 to the powerful forces of al-Mu'tasim, whose Turkish troops besieged it for twelve days, and who finally took it only as the result of treachery.

The capture of Amorium was the subject of a famous poem of Abû Tamîm. Forty-two of the prisoners taken to Sâmarra were executed there on 6 March 845. Their martyrdom is celebrated in the *Acta XLII martyrum Amoriensium*. The town destroyed by al-Mu'tasim was rebuilt, but was again burnt down in 159/931 by Ṭamal, *amir* of Tarsûs. Thereafter it does not seem to have played a part in history, although in the 12th and 14th centuries it was still an important place, according to the geographers al-Idrîsî and Hamd Allâh Mustawfî.

AMORIUM (see 'AMMURIYA).

AMR, a term which occurs in many verses of the Qur'ân in the sense of command, viz. of God. (A paper by J. M. S. Buljon, *The use of god in the Koran*, is to appear in *Acta Orientalia*.) These Qur'anic passages formed the point of departure for speculations of theologians and philosophers, in which the Muslim element is often so contaminated, with doctrines of Hellenistic origin, that it loses all distinctive character. Nevertheless, the term itself does not seem to have an exact parallel in the relevant Greek terminology, so that it seems that the various theological notions about the divine command were originally conceived by Muslims.

This conclusion supports the hypothesis according to which the longer version of the *Theology of Aristotle*, the one which forms the basis of the Latin translation and of which the Arabic original has been discovered by Borisov, was elaborated in a

Muslim environment. In effect, there are in that version passages dealing with the theory of the *amr*. On the other hand, the fact that the doctrine as it appears in that version seems to be identical with the teaching of certain Ismā'īlī theologians, is suggestive: it is very probable that the Ismā'īlī authors and the author of the longer version of the *Theology* used a common source, which cannot, however, be identified.

According to the longer version of the *Theology*, the *amr* is one of the designations of the word (*kalima*) of God, also called His will, which is an intermediary between the Creator and the first intelligence and the immediate cause of the latter. In a certain sense it can be qualified as the cause of causes. It also can be called "nothing" (*laya*), as it transcends movement and rest. Intellect, which is the first created thing, is so intimately united with the word that it is identical with it.

This theory recurs in an identical, or almost identical, form among the Ismā'īlīs, for instance in the *Kāfī* attributed to Nāṣir al-Khwarazmī. Other writings which go under the name of Nāṣir al-Khwarazmī, however, show doctrinal divergences. The *Ḍid al-Muḍawwif* does not regard as correct the thesis expounded in the *Kāfī* according to which the *amr* is identical with the *shāh*, the creative act of God; and the *Ghāṣṣ* al-*ṣāḥib* calls the *amr*, which in the *Kāfī* al-*ṣāḥib* is qualified as "non-being", "the first being".

Another Ismā'īlī author, Ḥamid al-Dīn al-Kirmīnī, seems to have regarded the *amr* as an influx (this seems to be the meaning which ought to be attributed, in this context, to the term *ḥadda*) coming from God and united to the intellect. In his view, the *amr* is not a principle superior to the intellect; in common with other Ismā'īlī theologians, he considers it identical with the divine will.

In the *Kawḍal al-Tasīm*, or *Tasawwuf* (ed. W. Ivanow, 54 f., cf. 29), an Ismā'īlī work attributed to Nāṣir al-Dīn al-Ṭūsī, the doctrine of the divine *amr* is connected with the notion that at the psychic level the ascension marked by the stages of the sense-perception, estimation (*waḥm*), soul (*nafs*) and intellect, ends in the *amr*.

There is a certain similarity between these Ismā'īlī doctrines and the concept of *amr* found in the theological dialogue commonly called *Kutari*, by the Jewish thinker Judah Halevi. On the one hand he seems to postulate, or at least to consider as admissible, the identity of the *amr* with the will (ed. Hirschfeld, 76), on the other, he calls divine *amr* the power which is given to the prophet as an intellectual faculty and which is superior to the intellect (e.g. 42 ff.).

On the basis of Kur'ān, vii, 53, *amr* is sometimes opposed to *ḥukm*: the first then designates the creation of the spiritual substances, or these substances themselves, while the second refers to the creation of the material substances, or the material substances themselves (cf. TALAM, for the contrast between *amr* and *ḥukm* according to Ibn Ḥanbal, see Massignon, *La passion d'al-Hallaj*, ii, 627, n. 2). This idea recurs in some Ismā'īlī writings, such as the *Tasawwuf* (53), where it interferes with the concept of *amr* in the sense explained above; in texts related to Ismā'īlism, such as the *Kawḍal al-Tasīm* (cf. Goldziher, in *REL*, 1905, 38 n. 4), and in the "dispute of the Sābians and the Hanifiyya". This last is found in the *al-Muḥṣi* or *Ṭ-Nihāl* of al-Shahrastāni (ed. Ahmad Fahmī Muḥammad, Cairo 1948, ii, 118), a Sunni author; nevertheless,

in the discourse of the representative of the Hanifiyya one finds notions current among the Ismā'īlīs, but put in a form which avoids giving offence to Sunni orthodoxy. In the *Ḍawā* al-*ḥikmat* attributed to Nāṣir al-Khwarazmī (ed. Corbin, 154) the "world of the *amr*" is the Ismā'īlī hierarchy, while the "world of the *ḥukm*" is the physical world.

Another theme, often treated by the Sūfīs, is the contradiction, assumed by some as possible, between the *amr*, God's command to perform an action, and the divine will which prevents it.

'AMR B. 'ADĪS, NASSIR B. RASAF, first Lakhmid King of al-Hira. His father 'Adī employed a rose, which frequently appears in Arab legend, cf. the story of 'Abbas bint al-Mahdi to win the hand of Rakāsh, sister of Ḍaḍḍima al-Abrash (g.e.), whose favourite he was; 'Amr, the offspring of this union, succeeded in winning the favour of Ḍaḍḍima, but was then carried off by the *ḍiwn*, was considered lost, and was finally restored to his uncle. After al-Zabāḥ (identified with Zenobia, queen of Palmyra) had seduced and killed Ḍaḍḍima, 'Amr succeeded the latter on the Lakhmid throne and established his capital at al-Hira; then, with the aid of the sage Kusayr, he succeeded, by means of a stratagem related at length in the historical sources, in avenging his uncle's death and in killing al-Zabāḥ. Such is the account of the Arabic sources, and it is difficult to doubt the existence of 'Amr b. 'Adī, who lived in the 3rd century A.D. (Cassius de Perceval, *Essai*, ii, 35, gives the dates of his reigns as 268-88, but the historians credit him with a reign of 218 years); moreover, his name appears in the inscription of al-Namra. On the other hand, the fact that he is mentioned in the commentary on numerous proverbs proves that, as the historical reality of this personage and of the events involving Zenobia became blurred, legend made use of his name to fix the time of events displaced from their historical sequence, and of stories invented to explain proverbs which had become unintelligible; thus, in representing him as the conqueror of Zenobia, legend attributes to him the role played by Aurelianus in 270-3, seized possession of the Kingdom of Palmyra.

'AMR B. AL-ĀHTAM (SINAY) b. SEMAYI

TAMIM AL-MINAYI, an eminent Talmite famous for his poetic and oratorical talent, and also for his physical beauty which earned him the surname of al-Mukabbal ("anointed with corymbium").

Born a few years before the *hijra*, he made his way to Medina in 96/90 with a delegation from the tribes; in 116/32, he was a follower of the prophet; Saḍḍīhī (g.e.), but he was converted to Islam and took part in the wars of conquest; he conveyed the news of the capture of Raghāh to 'Umar in verse; he is said to have died in 57/676. His poems, some of which have come down to us, are superficially brilliant rather than profound; according to tradition eloquence provoked the famous comment by the Prophet: *inna min al-bayān la-ahm*.

*Bibliography*: Ibn Kutayba, *Sh'ir*, 401-3; al-Mufaddal al-Dabbī, *Mufaḍḍalīyyat*, (Lyalī), 245-54, 830-7; *Aghāṣ*, iv, 8-10, xii, 44, xxi, 174; Balāḍhūrī, *Futūḥ*, 387; Mubarrad, *Kāmil*, i, 476; Tabari, i, 1711-16, 1919; *Ḥamāsa* (Freitag), i, 72; Ibn al-Aḥḍar, *Uḍ*, Cairo 1286, iv, 87 ff.; Ibn Ḥadjar, *Isāba*, no. 5707; Ibn Nubāṭa, *Sarḥ al-'Uyūn*, Alexandria 1290, 77 ff.; Marzubānī, *Ma'āḍim*, 262. (A. J. WENSINCK-CH. PELLAT)

'AMR B. AL-'ĀS (al-'Āṣ) AL-SAHM, a contemporary of Muhammad of Kurayshite birth. The part which he played in Islamic history begins with his conversion in the year 8/629-630. At that time he must already have been of middle age, for at his death which took place circa 42/663 he was over ninety years old. He passed for one of the most wily politicians of his time, and we must endorse this verdict. The more clear-sighted inhabitants of Mecca already foresaw shortly after the unsuccessful siege of Medina that this fact was the turning-point in Muhammad's career. It is not strange therefore that men like Khālid b. al-Walīd, 'Uḡmīn b. Ṭāḥa and 'Amr b. al-'Ās went over to Islam even before the capture of Mecca. Not much importance is to be attached to the story of their conversion. That of 'Amr is said to have taken place in Abyssinia under the influence of the Christian Negus — Muhammad at once made use of his newly-gained assistance: after a few small expeditions he sent 'Amr to 'Uḡmīn, where he entered into negotiations with the two brothers who ruled there, Ḍayfār and 'Abḥād b. Ḍulanda, and they accepted Islam. He was not to the Prophet again. The news of the latter's death reached him in 'Uḡmīn, and occasioned his return to Medina. But he did not remain there long. Probably in the year 12/633 Abū Bakr sent him with an army into Palestine. The accounts of the conquest of this country (see *FIḤRIST*) are known to be somewhat confused (cf. also Caetani, *Annali dell' Islam*, A. H. 12); but this is certain, that in this undertaking 'Amr played a most prominent part. The subjugation of the country west of the Jordan especially was his achievement, and he was also present at the battles of Ajnādāyn and the Yarmūk as at the capture of Damascus.

Yet his real fame is due to his conquest of Egypt. According to some sources he betook himself there with his troops on his own responsibility. It is more probable, however, that 'Uḡmīn was informed of the matter (cf. Wellhausen, *Sizzen und Vorarbeiten*, vi, p. 93) or even that he was undertaken under his orders. It is certain that re-inforcements were soon sent out to him, under al-Zubayr. For the history of the conquest of the article *MSK*; only the following need be mentioned here: In the summer of 19/640 the Greeks were defeated at Heliopolis. In 20/641 Babylonia was occupied by the Arabs, in 21/642 Alexandria lay in their power (see *MUḤAWWIḤ*).

But not only the conquest of Egypt was the work of the genius of 'Amr; he also regulated the government of the country, administration of justice and the imposition of taxes. He founded Fustāt, which was later called *Ḥiṣr* and in the 4th/10th century al-Kāhira.

We can understand that 'Amr felt himself wronged, when the Caliph 'Uḡmīn recalled him in favour of 'Abd Allāh b. Sa'd, shortly after his accession to the throne. He retired in disgust from active life, occasionally giving utterance to his mortification. When circumstances became threatening to 'Uḡmīn, 'Amr was wise enough not to commit himself as a partisan of his enemies; but he secretly incited 'Aḥ, Ṭāḥa and al-Zubayr against him. From his estates of al-Saḥ' (Beer-Sheva) and 'Aḍḍī he waited the development of events with the greatest anxiety. Yet it was not till after the Battle of the Camel (see al-*ḌJAMAL*), when only the two opponents 'Aḥ and Mu'āwīya survived, that he once more came to the front, associating himself with Mu'āwīya. At the battle of Siffin he commanded the Syrian cavalry. When the battle turned in favour of 'Aḥ, he conserved the clever device of placing leaves of the Kur'ān on the lances. The ruse was successful and the battle remained undecided. A court of arbitration was agreed upon, which was to consist of Abū Mūsā 'Aḥḍarī and 'Amr b. al-'Ās. Before the day appointed came, 'Amr rendered Mu'āwīya the important service of occupying Egypt for him. It was an easy task to dispose of the youthful 'Aḥḍar governor, Muḥammad b. Abū Bakr; he defeated him (early in 38/658) and put him to death.

In the same year (38/658) 'Amr proceeded to Aḍḍarūb (g.e.) to the court of arbitration (according to al-Wāḥidī's chronology in Tabari, i, 3407). Here again he gave a brilliant proof of his political talent. He succeeded in conducting matters so far that Abū Mūsā declared both 'Aḥ and Mu'āwīya unworthy of the highest office. 'Aḥ lost thereby his title of Caliph, Mu'āwīya however, who had only fought for "Uḡmīn's blood", lost nothing. Until his death (see above) 'Amr remained Governor of Egypt. On 15 Ramaḍān 40/22 January 661 he escaped by mere chance assassination at the hands of Zaidawāh, one of the three Khāridjites who are said to have chosen the three leaders, 'Aḥ, Mu'āwīya, and 'Amr, as the victims of their fanaticism. 'Amr felt unwell on that day and left the leadership of the *Ṣalāt* to Khāridja b. Huḍāfa. So the latter was mortally wounded. "I meant 'Amr, but God meant Khāridja"; the assassin is reported to have said after accomplishing his deed.

'AMR B. HIND, son of the Lakhmid prince al-Mundhir and of the Kindite woman Hind after the death of his father, he became "king" of al-Hira (524-70 A.D.). He was a warlike and cruel prince; the story of how he sent the poets al-Mutalim and Tarafa to the governor of Bahrain with letters

containing their own death warrants, is well-known. The severity of his character earned him the surname of *Muḥarrir* al-*Ḥijāra* ('he who makes his stone emit sounds'). He was also called *Muḥarrir* ('burner'); in explanation of this surname, the Arabs recount that in order to avenge the death of one of his brothers, he had ten *Ḥanzalites* seized and burnt. However, as several other *Lahmids* were also called *Muḥarrir*, this surname could well be the name of an ancient idiom (see Rothstein, *Lahmidien*, 48 ff.). He was assassinated while dining by the poet 'Amr b. Kulthūm (q.v.), because the latter's mother had been offended by the mother of 'Amr b. Hind.

(A. J. WESSING)

'AMR b. KAMPA b. DUḤḤA (Dihast) b. Sa'd al-Du'a'a', pre-Islamic Arab poet of the Bakr tribe of Kays b. Thālab. The only biographical details we possess concern his disputes with his uncle Marḡab b. Sa'd, whose wife had tried to seduce him, and his journey to Byzantium with Imru' al-Qays (q.v.). According to Ibn Kutayba (*Shi'r*, 45), he lived in the entourage of Ḥudayr, father of Imru' al-Qays, but according to Ibn al-Arabi (xvi, 105-6), the two poets met when 'Amr had already reached an advanced age, and 'Amr died in Byzantine territory (between 530-540 A.D.), thereby gaining the sobriquet of 'Amr al-Dā'i'. His poems, collected by the philologists of the 2nd/8th century, have often been quoted by critics who appreciate their delicacy and simplicity; they have been edited and translated into English by Ch. Lyaṭ, *The Poems of 'Amr son of Qamḥah*, Cambridge 1919.

As he is commonly called Ibn Kamī'a, he must not be confounded with others possessing the same *nasab*, notably 'Abd Allāh (or Ma'mar) b. Kamī'a, father of Djamāl al-Uḍri (q.v.), and the poet Rābi' b. Kamī'a al-Sa'bi (see Āmidī, *Muḥallaḥ*, 368).

**Bibliography:** Among the sources quoted in the edition of the *diwān*, the following can be mentioned: Ibn Kutayba, *Shi'r*, 222-3; *Āghāni*, xvi, 163-6; Baghdādī, *Khizma*, ii, 247-50; Cheikh, *Najm al-Dīn*, 207-7; See also: G. Rothstein, *Lahmidien*, Berlin 1899, 76-7; O. Rescher, *Abriß*, i, 71-3; Brockelmann, S. I, 58. (Ch. PELLAT)

'AMR b. KULTHŪM, pre-Islamic *sayyid* and poet; through his mother he was the grandson of the *sayyid* and poet al-Muḥallab (q.v.). While still a youth he became chief of his tribe, the *Dijham* branch of the Taghlib (q.v.) of the Middle Euphrates. What we know of his life is confined to a few traditions (*ḥikāyah*); one describes the circumstances of his assassination of the King of al-Ḥira, 'Amr b. Hind, about 568 A.D.; another serves as a commentary on some epigrams against another ruler of that town, al-Nu'mān b. al-Mundhir (560-602 A.D.). To his Taghlibite fellow-tribesman at the end of the 1st/8th century, 'Amr b. Kulthūm seemed a man weighty in years (he was included among the *mu'ammarrūn*) surrounded by an aura of prestige derived from his resistance to the domination of the kings of al-Ḥira,

and from his being an incarnation of the virtues of the *dijāhiliyya*. Above all, they proudly attributed to him a poem celebrating their deeds in their conflict with the Bakr. Inserted several generations later in the anthology of the *Mu'allafāt* (q.v.), this poem, in so far as it is not a pastiche, bears the mark of a later hand; see T. Husayn. In addition to this poem, there are several fragments attributed to 'Amr, forming a small *diwān* edited by Krenkow in *Mache*, 1922, 591-611. These pieces, all of pre-Islamic inspiration, are notable for their impetuosity of style and simplicity of language.

**Bibliography:** Ibn Kutayba, *Shi'r* (de Goeje), 117-20; *Āghāni*, xi, 42-5, 52-60 (reproduced by Cheikh, *Poltes Chrétiens* 197-220 and followed by Cussin de Perceval, *Essai sur l'histoire des Arabes*, Paris 1847, ii, 363-5, 373-84; Marzubān, *Ma'jam* (Krenkow), 202; Rothstein, *Die Dynastie der Lahmiden in Ḥira*, Berlin 1899, 100; Noldeke, *Fünf Mu'allafāt*, Vienna 1899, i, T. Husayn, *Fi 'l-Adab al-Dijāhili*, Cairo 1345/1927, 236-47. Translations of the *Mu'allafāt* by Kosegarten 1819; Cussin de Perceval 1847; see Brockelmann, S. I, 52. (R. BLACHE)

'AMR b. AL-LAYTH, Persian general, brother and successor of Ya'qūb b. al-Layth (q.v.), the founder of the Saffarid dynasty in Sijistān. Said to have been a mule-driver in his youth, and later on a mason, he was associated with his brother's campaigns and in 259/873 captured for Ya'qūb the Tāhīrid capital Naysābūr. After Ya'qūb's defeat at Dayr al-Akūl and subsequent death (*Shawāl* 265/ June 879), 'Amr was elected by the army as his successor. He made his submission to the caliph, and was invested with the provinces of the former Tāhīrid principality in Eastern Persia and Sind, together with Fārs, and the command of the *ghurra* in Baghdād and Sāmarrā (*Safar* 266/Oct. 879). He recaptured Fārs in 268/882, but obtained effective control of Khūzān only in 280/893, after a long struggle with Ahmad b. 'Abd Allāh al-Khūzistānī (d. 268/882) and Rāfi' b. Harthama. In the interval, he was twice dismissed from the command of the *ghurra* and formally divested of his provinces (in 271/885, after a severe defeat by the caliph's forces under Ahmad b. 'Abd al-Aziz b. Abi Du'af, and again in 278/890), and also lost Fārs in 274/887. Confirmed for the third time as governor of Khūzān and Sijistān in 279/893, he finally reestablished his control of the former in 283/896, after a transient reconquest by Rāfi' b. Harthama. Thereafter, at his own request (arising out of his ambition to restore in his own favour the former Tāhīrid suzerainty over the Sāmānid family in Transoxiana) he was granted the *lashīya* of *Mā warā' al-Nahr*, in 285/898. His attempt to enforce his rights of suzerainty was, however, cut short when Rāfi' II, 287/April 900 the Sāmānid Ismā'īl (q.v.) defeated his forces and captured him at Balḥ. 'Amr was sent to Baghdād and after remaining in captivity there for over a year was executed on 8 Dhu'l-ḥijja I, 289/20 April 902. For his organization of government and the general significance of his campaigns in the history of Persia, see the art. *SAFFARIDS*.

'AMR b. LUBAYY, the legendary founder of polytheism in Arabia and the ancestor of the *Khuz'a* (q.v.) at Mecca. The *Kufā* being, according to the *Kur'ān* (in, 96:10), 'the first sanctuary appointed for mankind', it was necessary to believe that polytheism was a later corruption. Neither the *Djurihum*, Ismā'īl's relatives, nor the Prophet's tribe, the *Kuraysh*, were likely to be responsible for it. So the blame was laid on 'Amr b. Lubayy, the leader of the *Khuz'a*, who was said to have expelled the *Djurihum* from Mecca. He soon succeeded in 'changing' either from Hitt in Mesopotamia or from Ma'āh in the Balak<sup>3</sup> and placing them around the Ka'ba. Others maintained that he latched the five idols of Noah's contemporaries (mentioned in *Kur'ān*, lxxi, 23) from *Didda* and distributed them amongst the Arabs over whom by dint of his wealth and liberality he was believed to have an absolute command. He also accused of setting free certain rams in honour of the idols, a superstition denounced in *Kur'ān*, v, 103/2 as an invention of the unbelievers. He was made responsible for the divination by arrows, for the pagan *talhiya*, in short for everything heathen. It was even told, that the Prophet had seen him in hell and that he closely resembled in appearance to one of Muhammad's followers (showing that appearances are deceiving). The Prophet is also made to decide the dispute about the genealogy of *Khuz'a* by stating that "'Amr b. Lubayy b. Kama' b. Khindil is the father of *Khuz'a*' in contradistinction to the prevailing opinion of the genealogists that the *Khuz'a* are of Yamani origin and that 'Amr's father Lubayy was Rab'a b. Haritha b. 'Amr b. 'Amir al-Azdi. These differences and the fact that 'Amr's name does not occur in any ancient poem, point to the conclusion that even if he be a historical personality, no reliable information about him exists.

'AMR b. MA'DIKARIB b. 'ABD ALLAH AL-ZUBAYD, AḤḤAD, famous Arab warrior and *mushaddad* poet. Born of a noble Yamaniite family, he is depicted as a fighter of uncommon strength who, armed with his legendary sword al-Samāna, took part in many battles during the *dijāhiliyya*. In 10/631, he went to Medina and was converted to Islam, without, however, making any radical change in his way of life, on the death of the Prophet, he apostatized and took part in the rebellion of al-Aswad al-'Ansī (q.v.); taken prisoner in the course of the suppression of the *rida* by Abi Bakr, he was freed by the caliph and fought at the battle of the Yarmūk (15/636) and was distinguished at that of al-Kādisiyya (probably 16/637). The sources differ regarding the date of his death, some, relying on the legends which grew up about his exceptional

longevity, place his death in the caliphate of Mu'awiyah; but it is more likely that he lost his life either at al-Kādisiyya or at the battle of Nihāwand (21/641), as stated by the most reliable authorities. His poetry, devoted to fighting, seems to have been characterised by its brevity and clarity of expression, but only a few examples of it have come down to us.

'AMR b. MAS'ADA b. Sa'd b. Sūl, secretary of al-Ma'mūn, was of Turkish origin, and was a relative of Ḥarūn b. al-'Abbās al-Sūl (q.v.). His father had been secretary of chancellery under al-Mansūr. He himself served the Barmakides, and was later for many years one of al-Ma'mūn's chief assistants, in charge of the Chancellery and also of various financial posts which seem to have brought him substantial profits, but he never received the title of *wazir*. He accompanied the caliph to Damascus and on his expedition into Byzantine territory, and died at Adana in 217/832. He was noted for his epistolary talent, and the Arab authors have preserved several specimens of his work.

'AMR b. SA'ID b. AL-'ĀS b. UMAYYA AL-UMAWI, known as AL-AḤḤADAK, Umayyad governor and general. Governor of Mecca when Yazīd b. Mu'awiyah came to the throne (60/686), he was the same year appointed governor of Medina. On Yazīd's orders, he sent an army to Mecca to subdue the anti-Caliph 'Abd Allāh b. al-Zubayr, and entrusted the command to a brother of the latter, 'Amr; but 'Amr was taken prisoner and, with his brother's consent, flogged to death by his personal enemies. At the end of the following year, al-Aḥḥad was dismissed. Later he went with the Caliph Marwān on his Egyptian expedition and, when Mus'ab b. al-Zubayr invaded Palestine in an attempt to reconquer Syria during the Caliph's absence, Marwān sent against him al-Aḥḥad, who forced him to withdraw. At the time of the conference after the death of Yazīd, 'Amr had been mentioned as a possible eventual successor to Marwān; he was the Caliph's nephew through his mother, and was also related to him on his father's side; since he was also well liked in Syria, he could have become a source of danger; but when Marwān had consolidated his position he enforced the *bay'a* in favour of his two sons 'Abd al-Malik and 'Abd al-'Azīz. When 'Abd al-Malik came to the throne, he entertained fears of 'Amr which were not entirely without foundation; in fact, in 69/689, when the Caliph undertook a campaign against 'Irāk, al-Aḥḥad took advantage of his absence to assert his

right to the caliphate and to stir up a dangerous revolt at Damascus; 'Abd al-Malik had to return, and 'Amr only submitted after receiving a promise safeguarding his life and liberty. The Caliph, however, soon decided to remove this potential threat; he had al-Ashdaq brought to the palace where, according to tradition, he was killed by 'Abd al-Malik himself (760-69-90).

(K. V. ZETTERSTEN\*)

'AMR b. 'UBAYD b. BĀR, one of the first of the Mu'tazila, and with the *Awraja* 'Abd 'Uḡḡmān. His grandfather Bār was captured by Muslims at Kāshūl. He himself was born at Balḡh in 86/99 and was a *mawālī* of a branch of Tamīm. His father apparently moved to Basra, and 'Amr seems for a time to have been a member of the school of al-Hasan al-Ba'ir, though al-Dāhībī also speaks of him as a pupil of al-Faḍl b. 'Isā al-Rakāhī. He also had some connexion with Ya'qūb III. He gained a reputation as an ascetic, and was known at the court of al-Manṣūr, to whom he apparently spoke fearlessly on religious and moral questions, while refusing all reward. For his strength of character al-Manṣūr respected him highly, and on his death composed a eulogy of him in verse. He died in or about 144/761.

There is some obscurity about his precise relationship to Wāsil b. 'Aḡḡ and the respective parts in founding the Mu'tazila. The story of how Wāsil went apart ('*faṣala*) from the circle of al-Hasan is also told of 'Amr both with al-Hasan and with his pupil Kaṭāda; and the early writer Ibn Kutayba (d. about 270/884) knows of 'Amr but not of Wāsil. Bīḡrī b. al-Mu'tamir (d. 210/825) speaks of his own party as followers of 'Amr and some opponents as followers of ḡḡmān (*Intiqāḡ*, 124). 'Amr's views are usually said to be similar to Wāsil's, apart from a slight difference in attitude towards the parties at the battle of the Camel; and Wāsil had married 'Amr's sister. So there was doubtless some relation between them, but it is possible that 'Amr did more than Wāsil, who died thirteen years earlier, to create the later Mu'tazila, especially as Abu 'l-Ḥajjaj al-'Alīf was 'Amr's pupil (*Intiqāḡ*, 67).

**AMRITSAR**, capital of a district in the Panjāb (India). Pop. (1951), town-325,747, district-1,567,047, of whom 4,385 Muslims. The population of the Muslims in the district declined sharply after Partition. It was founded by the fourth guru of the Sikhs (g.e.), Rām Dās (1574-81), upon a site granted by the emperor Akbar, where he excavated the holy tank from which the town derives its name (*amrita saras*, 'pool of immortality'); initially it was called *guru ka chak* or *chak guru* and Rāmāḍipura. The next guru, Arjan (1581-1606) completed the

*Harmandir* (in English, the 'Golden Temple'), the chief worshipping place of the Sikhs. In 1764, Ahmad Shāh Durrānī destroyed the temple and the tank, but it was quickly rebuilt by the Sikhs. With the establishment of independent Sikh power after 1766, the importance of the town increased, and the Sikh rulers, especially Ranḡit Singh, endowed the temple heavily. The town passed under British rule in 1849. For about two centuries the town has been important for its entrepôt trade.

'AMS (see SUSAYRIS).

**'AMU DARYĀ**, the river OXUS.

Names. The river was known in antiquity as 'Oξος (also 'Oξος, Latin Oxus); length 2494-2540 kms. The present Iranian designation is traceable to the town of Amul (g.e.), later Amū, where the route from Khurāsān to Transoxiana crossed the river as long ago as the early Islamic period. The Greek name is, according to W. Geiger and J. Markwart (*Wehrst.*, 3, 89) derived from the Iranian root *wahsh*, 'to increase'; a derivation from the homonymous root meaning 'to sprinkle' is also possible. (Cf. the name of the *Walshshāb*, a tributary of the Amū Daryā.) In Sāsānian times the river was called *Wehr-rōd* or *Behr-rōd* (Markwart, *Wehrst.*, 16, 35). The Arabs and Islamized Persians for a long time called it, especially in learned works, *ḡayyūn* (used by Gardīzī in the 11th century as an appellation for a river in general); this name derives from the Biblical Gihon, one of the rivers of Paradise. In Chinese it is known as *Kui-shui*, *Wu-chu* or *Po-tsu*. The region north of the Amū Daryā is called by the Muslims *Mā warā' al-Nahr* (g.e.), 'land on the other side of the river', Transoxiana.

The upper course of the river. The Amū Daryā rises from several rapid headwaters. The most southerly of these, the Panḡ (rising from the *Walshshāb*—in the Middle Ages *Turkshāb*, cf. Markwart, *Wehrst.*, 52; Barthold, *Darjistan*, 65—and the *Pāmīr Daryā*), has its source in the *Pāmīr*. After following initially a course from East to West, it turns North near Takhāshān and receives on the right (E.) the *ḡhīnd* and the *Al-Su* (g.e.), and flows from there once more westwards. There follow as tributaries on the right bank the *Yāḡulān* and the *Wanḡāb*, and lastly the *Kūlib Daryā*. All these rivers as well as those to be named later are fed by several headwaters and tributaries.

The most important and largest tributary of the Panḡ on the right bank is the *Walshshāb* (also known as *Kūlib Su* or *Surghāb*), which is regarded as the upper course of the Amū Daryā in the *Zafar-nāma* of 'Alī Yāzīdī (1424-5, ed. M. Iḡlādī, Calcutta 1885-8, I, 179 ff.). On the other hand the inhabitants of today, as well as the mediaeval geographers, consider the Panḡ as the upper course proper; modern geography favours the *Al-Su*.

The area of the source of the Amū Daryā began to become known from the 19th century onwards (cf. the map in A. Schultz, *Landeshandliche Forschungen im Pamir*, Homburg 1916, 24-5; details in PAMIR). The Arabic geographers did not entirely grasp the true state of affairs; moreover, the inter-

pretation of the names of the headwaters given by them is controversial. Al-Ḥabībī, II, 147-148 (= Ibn Hawkal (Kramers), 475), names five headwaters of the Amū Daryā; the co-ordination of these names with the designations in use today proposed by W. Barthold, with which, in general, V. Minorsky associates himself, appears the most plausible. (See Barthold, *Turkestan*, 68 ff.; Minorsky, *Hudūd*, 208, 360; different interpretations were proposed by Ma'marī *Ḥudūd*, 233 f.; and *Wehrst.*, 53, and Le Strange, 425.) The area of confluence of these streams was known in the 13th century as *Arhan* (in the *Zafar-nāma* Arhang), in al-Bīrūnī *Huḡbshāra*. Al-Makdisī, 22, counts as sixth headwater the *Kawḡshān* river. The *Kūka* and the *Kunduz river* are other left-hand tributaries mentioned by the Arabs (Tabarī, II, 1590; Ibn Khurādādhbih, 33; Ibn al-Fakḡh, 324; Ibn Kusta, 93; Minorsky *Hudūd*, 333 f.). From the right enter the *Kāfirnāh* (260 kms.; in the Middle Ages *Rāmīd*), in Ibn Rusta, 93, *Zāmīl*, today the name of one of its headwaters) and the *Surghān* (200 kms.; in the Middle Ages and in the 14th century *Caḡhān Rōd*). It is from the mouth of the *Kāfirnāh* at *Paṅḡāb* (Aywagh of today; Barthold, *Turkestan*, 72) that some geographers consider the *Oxus* proper to begin. The last (right-hand) tributary before the mouth (1175 kms. distant) is the *Surghān Daryā*, as the *Shīrābād* and *Kāfīl* rivers do not, under normal circumstances reach the Amū Daryā, and the *Zarāghān* (g.e.) too loses its waters and does not join the *Oxus*. Similarly numerous rivers, on the left-hand side run out in the sand before reaching the Amū Daryā. The lower *Murghāb* did not in Islamic times reach it; it remains doubtful how far Greek sources, which indicate that this did occur in their time, are correct (Ptolemy, VI, 10 (cf. *Mueḡḡāb*); the *Harī Rōd* (g.e.), Arius, ran out in the sands of the *Kara Kum* (Strabo, XI, 58; Ptolemy, VI, 17, cf. Pauly-Wissowa, II, 623 f.).

In the upper region of the Amū Daryā lie the districts of *Wakhān* (on the Panḡ), then *Badakḡhān* (on both sides) and *Shughnān* with *ḡhārān* (*ḡhārān* S. and S.E. of the junction of the Panḡ with the upper *Murghāb*, further N. Darwāz. Between the Amū Daryā and the *Walshshāb* lies *ḡhuttān*. The *Wakhāb* flows through the *Pāmīr* region (the name *Pāmīr* occurs already in al-Ya'qūbī, al-Bīrūnī, 290-92 and al-Dimashqī) and then touches *Zashḡ* (thus correctly in Gardīzī, ed. Nāzīm, 35) and *Kumūd*. Between the *Wakhāb* and *Kāfirnāh* lay in mediaeval times *Wāḡḡīd* (the *Fayḡābād* of today) and *Kuḡāḡshān* (the *Kahādīyān* of today). The *Surghān* valley contained the province of *Caḡhānīyān* (Arabic *Saghānīyān*). On the left bank lay, W. from *Badakḡhān*, the province of *Tukḡshān* (approximately up to Balḡh). At this point the Amū Daryā enters the desert tract between the *Kara Kum* of the present day (on the left) and the *Kūlib Kum* (on the right) where it loses a considerable proportion of its waters through evaporation. It skirts the ancient *Sogdīa* and finally reaches *Kh\**ārim.

In the 19th and 20th centuries the Amirates of *Bukḡhān* and *Khiva* lay here, while towards the S. since the frontier adjustment of 1856-63, the Amū Daryā forms the N. frontier of *Afḡānistān* for 1100 kms. from the *Pāmīr Daryā* past *Kālā-yi Panḡ* to *Bosaga* below *Kāfīl*. Since 1924 the Amū Daryā forms the southern boundary of *Tājīkistān* and, since the latest revision of provincial frontiers (1930) in the Soviet Union, in its lower course approximately separates *Uzbekistān* (with *Kara-kūpak* which embraces the whole delta) from *Turkmenistān*.

Historical maps for the mediaeval period in *Minorsky, Hudūd*, 339; Le Strange, maps ix and x; *Atlas Istori SSSR*, I, Moscow 1949, 6, 12, 20; A. Herrmann, *Atlas of China*, Cambridge (Mass.) 1935, 24, 32, 49, 60; for later times cf. *Atlas Istori SSSR*, II, Moscow 1949, 13, 17 right bottom, 18; *Burhān al-Dīn Khān Kūshkaki, Kanqas-i Budakhshān*, transl. from Persian into Russian by A. A. Semenov, Tashkent 1926; A. Herrmann, *Atlas of China*, 60 (distribution of nationalities); *Westermanns Atlas zur Weltgeschichte*, III, Brunswick 1953, 134, 135.

The following were places of particular importance on the Amū Daryā in the Middle Ages: *Tirmīdh*, *Kāfīl*, *Zāmū* (*Karkhī*; left), opposite to which lies *Aḡshshāb*, *Amul* (*Caḡḡūy*; left), opposite to which is *Tīrāz*, finally various towns of *Kh\**ārim. (Cf. the article).

The water of the Amū Daryā rises in its middle course, which is 3570-5700 ms. broad and 1, 3-8 ms. deep, in April-May, and becomes low again in July. It frequently floods the areas on its banks, particularly to the right, hence from time to time a more luxuriant growth of bushes and vegetation is produced there. The river is in this neighbourhood not directly tapped for irrigation; nevertheless there ran along its left bank in the Middle Ages a strip used for agricultural purposes; from the 14th century on it apparently began to turn into a steppe (Barthold, *Turkestan*, 81 f.).

The lower course and its changes. From the middle course onwards, somewhat beyond *Kāfīl*, the course of the Amū Daryā shifted in various directions in prehistoric or even in historical times. According to Ptolemy the course of the Amū Daryā in the area between *Kāfīl* and *Zāmū* (*Karkhī*) turned in approximately a W. direction (as opposed to the NW direction of the present day) and ran into the region of the *Kara Kum* desert. Al-Bīrūnī too assumed such a course for the river in a previous epoch (cf. A. Z. Y. Togan, *Bīrūnī's Picture*). In actual fact it is possible to trace a former bed which branches off at *Karkhī*, goes between *Repetek* and *Ūḡ Hādḡī* and finds its continuation in the (former) *Ungur* river bed. Between 1928 and 1940 for instance the Amū Daryā showed a tendency to flow S. in this vicinity, so that from the geological point of view a similar course is not out of the question. The theory of a bed in *Ungur* (in spite of the malices which al-Bīrūnī reports having found there) requires further geological research before further conclusions can be drawn from the extremely uncertain reports of the old geographers. Al-Bīrūnī's account is that the Amū Daryā/Ungur flowed into a great desert lake but did not reach the Caspian. On the other hand Strabo (XI, 50) reports a discharge into the Caspian Sea. The culture of *Kh\**ārim, however, which has ten centuries' history behind it, and which would have been impossible without irrigation from the Amū Daryā, is a sure indication that in that time the *Ungur* cannot have been the sole lower course of the Amū Daryā.

Al-Bīrūnī supposes that as a result of obstructions of the riverbed, the Amū Daryā later, instead of flowing into the *Ungur*, squeezed through the narrow river-gorge (360 m.) between the *Dūldūl* Adḡlāḡh and the *Tāye Muvayn* (at the present day *Atīnagh*, 384 kms. from its mouth); it is called *Dahān*, *Shīr* = *Fān* al-*Asad*, 'lion's mouth'). But geological research here too indicates that this break-through must have come about already in prehistoric times. Below this pass there branch off the large side canals which render possible the oasis culture of *Kh\**ārim.

The Arabic geographers of the 10th century give Tabiriyā, S. of the river-gorge, as the southern limit of this area of irrigation. In the 11th century Daughān, further NW (S. of the gorge) was generally regarded as the limit (Bayhaḡī, ed. Morley, 859). The S. boundary of the Khānate of Khīwa was first fixed further S. (S. of Pūnyak) after the Russian conquest of 1873.

Opposite the present-day Sadwar (three *farsāḡs* on the other side of the gorge) there branch off to the right the Goshgīrā, and after five more *farsāḡs* the Kīrya canal. They extended, respectively, N. to the Sulṭān Uways Daḡhī chain and E. from it to the same latitude and formed the base of the rich cultural development during and preceding the Islamic era on the lower right bank of the Amu Daryā N. of the present-day Dörtkü (Turkuli), the capital of the province of Karakalpakia. (Cf. Tolstov, in *IBid.*, and Khā'arizm).

Further NW and N. the main bed of the Amu Daryā has repeatedly shifted in historical times and does so even at the present day. The question has been thoroughly debated whether the Amu Daryā had in earlier times a different lower course. De Goeje quoted historical sources to the effect that this river has always in historical times emptied itself—albeit in separate main branches—into the Aral Sea. W. Barthold opposed this view and supposed that the Mongols by piercing a main dam with the object of conquering the town of (Old) Urgandj [9.5.] in 1221, diverted the river towards the W., so that it flowed into the depression and the sea and marsh tracts of the Sarī Kamīsh and finally into the Caspian, along the eastern edge of the Gīn (Gīn) ridge and further through the Ōzboy (Fousai, Ubozy) until the end of the 16th century. Barthold quotes in support of his thesis statements by Ḥamd Allāh Muṭawīl (1213 transl., 206; 117, transl. 170), Ḥāfi'ī-ā Abrū (see W. Barthold, *Arak*, 481), and Zāhr al-Dīn Mar'ashī. The latter (ed. B. Dorn, *Mohammed. Sources etc.*, 1, St. Petersburg 1856, 436, transl. 436) speaks of a fleet which travelled up on the Caspian from the mouth of the Ōzboy in the Daryā. Khā'āndamīr (iii, 244-6) reports that the sultan Ḥusayn Baykara travelled from Aghrīḡa (the Balghān mountains) to Adḡak (now Ak Aḡhā) and crossed the Amu Daryā "after seven days". But most of this evidence is subject to doubt, and Khā'āndamīr himself in his geographical appendix definitely makes the Amu Daryā flow into the Aral Sea. Everything considered, the evidence adduced by de Goeje seems to have more weight than that relied on by Barthold.

Barthold's views, however, found widespread support among historians and Le Strange, A. Herrmann and A. Zeki Velidi Toḡan (*Biruni's Picture*; recapitulated in *LA*, 1, 423-6) contended that the Amu Daryā flew into the Caspian even at an earlier period.

Barthold, and following him Toḡan, viewed the 16th century as the time of the shifting back of the mouth of the Amu Daryā to the Aral Sea. Both refer in this connection to the reports of the English traveller Anthony Jenkinson in 1558 (in R. Hakluyt, *The Principal Navigations etc.*, 1, London 1927, 449) and of the Ottoman traveller Sayfī in 1591/1582 (Barthold, *Arak*, 71; idem, *Orosheniy*, 93) as well as to Abu 'l-Ghāzī (b. 1603), who dates a shifting of the Amu Daryā 30 years before his birth (thus ca. 1573). The Khā'arizmī writer Aḡhī and the chronicle of Khīwa by Mu'nis (10th century) place this event in the year 1578 (Barthold, *Arak*, 69-74).

Thus the discharge of the Amu Daryā into the Aral Sea is unequivocally established for the period following the 16th century.

Although the question of the course of the lower Amu Daryā seemed to be settled to the satisfaction of the historians by the theory that the Ōzboy up till the 16th century formed the lower bed of the river (cf. A. Herrmann, *Gibt es noch ein Oxus-Problem?*, *Petermanns Mitteilungen*, 1930, 286 ff.), yet geographers and geologists have always rejected this view (see A. S. Keš, I. P. Gerasimov and K. K. Markov, and S. P. Tolstov, in *Bibliogr.*). At the present state of geological research, it appears that a temporary diversion of the Amu Daryā into the Sarī Kamīsh has been established; on the other hand, the Ōzboy was clearly not the river-bed of the Amu Daryā on its way to the Caspian in historical times.

Shifting of the channels of the Amu Daryā in the delta proper is not a matter of doubt either in historical times or at present. The early Islamic capital of Khā'arizm, Kāḡ [9.5.] gradually decayed owing to shifting of the bed of the river. The interpretation of the reports of the 10th century geographers is, however, uncertain. They speak of a series of lakes [Kāḡdān]; according to Ibn Rūsta, 92, these were on the edge of the Sīyā Kūh (Cin), but according to al-Isṭakhrī, 303, and Ibn Khaldūn (Kramers), 486, on the Aral Sea; al-Makhdī, 288, 343 f., gives no details. (Cf. also Barthold, *Turkistan*, 152; idem, *Orosheniy*, 84; idem, *Arak*, 22). The town of (Old) Urgandj lay after the Mongol conquest "on the right bank of the river" (i.e. the Daryālik). The breaking off of the connection to the Sarī Kamīsh in the 16th century may be accepted as a fact; possibly the resumed intensive irrigation took away the necessary water. At all events (Old) Urgandj lost its water-supply and was replaced by the towns of Waḡr (since ca. 1450, ruined in the 17th century, ruins near the present day fortress of Dēw Ka'fa) and (New) Urgandj. Finally the emergence of Khīwa as capital of the province is to be attributed to these shifts. The delta "island" (Aral) now took on importance. From here a new system of canals going to the left was constructed in the 19th century, and (Old) Urgandj was once again enabled to regain some kind of existence.

For the settlement and the population in the area of the mouth of the Amu Daryā, cf. Khā'arizmī, *gīlwa*, *akāl*, *ḡajr*, *ogūz*, *turkmen*, *uzbek*, *karakalpak*, *bart*.

In the delta and in the lower reaches of the Amu Daryā occurs a covering of ice, which on the average holds from the end of December to the end of March, and which caused astonishment to the Arab geographers and travellers (Ibn Battūṭa, ii, 450 f., iii, 11 f.). It nearly cost Yāḡūt his life in 1219 during his flight from the Mongols. In particularly severe winters it is up to 12 in. thick. The upper reaches also frequently freeze over in the mountainous regions.

In recent times there have been various projects for the diversion of the Amu Daryā into the Caspian. In 1716 Peter the Great commissioned Prince Alexander Bekovīč-Cerkasskiy (actually Dewlet Kidān Mirā, cf. Brockhaus-Efron, *Entsiklop. Slovar*, 1, 356 f.; *Bo'shaya Sovetskaya Entsiklop.*, iv, 406, with references) to investigate the possibilities of establishing a waterway almost right up to the frontiers of India. In 1873 the project was once more explored and pronounced basically feasible. It appeared that the way from Čārḡdyūz through

the Ungus was the most suitable, since it would thus not be necessary to await the protracted filling up of the Sarī Kamīsh depression (cf. A. I. Gīulovskiy, *Prospok vod v Amu-Dar'ya po staromu yeyu rasla o Kaspiyskoye More*, St. Petersburg 1893). After an extensive flood in 1952 the Soviet Government is said to have tackled anew in 1953 the project for a diversion of the powerful and incalculable Amu Daryā through a part of the protected area of the Sarī Kamīsh depression at Taghī and Tagh, on the old course of the river. The main portion of the water however would be led off by a canal 1700 kms. long into the lower Ōzboy, and would fall into the Caspian at Kīrlī Suw (Krasnovodsk). Two barrages with large lakes are to produce further electricity and in addition ensure the irrigation of 1.3 million hectares of land for cotton-growing. In order to provide for the settlements thus brought into being two fresh-water canals are to be constructed. It is impossible to ascertain how far this project has actually been put into effect, or when if ever its completion is to be expected.

(B. SPULER, shortened by the Editors).

'AMÜD (Ar.) (tent pole, hence a monolithic column and capital; less commonly, a constructed pillar).

The use of the column and the capital in Muslim art, and in particular in religious architecture, is connected with the adoption by the builders of mosques of the oratory with multiple aisles and of the court surrounded by galleries. The column, like this type of oratory and peristyle, appears to be a Hellenistic legacy, especially since in Syria, Egypt, Ifrikiya and Spain the columns of the early mosques are constructed of used materials. However, after a period of more or less faithful imitation of earlier models, types which are characteristically Muslim emerge, with a more simple outline. The shaft of the column is no longer slightly convex, and its diameter is equal throughout its length, the plan being circular or polygonal. The capital assumes various forms which can be classified in two main groups, both perhaps derived from the Corinthian capital, but each possessing a distinctly localized development and descent.

The first group consists of capitals whose campanula or lyre-shaped outline (Herrfeld) has perhaps been contaminated by the lotus-bud capital of ancient Egypt. This capital appears in the 3rd/4th century in the 'Abbasid monuments of Sāmarrā and Raḡḡa (A). It passes, with many other elements, into the Tūlūnid architecture at Cairo (end of 3rd/4th century) (B), and is preserved in Egypt under the Burḡī (C) and Circassian (D) Mamlūks. The base has a similar, though inverted, outline. This bell-shaped capital is also found in Persia, whose brick and tile architecture admits of few real columns. It crosses the small imitation columns of the *faience mikhrās* (E).

The general outline of the second group of capitals is rather that of the Corinthian corbel; it appears as a simplified form of the latter, by eliminating the vigorous relief of the Corinthian and its local variants, and predominates in western Islam. In the 3rd/4th century, al-Kayrawān possessed small capitals related to Coptic models, with four smooth leaves joined at the bottom and curving inwards at the point like a hook (F). From them derived, in

the same region, the Fatimid capitals of the 4th/10th and 5th/11th centuries, with a line of flowing floral designs surmounting shafts decorated with whorls or inscriptions in scroll form (G), and, from the 7th/13th century onwards, the Tunisian capitals (H). About the same period, the monuments of the Umayyads of Spain were ornamented with capitals copied from the two classical models: Corinthian and Composite (I), rounded off, as in the Great Mosque at Cordova, or scored with deep grooves as at Madinat al-Zahra (2nd half of the 4th/10th century). These were the prototypes of the many beautiful variants offered by the Aljaferia of Saragossa (5th/11th century) and the Almohad mosques of Tinnisi (J) and Marrakush (6th/12th century). In the 7th/13th century there emerged the Hispano-Morisco capital with a cylindrical lower portion and a parallelepiped upper portion (K), which is recognizably a development from the Corinthian corbel which is both logical and in harmony with the Islamic plastic ideal. Various types can be found in the mosques and *madrasas* of North Africa and in the Alhambra at Granada. The latter has also some capitals in the shape of stalactites, probably an imitation of Persian originals. (G. MARÇAIS)

**AMUL**, name of two towns: (1) A town in the south-west corner of the east Mázandarán plain; it stands on the west bank of the Harhá river, 12 miles south of the Caspian Sea, in the district which, according to the Classical writers, was the home of the *Máspoi* (*Ámušpo*) (Amul may be the Modern Persian form of the hypothetical Old Persian *Amartha*). Ibn Isfandiyyar (*Ta'rikh-i Tabaristán*, Teheran 1941, 62 f.) states that Amul was founded by Amula, daughter of a Daylamite chieftain and wife of King Firúz of Balh, while Hamid Alláh Mustawfi (*Nushat al-Kulub*, 159) maintains that King Tahmúrah was the founder, but these are mere legends. In the Sásanid era, the district of Amul, together with Gilán (the modern Gilán), formed a Nestorian episcopal see (ZDMG, xliii, 407); the town is also mentioned several times in the *Sháh-náma*. In Muslim times Amul became an important industrial and trading centre. The great historian al-Tabari and the famous jurist Abu 'l-Tayyib al-Tabari were born there. The anonymous author of the *Hadud al-'Asm* (114, 135) described Amul as a great town and the capital of Tabaristán. It was then very prosperous, and many merchants and scholars resided there. It had a number of industries, and the surrounding district produced large quantities of fruit of various kinds. Writing at much the same time, Ibn Hawkal stated that Amul was larger than Kázwán.

Amul was sacked by Mas'úd, the son of Mahmúd of Ghazna, in 426/1035-36, and again by Tímür some 350 years later. Sir Thomas Herbert, who visited Amul in 1628, described it as being "fruitful and blessed", and as having "three thousand houses and those not builded in the meanest fashion" (*A Relation of a Journey begun in 1610*, London 1632, 106-7). Amul has been devastated by earthquakes and floods several times; despite these disasters, it is still a considerable town (modern Amul, however, stands a little to the east of the old town, the site of which is marked by extensive ruins).

Its houses of burnt brick, with their red-tiled roofs, give Amul a picturesque appearance. It is connected with its suburb on the east bank of the Harhá by a fine twelve-arched bridge. It is linked by roads with the small port of Mahmúddáhd on the Caspian, with Bárbul (Barfurúh) to the East, and

with Cálús and Raght to the west. In 1941 Amul had a population of 14,166 (but the number of inhabitants undergoes seasonal variations, as many retire to the mountains in summer to escape from the heat and the mosquitoes).

Reclus, *Nouv. géogr. univ.*, ix, 235, 237; Pauly-Wissowa, s.vv. *Amardoi* and *Amarusa*; H. L. Rabino, *Mazandaran and Astabad*, London 1928, 33-40. (L. LOCKHART)

(2) A town situated at 39° 5' N. Lat. and 65° 41' east of Greenwich, 3 miles from the left bank of the Oxus (*Amü Daryá*). In the Arabic Middle Ages, Amul belonged to the large province of Khurásán; it is now (under the name of *Cárgü* or *Cárgüj*) in the Turkmen S. S. R. Although surrounded on all sides by desert, Amul was once of great importance for the caravan trade, as the meeting place of the roads connecting Khurásán with Transoxiana and Khiva. The Sámánid Isma'íl routed the 'Alid Muhammad b. Baghlr and his army near Amul in 287/900. The town is frequently mentioned in the sources dealing with the Mongol invasion and Tímür's campaigns. The name Amul (like that of Amul no. 1) may be connected with the *Máspoi* (*Ámušpo*), more especially with an eastern branch (cf. Ptoiy vi, 47). In order to distinguish the town from Amul no. 1, definitions were sometimes added to the name, as Yáköf points out, and it was called either Amul Zamín (cf. e.g. al-Baládhuri, ed. de Goeje, 410 and 420), i.e. the Amul near Zamín (the modern Kerkí, 125 miles to the south-east), or Amul Džayhún, i.e. the Amul on the Džayhún (Oxus), or Amul al-Shatt, i.e. the Amul on the river. Yet another name of the town, which occurs already in the Middle Ages, is *Amüya* (cp. especially al-Baládhuri, 410; Yáköf, i, 365) or *Amü* (Yáköf, i, 70); this last is perhaps merely a dialectical form of Amul, from which the later medieval name of the Oxus, *Amü Daryá* ('river of Amul') may have been derived (thus Barthold, cf. *AMÜ DARYÁ*); it seems more likely, however, that *Amüya* may be derived from *Amü*, an ancient local name of the Oxus. The modern name, *Cárgüj*, "the four streams", refers to the important ford over the Oxus near by. *Cárgüj* is now connected by rail with Marw and Krasnovodsk to the west, and with Bulhárá, Samarkand and Tashkent to the north-east; the railway crosses the Oxus by a long bridge on the north-east of the town.

**Bibliography:** Yáköf, i, 66, 70, 365; Le Strange, 403 f., 434; Marquart, *Iranische A. d. Geogr. d. Pseudo-Moses-Xorena's*, Berlin 1901, 136, 311; id. *Untersuchungen zur Gesch. von Iran*, Leipzig 1895, ii, 57. (M. SZECSEY)

The town appears to have received its present name of *Cárgüj* in the time of the Tímürids; in his account of the events of 903/1477-8, Bábur (*Bábur-náma*, ed. Beveridge, l. 58) mentions the passage of the river at *Cárgüj* (*Cárgüj gúzari*). In 910/1504 the fortress of *Cárgüj* (in Muhammad Sálub, *Shaybani-náma* (Melioranski), 197; *Cárgüj ka'ast*, in Bani's Persian *Shaybani-náma*, quoted by Samuilovici, *Exp. Ind. Old. Arkh. Obsh.*, xix, 175; *Ka'as'a-yi Chahardiz*) had to surrender to the Uzbeks.

During the period of Uzbek domination, as in the Middle Ages, the most important passage of the

Oxus at Čärğöy; boats were always kept in readiness for this purpose; bridges of boats were occasionally built for the passage of large armies, as, for example, for Nādir Shāh's army in 1153/1740. Čärğöy is, however as far as is known, nowhere mentioned in any authority as a large town in this period, still less as the residence of a prince or governor of importance. (Cf. Burnes, *Travels*, III, 7 ff.) [visited the town in 1832; more reliable than J. Wolff, *Narrative of a Mission to Bokhara*, 1844, 164 ff.; Mushketov, *Turkestan*, St. Petersburg 1886, 66 ff. (visit of 1879)].

In 1884, the Turkmen of Marw had to submit to the Russians; the old caravan route was replaced by a railway which reached the Āmūd Daryā in 1886. The importance of Čärğöy, as a result, rapidly increased; the town, which was the residence of a *beg* of Bughara, had before the Revolution about 15,000 inhabitants.

10 miles from Old Čärğöy near the Āmūd Daryā railway station, on ground ceded to the *amir* of Bughārā to the Russian Government, a new town arose which was the seat of a Russian military commandant and which had a population in 1914 of 45,000. In 1901 a railway bridge was built across the Āmūd Daryā thus ensuring railway communication between Čärğöy-Bughārā and Tashkent.

Under the Soviet regime new Čärğöy has become an important administrative and, since 1924, industrial centre. In 1926, its population increased to 13,659, of whom 8,069 were Russians, 846 Armenians, 525 Uzbeks and only 458 Turkmen; in 1933 it rose to 34,500, the Turkmen always forming a small minority. In 1935 it was the second town of the Soviet Republic of Turkmenistan, and for a time (before 1939) there was a proposal to make it the capital of the Republic. Since 21 Nov. 1939 New Čärğöy has been the chief town of the oblast' of the same name. It is a modern town designed on a rectilinear plan, and the town-planning scheme visualises an eventual population of about 200,000. It is the home of numerous industries, and an important centre of communications—rail (Krasnovodsk-Tashkent and Čärğöy-Kangrat lines); road (the Čärğöy-Būghāra motor road); and river, the Āmūd Daryā being navigable from Termez (Timāh) to the Aral Sea.

Old Čärğöy (now Kaganovitsk) is now a small workers' town situated 5 miles from the outskirts of Čärğöy, and has retained its character as an ancient indigenous town. In 1931 its population was only 2,042, mainly Turkmen of the Salor tribe, and Uzbeks.

The district (*oblast'*) of Čärğöy, created on 21 Nov. 1939, has a total area of 36,000 sq.m. and is situated in Eastern Turkmenistan. The oasis of Čärğöy, which stretches between the Āmūd Daryā and the Kara Kum desert, forms the centre of this district; it is a rich agricultural area (cultivation of silk, horticulture, cotton plantations, vine-growing, breeding of *karabul* sheep). (A. BENGTSEN).

**AMULETS** (see HAMAH).

**'AMCŪR** (Jabal), a mountain massif in southern Algeria. The mountains of the 'Amūr, named after a section of the people who live there form part of the Saharan Atlas of Algeria, together with the mountains of the Kūfir and the Rāmla, which form a continuation to the S-W and N-E. Nearly all over 3,000 ft., they rise slightly above the high steppes of Oran (3,275-3,900 ft.), and drop sharply down to the Saharan foothills (2,975-3,275 ft.).

Between the ranges, which run S-W to N-E, stretch large synclinal watercourses with flat beds, with the occasional contrast of deep valleys which form scarped plateaus such as that of El-Gā'da. The altitude gives the region cold winters, temperate summers and a relatively heavy rainfall. Thus the mountains of the 'Amūr, are still covered with forests, especially in the north-western ranges (4,920-5375 ft.) and on El-Gā'da (3,935-4590 ft.). These forests are mainly of juniper. Mediterranean flora mingles with that of the steppe, such as alga, which prevails on the southern slopes.

Inhabited from very early times, as is witnessed by the rock carvings and graves scattered over the massif, the Djabal 'Amūr was for long ignored by the historians. The earliest inhabitants mentioned are the Rashid Berbers who have given their name to the massif. They were to some extent superseded, in the course of the 8th/14th century, by the Arabised nomads of the Sahara, the 'Amūr, perhaps partly of Hittite origin, who settled in the mountain massif, and the name Djabal 'Amūr was substituted for that of Djabal Rashid.

Numerous traces of villages (*kūfir*) point to the early existence of agricultural life on a wider scale than to-day. The Djabal 'Amūr is primarily a pastoral mountain region; flocks of sheep and goats move from the north to the south of the massif and along its fringes, and the inhabitants live in tents often carried on the back of oxen. The 'Amūr make excellent knotted carpets. Adou, the administrative and economic centre, has developed at the expense of the four surviving *biā*.

**'AMWAS** or 'AMAWAS, the ancient Emmaüs, still marked by a large village, was situated in the plain of Judaea at the foot of the mountains, some 19 miles from Jerusalem, and commanding one of the principal approach routes to the latter. The site of a victory won by Judas Maccabaeus in 166 B.C., it was fortified by the Seleucid general in 100 B.C. and became under Caesar the chief town of a tetrarchy, only to decline to the size of a small market-town after being burnt by Varus in 4 B.C. Its strategic importance, however, led to its being selected by Vespasian as the site of a fortified camp, and it had again grown to the size of a small city when it was obtained from Elagabalus in 212 A.D. the title of Nicopolis, its Christian colony embellished it with a basilica which, as excavations have discovered, was rebuilt successively by the Byzantines and the Crusaders.

The conquest of the area by the Arabs, which according to the sources occurred in 1063, after the victory of Ajlūdayn, or in 1268 after that of the Yarmūk, marked its final decline; it was chiefly known as the source of the notorious "'Amwas plague" which left its tragic record in contemporary annals and which claimed 25,000 victims including the famous chiefs Abū 'Ubayda, Mu'ayyid b. Djabal and Yazid b. Abī Sulaym. Its position as administrative capital was taken over by Ludd and then by Ramla, founded in Umayyad times; the Arab geographers confined themselves to mentioning the small town, which played no part even during the period of the Crusades, when it experienced the same fortunes as Jerusalem down to the temporary

retrocession to the Franks under the treaty of Jaffa between al-Malik al-Kāmil and Frederick II.

**ANA** (see SIKKA).

**'ANA**—in the Middle Ages also 'Asat, and in Turkish official usage 'Awa—is a town of modern 'Irāk situated on the Euphrates right bank (41° 58' E, 34° 28' N), some 245 kilometres southeast of Dayr al-Zūr and 248 north-west of Hit. The river, not here navigable by steamers (in spite of attempts a century ago), is used by skimmers (wooden rafts), downstream only; and the traditional caravan-road from central 'Irāk to northern Syria, passing through 'Ana—a main element in its early importance—is little used since the appearance of trans-desert motor traffic. The town is flanked to the west by the tribal area of the 'Aniza sections in the Syrian desert, and to the east by the Shammur District in the Djazira, while the river banks are the area of the settled cultivating and sheep-breeding Dulaym. It is, under the 'Irāk Government, the headquarters of a *hadd* in the *hadd* of Dulaym (headquarters, Ramād), and contains the additional *hadd* of al-Kāim, Djubba, and Hadhā. The townspeople, practically all Sunnī Arabs—with small Jewish communities till 1369/70/1049-50—were for centuries at bitter enmity with those of Rāwa, immediately across the river: the feud was composed in 1340/1921.

'Ana, utilising the thin strip of land between the river and the line of low cliffs to the west, has the singular form of great length—some 7 miles—and extreme narrowness. The buildings lie within a dense date-belt, irrigated by water wheels (*sa'ir*, pl. *sa'ar*); there is also cultivation, and dwellings, on the mid-stream islands in the river. The town is reckoned as healthy and picturesque.

The women of 'Ana are famed for their beauty, and for their weaving of cotton-cloth and woollen mats and cloaks; the men, who lack of space for expansion forces largely to emigrate, are known for their skill as Euphrate boatmen, and in earlier days for their monopoly of water-carrying in Baghdad. The educational standard, with eight schools in 1946, is relatively high.

The modern 'Ana is the heir of a history disappearing into remote antiquity. Its name, recorded in cuneiform inscriptions as Anat or Kānat, was identical with the Greek Anath ('Avāna) (see Paulys *Wissensz.*, I, 406, Suppl. I, 77; M. Streck, in ZA, xix, 25; idem, in Klio, vi, 197; ZDMG, lxi, 701) and occupation (probably with minor variations of site) has apparently been continuous, as a centre of cultivation, trading-post, and at times military headquarters; the islands, and sites on high ground west of the town, have at various periods been important strong points or places of refuge. In 'Abbasid times 'Ana belonged to Djazira province, lying close to the frontier of al-'Irāk; it was known to travellers as a prosperous town with extensive date and fruit

gardens, and a reputation for wine-making. Its wine is already praised by the old poets; cf. S. Frankel, *Die aramäischen Fremdwörter im Arabischen*, 257; G. Jacob, *Aljarah. Studien zur Arabistik*, 98, 248. The caliph al-Kā'im took refuge here in 450/1058 from the contemporary Daylami ruler of 'Irāk. In early modern times, 8th/14th to 11th/17th centuries, it was the headquarters of tribal rulers, who about 1750 were replaced by first a rudimentary and later (after about 1267/1850) an organised Turkish administration; under the latter 'Ana was the headquarters of a *hadd* grouped directly under the *vilāyat* of Baghdad. The town and district were occupied by the British in 1337/1918, and became part of the Kingdom of 'Irāk, with their present administrative grouping, in 1340/1921.

(iii) — Historical geography of Turkish Anatolia.

1. The conquest of Anatolia by the Turks, first phase, and the state of the Saljuqs of Rūm.
2. The conquest of Anatolia, second phase, and the beginnings of the Ottoman empire.
3. The political divisions of Anatolia.
4. Population.
5. Communications.
6. Economy.

#### (i) THE NAME

Anadolu (Arabic spelling *أَنْدَلُوس*, *Anatōlī* i.e. Greek 'Avatōlī in Byzantine pronunciation), Anatolia, Asia Minor, the mountainous peninsula—including its base—proceeding from the southern part of the Asiatic continent towards Europe (Balkan peninsula—known as Asia Minor (*Musḡat* 'Anā) in antiquity—is situated between 36° and 42° N and 26° and 45° E. Together with the Balkan peninsula it has formed a bridge between Central Europe and Western Asia throughout its history. Arab geographers in the Middle Ages, and Turks until far into Ottoman times, called the country *Bilād al-Rūm* (country of the Romans).

The name 'Avatōlī ('rising' of the sun) is used first and foremost as a geographical term by the Byzantines, as 'Orient' or 'Levant', to denote all that lies east of Constantinople, i.e. especially Asia Minor and Egypt. A prefecture 'per Orientem' (ἐπαρχία τῆς 'Avatōlīs) appears, however, in the reorganisation of the administration by Diocletian and Constantine as one of the four large sections of the empire; it consists of the five dioceses of Aegyptus, Oriens ('Avatōlī in the stricter sense), Pontus, Asiana and Thracia, that is to say, the Middle East, Thrace, Egypt and Libya. The administrative term 'Avatōlī disappears with the introduction of the division into themes (at the beginning of the first half of the 7th century); the name 'Avatōlīōn or ἡμέρα τῶν 'Avatōlīōn is now applied to the theme (administrative area) around Amorium and Iconium. This considerably smaller administrative unit is called al-Nātōlīs, or some-

thing similar, explained as *al-maḡribī*, "the east" by Ibn Khuradādhbih (107, transl. 70); *al-Nāṭolīk* (explained as *al-maḡribī*, "the eastern") by Kudāma, (ed. de Goeje, 258, transl., 198); cf. H. Göler, *Die Genese der byzantinischen Themen-Verfassung*, Leipzig 1899, 83; F. W. Brooks, *Arabic Lists of Byzantine Themes*, *Journal of Hellenic Studies*, 1901, 17-177. The name of the theme Anatolikon disappears again with the Turkish conquest. The general geographical term *Anatōlōs* reappears, however, and gradually becomes Anatoli with the Turks. To begin with, this meant only western Anatolia. The large Ottoman province (*eyalet* or *vilâyet*) of this name embraced the area of the former western Anatolian Turkish principalities (see next article). The term Anatoli as name of a province disappeared at the time of the reorganisation of the provinces during the *tanzimat* (middle of the 19th century). From then on "Anatolia", used geographically, came to mean the whole peninsula (roughly as far as the line Trebizond (Trebzon) Erzingian-Birejik-Alexandretta) which today forms the main part of the area of the Turkish republic, "Anadolı", as it is used today in Turkish, is the whole Asiatic part of modern Turkey, including those areas which geographically belong to upper Mesopotamia: *al-Djazira* (Diyārbaḡir), Kurdistan (Van and Bitlis), as well as to Armenia (Kars). It is in this sense that the term is used in the present article (the islands in the Aegean Sea are not taken into account). In 1950 the overall area of Turkey was stated to be 765,120 km. Of these, Thrace has 21,485 sq. km, and Anatolia 743,634 sq. km. The number of inhabitants in the whole of Turkey was 20,934,670 in 1950; of these, 1,628,329 lived in the European part of Turkey, and 19,306,341 lived in Anatolia.

[For pre-Turkish Anatolia, see *BÖM*].

(F. TIESCHNER)

#### (ii) PHYSICAL GEOGRAPHY

General survey of the nature of the country. Anatolia consists of a spacious high plateau, ringed by longitudinal and even higher mountain ranges to the north and south. The central plateau contains Central Anatolia. The northern part of this ring may best be collectively called the northern Anatolian border mountains; the southern section is formed by the Taurus system. Central Anatolia is ringed off by hills to the east and west as well, where the northern and southern ranges come into contact. Thus there is the mountainous ridge of western Anatolia, with the Aegean coast-lands lying beyond it. In the east, there are the chains of mountains of the upper Euphrates region and—as a sort of outpost of Anatolia—the high plateau of Mount Ararat.

As might be expected from the geographical position, the winter temperatures along the coast of Anatolia are mild, ranging from an average of over 5° C. on the Black Sea coast to over 10° C. on the southern coast during January. A large part of the country lies within the reach of the system of low atmospheric pressure which moves from west to east and influences the weather in western and central Europe throughout the year. Hence humidity in Anatolia is comparatively high during the winter. In summer, the coastal areas become oppressively hot, with average temperatures for July and August of 22° in the north and over 27° C. in the south. Northern winds prevail and bring a dryness, typical of the mediterranean climate, to the west and south coast in summer, whilst, coming from the sea, they

bring rainfall even in summer to the northern coast. On the south and west coast, natural vegetation is largely of the evergreen variety common in mediterranean countries. In many places it has been made into arable land, whilst the rest has deteriorated into shrubs and sparse grazing ground. More luxuriant vegetation appears along the northern coast, which is more humid in the summer and where plants which need more water grow in woods, bushes and cultivated fields.

The border mountains naturally have colder—in parts extremely cold—winters, their summers are less hot, and the humidity is higher than along the coast. The sides of the mountains are naturally wooded. In the case of the western, southern, and eastern rims, these woods consist largely of "dry forest", particularly oak and coniferous trees. Many of them had to be sacrificed in the drive for arable and grazing land. In the northern mountain chains nearer the coast, "damp forest" prevails, in which the beech and the pine play a large part in the higher regions. "Dry forest" replaces "damp forest" even in northern Anatolia on the inner mountain ranges, owing to the decreased humidity. "Damp forest" has great resilience and is therefore less threatened by human activity.

The central Anatolian plateau—ringed by its border mountains—is cold in winter, with average temperatures for January below freezing point, whilst it is very hot in the summer, the July/August average reaching 24° C. Since there is considerably less rainfall here than there is in the coastal areas and their mountains, it is a steppe. Despite erroneous information on some maps, there are no stretches of desert in central Anatolia. Even in the driest districts it is possible to grow barley and wheat without artificial irrigation, relying solely on natural rainfall, with moderate success.

There are steppes on the southern edge of the eastern Taurus where Anatolia and Mesopotamia meet. Although they are not much above sea level, they are a long way from the sea, and as a result winters are less mild and less humid than along the mediterranean coast, and summers very hot and dry.

The Northern Anatolian border mountains. The range of north Anatolian border mountains (often known as the Pontic Mountains in Europe) consists of comparatively straight parallel mountain ranges from 1200 m. to 1500 m. in height, often rising to over 2000 m. These are fairly broad and some have plateaux. To the east, in the so-called Zigana mountains (called after the Zigana pass south of Trabzon) there is a long stretch over 3000 m. in height, and here one finds alpine formations. The mountains are made up largely of slate, sandstone, marl, volcanic stone, and crystalline substances. In the west one can trace—through the mountains south of the Sea of Marmara—a relation to the lower Dinaric mountain ranges of the Balkan peninsula. In the east, the southern Caucasian mountains form the link with the northern Iranian mountain ranges.

On the plateaux of the naturally wooded northern Anatolian mountain ranges, especially in the middle part, woodland has been turned into arable land up to a height of 1500 m. Growing of grain and raising of sheep and goats (in the east also cattle) form its economic basis. The long spacious valleys between the ridges, where hot summers and the presence of water make agriculture possible, are the main areas of settlement. Of these the most important is the row of basins of Bolu-Gerede-Cerğözü-Iğaz-Tosya

in the eastern part of the ancient Bithynia, the basin area of Safranbolu-Kastamonu-Bayazıt, the centre of the ancient Paphlagonia, and, in the regions of the ancient Pontus, the basins on the upper Yeğhil İrmak (İris) around Amasya, Zile and Tokat, and in the east, the Kelkit-Coruh furrow which is over 100 km. long.

On the north coast, mountains rise steeply out of the Black Sea; there are few bays. The coastal strip is very narrow and much cut up by valleys; it is densely populated, especially in the east, and maize, beans, and particularly hazelnuts are grown around Giresun [g.r.] (Cerasus), Trabzon [t.r.] (Trapezus, Trebizond, modern Trabzon), and Rize [r.] [r.] The only larger flats are in the deltas of the rivers Yeğhil İrmak [g.r.] (İris) and the Kizil İrmak [k.r.] (Halys), but these are partly swamp. The more fertile soil produces excellent tobacco. The peninsula of Kodja-eli [k.e.] and the Thracian peninsula are flat, and the plains of Adapazarı [a.p.] on the lower Sakarya (Sangarius) are very fertile.

A part from the Bosphorus, there is only one harbour which is protected against the north-westerly gales of the Black Sea, and that is Sinop [s.] which, however, because of its unfavourable hinterland, is at present of little importance. Samsun [s.] (Amisus) has the best access—both rail and road—to central Anatolia. The coal-mining and industrial areas of Zonguldak [z.] and Ereğli [e.r.] (Heraclea Pontica) are now being greatly developed. In the past, the silver, lead, and copper mines in the Zigana mountains were of some importance (Gümüşkhane [g.k.], Morgul near Borçka, and others).

The subsidence of land which has created the Aegean between Anatolia and the Balkan peninsula, has also affected the northern Anatolian mountain ranges in the Marmara region. As a result, there are hilly districts and plains around the Sea of Marmara (the basin of which is only deep in parts). These have a very favourable mediterranean climate. Silkworm is cultivated near Bursa [b.] (Brusa), and wine produced around Tekir Dağı [t.d.] (Rodostol). Owing to its unique geographical position, the city of Byzantium, Constantinople, Istanbul [i.s.] grew up and retained its importance for thousands of years. Situated on the bridge between Anatolia and the Balkan peninsula, the most important times of the city were naturally those in which it played the rôle of the natural capital of an empire stretching over both areas. Yet even today, it is Turkey's gate to the world and her principal import harbour. The straits here are obviously not a borderline of continents or cultures. Such a boundary might rather be found in the sparsely populated steppes and heather regions in eastern Thrace.

The Taurus (Toros) System. On the whole, the Taurus system in southern Anatolia is considerably higher than the northern Anatolian border ranges. For long stretches, the mountain chains and broad waves of elevations rise to more than 2000 m. and at times to more than 3000 m. To the south-east of Lake Van (Wân) there are even heights up to 4176 m. In the ice-covered Dillo Dağı, Limestone predominates in these mountains. The mountain ranges are often strongly bow-shaped, thereby making clear sections to the west of the Gulf of Antalya (Adalia, Attalia) the mighty ranges of limestone mountains of the Western Taurus—the highest of which are sometimes referred to as Lycian Taurus—point outwards in a S and SW direction towards the sea and towards Rhodes, Crete and the outer fringes of the Dinaric Mountains of the Balkan peninsula. Between the

Gulf of Antalya and the Adana plain stretches the mighty arc of the Central Taurus. The name Cilician Taurus, which often occurs, refers to its better known eastern wing. The Taurus system continues in two parallel chains to the east of the Gulf of Alexandretta. An outer chain stretches from the Amanus Mountains to the chains south of Lake Van by way of the chain south of Malatya and south of the Murd River. An inner chain—the western section of which is sometimes called Anti-Taurus (a name given with little justification)—runs from the ridges of the upper Seyhan region north of Adana to the Urmiya area by way of the chains south of the upper Euphrates (Kara Su) and the upper Aras (Araxes). Between these two there are a number of basins, those of Elbistan, of Malatya-Elaşığ (Elaşığ, Kharpūt), of Çapakçür, Muş and Van. This whole mountain system is best called the Eastern Taurus. (In earlier works, nomenclature varied: in addition to Anti-Taurus, other names for parts of the system were employed, such as Armenian Taurus and Kurdish Taurus, without determining the precise use of each). The above-mentioned row of basins separates the chains of the inner from those of the outer Taurus. Thus, seen as a whole, the eastern Taurus system (with these two ranges) describes an arc towards the north, and its southern end merges into the southern Iranian border ranges.

There are considerable longitudinal basins between the mountain ranges in the Western and the western part of the Central Taurus. Several of them contain lakes, the famous lakes of the old districts of Pisidia and Isauria. These basins are the main centres of habitation. In some places there are valuable special cultures, as for instance near Isparta [i.p.] and Burdur [b.d.]. The limestone mountains are thinly populated because of the scarcity of water. Grazing ground of a poor quality—used by goats and sheep in summer—has largely replaced the former "dry forest". Habitation in the Central Taurus, which is really one large massif, is restricted to the few narrow valleys. Here, too, the higher regions serve chiefly as grazing ground (*çaylak*) for sheep and goats in summer. The eastern Taurus, which, as we have seen, stretches out more broadly, has a larger area in its basins which could be inhabited, but at present they are only thinly populated. As far as rainfall—which decreases with the distance from the mountains—permits agriculture exclusively based on rain water, habitation is also possible in the as yet thinly populated southern foothills of the eastern Taurus. It is possible in the vicinity of the ancient centres of Diyarbakır (Diyār Bakr [d.b.], Diyarbekir, Amid), Urfa (see AL-RUHA) (Edessa), Gaziantep (Aynül [a.y.], Halab [h.] (Aleppo), but not much further to the south. The most propitious area of these eastern foothills is the Hatay [h.t.] in the west around Antakya [a.t.] (Antioch), where the nearby Mediterranean makes the growing of citrus fruits and other mediterranean crops possible.

On the whole, the coastal strip of the Taurus offers only a narrow stretch of alluvial land and few hills which invite habitation. These few make possible the cultivation of mediterranean plants, and in parts of citrus plants. There is, however, danger from malaria. Generally we find limestone mountains (with little water) rising at a small distance from the sea. The only really large arable area is the Adana [a.d.] plain—in which also Tarsus [t.r.] lies—the Cilician plain of antiquity, formed by deposits from the rivers Sayhān [s.y.] (Saron) and Dayhān [d.y.] (Pyramos). In recent years cotton growing in this

area has increased considerably. The tufaceous limestone plain of Antalya [g.e.] with sheer drops of 30 m. to the sea, is less favourable.

Anatolia's southern coast—in as much as it is a longitudinal one—has no protected landing places for larger ships. Iskandarun [g.e.] (Alexandretta) and Mersin [g.e.] have some importance as harbours of the Adana plain and the Hatay and as the harbours for shipping the chromium ore of the eastern Taurus. This part is played more to the west by the small harbour of Fethiye for the western Taurus.

Aegean Anatolia (Ege region). The areas between the two bordering mountain systems show less relief. There are several distinguishable units. In the west, there is Aegean Anatolia, in modern Turkish called the "Ege region", between the southern Marmara mountains in the north, and the western Taurus in the south, which corresponds roughly to the area of Ionian colonisation of the ancient Greeks. Here the broad valleys of the Bakır Çay (Caicus), Gediz (Hermus), the greater and lesser Menderes (Kaysir, Maeander), penetrate to a depth of 200 km. into the peninsula, in an area of crystalline rocks (called Lydian-Carian rock by Philippon), between the mountain peaks running from west to east at heights between 1000 m. and 2000 m. Thanks to these valleys, the mediterranean climate can penetrate deeply into the country. This area is densely populated. Tobacco, olives, figs, and grapes—largely dried for raisins—are grown here. More recently, cotton growing has gained some importance.

The coast, running at right angles to the mountain ranges, has many bays, coves and good natural harbours. The larger rivers, however, carry a great deal of sediment and gradually fill in the bays. Ephesus and Miletus, which were harbours in antiquity, are today several kilometres inland, and the otherwise excellent harbour of Izmir (Smyrna) is only saved from being filled up by diversion of the river Gediz Çay. Izmir [g.e.] is linked by railway to all the above mentioned valleys, and has thus become the economical centre of the region and the principal harbour for exporting the agricultural produce of Turkey. Bergama [g.e.] (Pergamon), Manisa [g.e.] (Magnesia), Tire [g.e.] Aydınlık [g.e.] (Güzel Hisar) and Denizli [g.e.] are local centres of this area.

The Western Anatolian Ridge. Where in the east the valleys of Aegean Anatolia come to an end, a huge ridge rises between the re-entrant angle of the Taurus system on the one hand, and the southern border chains of the sea of Marmara on the other hand, in the area around Afyon Kışlacı-Kütahya-Uşak. This is formed by huge plateaux which reach a height of 1200 m. to 1500 m. Massive ranges rise above these which frequently exceed 2000 m. There is a gradual decline in height to 1100 m. towards the northeast and the upper Sakarya (Sangarus). This large rise is the western Anatolian ridge. The plateaux consist largely of flat tertiary deposits of clay and sand which had once risen and were later cut into by the valleys we see today. They are steeply sloping. Only the higher mountains reach the natural tree-line, but most of the woods have been cut down.

The growing of grain and the raising of sheep and goats form the livelihood of the scanty population. Several roads and railways lead to the inland plateau on the one hand and branch off near Afyon Kışlacı [g.e.] (Afyonkarahisar) to the basins in the western Taurus, to the lowlands of the Ege region and to the sea of Marmara on the other.

Central Anatolia. The inland plateau of central Anatolia comprises large stretches of flat country at a height of 800 m. to 1200 m. These were formed by recent sedimentation in the bottoms of the landlocked basins of Konya (Iconium), such as the Tuz Gölü ("salt lake"), a huge flat salt pan at a height of 600 m. often erroneously marked down as Tuz Çölü ("salt desert") on our maps. They also exist on the upper Sakarya and in certain places on the Kızıl İrmak. There are also other broad plateaux of horizontal new tertiary deposits, and flat plains over creased subsoil.

Mountains of considerable height are, however, also found in central Anatolia. They rise from 500 m. to 1500 m. above the surrounding plateau. There are some gigantic recent volcanoes which are, however, not active at present, such as the Erilgiyas Dağı [g.e.] (3916 m.), the Argaeus of antiquity, near Kayseri, and the Hasan Dağı (3258 m.) near Nigde.

The mountains are of vital importance to human existence. In dry central Anatolia, surrounded by high mountains, the lowest areas are the driest, while the high mountains catch the rain. Hence the most favourable regions for settlement are, on the one hand, on the highest plateaux, such as for instance in the area of the bend of the Kızıl İrmak, in the Cappadocia of antiquity, and on the other hand at the foot of the surrounding mountains, where fast rivulets come forth. Most of the important towns are in the latter of these two positions, such as Ankara [g.e.] (Ancyra, Angora), Eskişehir [g.e.], Konya [g.e.] (Iconium), Nigde [g.e.] Kayseri [g.e.] (Caesarea), and Sivas [g.e.] (Sebasteia). All these have—or had—land that can easily be irrigated. There is little population in the steppes, where the basis of livelihood is the growing of wheat and barley and the raising of sheep and angora goats, although thanks to recent mechanisation the cultivated areas have been increased and improved; there is lack of all in the particularly dry basin of the Tuz Gölü and of Konya, the Lycania of antiquity, with a great deal of "Artemisian steppe".

Traffic is easier through the central plateau than through the mountainous borders. For this reason this plateau, which has always been the centre of Anatolia, has become even more important since the capital shifted to Ankara and the road and rail network of Turkey was extended.

The upper Euphrates area and the Ararat highlands. Geographically, the eastern limit of Anatolia is to be found on the upper Euphrates, where the mountain chains of the northern Anatolian border mountains and the eastern Taurus are joined by the rising of new mountains between the two systems. In this region of mighty chains of high mountains, where peaks generally exceed an altitude of 2500 m. (often 3000 m.), the scanty population is found only in the valleys, more especially in the longitudinal ones. Along these, too, run the roads from Anatolia to Ağharbaydjan and Iran. The role of the towns of Erzinjan [g.e.] and Erzurum [g.e.] (Erzerum) has always been to guard these roads.

The eastern Taurus, on the one hand, and the northern Anatolian border mountains on the other, divide again east of the meridian of Erzurum, thus forming a highland which, at 1500 m. to 1700 m., is an even higher basin than that of Central Anatolia. There are considerable volcanic deposits of recent formation over a creased base. Huge recent (at present inactive) volcanoes, such as Ararat (Aghdagh [g.e.]) (5172 m.), Alagöz Dağı (4094 m.),

Sühbân Dağı (4434 m.) rise above the highlands, and in places, such as at Lake Van, have led to a damming up of basins.

This rough highland with low winter temperatures is used chiefly for grazing, since somewhat more favourable conditions for agriculture and habitation exist only in the comparatively small basins. It is generally known as Armenia. Historical events have resulted in the fact that there have been no Armenians living there for a generation. The scanty population speaks either Turkish or Kurdish. Thus it seems appropriate to give this eastern border region of Turkey—which is actually outside the geographical Anatolia—the name of the Ararat Highlands. This name would be neutral, yet geographically characteristic.

**Bibliography.** More recent general geographical surveys: E. Banse: *Die Türkei, eine moderne Geographie*, Braunschweig 1916, contains an extensive list of earlier writing on the subject; R. #### (III) HISTORICAL GEOGRAPHY OF TURKISH ANATOLIA

(1) *The conquest of Anatolia by the Turks, first phase, and the state of the Seldjûks of Rûm.*

The main part of Anatolia remained untouched by the conquests of the Muslim Arabs. The boundaries of the Byzantine empire remained: in the north-east, the Christian states of Armenia and Georgia; to the south of these, Kâllâh (formerly Theodosiopolis, then Arzan al-Rûm, Erzurum) and—at times—Kamâh—were the furthest outposts of the empire of the caliphs; thence the Taurus, the "land of the passes" (*bilâd al-darûb*), formed the boundary as far as the Mediterranean. Although frequent raids into Byzantine territory were made, the Arabs never occupied the land. These border regions, comprising the outermost parts of Northern

Syria and Upper Mesopotamia, were the "military area of the protecting fortresses" (*djûd al-'usûd*), or simply al-'usûd, (g.e.); Manbij or Antiochia (Antioch) was the capital of this region, whilst the armed fortresses of the "Syrian marches" (*ḡhar al-'sha'm*) with Tarsûs as its centre, and the "Mesopotamian marches" (*ḡhar al-'Djazira*) with Malatya (Melitene) as their centre, formed the outer border. In the centuries that have passed between Byzantines and Arabs, these border areas suffered greatly, but they remained, on the whole, in the possession of the Arabs. Not until the conquests of the great emperors Nicephorus II Phocas (963-69), John Tzimiskes (969-76), and Basil II (976-1025) did these areas return to Byzantine ownership. At the time of the death of the last of these three, the whole of the territory of Turkey as we know it today, with the exception of Amidâ (Diyâr Bakr) and its surroundings, was Byzantine (compare E. Honigsmann, *Die Ostgrenze des byzantinischen Reiches* von 363 bis 1071, Brussels 1935). Then, however, the rivalries between the military nobility and the nobility of civil servants began in Byzantium. These, particularly the latter, were in power, led to a weakening along the borders.

The Turkish conquerors of the house of Seldjûk found the Byzantine borders in one of these weak periods, when, after conquering the whole of the Middle East, they sent their Turkish warriors against the frontier, in order to fight the holy war (*djihad*). They did, in fact, achieve several breaks through into Byzantine Anatolia (145/1074 conquest of Ant in the Byzantine-Armenian border area, laying waste Cilicia and storming Caesarea (Kaysariya). After the death of emperor Constantine X Ducas, a champion of the civilian nobility (May 1067), Romanus IV Diogenes, a member of the military nobility, was raised to the throne on the battlefield (1 Jan. 1068) because of the desperate position which had arisen. To begin with, he fought the Turks successfully, so that the Seldjûk sultan Alp Arslan was obliged to go against him in person. The numerically superior Byzantine army was routed by Alp Arslan near Mantzikert (Malâzgirt) in the vicinity of Lake Van, (463/19 August 1071) because of lack of discipline among the mercenaries and treachery by the opponents of the emperor. The emperor was captured, but he was freed by the sultan after a lenient treaty had been concluded. The defeat, however, caused a revolution in Constantinople, which brought the opposing party to power. Romanus IV lost his throne and was blinded. He died soon afterwards (summer 1072).

With the fall of the Emperor Romanus, the treaties between him and Alp Arslan became void, and the Turks renewed the holy war against Byzantium. This was fought not by regular Seldjûk troops, but by individual leaders, the most successful of whom was Malik Dânişmand [g.e.] Ahmad Ghâzi who operated in north-eastern Anatolia. Bands of Turkish warriors roamed the countryside and interrupted communications between towns, paralysing Byzantine administration. Even so, the successes of Alp Arslan, sultan Malikghâzi (since 463/1072), dispatched a member of the house of Seldjûk, Sulaymân b. Kutlumûsh, to lead the Turkish cavalry in Anatolia in the war being waged against Byzantium. His task was facilitated by the existing confusion over the succession to the throne in Byzantium. Emperor Michael VII Ducas and—after his abdication (1078)—Nicephorus III Botaniates, obtained Sulaymân's assistance to gain their aims. On their

part, they had to recognise his rights to those parts of the country which the Turks had occupied, and to hand over the recently conquered cities of Cyzicus and Nicaea (1081). Sulaymān established his headquarters in Nicaea (Turkish İznik). The Emperor Alexius I Comnenus, who began his reign in 1081, confirmed Sulaymān's rights to settle his Turkish troops in the occupied territory, whilst nominally retaining Byzantine suzerainty. In actual fact, Sulaymān ruled over practically the whole of Anatolia through his troops which roamed the country. Byzantine administration was virtually superseded.

After his successes in Anatolia, Sulaymān turned to the east, to extend his rule in this direction. He did succeed in capturing Antioch (Antakya), which was still Byzantine, but met with heavy opposition from the Saldjūk amirs, especially from Tutuḡ, the brother of Malikshāh, when advancing towards Aleppo. He was beaten and fell in battle (1086).

In the meantime, Turkish bands fighting the holy war in Aḡbaraydīn had conquered the Christian kingdom of the Buzarids in Armenia (475/1080). Following this, the Bagratid Ruben and his faithful followers founded a new state in Cilicia, known as the kingdom of 'Lesser Armenia'. It survived until the 14th century (1375) under his successors, the Rubenids. (See *sts.*)

After the death of Sulaymān, Anatolia was left to its own devices for some time. Other Turkish leaders settled in the country together with their troops and founded dominions there: the aforementioned Malik Dāniḡmand Ahmad Ghāzi in the north-east, with Sebastia (Sivas) as headquarters; the amir Mengüdjek [g.s.] Ghāzi with Tephrike (Divriği) and Erzinjān; and in the west, in Smyrna, a certain amir called Trachas by the Byzantines. Only after the death of sultan Malikshāh (1092) did his successor, Barkiyāruk, permit the son of Sulaymān, Kılıdī Arslan, to return to Anatolia, but he found it difficult to establish himself among the Turkish princes. Trachas, who was advancing against Constantinople by sea, was repelled with Byzantine aid.

At the beginning of the first crusade, the allied Byzantines and crusaders gained a victory over the Turks under Kılıdī Arslan and Malik Dāniḡmand (or his son, Ghāzi Gümüştegin) near Nicaea. The Turkish headquarters at Nicaea was besieged and taken on 20 June 1097. On 1 July 1097, the victory of the crusaders near Dorylaeum, near the Eskişehir of today, decided the fate of western Anatolia and opened the way for the crusaders through the rest of the Turkish territories. They reached Antioch, which was taken after a long siege (3 June 1098). Here the principality of Antioch, the first crusader state, was founded under the suzerainty of Byzantium. The county of Edessa (today Urfa), in Mesopotamia, was founded in the same year. After these successes by the crusaders, the Emperor Alexius found little difficulty in driving the Turks from western Anatolia and in re-incorporating this area into the Byzantine empire. He also re-inforced the border—running straight through the middle of Anatolia—against the region remaining under Turkish occupation. This, for the time being, checked the Turkish conquests.

After this set-back, the area of Turkish conquest remained limited to central Anatolia for over a century. The whole of the west (roughly from Dorylaeum), and the Black Sea and Mediterranean coasts remained in Byzantine possession, Cilicia became

the Kingdom of Lesser Armenia, and the regions of Antioch and Edessa formed the aforementioned crusader states. Amūd (Diyār Bakr) was the seat of the *alaḡek* dynasty of the Artukids [g.s.]. Later (1144), Edessa was conquered by the *alaḡek* Zengī of Mosul; later still (1268), Antioch was taken by the Mamlūk sultan Baybars. Kılıdī Arslan had to share the centre of the country, occupied by Turks, with Malik Dāniḡmand, or his son, and Mengüdjek. The former retained the steppe in Central Anatolia, with Konya—the Iconium of antiquity—as his capital; the latter retained the mountainous north-east with Sivas and Erzinjān respectively. There was a heated quarrel over some places, especially Melitene (Malatya), which Kılıdī Arslan eventually managed to decide in his own favour (1106 or 1108). Kılıdī Arslan failed, however, in his attempt to make conquests further to the east, in Mesopotamia (Mosul). He was beaten by the confederated Saldjūk amirs on the banks of the Euphrates, and died during the retreat (9 Shawwāl 500/3 June 1107). Concerning events at this period, see also Cl. Cahen, *La première pénétration turque en Asie Mineure*, *Byzantion*, 1946, 5-67.

Thus the Rüm Saldjūk state [see *sak.ḡ.ḡ.ḡ.*] or the Sultanate of Iconium, as the crusaders called it, was a rather limited territory in the poorest part of Anatolia. The Rüm Saldjūks under Maḡdī I retained this area and, having beaten the crusaders of the second crusade in the second battle near Dorylaeum (Oct. 1147), forced them to continue their way through Byzantine instead of Turkish territory. The Rüm Saldjūk state was considerably extended when Kılıdī Arslan II succeeded in incorporating the Dāniḡmandid state (1174), which he secured against the claims of the Byzantine Emperor Manuel I Comnenus by the victory in the Phrygian mountain passes, near Myrioccephalon (pass of Cardak, 17 Sept. 1176), in which he surrounded and routed the Byzantine army. The aged Sultan Kılıdī Arslan II was involved in the disputes which arose after he had divided his land among his sons. Owing to this, the German Emperor Frederic Barbarossa was able to take the route through Turkish Anatolia and even capture its capital Konya (18 May 1190), but this had no lasting consequences, particularly as the emperor himself was slain only a few days afterwards (10 June 1190) in the river Saleph (Calycadnus in antiquity, Gökusu today).

The crusaders of the so-called fourth crusade conquered Constantinople (1204) and erected a Latin Empire there, at the instigation of the Doge Enrico Dandolo of Venice; the Byzantines, under Theodore Lascaris, founded a Greek Counter-Empire in western Anatolia with Nicaea for its capital; and the brothers David and Alexis, of the imperial house of the Comneni, had, with the help of Queen Thamar of Georgia, formed the empire of the so-called 'Great Comneni' in Trebizond. The Rüm Saldjūk sultan Ghıyāṡ al-Dīn Kaykhusraw I, the youngest son of Kılıdī Arslan II, succeeded in conquering Attaleia (Antalya) and in re-incorporating this area into the Mediterranean for his kingdom (1207). He was not, however, successful in advancing further into western Anatolia. He was beaten by Theodor Laskaris near Honas, in 1210, and fell in battle (possibly in single combat with his adversary). Theodor Laskaris and his successors protected the eastern border of their Nicaean empire with a strong system of fortifications which, for the time being, made it impossible for the Turks to advance in that region. In 1214, Kaykhusraw's son and successor

'Izz al-Dīn Kaykhusraw I, forced the emperor of Trebizond to cede Sinope (Sinch), and so the Rüm Saldjūk Kingdom also gained access to the Black Sea. This extension meant traffic with the outside world. Connections were made with the Italian trading republics, trade flourished and brought undreamed-of prosperity to the country. 'Alā' al-Dīn Kaykubād, the brother and successor of Kaykhusraw, and the greatest of the Rüm Saldjūk sultans, extended the frontier of his empire on the mediterranean and took the fort of Galenos (ḡalvōn ḡnos), which he expanded into a sizable harbour town, to which he gave the name 'Alā'ıyya (now Alaya or Alanya), and where he had his winter residence. In the east, in upper Mesopotamia, he also won territory from the Artukids of Amūd and Hıw Kayfā and forced them to recognise his supremacy. In 625/1228, he annexed the Mengüdjek principality of Erzinjān, and in the east he also made further conquests (Erzerum 1230, Aḡhlāt 1231, Bḡharḡ 1234). Under his rule, Rüm Saldjūk culture and power reached their peak. His son and successor Ghıyāṡ al-Dīn Kaykhusraw II (acc. 634/1237) succeeded in incorporating Amūd into his empire, and at that time in the eastern borders of the Rüm Saldjūk kingdom were roughly those of Turkey today.

(2) *The conquest of Anatolia, second phase, and the beginnings of the Ottoman Empire.*

Two things in the middle of the 13th century brought about a change of conditions. The first of these was the Mongol invasion of the Middle East, which also affected Anatolia. Although the Rüm Saldjūk army was defeated by the Mongols under Bayḡḡ Noyon near Köse Daḡ in eastern Anatolia (6 Muharram 641/26 June 1243), there was no actual conquest of the Rüm Saldjūk Kingdom, but the Mongols advanced as far as Kayserıyya and did much plundering. The Kingdom grew more and more into the role of a vassal state of the Mongols, first of Batı, the conqueror of eastern Europe, then of the Mongol rulers of Persia, the Ilkhāns. A new stream of Turkmens came to Anatolia with the Mongols, partly as their followers, partly because they had been driven by them from their original homes. They increased the partly-nomad Turkmens already present in Anatolia, and played an important part. Those of most immediate importance were the hordes led by Karaman (g.s.) b. Nōra Süfi (thus probably a member of a *dawıḡ* family). He founded a state on the border of Lycania and Cilicia around Ermenik (the ancient Germanicopolis) in the Taurus foothills. In 1277, Karaman's son, Muhammad Beg, tried to gain the dominion over the Rüm Saldjūk Kingdom by means of a pretender, by name of Dīmrī, and he conquered Konya for his protégé. But the town was re-taken by a Mongol retaliatory expedition, and Muhammad Beg had to retreat into the mountains with his Turkmens. Dīmrī escaped to the north-west, but he was beaten by Saldjūk troops on the Sakarya (Muharram 676/June 1277), taken prisoner, and executed.

The other important event was the reconquest of Constantinople by the Byzantines under the Emperor Michael VII Palaeologus, and the restoration of the Byzantine Empire. The power of the empire was, however, past. The emperors of the house of Palaeologus were increasingly engaged in the Balkan peninsula, and they had to ward off the conquests of the Latins. The remaining strength of the empire was taken up with this. The emperors were unable to devote the necessary attention to

conditions in Anatolia, and allowed the defensive system—built up by the Lascaris—to fall into decay. This made it easy for the Turkmens, who were pouring into Anatolia to pursue the holy war and to gain a hold on the western parts. These, with their greater fertility as compared with the inner region, had already tempted them. The Palaeologi were thus forced progressively to surrender their Anatolian territories, and the Turks—especially in the open country—met with hardly any resistance. By about 1300 most of western Anatolia was in Turkish hands, and there was now hardly a district in which there were no Turks among the non-Turkish inhabitants. Eventually, only a few fortresses such as Prusa, Nicaea and Nicomedia in Bithynia; Sardes, Philadelphia and Magnesia in Lydia and some ports such as Smyrna and Phocaea on the Aegean and Heraclea on the Black Sea remained in Byzantine possession, as isolated Byzantine possessions in Turkish territory.

The Turkish hordes generally operated independently of each other under their leaders who founded principalities (amirates) in the conquered districts. We know little about their early history, although one gathers that there were quite a number of such small semi-nomadic states, of which some were of only ephemeral importance. By about 1300, a small number of principalities had emerged. The most powerful of these was, to begin with, Germiyan [g.s.] in Phrygia, with Kütiyya (the ancient Cotteyaeum) as its capital. According to al-Umari, the Turkish amir of western Anatolia paid tribute to the Germiyan at some periods, and according to Ibn Batıṡṡa they were feared by them. Temporarily they extended their power into central Anatolia, in 1300 as far as Ankara (according to an inscription). Incidentally, they do not seem to have been Turkmens originally, but possibly Yazdı Kurds (compare Cahen, *Notes sur l'histoire des Turcomans d'Asie Mineure au XIII<sup>e</sup> siècle* in *JA*, 1951, 335-34; concerning the origin of the Germiyan, especially 349 ff.). A whole circle of principalities grew up around Germiyan and some of the founders of these seem to have come from Germiyan. The second greatest of these western Anatolian principalities at that time, was Dīndār [g.s.] in Paphlagonia, which was also in Anatolia (Castrum Comneni, today Kastamonu) as its capital, and the harbour town of Sinch (Sinop) also belonging to it. To the west of it, in northern Phrygia (around Eskişehir-Dorylaeum), was the principality of 'Oḡmūn with Söğüt as its centre. After the conquest of some fortresses there, it soon expanded as far as the Sea of Marmara. Still further west, in Mysia, was Karas [g.s.] with Balıkesir for its capital, and Bergiana (Prezanon), which included the coastal area of the Sea of Marmara as far as the Hellespont (Dardanelles). Next to this, in the Aegean coastal region, were Şarūkhān [g.s.] in northern Lydia, with Magnisia (Magnesia, now Manisa); Aydıñ [g.s.] in southern Lydia and the hinterland of Smyrna with Tire; and Menteghe [g.s.] in Caria, with Milas (Mylassa) and Muḡla. Later, in further south-western Anatolia, were Tokat [g.s.] in Lycia and Pamphylia with Adalia (Antalya), and Hamid [g.s.] in Pisidia with İsbarta.

At about the same time, the Rüm Saldjūk state ceased to exist. For some time past, the importance of the reigning sultans had been replaced by that of the Mongol governors who resided in Sivas. After the death of 'Alā' al-Dīn Kaykhusraw III (707/1307 or 708/1308), the last of the shadow sultans, the empire simply became a province of

the Mongol Ilkhan Empire of Persia. By exploiting this condition, the Karamans [g.o.] tried to extend their territory from their Taurus foothills; they succeeded in conquering the town of Laranda (now Karaman), which they made their capital. They did not, however, succeed in taking Konya, as this was held by the Ilkhan governor Cöpin and his son Temürtaş. The latter actually extended the domain of the Ilkhan Empire by conquests in the west, where he fought with the Turkish petty princes. In the twenties, unrat in the Ilkhan Empire spread to Anatolia (Temürtaş fled to Egypt in 728/1328). The conquered territories were lost, and the Karamans succeeded in capturing Konya; but they kept Laranda as their capital. During the course of the 14th century, the Karamans extended their rule westwards in southern Anatolia, and thereby came into contact with the Turkish states which were developing in western Anatolia.

With the continuing decay of the Ilkhan Empire, the Mongol governors declared themselves independent as *amirs* (or *sultans*) of Rüm, and sought the support of the Mamluk sultans of Egypt. In 1375 the latter brought the kingdom of Lesser Armenia to an end, and a Turkmen dynasty, named Karaman [g.o.], founded a new state in its Cilician territory some afterwards, with Adana as capital, under Egyptian supremacy. Another family of Turkmen, the Dughdigh (Arabicised as Dhu 'l-Kadr [g.o.]) settled in the Eastern Taurus area including Elbistan, also under Egyptian supremacy.

In the west, the principality of Ghâzî 'Oghlân, and his descendants, the Ottomans (see 'Oghlân), extended more and more at the expense of the remaining Byzantine territory. After northern Phrygia and the territory as far as the Sea of Marmara had become Ottoman, the towns of Pруса (Brusa, Bursa, 6 April 1326), Nicæa (Iznik, 2 March 1331) and Nicomedia (İznik, now İzmit, 1337) fell into the hands of Orghân, the son of 'Oghlân. Brusa became his capital. Turning quarrels over the succession in the neighbouring principality of Karas to his advantage, Orghân annexed its territory (736/1336). Thus the whole southern coast of the Sea of Marmara became Ottoman territory, including the access to the Dardanelles. Acquisitions in Anatolia—usually peaceful ones—ended with the conquests on the Balkan peninsula under Murâd I. Soon after his accession (761/1360), he gained Ankara, which was nominally under the Mongol governors—and later under their successors the *amirs* of Rüm (Sivas)—but governed in actual fact by the heads of the guilds forming the *ahâl* [g.o.] union and practically independent. Some time later, he obtained the principality of Hamid (785/1381), thereby extending Ottoman territory considerably to the east and south. Murâd's son and successor Bâyezîd I simply annexed all Anatolian Turkmen principalities shortly after his accession (792/1389), including Karaman and the territory of the Mongol governors. This, however, resulted in an attack by Timûr, and Bâyezîd I was beaten in the battle near Ankara (79 Ebn 'l-Midjâs, 20 July 1402). Timûr reinstated the deposed Anatolian rulers, and, apart from the original Ottoman territory, only the original Mongol territory in the northeast of Anatolia remained in Ottoman hands. From there, Mehmed II unified the empire once more, and under Murâd II the western Anatolian principalities gradually merged with the Ottoman Empire. The Ottomans' only remaining rival was Karaman. Murâd's son, Mehmed II, completed the rounding off of Ottoman

territory in Anatolia after having given it a natural centre by conquering Constantinople (29 May 1453). He put an end to the empire of Trebizond in 1461, and to the principality of Karaman in 1467, incorporating both into the Ottoman Empire. The attempt of the Turkmen ruler Uzun Hasan, of the House of the Ak Koyunlu, to force Mehmed II to cede the annexed provinces failed with the loss of the battle of Tercidân (east of Erzurûm, 878/1473). Ottoman rule in Anatolia was completed in the east when Mehmed's grandson, Selim I (921/1515) incorporated the principality of Dughdigh into the empire and conquered Diyar Bakr, and when he reduced the principality of the Ramadânogullarî (in Cilicia) to vassalage and gained the allegiance of the Sunnite Kurdish chieftains. In the north-east, his rule was further extended into the Caucasian foothills by campaigns of the Ottoman Sultans and their generals against Persia. These were generally directed towards the north-east (Süleymân, 940/1534, 955-56/1548-49, the *ser-asker* Mustafâ Pasha, 986/1578, against Georgia, and Murâd IV, 1045/1634, against Erivan). The whole of Anatolia henceforth remained undisputedly in Ottoman possession and has been taken over by the Turkish Republic in our day.

The only change in more recent years has been the transfer of the districts (*sandjaks*) of Karv, Ardahan and Batum which went to Russia in accordance with the Berlin Treaty of 13 July 1878, which in this respect confirmed the peace of San Stefano (3 March 1878). But the peace of Brest-Litovsk (3 March 1918) returned this territory to Turkey. This was finally ratified (with the exception of the town of Batum and a small hinterland, today known as Abkhazistan) by the USSR in the Treaty of Moscow (16 March 1921), and by the then still nominally independent—Soviet Republics of Georgia, Armenia and Aghharbaydjan in the Treaty of Karv (13 Oct. 1921) (cf. G. Jäschke, *Geschichte der russisch-türkischen Kaukasusgrenze, Archiv des Völkerrechts*, 1955, 198-206). In the Franco-Turkish Treaty of 23 June 1939, Syria ceded the *sandjak* of Iskandariya to Turkey, and it was incorporated into her territory as the (63rd) *wilâyet* of Hatay.

### (3) Political division of Anatolia.

The earlier Ottoman organisation. The Ottoman Empire extended so quickly that it soon became necessary to divide it up into political regions. In the beginning these were simply districts of the feudal cavalry, 'standards' (*sandjaks* [g.o.] or *huyûd*) which were under a district commander of the 'standard' (*sandjak begi* or *mir-huyûd*). Under Orghân, the second Ottoman ruler, there were already four of these. (1) Sultan-uyûgi [g.o.] which incorporated the original territory of the Ottomans around Eskişehir and Söğüt; (2) Khudawendîkari (eli) 'the ruler's (land)', administered by the ruler himself, with Brusa and Iznik; (3) Kodja-eli [g.o.], the feudal tenure which Orghân had bestowed upon his general Akie Kodja, the Bithynian peninsula with Iznik; and (4) Karas-eli [g.o.] the former principality of Karas, with Balıkesir and Bergama. Under Murâd I, when the empire extended still further after the conquests in the Balkan peninsula and further regions of Anatolia, Ottoman territories were united into one province on each side of the straits (*eyâlet*, later *wilâyet*), each under a *paşa* with the title of *beglerbeg* (later *vali*). Thus, to begin with, there were two provinces, with the names of Anatolia (Anatoli), later pronounced

Anadolu) and Rumelia (Rûm-eli). Each of these was subdivided into districts of the feudal militia (*sandjak* or *huyûd*). When the Turkish principalities in Anatolia became part of the Ottoman Empire, they were made into such *sandjaks*, but retained their original names. The gradual growth of the empire is thus shown in its political divisions. Later on, when the Ottomans penetrated further to the east, under Bâyezîd I and particularly under Mehmed II and Selim I, newly acquired areas no longer became *sandjaks* of the *eyâlet* of Anadolu, but became provinces in their own right. Independent of this division into provinces and *sandjaks* was a separate division into judicial districts (*hukûd*), each of which was under a judge (*hâkim*). Furthermore, there were domains (*kâimiyat*) ruled by local dynasties, direct vassals to the Sublime Porte. This whole system was finally fixed by the laws of Sultan Süleymân I Kânî. According to this, (cf. the printed edition of Kâthî Çelebi, *Djâhân-nâmâ*; cf. also J. v. Hammer, *Des osmanischen Reiches Staatsverfassung und Staatsverwaltung* II, 249 ff. and P. A. v. Tschiedner, *Das Leben in den muslimischen Staaten*, Leipzig 1872, 62 ff.), there were the following *eyâlets* in Anatolia: (1) Adana (cf. also mentioned as *sandjak* of Aleppo); (2) Anadolu (630; cf. also ANADOLU the following art.); (3) part of Cilidî (408, later Akhiska in Transcaucasia); (4) Diyar Bakr (436); (5) Arzan-i Rûm (Erzerum, 422); (6) Karamân (Konya, 614); (7) Karv (407); (8) Dhaulakdiyya (Mar'ash, 598); (9) Rakka (Urfa, 443); (10) Siwas (also simply called Rûm 622); (11) Trabzon (Trebizond, 429); (12) Wîn (411); (13) *eyâlet* of Halab (Aleppo) the *sandjak* Antakya (505, the modern Hatay), Bire (Birejik, 597) and Kilis (598); (14) the western Anatolian *sandjaks* Hıfzâ (667), Karas (661) and Sughla (Izmir, 667), and the areas of İdel (Selefk) and Alaya with the island of Kubrus (Cyprus) on the south coast, which were under the Kapudûk Paşas. (See individual articles for each of the preceding.)

Basically, this division was adhered to until the beginning of the 19th century, although, at times of weak central governments, some local *paşas* rose and attempted to extend their rule beyond their original provinces. Such governors who acquired independent power and founded dynasties were known as 'Princes of the Valleys' (*devletler* [g.o.]). They were no longer civil servants, but vassals of the Sublime Porte, and—reluctantly—recognised as such, contributed troops to the sultan. Because they had an interest in the prosperity of their regions, their rule was generally a beneficial one, whilst the governors sent from the Porte changed frequently, and their main interest was to amass wealth for themselves as quickly as possible. The 18th century in particular saw the development of several such dominions in Anatolia, e.g. that of the Kara 'Oghman in the Aegean region, and that of the Çapan (or Çapar) in the area of the middle Kili İrmak (Halys).

*Tanzîmât*. In the course of his reforms, Mahmûd II abolished the dominions of the *derbeyes*. During the subsequent times of reform (*İzâmlat*), a new division of the empire on European lines was made by the law of 7 Jumâdî II 1241/8 Nov. 1864. Now there were provinces (*wilâyet*), administrative areas (*sandjaks*) and districts (*hukûd*); many of the old *sandjaks*, especially those of the *eyâlet* of Anadolu—later (1875) also those of the *eyâlet* of Erzerum—were raised to the status of *wilâyet*s and then subdivided into smaller *sandjaks*. Some other *eyâlets* of smaller size were assigned to a *wilâyet* as *sandjaks*. After some vacillation, Anatolia consisted of the following

*wilâyet*s (according to Cuinet, *La Turquie d'Asie*, Paris 1896): (1) Adana; (2) Ankara; (3) Aydin (Smyrna/Izmir); (4) Bitlis; (5) Diyar Bakr; (6) Erzurûm; (7) the *sandjaks* of Mar'ash and Urfa of the *wilâyet* of Halab (Aleppo), as well as some *hukûd*; (8) some *hukûd* and *nâhiy*es of the *wilâyet* of Istanbul; (9) Kastamûn; (10) Khudawendîkari (Brusa); (11) Konya; (12) Ma'nûret al-'Azîz (Kharpûz, since 1880); (13) Siwas; (14) Trabzon; (15) Van; and the two independent *sandjaks*; (16) Hıfzâ; (17) İznid. [Articles on each of the preceding.] This division was kept—with some alterations—until after the First World War.

Under the Turkish Republic, the *wilâyet*s were abolished, and *sandjaks* were raised to *wilâyet*s. These were called it in the course of the language reform. Their number varied. On 30 October 1935, there were only 57 *wilâyet*s, at the end of 1935, a further 5 were formed (from the districts, *hukûd*, now *ilâle*, of the neighbouring *wilâyet*s); in 1939, Hatay was added (ceded by the French mandate of Syria, see above) as the 63rd. (The 65 provinces of January 1st 1940 with their districts at that time are enumerated by G. Jäschke, *Turkey*, Berlin 1941, 22-41. In 1953 Iraq was added as the 64th *wilâyet*. On January 4th 1954 the overall area of the Turkish state consisted of 64 provinces (of which only 4 are in the European part of Turkey, the other 60 in Anatolia) and 523 districts. Of the Anatolian provinces, however, Çankakkale is partly on European ground; the province of Istanbul, on the other hand, is mainly in Europe.

Geographically the provinces are grouped into the following 8 zones (*hâlze*) (the names in the modern spelling): (1) the Black Sea Coast: the provinces of Trabzon, Ordu, Rize, Zonguldak, Giresun, Samsun, Sinop, Kastamonu, Bolu, Çoruh; (2) the coast of the Sea of Marmara and the Aegean Sea: the Asiatic parts of the provinces of Istanbul (districts Üsküdar, Kadiköy, Beykoz, Adalar, Kartal, Sile, Yalova) and Çankakkale (districts Çankakkale, Ayvacık, Biga, Bayramic, Bozcaada, Ezine, Lapseki, Yenice), and the provinces Izmir, Kocaeli (Izmit), Aydin, Balıkesir, Bursa, Manisa, Muğla; (3) the Mediterranean coast, the provinces of Hatay (İskenderun), Seyhan (Adana), İgel (Selâfk), Antalya; (4) European Turkey: the European provinces of Istanbul (districts Beyoğlu, Beşiktaş, Sarıyer, Fatih, Eyüp, Eminönü, Bakırköy, Cankaya, Silivri) and Çankakkale (districts Eceabat, Gelibolu, Imroz), and the provinces Kırklareli, Tekirdağ, Edirne; (5) western Anatolia: the provinces of Denizli, Bilecik, Kütahya, Afyonkarahisar, Isparta, Burdur, Eskişehir—and since 1953—İşkil; (6) central Anatolia, the provinces Tokat, Çorum, Amasya, Kayseri, Malatya, Ankara, Çankırı, Yozgat, Sivas, Maraz, Niğde, Kırışehir, Konya; (7) south-eastern Anatolia: the provinces Gaziantep, Mardin, Urfa; (8) eastern Anatolia: the provinces Karv, Elazığ, Diyarbakır, Gümüşane, Erzurum, Erzurum, Siirt, Bitlis, Tunceli, Ağrı, Mus, Bingöl, Van, Hakkâri.

### (4) Population.

Turks and non-Turks. At the time of the Turkish conquest of Anatolia, it had already been Hellenised. The Hellenisation of the various old-Anatolian peoples (begun in Greek and Roman times) was completed during the course of Christianisation. Now, remnants of the old peoples (for example the Lazes), remain only in the mountains, especially those near the Caucasian foothills. Such areas are at the same time refuges in which ancient

religious communities, such as the Paulicians, survived as sects. By the time the Turks came, Anatolia was, however, on the whole Greek speaking and mainly adhered to the Byzantine Orthodox Church. Only the Armenians in the east, who were Monophysites (Gregorians), remained ecclesiastically apart from the Greeks and were not Hellenised. Being merchants, Armenians had probably spread towards the west as far as the capital, even in pre-Turkish times.

A new central-Asiatic race with a new religion, Islam, came to Anatolia with the Turks. In the beginning it may well have been a minority, compared with the Greeks, but, since it consisted of the ruling classes in the Turkish occupied territories, it succeeded in spreading. The reason for this was probably that many members of the old population, who had lost contact with their spiritual centre in Constantinople, felt this spiritual isolation, turned to Islam and were thereby assimilated to the Turks. Initially, this process was a very slow one. In any case, at the time when Marco Polo travelled through Anatolia in 1272, the inhabitants do not appear to have been Turkicised (cf. E. Oberhammer, *Die Türken und das Osmanische Reich*, Leipzig-Berlin 1917, 42). On the other hand, the documents of the Patriarchate of Constantinople prove clearly, as A. Wächter, *Der Verfall des Griechentums in Kleinasien um XIV. Jahrhundert*, Leipzig 1903 shows, that, especially in the 14th century, when increased numbers of Turks occupied Anatolia, the Orthodox Christianity gradually receded, and with it the land gradually lost its Greek character. This may be due, on the one hand, to emigration from the Turkish occupied areas, but on the other hand also to assimilation to the Turks. Here one must distinguish, however, between the regions with long established Greek inhabitants, such as the western Anatolian coastal regions, which held on to Greek culture and Christianity with great tenacity (as also did those areas which had been under Greek rule for a long time, like Trebizond), and the central Anatolian regions with their only superficially Hellenised and Christianised population (especially in northeastern Anatolia, where the Persian Mongols, the Ilkhāns—who themselves had only taken to Islam since Ghāzān—ruled for some time with the true ardour of renegades). Christianity in Anatolia was hard hit by Timur, who—as everywhere else he appeared—let the Christian population feel his hardness and cruelty with a special severity.

The position of the Christians improved when Mehmed II granted the Greek Orthodox Church a secure position in the Ottoman state for political reasons after the conquest of Constantinople, and made it into a pillar of his empire side by side with Sunnite Islam. Thus the Christian communities, Greek (see 186f) as well as Armenian (see 186a) in Anatolia were freed from their spiritual isolation, and held their own until this day. The so-called system of the *millet*s [g.r.] according to which non-Muslim religious communities within the Ottoman Empire enjoyed considerable autonomy, saved these from further shrinking. In this manner, a *modus vivendi* evolved during the flowering of this empire which did justice to both Muslims and non-Muslims. In the 18th and 19th centuries, there was a positive revival of Anatolian Hellenism, and Armenians were still referred to as "The faithful nation" [i.e. faithful to the state] (*millet-i sadika*) in the 19th century. On the whole, linguistic and religious areas were identical, except in central Anatolia (in Konya and Kayseri), where the Greeks adopted Turkish as the

language of social intercourse and of the house (partly in Greek script), whilst the Armenians by and large accepted Turkish as the language of social intercourse (partly in Armenian script), whilst retaining Armenian—their ecclesiastical language—as the language spoken at home.

Apart from Turkish inhabitants, either city dwellers or peasants, there are—or were—nomad and semi-nomad elements as well as migrating shepherds in Anatolia, who belonged to Islam but were of differing languages and races: Turks, Kurds and Circassians. In the case of Turks (so-called Yürüks and Turkmens [g.r.]), their origin is debatable: they may be Turkmens who kept to their nomadic way of life, or remnants of races of varying origin which became Turkicised. By religion they are mostly 'Alawites, i.e. they confess to Shī'ite of some type or have at least Shī'ite leanings. The Kurds [g.r.] who are for the most part Sunnite Muslims, have a closed area of settlement in the south-eastern provinces. The Circassians (Çerkes [g.r.]), lastly, had mostly immigrated from the Caucasus at the time when Russo-Christian rule spread over the Caucasus. Apart from these, one frequently meets returned Muslim emigrants (*muhâdîrler*) all over Turkey especially from the Balkan countries, who preferred to leave a country with a Christian government and to seek a new home in Turkey which belongs to the *dâr al-islâm*. Those people are, however, not nomads but are assimilated by the town or country area in which they settle.

The comparatively amicable relations between Muslims and non-Muslims deteriorated when the western powers began to meddle in the affairs of Turkey in the 19th century. On the grounds of the treaty of Küçük Kaynardja (1774), Russia claimed the protectorate over the Christian Orthodox inhabitants of Turkey, and awakened anti-Turkish feelings in them. Coming from western Europe, nationalism gained ground amongst the Christian part of the population. The Turkish reaction to this was a dislike for these Christians which soon became hatred. The Armenians felt this most strongly, since they, as neighbours of Russia, were particularly under the suspicion of being in Russian service. The insistence on effecting the reforms laid down in the Berlin Treaty (1878) led to bloody clashes with the Kurds in the years 1894-96. In the First World War, following the Russian Revolution, the Caucasian army into the Van region, during which—according to Turkish opinion—the Armenian population behaved disloyally, the whole population was forcibly moved to Mesopotamia, and many of them perished. The remainder emigrated after the war. There was a war against the Greeks in 1919, when, supported by Great Britain, they occupied Smyrna and advanced as far as the Sakarya in 1921. The Turks under Mustafa Kemal Paşa beat the Greek army which retreated from Anatolia, and the greater part of the Greek population retreated with it. The remainder was exchanged by treaty (30 January 1923) for the Muslim inhabitants of Greece (with the exception of the Turks in western Thrace and the Greeks in Istanbul). Through this action Anatolia became a 99% Turkish and 99% Muslim country. With the exception of the Arabs living on the Syrian border, the small non-Turkish Muslim pockets will hardly be able to withstand Turkish influence indefinitely. One may also expect a gradual Turkicisation through military service and the influence of the schools among the Kurds, who have no cultural tradition of their own.

End of the 19th century. The statistics on p. 472 show the population of Anatolia during the last decade of the last century according to their religions, as given in the work of V. Cuiñet (see Bibl.) on the basis of the imperial and provincial *sâl-nâmes*. As there was no official census in Turkey at that time, the numbers are largely based on estimates and only to a small extent on actual figures. Additional inaccuracies come from the fact that the principle on which these statistics were based was not consistent throughout the various *vilâyet*s. For some of them we have detailed figures (in certain cases, even separate data for men and women), in others only summary ones. Thus, for example, the fact that Shī'ites and Yazdids are mentioned separately only in some *vilâyet*s, does not necessarily mean that there were none in some others. The statistics may, nevertheless, serve to give at least a rough picture of the composition of the population of Anatolia before the First World War.

Abbreviations:

w = *vilâyet*, s = *sandjâh*, k = *kadâ*,  
n = *nâhiye*, i.s. = independent *sandjâh*.

In the case of the administrative areas belonging to the *vilâyet*s of Istanbul and Halab (Aleppo), Ist. and Hal. respectively is added in brackets.

	Turks	Kurds	Arabs	Circassians	Total
w. Adana . . . . .	93,200	39,600	12,000	13,200	158,000
w. Diyarbakr . . . . .	310,644	—	8,000	10,000	328,644
Anat. districts of w. Halab . . . . .	177,048	119,588	123,536	4,500	424,672
w. Ma'mûret al-'Azîz . . . . .	267,616	54,650	—	—	322,266
w. Van . . . . .	30,500	210,000	—	500	240,000
	879,008	424,138	143,536	27,500	

If one adds up the members of non-Islamic religions, then the composition of the population—according to religious—appears as follows for the time of Cuiñet (actual figures and percentages):

Muslims	9,676,714	78.9 %
Non-Muslims	2,577,745	21.1 %
Total	12,254,459	100.00 %

Of the non-Muslims, 2,410,272 were Christians of various denominations.

These statistics show some peculiarities which need explanation. Particularly obvious is the high number of "Copts" (2,867), but only a very small number of these are actual Copts (i.e. Christian Egyptians); by Copts (Kibit), the Turks usually mean the non-Muslim gipsies. These "Copts" should therefore be added to the number of gipsies (2,867 + 37,752 = 40,619). The Column "foreigners" includes

	Syrian Orthodox	Syrian United	Chald. United	United Maronites	Total
w. Adana . . . . .	20,900	—	—	4,539	25,439
w. Diyarbakr . . . . .	4,990	—	—	—	4,990
w. Bitlis . . . . .	—	—	2,600	—	2,600
Anat. distr. of w. Halab . . . . .	—	13,687	9,865	—	23,552
w. Van . . . . .	—	—	6,002	—	6,002
Total . . . . .	25,890	13,687	18,467	4,539	62,583

not only real "foreigners" (*edinebi*) but also immigrated Ottoman citizens (*yahangîl*), whose home is not in the *vilâyet* in question. The two categories are mentioned separately only for the *vilâyet* of Erzurum (1,220 *edinebi* + 4,986 *yahangîl* = 6,206).

The proportion prevailing there (1:4) might also prove right for the other *vilâyet*s.

Concerning the races, the statistics show clearly that at that time the Armenians (Gregorian, Catholic and Protestant Armenians together 1,142,775) were concentrated in some eastern *vilâyet*s (Erzurum, Bitlis and Sivas, to a lesser extent also in Van, Ma'mûret al-'Azîz, Diyar Bakr and Adana), although even there they were a minority in comparison with the Muslim part of the population (Turks and Kurds). In the case of the Greeks, one must add to the Orthodox (1,042,612—25,890 Syrian Orthodox = 1,016,722 Greek Orthodox) the Uniates (16,811), who were included under Catholics in these statistics; their total was thus 1,033,533. They were concentrated in the districts belonging to the *vilâyet* of Istanbul, and in the *vilâyet*s of Khudâvendigâr, Aydin (Isair) and Trabzon, to a lesser extent in Sivas, Konya, and Adana. They also, were a minority everywhere compared with the Muslims (and in Sivas and Adana also as compared with the Armenians). It is more difficult to arrive at the racial composition of those elements of the population which are described as Muslims, because the statistics generally give merely a total figure. Only for some eastern *vilâyet*s are the races for the Sunnite Muslims given as follows:

	Kurds	Arabs	Circassians	Total
w. Adana . . . . .	39,600	12,000	13,200	158,000
w. Diyarbakr . . . . .	—	8,000	10,000	328,644
Anat. districts of w. Halab . . . . .	119,588	123,536	4,500	424,672
w. Ma'mûret al-'Azîz . . . . .	54,650	—	—	322,266
w. Van . . . . .	210,000	—	500	240,000
	424,138	143,536	27,500	

One can only surmise to which race the occasionally separately mentioned members of Muslim sects (usually Shī'ites) belonged (total number 533,677). In Van and Bitlis they are given as Yazdids (5,400 + 3,863 = 9,263), and in the case of Diyar Bakr it is stated that the figure 6,000 for members of different sects also includes Yazdids. We may assume that these were on the whole Kurds. Of the others, by far the greater part probably consisted of Shī'ite Turks, in Arab areas probably also Nusayrî Arabs. If one deducts the figures for Shī'ites and Yazdids as well as those of Arabs, Kurds and Circassians there remains the figure 8,537,863 for supposedly Sunnite Turks, which still contains small elements of Shī'ites, non-Turkish Sunnites, and also Lazs, and emigrants from former Ottoman provinces which had come under Christian rule (*muhâdîr*). To the number of Arabs a considerable number of Christians of various denominations should be added as follows:

	Syrian Orthodox	Syrian United	Chald. United	United Maronites	Total
w. Adana . . . . .	20,900	—	—	4,539	25,439
w. Diyarbakr . . . . .	4,990	—	—	—	4,990
w. Bitlis . . . . .	—	—	2,600	—	2,600
Anat. distr. of w. Halab . . . . .	—	13,687	9,865	—	23,552
w. Van . . . . .	—	—	6,002	—	6,002
Total . . . . .	25,890	13,687	18,467	4,539	62,583

With the addition of the total of the non-Uniate Jacobites, Chaldeans and Nestorians (168,706) one arrives at the total of 231,486 for Christian Arabs of differing denominations; of these, however, some Chaldeans and Nestorians, as well as Uniate

	Muslims (* Shi'ites and Yaqdils)	Greek Catholics and Syr. Orthodox	Armens, Gregorian	Armens, Catholic	Armens, Protest.	Other Catholics (Union and Latin)	Sun-Unitate Jacobines and Nestorians	Jews	*Coptic*	Gypsies	Others (For- eigners)	Total

Total	9,676,744 (9,142,037)*	1,042,612	977,079	19,749	85,347	56,179	168,706	47,269	2,867	37,752	796,555	12,254,459

Chaldeans have to be added to the Kurds. In these statistics, one may assume that the 2,675 Catholics not contained in the number of the Uniates were largely Latins, i.e. occidentals (missionaries etc.) with or without Ottoman nationality, who had not been included under the heading "foreigners".

Thus, for the time of Cuinet we have roughly the following picture of the ethnic composition of Anatolia:

	Sunnites	Sh'ites	Yazidis	Christians	Jews	unknown and foreigners	Total
Turks	8,547,863	462,414 ?	—	—	—	—	9,010,277
Kurds	424,138	—	9,263 ?	?	—	—	433,401
Arabs	143,536	62,000 ?	—	233,280 ?	—	—	436,816
Chirassians	27,500	—	—	—	—	—	27,500
Greeks	—	—	—	1,031,533	—	—	1,033,533
Armenians	—	—	—	1,142,775	—	—	1,142,775
Jews	—	—	—	—	47,299	—	47,299
Gipsies	—	—	—	—	—	40,619	40,619
Unknown and foreigners	—	—	—	2,675	—	70,555	82,230
Total	9,143,937	524,414	9,263	2,410,272	47,299	120,174	12,254,459

The figures for several official censuses for the Turkish Republic are already available; namely, those of 1927, 1935, 1940, 1945, and 1950, but the last of these is given as only "provisional" (*muvakkat*). The particular figures can be found in the individual articles on the capitals of the various *ils* (*vilâyet*), enumerated above, ch. 3, last paragraph.

The total for 1945 is 18,790,174 and 20,934,670 for 1950: 1,496,612 and 17,293,362 in European Turkey and Anatolia respectively in 1945; 1,598,255 and 19,336,415 in European Turkey and Anatolia respectively in 1950.

Definite figures for some towns exist for 1950. According to these, there are 5 towns of over 100,000 inhabitants: Istanbul (1,000,022), Ankara (286,781), Izmir (230,508), Adana (117,799), and Bursa (100,007); and the following 6 towns between 50,000 and 100,000 inhabitants: Eskişehir (88,459), Gaziantep (72,743), Kayseri (65,489), Konya (64,509), Erzurum (54,360), Sivas (32,269).

There are also figures for the distribution of the town and the country population for 1945 and 1950. The percentage rate, worked out for the purpose of this article, is:

	1945	1950
in towns . . . . .	4,687,102 : 25.06 %	5,267,695 : 25.16 %
in the country . . . . .	14,103,074 : 74.94 %	15,666,975 : 74.84 %
	18,790,174 : 100.00 %	20,934,975 : 100.00 %

At Turkey's overall area of 767,119 sq. km., this produces a density of population of 24.49 per sq. km. in 1945 and 27 in 1950. The official percentage of towns and country population (both as a whole and according to individual *wilayets*) is only available for 1935. According to this, there were then 55% of the population in towns and 45% in the country. When these figures are put into the country's population figures, one must be in mind that according to the law of 1930, every place with a municipal government (*belediye teşkilatı*) counts as a town. Such a body is to be set up both in all places of more than 2,000 inhabitants and also (irrespective of this minimum figure) in all *kazas* centers, where some have had a population of less than 2,000. If judged by these standards, the proportion would alter in favour of the country population.

H. Louis, *Die Bevölkerungskarte der Türkei*, Berlin 1940, bases his work on the publication of the census in Turkey in 1935. It can be seen from the map that the three most densely populated areas in Anatolia are the following: 1) the western Anatolian coastal strips together with the river valleys, leading into the interior, especially that of the Maeander (Büyük Menderes Cay), 2) the coastal area of the Black Sea, 3) Cilicia, the new sandjak of

Idia	Christians	Jews	unknown and foreigners	Total
10637	7	—	—	9,010,277
	231,289?	—	—	433,401

	1,142,775	—	—	1,142,775
	—	47,299	—	47,299
	—	—	40,619	40,619
	2,675	—	79,555	82,230
263	2,410,272	47,299	120,174	12,254,459

Hatay, and the plain towards the Euphrates, which, geographically, belongs to northern Syria; compared with this, the centre with its steppes and the mountainous north-east show the lowest density of population. The distribution is caused by the nature of the country, and has probably always been roughly the same—at least since the Middle Ages—and should remain so at any rate in the near future. Figures for religious and linguistic divisions are only available for 1943 (21 *Ehim 1945 Genel Nüfus Sayımı, Recensement général de la population du 21 octobre 1945, Türkiye Nüfusu, Population de la Turquie*, vol. 65, Ankara 1950). According to these, Turkey can be divided up linguistically as follows:

people with	
Turkish as mother-tongue	16,598,017 : 88.14 %
a non-Turkish language as mother-tongue	2,192,006 : 11.66 %
Unknown	131 : —
Total	18,790,174 : 100.00 %

1945	1950
4,687,102 : 25.06 %	5,267,695 : 28.16 %
14,103,072 : 74.94 %	13,666,975 : 74.84 %
18,790,174 : 100.00 %	20,934,075 : 100.00 %

According to religions:

Islam	18,497,801 : 98.45 %
non-Islamic religion	292,152 : 1.55 %
unknown denomination	221 : —
Total	18,790,174 : 100.00 %

Of the non-Muslims there were:

Christians	202,044 : 69.16 %
Jews	76,965 : 26.34 %
Without religion	361 : 0.12 %
Other denominations	12,352 : 4.31 %
Total	292,152 : 100.00 %

These rough statistics, when compared with those at the end of the last century as given by Cuinet, clearly show an enormous change which was caused by the events during and shortly after the First World War.

More detailed information can be gained from the following division into both categories which is reproduced here in shortened form.

Language	Muslims	Catholics	Orthodox	Protestants	Gregorians	Christians of unknown denomination	Jews	Without religion	Others	Unknown	Total

With regard to the totals of the division into languages, the following facts stand out from the figures given for individual *uluslar*, (the numbers are again given in round figures). The Kurdish speaking people live together densely in the south-eastern *vilayets*, and form the large majority in the *vilayets* of Aghl (80,000), Bingöl (42,000), Bitlis (43,000), Diyar Bakr (180,000), Hakkari (30,000), Mardin (155,000), Mus (33,000), Siirt (100,000), and Van (79,000). In Tunceli (48,000) and Urfa (123,000) they have a slight majority over the Turks (43,000 and 103,000), and in Elazığ (82,000), Kars (66,000), and Malatya (141,000), they form a large minority. The Arabic speaking people are everywhere in the minority compared with the Kurds; 60,000 in Mardin compared with 155,000 Kurds, but in the majority compared with the Turks (15,000); 40,000 in Urfa compared with 123,000 Kurds and 103,000 Turks; 100,000 in Hatay, where the largest number of Arabs live, compared with 130,000 Turks. The smallest number of Turks is found in the *vilayets* of Mardin and Siirt (in each ca. 15,000) and in Hakkari (4,000). Greeks, Armenians and Jews (including ca. 10,000 who speak Judeo-Spanish) live almost exclusively in Istanbul. There are also some 7000 Greeks in Çanakkale and some 12,000 Jews in Izmir; there are only extremely small groups elsewhere. Other small racial groups, such as the Circassians (most of these in the *vilayet* of Kayseri), Lazs, and Georgians (both of these especially in the eastern Black Sea provinces), form a very small minority in all these places in comparison with the Turks.

The division into religions is also very informative. Above all, it is worth noting that all those religious groups which have Turkish as their mother tongue have increased. In the case of Islam, no distinction is made between Sunnites and Shī'ites. But those

mentioned under "other denominations"—with the exception of a few foreigners of unusual religious denominations—are largely Kurds (probably of extreme Shī'ite sects or Yazidis) who either do not count themselves members of Islam or are not recognised as such by the Sunnites and Moderate Shī'ites. Those giving Georgian as their mother-tongue are Lazs, and not real Georgians—who are

Christians—as can be seen clearly from the fact that most of them give Islam as their religion. The relatively high figure for Catholics and Protestants under "other languages" obviously refers to foreigners. The number of Jews under "other languages" includes the 10,866 who speak Judeo-Spanish. The Gipsies, who in Cuinet's statistics were given with the rather large figure of 40,000, have disappeared altogether from the new statistics. As they do not speak a different language from that of the people amongst whom they live, nor profess a different religion, one may assume that they are present, unrecognised, in the various groups of the statistics.

#### (5) Development of Communications.

Being a thinly populated peninsula with steeples in the centre and few usable harbours, Anatolia has little traffic. Long distance traffic from Istanbul to the east mostly tries to bypass Anatolia, preferring the difficult overland roads the easier sea routes to Trabzon on the Black Sea, or to Ayas at the mouth of the Djeyhan in the Middle Ages, to Payas in the Gulf of Issus under the Ottomans, and to Iskenderun (Alexandretta) in recent times. Throughout the ages the main caravan tracks led from these harbours to the interior of Asia. Traffic inside Anatolia was generally only of local importance. There were always through-roads, usually leading to or from Istanbul which was regarded as the undisputed metropolis even at times when Anatolia did not regard it as its political capital.

Three types of such roads can be distinguished in Turkish times: (1) Military roads; (2) Caravan routes; (3) Postal routes. All three types follow the nature of the country and circumvent the interior steppes, passing through adjoining regions, but keeping to the inside of the border-mountains. They prefer the edges of the steppe where animals

can graze and where the towns are situated. The routes follow roughly the same lines, though they do not coincide altogether.

The main Military road (on which the armies of the sultans moved in the 16th and 17th centuries against Persia and Caucasus) described a large arc south of the central Anatolian steppe from Üsküdar via Izmit, Eskişehir, Akgözü, to Konya and from there via Ereğli, Niğde, Kayseri to Sivas, then via Erzurum and Erzurum to the east. When Selim I moved against Syria, he too went to Kayseri and only from there through the Ant-Taurus to Elbistan and Mar'ash. The route from Ereğli through the Cilician Gate (Gölek Boğazı) to Adana and further into Syria was usually avoided, particularly for difficult transports, and especially because the Gölek Boğazı is easy to block. In 1618, for instance, Murad IV sent the artillery he needed for the capture of Baghdad by sea as far as Payas, only transporting it overland from there onwards with the aid of buffaloes. The northern Caravan route (to be mentioned below) was used for small detachments only. The reports of the Imperial armies often give the sites of the camps on the main Military road, but these are frequently at a considerable distance from the inhabited places along the route.

The most important of the Caravan routes is the one leading diagonally across from Üsküdar via Gebze, then, after crossing the Gulf of Izmit from Dil to Iznik, following roughly the Military route via Eskişehir to Konya and Ereğli, then through the Cilician Gate (Gölek Boğazı) to Adana and thence to Syria or Mesopotamia. The route via Antakya to Syria is, at the same time, the route which pilgrims took (via Damascus) to Mecca and Medina, the holy places of Islam, and it is often mentioned in this capacity. There is also a northern caravan route of some importance which goes from Üsküdar to Amasya via Izmit, Bolu and Tosya (or, bypassing Amasya, via Niksar), and thence to Erzurum and Erzurum and further to the east; alternately, from Amasya via Tokat, Sivas and Malatya to Diyarbakır and further to Mosul and Baghdad; from Üsküdar onwards this route is called Baghdad Yolu. An older variant of this—used by Busbeque in 1555—follows the diagonal route as far as Eskişehir and then goes on to Amasya via Ankara. Lastly, the north-south route which bypasses the central Anatolian steppe to the east is of some importance. In Seljuk times, this route branched off at Konya, the capital, and went right across the steppe, past the beautiful Sultan Kham and Aksaray to Kayseri and on to Sivas, where it connected with the northern route as well as with those leading to the east (Erzurum and Erzurum). In Karahan and Ottoman times it went from places at the foot of the Taurus, Laranda (Karaman), or Ulukışla via Niğde to Kayseri. In western Anatolia, only roads leading from Izmir seem to have had some local importance and little is reported of them.

Postal routes, like the caravan routes, were divided into three "arms" (*kol*), for this term, which is also used as a technical term in administrative language, cf. Reibowicz, *A Turkish and English Lexicon*, 1942; H. W. Duda, *Balkanische Studien*, Vienna 1949, 98 ff. note 8). In the 17th century, according to the *Divân-nümâ*, the middle one of these "arms" embraced the entire length of the diagonal route together with its offshoots as far as Damascus; the right one, the whole west Anatolian network, and the left, the northern caravan route

with its extension as far as Baghdad. According to reports of postal routes in the 19th century, the diagonal route forms the right arm together with the western Anatolian network, the northern caravan route the central one, whilst the left one does not leave the central one until Tokat, whence it embraces the eastern network to Erzurum. (Concerning the development of road and route-nets in Anatolia prior to the 19th century, cf. F. Taeschner, *Das Anatolische Wegnetz nach Osmanischen Quellen*, Leipzig 1924; *idem*, *Die Verkehrs- und das Wegnetz Anatoliens im Wandel der Zeiten*, *Petermanns Geographische Mitteilungen*, 1926, 202-6).

The word "roads" can be applied to these routes only in a limited sense, as roads were not built with foundations; except where Roman roads could still be employed, they are simply much used and well-trodden tracks, along which caravans, wells, and bridges have been erected by benefactors for the comfort of the travellers.

This tripartite route-system has been gradually falling into disuse with the expansion of railways in the 19th and 20th centuries, though the railway follows roughly the track of the old routes—at least in the case of the diagonal road.

The building of railways naturally did not replace the building of roads, which also has been encouraged (to a certain extent) since the *langavut* period. (For the means devised to finance the building of the roads: *corvée* and road-tax, "*yol parası*", see G. Young, *Corps de Droit Ottoman*, IV, Oxford 1906, 245 ff., "Routes et Prestations").

The history of railway building in Anatolia began with the granting of a concession to a British company for a railway from Smyrna (Izmir) to Aydin in 1856, and the line was opened 10 years later. In the last decades of the Ottoman Empire the following sections were opened in Anatolia:

- (1) British Company: Smyrna (Izmir)—Aydın 1866.—Dinar 1889. (with branchlines to Ödemiş, Tire, Söke, Denizli and Çeşme)—Eğirdir 1912;
- (2) Franco-Belgian Company (British until 1893): Smyrna (Izmir)—Manisa—Kasaba 1866.—Ağaçlı 1873 (?).—Aydın Kara Hisar 1897; Manisa—Soma 1890.—Ballıoğlu—Bandırma 1912; (3) Narrow Gauge Railway Mudanya-Brusa (Bursa) 1875, rebuilt by a Franco-Belgian Company in 1892 (not in use now); (4) German Company (since 1888) Anatolian Railway: Haydar Paşa—Izmit 1875 (with a branchline to Adapazarı)—Eskişehir—Ankara 1892; Eskişehir—Aydın Kara Hisar (with a branchline from Aylavut to Kütahya)—Konya 1896; Baghdad Railway: Konya—Bulgurlu 1904; Toprakale—Iskenderun 1913; Bulgurlu—Adana—Toprakale—Aleppo (Halep)—Nusaybin 1918 (with a branchline to Mardin); (5) British Company: Mersin—Adana 1886 (1906 taken over by the Baghdad Railway Company).

Thus the railways consisted—with the exception of the short stretches which linked Adana and Brusa with their harbours—on the one hand of a network based on Smyrna (Izmir) and opening up the rich agricultural districts of western Anatolia, on the other hand of a diagonal line, with a branch to Ankara, which linked the capital to the far-distant Arab provinces of Mesopotamia, Iraq and Syria. Plans for a railway system in the Black Sea area and in north-eastern Anatolia broke down because of Russian opposition.

Existing railways were nationalised at the beginning of the Turkish Republic in 1920 ("Türkiye Cumhuriyeti Devlet Demiryolları"), and the system has since been extended and based on Ankara as

its centre. This extension began as early as 1912 with a narrow-gauge railway Ankara—İrmak—Yahol Han 1915—Yerköy and in the Kayseri direction 1925. This was later extended in wide gauge.

There are the following lines: (1) Ankara-Kayseri 1927—Sivas 1930—Erzincan 1938—Erzurum 1939—Horasan 1950—Sarıkamış under construction. Here it will link up with the broad gauge railways which the Russians built in 1896: Gümrük (Alexandropol, now Leninakan) via Kars to Sarıkamış. The line was continued in narrow gauge from there to Mamahatın via Erzurum during the First World War. (2) Ilıca (in the Gulf of Edremit)—Edremit—Palamutluk (narrow gauge) 1924 (unused since 1953); (3) Fevziye (on the Adana—Aleppo line)—Malatya 1917—Diyarbakır (Diyarbakır) 1915 (with a branchline to Elazığ)—Kurtalan 1941; (4) Samsun—Çarşamba (narrow gauge) 1926 (no longer in use); Samsun—Amasya—Sivas 1932; (5) Kütahya—Balıkesir 1932; (6) Kayseri—Uludağ (more specifically: Boğazköprü—Kardedeş) 1933 (since then through-trains to Syria and Iran—the Taurus Express—go via Ankara and no longer via Konya); (7) Irmak—Filyos 1935—Zonguldak 1937—Kozlu 1943—Ereğli planned, under construction; (8) Işık as Çamlı; (8) Afyon Karahisar—Karakaya (near Dinar), Baladiz (near Egridir)—Burdur, and Bozdoğan (also near Egridir)—İsparta 1936; (9) Çetinkaya (on the Sivas—Erzincan line)—Malatya 1937; (10) Elazığ—Genç 1947; — Muş under construction — Tavan (on Lake Van) planned; (11) Köprübaşı (near Fevziye)—Maras 1948; (12) Nallı (near Fevziye)—Gaziantep 1953 — Karkamış, formerly Döğüşbaba (on the Euphrates, on the Aleppo—Nusaybin line) under construction. (Cf. G. Jäschke, *Geschichte und Bedeutung der türkischen Eisenbahnen*, Zeitschrift für Politik, 1942, 559-566; concerning the Baghdad railway in particular, cf. H. Bode, *Der Kampf um die Bagdadbahn* 1903-1914, Breslau 1941; K. Huber, *Die Bagdadbahn*, Berlin 1942.)

The increased use of motor-transport and the consequent decrease in rail-transport, has already resulted in the closing of local lines (Mudanya—Brusa, Ilıca—Edremit—Palamutluk) and threatens to outdo rail-transport in Turkey. As a result there has been a fresh emphasis on road construction (Mabul Gökdoğan, *Straßenbau und Verkehrspolitik in der Türkei*, Stuttgart 1938). In recent years the road network in Turkey has been greatly expanded—partly with American aid—and there are now numerous bus lines (cf. R. W. Kerwin, *The Turkish Roads Programme*, The Middle East Journal, 1950).

Since the Anatolian rivers are not navigable, there is no real inland shipping (except in the case of the greater rivers just above their mouths, and the use of rafts of inflated skins (*balık* [g.s.] on the Tigris). Nor are there any artificial waterways. The project of linking the Sabandja lake with the Sakarya on the one side and the Gulf of İzmit on the other by canal has been considered twice (1909/1910-1911 and 1964/1965), but on neither occasion did it get past the preliminary stages (see SABANDJA).

Conditions for sea shipping are not very favourable either: the north and south coasts have few natural harbours, and the many bays along the west coast are of little use because the river estuaries are silted up by the rivers (cf. above, ii, "Aegean Anatolia"). Apart from Smyrna (İzmir [g.s.]), the most important harbour, there are a few—admittedly unimportant—harbours along the west coast, such as Foça [g.s.] (Phocaea); in ancient times

and in the Middle Ages it was a considerable rival of the port of Smyrna, because it jutted further out into the sea; Bodrum (Halicarnassus), and Fethiye (Makri), which are only of importance for coastal shipping. In recent times only Smyrna has had any importance as an overseas harbour, though Foça also held a similar position in the Middle Ages.

Unlike the ports on the western coast which can be easily reached by the river valleys from the centre of Anatolia, the few ports on the north and south coasts are difficult to reach. On the north coast, Sinop (Sinope) [g.s.]—rather inaccessible because of its mountainous hinterland—and Samsun [g.s.] (Amisus) are of some importance, particularly in traffic with the Crimea which lies opposite. Samsun, situated in the plain between the mouths of the rivers Kizil Irmak (Halyk) and Yeşil Irmak (Irta), has grown more important than Sinop, particularly in the 19th century. On the south coast, the ports of Antalya [g.s.] (Adalya, the ancient Attaleia and Satalia of the Crusaders) and Alanya [g.s.] ('Alā'īyya, Galeson in Byzantine times, the Candelier of the European merchants in the Middle Ages) have been of importance ever since the Middle Ages. More recently, the harbour of Mersin (now İmran [g.s.]) has also been of importance since it was built in 1832. The only points for landing which would link up with traffic across the continent were actually those at the "base" of the Anatolian peninsula: La Tarabun [g.s.] (Trebizond) on the Black Sea, and one on the Mediterranean (in the Middle Ages Ayas [g.s.], Laiaze of the crusaders, Payas in Ottoman times, now Iskenderun, Alexandretta); caravans from Trebizond went to Ağharbaydjan and Persia, and from the above-mentioned Mediterranean ports to northern Syria (Aleppo), Mesopotamia (Mosul) and 'Irak (Baghdad).

#### (6) Economy.

Anatolia has always been an agricultural country and it has largely remained one in spite of the considerable incipient industrialisation. In the centre—wherever the land is fit for more than grazing—the main crop is grain, whilst fruit and vegetables are cultivated in the coastal areas and near rivers where gardens can be watered with the aid of water-wheels. Fruit-growing is characteristic particularly of the districts on the Black Sea (apples from Amasya are famous throughout the country, and Çarşu, now Giresun, is supposed to be the original home of the cherry); hazelnuts are grown in many areas. Along the Aegean Sea (with its Mediterranean vegetation) figs, olives, melons (watermelon, *karpuz* and sweet melon, *kavun*), and mulberry trees and vines are grown. The woods in the Black Sea area (especially the "Wood Sea", *aghaş denizi*, of former times, near Sabandja) were extensive enough to meet not only the local demands for timber for building, wood for burning and charcoal but also part of the need of the capital, which got the remainder of its supply from woods on the European side.

The steppes in the centre of the country are most propitious for the raising of cattle. Various types of sheep and goats are found here, including Angora. Anatolian horses have been famous since the Middle Ages. The 'Akzitiye stud farm in Phrygia used to breed the horses for the Ottoman cavalry. The growing of silkworms is a speciality of north-west Anatolia thanks to the cultivation of the mulberry tree. Brusa is the centre for this and for the silk-spinning industry.

The silver mines of Gümüş-khâne between Trabzon and Erzurum, and those of Gümüş Hâğdji Köy near Amasya, must be mentioned as the oldest; here, too, were the mints for silver coins. Copper was found in Küre (between İnebolu and Kastamonu) and in Ergani Ma'den (near Diyarbakır). Near Eskişehir is the only area in the world where "Meerschaum" is found. This was in great demand in the 19th century for pipes (*hile*) and similar articles, but since "Meerschaum" is no longer in fashion now, production is much reduced.

Arts and crafts have been playing a considerable part, especially ceramics (introduced from Persia as early as the Saldjûk period). Magnificent examples of Rûm Saldjûk ceramics are found, especially in buildings in Konya. The golden age of Ottoman ceramics began when Selim I brought craftsmen back from Tabriz during his Persian campaign (1514), and settled them in Istanbul and Izmit. In the 16th and 17th centuries, Izmit was the centre for the production of the classical Ottoman pottery with blue and green as the main colours, contrasting effectively with the interperennial bright "Bols-red". The tiles produced in Izmit adorn mosques and *türbes* in Istanbul, as well as the Topkapı Sarayı. Of vessels, the plates (known as "Rhodes plates" to the trade) are the best known and most exported product of the potteries. In later years (under Ahmed III) potteries were founded in the Tekir Sarayı in Istanbul and in Kütahya (concerning Turkish Pottery manufacture in Izmit and other places, cf. K. Otto-Dorn, *Das islamische Izmit*, Berlin 1941, 109 ff., and the list of sources by R. Anhegger, *ibid.*, 165 ff.). (Cf. also KHAZAFI).

Besides pottery, textile goods form a characteristic part of Anatolia's produce, particularly rugs. The Turks brought this skill from the east and developed it (mainly in Istanbul, Kula, Gökdeğir and others) partly in the Persian tradition, partly in a more popular style. The rugs best known in Europe are those made in the 19th century, which are loosely knotted, with long threads and known as "Smyrna" rugs after their harbour of export, although they were actually made in the Uşak area. The Anatolian silk industry was also of great renown; the centre for which was in Brusa. Its products, of which the brocades with woven gold and silver threads are of an especially high artistic quality, were chiefly woven for the court and for higher society. (Concerning Turkish textile production cf. Tabin Öz, *Türk Kumay ve Kadifeleri*, Istanbul 1946-51; İden, *Türk Textiles and Velvets*, Ankara 1950). Lastly, mentioned, such mats cover the mosque floors in winter. (Cf. also BİŞAT, NASTIJI).

Trades in towns were organised into guilds. These guilds (*şeyh*, from the singular *şeyh* [g.s.]) which were "fraternities" somewhat similar in character to a darwish order, maintained and guarded traditions, quality and integrity. In cases of accident, their members were protected against loss by the spirit of comradeship, and the resultant esprit de corps gave them a power to which—at times—even the government had to yield. The guilds were supervised by the clerk of the market (*muhatab*), who, in turn, was subordinate to the Kâdî—an institution belonging to the *şar'ia*. (Concerning Turkish guilds cf. Osman Nuri, *Mecidi-i Umur-i Beldiyehi*, I, Istanbul 1922, chap. *Esnaf*, 479-788; Taeschner, *Die Zünfte in der Türkei, Leipzig Vierteljahrsschrift für Südosteuropäer*, 1941, 172-88; and Sivar; concerning economy in early Ottoman times in general, cf. Afet İnan,

*Aperçu général sur l'Histoire économique de l'Empire Turc-Ottoman*, Istanbul 1941.)

The ancient guilds began to disintegrate in the 19th century when state reform (*tanzimat*) opened the way to commercial reforms on western European lines and to a western legal code (partly by direct adoption of European legal codes). Finally the guilds were formally dissolved on 13 Febr. 1325 M./26 Febr. 1910 (the *Gedik* on 16 Febr. 1328 M./1 March 1913). Modern organisations (grouped into trade unions in 1943) took their place. Improvements were made in agriculture, as for instance the irrigation to bring water to the Konya plain carried out by the Bagdad Railway (1907-1913), and new cultivations (e.g. cotton in the Cilician plain) were introduced.

Attempts to bring Anatolia into line economically with European countries have been particularly marked since the foundation of the Turkish Republic. Cf. (amongst others): Orhan Conker and Emile Witout, *Kreditelement économique et industrialisation de la Nouvelle Turquie*, Paris 1937; Ahmed Oguz, *Die Wirtschaftsentwicklung in der Türkei*, Berlin 1940; Schweickert Raschid, *Die türkische Landwirtschaft als Grundlage der türk. Volkswirtschaft*, Berlin-Leipzig 1932; M. Thornburg, G. Spy, G. Soule, Turkey, *An Economic Appraisal*, New York 1949; *The Economy of Turkey. An Analysis and Recommendations of a Development Program*, Baltimore 1951.

*Bibliography*: al-Idrisi, *Kitab Rüdîr ve Nushat al-Muhtâş* (K. Müller, *Mappe Arabica*, iv, Stuttgart 1927, plates 35, 45, 55; *Edrisi Geographia Arabica*, Rome 1592, fol. 113v-114v, 139r-142r, 153v-154v; P. Amélie Jaubert, *Géographie d'Edrisi*, Paris 1896-40, II, 129, 302, 301); Yâkûti, *Ma'djam al-Buldân* and al-Kawâbir, *Ağâr al-Buldân*, s.v. al-Rûm; Abu 'l-Fida', *Takwim al-Buldân* (*Geographie d'Abou'l-fida*, ed. Reinaud and de Slane, Paris 1840; French translation by Reinaud, Paris 1848, continued by St. Guyard, Paris 1883); Ibn Batûta (Arabic text with French translation: *Voyages d'Ibn Batûta*, by Delémery and Saguenet, II, Paris 1877, 254-354; French translation with annotations by Delémery in *Nouvelle Année des Voyages*, Dec. 1850-April 1851; English translation by H. A. R. Gibb, *Ibn Battûta, Travels in Asia and Africa 1325-1354*, London 1953, 123-66); al-'Umarî, *Masâlik al-Ahâr* (F. Taeschner, *Al-'Umarî's Bericht über Anatolien*, Leipzig 1929; incomplete translation by Quatremère in *Notice d'Extraits*, xlii, Paris 1858, 251-284); Hamûd Allâh Mustawfî, *Nushat al-Kulûb*, (*The geographical part of Nushat al-gulub*, ed. by G. le Strange, Leyden-London 1915, English translation 1919); G. le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, 127-58; F. Taeschner, *Ein altemannischer Bericht über das vorislamische Konstantinopel*, in *Anadolu* (Ist. Univ. Or. Nâzîli, N. S. I, Rome 1949, 185-5, 1st Univ. Or. Nâzîli, N. S. I, Rome 1949, 185-5); Muhammad 'Ashkîr's *Mansûr al-'Adâim* (1006/1398) brings to an end the geographical literature of the mediaeval type. In the geographical section, he begins with a Turkish translation of what older authors—al-Idrisi, Abu 'l-Fida' and others—have said; in the case of places which he himself has visited, this is followed by an account of what he has seen. These reports, which are interspersed throughout the work, are of the greatest importance and would merit an edition, especially since they were used as a basis for later works.

Those original works by Ottoman writers which have survived are more revealing than any of the

above-mentioned ones: Piri Râis, *Kütâb-i Bahriyye*, İstanbul 1935, Facsimile edition, from p. 746; Kâtib Çelebi (or Hâdîdî) *Kıllıfı*, *Dişân-nümâ*, of which there are two recensions (cf. Tauschner, *Zur Geschichte des Dişân-nümâ*, MSOS, 1926, II, 99-111; idem, *Das Hauptwerk der geographischen Literatur der Osmanen, Kâtib Çelebi's Dişân-nümâ*, *Imago Mundi* 1933, 44-7). The former exists only as an unfinished fragment in a series of manuscripts of which the Viennese one, Mss. 359 (Cat. Flügél, II, No. 1282) is the most important because it seems to have been the working copy of the great scholar. Abû Bakr b. Bahrâm al-Dimashqî (d. 1102/1691) continued Kâtib Çelebi's work and wrote a description of Anatolia, a manuscript of which is in London (Brit. Mus., Or. 1038). İbrâhîm Mutaferrika printed the *Dişân-nümâ* (10 Muh. 1145/23rd July 1732; an inaccurate translation into Latin by Matth. Norberg, *Gühan Numa, Geographia Orientalis*, 2 vols, Lund 1818; French translation by Armin, *Description de l'Asie Mineure*, in Louis Vivien de Saint-Martin, *Histoire des découvertes géographiques*, III, Paris 1846, 637 ff.), in which he completed the part left unfinished by Kâtib Çelebi from the work of Abû Bakr (p. 422 ff., Norberg, I, 618 ff.). Thus this book—which is one of the incunabula of Turkish printing—became a geographical description of Asia. Of Anatolia, however, (Norberg, I, 359 ff.) only the parts on the *eyâlet* of Van (p. 411) are actually by Kâtib Çelebi, everything else, i.e. the description of the *eyâlets* Kars (inserted, p. 407), Erzurum (422), Tîrâbon (429), Diyarbakır (436; from here onwards Norberg, II, Cülcia (1661, 610) Karaman (614), Sivas (622), and Anadolu (631), is by Abû Bakr.

Further sources of information on Anatolia in Ottoman times are the few reports of travellers in Turkish and in Arabic. Ewliyâ Çelebi, *Seyâhat-nâme* (i-vi, badly edited in İstanbul 1374/6, vii and viii slightly better in 1928, ix and x (in Latin script) in 1933 and 1938; the first two volumes were rather inadequately translated into English from a bad manuscript by Joseph von Hammer, *Narrative of Travels in Europe, Asia and Africa*, London 1834, 1846 and 1850), which we have only as a rough sketch. Those parts of the work which relate to Anatolia (vols ii-v) are brought together in Tauschner, *Das Anatolische Wegennetz nach osmanischen Quellen*, 3, Leipzig 1924, 37-39, 44. Further, there are the travel guides for pilgrims going to Mecca, such as Muhammad Adib's work of 1193/1779 (printed in İstanbul 1232/1817, French translation by Bianchi, *Histoire de Constantinople à la Mecque*, Paris 1825, in which the date of writing is erroneously given as 1093/1682, cf. Tauschner, *Wegennetz*, I, 82).

To complete the picture given by the above-mentioned Oriental travel accounts, there are those by Europeans (the older ones listed by L. Vivien de Saint-Martin in *Histoire des découvertes géographiques*, III, 743-808; vi, Bibliographie; the more recent by Selâk Trak, *Türkiye'ye ait Coğrafî eserler genel bibliyografyası*, I, Ankara 1942, 38-9).

A wealth of information may be expected from documents kept in Turkish archives, but research into these is only in its beginning (Ömer Lütfî Barkan, *Türkische Imperatorluk devletlerinin nüfus ve arazi tahkiri ve Hukuk maksus defterleri*, İstanbul 1941, and XV ve XVI'inci asırlarda Osmanlı İmparatorluğunda aile tahkimi hususî ve mülk esasları, *Kanunlar*, İstanbul 1943).

Finally, the official handbooks (*Devlet-i 'Alîyye-i 'Osmâniyye Sâli-nâmesi*) which are available for the 68 years from 1263 H/1847 to 1334 Mâliyye/1918 and the *Sâli-nâmesi* of the individual *vilâyet*s may be used as sources of information for the last decades of the Ottoman Empire. (The Imperial and Provincial *Sâli-nâmesi* of that time, together with other sources, are exploited in the important work by V. Cuiet, *La Turquie d'Asie*, Paris III, 1892, III/IV, 1894). Under the Turkish Republic, a similar series was started (*Türkiye Dişân-nâmesi Devlet Sâli-nâmesi*), but only 5 volumes have appeared so far (I, 1926; II, 1927; III, 1928; IV, 1929; V, 1930), and they do not contain nearly as much material as the earlier *sâli-nâmesi* of Ottoman times. Lastly, the lists of place-names may serve as sources for the most recent period, for instance: *Son teşkilât-ı mülkiyye Köylerimizin adları*, İstanbul 1928; *İdare Taksimatı*, 1942, İstanbul 1942; *Türkiye'de Meskun Yerler Kılavuzu*, 2 vols., Ankara 1946 and 1950.

#### Key to the map of Anatolia in the 17th century.

This map is based on the *Bevölkerungskarte der Türkei*, 1 : 4,000,000, by H. Louis, 1938. The entries are mainly taken from the *Dişân-nümâ* of Kâtib Çelebi, and therefore reflect conditions in Anatolia in the 17th century. The map shows the approximate limits of the *eyâlets* (within the present-day boundary of Turkey) as red broken lines, and in some cases those of the *hüdud* (or *sandjak*), within the *eyâlets*, as red dotted lines. It further shows the more important roads indicated by Kâtib Çelebi, Ewliyâ Çelebi and other sources, the main communication routes as double red lines, other routes as single red lines. The names of towns (in red) and of mountain peaks (in black, with heights in metres) are abbreviated, and the following list explains these abbreviations; first comes the name as it appears in the *Dişân-nümâ* and in the other sources of the 17th century, then, in brackets, the antique or Byzantine name (if known), the modern name (if different from the old one), the administrative district (except in the case of towns which have gained importance only later and therefore do not occur in the ancient sources; these have been put in brackets on the map), and finally the reference to the squares of the map. The names of the capitals of *eyâlets* are printed in small capitals, those of the capitals of *hüdud* in italics. General abbreviations: E. = Büyükk; G. = Çay, Çaylı; D. = Dağ, Dağlı; E. = Eyyalet; G. = Göç, Göçü; I. = İrmak; L. = Liwa; N. = Nehir, Nehri. For practical reasons, the transliteration has been based on modern Turkish orthography.

A D = Ağrı Dağı (Ararat : I 3)

(F. TAESCHNER)

ANADOLU. In the time between the 15th and the 18th century, this was the name applied to the province (*eyâlet*) comprising the western half of Anatolia [cf. preceding article] and embracing largely the western Anatolian Turkish principalities. At the beginning, Ankara was the capital and the seat of the governor (*beglerbeg*), later it was Kütahya. The *eyâlet* of Anadolu contained the following military districts (*sandjak* or *liud*) which were partly former principalities (in the order given by Katib Celebi in *Dihân-nümâ*): 1) Gerniyan with Kütahya as its capital; 2) Sarukhan with Magnesia (now Manisa); 3) Aydin with Tire; 4) Menteşe with Muğla; 5) Tekke with Antälyä; 6) Hamid with İsbarta; 7) Karahisar-ı Şâhib with the capital of the same name (later Atıyan Kara Hisâr); 8) Sultan Öyüğü (often in the corrupted form of Sultan Öni) with Eskişehir; 9) Ankara with the capital of the same name (also called Engürü); 10) Kankir with the capital of the same name (now Çankir); 11) Kastamonu with the capital of the same name (now Kastamonu); 12) Bolu with the capital of the same name (now Bolu); 13) Khudâwendigar with Bursa (Bursa); 14) Kodja-eli with Izniomid (later Izmit, Izmit). In addition there were the following *sandjaks* which were under the Kapudan Pasha: 1) Karas with Balıkesir; 2) Bığla with the capital of the same name and Ka'le-i Sultaniyye (or Çanak Ka'lesi); 3) Sığla with Izmir. [Cf. individual articles on each of the preceding.]

When other *eyâlets* besides Anadolu were formed in the Asiatic part of Turkey, the term Anadolu was loosely applied to the whole Asiatic half of the empire, inasmuch as there was in addition to the "Military Judge" (*kâdi 'asker*, pronounced *kazasker*) of Rumelia as highest judge in the European part of the empire, also such a one for the Asiatic half. The latter had to accompany the Pâdişâh on his campaigns into Asia. Besides the "accountant" (*defterdar*), i.e. the Minister of Finance, in Rumelia there was also one in Anatolia whose post, however, became a mere sinecure in comparison with the former.

The law of 7 Djumâdâ 1281/5 Nov. 1864, concerning *wilâyet*s, dissolves the excessively large *eyâlet* of Anadolu, raised the *sandjaks* of Khudâwendigar, Aydin, Ankara and Kastamonu to the status of *wilâyet*s, and assigned the remaining *sandjaks* to these.

(F. TAESCHNER)

**ANADOLU HIŞÂRİ**, a fortress (also known Güneşli Hisâr, Yenî, or *Alâ Hüsrî*) the narrowest part of the Bosphorus, built by Süleyman I in 1527/1528 in order to cut off communications between Byzantium and the Black Sea. I. 'Aşîkpaşa-zâde, ed. Giese, Leipzig 1928, 61, 11, 131; Negri, ed. Taeschner, 1, Leipzig 1951, 90; Bihaghi, *Ta'rih*; Solak-zâde, *Ta'rih*, Istanbul 1908, 64; Sa'd al-Din, *Tadh al-Fa'wâ'id*, Istanbul 1279, 1, 128; Müneddim-başı, *Şahâ'ir al-Âkâ'id*, Istanbul 1285, 110. Some improvements were made by Mehmed II during the erection of Rümeli Hisârî [q.v.] in 1452/1453 (hence he is wrongly named the founder of Anadolu Hisârî cf. Kâtib Çelebi, *Siyâhat-nâme*, 1, 664). Anadolu Hisârî played an important role before the battle of Varna, during the passage of Murâd II's army from the Anatolian to the European shore (cf. Negri, loc. cit.; Sa'd al-Din, 379; Müneddim-başı, 358; Lutfi Paşa, *Amîrîkâ-âli-â-Othmân*, Istanbul 1311, 117). After the conquest of Istanbul, the fortress lost its military importance, and when further changes in political power made it necessary to protect the Bosphorus again, Murâd IV built fortifications at Rümeli Kavagı and Anadolu Kavagı in order to repel the incursions of the Cossacks. The fortress is described by Ewliyâ Çelebi (*Siyâhat-nâme*, loc. cit.); after a long period of neglect, it was thoroughly restored in 1928. The sub-district called Anadolu Hisârî (already mentioned by Ewliyâ Çelebi), has about 1000 inhabitants (including Kanlıca and Çubuklu). The rivulets Güneş and Kâğız Su, known as the Sweet Waters of Europe, were formerly one of the most popular places for excursions from Istanbul, often mentioned in literature. Here, between the fortress and Kanlıca, stands the "maison de plaisance", the only surviving part of a villa built by Amîdî-zâde Husayn Paşa towards 1695, and one of the few remaining examples of early Ottoman civil architecture.

**ANÂHID** [see ZUHARA].

**ANÂK**, name given by the Arabs to the daughter of Adam, the twin sister of Seth, wife of Cain and mother of 'Qd [q.v.]; see *Djâhid*, *Tarîk* (Pellat) index.—In zoology, 'anâk denotes a kind of lynx, the caracal (from the Turkish *bara bulak* "black-ear", Persian *siyâk gâh*) found in much of Asia and Africa, which is thought to walk in front of the lion and, by its cry, to announce the latter's approach.—In astronomy, 'Anâk al-Band is the 7 of the Great Bear, and 'Anâk al-'Arâ, 7 Andromedae; see A. Benhamouda, *Les Noms arabes des étoiles*, in *IEO*, Algiers, ix, 1951, 84, 97. (Ed.)

**ANAMUR**, small town and harbour on the southern coast of Anatolia, 36° 6' N, 32° 10' E, capital of a *hüdâ* in the wilâyet of İöel, with 2734 inhabitants (1945); the *hüdâ* has 25,725 inhabitants. It is situated in a plain formed by the mouth of a little river, ca. 5 km. from the promontory of Anamur Burnu which forms the southernmost point of Anatolia. The town is called in medieval cartularies Stallimuri, Stalemura, etc. On the coast, at the foot and on the slopes of the Anamur Burnu are the extensive ruins of the late antique and early Christian town of Anemurium or Anemurion. At the east end of the plain of Anamur, close to the shore, lies Ma'mûriyye Kalfesi, a well-preserved

medieval fortress, which was made use of and repaired by the Ottomans; this is recorded by an inscription from 874/1469-70. Inside there is a small mosque.

**ANÂNİYYA**, Jewish sect of the adepts of 'Anân b. David (c. 760 A.D.), rather incorrectly considered to be the founder of the Karaites schismatic faction; his schism was only one of many which affected Rabbinical Judaism during the 8th-9th centuries. The Muslim authors seem to have taken most of their information about 'Anân and his sect from Karaites sources, especially Kirîshânî, but they have only used a small part of the mass of information supplied by him. The author of the *al-Badr* wa 'l-Ta'wîh represents 'Anân as a sort of Mu'tazilite, who professes the divine unity and justice and rejects anthropomorphism. The 'Anânîyya of Ibn Hazm are in fact the Karaites. Al-Bîrûnî is interested in their particular views regarding the calendar. Al-Shahrastânî, in addition to briefly mentioning their calendar and their prohibitions concerning food (M. Badran has rejected the correct reading into the footnote) comments on their favourable attitude to the person of Jesus. The later Muslim sources throw no fresh light on the subject. No Muslim author mentions the alleged meeting between 'Anân and Abû Hanîfa in the prisons of al-Manûsir. Although *siyâh* is recognized as a source of the law both by the Karaites and by the Hanafis, there is nothing to suggest that the latter influenced the former.

**Bibliography:** Abû Ya'kûb al-Kirîshânî, *al-Anûr wa 'l-Marâhib*, ed. L. Nemoj, New York 1939-45, index, s.v. Anan and Ananites; *Le Livre de la Création et de l'Histoire*, ed. and trans. by Cl. Huart, IV, Paris 1907, text 34-6, trans. 32-3; Ibn Hazm, *Fisal*, Cairo 1317, I, 99 (1247, 82); Bîrûnî, *Âkâr = The Chronology of Ancient Nations*, ed. and trans. by E. Sachau, text 58-9, cf. 284, trans. 68-9, cf. 278; Shahrastânî, *Mûlal*, ed. Cureton, 167-8, ed. M. Badran, 303-5. The most recent statement of the problems concerning 'Anân and the origins of Karaism is contained in the articles of Leon Nemoj: *Anan ben David. A re-appraisal of the historical data, Semitic Studies in Memory of Immanuel Löw*, Budapest 1947, 230-48; idem, *Yivo-Bleter*, 1949, 95-112; *JQR*, 1950, 307-15: the essentials of the earlier bibliography will be found there. (G. VAJDA)

**ANAPA**, a former fortress on the Black Sea, situated on the Bugur river 40 km. S.W. of the Kuban estuary. Built by French engineers for Sultan 'Abd al-Hamid I in 1781, it was unsuccessfully attacked by the Russians in 1787 and 1790, but stormed by Gen. Gudovich in 1791. Returned to Turkey by the treaty of Yassy (1791), it was in 1808 taken by the Russians but returned to Turkey in 1812. In 1828 it was blockaded by Admiral Greig and Prince Menshikov and ceded to Russia by the treaty of Adrianople of 1829 (article 4). In 1846 a town was built at Anapa. During the Crimean war it was first blown up by the Russians, then recaptured in 1856. In 1866 the inhabitants of Anapa were transferred to Temruk. In recent decades Anapa was used as a beach and rest home for children. It was destroyed by enemy action in 1942-3, and is now restored.

ANAS a. MĀLIK Abd HANZA, one of the most prolific traditionalists. After the *hidja* his mother gave him to the prophet as servant; according to his own statement he was then ten years of age. He was present at Badr, but took no part in the battle, and is therefore not counted among the combatants. He remained in Muhammad's service up to the time of the Prophet's death; later he took part in the wars of conquest. He also played small parts in the civil wars. In the year 55/64 he officiated as *imām* of the *ṣalāt* at Basra on behalf of the rival caliph 'Abd Allāh b. al-Zubayr. When 'Abd al-Rahmān b. al-Ash'ath revolted, al-Hajjāj charged Anas with being a partisan of the rebel just as he had formerly taken the part of the enemies of the Umayyads, 'Alī and Ibn al-Zubayr; and although Anas was highly respected as a Companion of the Prophet, al-Hajjāj had no scruples in putting round his neck a cord with his seal (72/90). It is said however that the caliph 'Abd al-Malik apologised for al-Hajjāj's disrespectful act. Anas died at Basra at a very advanced age, which is variously given as from 97 to 107 years, the dates most frequently mentioned are 91-93/99-711.

Traditions attributed to Anas are found, collected together, in the *Musnad* of al-Tayālīsī (Haydarābād 1342, Nos. 1959-2150) and in the *Musnad* of Ahmad b. Hanbal (Cairo 1313, iii, 98-292). Al-Dhahabī states that al-Buḥārī and Muslim record between them 278 traditions from Anas, of which he occurs in al-Buḥārī alone, 70 in Muslim alone, of 128 are common to both. It is not surprising that many traditions were attributed to the servant of the Prophet but while they may contain some genuine material, it is likely that they are mainly attributions of a later age; so Anas should not be blamed for all the strange statements given currency on his authority.

ANATOLIA [see ANADOLU].

ANATOMY [see TAGHRIL].

'ANAZA, short spear or staff (LA, vii, 231), usually synonymous with *barba*. In the Muslim ritual the 'anaza first appears in the year 2/62. When Muhammad first celebrated the 'id al-ḥar, Bilāl carried a spear (reportedly the gift of al-Zubayr, who had received it from the Najdī) before him on his way to the *muṣallā* [q.v.]; during the service this spear was planted in the ground and served as *sutra* and *hība* [q.v.]. The same was done on the 'id al-*anḥa*. This custom or carrying a spear or staff on ceremonial occasions was observed and expanded by the early caliphs. It became the rule for the preacher to hold in his hand, or to lean upon, a staff (*ḥaḥīb*), sword or bow when he ascends the pulpit at the Friday service. All these are symbols

expressing the same idea as the 'anaza, essentially that of authority (cf. the spear of Marduk). Among the ancient Arabs staff and pulpit were attributes of judge and orator.

The word survives as an architectural term in the Maghrib, where it signifies an external *mīhrāb* for those praying in the court of the mosque; see *Kirjās* (Tornberg), 30, 31, 32, 37 (inscript. dated 324 H.; cf. *RCIA*, no. 3031); E. Pauty, in *Repos*, 1923, 515-6.

'ANAZA, a very ancient, but still existing, Arab tribe. The classical genealogical scheme 'Anaza b. Rabī'a (Wienfeldt, Tab. A 6) has in recent times been changed in the same way as in the case of other tribes such as the Banū 'Atīyya in Northern Hijāz and Wā'il, the ancestor of the Bakr and Taghlib, is taken to be their tribal ancestor; in the most recent genealogies Kuraysh appears above Wā'il. Whether or the Rabī'a group are inter-related, as implied in the genealogy, they were in any case connected by neighbourly and other ties in their home, the Yamāma. The 'Anaza were living in the Tuwayk to the south of the Wādī Naḥb; there, in Haddā, a remnant of them, the Banu Hizzān, remain to this day. Settlements in al-Falāḥ were disappeared and 'Anaza villages south of Tā'if were destroyed by the plague in about 1200. The Banū 'Othā/Oṭhā, to which the ruling houses of Kuwayt and Bahrayn belong, also come from Haddā.

Accompanying some migrating Bakr, 'Anaza elements reached as far as the Euphrates in the second half of the 6th century, and like them, eventually stayed there. As allies of the Kays b. Tā'aḥaba, whose area was to the south of Basra, they took part in the East Arabian *ridā*. It is not known how and when they, and the 'Anaza who had remained behind, went over to Islam. It is said that they had previously worshipped the god Su'ayr/Sa'ir, and together with the 'Rabī'a', Mularrik, whose image stood in Salmān, to the south of Hira.

Some 'Anaza settled in Kufa, others migrated together with a group of Shaybān (Dairi to the region of Mosul, where they can be traced up to the second half of the 9th century. The ancestors of the present-day 'Anaza appear in the Harra of Khaybar in the 12th century. We do not know exactly whence they came: perhaps from the Tuwayk, perhaps from the area between 'Ayn al-Tamr and al-Anḥir (Ibn Sa'd quoted by Ibn Khallikān, *Hist. des Berbères*, I, 14). This new emigration must be Arabian Karmatians which completely changed the face of Bedouin Arabia. In the 16th century they extended as far as the Kaḥm in the east, to Dīār 'Anaza (= Wāḥis) f. east of al-'Ula in the north. Later they occupy that oasis itself and Madīn Salīh. The tribal division we find today begins to be recognizable as early as 1700: the Dī'els (Ruwall) moved to the south of the Harra Khaybar from Medina via Hanakīya to Samīra, the Sha'ba in the Wādī 'l-Ruma, as far as the Kaḥm; the 'Amārik in the Shammar mountains and in Eastern Arabia. The Fad'n may have been to the north of the Harra

where we find today the Wād Sulaymān, who are closely connected with them. The Wād 'Alī were to the west of Khaybar, and their close relatives, the Hesene, were most probably there too.

The new migration of the 'Anaza, the first stage of which lasts for over a century (ending with the arrival of the Dī'els (Ruwall) in Syria in the second half of the 18th century), began before 1700. In 1703 there is mention of them in Ma'nā, in 1705 on the Euphrates. This migration showed its aim because of the power of the *amirs* of the Mawālī in the north of the Syrian desert had been waning since the end of the 17th century, and because the tribe of Ghazīya was about to vacate the hinterland of Karballā and go over the Euphrates. The second stage of immigration into Syria and Mesopotamia began about 1800 and was due to the Wahābīs: the 'Anaza were partly on their side ('Amārik), and partly fled from their tax-collectors. In the 19th century the history of the 'Anaza is governed by their relations with the Turkish authorities and the house of Rashīd, the Shammar *amirs* of Hāyil. At the turn of the 20th century the Ruwall and their hereditary *ghayshs*, the Sha'lin, play an important part (the oasis of Dī'el was in the possession of the Sha'lin from 1900 to 1921). In the first World War, the 'Amārik joined the English after the fall of Baghdad (21 March 17). The Ruwall did not take part in allied operations until September 1918. Their *ghaysh*, al-Nūrī b. Sha'lin, entered Damascus with the British and Arab troops in October 1918. In the post-war troubles the 'Anaza frequently changed sides. The political reorganisation in the Middle East distributed the 'Anaza over Syria, 'Irāk, Transjordan and Saudi Arabia. The Fad'n, Sha'ba and Ruwall are regarded as Syrian, the 'Amārik (with the exception of those who stay permanently in the Naḥḥ), are regarded as 'Irākī citizens, although they periodically leave the territory of that state during their migrations.

There have always been two opposing groups within the 'Anaza: the Danā Muslim (Hesene, Wād 'Alī, Dī'els/Ruwall) and the Bīḥr (Fad'n, Sha'ba and 'Amārik). The last flare-up of this old animosity was quelled by the French in 1929. The Shammar, especially since the 'Anaza's advance to the north, and the inhabitants of the Saḥā and the Hawrān, particularly the Druze, are the hereditary enemies of the 'Anaza. This is the reason why the 'Anaza sided with the government in all Druze risings.

The 'Anaza's modern grazing areas are as follows. The Fad'n: in summer the area east of Aleppo and Hamā, especially to the east of the Euphrates; in winter the Syrian desert (al-Bīḥr—al-Ka'ra, at times as far as al-Rōda). The Sha'ba: in summer to the east and northeast of Hamā; in winter in the Syrian desert to the south of the Syria-Irāk border. The 'Amārik: in summer in the Dī'el, southeast of the Khābīr, mostly on 'Irākī territory, in winter in the south-eastern Syrian desert (al-Wudayn). The Hesene: in summer to the east of Hama; in winter in the Syrian desert close to the Syria-Irāk border. The Wād 'Alī: in summer to the northeast of Damascus and in the Hawrān plain; in winter in the heart of the Syrian desert as far as Dī'el and Taymā. Of the sections which remained in Arabia, the Fukār and the Wād 'Alī (both Danā Muslim) have their tents between the Harra of al-'Uwayrid and that of Khaybar; the Wād Sulaymān (Bīḥr) migrate between the Harra of Khaybar and the southern border of the Naḥḥ as far as Bēḥā Naḥḥ (to the southwest of Hāyil), where a *hadda* settlement of the *hadda* was founded in the twenties.

The northern 'Anaza are camel breeders. Sheep breeding is the main occupation of the Hesene and the Wād 'Alī (since 1900), and since 1920 the Fad'n and Ruwall have also increasingly taken to this. The Hesene and Wād 'Alī—also, more recently, the Sha'ba—have for some time been farming the land. In former times the 'Anaza had a right to part of the harvest of Khaybar; the tribes living there have retained that right. In Ottoman times the 'Anaza had a right to the *ḥara*, a payment for protecting the pilgrims' caravan in their area. If this was not, or only partly, paid, then they reimbursed themselves by plundering the *Madḥi* (as e.g. in 1700, 1703, 1757). A further source of income was the tolls raised from the caravans, and the *ḥisra* (protection money) collected from the settled population. The more prominent families among whom the office of *shaykh* is held, have considerable property in land, some of which dates back to donations of 'Abd al-Hamīd. In the Dī'el this is partly cultivated, following American methods, in partnership with town-dwellers.

ANBADUKLIS, the Arabic form of the name of Empedocles (often corrupted into Abiduklis, etc.). Some authentic information about his doctrines came down to the Muslims by way of such channels as the works of Aristotle, the doxography of P. Flutarch (e.g. I, 3, c. d. ed. Badawi); also quoted in Abū Sulaymān al-Mantrikī, *Sūnān al-Hikma*, introduction; al-Makdisī, *al-Badā'*, I, 139, II, 75), etc. The authentic Empedocles, however, plays no role in Islamic philosophy; on the other hand, his figure was appropriated by late Neoplatonic circles, and treatises in which Neoplatonic speculations were put into his mouth were translated into Arabic. The main representative of this literature is the *Book of the Five Substances*, the Arabic translation of which is lost, but parts of which are preserved in excerpts from a Hebrew translation made from the Arabic (see D. Kaufmann, *Studien über Salomon b. Gabirol*, Budapest 1909, I f.). It seems that the quotations in Ps.-Majritī, *Ghāyāt al-Hakīm*, 285, 290, 293-4, are from some closely related source (289 = ed. Kaufmann, § 13). Various Neoplatonic ideas are attributed to Empedocles in Ammonius, *Arā' al-Falāsifa* (MS Aya Sofia 2450; see fols. 109v ff., 130r), in which Neoplatonic doctrines are distributed among a number of ancient Greek philosophers. This work, quoted in al-Bīrūnī, *India*, 41-2, transl. 83 (the passage from Empedocles = MS Aya Sofia, fol. 130r), was also the main source of al-Shahrastānī's account of the ancient philosophers and also of that of Empedocles (al-Mīṭal, 230 ff.). In addition, however, al-Shahrastānī reproduces another text by "Empedocles" (262 L. 1-263 L. 18) from some other source. Al-Shahrastānī, in his *Ḥawādī* al-Aḥbāb, though mainly basing himself on al-Shahrastānī and Ibn al-Kifī, also has some additional passages (extracts in *Asin Palacios*).

AL-ANBĪR, in medieval Latin Alambic, is the name for that part of the distilling apparatus which is also called "head" or "cap". The word was borrowed from Greek ἀμβίς. *Al-anbīr* occurs as early as the 10th century in a translation of Dioscorides, in the *Maḥādīd al-Yūṣuf* and in al-Rāzī. The *anbīr* is often referred to as "one of the apparatuses used in distilling rose-water".

The complete distilling apparatus consists of three parts: the "cucurbit" (*karā*), the "head" or "cap" (*anbīr*) and the "receiver" (*balḥā*). Modern retorts have the "cup" and the "cucurbit" made into one. —Illustrations of distilling apparatuses in Arabian manuscripts are to be found in al-Dīmīshqī's *Compendium* (Mehren) 194 ff. Whereas usually however the cucurbit is surmounted by the cap, here it is placed in front of it. In the former case the cap has the shape of a cupping-glass, as it is represented in the *Maḥādīd* (ed. van Vloten, 227). The *anbīr* is described by Ibn al-'Awwām (transl. Clément Mullet, ii, 344) where he explains how rose-water is distilled. But in this description the name does not always refer to the entire "cap", but often to the additional faucet-pipe only, which fits onto it (that is, if the text is not corrupt). The *anbīr* is also called the *ra's* (head) of the cucurbit.

The *anbīr* is mentioned in the various lists of chemical apparatuses, amongst others in the *Maḥādīd al-Yūṣuf*, in the *Kutub al-Aṣṣar* of al-Rāzī, where different kinds are enumerated and described, and in a text written in Karshūnī, which has been published by Berthelot and shows close similarity to al-Rāzī's account.

Special kinds of *anbīr* are the blind *anbīr*, which has no additional faucet and is consequently closed, the *anbīr* with a beak, and others of various shapes. In Ibn al-'Awwām the appendix is also called *qanāḥ* (as Cl. Mullet prefers to read it) or *qanāḥ* as the text has it and as Dozy would like to retain, because he combines the additional faucet with a worm-pipe used in condensing (but no illustrations of the latter can be found).

As the Arabian alchemists mainly depend on the Greek alchemists, the illustrations which are found in the works of the ancients can be turned to account. Some also occur in the Latin translations of the latter can be found.

AL-ANDALUS, or QAZIRAT AL-ANDALUS, geographical term which, in the Islamic world up to the end of the Middle Ages, denoted the Iberian peninsula, that is, modern Spain and Portugal.

(i) Toponymic significance of the term al-Andalus; (ii) Geographical survey; (iii) Outline of its historical geography; (iv) Population of al-Andalus; (v) Development; (vi) Survey of the history of al-Andalus; Appendix: *The Andalus in North Africa*; (vii) Islam in al-Andalus; (viii) Andalusian literature and culture; (ix) Andalusian art; (x) Spanish Arabic.

#### (i) TOPONYMIC SIGNIFICANCE OF THE TERM AL-ANDALUS

The name al-Andalus is hypothetically connected with that of the Vandals (al-Andaliq), who named Baetica "Vandalia" when they crossed the Iberian Peninsula before their invasion of North Africa; al-Andalus is mentioned as early as 98/716 on a bilingual *dirar*, the Latin inscription giving as its equivalent the term "Spania". The latter term, or its doublet "Hispania", were the only ones by the earliest Spanish Latin chroniclers to denote the Iberian Peninsula as a whole, that is, the two Spains, Christian and Muslim. On the other hand, the use of the term al-Andalus by Arab writers appears always to have been confined to Muslim Spain, whatever its territorial extent, which was progressively reduced in size by the Christian Reconquest (the Spanish equivalent "Reconquista" will always be used in this article). Even when Islamic power in the Peninsula was restricted to the tiny Nasrid principality of Granada, the term al-Andalus was used to denote the territory of this small Kingdom alone. On the other hand, there had been in existence for some time in the Muslim chroniclers the names (in Arabic form) of Ighāniya (Hispania, España) and the Christian principalities formed as a result of the Reconquista: Liryūn (Leon), Kaṣṭilla or Kaṣṭilla (Castilla, Castile), Burtukāl (Portugal, Aragón) (Aragón), Nabārra (Navarre).

From the name al-Andalus—the form al-Andalus is sometimes found, especially in Ibn Kurrūm—derive the ethnic form *andalusi* and the collective form *ahl al-Andalus*. This term is retained in modern usage to denote the geographical area formed by the Sub-Mediterranean region (littoral zones and highlands) corresponding, from East to West, from the modern province of Almería to that of Huelva, to the natural region of Andalusia (Spain, Andalusia), the inhabitants of which are called Andalusians (sing. Andalusī).

#### (ii) GEOGRAPHICAL SURVEY

1. Physical situation. S-W of Europe, the Iberian Peninsula forms a massive promontory almost pentagonal in shape, joined to the continent by the range of the Pyrenees, and washed on the remaining sides by the Atlantic and the Mediterranean. It is situated between 43° 27' 25" and 35° 59' 30" N, and 9° 30' and 3° 19' E. Its surface area is about 229,000 sq. m., modern Portugal constituting less than a fifth of this total (modern Spain has an area of 195,000 sq. m.).

The situation of the peninsula at the western end of the Mediterranean basin, with a large Atlantic seaboard, explains many episodes in its history.

Cut off by the barrier of the Pyrenees from the rest of the continent of Europe, it is only separated from Africa by the narrow Straits of Gibraltar, bounded to the N. and S. by the bridgeheads of Tarifa and Ceuta. It has as a result acquired an insular character, which has for long isolated the Iberian bloc from trans-Pyrenean influences, while leaving it open to earliest stimuli by contact with influences via the classical Mediterranean approach route.

The Spanish Peninsula has one of the most broken terrains in Europe. A general examination of its structure reveals that it consists basically of a large central plateau which constitutes at least half of the total area, the Meseta, with a mean altitude of 1,965 ft., comprising the two Castles, Old (Castilla la Vieja) and New (Castilla la Nueva), and the Estramadura. The Meseta is bounded by high mountain escarpments; to the North, the Cantabrian range; to the North-East and East, the range of the Iberian Mts., to the South, the successive tiers of the Sierra Morena (Subbaetic range); to the West, the high table-lands of Galicia and Portugal. The plateau possesses three deep central depressions; those of the Ebro, the Guadalquivir and the lower Tago. To the South, the upheaval of the "Penibaetic system" has thrown up a mountain mass which comprises the greater part of Upper Andalusia and shows a confused series of ranges (Span. *sierra*, "saw"; Ar. *al-shārāt*), of which the highest is the Sierra Nevada (highest point; the Mulhacín, 11,420 ft.).

As a result of this tortuous orographic formation, the mean ground elevation of the Peninsula is not less than 2,160 ft. The additional fact that the proportion of lowlands, of an altitude of less than 1,645 ft., is only 40%, shows the difficulties which have always been encountered, over the greater part of the country, in exploiting a soil which, because of the inadequate rainfall and the meagre supply from the rivers, is generally arid.

2. Climate.—The Peninsula has a dry, generally temperate, climate, despite extreme variations of temperature in the high and mean altitude regions, which escape the moderating influence of the Atlantic or the Mediterranean. Here the winters are severe and the summers torrid. The sub-littoral zones are an exception, especially the largely exposed depression of maritime Andalusia.

As regards rainfall, a distinction must be drawn between dry Spain and wet Spain. The latter comprises, starting from the western prong of the Pyrenees, the Basque country, the Cantabrian coast and nearly all modern Portugal. Dry Spain, which covers nearly 2/3 of the Peninsula, has an essentially erratic rainfall, varying from the annual average of 23 ins. to less than 15 ins. In many cases, the beneficial effects of the rain are nullified by evaporation, wherever it is not possible, as in the Levant (the region of Valencia and Murcia), to remedy this state of affairs by the irrigation of parched lands.

The North and North-West of the Peninsula, and in general all the Atlantic seaboard, enjoy, as a result of the humidity and prevalence of clouds which are features of the region, comparatively mild weather. Similarly, in the Mediterranean zone, from Catalonia and Levante to the Andalusian coast, the winters are mild, with a characteristically high sunshine record and clear, bright atmospheric conditions.

3. Hydrography. The physical formation and climate of the country, and the frequently impermeable nature of the soil, explain the Peninsula's

water shortage and the irregularity of the supply from its rivers, which are nearly always dry during the dog-days, when evaporation is at its highest. These rivers have the same characteristics as North African *wadis*; they are either almost completely dry, or else sudden spates transform them into torrents, with the disastrous concomitant effects of erosion and removal by alluvium.

The rivers which flow towards the north and west are in general coastal rivers of no great length, the chief one being the Miño (Portuguese Minho), which forms the northern frontier of Portugal and discharges its waters into the Atlantic. Three other rivers, which have an extremely irregular supply of water and which drain the waters of the Meseta, also flow towards the Atlantic; the Duero (Port. Douro), the Tago (Span. Tago, Port. Tejo), and the Guadalquivir, whose estuary forms the southern frontier between Spain and Portugal. The most important river of the Peninsula is the Guadalquivir which, rising in one of the mountain groups in the South-East of the Meseta, is swelled by several tributaries, the most important being the Genil, which issues from the Sierra Nevada and is fed in summer by the melting snows from that massif. The Guadalquivir is the only river in the Peninsula whose lower course is navigable (over the last 75 miles). Several *wadis* of a torrential nature reach the Levantine coast; they issue from the edge of the Meseta and provide, by means of dams, rather uncertain reserves of water for irrigation. The chief of these are the Segura and the Júcar, to-day used for the improvement of the *huertas* of Valencia.

The Ebro, which rises in the Basque country, is fed by the southern slopes of the Pyrenees (Aragón, Segura), and, after a difficult course, during which the gentleness of the gradients gradually reduces the volume of its waters in its lower reaches, turns towards the Mediterranean, into which it discharges after crossing an alluvial delta of considerable size.

4. General characteristics. The subsoil of the Peninsula is especially rich in metalliferous strata: lead, silver, iron, copper, manganese, marble. It is also rich in the natural salts, saltpetre, magnesium and silicates. The vegetation varies completely between dry Spain and wet Spain. In the former, three types of vegetation, more often associated with the Mediterranean zone, predominate: the forests (non-deciduous trees, various kinds of pines and holm oaks or cork-trees), the foothills (Span. *monte bajo*), and the steppe (scrub, *esparto*). In wet Spain, on the other hand, the countryside is green all the year round, owing to the presence of forests and natural prairies.

As a result of this natural variety Spain is a country of the greatest possible contrast. It is a commonplace to state that it is frequently possible to pass almost without transition from a river valley (e.g., with its luxuriant vegetation, to the steppe burnt by the sun and the wind).

#### (iii) OUTLINE OF THE HISTORICAL GEOGRAPHY OF AL-ANDALUS

1. Descriptions of al-Andalus. The works of the Arab geographers, both eastern and western, which have come down to us constitute the essential part of our knowledge of al-Andalus in the Middle Ages, its development and the exploitation of its

natural resources. First, there are the Road Books (*masālik*) published by De Goeje in *BGA*, which only devote a limited amount of space to Spain: the oldest, those of Ibn Khurrādādhbih, al-Ya'qūbī, Ibn al-Fakih and Ibn Rusta, contain such brief descriptions that one assumes that up to the 4th/10th century al-Andalus was a province of Islam little known to the eastern world. From the time of the restoration of the Marwānid Caliphate at Cordova, the geographical documentation on al-Andalus becomes systematised, although still not elaborated in great detail. The expositions on al-Andalus by al-Isṭakhṛī (d. 322/934) concern agriculture and commerce, and describe fourteen itineraries in the interior of the Peninsula. His contemporary Ibn Hawkal had the advantage of having himself visited Spain and of having brought his documentation up to date by the interrogation of informants en route; the picture of al-Andalus revealed by the pen of this pro-Fatimid writer, is too often partial, but it is nevertheless the first rational description, at once full and coherent, of the Cordovan Kingdom, which has come down to us. Equally worthy of attention is the account of Ibn al-Mukāddasī (end of 10th century) who, although he had not himself visited the Peninsula, makes important statements, apparently based on good authority, concerning in particular the intellectual life, the language, the metrology and the trade of the country.

From the time of the Caliphate, and in the centuries following, all the descriptions of al-Andalus, written primarily in the West, were modelled on the description which the celebrated Cordovan chronicler of oriental origin Ahmad al-Rāzī (d. 344/955) placed at the head of his great history of al-Andalus, now lost, and which was used as a source for quotation, usually without acknowledgement, particularly by the compiler Yāqūt in his *Ma'ājam al-Bulad*. The "Description" of al-Rāzī is only known to us in a Castilian version, published in 1852 by F. de Goyanes and derived from a Portuguese version executed about the beginning of the 14th century at the order of King Denis of Portugal (1279-1325); the author of the present article has translated it into French and attempted to reconstruct the original Arabic (In *And.*, 1955, 51-108).

It is thus clear that the plan of the "Description" of Ahmad al-Rāzī, though on the whole only sketched in outline, has served as a framework for most later descriptions; among the latter pride of place must be given to the description of the Andalusian Abū 'Ubayd al-Bakrī (d. 487/1094), which unfortunately is lost, but which can be largely reconstructed from the notices on al-Andalus in the *al-Rawḍ al-Mi'wār* of the Maghribī compiler of the 7th/14th century Ibn 'Abd al-Mu'izz al-Himyarī, who has also made use of material from al-Sharif al-Idrīsī. To this list must be added, in addition to the collections of *'adja'ib* relative to al-Andalus contained in the works of al-Kawṣinī and al-Dimashqī, the notices, sometimes of considerable length, collected by the Maghribī al-Makkārī (17th century) in the first volume of his *Nafh al-Th*.

**Bibliography:** General survey in Lévi-Provençal, *Hist. Exp. mar.*, p. 233-9. The description of Spain appearing in the *BGA*, are: Ibn Khurrādādhbih and Ibn Rusta (French trans. by G. Wiet, Cairo 1937, 217-221), al-Isṭakhṛī, *BGA*, v, 37-46; Ibn Hawkal, *BGA*, ii, 74-9, to be studied in the new edition of J. H. Kramers, Leiden 1938, i, 208-17; al-Mukāddasī, *BGA*, iii, 215-48 (French trans. by Ch. Pellat, Algiers, 1950).

On the geographical literature of al-Andalus, the most complete work, despite many imperfections, is that of J. A. Menéndez Pidal, *La Geografía de la Península ibérica en los escritores árabes*, Granada 1921 (extract from the *Rev. del Centro de Est. hist. de Granada y su reino*). Cf. also al-Idrīsī, *Nuḥḥat al-Maghārib* (Drey and de Goeje, *Description de l'Afrique et de l'Espagne*, Leiden, 1800, text 165-214, Fr. trans. 197-260); E. Lévi-Provençal, *La Península ibérique au moyen âge d'après le Kitāb al-Rawḍ al-Mi'wār*, London 1958.

2. Physical geography of al-Andalus according to Muslim geographical tradition.—According to al-Rāzī, al-Andalus forms the extremity of the fourth rīd towards the West. It is a country mainly watered by numerous rivers and sweet water springs. The geographers, after this declaration, usually launch into panegyrics and devote much space to *laudes Hispaniae* rather in the manner of Isidore of Seville.

Al-Andalus is triangular in shape. Each of the angles of this triangle corresponds to a place famous in the traditions of Hispanic legend. On the angle at the apex, in the South-West, rises the temple of Cadiz, *Susana Yādī* (p. 4); the second angle is situated on the latitude of the Balearic Islands between Narbonne and Bordeaux (sic); the third, in the North-West, corresponds to the Tuerre de Hercules, near Corunna. These ideas are also partly illustrated by the maps of the Road Books, Ibn Hawkal and al-Idrīsī. al-Rāzī has clearly grasped one of the characteristics of the physical structure of the Peninsula: in his opinion, a distinction must be made between western Spain and eastern Spain, taking into account the differences in the direction of the winds, the rainfall and the course of the rivers. In western Spain, the rivers flow towards the Atlantic and rain is brought by the westerly winds. The opposite is true of eastern Spain, where easterly winds prevail and the rivers flow eastwards.

Other landmarks are often given to mark some of the points of the "triangle" formed by al-Andalus: Cape St. Vincent, at the south-western extremity of Portugal, in Arabic the "Church of the Crow" (Kansat al-Ḥurūb); the Temple of Venus, at the opposite extremity, Haykal al-Zahra (Port-Vendres).

On approaching al-Andalus from continental Europe, Gaul (Ḥishāq) or the "Great Land" (al-ard al-Kabira), one must cross the range of the Pyrenees by one or other of the passes (*abwāb*) or "gates" (*burāḥ*) in order to reach the land of the Gascons (al-Baḥḥānīsh) or that of the Franks (al-Ifrānḡ). From there, it is possible to reach the shores of the Atlantic, called the "Sea of Darkness" (*Bahr al-Zulmāt*) or the "green sea" (*al-Bahr al-Aḥḡar*) or the "Surrounding Sea" (*al-Bahr al-Maḥḡh*). In this dangerous ocean a number of intrepid mariners carried on coastal trade from the land of the Blacks and the Canary Islands, the "Fortunate Islands" (*al-Ḥāḡḡidāt*), as far as the confines of Great Britain (Britāniya). The Mediterranean is known as the "Great Sea" (*al-Bahr al-Kabir*), the "Middle Sea" (*al-Bahr al-Mutawassit*) or even the "Tyrrhenian Sea" (*Bahr Trān*).

In the opinion of al-Rāzī, there are only three mountain ranges in Spain, which traverse the Peninsula from one sea to the other, and none of which is crossed by a river. The first of these ranges is the Sierra Morena, called Mountains of Cordova (Ḥijāb Kurtuba), which rises from the Mediterranean coast of Levante and terminates in Algarve, on the Atlantic. The second is the Pyrenean range,

between Narbonne and Galicia. The third cuts Spain obliquely, from Tortosa to Lisbon. It corresponds to the transverse range called al-Sharrāt, according to al-Idrīsī. However, the geographer is obliged to mention in addition the Sierra Nevada (Ḥijāb Shulayr, "Mons Solaris") and the Serrania of Malaga (Ḥijāb Rayy) which extends as far as Algeciras.

The chief river of al-Andalus is the "Great River" (*al-Wādī 'l-Kabir*), Guadalquivir, also known as al-Nahr al-A'zam and Nahr Kurtuba "River of Cordova". It is sometimes referred to by its ancient name of Nahr Btī ("Baetis"). It is 310 miles in length. It is the river of Baetica, the richest part of the Peninsula, and waters Cordova and Seville. Its chief tributaries are the Genil (Wādī Sindil or Shandī), which flows through Granada, Loja and Ecija; the Guadajoz (Wādī Shūḡh); the Guadalquivir (al-Wādī 'l-Ahmār), thus named because of the reddish colour of its waters; and the Guadalbullón (Wādī Bullūn).

The Guadiana (Wādī Ānā) has a total length of 320 miles and rises not far from the source of the Guadalquivir. It runs underground for part of its course, and re-emerges in the Calatrava region. It discharges into the Atlantic at Osonoba.

The Tagus (Wādī Tāḡūḡ) rises in the mountains of Toledo and, after a course of 580 miles, flows into the Atlantic at Lisbon. Further north still is the Duero (Wādī Duwayro), 780 miles long, which is fed by several tributaries and flows into the Atlantic at Oporto (Burtāq). Another important river, also flowing into the Atlantic, is the Miño (Portuguese Minho), Nahr Mīnyo, which crosses Galicia from East to West and is 300 miles long.

Of the rivers which flow towards the Mediterranean, al-Rāzī only mentions the Segura (Wādī Shakra) which rises near the sources of the Guadalquivir and the Ebro (Río Ebro = Wādī Ibro); the latter rises at Fontibre, in Upper Castile and eventually reaches the sea not far from Tortosa, a distance of 204 miles. The Ebro has numerous tributaries, including the Río Gallego (Nahr Ḥillik), which comes down from the mountains of Cerdagne (Ḥijāb al-Sirtāniyyin).

3. Urban toponymy and territorial divisions of al-Andalus. Al-Andalus is notable, at all periods of its Muslim history, for the number of its cities, towns and villages, and for the contrast with the relative poverty of North Africa, as regards population centres of equal importance. Nearly all the towns of Roman Spain survived the Arab invasion and continued to prosper. On the other hand, the new towns founded by the conquerors were not numerous and were almost always built for strategic reasons or as coastal bases intended to neutralise the aggressive ambitions of the Fatimids in the western Mediterranean, for instance, Murcia (Mursiya) which replaced the old town of Ello, and Almería (al-Mariyya), which was at first simply a coastal observation post before being developed in the 10th century as an arsenal and naval station. In most cases, the old Latin place-names survived virtually intact, for instance, Cordoba (Kurtuba), Huelva (Ighbīla), Casarranaga (Sarakhata), Valencia (Balansiya), or else assumed a diminutive form, as Toledo, Toledo becoming Toletula/Tulaytula. Certain place-names of historical interest had their origin in puns, Ocili becoming Madinat Sālim/Madināsal, which gave rise to the mythical existence of a pseudo-found named Sālim. Towns with a descriptive Arabic name were the exception:

e.g. the "Green Island", al-Ḥijāzira al-Ḥadāḡ (Algeciras). Some places bore the name of the Arab or Berber tribe which had populated them after the conquest: Baly (Poley), Ḥāḡāfik north of Cordova, Miknasa (Mequinenza) in Aragón. In Levante, as evidence of a more profound Arab influence, many place-names were the names of "stages" coupled with an Arab forename (e.g. Manūl 'Atā' (Mislata), Manzil Naur (Masanasa), in the suburbs of Valencia. Many place-names of the Valencia region were formed like names of tribes, with *Bani* plus the name of the eponymous ancestor (see Lévi-Provençal, *Hist. Exp. mar.*, iii, 326-8).

At the time when Ahmad al-Rāzī wrote his description of al-Andalus, Muslim Spain was already separated from Christian Spain by a boundary line, a sort of no man's land, flanked along its periphery by three Marches (ḥuḡḡūr): al-a'ā, al-awṣat, al-ādā. Already many regions of the Peninsula, long since evacuated under the pressure of the first manifestations of the Reconquista, had been finally severed from al-Andalus; the Hispanic March in the East, the Basque country in the centre, the Cantabrian coast in the West. The famous expedition led against Santiago de Compostela (Shant Yāḡāḡ) by the 'Amirid al-Manṣūr was no more than a spectacular raid without lasting effect. During the period of the Caliphate, therefore, Islam definitively lost part of Spain and did not seek to recover it. The provincial organisation of al-Andalus, however, remained unchanged.

This organisation dated from the 8th century, and was therefore prior to the Marwānid restoration. It was based on the provincial districts (*āras*), which had a chief town, a governor and a garrison. The lists of *āras* under the Caliphate differ widely; al-Mukāddasī gives an incomplete list of only 18 names. Yāqūt enumerates 47, a figure approached by al-Rāzī, who describes successively 37. Later, al-Idrīsī introduced a division not into *āras*, but into "climes" (*aklīm*), with no administrative significance and putting forward many names which must be firmly rejected as apocryphal. By utilising the information given by al-Rāzī, who follows a concentric order round the capital, and al-Bakrī, the principal features of each of the main *āras* of the provincial organisation under the Caliphate can easily be determined. The *āras* usually had the same name as their chief town, apart from a few exceptions noted below: the most important *āras* was that of Cordova, bounded to the north by that of the Falṣ al-Ballūḡ (Llano de los Pedroches, "plateau of the oaks"), whose chief place was Ḥāḡāfik (doubtless the modern Belalcázar; cf. F. Hernandez, in *And.*, 1944, 71-109). On the other side of the fluvial plain of Cordova (al-Kanbāniya, modern la Campiña), to the south of the Guadalquivir, lay the small *āras* of Caba (Kabira) and Ecija (Istidjā). Further west were the rich districts of Carmona (Karmāna), Seville (Ishbīliya) and Niebla (Labla). The *āras* of Osonoba (Uḡḡḡḡnuba), with Silves (Shībī) as its chief town, corresponded to Algarve (Ḥaḡḡar al-Andalus, i.e., the southern border of modern Portugal) on the Atlantic. North of this district lay that of Beja (Bādja). The southernmost part of al-Andalus was divided into four *āras*: Meron (Mawrūn), Sidona (Shadḡhūna), chief town Cabena (Kāshḡhāna), Algeciras and Tacaronna (Tākurrūna), chief town Ronda (Rūnda). Further east, the *āras* of Malaga (Māḡāla), which was called Rayyō, had as its first chief town Archidona (Urḡḡḡḡḡna); it was adjacent to the *āras* of Elvira (Ilbira, formerly Ilberria), a

state and contributed in no small measure to its rapid collapse.

The Berber, Arab and other Muslim foreign elements, important though they were, were numerically far inferior to the much more important group of the Spanish neo-Muslims, who were known in al-Andalus by the generic terms *musulima* or, more especially, *musuladun*. These were Spaniards who, during or after the Conquest, had adopted Islam in order to enjoy a better personal status than that of *dhimmi*. The complete and rapid arabicisation of all these converts to Islam, to which in the vast majority of cases they displayed a deep and sincere attachment, is a remarkable phenomenon. In a short time the *musuladun* became assimilated into Muslim society and enabled the rulers of the country, by the rational use of their services, to make good the lack of emigrants of old Muslim stock. Many *musuladun*, soon fused in the melting-pot of Andalusian society, lost even the memory of their Spanish (Iberian or Gothic) origin, although they often bore Romance names. The co-existence within Islam of elements of population of such diverse origin, led to their gradual fusion, a process which was aided by the adoption of an identical way and rhythm of life and by the bilingualism which, at least in everyday life, placed Spanish Arabic and the Romance tongue (*al-ʿadamiyya*) on the same footing.

The Muslim population of al-Andalus, which was so composite in origin, but which gradually became relatively homogeneous, was divided in the tenth century into a certain number of social classes, in the same way as the rest of the Islamic world: *khāṣṣa* and *ʿamma*. The former comprised the great noble families who were often hereditary grantees, while the middle class, composed of merchants and small land owners, soon became a sort of urban bourgeoisie, though without charters or immunities. In contrast, the plebs or *ʿamma*, in the towns and particularly in the country, constituted an obscure mass subjected to severe vexation by authority. As there is virtually no information on the agrarian law which was in force in al-Andalus, one is compelled to postulate the existence, undoubtedly necessary, of a rural proletariat, composed of day-labourers tied to the soil and leading a particularly wretched existence, mostly unable to escape their servile condition.

The tributaries (*muʿabidin*) in Andalusian society formed an important part of the population and comprised both Christians and Jews. The former, usually grouped under the general name of Mozarabes, all belonged to that part of the Spanish population which, at the time of the Conquest, had refused to renounce its faith in order to adopt that of the conquerors. In the large towns at least, notably in Cordova, Seville and Toledo, the Mozarab communities were organised under the protection and control of the Muslim central authority, with a leader responsible to that authority, the *comes* (*hāim*), sometimes also called *defensor* or *procurator*. He exercised over his community the powers of a police magistrate, and had the duty and responsibility of collecting the taxes; he was assisted by a special judge, *censor* or *hādī* *ʿl-ʿadām*, who settled disputes between the Mozarabs. The territory of al-Andalus, up to the end of the 11th century, remained divided into the same ecclesiastical districts as at the time of the Visigoths, namely, three metropolitan provinces (Toledo, Lusitania and Baetica), each with an archbishopric and several dioceses. The details have been preserved for us by al-Bakrī in

what he calls "Constantine's partition". The names have been preserved of some very rare church dignitaries of al-Andalus under the Caliphate. The Mozarab community about which we possess the most information, though not numerically the most important, is that of Cordova.

We have even less information as to the numbers and activities of the Jewish communities in the towns of al-Andalus, each of which had a Jewish quarter (*ḥarāt* or *madīnat al-Yahūd*, Span. *Judería*). At the same time, in the 11th century, and especially in the Zirid Kingdom of Granada, the part played by Jewish excise officials and treasurers, the importance of the Banu ʿI-Naghralā family, the pogrom unleashed in Granada following the murder of the Crown Prince Buluggin b. Bādīs b. Ḥabūs b. Zīrī, and the importance accorded in the economy of the small state of Granada to the large Jewish community which formed the bulk of the population in the town of Lucena (*al-Yusūdā*), give rise to the belief that the Jews of al-Andalus, at all stages of the Reconquista, in the service of Muslims or Christians, played an active part in the country as counsellors and ambassadors, and that they controlled the main commercial channels between al-Andalus and continental Europe on the one hand, and the Muslim East on the other. In this connection, much may be expected from the study of the documents obtained in particular from the Geniza of Cairo.

**Bibliography:** The material given above in outline will be found in greater detail, with references, in Lévy-Provençal, *Hist. Esp. musul.* iii, 165-212. Graetz, *Geschichte der Juden*, vols. 5-7, Leipzig 1871-3; *idem*, *Les Juifs d'Espagne*, trans. into French by Stenke, Paris 1872; J. Amador de los Ríos, *Historia social, política y religiosa de los Judíos de España y Portugal*, Madrid 1875.

#### (v) THE DEVELOPMENT OF AL-ANDALUS

It is primarily the geographers who have given us more or less detailed information on the manner in which the soil of al-Andalus was cultivated and its vegetable and mineral resources exploited. We also possess a fairly extensive technical literature, formed by agronomic works of various periods, notably those of al-Tighnārī, Ibn Wāṣil, Ibn Ḥaṣṣāl, Ibn Luyūn and Ibn al-ʿAwwām. Mention must also be made of the "Cordovan Calendar of the year 961", published in 1873 by Dozy, at the same time as a definitely later version, and attributed to the Cordovan chronicler ʿArīb b. Saʿd [q.v.]. Unfortunately, this technical literature gives us practically no information on the methods of cultivation and on contracts of lease, questions on which certain juridical works give us information which is too vague for complete reliance to be placed on it.

1. Agriculture. As to-day in Spain, there was a distinction between dry land (Span. *secano* = Ar. *ḥaʿl*) and irrigated land (Span. *regadío* = Ar. *saḥy*), the former being reserved for the cultivation of cereals. Owing to the poor quality of the soil and unfavourable climatic conditions, the cultivation of cereals was quite inadequate to provide the population with wheat and other bread grains; consequently al-Andalus, at certain periods of famine, had to rely on imports of North African wheat. Some varieties of Andalusian wheat (Toledo) were especi-

ally renowned. Millers used either horse-driven mills (*hāḥāna*) or water-mills (*raḥā*).

Vast stretches of country, especially in Andalusia and the Aljarafe region, were covered with olive-trees, and the olive oil industry was always extremely active there. Extraction methods were primitive, but the quantities of oil produced were sometimes in excess of local need, and the surplus was exported to the rest of the Islamic world.

The cultivation of the vine, like other forms of dry cultivation, seems to have been extensively practised. Raisins were used for cooking, and above all the consumption of wine was virtually tolerated and its sale regulated.

It was, however, in the sphere of crops needing suitable irrigation, that the Andalusians soon achieved an unchallenged supremacy, although it is not possible to attribute to them the invention of the system of irrigation which they used, in particular in the East of al-Andalus, and which still exists without substantial modification. The simplest form of irrigation was that practised with the aid of a network of irrigation channels (*al-ayya*, Span. *acequia*) which criss-crossed the littoral plains of the Murcia and Valencia regions, and in which the flow of water depended entirely on differences of level. Water rights were fixed by custom according to a code, patriarchal in character, which is also still in use to-day. On the higher ground and in the valleys of rivers such as the Guadiana, Tagus and Ebro, irrigation could only be carried out with the aid of pumping machines, named, according to their type and function, *na'irā* (Span. and Fr. *noría*) or *zāmiya* (Span. *acoria*). This irrigation was used for the cultivation of vegetables and trees. The geographers view with one another in their praises of the fruits of al-Andalus: cherries, apples and pears, almonds and pomegranates, and above all figs, of which numerous varieties were known in Spain. In some unusually sheltered coastal strips it was possible to grow crops of a sub-tropical nature: sugar-cane, bananas. The palm-groves of Elche (*Alfā* [g.a.]) were one of the sights of the country.

Finally, the cultivation of aromatic herbs and plants used for making cloth was also carried on to a considerable scale; saffron, safflower, cumin, coriander, madder and henna, on the one hand, flax and cotton on the other. Silk cultivation flourished, mainly between Granada and the Mediterranean.

The geographers, in their descriptions, have devoted little space to the rearing of saddle- and draught-animals or animals for meat. Horses were bred in the grass-lands of the lower Guadalquivir, and Andalusian mules were already celebrated by the time of Ibn Hawkal. Cattle, sheep and goats were reared everywhere, making use of the meagre pasture available. Apiculture, for the production of honey, was also practised.

The forest region of al-Andalus was exploited for the needs of the towns, notably charcoal. Pines, numerous on the edges of the Meseta, were felled for use as joints or ships' masts. The great steppe-like expanses of the south-east furnished an abundance of dwarf palms and esparto, used in basket-making and domestic purposes.

2. Mineral exploitation. The richness of the subsoil of al-Andalus justified mineral exploitation from earliest times, and the process continued during the Muslim era. Apart from gold, extracted from the gold-bearing sand of certain rivers, veins of silver and iron were mined north of Cordova, and

deposits of cinnabar were exploited at Almaden and Ovejo. Copper was produced from pyrite mines of the Huelva region. Alum, sulphate of iron, lead and galena were also extracted. Muslim Spain was also renowned for its marble and precious stones. Like the Romans before them, the Andalusians made use of many thermal springs, nearly all of which still retain their old name of *Alhama* (Ar. *al-hama*).

The exploitation of the rock-salt mines and the salt-deposits on the coast at Cadiz, Almeria and Alicante was a flourishing industry. Fishing was carried on, especially with string-nets and tunny-nets (Ar. *al-maḥraḥa*); sardines and tunny were caught in large quantities.

#### (VI) GENERAL SURVEY OF THE HISTORY OF AL-ANDALUS

It is only possible to give here a brief outline of the development of the history of al-Andalus during the seven centuries of Muslim occupation of the Iberian Peninsula. For greater clarity, this outline will be divided into a number of chronological compartments, which will allow the presentation of a chronologically connected account without the necessity in most cases of going into events in greater detail.

1. The conquest of al-Andalus.
2. The history of al-Andalus up to the Marwanid restoration.
3. The Marwanid Kingdom of Cordova.
4. The Caliphate and the 'Amirid dictatorship.
5. The collapse of the Marwanid Caliphate and the partition of the Kingdom of al-Andalus.
6. The Kingdoms of the *al-far* up to the battle of al-Zalāḥa.
7. Spain under the Almoravids.
8. Spain under the Almohads and the progress of the Reconquista.
9. The Nasrid Kingdom of Granada and the conclusion of the Reconquista.

1. The conquest of al-Andalus. Of all the conquests undertaken by the Arabs in the first century of Islam, the conquest of al-Andalus is most remarkable for the speed and despatch with which it was accomplished. The accounts which have reached us of successive stages culminating in the extension of Muslim power over the whole of the Iberian Peninsula are particularly brief and unreliable; legend rapidly obscured historical reality with a veil which is nearly always impenetrable. It is clear that at the opportune moment the Arabs profited by the decayed state of the Visigothic Kingdom of Spain to turn their attention to it, and that they had the effective co-operation of many of the Spaniards themselves, desirous of throwing off a yoke which had become insupportable to them, to aid them in conquering it. The opportunity was tempting, at a moment when Arab power had just established itself firmly in North Morocco, and when the post of Governor of Ifrikiya and the Maghrib was in the hands of Mūsā b. Nusayr [g.a.]. To the latter, and to his lieutenant, the *muḥallif*

Tārik b. Ziyād [g.a.], belonged the glory of the conquest of al-Andalus.

It seems certain that Mūsā b. Nusayr himself took the decision to try to occupy new territories on the other side of the Straits of Gibraltar before referring the matter to the Caliph at Damascus; Mūsā took this step as a result of promises of support which he had received from the exarch of the town of Septem (Ceuta), which had remained a Byzantine possession despite the recent fall of Carthage into Muslim hands. This dignitary, Count Julian, facilitated the first Muslim landing, which was merely a raid led by the Berber officer Tārik on the island of Tarifa (Djazīrat Tarf) in Ramadan 92/July 710. The success of Tārik's raid encouraged Tārik, the lieutenant of Mūsā b. Nusayr, to place on a war footing an assault force of 7,000 men, which, with the aid of Count Julian's flotilla, established itself on Andalusian soil in the neighbourhood of Gibraltar (Djabal Tārik) in Rajab or Sha'ban 92 April-May 711.

The decisive battle between the Muslim assault force and the regular troops of the Visigoth king, Roderic, which occurred a few weeks later, on 28 Ramadan 92/19 July 711, at Wādī Lago (Rio Barbate), ended in disaster for the Visigoths, who wavered and fled, while Tārik decided to advance further. The cities of the Gothic kingdom fell one after another. Cordova was taken by the freedman Muḥallif at the beginning of 93/Oct. 711, and Toledo fell without resistance. Mūsā b. Nusayr, anxious not to leave to Tārik alone all the prestige of the conquest, entered Spain shortly afterwards, in Ramadan 93/June 712, with a force of 18,000 men, mainly Arabs, and captured successively Seville and Mérida (Shawwāl 94/June-July 713). Mūsā effected a junction with Tārik at Toledo and from there marched to occupy Saragossa. At that moment he received the order of the Caliph al-Walid to return to Syria with Tārik. They both left Spain, which was almost completely conquered, never to return.

2. The history of al-Andalus up to the Marwanid restoration. The departure of Mūsā b. Nusayr to the East inaugurated a period during which a number of governors (*alif*) succeeded one another as rulers of the newly-conquered territory with powers delegated by the central authority at Damascus, or simply as delegates of the nominal governor at al-Kayrawān. It is an extremely obscure period during which the rivalry of the Arab clans re-awoke in Spain, resulting in the greatest political confusion, and only marked by various feeble attempts to extend Muslim power towards Gaulish territory (capture of Barcelona, Gerona and Narbonne), a raid against the Narbonne and Toulouse (100-2/719-721), and, in 725, an expedition to the valley of the Rhône as far as Burgundy. The last expedition of any size, led by the governor 'Abd al-Rahmān al-Ghāfīqī, who was killed in action, ended in the defeat of the Muslims by the Duke of the Franks Charles Martel, at *Baldī al-Shahādā*, a battle more commonly known as the Battle of Poitiers (Ramadan 114/October 732).

#### List of governors of al-Andalus responsible to the Caliphs of Damascus

1. 'Abd al-'Azīz b. Mūsā b. Nusayr [g.a.], succeeded his father on the latter's death in 94/712-3. Assassinated in Rajab 97/March 716.
2. Ayyūb b. Ḥabīb al-Lakhnī (97/716), for six months.
3. al-Hurr b. 'Abd al-Rahmān al-Thakafī [g.a.] (97-100/716-719).

4. al-Samī b. Mālik al-Jahāwī (Ramadan 100-101/719-721).
5. 'Anbasa b. Suhaym al-Kalbi (102-107/721-726).
6. 'Uthra b. 'Abd Allāh al-Fihri (107/726).
7. Yahyā b. Salama al-Kalbi (107-110/726-728).
8. Hudhayfa b. al-Aḥwas al-Kayd (110/728).
9. 'Uthmān b. Abi Nis'a al-Jahāwī (110-111/728-729).
10. al-Haytham b. 'Ubayd al-Kalbi (111/729-730).
11. Muhammad b. 'Abd Allāh al-Ashdijāfi (111-112/730).
12. 'Abd al-Rahmān b. 'Abd Allāh al-Ghāfīqī [g.a.], 112-114/730-732.
13. 'Abd al-Malik b. Kaṭan al-Fihri [g.a.] (114-116/732-734).
14. 'Ukba b. al-Hudhādī al-Salūfī (116-123/734-741).
15. 'Abd al-Malik b. Kaṭan (for the second time) to 123/741.
16. Baljū b. Bishr al-Kushayrī [g.a.] (123-124/741-742).
17. Thā'aba b. Salama al-'Amīlī (124-125/742-743).
18. Abu 'l-Khaṭīr al-Huṣām b. Dirār al-Kalbi (125-127/743-745).
19. Thawāba b. Salama al-Djūdhāfī (127-129/745-746).
20. Yūsuf b. 'Abd al-Rahmān al-Fihri (129/746-136/756, date of the proclamation of 'Abd al-Rahmān I).

*Bibliography:* (For 1 and 2): Sources and bibliography listed in detail in Lévi-Provençal, *Hist. Esp. musul.*, i, p. 8, note 2. *Ibid.*, 2-89, contains a detailed account of the conquest and the period of the governors. Cf. also Dozy, *Recherches*, i, 1-83; E. Saavedra, *Estudio sobre la invasión de los Arabes en España*, Madrid 1892.

3. The Marwanid Kingdom of Cordova. (138-300/756-912). The circumstances attending the arrival in Spain of the Marwanid pretender 'Abd al-Rahmān b. Mu'āwiya, which enabled him to rally to his cause a large number of clients and partisans of his family and eventually defeated the governor Yūsuf b. 'Abd al-Rahmān al-Fihri near Cordova, where he was proclaimed *amir* of al-Andalus on 10 Dhu'l-Hijja 138/15 May 756, are narrated in the article on this prince [see 'ABD AL-RAHMAN I].

#### List of amirs of al-Andalus up to the proclamation of 'Abd al-Rahmān III

1. 'Abd al-Rahmān I b. Mu'āwiya b. Hishām b. 'Abd al-Malik b. Marwān, born 113/731, *amir* of al-Andalus 138/756 to 172/788.
2. Hishām I b. 'Abd al-Rahmān I, born 139/757, *amir* 172/788 to his death, 3 Šafar 180/17 April 796.
3. al-Hakam I b. Hishām I, born 154/770, *amir* 180/796 to his death, 25 Dhu'l-Hijja 206/21 May 822.
4. 'Abd al-Rahmān II b. al-Hakam I, born 176/792, *amir* 206/822 to his death, 3 Rabi' II 238/82 September 852.
5. Muhammad I b. 'Abd al-Rahmān II, born 207/823, *amir* 238/852 to his death, 28 Šafar 273/4 August 886.
6. al-Muḥallif b. Muhammad I, born 229/844, *amir* 273/886 to his death, 15 Šafar 275/29 June 888.
7. 'Abd Allāh b. Muhammad I, brother of the latter, born 229/844, *amir* from 275/888 to his death, 1 Rabi' I 300/16 Oct. 912.

Among the noteworthy features of this period of the Marwanid amirate of al-Andalus, which lasted more than a century and a half, are the introduction

of the Mālikī *madhhab* into Spain during the peaceful reign of Ḥishām I, and the efforts of the *amirs* throughout almost the entire period to deal with the revolts instigated in the Marches by the Berbers, the Arabs and the *muwallads*, and to wage a holy war on the frontiers of the Kingdom. The attempts made against al-Ḥakam I (in particular the famous "revolt of the Suburbs" on several occasions placed him in a dangerous position. Moreover the Reconquista, as a result of the aggressive spirit of the first Asturian-Leonese princes and the Franks of the Spanish March, gradually gained ground (final recapture of Barcelona).

The internal crisis was relieved for a time by 'Abd al-Rahmān II (g.a.), who fought simultaneously against the Franks, the Gascons and the Basque Kant (g.a.) of the Ebro valley, crushed the Mozarab revolt at Cordova (850-9), and threw back into the sea the Norsemen (*Urdumuniyān* or *Madjās*) who had landed on the coast of Seville. This great ruler, who broke with the "Syrian tradition" introduced into Spain by his great-grandfather 'Abd al-Rahmān I, organized the state of the 'Abbasid model.

His work was continued by his son Muhammad I, at the end of whose reign, however, occurred the renewed insurrection of 'Abd al-Rahmān b. Marwān b. al-Jullid (g.a.) and the rising of the whole of southern Andalusia under 'Umar b. Ḥafṣ (g.a.), whose revolt continued during the following reigns; further, during the reign of the *amir* 'Abd Allāh, serious fighting broke out between Arabs and *muwallads* in the Elvira and Seville regions.

**Bibliography:** Lévi-Provençal, *Hist. Esp. musul.*, I, 95-96, with details of sources and bibliography. Dozy's history, *Hist. Mus. Esp.*, vol. II, is now out of date.

4. The Caliphate and the 'Amirid dictatorship. On the long and fruitful reign of 'Abd al-Rahmān III al-Nāṣir, the restoration of the Cordovan Caliphate, and home and foreign policy, see 'Amr al-Kawmān III, and Lévi-Provençal, *Hist. Esp. musul.*, II, 2-164.

His reign of fifty years represented not only the high-water mark of Marwānid rule in the Peninsula, but also the most flourishing period in the Muslim history of al-Andalus. On the death of 'Abd al-Rahmān, 22 Rāmādān 350/4 November 961, he was succeeded by his son al-Ḥakam II, who was already nearly fifty years old, and who reigned until his own death on 3 Safr 366/1, October 976. The latter's reign was also a successful and prosperous one. Cordova, in the words of the Saxon poetess Hroswitha, was the "ornament of the world", and at the same time, under the stimulus of a prince like al-Ḥakam II, who was a man of letters and a bibliophile, one of the most active centres of philological, literary and juridical culture in the entire Muslim world at that time. Christian Spain requested his arbitration, and the Reconquista seemed finally to be checked.

When he died, al-Ḥakam II only left as his successor a young son unfit to rule, Ḥishām II, born in 354/965 of the union of the Caliph with the Gascon *umma* *walad* Subh. Once the palace intrigues were frustrated, the way was clear for a man of ambition and energy, who soon seized the reins of power and directed the destinies of the Caliphate with a dictatorial hand: the celebrated "major-domo" Muhammad b. Abi 'Amir, the future al-Manṣūr (g.a.). The stages in the brilliant career of Ibn Abi 'Amir, which speedily led him to the highest honours, will not be recounted in detail here. But this highly-talented

politician showed himself also to be a general and a strategist who was both able and successful in his undertakings. He mounted successive attacks in the *ghihād* against the Christian kingdoms to the North, inflicted on them severe defeats and even succeeded in capturing and destroying the famous sanctuary of Saint James of Compostela (Santiago, *Shant Yāhū*) in the campaign of his campaign of 387/997 against Galicia. Al-Manṣūr died at Medina (Madinat Sālim), on his return from a final campaign to North Castle, on 27 Rāmādān 392/9 August 1002. He left Muslim Spain intact and, following 'Abd al-Rahmān III and al-Ḥakam II, had even been able to extend Andalusian political influence over the whole of western Barbary.

One of al-Manṣūr's most skilful achievements was to respect throughout his life the external trappings of the Caliphate and to keep intact certain of its prerogatives on behalf of his nominal master Ḥishām II. The latter bequeathed the same powers of "major-domo" or *hājib* to the favourite son of al-Manṣūr, 'Abd al-Malik, who succeeded his father and adopted the honorific surname of al-Muṣaffar. He remained in power until his death in 399/1008 see 'Abd al-Malik b. Abi 'Amir for the details of the history of his "septennate". The death of 'Abd al-Malik b. Abi 'Amir and his replacement by his brother 'Abd al-Rahmān ushered in a period of disastrous disorders in the Spanish Caliphate which soon brought about its downfall.

**Bibliography:** Lévi-Provençal, *Hist. Esp. musul.*, II, 1-290.

5. The collapse of the Marwānid Caliphate and the partition of the Kingdom of al-Andalus. The military policy of al-Manṣūr had resulted in the introduction into Muslim Spain of a large number of mercenaries of North African Berber origin who, after his death and that of his successor, formed a centre of agitation against the Andalusians themselves, and against the powerful Slav bloc. The train was fired by the insane desire of 'Abd al-Rahmān Sanchuelo to have himself designated heir-presumptive to the throne by the Caliph Ḥishām II (Rabī' I 399/November 1008). This designation was extremely badly received at Cordova and, following a plot against him, the 'Amirid *hājib* was executed by the supporters of the Marwānid pretender Muhammad b. Ḥishām b. 'Abd al-Djabbār near Cordova on 3 Raddjāb 399/3 March 1009 [see 'Abd al-Rahmān b. Abi 'Amir].

From then on, the Kingdom of Cordova went through a period which was fatal to its destinies: pretenders and counter-pretenders, supported by the Berbers or by the enemies of the Berbers, hastened the ultimate downfall of the Caliphate.

#### List of the last Caliphs of Cordova

1. Ḥishām II b. al-Ḥakam II al-Mu'ayyad bi'llāh (366-399/976-1009: 400-403/1010-1013).
2. Muhammad II b. Ḥishām b. 'Abd al-Djabbār al-Mahdī (399-1009).
3. Sulaymān b. al-Ḥakam b. Sulaymān b. 'Abd al-Rahmān III al-Musta'in (399/1009: 403/1011).
4. 'Abd al-Rahmān IV b. Mub. b. 'Abd al-Malik b. 'Abd al-Rahmān III al-Murtadā (408/1018).
5. 'Abd al-Rahmān V b. Ḥishām b. 'Abd al-Djabbār al-Mustazhir (414/1023-24).
6. Muhammad III b. 'Abd al-Rahmān b. 'Ubayd Allāh b. 'Abd al-Rahmān III al-Mustakfi (414-416/1024-1025).
7. Ḥishām III b. Mub. b. 'Abd al-Malik b. 'Abd al-Rahmān III al-Mu'tadd (420-442/1029-1031).

#### Hamūdīd Caliphs

1. 'Alī b. Hamūd (407-408/1016-1018).
  2. al-Kāsim b. Hamūd (408-413/1018-1023).
- The Andalusian, Slav and Berber "factions" (*al-fāq*, pl. *fāqā'if*) did not wait for the collapse of the Cordovan caliphate before splitting up the territory of al-Andalus into a multitude of small states, most of which had only an ephemeral existence and among which emerged only a few large political blocs, the Kingdoms of the 'Abbasids of Seville, the Atafids of Badajoz, the Zirids of Granada, the Uba' b. Nūmids of Toledo and the Hūdids of Saragossa.

**Bibliography:** Lévi-Provençal, *Hist. Esp. musul.*, II, 291-341 (and bibliography quoted on p. 291, note 1); and see HAMŪDIDS. For 3-5 see UMAYYADS.

6. The Kingdoms of the *al-fāq* up to the battle of al-Zallāka. The history of Spain in the 11th century is characterized by the vigorous efforts of the Reconquista, stimulated by energetic and enterprising Christian monarchs who were more and more conscious of the necessity of re-establishing national unity at the expense of Islam. The internal history of the Kingdoms created by the dismemberment of the Spanish Caliphate is particularly dull and devoid of interest. As portrayed by the chroniclers, it presents a picture of constant turmoil—opposing interests, rivalries and perpetual disputes, through which it is not always possible to trace a guiding thread. The ethnic groups, to which belonged the dynasties which outlived those which were rapidly absorbed by their more powerful rivals, joined issue with one another. Andalusians fought against Berbers, and Slavs fought against both. Before long there was no hope of restoring the Caliphate, and the increasing weakness of each of these states only whetted the appetite of the Christian monarchs, who levied heavy tribute from them: this policy was followed particularly by King Alfonso VI, who succeeded, by skilful diplomacy, in effecting the peaceful occupation of Toledo (1085) and in making himself the arbiter in disputes between the *mulūk al-ta'wā'if*.

The danger became so great that, whether they wished to or not, the *mulūk al-ta'wā'if* were forced to seek help from the Almoravids. The turning-point came with the intervention of North African troops led by the *amir* Yūsuf b. Tāghūf, who defeated the forces of Alfonso VI at Sagrās (2 Raddjāb 476/10 on 22 Raddjāb 476/2 November 1086. This victory was not followed up, and Yūsuf b. Tāghūf, soon wearying of the spectacle of the disunion of the Andalusian kings and their compromises with the Christian monarch, dethroned them one after the other and simply annexed the greater part of al-Andalus to his dominion. From that moment, Muslim Spain was only the vassal of the Maghrib.

**Bibliography:** See the usually accurate lists given by A. Prieto y Vives, *Los Reyes de Taifas: estudio historico-numismatico de los musulmanes españoles en el siglo V de la hégira* (XI de J. C.), Madrid 1926. See also Dozy, *Hist. Mus. Esp.*, vol. III; A. Gonzales Palencia, *Hist. de la Esp. musul.*, 34-69; and *ANASTASIOS AFRASIAS*, 190-208, 209-210, 211-212, etc.; for a list of the dynasties of the *ta'wā'if* cf. MUKĀBIL al-TAWĀ'IF.

7. Al-Andalus under the Almoravids. The Almoravid occupation of Muslim Spain was completed by the recapture of Valencia (495/1102), which had fallen into the hands of the Cid Campeador Rodrigo Díaz in 478/1085, and by the surrender of

the Hūdīd capital of Saragossa on the death of al-Musta'in (503/1110). Al-Andalus then experienced, despite the domination of society by the *fahils*, several decades of prosperity, marked by the indisputable successes of Almoravid arms (victory of Uclés in 502/1108) which, however, were unable to recapture Toledo. Saragossa itself fell in 512/1118 into the hands of Alfonso the Warrior. Christian pressure on al-Andalus increased, and achieved the greater success because the son and successor of Yūsuf b. Tāghūf, 'Alī, threatened in Morocco itself by the Almohads, soon became incapable of offering serious resistance to the manifestations of revolt which were appearing on all sides. The time was ripe for another change of masters in al-Andalus. (See AL-MURĀBITŪN).

**Bibliography:** R. Menéndez Pidal, *La España del Cid*, definitive edition, Madrid 1927, F. Codera, *Decadencia y desaparición de los Almorávides en España*, Saragossa 1899.

8. Al-Andalus under the Almohads, and the progress of the Reconquista. After a period of thirty years, in the middle of the 12th century, during which certain movements took shape to weave a new pattern of "Kingdoms of *al-fāq*", al-Andalus submitted to the authority of the Ma'mūnid dynasty of Morocco. The Almohads maintained for nearly a century an increasingly precarious grasp on those parts of the Peninsula which still belonged to Islam. The Reconquista now back more territory each year. In Catalonia, Ramón Berenguer IV occupied successively Tortosa and Lerida, the chief architect of the Reconquista was King Alfonso VIII of Castile (1188-1214), who gained possession of Silves, Evora, and Cuenca. The Muslim victory at Alarcos (*al-Arah*), won by the Almohad Caliph Abū Yūsuf Ya'qūb, 8 Sha'bān 591/18 July 1195, had no lasting effect. Less than fifteen years later, the Christian coalition, comprising troops from Castile, Leon, Navarre and Aragon, inflicted a crushing defeat on the Muslims at Las Navas de Tolosa (*al-Ibbāh*), 13 Safr 609/17 July 1212, which was followed by the fall of Ubeda and Baeza. The capture of Cordova occurred less than a quarter of a century later, followed by the capture of Valencia by Jacques I of Aragon (636/1238) and of Seville by Ferdinand III (646/1248).

**Bibliography:** See AL-AḤKĀM al-'Īḥān, Iḡlāl-ḥayā, BALANSUYA, KURVINA, MU'AMMARS.

9. The Nasrid Kingdom of Granada and the conclusion of the Reconquista. For a further two and a half centuries the "Kingdom of Granada", despite successive amputations, continued to be the only territory on the Iberian Peninsula still under the authority of a Muslim ruler; bounded by the Mediterranean from Gibraltar to Almería, this Kingdom did not extend inland beyond the mountain masses of the Serranía de Ronda and the Sierra d'Elvira. The ancestor and founder of the Nasrid dynasty (or Banu 'l-Ahmar), Muḥammad I al-Ḥishām bi'llāh, took possession of Granada in 635/1237-8 and organized the fortress called al-Hamra', the Alhambra, as a royal palace; at the same time, he agreed to become the tribute-paying vassal of the King of Castile, Ferdinand I, and then of his successor Alfonso X. Henceforth the policy of kings of Granada was to try to achieve a precarious balance in their alliances concluded either with the Christians, or with the Mārnids of Morocco, who intervened militarily on Andalusian territory and occupied certain points such as Tarifa. Moroccan co-operation was gradually proved to be illusory:

the sultan Abu 'l-Hasan suffered a grave defeat on the Rio Salado (747/1340). Granada still retained some of the prestige of a capital by virtue of its monuments and literary gatherings, in which men like Lisán al-Din b. al-Khatib were conspicuous. In the following century, with the advent of the Catholic Kings, Ferdinand of Aragon and Isabella of Castile, the Christian offensive became increasingly aggressive and was conducted on a wider scale. Loja fell in 1486, Vélez-Málaga, Málaga and Almería the following year, Baza in 1489, and Granada eventually surrendered to the Catholic monarchs on 2 Rabī' I 897/3 January 1492.

#### Appendix: the 'Andalus' in North Africa

As a generic term *al-Andalus* is especially well known in the North African context where it denotes that element of the Islamic population which derives its origins from Spain. Generally speaking, the Andalusian element only appears in relief from about the end of the 13th century, but here we have to do with nothing more than the culmination of a long historical trend.

In the course of Hispano-Islamic history emigration to the Maghrib not infrequently served the inhabitants of al-Andalus as a means of escape from internal crisis. Andalusian commercial and external interests also played a great part in bringing Hispano-Islamic elements to the littoral of the Western and Central Maghrib.

From about the middle of the 12th century, when Muslim disasters in Western Andalus sent a stream of emigrants to Kar al-Kutāma (al-Kar al-Kabir), the advance of the Reconquista was to prove an increasingly important, though by no means the sole cause of emigration to North Africa. With the protracted disintegration of Islamic Spain emigration progressed sporadically until the 15th century when the critical events which foreshadowed the fall of Granada marked the beginning of what was to prove a veritable diaspora, of which North Africa experienced appreciable effects. By the end of the 16th century the number of Andalusian expatriates on Maghribi soil was such that they could be accounted an important minority of its population.

The advent of the 17th century brought new developments and it is not long before we see the outcome of the general expulsion of the Moriscos. From their ports of disembarkation large numbers are said to have made for Fez and Tlemcen, but of these a great proportion suffered death or spoliation at the hands of the Arab tribes. Many others succeeded in joining their compatriots at Algiers, and in Tunisia, where a policy of immigration was actively encouraged by 'Uthmān Dāy, the influx was considerable.

Of the Andalusians thus established in 17th century Tunisia a fairly detailed picture can be drawn. Their case is somewhat different from that of their 13th century precursors who are best known for their great political role in the Ifrīqiya state. Appearing as a highly organized and exclusive community under a supreme head (*shaykh al-Andalus*), they seem in their village communities to have enjoyed certain legal rights together with a large measure of independence in local government. The monopoly of a highly successful and well organized *shādhiya* industry enabled them so to modify

the economic system that the *amin al-shādhiya* became *de jure amin* of commerce, presiding over a commercial tribunal to which all corporations were subject and whose members were, with only two exceptions, recruited from the Andalusian *shādhiya*. In the agricultural field Andalusian skill, fostered by the enlightened 'Uthmān Dāy, was turned to the exploitation of the fertile north, where the Moriscos ably applied their knowledge of irrigation and the techniques of husbandry to arboriculture and market gardening. During the 16th and 17th centuries the production and traffic of raw silk as well as the manufacture of stuks, fabrics and embroidered goods were great specialities of the exiles. At Algiers, for instance, the silk industry was very much in their hands and contributed much to the wealth of the city. Much, on the other hand, that they might have contributed to the Maghrib was lost. In Morocco, for instance, the Sa'īdis sought mainly to exploit them as a military force. For the rest, their occupation with piracy, and the slave trade must have accounted for the disappearance of traditional skills. Their traces, however, still survive in many spheres of activity. Andalusians proudly proclaim their Andalusian origin which is in many cases apparent from their patronymics.

**Bibliography:** No comprehensive work has yet been published. The following list is a selection from the vast literature. For the earlier centuries, see: Bakri, *Descr. de l'Afrique sept. #### (vii) ISLAM IN AL-ANDALUS

Al-Andalus was always a stronghold of Mālikism and a centre of orthodoxy from the beginning of the 9th century, when the *madhāb* of Medina was adopted and supplanted that of al-Awāzī. During the Marwīdī period, as the new *madhāb* had the official support of the rulers of the country, there was no possibility of the implantation of other rites, and all Shāfi'i or Shī'i tendencies were suppressed in their early stages; the Andalusians could only direct their legal and theological activity towards the elaboration of manuals of *fiqh*, and to a permanent attachment to the method of *taḥlīl*. In the 3rd-4th/9th-10th centuries, however, there is apparent an infiltration, admittedly slight, of the Shāfi'i and Zāhiri schools, the latter represented in Spain by the *hāfī* al-Muḥḍib b. Sa'īd al-Balūṭī (d. 355/966) until it found its "standard-bearer" in the person of the famous Ibn Ḥazm (g.e.). Similarly, there is apparent at certain periods a certain spread of Mu'tazilism, which corresponded to a revival of ascetic tendencies, whose principal representative was the Cordovan philosopher Ibn Masarra (g.e.) (d. 379/931).

The representatives of Andalusian Mālikism whose names and sometimes works have come down to us are legion. Nearly all of them have received biographical notices in the collections printed in the *Bibliotheca arabico-hispana*. After the fall of the Caliphate, jurisprudence was held in even greater esteem than before, and the social class of the *fakīhs* frequently formed the most influential and active section of the population, especially under the Almoravids. From a doctrinal point of view, al-Andalus was scarcely affected by Almohad propaganda, and Mālikism reigned supreme up to the end.

#### (viii) ANDALUSIAN LITERATURE AND CULTURE

See 'ARABIC LITERATURE, II, Appendix.

#### (ix) ANDALUSIAN ART

The Iberian Peninsula, by virtue of its geographical position, which encloses the western end of the Mediterranean, and by reason of its predominantly Mediterranean characteristics, has been since ancient times an area favourable to the germination of Oriental influences. Possession of a common religion and a common language, the two factors, says Sartori, which constitute the strongest bond between peoples, strengthened relations between the two regions, relations which benefited also by the religious obligation of the pilgrimage to Mecca.

Artistic trends and forms reached the Iberian Peninsula from the Orient over a period of eight centuries; some of these were developed to a greater degree and extent than in their country of origin. In Hispanic art there are echoes of the art of Byzantium and its cultural zones, of Syria, Mesopotamia, Persia, Egypt and Ifrīqiya. In Syria as on

Iberian soil, the art of the Middle Ages was modelled on the pattern of the art of Imperial Rome. The coincidence of certain forms in the works of these two countries points sometimes to their common origin and not to a direct relationship between the two. But, whereas in the eastern Mediterranean, civilisation developed without interruption from the first centuries of the Christian era and during the first centuries of Islam, the Iberian Peninsula, and the West as a whole, experienced grave crises and a considerable decline in its standard of civilisation.

We do not know many details of the transition from Visigothic Spain, whose lack of homogeneity and decadence are shown by its feeble resistance to the invaders, to Spain under Islamic domination. In the artistic sphere, works and remains of the obscure period and of the subsequent Islamic periods are lacking, with the result that in many cases the gaps must be filled by guesswork.

The art of al-Andalus developed with an original and distinctive character of its own. During the period of contact with the Orient, between the 2nd/8th and 9th/15th centuries, certain monuments of incomparable beauty, perfection and originality, such as have been preserved in no other Muslim country, were built there: the mosque at Cordova, unique both for its complex and skilful construction and for the richness of its decoration; the palaces of Madinat al-Zahrā', whose art and magnificence have never been surpassed; the Aljama of Saragosa, a palace of extraordinary originality and decorative profusion, the reconstruction of which is being undertaken at the present time; the Giralda tower, a monumental minaret which is one of the most beautiful in the Islamic world; and, finally, a huge palace, the Alhambra of Granada, wonderfully preserved despite its extreme fragility, in which architecture and the natural beauties of water and vegetation have combined to create one of the most inspiring scenes in the world.

#### Architecture

Umayyads. In default of older buildings, the study of Islamic architecture in al-Andalus must start from the oldest part of the Cordova mosque, built by 'Abd al-Rahmān I between 168 and 170/784-6, i.e. three-quarters of a century after the invasion and conquest of the Peninsula. By the time of the death of this *amir*, only the finishing touches remained, and these were executed by his son Hishām (172-180/788-96).

This early oratory occupies the N.-W. portion of the building, which is still preserved to-day. The mosque is rectangular, with stone walls, divided into eleven aisles running North to South, perpendicular to the *hība* wall, the central aisle being larger than the others. The aisles are separated by marble columns deriving from Roman or Visigothic buildings. On the capitals rest square impost blocks, which in their turn carry rectangular stone piers, the overhang being supported transversely by means of corbels and terminating above in an impost. The piers are linked longitudinally by two ranges of arches; the lower arches, horseshoe-shaped, are suspended and support nothing; above, a second range consisting of semi-circular arches, springs from the imposts and supports the walls. By this method of construction it was possible to erect a huge building on slender columns, making the maximum use of the interior space and, for the faithful, ensuring a good view of the *miḥrab* leading the prayer. Owing to the fact that the width of the supports was

increased in proportion to their height, it was possible to support the roofs and to place rain-water gutters in the thickness of the walls.

The method of construction with double superimposed arches, which gives the Cordova mosque an original beauty and a unique character in mediaeval architecture, is not found in any other mosque. In the other hypostyle mosques, the arches separating the aisles are supported by means of wooden beams which give them the appearance of temporary constructions. It is astonishing to find in Cordova in the second half of the 8th century such a perfect structure, in view of the apparent lack of architectural ability which is suggested by the use of columns originating from earlier buildings.

Repeated attempts have been made to establish the origin of these forms. The system of double arches could be inspired by Roman architectural works, for example aqueducts. Stone was used as constructional material in Syrian architecture, but also in Visigothic architecture in Spain. The arrangement of the ashlar alternately as stretchers or as piers is frequently found in Roman buildings of the East and the West, which have inherited it from Greek buildings. Visigothic architecture made more general use of the horseshoe arch, specimens of which are found in Roman and eastern Islamic architecture, although fewer than in the Peninsula. The alternate use of stone and brick in the voussoirs of the arches was frequent in Roman architecture, from which it passed into Byzantine architecture. The originality of the mosque of 'Abd al-Rahmān I resides in the plan and general arrangement of the building, with its numerous parallel aisles, the central aisle being larger, as in the eastern mosques, and perhaps also in the wall buttresses and probably in the stepped crenellations which crown them.

The growth of the population of Cordova, in the reign of 'Abd al-Rahmān II (206-38/822-52), necessitated the enlargement of the mosque. By demolishing the *mihrāb* and piercing the *kibla* wall, the aisles were extended southwards. The portion added follows the lines of the earlier work, but, among a large number of capitals originating from earlier buildings, there are eleven which were finely cut for the purpose and were inspired by classical models, and four, from the *mihrāb*, which were later transferred to that of al-Hakam II. The latter are not inferior to the finest Roman capitals, and are evidence of the existence of a workshop of selected artisans. These works were commenced in 218/833; the first prayer before the new *mihrāb* took place in 234/848, but the work was incomplete at the death of 'Abd al-Rahmān II. His son and successor Muhammad I completed them in 241/855, a date which appears in an inscription on the St. Stephen door, whose bevelled decorations, inspired without doubt by Roman mosaic motifs, are of the Byzantine type.

'Abd al-Rahmān III (300-50/912-61), left in the Great Mosque a memorial of his long and glorious reign, by constructing in 340/953 a new and monumental minaret, of square section like the Syrian minarets.

In 326/936, 'Abd al-Rahmān III, proclaimed caliph, began the construction of the royal city of Madinat al-Zahra', at the foot of the Sierra, less than five miles from Cordova. The work proceeded until 365/976, a period of forty years during which the grandeur and power of the Andalusian caliphate reached their zenith, as is witnessed by the disfigured ruins of the palaces of this city, the seat of the court

and officialdom, and by the enlargement of the Cordova mosque on the initiative of al-Hakam II.

The portions of Madinat al-Zahra' until now brought to light are the ruins of stone buildings-dwellings, offices and reception halls, the last-named situated at the end of *patios* and consisting of several parallel aisles, separated by horseshoe arches on columns, following a basilica-type arrangement common in the East. For its decoration, the two caliphs, fired by the ambition to construct buildings of exceptional splendour and richness, imported materials and skilled craftsmen from the other end of the Mediterranean. The roofs and ceilings have gone—Madinat al-Zahra' was sacked and burnt several times during the early years of the 11th century and later served as a quarry up to a recent date—but there remains part of the stone and marble surfaces of the walls of many of the rooms, numerous columns and capitals of the same materials, and pavements of stone, marble and brick. The richly decorated surface of these buildings was entrusted to workshops of skilled craftsmen, some of whom came from the eastern Mediterranean; they possessed different training and different techniques for the working of stone and marble, but were especially familiar with the general characteristics of two-dimensional reliefs with vegetal motifs (there are a few simple geometrical motifs, of Byzantine origin), the majority far-removed from the vine and the acanthus motifs which derive from them. A magnificent hall, discovered in 1944, and at present in course of reconstruction because among its ruins were found many reliefs from the decorated surfaces of the inner walls, was decorated from 342 to 345/933-7.

The same craftsmen from the palaces of al-Zahra' worked on the enlargement of the Great Mosque at Cordova; this work, initiated by al-Hakam II, was put in hand in 350/961, and the principal part was completed in 355/966. Workers in mosaic, requested from the emperor of Byzantium, had a hand in its decoration. An Oriental influence is also noticeable in the four vaults of intersecting arches in the extension, although no comparable example of an earlier date has yet been discovered in the East. The increase in the height of the walls of some bays in order to form vaulted lanterns probably comes from the mosques of Ifrikiya of the 9th century, although the vaults of the latter are of Byzantine origin. The arches, intersecting equally, but in plan and not in space, form an open lattice-work which, by an ingenious and skilful constructional technique, supports the cupolas. Some of the arches are cusped and 'Abbasid in origin; there are also a number of broken arches. The former were, from then on, combined with intersecting arches, one of the favourite themes of Hispano-Muslim art, used purely as decoration. Following a process common to all Islamic art, but in al-Andalus carried to its ultimate conclusion.

In this extension, which dates from the reign of al-Hakam II, and which in fact constitutes a new mosque contiguous to the original, decorative forms of an incredible richness blend with a magnificent blaze of colour to cover the walls and the vaults, composed of vivid mosaics with arabesques (*ataurique*, *al-ta'arib*), the majority of cut stone, with the background painted red and inscriptions in other kinds of blue, and veined marble in the columns and pedestals. The mosque of al-Hakam II, like the hall of 'Abd al-Rahmān III at al-Zahra', illustrates an art utilising its resources to the full, at its peak,

which, without parallel in the contemporary West, is an expression of the grandeur of the Cordovan caliphate.

The third and final enlargement of the Great Mosque was due to the initiative of the powerful al-Mansur, the minister of Hishām II, and was carried out between 377-80/987-90. It maintained the unity of the whole by repeating the same mode, as regards the engaged piers and the arches, the construction of the originals, without any novel feature, and inferior in richness and style. The doorways reveal a process of unification of the great variety of decorative techniques displayed at Madinat al-Zahra', but the result is heavy and monotonous.

Few traces remain of the work executed during the period of the *al-Mu'tas* in the 5th/11th century. In the mosques, on the evidence of the texts and such traces as remain, the division into aisles perpendicular to the *kibla* wall by means of horseshoe arches on columns, is repeated. The piers of the *al-Mu'tas* built palaces rather than religious edifices. They could not rival their predecessors, rulers of a united Spain, in power or wealth but they tried to imitate, at least in appearance, their splendid residences. In place of the solid stone walls of Madinat al-Zahra' they erected walls of clay and brick. The surfaces of stone and marble covered with arabesques (*ataurique*) were replaced by decoration in plaster, and the columns of marble, as in the Alcazaba of Malaga, by wooden columns. The polychrome conveys the poverty of the interior under an ephemeral display of richness and luxury. The reduction in grandeur and solidity, and the lack of architectural greatness, were compensated for not only by the more agreeable and picturesque aspect of the 5th/11th century buildings, but also by the introduction of running water in the halls and patios, and by the use of plants in the patios, doubtless as a result of an Oriental influence, perhaps via Ifrikiya.

The decorative art which sought to conceal the structural poverty of these palaces was a direct successor of the art of the caliphate but with an evolution towards the baroque, essentially Hispanic, by the transformation of the architectural elements of Cordova and Madinat al-Zahra' into other purely decorative elements, consisting of involved and complex designs and profuse ornamentation.

A work which is highly characteristic of the art of the *al-Mu'tas* is the palace built in the immediate vicinity of Saragossa by al-Mu'tadid b. Hūd (441-74/1049-81).

The 6th/12th century, i.e., the period of Almoravid and Almohad domination in al-Andalus, was one of the most fruitful periods of Western Islamic art, and at the same time one of the periods in which there occurred the greatest assimilation of forms originating from the eastern Mediterranean.

The Almoravids, Berber nomads from Africa, without a cultural tradition, remained on the fringe of the artistic trend. But the political union of Muslim Spain and Barbary for a period of just over a century (6th/12th and the first years of the 7th/13th), at first under the Almoravids and then under the Almohads, resulted in the spread of Andalusian art across the Straits of Gibraltar, into regions with a mainly rural civilisation and without large urban centres. [Cf. *AL-MURĀBĪTŪN* (section on art)].

The construction of the Almoravid mosques shows changes as compared with the earlier Hispanic mosques, probably as the result of Mesopotamian influence. In place of the columns which had hitherto

separated the aisles, they built brick pillars; this resulted in increased stability, enabling them to do away with the wooden tie-beams, but also in a loss of space and in reduced visibility. Compared with a hypostyle oratory, an oratory with brick pillars always seems heavy and monotonous.

No Almoravid mosque has been preserved in al-Andalus. The Great Mosques of Tlemcen and Algiers, originally devoid of decoration, were built probably in the last years of the 5th/11th century, before Andalusian influence reached the African shore. This occurred during the reign of 'Alī b. Yūsuf (500-37/1106-43), during which the mosque at Tlemcen was enriched with splendid and profuse Hispanic decoration, which covers the surface of the *mihrāb* as well as the walls and the cupola of the bay which precedes it. This decoration, according to an inscription in cursive letters which forms part of it, was completed in 530/1136. About 529/1135, 'Alī b. Yūsuf enlarged the al-Karawiyyin Mosque at Fez, still closed to non-Muslims, in which there are intersecting arches obviously of Cordovan origin, and vaults formed by stalactites (called *muḥarab* in Spanish), originating from Persia or 'Irāq, which span some of the bays. Its amazing perfection shows that this was not one of the first experiments with these imported elements.

The most characteristic Almoravid work of the decorative style is the Kubbat al-Bardidiyyin of Marrākush, built probably between 514 and 526/1120-1130. The central portion of this small rectangular building is covered by a small cupola of curved brick. Within, eight arches intersect, in a fashion similar to those of the cupola which covers the bay before the *mihrāb* in the mosque at Cordova. The arches are mixtilinear in the Marrākush specimen, composed of cusps, curves and right-angles, and the surfaces contained between their springings are covered, like almost all the others, with delicate plaster arabesques, around large scallops. This is a Hispanic work of extraordinary richness and unusual imagination; it expresses in an eloquent manner the anti-classical tendency to fragmentation and decorative excess which breaks out periodically in the course of the history of Spanish art.

The Almohads who, like their predecessors, lacked a cultural tradition, and were governed by their fundamental asceticism which condemned all luxury and all excess, as befitted a movement purporting to restore the purity of early Islam, influenced artistic evolution by placing severe restrictions on ornamentation, which was reduced to basic essentials, with precise and well-defined lines, on large, plain backgrounds. [Cf. *AL-MU'AWAN* (section on art)]. As no Almohad oratory has survived in Spain, we do not know whether these characteristics extended to them also; the remains of the Great Mosque at Seville, completed during the reign of Ya'qūb al-Mansūr (572-94/1176-98), lead one to suppose that they displayed richer decoration than those preserved in the Maghrib.

The Almohads influenced artistic evolution in other respects as well. Inspired by the memory of the past greatness of the Cordovan caliphate, as witnessed by its buildings, they built huge, symmetrical and well-planned mosques, solid, tall minarets, and great city gates, veritable triumphal archways in honour of the dynasty.

In the remainder of the Almoravid and Almohad palaces there appear two types of patio which later reached an extraordinary pitch of development in the art of Granada: the court with two transverse

pathways forming four squares of vegetation, with projecting pavilions on the shorter sides (El Castillo), in the Vega of Murcia), and the type with a portico on one or two of its sides (the Yeso, in the Alcazar of Seville).

Almoahad military architecture uses, in al-Andalus, arrangements deriving from Byzantine architecture and as yet unknown in the West. For instance, the best gates (walls of Badajoz, Seville and Niebla); the barbicans; the polygonal towers (Cáceres, Badajoz, Seville) and the *albarrañes* or towers outside the walls (Cáceres, Badajoz, Écija). With the stables, there arrived from the Orient curvilinear epigraphy (plaster decorations of the Maunor at Granada, and of the Castillejo at Murcia), and glazed or varnished ceramics used for exterior architectural decoration, of which the first example known in Spain is in the Torre del Oro at Seville (812/1220-21).

After the collapse of the Almoahad empire, the last foothold of Islam in Spain was the tiny Kingdom of Granada, established a little before the middle of the 7th/13th century. The universally famous palace of the Alhambra at Granada, almost all of the other buildings remaining from this final period, are not earlier than the 8th/14th century.

Nasrid [see *NARRIDE*] or Granadan art, is a brilliant final phase of Islam in the Peninsula, which maintained its position partly on the fringes of official dynastic Almoahad art, enriched by the legacy of the latter and by a few importations from the East, without forgetting the changes wrought by the inexorable march of time. It also represented, in its decorative aspect, the revival of the national tradition of dense, flat and fine ornamentation, after the brief Almoahad deviation; the extent to which the latter spread through Spain is not known.

The craftsmen of Granada adorned the last days of a moribund civilisation with the most exquisite examples of what human genius and art can produce in the decorative field. With poor and fragile materials, they created large, strong, plain masses and severe, purely architectural volumes, like the Tower of Comares and the Gate of Justice, in the Alhambra, compositions as serene, harmonious and original as the patio of the Alhambra, and cleverly planned interiors, such as those which are arranged in echelon from the Lion's Court to the platform of Daraja, in the royal palace at Granada. At the same time they constructed fortifications which are more important than the Hispano-Almoahad ones which have been preserved, and Granada was enriched by public buildings, houses and palaces embellished with exquisite art. From modest residences to the royal palaces which surrounded the city, every building had its patios, fountains, cloisters, pavements of brilliant coloured tiles, plaster decoration and skilfully-assembled wooden roofs.

It is in the royal palace of the Alhambra, miraculously preserved despite its great fragility, that the art of Granada acquires its characteristics of magnificence and grandeur. The patios of the Alhambra and of the Lions, built in the middle of the 8th/14th century, are the development of the development of the type with portico built on the shorter sides and with two transverse pathways of the Almoravid era. The stalactites in the Alhambra form complex vaults, cover the extrados of the arches, serve as impostes and cover the surface of some capitals. Above the soles of the glittering *alicatados* [al-jalad]—mosaics of coloured tiles—the walls of the rooms are covered, as if hung with carpets, with plaster panels in which vegetal motifs—

leaves divided into small leaflets, in Almoravid tradition, and others smooth, derived from Almoahad decoration—are combined with complex geometrical outlines and inscriptions in Kufic and cursive. There is a tremendous wealth of ornamentation in the Alhambra, but the paucity of relief and the orderly arrangement on the walls within the panels obviate any sense of superabundance disorder. The whole is harmonious, light, and pleasant to look at.

At the time when these palaces were being built, Granada was being enriched by the construction of a series of important public buildings: a *funda*, the "Alhondiga nueva"; a *madrasa* completed in 750/1349; a *madrasa* or lunatic asylum (767/1365-7). These three buildings—only the first is preserved—conform to foreign plans, but their form represents the local style.

In the first half of the 9th/15th century, which coincided with the final political decadence, the art of Granada, failing to receive new contributions from the eastern Mediterranean, and exhausted by amazing but sterile refinements and subtleties, owing to self-repetition and dwelling exclusively in the past, became an empty formula. In a petrified form, it still survived in the Maghrib for several centuries, almost up to the present day.

#### Industrial Arts

Trade, mainly in the hands of the Jews and Syrians, distributed throughout al-Andalus many products of the decorative and industrial arts of the Orient, a number of which were easily transported. During the reigns of 'Abd al-Rahmān II and his son Hishām I, a taste for refined luxury and ostentation prevailed at Cordova, under the influence of Baghdad and Byzantium. There rapidly developed in al-Andalus the manufacture of textile, jewelry, productions in ivory and ceramics, furniture, etc., imitations of imported work, in order to satisfy the demands of a large clientele in Muslim territory and the Christian kingdoms of the Peninsula and north of the Pyrenees. The copy was sometimes so faithful that it is difficult to say whether certain articles entered from countries at the other end of the Mediterranean, or whether they were made in al-Andalus. In the case of various bronze works in the Fatimid style, it is impossible to say definitely whether they were made in Egypt or Spain. It is only after a most careful scrutiny that one can say whether certain fabrics had their origin in the workshops of the 'Abbasids or al-Andalus.

The activity of the Hispanic workshops did not slacken in the 10th/11th century, but only in the following one, when the austerity of the first Almoahad caliphs imposed a check, particularly on the royal workshops. In the Kingdom of Granada, in contrast, in spite of its smallness, the industrial arts reached a magnificent and final peak of development. In addition to satisfying the needs of an extravagant court, the export of its products helped to support a large population, which was obliged to pay a heavy tribute to the King of Castile.

Religious furniture in al-Andalus, commencing at least from the 4th/10th century, was of extraordinary richness and perfection. "The most skilful craftsmen", wrote an 8th/14th century historian, "agree that the members of the mosque at Cordova and of the Kutubiyya at Marrakech are the finest in existence; Orientals, to judge from their work, are not experts in wood-carving". According to al-Iḍrī, the *mihrab* of the Great Mosque at Cordova is without equal in the world; it was made in the reign

of al-Hakam II. It is described as an incomparable example of the cabinet-maker's art, with inlays of ivory and fine woods.

The *mihrab* of the Kutubiyya was made at Cordova between 534/1139 and 538/1143. It is considered to be one of the finest specimens of the intersecting figures in marquetry, consisting of small pieces of rich woods of various colours, bordered by fine lamellae of ivory; exquisite wood-carving fill the spaces between the traceries.

One of the greatest artistic glories of the caliphate was the caskets and jars of ivory (*ḥaḍḍ*, [q.v.]), whose antecedents must be sought in the spheres of Egyptian culture. They were in the court workshops during the 4th/10th century and the first half of the 5th/11th, Arabesques are the predominant feature of their ornamentation, although there is no lack of representations of animals and human beings, whose Mesopotamian origins go back to eras well before Islam.

Ceramics also achieved a singular development in al-Andalus (cf. *KHARAF*). During the period of the caliphate were manufactured what are known as "ceramics of Madinat al-Zahrā", or of "Medina Elvira", because numerous examples have been found in the ruins of these two cities. On a white background, the decoration consisted of patterns in oxide of copper (used in dark brown [manganese]). These ceramics are of Byzantine origin, but they developed independently in al-Andalus.

From 'Irāq and Iran came the immensely rich gold *falcone*. There is evidence of its manufacture in al-Andalus from the 5th/11th century; it may be earlier still. This luxury technique reached its greatest development and perfection in the 8th/14th century, with productions which were exceptional for their shape and richness, such as the superb vases of Malaga, the pride of those museums and collections which possess the rare specimens which have been preserved. Some have only decoration in gold; in others, gold ornamentation is combined with blue. From the 4th/10th century, we have fragments of ceramics with the colours separated by thin outline plates (*cuadra seca*), which appear to be of Spanish manufacture; on the other hand, engraved pottery, without glazing, only appeared, it seems, in the 6th/12th century.

Several specimens of the famous "baldaquins", imported from Baghdad, which mark the peak of mediæval silk-manufacture, are preserved in Spain. Serice (Syrian) and *Grecian* (Byzantine) fabrics, mentioned in numerous documents of Christian Spain of the 4th/10th and 5th/11th centuries, are evidence that the rich fabrics emanating from the Orient reached Spain.

At Seville and Cordova, there were in the 4th/10th century workshops producing *firda*, i.e., silken fabrics and brocades designed for ceremonial robes. Fabrics and robes were among the best-appreciated gifts. At the time of the Almoravids, the looms of Almeria were famous. During that period, the Byzantine-Saracenic tradition of decoration was still in force; it consisted of tangential circles with representations of animals arranged symmetrically inside, following the technique and the style of the 'Abbasid capital. The Almoahad sovereigns suppressed the *firda*. The circle then disappeared from silks, and was replaced by geometric designs, traceries of straight and curved lines, rhombi, star-shaped polygons, etc.; from the 7th/13th century, decoration by means of multiple parallel bands bearing inscriptive and geometric

elements, finally prevailed. The silks of Granada are of this type.

We have already alluded to the bronzes of the caliphate—lamps, chandeliers, *handils*, waterpots in the form of animals, mortars, perfume-burners, etc.—and to the difficulty of establishing their place of origin because of their resemblance to the Fatimid bronzes. The perfection of the artistic metal-working technique in the 6th/12th century is illustrated by the plaques of engraved and chased bronze which cover the wooden leaves of the door of the patio of the Great Mosque at Seville, and its magnificent door-knocker, of cast and chased bronze, which remain on the very spot where they were made.

Museums and collections have preserved specimens of repoussé silver bracelets dating back to the period of the caliphate. The technique of *repoussage* is less commonly found in gold jewelry, in which there is a predominance of filigree-work and wire threads forming settings filled with precious stones or pieces of glass, a technique which survived until the last days of the Kingdom of Granada. Several swords are of this type, such as that of Boabdil in the Military Museum at Madrid, a masterpiece of the goldsmith's craft, of consummate elegance, whose hilt, of silver and ivory, has a decoration of filigree-work and polychrome enamel set in filigree. *Bibliography*: R. (L. TORRES BALBÁS)

#### (N) SPANISH ARABIC

1. Of all post-classical Arabic dialects, the Arabic spoken in the Iberian Peninsula is the best known, as regards the mediæval period.

As early as the 4th/10th century, the philologist al-Zuhayr al-Iḥḍilī wrote a treatise on the errors of speech of the common people in al-Andalus. In the middle of the 6th/12th century, Ibn Kuzūma (q.v.) wrote some *adgāls* [q.v.] full of linguistic and sociological interest, the majority of which have been preserved. In the 7th/13th century, the mystic al-Shuḥṭārī (q.v.) also composed *adgāls* of which numerous collections are known. Unfortunately, the nature of the subjects dealt with in these dialect poems means that they are of less interest than those of the preceding poet.

In the middle of the 13th century, too, the reconquest of the Kingdom of Valencia by the Christians and the requirements of religious propaganda among the Muslim population, resulted in the production of a copious anonymous *Ucābūlita*, Arabic-Latin and Latin-Arabic, which has been published. At the end of the 6th/13th century, the reconquest of the Kingdom of Granada led Dr. Pedro de Alcalá to compile in his turn an *Arte* and a *Ucābūlita*, giving the Arabic in Roman transcription; the latter work is particularly valuable, but the prose texts of the *Arte* are often incorrect.

These are only the essential sources. Many secondary sources exist: minor composers of *adgāls*; several *ḥadīḥs* of *muwaḥḥab* [q.v.]. As regards

ANDARĀB "between the waters", a frequent toponymic in Iranian countries.

(1) A district in northern Afghanistan watered by the river Andarāb and its tributary Klān, al-Iṣṭāḥir 279 (Andarāb). Its present center is Bānū, see Burhān Khānkhāni, *Kullūghān wa-Bādakhshān*, Russian transl., Tashkent 1926, 28-34. The Khwākh pass connects it with the silver-mines of Panjshir (Panjshir). The mint of Andarāb was used by several dynasties, and especially by the local Abū Dāwūdīs (coins 264-370/877-921), see R. Vasser in *Wien. Num. Zeit.*, 1924, 48-53. The rulers of Andarāb bore the title of *shāhshāh*. See *Ḥudūd al-'Alam*, 109, 341; Le Strange, 427.

(2) A town (Andarāb) near Marw in which Sultan Saḡghar had a castle built, see Barthold, *Istoriya orgheniyi Turkestana*, 1914, 63.

(3) A place in Arrān, at one day's march from Barda'a, al-Iṣṭāḥir 182, probably identical with the present-day Lāmbārān on the Khācān river, which flows to the south of the Terek.

(4) According to the *Nuḥāl al-Kulūb*, 223, a place on the river of Arīdāb (now Balīghī-ān), where it flows north of Mt. Sawālān above its junction with the Ahar river. (V. MOROSKOV)

ANDARŪN [see ENDERŪN].

ANDAL. The term "Andi peoples" embraces eight small Ibero-Caucasian Muslim peoples, some 50,000 in number, ethnically akin but linguistically distinct from the Awar [s.v.]. They live in the basin of the Koysoy and Adul, which runs from north to south across the mountainous western portion of the Soviet Autonomous Republic of Daghjistan [s.v.].

The group comprises: (1) the Andi proper, numbering 8,896 in 1933, about 10,000 in 1954; (2) Akhkhāh (or Aḥwād); 4,610 in 1933; (3) Bagulā (or Kvanadā), 3,537 in 1933; (4) Botlūh, 2,864 in 1933; (5) Godoberi, 1,500 in 1946; (6) Camalā, 5,101 in 1933, about 7,000 in 1954; (7) Karatā (or Kirīf-Kālā), 6,235 in 1939; (8) Tindi (or Tindāl, Idēn), 4,777 in 1933.

The Andi peoples were converted to Islam by the Awar between the 13th and the 15th centuries, and are, like them, Sunnis of the Shāfi'ite school. Each Andi people has its own language, belonging to the Awar-Ando-Dido group of the Daghjistan branch of the Ibero-Caucasian languages, differing both from the language of the neighbouring people and from Awar; only the following people are able to understand the language of each other: Karatā-Akhkhāh, Bagulā-Tindi, and Godoberi-Botlūh. No language of the Andi group is fixed by writing. The Andi using Awar, or less commonly Russian, as the language of administration and education. Bilingualism (Awar and the local tongue) is general. On the eve of the 1918 Revolution Andi still had a pre-lexical system, and had never formed or belonged to a principality (despite the attempts of the Awar Khānate to subdue the Botlūh and the Akhkhāh in the 17th-18th centuries). They formed clans or "free societies", some of which combined as "federations". Each clan was governed by the assembly (*ḡamā'a*) of the *wādēn* (free peasants). Women had more freedom than among the other Daghjistan peoples (absence of the *ḡadra* and of polygamy). Before 1918, the economy of the Andi was linked with Cēfnyā, which imposed its authority on them [see *ḡēfnyā*], and with Central Caucasia. To-day, especially since the suppression of the Soviet Republic of Cēfnyā, Ingushlān in 1945, they incline politically and culturally towards the Awar, and constitute with the latter, the Dido [s.v.], and the Arēi [s.v.], a

single "Awar nation". The economy of the Andi peoples is still of the traditional type—based on sheep-breeding on the seasonal migration system, cultivation on the terrace system, and the existence of a skilled body of artisans. The end of Botlūh is an important market in the mountainous part of Daghjistan.

(H. CARBÈRE d'ENCASSI)

ANDIDJĀN, town in Fārgānā, 49°43' north, 72°45' east, on the left bank upper Jaxartes (Syr Darya). In the 4th/10th century the town—then known as Anduk(g)ān—was under the rule of the Karluks and later under their Karākhānid rulers; in the 11th century it was under the Saljuqs (Yāqūt, *Ṭabriz* ed., 1, 347). In the 12th century the town is mentioned as the centre of Fārgānā (cf. *Zap. Imp. Russk. geogr. ob-shch.* 1912, 72). Apparently the town suffered greatly from the Mongol raids and had to be rebuilt towards the end of the 13th century under the Chaghatay Khān Kaydā and Duwā (Hamid Allāh Mustawfī, 246). Since then the place has been inhabited almost exclusively by Turks whose separate tribes apparently settled in different quarters of the town (Barthold, *Vorlesungen*, 221 following "the Anonymous of Iṣṭāḥir"). Their language became the model for the whole of Fārgānā. It was used by 'Alī Shīr Nawā'ī (according to the *Bāḥur-nāma*, Kazan 1857, 3). Andidjān remained the capital of Fārgānā and the centre of trade with Kāshghar throughout the 14th and 15th centuries. In the 15th century it became the capital of the Khānate of Khōkand [s.v.] and continued to be an important market for agricultural products.

In 1875, when the Khānate was subjected, it was conquered by the Russians (Russian form of the name: Andizān). At that time it had 30,620 inhabitants who lived largely by agriculture and horticulture. Since then, petroleum fields and iron mines have been opened in the district. On the 17th and 18th of May 1898 a nationalistic rising broke out under the title [s.v.] Madall from Mīn Tāpe (in the Marghān district) which Soviet historians attribute entirely to social motives, was put down after much bloodshed. (cf. such Soviet literature as *Revolutsiya v Sredney Azii*, 1, Tashkent 1928, in which: Sang-zhāda: *K 30-letiyu Andizānskogo sostaniya 1898 g.*; E. G. Fedorov, *Ocherki natsional'no-voevoditskogo dveniya v Sredney Azii*, Tashkent 1925; K. Rāzmi, *Revolutsiya v Sredney Azii i obratnaya k Ruzickiy*, Moscow 1928). In 1902 the town lost 4500 inhabitants (there were 49,682 in 1900) in an earthquake (F. N. Chernykh, et al., *Andizānshoe zemletрясение 1902 g.*

St. Petersburg 1914). After the suppression of the Basma'āl [s.v.] rising (since 1916) Andidjān became part of the Soviet Republic Uzbekistan in 1924 (number of inhabitants in 1939: 83,700; partly Russian) and it is now the centre of a separate district (since 6 March 1941: 3,400 sq.km.) and the centre of an important cotton-growing area. Since 1937/38 there have been petroleum finds in the area (comp. W. Leimbach: *Die Sowjetunion*, Stuttgart 1950, 340 f., with map). Today the town has a teachers' training college, an agricultural college a training college for women, an Uzbek theatre, a regional museum etc.

ANDJUMAN, a Persian word already in frequent use in the Shāh-nāma of Firdawsī (5th/11th century) in the sense of "meeting, assembly, army". In modern times, it denoted primarily religious or confessional associations; then, at the beginning of the 20th century, at the time of the establishment of the parliamentary régime in Irān, political groups. One of the most celebrated of these groups was the *andjuman-i millī* ("national club") of Tabriz, founded 1 Ramadan 1324/17 December 1906, by the leaders of the constitutional movement; other groups, moved by the same liberal tendencies, were then organised in the principal provincial towns (see IRAN). Later, other *andjumanes* were set up by Persians in Istanbul and Bombay, and in India by the inhabitants of those parts. To-day, the term is applied primarily to learned or professional societies: the *andjuman-i adabī-i Irān* ("Persian Literary Society") preceded the foundation of the Farhang-i Irān ("Iranian Academy") in 1355/1936; since 1346/1926, the *andjuman-i ādabī-i millī* ("Committee for National Monuments") has published scholarly editions of old texts (notably the works in Persian attributed to Avicenna). More recently, this term is also used for local associations, for example *andjuman-i Khurāsānīhā* ("Association of the People of Khurāsān resident in Tehran").

**Bibliography:** *As. Fr. B.*, May 1908, 175-6; *RMF* (National Club of Tabriz), May 1907, 1-9; *Asnam*, 116-7; *January*, 1908, 85, 164; *March*, 1907, May, 167; *Sept.*, 1907, Oct. 224; *Nov.*, 1907, *Women's Club*, August 1905, 145; *May*, 1907, 311, 379; *Nov.*, 1907, 569; *Muslim Associations of India*: *Nov.*, 1906, 77-8; *Nov.-Dec.*, 1907, 579; *Jan.*, 1908, 172; *March*, 1908.

The term is also used in Turkey, where it is pronounced *Endjūmen*. In 1267/1851 the first modern academy of letters and sciences in the Middle East was created in Istanbul, under the name of *Endjūmen-i Dāniḡ*. Inspired by Ahmed Djewdet Paḡhā [s.v.], it was modelled on the French Academy, with forty Turkish members and a number of corresponding members, including such European orientalists as Hammer, Bianchi, and Redhouse. Its programme included the encouragement of the letters and sciences in Turkey and the advancement of the Turkish language. The Academy was first mooted at the Council of Education [Medjlis-i Ma'arif] in 1261/1845, and was formally authorised by an irade of 27 Rajab 1267/26 May 1851. It was

publicly inaugurated on 19 Ramadan 1267-18 July 1851, with a speech by Muṣṭafā Reḡhīd Paḡhā, indicating that the academy was to play in the renovation of Turkey. Its work was however impeded by the political instability of the time, and it petered out in 1279/1862 without having accomplished much more than the sponsorship of a few books, which included the Ottoman Grammar of Djewdet and Fu'ād Paḡhā, part of the history of Djewdet Paḡhā and his Turkish translation of the Prolegomena of Ibn Khaldūn. After the revolution of 1908 a number of learned societies appeared, the most important of which was the Ottoman Historical Society (*Tārīkh-i 'Oḡmāni Endjūmen*), founded in 1911.

The term *Endjūmen* was also used in Turkey for various parliamentary and administrative committees, for the standing provincial and municipal committees, and for certain educational committees operating under the Ministry of Education. Such were the *Endjūmen-i Tefhīh ve-Ma'ārif* (established 1299/1882, and the provincial and local educational committees (*Ma'ārif Endjūmen*)) established in 1328/1910 to initiate and supervise elementary education.—The word was also used for certain clubs founded on the European model, the first of which appears to have been the *Endjūmen-i Ulūd*, founded in Istanbul in 1287/1870. In recent years it has been replaced in most contexts by words of Western or Turkish origin.

In India and Pakistan there have been and are several *andjumanes* in different fields; the two most important, influential, and enduring are:

(1) The *Andjuman-i Tarakki-i Urdu* which was founded in 1913 within the scientific section of the *Mohammadan Educational Conference* (itself established by Sir Sayyid Ahmad Khān) with Sir Thomas Arnold and Muhammad Shibli Nu'mānī as its first president and secretary respectively. Its aims were to defend the Urdu language against Hindi as the *lingua franca* of India, and to develop and enrich it. Under its impulse and auspices books were written in Urdu and various others were translated from the English. In 1912 the *Andjuman* moved its headquarters from Aligarh to Awarāghūh (Dewcan) since when it has been under the able and zealous secretaryship of Mawlawī 'Abd al-Hakīk. In its new seat, where it was supported by the Haydarābād State, the *Andjuman* showed vigorous activity not only in writing and editing Urdu works and classics but also in translating from the English (some translations were also made from the French, Arabic and Persian), works on history, philosophy, science and others of general interest. The *Andjuman*, thus, supplemented the work of the 'Uthmāniyya University (established 1918) which, in pursuance of its programme of giving all instruction in Urdu, concentrated on translating texts rather than general

works. But, besides issuing a learned quarterly called "Urdū" (which still continues) and another entitled "Science", and attempting to find means of improving Urdu script and print, perhaps the most important pioneering work has been the publication of the lists of translations of scientific, philosophical and professional technical terms, and the issuing of English-Urdu and Urdu-English Dictionaries, modelled on the Oxford Concise Dictionary of English. In 1936, the *Andjuman* moved to Delhi and in 1948 to Karachi, where an Urdu College has been established giving all instruction (including modern science) in Urdu and hoping to become a University.

[a] The *Andjuman-i-Himāyati Idāra* of Lahore, founded in 1884 under Sir Sayyid Ahmad Khān's inspiration of spreading Western education among Muslims and working for their social welfare, established in 1912 the Islāmiyya College at Lahore (and since the creation of Pakistan, has acquired another, a formerly Hindu College), where, like Aligarh, Western education was given along with the compulsory instruction of Islamic theology. The *Andjuman* has played, through its institutions and its leaders, an important role in the awakening of the Muslims of the Panjāb. Besides High Schools for boys and girls, the *Andjuman* runs an Islāmiyya College for Women, an Industrial School, a Tibbiyya College and Dispensary (on traditional lines but with some blend of modern medicine), an orphanage etc., and had a missionary school (Iqbalīyat Islām College). It also issues a weekly paper called *Himāyati Idāra* and has its own press.

**Bibliography:** For (1) see a detailed account in *Oriente Moderno*, 1935, 331-45 and 536-48 by A. Bansaani, also *Ta'rikhi Adabi Urdū* by Rām Bāb Saksena (Urdū translation by Muḥammad 'Asfārī, Nawalkishore, Lucknow 1929, 392-4). For (2) see *Pakistan* by Dr. Gamāl-Eddīne Heyworth-Dunne, Cairo 1952, 38.

(F. KAHMAN)

**ANDEKŪY**, in Yākūt, i, 372, *Andekūhū*, also written *Addakūh* and *al-Nakhūd*, name of a town in Afghānistān situated in the northwestern province of Mazār-i Sharīf. Located on the steppes sloping north some 30 kilometers to the Amū Daryā (Oxus) river, this town of about 25,000 people is on the peninsula *Andekūy* river and along the motor road which joins Harāt, Mazār-i Sharīf and Kābul. Its modern fame is as a leading center of the *harabul* (lambskin) trade. The single structure of architectural interest and considerable antiquity is the domed shrine of Bābā Wall Šāhib, a local Muslim saint whose proper name may have been Bābā Shukr Allāh Abādī.

**Bibliography:** Le Strange, 426, with references M. N. Kūhī, *Armāghāni Maymana*, Maymana 1949, 474, 54.

(D. N. WILBER)

**ANEIZA** [see *SUNAYZA*].

**ANFĀ** the old name of Casablanca (Ar. *al-Dār al-Bayḍā'*, dial. *Dār I-Bēda*), often written as *Auale* in the Portuguese chronicles. The word, according to E. Laoust (*IREI*, 1939) is a variant of the Berber *aṣṣ* *remitt*, which induces one to place the early site on the hill now occupied by the residential quarter called *supper Anfā*, Marmol attributes the foundation to the Carthaginians, Leo to the Romans, but neither theory is supported by any text or archaeological remains. Al-Zayyālī ascribes it to the Zānāta *awira*, and places it at the end of the 12th century, but does not quote his sources. Al-Idrīsī mentions the port, already busy with the export of cereals. Nothing is known of the

part played by the town during the episode of the Baragwāt. Under the Marinids, it figures as the capital of the province of Tāmsān; it had fortifications, a governor, and a *hādī*; Abu l-Ḥasan built a *madrasa* there. In the anarchy which accompanied the decline of the dynasty, the town became virtually independent, and formed a small *cezaie* republic. The Portuguese decided to terminate the activities of the corsairs, and in 1468 or 1469, during the reign of Alfonso V, an expedition led by the *infante* D. Fernando captured Anfā, which had been evacuated by its inhabitants. The Portuguese destroyed the town, razed the ramparts and re-embarked. Several authors state that they returned in 1515 and occupied the town until the middle of the 16th century. This is a legend, probably having its origin in the plan actually conceived by the Portuguese in 1515 of reoccupying Anfā and building there a stronghold when they had completed that of al-Ma'mūra. Their setback at the latter place forced them to abandon their plan. Anfā remained deserted and in ruins until its reconstruction by the sultan Sīdī Muḥammad b. 'Abd Allāh in the 16th century, when it assumed the name of *al-Dār al-Bayḍā'* [22].

**ANGELS** [see *MALĀ'IKĀ*].

**ANGORA** [see *ANKARA*].

**ANHALWĀRA**, in Arabic and Persian literature *KARWĀLA*, modern Patan (pop., 1951 census, 43,044), situated 20° 51' N, 72° 11' E on the left bank of the Saraswatī in the Mīlsāna district of Bombay State, was the headquarters city of the Muslim *ahī* *ahī* of Godwāl from 699/1299, to 816-817/1411-1414 when Ahmad Šāh, grandson of Muḥammad Khān, the first of the independent sultāns of Guḍjarāt, made Ahmaddād his capital.

**History.** Hindu and Jain tradition ascribes the foundation of Anhalwāra to the Cālvādī ruler Vanarāja in either 128/746 or 148/765 (see K. M. Munshi, *The Glory that was Gurjarāḍa*, II, Bombay, 1944). Capital of the Chaulukya-Solanki dynasty from the beginning of the 4th/middle of the 10th century, Anhalwāra was abandoned to Mahmūd of Ghaznī by Bīhmadeva in 416/1025, but Mahmūd, intent upon Somnāth, paused there only to replenish his supplies. Although Kutb al-Dīn Aybak plundered the city in 593/1196-7, the definitive Muslim conquest by the forces of the sultān of Dīlī did not occur until 699/1299, when Anhalwāra, ruled then by the Chaulukya-Vāḡhelas, was sacked by Ulugh Khān and Nurāt Khān, generals of Sultān 'Alā' al-Dīn Khālījī. (See K. S. Lal, *History of the Khaljis*, Allahābād, 1950, on the date of this conquest). For a century Anhalwāra remained within Dīlī's area of paramountcy. Under the descendant of the well-known Khān, who formally proclaimed himself independent in 816/1407, Anhalwāra sank to a *diḡīr*; after Akbar's conquest of

Guḍjarāt in 980/1572, it became the centre of the *sarkār* of Pattan in the *shāh* of Guḍjarāt. (See Aḥmad-Akbar, ed. H. Blochmann, Calcutta, 1879). **Buildings.** The Muslim remains at Anhalwāra date from the beginning of the 8th/14th century. The *Adina* or *Djāma'* Masjid, built of white marble c. 705/1305, was destroyed by the Mahrattas in the 12th/18th century and was used as a quarry for the modern town walls. The Gumada and Shāykh Dīwān *maḡāzī* still stand, but the most magnificent Muslim construction now at Anhalwāra is the Khān Sarowar, "a really noble sheet of water", 1228 ft 1273 feet, given its present form by Akbar's foster brother Mirā' 'Aḥd Kōka between 997/1589 and 1002/1594.

(P. HARVEY)

**ĀNL**, ancient Armenian capital, whose ruins lie on the right bank of the Arpa-Cay (called by the Armenians *Alghuyun*) at about 20 miles from the point where that river joins the Araxes. A suggestion has been made that the town may owe its name to a temple of the Iranian goddess Anāhīta (the Greek Anaitis). The site was inhabited in the pre-Christian period, for pagan tombs have been found in the immediate vicinity of the town. As a fortress Ānl is mentioned as early as the 5th century A.D. Its foundation was conditioned by its position between the ravine of Taalkotzador, through which a stream coming from the hills of Aladja flows towards the Arpa-Cay, and the steep bank of that river. In the ensuing centuries the princely house of the Kamsarakan (connected with the Arghakids) built a castle at Ānl, and the foundations of this building erected of stone blocks without mortar right on the rock, have been discovered. The oldest portion of the structure seems to be a little church which may have been built before the 7th century castle, and later used by the Kamsarakan as a house-chapel.

From the 8th century onward the district of Ānl, like the rest of Armenia, was under the suzerainty of the caliphs. During this period the dynasty of the Bagratids succeeded in gradually consolidating their possessions and establishing direct relations with the caliphs. In A.D. 887 the Bagratid Ashot, "prince of the princes of Armenia and Georgia", was proclaimed king by the nobles of his country and confirmed in this dignity by the caliph. The son of this first king, Smbat (called by Arabic authors *Sambā* b. *Ashbūl*), was crowned in the year 924 by the governor Yūsuf b. Abī l-Šāḡī, whose act is stigmatised as tyranny and rebellion against God and His Prophet" by Ibn Hawkal, 252. Even under Smbat the kingdom of the Bagratids is said to have included the whole region from Dwin (Arab. *Dabīl*) to Bardha'sa reaching southwards as far as the frontiers of Mopotamia (al-Jaḡra; *Genoa* al-*Yūghūt*, 188, 194). The son of the murdered king "the Iron" Ashot, succeeded, partly with Byzantine assistance, in reconquering his kingdom; as ruler of Armenia he bore the Persian title *shāhshāh* (king of kings) which had already been conferred on his predecessor and rival, Ashot, son of Shapuh, by Sabuk, the successor of Yūsuf.

In the first half of the 9th century the Bagratid Ashot, Master of the mountainous district of Ānl from the Kamsarakan; but only under Ashot

III (961-77) did Ānl become the royal capital. The wall which is still extant was built by Smbat II (1077-89); the site of an older wall erected in 964 has been fixed by the excavations of 1893, and a comparison of the areas enclosed by the two walls indicates the rapid growth of the population. At a later period, town life overstepped the comparatively narrow space within the walls. The Bagratids built several bridges over the Arpa-Cay thus enabling the trade between Trebizond and Persia to take the shorter route through Ānl instead of passing through Dwin. The zenith of the Bagratids and their capital was reached under Gagik I (990-1002): from 993 onwards Ānl was the residence of the Catholicos of Armenia. As numerous inscriptions prove, Gagik retained the Persian title of *shāhshāh* which also appears in an Armenian form (*ark'ayats ar'shā*); he was also styled "king of the Armenians and Georgians". The remains of a church erected by Gagik in 1007 were excavated in 1905 and 1906; among them was found a statue of the king, with the model of the temple in his hand, and wearing a Muslim turban; the same headgear is also found in a relief portrait of his predecessor Smbat II, preserved in the monastery of Hahat.

Under Gagik's successors the kingdom rapidly decayed and in 1044 it became a part of the Byzantine empire but the growth of the town of Ānl was further encouraged by the Byzantine governors (*catapani*): an Armenian inscription ascribes to the catapan Aaron the erection of a magnificent aqueduct conducting water from the hills of Aladja to the town.

The Greek rule was ended by the sultan Alp Arslan who conquered and destroyed Ānl in the year 1064; according to Ibn al-Athīr, x, 27, the town possessed at that time 300 churches. In 1072, a year after the defeat of the emperor Romanos Diogenes, the sultan sold Ānl to the Muslim dynasty of the Shaddādhids [22], and down to the end of the 12th century the town remained (apart from a few interruptions) the residence of a branch of that family. At that period the town had two mosques, one of which collapsed during the second half of the 16th century; the other, which had survived, was used (since 1907) as a museum for the objects discovered during the excavations. There are also Christian buildings belonging to the same period; the Shaddādhids acted as beneficent rulers even towards their Christian subjects, and being related by marriage with the Bagratids, they were recognised by the Christian population as native and lawful kings. The walls of the town were repaired and furnished with some towers during their rule.

Ānl was for the first time conquered by the Georgians in 1124, under David II, who laid the foundation of the power of the Georgian kings; the town was given as a fief to the Armenian family of the Zak'arids, (in Georgian: *Mkhargrdzeli* = Long-imani), who extended the walls of the town so as to reach the steep banks of the Arpa-Cay. The Armenian tradition ignores the fact that the Georgian rulers (like the Greek predecessors) favoured the Greek Orthodox tendency, which accordingly predominated in the architecture of the period. There was no religious persecution of Muslims during this period, just as there had been no persecution of Christians under the Shaddādhids; a Muslim contemporary, whose gloss is found in Ibn Hawkal, 245, confirms that the Georgian king protected Islam against injury and made no distinction between Muslim and Georgian. Probably in connection with the

foundation of the Trebizond Empire (1204), Ani became an important centre of international trade; see A. Manandian, *O torgole i gorodakh Armenii*, Erevan 1954, 278.

Ani was besieged unsuccessfully by the Kh'arizmshah Jalāl al-Dīn in 1226, and conquered by the Mongols in 1239; but even after this conquest the town remained for a time in the possession of the Zak'arids; an inscription on the main gate shows that at a later period it was considered the 'private domain' (*khān-i indū*) of the Mongol rulers of Persia; but it never regained its former importance. According to tradition, Ani was finally destroyed by an earthquake in the year 1319; but both inscriptions and coins of a later date have been found. A variety of copper coins struck at Ani by the Ilkhan Sulaymān (1339-1344) is called by the Turks 'monkey-coin' (*maymūn isken*), the coins bearing the image of a hairy figure. Coins bearing the name of Ani were struck as late as the 14th century by the Ilkhan, and even in the 15th century by the Kara Koyunlu, though actually the mint must have stood outside the town, perhaps in the fortress of Maghazaberd (less than 2 miles from Ani). The excavations have shown that, after the decay of the palaces and churches, a rude and miserable population had built their dwellings on the ruins. At the time of Ker Porter's visit (November 1817) it was possible to distinguish these houses and their separate rooms, as well as the streets of the later period, which are but 12-14 feet wide. Later the name of Ani was preserved only by a Muslim settlement standing near the ruins. After the war of 1877-8 Ani was incorporated in Russia, but restored to Turkey by the treaty of 1921. It is now in the *kāds* of Arpaçay in the *wilāyat* of Kars, and has a population of ca. 150.

**Bibliography:** Accounts of the history of Ani are chiefly found in Armenian sources, especially in Stephan Asolik, a contemporary of king Gagik I. The Arabic and Persian accounts are extremely scanty, and the town is not mentioned by the Arabic geographers of the 9th and 10th centuries; Yāqūt, *i*, 79, gives Ani as a small town, Hamd Allāh Mustawfī, *Nahar* 30, states merely that the district has a cold climate and produces much corn and little fruit. The only Islamic source containing firsthand material on Ani in the 6th/12th century is al-Fāhik's *Ta'wīd al-Maṣālik*, Br. Mus., Or. 5803 and Or. 6310; see also the didactic chronicle by the local scholar Burhān al-Dīn Anawāl (*Anis al-Kalā'id*), written in Persian in 601/1211, and described by F. Köprülü in *Bull.*, 1943, 279-551. Cf. also Ibn al-Athīr, *x*, 27 (not quite accurate). See Minorsky, *Studies in Caucasian History* 1953, 79-106.

The ruins were first visited in 1663 by Gemelli-Careri (*Collection de tous les voyages faits autour du monde*, ii, Paris 1768, 94) and described at length in 1817 by Ker Porter (*Travels*, i, London 1821, 172-3). In 1859 plans of the town were sketched by Texier (*Voyages en Arménie*, Paris 1842, *Atlas*, plate no. 74) and in 1844 by Abich (cf. M. Brosset, *Rapports sur un voyage dans la Géorgie et dans l'Arménie*, St. Petersburg 1851, *Atlas*, plate no. 23 and Brosset, *Les ruines d'Ani*, St. Petersburg 1850, *Atlas*, plate no. 30). The Christian monuments were described by Muraviev, *Gruzia i Armeniya*, St. Petersburg 1848; for the Muslim inscriptions see Khanykov (in 1848), cf. *Mélanges Asiatiques*, i, 70 ff. and M. Brosset, *Rapports etc.*, 3-6 *rapport*, 121-50; the Album

compiled by Kästner (1850) contains pictures of architectural monuments on 36 leaves, and a collection of Armenian, Arabic, Persian, and Georgian inscriptions on 11 leaves (cp. Brosset, *Les ruines d'Ani*, 10-63). Among Armenian writers Nerse Sarkisyan and Sarkis Djalalayan collected Armenian inscriptions, and their material was used in Alihan's historical work on the history of the town (Venice 1855, in Armenian, cp. Brosset in *Mélanges Asiatiques*, iv, 392-412), now obsolete.

Russian excavations began in 1892 and were carried on systematically by Prof. N. Y. Marr in 1904-1917. Their results were published in numerous reports in Russian periodicals and in a special series (*Anitskaya seriya*) containing guide books and studies by Marr, J. Orbeli, Barthold etc. In more detail see N. Marr, *Ani. Krimiya istoriya* 4 i 5 *razskazy*, Moscow 1924, and architectural studies by T'oros T'oramanian (in Armenian), Erevan 1942-4. V. and I. Kratchkovsky, *Is arkhivy epigraphiki v Ani*, in the presentation volume to N. Y. Marr, Moscow 1935, 671-93.

**ANIMALS** [see DAYANĀN].

**ANIS**, the pen-name of Mīr Hāshim 'Alī, Urdu poet of Lucknow, India, who was noted chiefly as a writer of *maṭhvi* or elegies on the tragic fate of Husayn b. 'Alī and other martyrs of Karbala. He was born at Fyzabad (Faydābād) in 1216/1801 or 1217/1802; but, in his early manhood, migrated to Lucknow, where he enjoyed the patronage of the Shī'ite rulers of Oudh and their nobles. When the kingdom of Oudh was annexed by the British in 1856, he left Lucknow and visited many other places like Patna, Besare, Allahabad and Hyderabad: Deccan; but ultimately returned to his favourite city in his old age and died there in 1291/1874.

The chief merits of his poetry lie in the beauty and appropriateness of his diction, the perfection of his art, his remarkable powers of description, his successful delineation of character and the striking use of rhetorical figures. The emotional effect of his *maṭhvi* was heightened by the forceful and dramatic manner in which he recited them in the presence of large audiences. In his special branch of poetry, Anis had a serious rival in the person of his contemporary Dabir [s.v.]. Each poet had thousands of enthusiastic partisans, who maintained that he was superior to his rival. The citizens of Lucknow were thus divided into two camps, the Anisites and the Dabirites, each extolling the qualities of its own favourite poet. Opinion is still divided on their relative merits; but there is general agreement that they share the honour of raising the Urdu *maṭhvi* to its greatest heights and that their cultivation of the poetic art undoubtedly contributed to the refinement and enrichment of the Urdu language.

The works of Anis were published under the title, *Maṭhvi Anis*, in four volumes at Lucknow in 1876, and have been reissued several times since then. There is another edition in three volumes by S. 'Alī Haydar Tabātabā'i (Badāyūn 1921-30). A good idea of his writings may also be obtained from *Wāḥid-i Karbala*, a volume of selections so arranged by S. Manthir 'Alī Kākarawāl as to make a single connected story (2nd ed., Lucknow 1947).

**'ANKĀ'** [often followed by *maghrīb* as an epithet or in *idfa*] a fabulous bird approximating to the phoenix, which was also located by the Greeks in the deserts of Arabia. The belief in this creature is of long-standing among the Arabs, who connect it with the Abḥās al-Ras [s.v.], but it received its confirmation in a *ḥadīth* reported by Ibn 'Abbās (al-Mas'ūdī, *Murūj*, iv, 19 ff.), which states that, created by God, the 'ankā', in the beginning endowed with all perfections, had become a plague; one of the prophets of the 'Interval' (*fatwa*), either Khālid b. Sīdān or Ḥanzala b. Salwān, is credited with having put an end to the havoc wrought by this species of bird. After Islam, the 'ankā' was definitely assimilated with the *simurg*, which plays some part in Iranian mythology, and probably with the Indian *garuda*, the mount of Vishnu; thus a Shī'ite group, the Shumayyīya (see al-Shahrastānī, in the margin of Ibn Harm, ii, 3), adopted it and included it among the attributes of the Hidden Imam. Some authors give precise descriptions of this bird, although recognizing that it is extinct, but others claim that the Fātimids possessed specimens of it in their zoological gardens; there is no doubt that it is a type of heron.

(CH. PELLAT)

**'ANKABŪT** (A.), the spider. Al-Kāẓimī and al-Dāmīrī mention several species, the most dangerous of which is the poisonous tarantula, *Rufūḥ al-Raḥīl* or *al-Raḥīl*. Al-Dāmīrī also describes a hell-spider of reddish colour with fine hair on its body; at the head it has four claws with which it bites; it digs a nest in the ground, and seizes its prey by night. The weaving spiders make their webs according to mathematical rules; according to some the male spins the warp and the female the weft; according to others the female only is capable of making a web; as material they use spittle. When the web is finished the spider sits down in a corner waiting for a fly to enter the web, and pounces on it at once. Others suspend themselves on threads, others sit motionless on the ground and catch their prey at a jump; after rendering it helpless by entangling it in their web they carry it off to their lair and suck its blood. According to al-Ejzī the spider is young among the most wonderful of existing things because they are able to spin without being taught. The spider lays eggs out of which come small worms which, after three days, change into spiders; the act of copulation lasts a very long time, Dāmīrī describes how the male approaches the female.—Spiders webs are applied to external wounds to stop the flow of blood; they are also used for polishing enriched silver. The spiders themselves when pounded, are said to be a good remedy against mucus fever etc.—According to the

tradition a spider once saved Muḥammad from a great danger. When during the Hijra he and Abū Bakr had sought refuge in a cave the Kuraish who pursued him found a spider web in its opening. They therefore gave up the search thinking that no one could have entered the cave a short time previously. This and similar legends are founded on the fact that the spider makes its web with extraordinary rapidity.—*Sīrat al-Ankabūt* is the title of sūra 29. See also ASTURKAN.

**ANKARA** (Greek and Latin Ankyra, modern Greek Angora; known as Ankara, Ankuriya and also as Kaḥ'at al-Salāl, 'fastness of the chains'), to the Arab geographers; in Turkish times formerly Engürīye, Engür, Engürü, forms which also occasionally appeared on coinage), town in the district of Galatia, in central Anatolia, capital of the Turkish Republic (at the same time of a *wālayat*); 38° 55' N, 32° 55' E; 835 m. above sea level. It is situated near the northern edge of the central Anatolian steppe where three small rivers (the Bent Deresi or Hatip Suyu, the Incesu (Ingle Su) and the Çubuk Suyu, which subsequently flow into the Sakarya under the name of Ankara [formerly Engürü] Suyu or Caylı). It is at the foot and on the slopes of a mountain which lies north to south and rises towards the north, being crowned at its summit by an extensive castle. This summit is 978 m. above sea level and 110 m. above the valley of the neighbouring Hatip Deresi. The other side of the valley is flanked by a second hill, called Hızır (Hızırlik).

Ankara has probably always been a centre for the caravans going through Anatolia in all directions, and thus also a political centre. The old town—dating back to prehistoric times—was situated on the plateau of the castle hill; it gradually spread over the slope outside the fortifications and even to the western side of the plain at its foot. The original layout of the castle itself may well date back to the prehistoric period. In its present form it dates back to Byzantine days, and it was frequently extended and restored in Seljuk times. Its walls contain many ancient remains. There are three distinct parts: the 'outer castle' (Dış Kale) which can be reached by the Hızır Kaplı, whose walls encircle the castle to the south and to the west; the 'inner castle' (İç Kale), a fairly regular rectangle; and, on the crest of the mountain to the north, the citadel, called Ak Kale ('white castle').

Ankara, at one time the capital of the Galatian tribe of the Tectosages, and later within the sphere of power of the Pontic King Mithridates, was finally incorporated into the Roman Empire in the year 25 B.C. It was then embellished with the buildings required by a Roman town. Of those which survive, the one deserving most mention is the temple of Roma and Augustus, erected on older foundations. On its walls we find the most famous of all antique inscriptions: the *Monsuementum Ancyranum*, an account (in Latin and in Greek) given by the Emperor Augustus of his reign. In Christian times the temple was converted into a church; in Muslim times, the building was the seat of a Dervish saint, Hacıdî Bayrāmî Walli, whose *hürle* and mosque stand beside the ruined temple. A column (Bâlkâ Müskesi) erected by Emperor Julian (or Jovian?) should also be mentioned. The foundations of a large Roman bath have recently been discovered on the road towards the north (to Cankırı).

In the year A.D. 51 Ancrea was visited by St. Paul, who founded one of the oldest Christian communities there—to which he addressed his *Epistle to the Galatians*. Christianity survived in this town until the First World War.

In A.D. 620 Ancrea was taken by the Persian King Khosrow II Parviz on his campaign against Asin Minor. After his defeat near Ninivah, A.D. 627 he had to withdraw from the country—hence also from Ancrea. Subsequently Ancrea—capital of the Hakkari region—frequently suffered at the hands of Arab raiders. As early as 654, the Arabs held the town for a short space of time. In 806, the Caliph Harūn al-Rashid besieged and plundered the town; as did his son, the Caliph al-Mu'tasim, in 838. In 871 the town was plundered by the Paulicians of Thophris (Diyadin), and in 931 it was threatened by the Arabs of Tarūs.

Ancrea came under Turkish supremacy after the Emperor Romanus IV was defeated by the Saljuq Sultan Alp Arslan, near Malazgird, in 1071 (the exact date is not known—the city was still Byzantine in 1073). During the First Crusade, however, it was re-conquered for the Byzantine Empire by Raymond of Toulouse in 1101. Soon afterwards (it is not known exactly when), the city reverted to the Turks: first the Saljuqs; then, in 1127, the Dānişmendids; and finally, after the death of the Dānişmendid Malik Muḥammad Ghāzī (1143), back to the Saljuqs. When the Rūm Saljuq empire was divided up under Kılıç Arslan II (1196), Ankara went to his son Muḥyī l-Dīn Maḥmūd. In 1204, however, it was taken from him by his brother Rukn al-Dīn Sulaymān Shāh, who re-united the Rūm Saljuq empire. The oldest dateable work of Rūm Saljuq art is of the time of Prince Maḥmūd (Safar 594/Dec. 1197-Jan. 1198), a wooden *minbar* in the so-called 'Alā' al-Dīn mosque in the fortress of Ankara.

After the death of the Sultan Kaykhusraw I in 1210, his son 'Alā' al-Dīn Kaykubād—reverting against his elder brother, the Sultan 'Izz al-Dīn Kaykaws—obtained the fortress of Ankara. After a year's siege, however, the city had to surrender to the other brother and Kaykubād was imprisoned in Malatya, whence he returned only after the death of Kaykaws (in 1219) to succeed to the throne. His reign (1219-37) introduced the Golden Age of the Rūm Saljuq Empire. It is commemorated by Ankara's 'White Bridge' (Ak Köprü) over the Çubuk Suyu, of 619/1222, an hour's journey to the north-east of Ankara. This bridge connects Ankara with Baysaz and the west. It cannot be stated with any degree of certainty whether the beautiful bridge over the Kılıç Arslan near Köprüköy (to the south-east of Ankara) on the road to Kırşehir and Kayseri, the Çeşme-i Kaya, is of the same period. It bears no inscription but its name may well refer to the *amir* Sayf al-Dīn Aynā Çāhānqir who is repeatedly mentioned by Ibn Bibi, e.g. in connection with the handing over of Ankara to Kaykaws I (Ibn Bibi, ed. Houtsma, index).

The large so-called Arslan-Khāne mosque, outside the gate to the fortress (which may be regarded as the main Friday Mosque for the area of the city lying outside the fortress), dates from the late Saljuq period, when the empire had sunk to the position of a protectorate of the Mongol Ilkhan Empire of Iran. It is a mosque with wooden pillars and with open beam work, containing a beautiful wooden *minbar* which was donated by two brothers belonging to the Akhis in the year 689/1290. It also contains a *mihrāb* with beautiful faience facing. The

Kılıf Bey Dīnārī is of roughly the same period. Its *minbar* bears an inscription of 699/1299-1300 mentioning a certain *amir* Ya'qūb b. 'Alī Shīr as donor. He was possibly a member of the Turkmens of the Gerniyan-oghlu. Towards the end of the 13th century the Saljuq rule appears to have been merely nominal, whilst other rulers made their influence felt in Ankara, such as the Gerniyanid Ya'qūb and the members of the Akhi fraternity (p. 4).

In the beginning of the 14th century, after the collapse of the empire of the Saljuqs of Rūm, Ankara belonged to that part of Anatolia which was incorporated into the Mongol Ilkhan empire of Iran. There are coins made in Ankara for the Ilkhans from the year 703/1304 to 748/1344. There is also a Persian inscription of the Ilkhān Abū Sa'īd (over the entrance to the fortress) dated 750/1350, in which the taxes payable by the population are recorded (cf. W. Hinz, in *Bell.*, 1949, 745 ff.). The Ilkhan rule extended over the area towards the west, beyond Ankara, as far as Siirt-bisr. After the collapse of the Ilkhan Empire, Ankara belonged to the territory of the *amir* (after 1341, Sultan) Eretna by Kaymak, and his descendants. It may be assumed, however, that the rule over Ankara of both the Ilkhans and the Eretnids, was merely one of military occupation and tax collection, whilst the actual government remained in the hands of rich merchants and craftsmen of the city who were able to exercise considerable influence through the Akhi organisation. Akhi Şehāz al-Dīn (d. 751/1350) appears to have been the most prominent personality. He made donations to the main mosque in Ankara, the Arslan-Khāne mosque, and he lies buried in a *türbe* beside this mosque. In the inscription on his wooden sarcophagus (now in the ethnographical museum in Ankara), he calls himself *akhi mu'azzam*.

According to John Cantacuzenus (ed. Bonn, II, 284), Ankara is supposed to have been occupied for the first time by the Ottomans in 1354 under Süleymān, the son of Orkhan, but the Ottoman chronicles make no mention of this. This occupation, if it occurred, can only have been a temporary one. It was not until the beginning of the reign of Murād I (762/1361) that Ankara became Ottoman. The early chronicler Negārī (ed. Tauscher, I, 52, II, 80 (52)) reports that Ankara was at that time in the hands of the Akhis, and that they handed it over to Murād Beg, Murād's rule in Ankara in the year 763/1361-2 is proved by an inscription in the 'Alā' al-Dīn mosque in the fortress. In the early days of Ottoman rule, the wealthy Akhi families seem to have retained some influence in Ankara, as we can gather from inscriptions in the mosques they built (such as that of a certain Akhi Ya'qūb of 794/1391 and a certain Akhi Evran of 810/1433). Later on there is no mention of them.

On July 20th 1402, there took place, on the Çubuk Ovası, north of Ankara, the battle in which Timur defeated Bayezid I and took him prisoner. During the time of the subsequent fights between Bayezid's sons, Ankara belonged to the area of Mehmed Çelebi. On various occasions he had to defend the city against his brothers, in 1404 against 'Isā Çelebi, in 1406 against the *amir* Süleymān. During the quarrels between Sultan Bayezid II and his brother Dīnār, the governor of Ankara decided in favour of Dīnār, until Bayezid succeeded in conquering the city. During the reign of Ahmed I, Ankara became the centre of a revolt led by a native of the town, a robber chieftain by name of Kalandar-

oghlu. This revolt spread over most of Anatolia (1607) until it was put down by the Grand Vizier Kuyucu Murād Paşa in 1608.

The most prominent figure in Ottoman Ankara is Hādīdī Bayram Wallī (d. 723/1322 to 833/1429-30), the founder of the darwish order of the Bayrāmīyya. His *türbe* and the mosque belonging to it (an attractive building with a tiled roof and a flat wooden ceiling inside, built in the beginning of the 15th century) are close up against the ruins of the temple of Augustus.

There are a number of small and medium sized mosques of Ottoman times in Ankara. Amongst these some are worthy of special mention, such as the 'imāret Dīnārī' (built in 833/1427-28 by a certain Karāğāz Beg, perhaps the one killed in the battle of Varna in 848/1445) in the style of an ancient Ottoman mosque on a  $\perp$  shaped plan, and the mosque of Dīnārī Ahmed Paşa, also called Yenī or Kırşulu Dīnārī. This was built in 973/1565-66 by Sinan, the greatest of Ottoman architects. It has one dome, and beside it stands the *türbe* of its founder (d. 969/1561-62); concerning mosque and *türbe* see Hikmet Turhan Dağlıoğlu and A. Saim Ölgün, in *Vakıflar Dergisi*, II, 1945, 213-22; E. Egl, *Sinan, Der Baumeister osmanischer Glanzzeit*, Stuttgart (1954), 66-8. Other ancient buildings of Ottoman times which deserve a mention here, are the *kāfī* (Kuşşulu Khān, *makbūre* of 1579-1580; see A. Galanti, II, 733) and the *bedesten* beside it, which are halfway up the fortress hill. Both these were in ruins until recently, when they were restored for use as a museum of antiquities.

In Ottoman times, Ankara was the capital of a *sandjak* (*livā*) of the *eyālet* of Anadolu. In the beginning it was at the same time the capital of the *eyālet*, until Kütahya took over this function. Under the re-organisation of the internal government in the *tanziimat* times (law of 7 Džumādā II 1281/7 Nov. 1864), Ankara became the capital of a *vilāyet* with the *sandjaks* of Ankara, Yozgad, Kırşehir and Kayseri. The *sandjak* of Ankara had the following *kāzas*: Ankara, Ayash, Balı, Zir, Baysaz, Döğüşahid, Haymana, Sırbişar, Mihallıçık, Nallihan, Yabanözü.

Ankara is famous under the name by which it was formerly known in Europe, Angora, as the home of the beautiful white long-haired goats, which are bred all over central Anatolia. Their silky hair (*mohair*, Turk. *İpek*) is a commodity in great demand. The long-haired Angora ('Persian') cats and rabbits also enjoy considerable fame.

Since 1892, the town has been connected by railway with Haydarpasha, opposite Istanbul. Before the First World War it was a small town; Cuinet gives 27,825 inhabitants for the time round about 1890, with a Christian minority of ca. 10%. Other reports about the number of inhabitants of Ankara agree with this. The figure 50,000, given by Saint Bey Fräghert, *Kamūs al-A'ām*, I, 439, is undoubtedly exaggerated.

After the meeting of the National Congress at Siwās in June 1919, that town remained for some months the centre of the revolutionary government. The seat of the government was moved to Ankara in October, and Mustafa Kemal entered it on 27 Dec. 1919. On 13 Oct. 1921, by a decision of the Great National Assembly, Ankara was declared the capital of Turkey. (Cf. Gazi Mustafa Kemal, *Nispet*, I, 240, 572; G. Jäschke, in *WI*, 1924, 262 ff.). In view of its increased importance and growing population Ankara underwent great and rapid changes after

1925. The town plan was designed by H. Jansen. The most important suburb, on a spur of the Elma Dağı, is Çankaya. The mausoleum of Atatürk, a work of the Turkish architect Emin Onan, stands on a hill in the SW. Ankara is the seat of a University and of other educational institutions. According to the preliminary returns for the census of 1955 Ankara had 453,151 inhabitants.

ANNA (see SIKKA)

AL-'ANNABA, the present town of Bône, on the Algerian coast, east of Algiers. It is not known when it received the name of al-'Annaba or, according to Leo Africanus, *Buld al-'Unabā*, 'city of the juubes', a reference to the fruit grown there. The early Arab geographers call it Būna, derived from its ancient name Hippona and testifying to its long history. It was successively a Phoenician settlement, a Punic city, a possession of the Numidian kings, and a Roman city named Hippo Regius, it played a major role during the Christian era when Saint Augustine was bishop there (395-430). Captured by the Vandals (430), retaken by the Byzantines, it became a Muslim possession at the end of the 7th or beginning of the 8th century.

The urban centre has occupied various sites in the course of the centuries. Al-Bakri is the most precise on the question. He distinguishes three settlements: the town made famous by 'Aghūllān, the doctor of the Christian religion', situated on an eminence, very probably that on which the basilica of Saint Augustine stands to-day. At its foot, stretches 'the city of Sibus', also called Madinat Zāwī, from the name of the Zīrid prince who had received it as his portion (?). This site of the old town, which is in the process of being uncovered by excavation, and of the first Muslim city which in the 5th/11th century was flourishing, must gradually have been abandoned, as being too exposed to raids from overseas, and disappeared under the silt of the Seybouse. Finally, three miles from Madinat Zāwī, rose New Bône, Būna al-Hādūba, in a more secure position and, after 450/1058, encircled by a rampart. This is the present Muslim quarter, which occupies the height overlooking the port and the European city. Since 425/1035 it has possessed a Great Mosque, certain

features of which recall the Great Mosques at al-Raywān and Tunis, and which later received the name of the holy man Sūfi Abū Marwān (died 305/1115).

Like al-Biḡḡaya, Bône was a base for active piracy, and was for this reason attacked by the Pisans and Genoese (1034). Roger II of Sicily captured it in 1153 and installed a Hammāddid prince there. In 1160, it was taken by the Almohads. In the middle of the 13th century, it was annexed to the Hāfṣid dominions; but, frequently independent of Tunis, it was furnished with governors, from al-Bayḡar or Constantine. In 1533, it appealed to Ḳhayr al-Dīn, the ruler of Algiers, and was occupied by a Turkish garrison, which remained there until 1830.

**ANNĀZIDS** (ANĀZ <sup>3</sup>ANĀK), a dynasty (c. 382-517/991-1127) in the frontier region between Ḳirān and Iran, which was one of the manifestations of the period "between the Arabs and the Turks" when, in the wake of the westward expansion of the Būyids, numerous principalities of Iranian origin sprang up in Aḡharbāyḡdān and Kūrdistān.

As the rise of the Banū Ḳānizā was based on the Shāhādandīn Kurds, the dynasty should be considered as Kurdish, although the Arabic names and titles of the majority of the rulers indicate the Arab links of the ruling family. The organisation of the Banū Ḳānizā was typically semi-nomadic, in that it combined camps living in tents with strongholds serving as treasuries and refuges in time of danger. The characteristic feature of the Banū Ḳānizā dominion was the unusual flexibility of the organisation, now expanding and now shrinking. The existence of several rival branches of the family contributed even more to the vagueness of their territories and the constant displacement of their little-known centres.

There were two periods in the history of the Ḳānizāids. At first the external centres between which the family shifted were Baghdad, with its branch of the Būyids issued from Ḳādū al-Dawla, and Rayy, with its branch of descendants of Rukn al-Dawla. In the immediate west the Shāhādandīn were constantly involved in the tribal affairs of the Arabs Banū Ḳayāl and Banū Maryād. In the east, they were separated from Rayy by the dominions of the Kurdish Ḳasawayhids. In the second period, the appearance of the Salḡūks and their Turkish (Ghuzz) tribes completely disorganised the life of the Banū Ḳānizā who leaned now on the newcomers, now on the Būyid epigons, or fended for themselves in various tribal combinations.

The founder of the dynasty was (1) Abū Ḳānizā Muḥammad b. Ḳānizā, who ruled in Hulwān (at the foot of the pass leading up to the Iranian plateau). The fact that Hīlāl b. Muḥassin (*Edīpa*, ii, 422) calls him *ḡāḡib* and *naḡib* suggests that he was attacked by the administration of Bahā' al-Dawla (370-403/989-1013) and through that channel established himself in Hulwān where he ruled 20

years (382-403/991-1010). In 387/997 he temporarily seized Dabūkhā from the Ḳūkūl and then joined the commander Ḥaḡḡīdī b. Ḥurmīr in the campaign against the Banū Maryād. Later in the year he entered the service of Ḳānizā al-Dīn. In 389/999 he destroyed the family of Zahmīn b. Hīndī, lord of Ḳhānīn. In 397/1006 Badr b. Ḥasanīya temporarily dislodged him from Hulwān and he retired to Baghdad, though according to Ibn al-Aḡḡir, iii, 157, he died in Hulwān.

(2) His son Ḥusām al-Dīn Abū Ḳānizā Fāris (401-37) succeeded him in the principal fief (Hulwān), but at the same time his brothers became autonomous: Muḥalḡil b. Muḥammad in Shahrāzūr [q.v.], and Surḡḡāb in Bāndandīn (Māndān), on the border of the southern Kurdish tribes and the Lurs [q.v.]. This division led to a number of complications. In 405/1014 the Būyid Ḳānizā al-Dawla (of Ḥamadān) clashed with the Ḳasawayhīd Hīlāl b. Badr who was killed and his son Ṭāḡir captured. During Ḳānizā al-Dawla's absence in Rayy Abū Ḳānizā occupied Kirmānshāḡ (Karmīn). Ḳānizā al-Dawla returned to Ḥamadān and released Ṭāḡir (in 405/1015) who rapidly defeated the Ḳānizāids. Abū Ḳānizā submitted to him and gave him his daughter, but then suddenly attacked and killed him. Ḳānizā al-Dawla himself marched against Abū Ḳānizā but in the battle fought near Kirmānshāḡ (and witnessed by Avicenna, see his autobiography in Ibn Ṭayyib's, ii, 4), lost the day (c. 406/1015).

The Būyids of Rayy were succeeded (in 398/1007) by their maternal relative the Kikkīnī Abū Ḳānizā al-Dawla. By that time Abū Ḳānizā had already expanded up to Daynawar (and Shāḡir-khast?), which Ḳānizā al-Dawla now occupied. In the struggle between the western Būyids Abū Ḳānizā and Ḳānizā al-Dawla, Abū Ḳānizā (420/1020) helped the latter but insisted on the reconciliation of the rivals. In the same year parties of Ghuzz occupied Mawṣil and Abū Ḳānizā was ready to assist Ḳānizā al-Dawla, but the Arabs lost the day. In 428/1037 Abū Ḳānizā sided with Abū Ḳānizā but he was besieging Ḳānizā al-Dawla. In 450/1059 he again occupied Kirmānshāḡ and the castles Ḳhānīn and Arānā (probably Ḳhānīn and Arānā near Kangāwar?) which belonged to the Kūht Kurds (i.e. the Kurds of the Ḳasawayhīd federation).

In 437/1045 a war broke out in the region of Daynawar between his son Abū Ḳānizā and Muḥalḡil, who took Abū Ḳānizā prisoner. Abū Ḳānizā marched against his brother (in Shahrāzūr). But Muḥalḡil appealed to the Kakkīnī Ḳānizā al-Dawla who arrived and annexed Kirmānshāḡ and Daynawar (432/1040). When his other brother, Surḡḡāb, made a pact with the Ḳānizā (now Ḳānizā) Kurds, Abū Ḳānizā turned for help to Ḳānizā al-Dawla. Meanwhile Ḳānizā al-Dawla pushed on to Marḡī (Kerend?) and Abū Ḳānizā took refuge in the castle of Sirwān (on the Diyālā?). Finally Ḳānizā al-Dawla contented himself with Daynawar and then suddenly died in 433/1041. In 434/1042 Abū Ḳānizā again attacked Muḥalḡil who fled to Snda (perhaps Sennar?). Abū Ḳānizā had died in captivity and the brothers made peace.

In 435/1043 Ḳānizā al-Dawla died and at the same time a new enemy threatened the Ḳānizāids. In 437/1045 Tughril sent his half-brother Ibrahim Yinal to the west, and Abū Ḳānizā fortified himself in the castle of Sirwān (see above), while the Ghuzz devastated his dominions. He died in Ramaḡān 437/ April 1046.

The Kurds rallied now round (3) Muḥalḡil who succeeded to recover Kirmānshāḡ and Daynawar (438/1047), whence he ousted Badr b. Hīlāl appointed by Ibrahim Yinal. It is possible that Muḥalḡil relied on some local tribes of Shahrāzūr, for his nephew (4) Saḡdī (Saḡdā?) b. Abū Ḳānizā felt disappointed by his uncle's neglect of himself and the Shāhādandīn. He went to join Ibrahim Yinal (438/Sept. 1046), who reinforced his Shāhādandīn by a troop of Ghuzz. In Hulwān Saḡdī read the *ḡāḡib* for Ibrahim. He also occupied Bāndandīn, and his uncle Surḡḡāb sought refuge in Dīzī-Dēlōya (cf. the name of the Kurdish tribe Dēlō between Shahrāb and Khamīn), but then defeated and captured Saḡdī and his ally, the chief of the Ḳānizā tribe. Soon, however, the Lurs, who were Surḡḡāb's subjects, extradited their master to Ibrahim who had one of his eyes blinded. By that time, Saḡdī had been liberated by a rebel son of Surḡḡāb. As Saḡdī was not too favourably received by Ibrahim, he returned to Daskara (near Shahrābān) and sought the help of Daskarid.

Ibrahim appointed a relation of his to occupy Surḡḡāb's dominions and remitted Surḡḡāb to him to facilitate the surrender (Ḳānizā ii, 439/Oct. 1047), but the envoy was defeated by Saḡdī's ally Abū Ḳānizā b. Warīm (<Warīm < Bahrām?) Ḳānizā. Then the Ghuzz defeated Saḡdī and spread on the left bank of the Tigris. Saḡdī sought refuge among the Banū Maryād Arabs and Ibrahim captured the last important castle of the Ḳānizāids, Kaḡat al-Sirwān (see above). Muḥalḡil had to flee to Shahrāzūr (439/1047). During the siege of Trānshāḡ (Trānshā?) by the Ghuzz, plague broke out among them and in 440/1048 Ibrahim Yinal recalled them to Māḡḡadī (west of Kirmānshāḡ).

Muḥalḡil re-occupied Shahrāzūr but in 442/1050 he felt obliged to pay homage to Tughril-bek, who received him kindly and re-instated the Ḳānizāids: Muḥalḡil in Sirwān, Dakkūḡ, Shahrāzūr and Sīnḡhān (Zimkha?) a left affluents of the Diyālā; Surḡḡāb in Dīzī Māḡḡī (cf. the Kurds Māḡḡī in north-western Luristan) and Saḡdī in the two Rīwānds (near Nihāwand). In 444/March 1053 Saḡdī was placed in command of Tughril's van and advanced to Nuḡmīniya, clashed with his uncle Muḥalḡil and made him prisoner.

Meanwhile Baghdad was occupied by al-Basāḡī (q.v.). Muḥalḡil's son (5) Badr went to ask Tughril to intervene for the liberation of his father. Tughril offered to exchange Muḥalḡil for one of Saḡdī's sons kept by him as a hostage. Saḡdī disliked the offer and suddenly revolted against Tughril and sided with al-Malik al-Rāḡhīn, the Būyid. He was defeated by Tughril's generals and Badr, Muḥalḡil must have died at that time. Badr proceeded to Shahrāzūr, while Saḡdī remained in the castle of Rawḡḡan-Ḳūḡḡān (on the right bank of the Diyālā?), and even in 446/1054 the Ghuzz were unable to dislodge him.

After the occupation of Baghdad by Tughril (447/18 December 1055) the sources are silent on the Ḳānizāids but some survivors of the dynasty can be traced even at a considerably later time. Under 495/1102, Ibn al-Aḡḡir, x, 238, reports on the attack of Karabālī (a Salḡur Turkman) on (6) Surḡḡāb b. Badr. The commanders in Ḳhūḡḡīdḡān (Yāḡūḡ, ii, 436, Khutīyān Surḡḡāb, which G. Hoffmann, *Asiatica*, 1886, 264, identifies with Koy-sandjak?), seized his treasure, out of which they sent a present to Sultan Bark-yaruk. The Turkman occupied Surḡḡāb's dominions, except Dakkūḡā and

Shahrāzūr. Ḳhūḡḡīdḡān was also restored to Surḡḡāb, who died in 500/1106 and was succeeded by his son (7) Abū Mānṡūr. On this occasion Ibn al-Aḡḡir, x, 305, mentions Surḡḡāb's great wealth and great number of horsemen adding that (up to that date) the family had ruled for 130 years. Nothing is known of Abū Mānṡūr but from the *Tārīḡh-i Ḳasḡā*, 547 (clearer in the *Shahrānūma*, 32-4) we learn that in the second half of the 6th/12th century under the Aḡḡār ruler of Ḳhūḡḡīdḡān called Shūḡlā (read: \*Shūḡlā? (cf. *Asḡḡāḡ*)) there existed a ruler in Luristan called (8) Surḡḡāb b. Ḳānizā (mis-spelt: \*Ayyār). After \*Shūḡlā's death (in 570/1174, Ibn al-Aḡḡir, xi, 280) the founder of the dynasty of Lesser Lur [q.v.] Ḳhūḡḡīdḡān (Sīḡḡīr) curtailed Surḡḡāb's possessions, until the latter contented himself with being a mere *shāḡḡā* on his behalf in Māḡḡīd (near the Munḡḡer range in Central Luristan). Finally the whole of Māḡḡīd was incorporated by Ḳhūḡḡīdḡān. This Surḡḡāb was undoubtedly a descendant of Surḡḡāb, lord of Bāndandīn and Māḡḡī, and with him the last scion of the Ḳānizāids must have disappeared.

**Bibliography:** Hīlāl b. Muḡḡadī, in Margāḡīnī, *The Edīpa*, iii; *Muḡḡadī al-Tawḡḡīdī* (written in 520/1126), Teheran, 1318/1935; this book adds some interesting details to our principal source Ibn al-Aḡḡir, ix-x, who repeats some of Ibn al-Djāwārī's data in *al-Muntazam*, Haydarābād, viii-ix, but is much more explicit. Huart, *Les Banu Ḳānizā*, Syria, 1921, 265-79, and 1922, 66-79 (based mainly on Ibn al-Aḡḡir, ix). See also Bergmann, *Beiträge z. māk. Numismatik*, in WNZ, 1873, 25. An undated coin struck by Ḳānizā al-Dawla Abū Ḳānizā (or one of his vassals?) under the caliph al-Kāḡīm (422-07) belongs to the American Numismatic Society (information by G. C. Miles). (V. Moxosovsk).

**ANNĪYYA**, an abstract term formed from the conjunct particle 'an or 'anna, "that", is the literal translation of the Aristotelian term τὸ ὄν and means therefore the fact that a thing is, its "thatness" (the particle 'anna is used also substantively and al-'anna has the same meaning as al-'annīyya). The principal passage where Aristotle employs this term is in *Anal. Post. II. 1* and the important distinction he makes there between the fact that a thing is (τὸ ὄν) and the question what it is (τὸ τί ὅτι) is the fundamental source of the later discussions about *existentia* and *essentia*. Indeed, the most pregnant sense in which the term 'annīyya is used by the Muslim philosophers is the meaning of *existence*, i.e. the existence in reality of a particular individual in opposition to its *essentia*, its intrinsic nature, its "whatness", *māḡḡīyya*, *quidditas* in the Latin translations. When, for instance, ḡhāḡḡālī in his *Makāḡīd al-falāḡīya* expounds the general doctrine of the Muslim philosophers that in God existence and essence are unified, he uses the terms 'annīyya and māḡḡīyya. Since, however, in philosophy existence and non-existence being are often confused—in Greek philosophy the terms *by* and *ēvōv* serve to express both meanings and Aristotle himself uses (*Met. VII. 17*, 1021<sup>a</sup> 15) τὸ ὄν and τὸ ὅτι as synonyms (the Arabic translation of these terms here, in the edition of Bouvyes p. 1006g, is *al-'anna* and *al-'annīyya*)—we find the term al-'annīyya used also for non-existence being. For instance in a passage in Aristotle's *Metaphysics IX. 10.1051<sup>a</sup> 23* the non-existence being of truth and falsehood is rendered

by 'annīyya (the Greek has ἀννίησις) and Averroës in his comment on this passage explains the term by *annīyya*.

A special feature of the pseudo-Aristotelian neoplatonic treatises the "Theology of Aristotle" and the *liber de causis* in which *ἔν* and *ἐξ* are constantly translated by 'annīyya, is the introduction of Plotinus' five intelligible categories (cf. Plotinus, *Enn.* VI, 2); the category *ἔν* (being) is translated here by 'annīyya, whereas the category *ἐξ* (beingness) is rendered by *hūwīyya*. But in other translations e.g. the translation of Aristotle's Metaphysics *ἔν* is often translated by *hūwīyya* (e.g. in Book V, 7, where a definition of *ἔν* is given) and we find the terms, 'annīyya, *uwwād* and *hūwīyya* often used interchangeably.

It may be remarked that the fanciful derivation of 'annīyya from 'annī, ego, given by some Persian mystics and which has been adopted also by some modern European scholars, cannot be maintained, if only for grammatical reasons. The correct derivations from 'annī: 'annīyya and 'annīyya are both found in later Arabic philosophy for instance in Šihābī (17th Century).

**Bibliography:** We do not possess a satisfactory lexicon of Arabic philosophical terms. However, the examples given by Bouyges in the accurate indexes to his edition of Aristotle's Metaphysics with Averroës' Commentary may be studied with profit. Although the term is frequently used by Avicenna, it is found neither in *Ḥazāli's Tahkūt* nor in Averroës' *Tahkūt al-Tahkūt* (S. van den Haegen).

**AL-ANŠĀR**, the 'helpers', the usual designation of those men of Medina who supported Muḥammad, in distinction from the Muhājirūn or 'emigrants' i.e. his Meccan followers. After the general conversion of the Arabs to Islam the old name of al-Aws and al-Ḥazraǧ jointly, Banī Kayl, fell out of use and was replaced by Anšār, the individual being known as an Anšārī (cf. Kur'ān, ix, 100/101, 117/118). In this way the early services of the men of Medina to the cause of Islam were honourably commemorated. Anšār is presumably the plural of *ansār*, but the latter is never used as a technical term. The verb *ansara* has the connotation of helping a person wronged against his enemy. This is sufficient to explain why the Muslims of Medina were called al-Anšār (sometimes *ansār al-madīna*, "the helpers of the Prophet"), but the choice of the name may have been influenced by the resemblance to Našārā, "Christians"; e.g. Kur'ān, lxi, 14, "By helpers of God as 'Isā b. Maryam said to the disciples, Who are my helpers towards God?" (cf. iii, 52/53).

Muḥammad's first effective contacts with Medina were at the pilgrimage of 620 A.D. with six men of the Ḥazraǧ. As the reconciliation of the Aws and the Ḥazraǧ, however, was part of his aim, he seems to have insisted on the Aws being represented at the negotiations; and in the traditional accounts of "the first and second 'Akaba" (p. 6) about a sixth of those who pledged themselves to Muḥammad were men of the Aws. Medina had suffered so much from the feuds of the two tribes (see al-Aws, al-Ḥazraǧ, al-Madīna), that the ready acceptance of Muḥammad's claims must have been partly due to the hope that he would be able to restore and maintain peace. While there is much obscurity about the details, it is clear that most of the inhabitants of Medina, apart from the Jews, had entered into the agreement with him. The chief exceptions were four clans of

the Aws, called Ǧahma, Wāḥ, Wāḥf and Umayya b. Zayd, and part of a fifth, 'Aṣr b. 'Awf, all of which had close relations with the Jews. These non-Muslims are to be distinguished from the Muṣāḥibīn or 'hypocrites', since the latter were parties to the agreement with Muḥammad who afterwards disapproved of him. Despite these defections, the Aws were important among the Anšār, and indeed the leading Anšārī, until his death in 562, was Sa'd b. Mu'adh, chief of the clan of 'Abd al-Aḥbal of the Aws.

The following table shows the number of men of the various clans present at "the first 'Akaba" (A 1), "the second 'Akaba" (A 2), and the battle of Badr (B). The last column (W) gives the number of women of the clan who are given notices in Ibn Sa'd, viii; this may be taken as a rough indication of the total strength of the clan.

Clan	A1	A2	B	W
'Abd al-Aḥbal	1	3	15	35
Zafar	—	—	5	23
Ḥiribha	—	3	3	23
'Aṣr b. 'Awf	1	5	40	28
Aws Manāt (Ǧahma)	—	—	—	12
al-Aws (total)	2	11	63	121
al-Naǧǧār	3	11	56	83
al-Ḥabāṣa	—	7	19	30
Banu 'l-Ḥubāl, al-Kawākila	3	6	25	17
Sa'd b. Mu'adh	—	2	9	12
Salima	2	29	43	54
Zurayk	2	4	16	16
Bay'ada	—	3	7	12
al-Ḥazraǧ (total)	10	62	175	228

These figures suggest that a leading part in the approach to Muḥammad was played by clans like al-Naǧǧār and Salima, which had many members but had produced no great leaders in war. The two chief men of Medina at this time, Sa'd b. Mu'adh and 'Abd Allah b. Ubayy were not at al-'Akaba, and their clans ('Abd al-Aḥbal and Banu 'l-Ḥubāl) seem to be relatively badly represented.

It is disputed in the primary sources whether the Anšār took part in any of the first small Muslim expeditions. They constituted, however, about three quarters of the Muslim force at Badr. Of the leaders Sa'd b. Mu'adh was the most zealous in the cause of Islam; not merely 'Abd Allah b. Ubayy, but Usayd b. Hudayr (a rival of Sa'd b. Mu'adh for the chieftaincy of 'Abd al-Aḥbal) and Sa'd b. 'Ubayy were absent from Badr. At least until the siege of Medina in 562 'Abd Allah b. Ubayy was trying to prevent the growth of Muḥammad's power; but the others threw in their lot with Muḥammad after Badr. At the meeting to deal with "the affair of the lie (*al-bai'a*)" against 'Aḥḥa's chastity, it was clear that a first man among the Ḥazraǧ, was now Sa'd b. 'Ubayy. Indeed, shortly afterwards, on the death of Sa'd b. Mu'adh, he was recognized as the leader of the Anšār as a whole. These continued to be one of the main foundations of Muḥammad's power, though about the time of the expedition to Tabūk in 630 a small section became disaffected.

Throughout Muḥammad's residence at Medina the old feuds were slowly being forgotten, and the

Anšār were coming to feel themselves a unity, especially in contrast to the Muhājirūn or "emigrants", with whom they rarely intermarried. The cleavage between the Aws and the Ḥazraǧ was a factor of occasional importance as late as the meeting after Muḥammad's death at which Abū Bakr was made caliph; but nothing is heard of it subsequently. After the wars of conquest the Anšār, despite their honourable position in the new Islamic nobility, declined in influence. They mostly opposed 'Uthmān and supported 'Alī. Later they constituted a "pious opposition" to the Umayyads and took the side of the 'Abbāsids. Before the 'Abbāsids came to power, however, the Anšār had largely become merged with members of Quraysh and other tribes who had settled in Medina.

**'ANŠĀRA**, the name of a festival. Ibn al-Ḥaǧǧī (*Taǧdī al-Mulūk*, Cairo 1312) derives the word from the Arabic root *ṣ-ṣ-r*. For more than three quarters of a century, Dozy, on the one hand, and Equilaz y Yancas on the other, have attributed it to the Hebrew *šāṣra* (*šāṣereth*) "an assembly of the people to celebrate religious festivals, especially Pentecost". Among the Copts, it is still the name for Pentecost (Lane, *Modern Egyptians*, ii, 365). In Spain, existing in the forms *anšara*, *anšara*, *anšara*, it is the feast of St. John, among both Christians and Muslims (cf. Dozy and Engelmann, *Glossaire*, 125-7; Equilaz y Yancas, *Glossaire*, 187-8). In the Maghrib, *anšara* (with the variants *anšara*, *anšara*, *anšara*, depending on the district) denotes the festival of the summer solstice, celebrated on the 24th June in the Julian calendar, or the 5th/6th July in the Gregorian. Though known throughout Morocco, and almost everywhere in Algeria, it is not known, it appears, in Tunisia. The magico-religious character of the acts which make up its popular ritual is not in doubt: (a) fire rites intended perhaps to give greater strength to the sun at the time of the solstice; the burning of braziers full of plants, of hives, or of huts, thus producing copious smoke which is supposed to have virtue of purification and fecundation; (b) water rites, ablutions, sprinklings, the mingling of water with the ashes of the ritual brazier, by virtue of which the fructifying humidity is brought to combine itself with warmth, at the beginning of a new period of the solar cycle. It is reasonable to accept as clearly established the relationship between the rite of the *anšara* of the Maghrib and those of the Middle Eastern *anšara* (p. 6), and also the transference of the popular practices of the *anšara* to another festival, that of *šāṣra* (p. 6).

**AL-ANŠĀRĪ AL-HARAWĪ**, Abū 'Alī Ḥusayn 'Abd Allāh b. Muḥ. b. 'Alī b. Muḥ. b. Ahmad b. 'Alī b. Dī'āfar b. Maṣūf b. Maṭṭ al-Anšārī al-Harawī al-Hanbalī, born at Kuḥandir, the citadel of Harāt, on 2 Šahbān 360/4 May 1005. An infant prodigy, he was at a very early age the pupil of Abū Maṣūf al-Aḥlī, of Abū 'l-Faḍl al-Dīrādī and of Yaḥyā b. 'Annās, who instructed him in *ḥadīth* and *tafsīr*. Although commencing under Šāfi'ī teachers, he soon adopted Hanbalism with enthusiasm, because of its devotion to the Kur'ān and the Sunna. In 417/1026, he went to continue his studies to Nišāpūr, where he frequented the disciples of al-Aṣamm, and then to Tūs and Bīstām. In 423/1031, he made the pilgrimage, breaking his journey at Bagdād in order to attend the lectures of Abū Muḥammad al-Khālīl; on his return he met Abū 'l-Ḥasan al-Kharrābī, who had a decisive influence on his mystical career, on which he had first embarked under the guidance of his own father Abū Maṣūf, the *murīd* of the *ghurī* al-'Aḥlī of Balkh. He finally settled at Harāt, and divided his time between teaching his disciples and polemics against the theologians; as a result of the latter activity he was threatened with death on five occasions, and was three exiled. He died, honoured with the title of Shaykh al-Islām, in the city of his birth, on 22 Dhu 'l-Hijja 481/8 March 1089.

His biographers are unanimous in praising his piety, the breadth of his knowledge in all branches of the religious sciences, and the indomitable fervour of his devotion to the Kur'ān, the Sunna, and the school of Ibn Hanbal, which led him to be accused by his enemies of bigoted fanaticism and anthropomorphism.

His works are the exact expression of the varied aspects of his rich personality: in the field of mysticism, he bore his soul in the *Maṣnū'āt* and other writings in *naḡ* or in verse, which are considered to be among the masterpieces of Persian literature; the *Maṣnū'āt al-Sāfi'īya*, a valuable spiritual guide, impresses by its originality, its conciseness and its masterly psychological analyses (the number of the commentators on this work alone places it in an eminent position in the history of Sūfism). The *Taḥkūt al-Sūfīyya*, forming a link between al-Sulmī's work and the *Nafahāt* of Dīlāmī, is valuable both as a biographical document and as evidence of the dialect spoken at Harāt in the 5th/11th century. Finally, the *Dhann al-Kalīm wa-Aḥlā* is a principal source for the history of the struggle against rational theology in Islam.

Among his chief disciples, the following are worthy of note: Abū 'l-Wakī' 'Abd al-Awwal al-Sajīd, Muṭamīn al-Sajīd and, above all, Yūsuf al-Hamadghānī, the inheritor of his ideas.

SIRAT 'ANTAR, the romance of 'Antar, rightly considered the model of the Arabic romance of chivalry. This *sira* surveys five hundred years of Arab history and includes a wealth of older traditions. The story in the *Kutub al-Aghani* of how 'Antar, the son of a slave-girl, was adopted into the tribe of Banu 'Abs for saving them at a time of great crisis bears the stamp of a flourishing but already legendary tradition. The *Sirat 'Antar* far transcends the unconscious development of a legend. By a bold stroke 'Antar, the solitary hero, is raised to be the representative of all that is Arab, 'Antar the pagan is made the champion of Islam. The romance thus comes to reflect the vicissitudes of the Arabs and Islam through half a millennium; the tribal feuds of the old Arabs; the wars against Ethiopian rule in Arabia; the subjection of Arabia and especially of 'Irak to Persian suzerainty; the victories of the rising Islam over Persia; the remarkable historical position of the Jews in Arabia down to the seventh century; the conquests from Christianity by the Arabs, especially in Syria; the continuous wars of the Persian and later of the Muslim East against Byzantium; the victorious advance of Islam in North Africa and in Europe; the influence of the Crusader is also undeniable. The contacts between East and West are numerous. The romance is written in smooth rhymed prose into which have been interwoven some 10,000 verses. The editions printed in the East since 1286 A.D. divide the *Sira* into 32 little volumes, none of which, like the separate nights of the *One Thousand and One Nights*, ever ends at the conclusion of a tale.

Contents. The romance brings us through numerous legendary stories from early times down to the period when King Zubayr is ruling over the Banu 'Abs. The 'Abul hero Shaddad on a raid captures the negro slave-girl Zabiba (not till the xviii book do we get the denouement that she is a king's daughter, who had been carried off from the Sūdān), who becomes the mistress of 'Antar. As an infant, 'Antar tears the strongest swaddling clothes, when two years old pulls down the tent, at four slays a large dog, at nine a wolf and as a young shepherd a lion. Soon he comes to the rescue of his oppressed tribe, for which

he is acknowledged by his father and adopted into his tribe. He seeks 'Abba, his uncle's daughter, in marriage; the latter promises her to him in an hour of need; but after 'Antar has averted the danger, he imposes the most dangerous conditions to be carried out before the marriage. 'Antar fulfils them all but is only allowed to marry 'Abba after ten volumes of wonderful exploits. The area of his exploits widens continually. In his own tribe 'Antar has first to overcome the resistance of his father, then the hostility of 'Abba's relatives, to win over his rivals including the poet 'Urwa b. al-Ward, to put an end to the feuds of the Banu Ziyād, Rabi' and 'Umayra. In the feuds between the sister-tribes of 'Abs and Fajhāra, 'Antar proves himself the saviour of the Banu 'Abs; outside of his tribe, he fights and overthrows the strongest heroes and makes them his friends; such are Durayd al-b-Sinma, 'Amr al-'Umayr, Hani' b. Mas'ūd, the victor over the Persians at Dhū Kār, 'Amr b. Ma'dikarib, 'Amir b. al-Tufayl, 'Amr b. Wudd, the knight of the Harām, Rabi'a b. Mukaddam, the pattern of Arab chivalry and many others. He hangs up his *ma'dād* in the Haram of Mecca after defeating the other *ma'dād*-kaba-poets in a competition, overcoming all his rivals in duels and passing an examination in Arab synonyms set by Amru 'l-Kais. From Mecca he goes to Khaybar and destroys the town of the Jews. But 'Antar is also taken beyond the bounds of Arabia. The *Sira* does not lack reasons for this. 'Abba's father demands *ajdā* from him as a bride gift, which are only brood by Mundhir, King of Hira. 'Antar takes 'Antar to 'Irak. From there he is summoned to Persia to fight the Greek champion Badramit. Next we find him in constant association with the kings of 'Irak, Mundhir, Nu'mān, Aswad, 'Amr b. Hind, Iyas b. Kabisa and their viziers, notably 'Amr b. Bukayya. He also has constant dealings with the Sāsāns. His name is found in the *Shāh-nāma* (no *shāh* of this raw Anoshirwān, Rhodriwān (no *shāh* of this name is found in the Sāsānian history), Kawādī (probably Kawādī *Shīro*) sometimes as a dreaded opponent, sometimes as a most welcome ally. The son of the king of Syria woos the promised bride of a friend of 'Antar. The latter goes to Syria, kills his friend's rival, defeats King Hārith al-Wahhāb (Aretas), but becomes his friend and after the death of Aretas at the request of the princess Hāluma becomes guardian of the new king 'Amr b. Hārith, who is still a minor, and as such ruler of Syria. Here 'Antar comes into contact with the Franks, sometimes as an enemy and sometimes as their ally against the Persians. Syria is under Byzantine suzerainty. For the services which 'Antar renders the Christians here, he is invited to Constantinople and entertained and honoured. Laylāmīn, the king of the Franks, objects to this and demands that the emperor should hand over 'Antar to him. 'Antar along with Heracles, the emperor's son, then leads the Byzantine army into the land of the Franks, subjects them to the emperor, reaches Spain, defeats King Santiago, pursues his victorious march through his provinces in North Africa from Morocco to Egypt. When he returns from these conquests on behalf of Byzantium to Constantinople, an equestrian statue of him is erected out of gratitude; the statues of his two brothers, who had accompanied him to Byzantium, are placed at the side of his. Shortly before his death, 'Antar comes to Rome. The king of Rome, Balkām b. Markas is hard

pressed by Bohemund; 'Antar kills Bohemund and liberates Rome. On a campaign of reprisal against the Sūdānes, 'Antar goes from kingdom to kingdom deeper into Africa till he reaches the land of the Negus. Here he discovers in the Negus the grandfather of his mother Zabiba. Even more fantastic are the campaigns against Hind-Sind, against the Christian king Laylāmīn in the land of Baydā, in the land of the demons. 'Antar's death is brought about by Wizr b. Dīlā called 'Abd al-Rahmān, 'Antar had repeatedly defeated him and taken him prisoner but always set him free again. Wizr feels humiliated by this magnanimity and continually renews his attack. Finally 'Antar blinds him. Though blinded, Wizr learns to shoot birds and gazelles with bow and arrow from their sound. 'Antar is struck by one of his poisoned arrows, but Wizr dies before 'Antar has the delusion that he has missed. While dying, and indeed when dead, still sitting on his steed Abdjār, 'Antar still wards the enemy off from his people. 'Antar's marriage with 'Abba was childless but from his secret marriages and love-affairs, several children were born including two Christians, and indeed Crusaders, Ghadānfar, Coeur-de-Lion, son of 'Antar and the sister of the king of Rome whom 'Antar had married in Rome and left in Constantinople, and Djufrān (i.e. Geoffroi, Godfrey), the son of 'Antar and a Frankish princess. 'Antar's children avenge and lament the death of their heroic father. Ghadānfar and Djufrān then return to Europe. 'Abs becomes a convert to Islam.

Analysis. The following are the main elements that have contributed to the growth of the *Sira*: 1. Arab paganism; 2. Islam; 3. Persian history and epic; 4. The Crusades. 1. To Arab paganism it owes the chivalrous and knightly Bedouin spirit of the work, the majority of the characters in it, who often have historical features, the feuds between the sister tribes of 'Abs and Fajhāra; in connection with the race between Dābis and Zabāra, the most powerful of the *Abd al-Rahmān*, like King Zubayr's marriage with Tumādīr, Zubayr's death, Malik b. Zubayr's death, Hārith and Lubna, Djaida and Khalid, anecdotes of Hālīm Tayyī, the splendid figure of Rabi'a b. Mukaddam etc. 2. To Islam belong the introduction with a long midrash of Abraham, repeated legends of Muhammad and 'Ali, the conclusion of the work which forms a transition to Islamic literature, the tendency of the book to make 'Antar really prepare the way for Islam; 'Antar's victorious campaigns through Arabia, Persia, Syria, North Africa and Spain are modelled on the conquests of Islam. Certain details give the *Sira* a slightly *Shū'ite* colouring. 3. Persian influence is found in the knowledge of Persian history and the Persian epic, in places of Persian language, in the conception of kingship by grace of God, in the knowledge of Persian court life and ceremonial (throne, crowns, imperial carpet, court-hunts (falcons, cheetahs), pigeon-post, Persian offices and ranks (vizier, mōbedān mōbed, marzpan, pahlawān, eyes and ears of the *Shāh*) even the *sakridja* (gentleman-carvers). 4. Christianity and the Crusades. The *Sira* assumes that Christians in the Syria of the Sāsānians, in Byzantium and among the Franks. The Franks appear as Crusaders (the romance even mentions the cross worn on the breast), fighting for Shiloe and Jerusalem. Djufrān (Godfrey) besieges Damascus and sends troops against Antioch. The *Sira* mentions the cross, the dress of the priests and friars, the girdle

of the order (which in the *Sira* is the most important symbol of Christianity next to the cross), the crozier, the bell (clapper), incense, holy water, prayers for the dead, unctio, sacrament and of holy-days, Christmas, Palm-Sunday, is aware that among the Franks the clergy are first in Church and state, that marriages between cousins are illegal, seems also to know of excommunication and describes a Spanish place of pilgrimage and day of pilgrimage. The Christian saviour by Jesus, Mary, the Gospels, John the Baptist (Māri Hannā al-Ma'madīn, Yūghnā), by Luke (Lūka), Thomas (Mar Tōma) and Simon. The Emperor Radfīm rules in Byzantium and his son is called Heracles; Balkām b. Markas is king of Rome. The Christian rulers of North Africa have names which end with the -i, common in Greek and Latin, e.g. Martos, Kardus, Hernes, Ibn al-'Umayr, Kindaryas b. Kirmā, Sindaris, Theodoros. The king of Spain is called Santiago; of the names of Frankish kings and princes that of Bohemund alone is certain. The names of his brothers Mübert, Söbert, Kübert and that of the prince "Shübert of the Sea" show what is perhaps the commonest ending in personal names in Old French. 'Antar's son by the Frankish princess is called Djufrān, which conceals the old French form [Jofroi, Jelfroi, Gelfroi] of the name of Godfrey of Bouillon. As the romance of 'Antar knows nothing of Europe, but a good deal about Europeans, the author must have become acquainted with them outside of Europe, of course at the period of the Crusades; Bohemund is slain by 'Antar. Godfrey is the son of 'Antar, who comes as a Crusader to Asia, learns his paternity there, avenges the death of his father and then returns to Europe. Even the name "Taufur" of the king of the beggars in the army of Peter of Armenia, seems to be preserved in the *Sira*: "Dāfir" is the name of the usurper who drives the infant prince 'Amr from the throne of Syria but is overthrown by 'Antar. In regard to intelligent sympathy with and toleration of Christianity, the picture we get from the *Sirat 'Antar* is far in advance of that which the mediaeval Christian epic reveals of Islam, where the Muslims are made to worship idols, like Apollo, Cabu, Gonnellu, Jupiter, Margot, Malquedant, Tervagant etc. The romance of 'Antar regards the Crusades not with sympathy and admiration. It is true that Crusaders are mentioned, who go to the Holy Land to seek plunder and to escape punishment; but the Franks are fighting for God the Father, for the Son and for the spread of religion.

Folk-lore and literary parallels. There is remarkably little folk-lore in the *Sirat 'Antar* but it includes several noteworthy features: splendid witches' kitchen, fine examples of allegorical speech, of omens, life-taken. Most of the agreements with other narrative poetry may be regarded as commonplaces of the epic; the strength and growth of the hero, his exploits, the killing of a lion, *mu'ammārīn* (longevity) is as common in the 'Antar as in the *Shāh-nāma*, dreams, visions, Amazons, fights between father and son in the *Sira* have their parallel in the motif of the stupid man. There are very few borrowings: Nu'mān's lucky and unlucky day, Khuraw's bell of justice (the motif of the legend of the Emperor Charles and the snake), a flight to heaven in a box borne by eagles, several African traditions (probably taken from geographical works on Africa). There are also links with

European legends. The marvelous signs at the birth of Charlemagne (in Pseudo-Turpin) resemble those recorded in our romance at the birth of Muhammad, but Pseudo-Turpin undoubtedly borrowed from an older source. Artificial birds made of metal, which sing in various tunes by means of bells and organ pipes are described in French and German epics and also in the *Sirat 'Antar*. But here we have to deal with the historical marvel of the Chrysotriklinos in Constantinople, and with a similar thing in the Ctesiphon of the Sāsānids and also in the capital of the Tatar Khāns. Some coincidences are very striking. Hārith al-Zālim beats his sword Dhu 'l-Hiyāt against a rock, so that it may not fall into the enemy's hands; the rock is broken but the sword is unscathed, just as in the case with Roland's Durandal. 'Antar instructs his son Ghadhān, who wishes to slay Khurraw and seize the power for himself, on the subject of kingship by God's grace just as Girard de Viane does his nephew Almeri who wants to kill Charlemagne. 'Antar's horse Abdir takes flight to the desert after 'Antar's death, so that he may not serve another master, just as Renaud de Montauban's Baiart escapes to the forests of the Ardennes. Very remarkable is the parallel between the duel between Roland and Oliver and that of 'Antar and Rabi'a b. Mukaddam; the sword of the one combatant breaks in two and his magnanimous opponent gets him another; the duellists are reconciled and become brothers-in-law. But such poetical developments have their origin in a similar chivalrous outlook, the relation of the knight to his sword, to his horse, to his overlord and to his opponent.

Chivalry in the *Sirat 'Antar*. The *Sira* is rightly recognised to be a romance of chivalry. In the pagan period among the Arabs the ideal of masculine virtue was *murawwa*, *furuwwa*; alongside of this we have more frequently in the *Sirat 'Antar* *furuwwi* along with *farāda* and *fatāwana*. The knight is called *fāris*. 'Antar is called "a father of knights", *Abū 'l-Fāris*; sometimes *Abū 'l-Farṣān*, *Alā 'l-Farṣān*, *Fāris al-Farṣān*, *Afrān*. Not everyone who rides a horse is a knight. The knight's qualities are courage, fidelity, love of truth, protection of widows, orphans and the poor ('Antar arranges special meals for them), magnanimity, reverence for men ('Antar begins and ends his heroic career protecting women; he swears by 'Abila, by 'Abila's eye, conquers in 'Abila's name), liberality, especially to poets. The knights are also poets, especially poets of the Hujjās, who are found in hundreds in the *Sirat 'Antar*. The *Sira* also knows the institutions of chivalry. We meet pages and squires, not only the *shahīd* of Ctesiphon; 'Antar himself trains several thousand squires. The *Sira* even describes tournaments on a great scale, in the Hujjās, in Hira, in Ctesiphon, the most splendid in Byzantium where 'Antar's lance strikes the ring 476 times. These tournaments have many features in common with those of Europe, fighting with blunted weapons, tilting at the ring, decorating and beflagging the lists, the presence of ladies and girls. These agreements have been explained in the most diverse ways. On the one hand Delcure saw in 'Antar the model of the European knight, in the *Sirat 'Antar*, the source from which Europe had obtained all its ideas of chivalry, while on the other hand Reinaud simply found European ideas, customs and institutions imitated

in the *Sira* [JA, 1833, I. 102-105]. In this sense have seen the starting point for the study of the question of the origin of the *Sirat 'Antar*.

Origin. The *Sirat 'Antar* itself frequently and readily talks about itself and its origin. It professes to have been composed by al-Asma' in the time of the Caliph Hārūn al-Rashīd at his court in Baghdad; Asma' lived for 670 years, of which 400 were in the Dihlīyah; he was personally acquainted with 'Antar and his contemporaries, concluded the composition in the year 473/1080 and recorded traditions from the mouths of 'Antar, Hanza, Abū Tālib, Hātim Tayyī, Amru 'l-Kais, Hānī b. Mus'ūd, Hāzīm of Mecca, 'Ubayd, 'Amr b. Wudd, Durayd b. al-Shimma, 'Amir b. al-Tufayl. In fact we have a regular romance regarding the origin of the romance. The repeatedly mentioned *raḥal*, *raḥl*, *muḥammī*, *raḥl al-ḥarā*, *Asma'* and other authorities have the same significance for the *Sirat 'Antar* as the Dihkās, Pehlavi books and the hoary authorities in Firdawsī, or as the chronicles of St. Denis for the French epic. It is simply fiction when the *Sirat 'Antar* tells us that it exists in two versions, one for the Hujjās and the other for 'Irāk. The invention of the Hujjās is intended to encourage the belief that Asma' collected from 'Antar and his companions in the Hujjās the information, which was utilised in the romance. The Hujjās as the home of the romance is a pure invention. On the other hand 'Irāk may really have made a considerable contribution to the composition of the *Sirat 'Antar*. For the date of origin of the *Sirat 'Antar* we have the following clues: 1. In a religious dialogue between a monk and a Muslim (Das Religionsgespräch von Jerusalem um 800 A.D. aus dem Arabischen übersetzt von K. Vollers, *Zuschr. f. Kirchengeschichte*, xxix, 49) the monk mentions the exploits of 'Antar. 2. About the middle of the sixth century the former Jew Samaw'al b. Yahyā al-Magribī, a convert to Islam, describes his career and mentions that in his youth he was fond of long tales like that of 'Antar (MGWJ, 1898, xlii, 127, 418). 3. The evidence contained in the book itself. The appearance of Bohemund, Djurjān (Godfrey of Bouillon), perhaps also of the king of the beggars, Tufur, brings us to the period after the first Crusade, that is at the earliest in the first half of the sixth century. The composition of histories of 'Antar must therefore have already begun in the sixth century—on the evidence of the religious dialogue above mentioned. According to Samaw'al b. Yahyā a book of 'Antar of considerable size was actually in existence in the middle of the sixth century and if Bohemund and Djurjān already appeared in it, it must have been completed at the beginning of the sixth century. At the same time the meddlys may have continued to add a great deal to it and in particular continued its islamisation. The midrash of Abraham which is quite an inorganic addition and the legends of Muhammad and 'Alī could belong to any period. An original 'Antar can be reconstructed with philological probability. In vol. xxvii, the dying 'Antar reviews his heroic career in his and girls. These agreements have been explained in the most diverse ways. On the one hand Delcure saw in 'Antar the model of the European knight, in the *Sirat 'Antar*, the source from which Europe had obtained all its ideas of chivalry, while on the other hand Reinaud simply found European ideas, customs and institutions imitated

in the *Sira* [JA, 1833, I. 102-105]. In this sense have seen the starting point for the study of the question of the origin of the *Sirat 'Antar*.

no mention of children, and knows of only one love of 'Antar. This original 'Antar, therefore, should be called 'Antar and 'Abila. Following a genealogical stimulus, the later epic made royal ancestors be found in the Sūdān and royal descendants in Arabia, Byzantium, Rome, and the land of the Franks. The Crusades next found an echo and a reaction in the 'Antar story. The Crusaders came from the land of the Franks via Byzantium to Syria. 'Antar goes in a kind of reversed crusade from Syria via Byzantium to the land of the Franks and brings about the victory, if not yet of Islam, at least of Arab ideals and culture over European Christianity. The whole geographical area and historical range of the novel is filled with the exploits of 'Antar.

The romance of 'Antar seems to be first mentioned in Europe in 1777 in the *Bibliothèque Universelle des Romans* [JA, 1834, xlii, 236]; it was first introduced to European scholarship in 1819 by Hammer-Purgstall and to comparative literature in 1857 by Dunlop-Liebrecht (*Geschichte der Prosa-dichtungen*, xiii-xvi). The study of the problem of scholarship raised by the *Sirat 'Antar* was begun by Goldziher (mainly in his Hungarian works). The *Sirat 'Antar* was for long a favourite subject of study in France. In the *Journal Asiatique* the work was often discussed and partly translated. Lamartine went into raptures of admiration and enthusiasm for 'Antar (*Voyages en Orient: Vie des grands hommes* I. *Premières Méditations Poétiques*, *Première Préface*). Taine places 'Antar beside the greatest epic of his century, Roland, the Cid, Rostam, Odysseus and Achilles (*Philosophie de l'Art*, ii, 297). These tributes are not unmerited. The *Sirat 'Antar* unfolds before us the ever changing, glowing panorama of a particularly attractive period with an extravagant power of imagination, a skill in narration which never palls throughout the 32 volumes, and a poetical style of inexhaustible richness.

*Bibliography*. A very full collection of references to the manuscripts, editions, translations of and treatises on the *Sirat 'Antar* is given in V. Chauvin, *Bibliographie des ouvrages arabes ou relatifs aux Arabes*, etc., iii; *Loumāni et les fabulistes*, Harlaam 'Antar et les Romans de chevalerie, Leipzig-Leipzig 1898, 133. Cf. also: L. Goldziher, *Die arabischen Held 'Antar in der geographischen Nomenclatur* (Gloßes, 1893, lixv, no. 4, 65-67); do., *Ein orientalisches Ritterroman*, Peter Lloyd, Mai 18, 1918; B. Heller, *Der arabische 'Antarroman*, *Ungarische Rundschau*, v. 83-107; do., *As arab 'Antarregny*, Budapest 1918; do., *Der arabische 'Antarroman*, ein Beitrag zur vergleichenden Literaturgeschichte, Hannover 1925.

'ANTARA, "the valiant" (see LA, vi, 283, which also gives the meaning "blue-bottle"); the word is probably derived from the root 'ar which expresses the idea of violence. Several warrior-poets of Pre-Islam bore this name; see Amidi, 151-2.

'Antara b. Shaddād, warrior-poet of the 6th century A.D., belonged to the 'Abi tribe of central Arabia (see MGWJ, 1898, 133). The short notice by al-Ishādī, in the *Aghāni*, suggests that by the 4th/10th century responsible people tended to dismiss exaggerated popular accounts which had already made 'Antara a hero of fiction. Restricted to positive facts, the biography of this man is extremely sketchy. Born of an Arab father and a black slave, 'Antara, in his youth, lived in slavery as a shepherd;

in the course of the conflicts between the 'Abi and their Central Arabian neighbours, he had opportunity to display his prowess; in the "War of Dhānis and al-Ghāḥrā" especially between the 'Abi and the Dhūbyān, then the Tamīm, he seems to have particularly distinguished himself (see Cheikh, 803 f. and the scholia on *Diwān* nos. 13 ff.; see also *Diwān* nos. 12 and 26, distiches against other poets). It is probable that 'Antara was emancipated as a result of these exploits and that, at an advanced age, he fell into a raid against the Tayyī (see the *Aghāni* for the different versions of his death). Legend soon clothed this bare outline, under the influence of 'Abi particularism and Kharijite equalitarianism. 'Antara provided proof that a person of mixed race could, in the pre-Islamic era, achieve the status of a pure-blooded Arab. The embellishments were concerned with a limited number of themes: the valiant achievements of the hero, his passion for his cousin 'Abila, his vain efforts to overcome her scorn and to be worthy of this heartless beauty. These developments eventually resulted in the composition of a celebrated epic entitled *Sirat 'Antar* (see the preceding article). As is frequently the case, fragments and sections of the sub-stratum of the biographical legend. At the beginning of the 3rd/9th century, the collection of these poetic works was undertaken by the scholars of Bagra, notably by al-Asma' [q.v.]; in a recension with commentary by the Spaniard al-'Alam al-Shantamari (d. 476/1083), there are 27 poems and fragments: one of these, the *Kasida* in *mim* also appears in the *Mu'allakah* anthology; numerous fragments, often of considerable length, attributed to 'Antara, and appearing in various works, have been assembled by Cheikh, 816-82 (without exact references). On the whole, these last texts appear to be clumsy pastiches; see for example the fragments given by Cheikh, 812, 820, 829, 855; scholars—or forgers—have too often been led to attribute to 'Antara any poem containing the name of 'Abila (see Cheikh, 826, 828-9 where a poet addresses himself to 'Abila and celebrates his exploits against the Persians); many of the items attributed to 'Antara are dubious (see Cheikh, 853 and *Agh*, 235); the *Mu'allakah*, suspect on account of its length, is composed to begin with of elements in juxtaposition. Taken as a whole, the poems and fragments placed under the name of 'Antar, which do not betray too obviously the forger's hand are generally short; poems introduced by a *nasīb* are rare (see *Diwān*, ed. Ahlwardt, nos. 13, 21; and Cheikh, 817, poem in 84). With the exception of a threnody (*Diwān*, no. 24) and a few fragments of invective like *Diwān* no. 11, the majority of the poems celebrate the poet's valour, his exploits, and the claim which these give him the love of 'Abila. Those which have some chance of not being clumsy forgeries are distinguished by their simplicity of language and style.

The *Diwan* has been edited by Ahlwardt, *The Diwan of the six ancient Arabic poets*, London 1870, 33-2 + additions, 1781; other editions at Cairo, 1315 and at Beirut, 1888, 1901, upon which see Brockelmann, S. I, 45.

'ANTARI (a), noun derived from 'Antar (q.v.), denoting in Egypt: 1) a story-teller who narrates the *Sirat 'Antar*; 2) a short garment worn under the *haṭṭān*. The latter usage, assimilated by popular etymology to 'Antari, derives from the Turkish *Antari*, a word of Greek origin.

ANTARTÔS (see ANTÔS).

ANTEMURU, tribe of south-eastern Madagascar, comprising 55,000 sedentary agriculturalists living in the low river valleys, from the Matatana in the south to the Namurana in the north, and eking out their livelihood by fishing. Of their number, 25,000 members of certain clans claim to come from Rimaka, a region which they liken to Mecca. According to their written traditions, some *silama* 'Muslims', accompanied by *hafra* 'pagans', passing through the Comores and the north-east of Madagascar, settled, during the 7th/13th century, near their present territory. They found there, and assimilated, other groups of the same origins.

It seems likely that an Indonesian community was augmented by an influx of groups which had in varying degree been Islamised, and came probably from the east coast of Africa, which had been penetrated by the descendants of immigrants from the Persian Gulf. The prestige of these 'Islamised' elements was such that the Indonesian dynasties and some clans ascribed to themselves an Arab origin.

It is possible to distinguish two successive waves of immigrants: the earlier introduced divination based on geomancy, while the Antelatra of the recent influx introduced writing in Arabic characters and paper-making. The Islamised elements introduced in addition: plants (the vine, pomegranate, hemp, the copal-tree), the game of chess, a few prayers, a period of comparative fasting, some words of Arabic origin, and above all a calendar.

Since the 10th/16th century, the fame of the Antemuru magicians has extended their influence throughout Madagascar. Isolated from the Muslim world, they look upon writing not as a vehicle of communication, but as a means of preserving their magico-religious secrets. The development of the occult sciences has represented a corresponding decline of the Islamic tradition. The astrological calendar has supplanted the Muslim lunar calendar; prayers, their meaning not understood, have become magic formulas. This decadence is most marked in the tribe which dwells to the north of the Antemuru, namely the 12,000 Antamboko or Antambawaka.

Since the beginning of the 19th century the overpopulation of Temuru territory has led to a temporary exodus to the north-west of Madagascar. There, they live with the Comorian Muslims. This has given rise since 1913, and especially between 1926 and 1939, to an Islamic revival among some of the 2,000 literates belonging to the class of the Antelatra group.

After 1924, the development of coffee-planting, which created new resources, checked the migration to the north-west. Relations with true Muslims again

came to an end. The Islamic revival, opposed by the Christians as well as by the traditionalist magicians, declined, despite several attempts by Pâkistân Khodjas to make converts.

ANTIOCH (see ANTAKYA).

ANTŒN FARAH (see FARAH).

ANŒSHIRWÂN, Arabic form of the surname of Chosroës I (al-Tabarî, I, 862) (see KISRA), in Pahlavi *anoshah-rwân*, in Pārsan *anosh-rwân* 'possessed of an immortal soul', then in Persian *Nôshirwân* (Nôshirwân), which is popularly explained as *nôshir-rwân* 'possessed of sweet soul' (*burhân-i Kāfi*). Several persons in Islam bore this name (Zambaur mentions four), particularly one son of Manûshir and of a daughter of Mahmûd al-Ghaznawî, who was *amir* of Djurdân from 420/1029 to 434/1042 (Ibn al-Athîr, IX, 262), and AnŒshirwân b. Khâlid b. Muhammad al-Kâshânî (see the following art.).

*Bibliography*: A. Christensen, *L'Iran sous les Sassanides*, chapter VIII; Zambaur, index, s.v. (H. MACÉ)

ANŒSHIRWÂN b. KHÂLID b. MUHAMMAD AL-KÂSHÂNÎ, SHARAF AL-DIN ANŒ NÂSIR, was treasurer and *qâdî* al-diyâra to the Saljûqî sultan, Muhammad b. Malikshâh. After being succeeded by Shams al-Mulk b. Nîghm al-Mulk as *qâdî* al-diyâra he went to Baghdad. He was imprisoned during the reign of Malûkshâh b. Malikshâh for a short period but subsequently appointed *naîb* by Malûkshâh (514/1121-522/1128). From 520/1127-528/1134 he was *naîb* to the caliph, al-Mustashîd. In 520/1134 he became *naîb* to Mas'ûd b. Muhammad and held office until 530/1135-6. He died in Baghdad in 533/1138-9 according to Ibn al-Athîr, but according to the *Tadhkirah* al-Salaf of Hindû Shâh b. Sanjâr in 532/1137-8. He composed a work in Persian on the

events of his time, entitled *Futûr Zamin al-Sudûr* or *Sudûr Zamin al-Futûr*, which was later translated into Arabic by 'Imâd al-Dîn (q.v.). al-Bundârî's abridged version of this translation has been edited by Houtsma (*Recueil de textes relat. à l'hist. des Seldjûcides*, II). Majdî Khalfâ mentions another work by him, entitled *Nafhat al-Masûdî*, but this is probably the same as the *Futûr Zamin al-Sudûr* mentioned above (see Mirza Muhammad Kuwîwî, *Makhlâs Ta'rikh wa Intihâb*, Tehran, 1308 solar). AnŒshirwân was praised by various contemporary poets. It was he who encouraged al-Harîrî to compose his *maḥzâns*.

*Bibliography*: *Recueil de textes relat. à l'hist. des Seldjûcides*, II; Ibn al-Athîr, x, 31; Sibî b. al-Djarrî; Hindû Shâh b. Sanjâr, *Tadhkirah* al-Salaf. (A. K. S. LAWATOS)

ANWÂ' (a.), a system of computation among the early Arabs. The singular *nawâ*, connected with the root *nâ'a* 'to rise with difficulty, to lean, to support a load with difficulty' (cf. Kur'ân, xxvii, 76), denotes the acronychal setting of a star or constellation and heliacal rising of its opposite (q.v.); by extension, it is applied to a period of twilight, in the language of the later Middle Ages and the modern era, it has come to mean 'cloud, rain, storm, tempest' (see Dozy, Suppl., s.v.; Bousset, s.v.; H. Wehr, *Arab. Wörterbuch*, s.v.), on account of the pluvial role ascribed to the stars contemplated. In the plural, *anwâ'* denotes the whole system based on the acronychal setting and heliacal rising of a series of stars or constellations; it also appears the title of a number of works which constitute a separate class of their own.

1. The system of the *anwâ'*.—To estimate the passage of time, the early Arabs possessed a primitive system—perhaps already influenced by the 'Calendar of the Pleiades' (cf. J. Henninger, *Sternkunde*, 114 and references quoted)—which can be summarized as follows:—(a) in the one hand, the acronychal setting of a series of stars or constellations marked the beginning of periods called *nawâ*, but within which the duration of the *nawâ* proper was from 1-7 days. The stars themselves were responsible for rain and were invoked during the *istisâh* (q.v.); knowledge of these *anwâ'* enabled Bedouin trained in this science to foresee the state of the weather during a given period; (b) on the other hand, the heliacal rising of the same series of stars or constellations, at six monthly intervals, marked out the solar year by fixing a number of periods probably about 28. Such maxims as have survived suggest that this was the very basis of the calendar.

Some time before Islam (cf. Kur'ân x, 3; xxxvi, 39) the Arabs learnt from the Indians to distinguish the 'stations' or 'mansions' (*manzil*, pl. *manâzil* (q.v.)) of the moon, numbering 28. Perceiving that the list of these mansions corresponded *grasso modo* with their own list of *anwâ'*, they proceeded to combine the two ideas and to adjust their *anwâ'* to make them coincide with the *manâzil*, by dividing the solar zodiac into 28 equal parts of approx. 1° 55'; thus the 28 *anwâ'* identified with the 28 *manâzil* (see list in the article *MANZIL*) are determined by 28 stars or constellations constituting 14 pairs (the acronychal setting of the one corresponding to the heliacal rising of the other) and marking the beginning of 27 periods of 23 days and one of 24. These modifications, the date of which cannot be fixed accurately, were definitely completed after Islam, the passage from one system to the

other being favoured by the development of astronomy, and by the anathema hurled by the Prophet against the *anwâ'*, which are not mentioned in the Kur'ân. The old system, however, still survived, on the one hand empirically among the Bedouin tribes (cf. for example the *nawâ*, pl. *nawâs* of the Marâzî of southern Tunisia in G. Boris, *Documents linguistiques*... Paris 1951, 208-11), on the other hand traditionally, and with complete identification of the *anwâ'* with the mansions, in the specialised works which have perpetuated it among certain rural populations (see Ed. Westermarck, *Ritual and Belief in Morocco*, London 1926, II, 177, and *Wisdom in Morocco*, London 1930, 315-17).

2. The *anwâ'* in Arabic Literature.—As might be expected, it was the lexicographers who first assembled Bedouin ideas on the subject of the *anwâ'* and published them in lexicographical works of which we shall consider only those entitled *K. al-Anwâ'*, leaving aside the *K. al-Azma* and others which fall into the same category. The following are the principal writers mentioned as being authors of works entitled *K. al-Anwâ'*, none of which has as yet come into our possession: Ibn Kullîb (d. 207/822), Mu'arrirî (d. 193/810-11), al-Nadr b. Shumayl (d. about 245/859), al-Aḡma' (d. 213/828), Ibn al-A'arabî (d. 233/846), al-Shaybânî (d. about 245/859), al-Mubarrad (d. 285/898). On the other hand, we have the *K. al-Anwâ'* of Ibn Kutayba (d. about 276/886) which has recently (1957) been printed at Haydarâbâd, and we have fragments of that of Abû Hanîfa al-Dinawarî (d. after 282/895); the works of al-Aḡhâsh al-Aḡharî (d. 315/927), al-Zadîdjîdî (d. 310/922), Ibn Durayd (d. 321/933), the *hâfî* Wakt' (d. 330/941) and others are also lost. Basically these works contain an explanation of the system of the *anwâ'*, a list of the mansions (i.e. the modified *anwâ'*), a table of the dates of the rising and setting of the stars which determine them, the system of the winds and the rains, etc.; the explanation is accompanied by maxims and poetry, usually with a commentary.

From the 3rd/9th century, however, astronomers in their turn showed interest in the *anwâ'*: al-Hasan b. Sahl b. Nawbakht, Abû Ma'shar al-Balḥî (d. 272/885-6), Ṭhâbit b. Kurra (d. 289/902), and Ibn Khurrahshâh (d. 300/912-3), wrote *K. al-Anwâ'* while al-Bîrûnî (d. 440/1048) devoted to this subject a chapter of his *Āthâr* and reproduced in part (243-75) the *K. al-Anwâ'* of Sinân b. Ṭhâbit b. Kurra (d. 331/943), which is an almanac.

One would expect, indeed, to see Arab authors producing almanacs on the lines of those which they found in conquered territories, and, although we only have the almanac of Sinân for 'Irâq, it is probable that Egyptian authors composed them at an early stage, as is proved by certain chapters of Ibn al-Mammâtî and al-Makrizî, and by the names of the Coptic months which appear in the calendars produced in Spain. For the latter country, we in fact possess an almanac published by Dozy under the title of *Calendrier de Cordoue de l'année 961* (Leiden 1873) and still entitled *K. al-Anwâ'*, as is that of the mathematician of Marrâkush, Ibn al-Bannâ' (d. 721/1321) which has been published by H. P. J. Renard (Paris 1948); other *K. al-Anwâ'*, now lost, are attributed to al-Gharbâlî (d. 403/1012-13) and al-Khatîb al-Umawî al-Kurṭubî (d. 602/1205-6). These calendars are solar and, under each day, of the day and night, agricultural practices, etc., with, in the *Calendrier de Cordoue*, notification of

the Christian festivals. The modern popular calendars (*shāhiyya, tabakhim* etc.) are a final re-incarnation of the *K. al-Anwā'*.

**ANWĀR**, the *tabakhim* of ANWAD AL-DIN MUB. or MUB. (?) or (ALI B. MAHMUD) KHAWARĀNĪ, proclaimed in a well-known bayt to be master of the Persian *bayda*. Of his life little is known for certain except that he became one of the court poets of the Saljuqī sultan Sanǧār (d. 1157) at some period towards the end of the prince's life and that he was writing *baydān* in 540/1145—two of them being thus dated—when he must still have been quite young. He was born in the district of Khawārān in Khurāsān and received part of his education at the Mansuriyya madrasa in Tūs. Either while he was there or subsequently his studies embraced astrology, his skill in which brought him renown, though it also, if legend can be trusted, led to his downfall. This was in 581/1185, when an extraordinary conjunction of the planets failed to produce the upheaval of the elements which he had foretold. He died a few years afterwards, probably in 585/1189 or in 587/1191, being buried at Balḫ (thus Dawlatshāh) or at Tabriz, in the Poets' Cemetery alongside Khakān and Zābir al-Farūqī (cf. Mustawfī, *Nawā' al-Kawā'id*, 78), the former seeming more probable. His literary powers are considerable, as shown in his famous lament over the ruin caused by the Ghuzz tribesmen in Khurāsān, and his exercises in irony and ridicule make pungent reading. He shows little of self-criticism, being satisfied that he is an adept in astrology and superior to his contemporaries in logic, music, theology, mathematics and all other intellectual pursuits. It appears that his patrons after Sanǧār failed to value his services as highly as he did himself; at any rate he considered their rewards inadequate. Either that fact or jealousy of his rivals caused him to renounce the writing of eulogies and of *ghazals*, although it is difficult to decide at what point in his career this took place. His satire doubtless brought him enemies and declining fortunes led to persistent complaint against capricious Fate. In style and language he is sometimes obscure, so that Dawlatshāh declares that he needs a commentary. That obscurity, and a change in literary taste, may be reasons for his comparative neglect in recent times.

**APAMEA** (see APĀMIVA).

**APOLLONIUS OF TYANA** (see BALINOS).

**AL-'ĀRA**, a place on the S. shore of Yaman, W. of 'Ādan, on Subayhī territory, between 'Umayra (Khor Umaira) and Sukyā (Sukayya). Ibn al-Khujawī (ca. 600/1200) makes it the starting point of several routes. Al-Sharīfī (d. 893/1488) still calls this headquarters of the Banū Muḥammīn 'a big village' (cf. Abū Maḥmūd Ta'rikh *Thaghr 'Ādan*, ii, 91 f., in the biography of Sa'īd b. Muḥ. Muḥammir). Since then, with the diminishing caravan trade, there has been a steady decline. The place is still on the map of von Maltzan (ca. two miles from the coast), but nowadays the name seems to survive only in Bīr 'Āra and Rās 'Āra, which is the utmost Southern point of Arabia, the Promontorium Amnūmūl of the ancients.

#### (i) THE ANCIENT HISTORY OF THE ARABS

(For the ethnic origins of the Arabs cf. **AL-'ARAB** (**AL-ʿARAB**), section on Ethnology, cf. also part b, below.)

The early history of the Arabs is still obscure; their origin and the events governing their early years are equally unknown to us. Probably we would know a good deal more about them, if Uranus' five books of *ʿAḥzāʿ*, which constituted a special monograph on the Arabs, had been preserved. What we know about them is derived chiefly from the Assyrian records, the classical writers, and, as far as the history of the last three centuries before Islam is concerned, from Muslim tradition and some pre-Islamic Nabataean and Arabic inscriptions.

Possibly "the Aramaean Bedouins", who in 880 B.C. interfered in the affairs of Bet-Zamāni on the upper Euphrates and helped to overthrow the local vassal of the Assyrian king, were their predecessors of the Arabs. Their anti-Assyrian policy was subsequently followed by the Arabs, who first appear in the light of history in 854 B.C.: Gindibu, the Arab with 2000 camel troops from Arbi territory, joined Bir-Adri of Damascus (the biblical Benhadad II) against Salmanassar III. at the battle of Karkar in which, it is said the Assyrian king was successful. Perhaps the camp of Gindibu

was situated somewhere south-east of Damascus. Certainly the bedouin element of the Arabian Peninsula—for which Aram, Eber, and Khābiru are probably synonyms—was to be found originally in the area which extended between Syria and Mesopotamia and which, including Syria, was the oldest centre of the Semites.

If the hypothesis, presented by F. Hommel (*Ethnologie*, 350), that the land of Magan corresponds to Arabic Maʿān and forms the starting point for the foundation of the South-Arabian kingdom of Maʿīn, were established—though it would be difficult to prove it—the South-Arabian tribe of the Minaeans must have detached themselves from Arab nomads settled in this country, which had already been included in the Babylonian Empire by Naram-Sin (1330 to 1284 B.C.). The traditional pro-Babylonian policy of the Arabs would, therefore, be understandable because of their old political and cultural relations with Babylonia.

The geographical position of the land of Arbi between Syria and Mesopotamia, and the rôle of the Arabs in the traffic on the commercial routes leading from the Persian Gulf to Syria, from Syria to Egypt and Southern Arabia, and along the Wādi Dawshir through the highlands of Naḥd to Maʿīn, influenced historical events in the Near East. The struggle for the possession of these important high roads characterises the course of history during the last two millennia B.C. and the Roman period.

Already in 738 B.C., during the reign of Tiglat-Pileser III (745 to 726 B.C.), who had occupied Gaza, the terminal point of the "incense" road, Southern Arabia to the Mediterranean Sea, Zābir, the queen of the Arbi region, sent tribute to the Assyrian king. She probably ruled the oasis of Adumu (Dāmat al-Djandal) and was high priestess of the Kedar tribe, to which the oasis paid tribute. In 734 B.C. Tiglat appointed the Arab Idibaʿil as his representative in the land of Musī (Midian and Northern Hijāz), through which the "incense" road passed, and in 732 B.C. he subdued another queen of Arbi, Samś—who had apparently joined a coalition of the king of Damascus and several Arab tribes, among them Maʿa (Massa in Genesis xxv, 13 f.), Tema (Taymāʾ), Khayyapa (ʿEla, a Midianite tribe in the territory of Hesma, east of Taymāʾ), the Badana (south-east of the oasis of al-ʿEla), Davidu and Saʿaʿa (the Sabaeans)—conquered two of her cities and besieged her camp, so that she sent white camels as a tribute; the aforementioned Arab tribes were also compelled to pay tribute, and Idibaʿil (the Adbeʿil of Genesis xxv, 13), who resided near Gaza, was forced to recognise Assyrian suzerainty. In order to be sure of the loyalty of Queen Samś's land, Tiglat-Pileser III appointed a resident at her court. As the cities subdued by the Assyrian king were situated on the caravan road in southern Hawrān and northern Hijāz, it is obvious that the object of the struggle was the possession of the northern part of the caravan road from Māhīh to Gaza (Gharza). Nevertheless his success in subduing these people was neither complete nor lasting, for in 715 B.C. King Sargon II (722 to 705 B.C.) again defeated the Khayyapa as well as the Tamdī (Ḥamūdī, west of the oasis of Taymāʾ) and the Mansimāni (south of al-Akaba), and Samś, queen of Arbi, and the Sabaeans are again recorded as paying tribute. In 703 B.C. the Arabs (Yātū) were then queen of Arbi) helped the Babylonian king Marduk-apal-Idin against Sennacherib, king of Assyria (705 to 681 B.C.); but the Arab troops were

taken prisoner by the Assyrians, and Sennacherib seems to have possessed considerable influence over the Arabs, as Herodotus (ii, 141) calls him "king of the Arabs and Assyrians" (F. Hommel, *Ethnologie*, 374). In 689 B.C., after the defeat of Babylon, Sennacherib attacked the camps of the Arab clans subject to queen Teʿlḥinnu, routed them and pursued them into the inner desert around Adumātu (Dūmāt al-Djandal). The settlers of this large oasis were dependent upon the Kedar tribe which had control over Northern Arabia (the Palmyrene). The queen and priestess of Adumātu, Teʿlḥinnu, and her lieutenant Khazāʾī, king of Arbi, had taken refuge here; the latter, after a dispute with the queen, fled into the inner desert, but was pardoned by Assarhaddon, Sennacherib's successor, who recognised him as chief of all the Kedar. Khazāʾī died in 675 B.C., and his son Uaiṭe (Yātū) succeeded him, paying a heavy tribute to the Assyrian king, who had sent back Teʿlḥinnu's daughter Tabuʾa to Khazāʾī as queen and priestess. In 676 B.C. Assarhaddon made an expedition against the Bāzu (Būz) and Khazū (Khānū) in the depression of the Wādi Sirhān. When Shamash-shum-ukīn, the king of Babylon, revolted against Assarhaddon, the Kedar under Uaiṭe began hostilities against him and plundered the western borders of the country between Hamāʾ and Edom, but were driven back to the desert; when they again plundered the Assyrian provinces, they were forced to flee to Hawrān, while king Uaiṭe, expelled by his own subjects, who were enraged by the devastation of their lands during the campaign, was captured and brought to Ninveh. The Nabayati and the Kedar, settled in the Palmyrene and south of Damascus, and the Harar in the southern Sirhān valley were also subdued by Assyrian forces coming from Damascus, while an auxiliary detachment, which fought in Babylon on the side of the Babylonian king, was completely destroyed after the capture of that capital. Arbi and the tribes of the Nabayati and Kedar again recognized Assyrian suzerainty. About 580 B.C. the Kedar are mentioned as having been subdued by Babylon.

Strenuous efforts had been made during the Assyrian period to restore order in Arabia, but as a whole this was an impossible task. The utmost that could be achieved, was the protection of the important trade routes and the punishment of razzias, undertaken by the independent or rebellious tribes. If the title of "kings" reappears frequently in the Assyrian records, this title scarcely meant more than a local chief or shaykh, and it is much later before a really kinglike power is exercised by these Arabian chiefs. So "the kings of Arabia and all the kings of the Arabs, who live in the desert", of whom Jeremiah xxv, 23 f. foretells the ruin, are the nomad chiefs. The kings of Arabia are the chiefs of the settlements, e.g. the inhabitants of the oasis of Būz in the depression of Wādi Sirhān. Some of these settlements are occupied by the Neo-Babylonian kings, e.g. Taymāʾ, which was occupied by Nabonid (552 to 545 B.C.). Some years later (539 B.C.) Arab warriors helped King Cyrus II to take Babylonia (Xenophon, *Cyropaedia*, vii, 4, 16; v, 13).

When the Near East was annexed to the Achaemenid Empire, the Arabs again furnished camel troops to the Great King of Persia, e.g. to Xerxes (Herodotus, vi, 86), but sometimes the Arabs also joined the kings of Asia Minor in their struggle against Persia; for instance their king Artages (of Maragdes, Khārdjā?) was a confederate of Croesus

(Xenophon, *Cyropædia*, II, 1, 5). The "King of the Arabs" mentioned in Herodotus (III, 4) may be a king of the Libyānites (the Laianites of Agatharchides); the latter had occupied the Northern Hijāz, i.e. the colony of the Musānans known as Musāra ("border-land") in the land of Midian, with the centre of Agra-Hijra, between 500 and 300 B.C., and were followed by the Nabataeans.

When Alexander the Great had conquered the Achaemenid Empire, he also subdued Arabia according to Levy (xiv 9) and Piny (*Nat. Hist.* xii, 62). The Arabs now had to supply clothes and arms to the Greek army, and they participated in military actions, e.g. in the defence of Gaza (Arrian, *Anabasis*, II, 25, 4; Curtius Rufus, *Memoriae*, IV, 5, 30) and in the battle of Raphia (217 B.C.) on the side of Antioch III. Although the western part of Arabia was occupied by Ptolemy after the death of Alexander, the majority of the Arabs joined Antiochus (Polybius, V, 71); presumably these Arabs are the predecessors of the Nabataeans. Arab colonies, established at the foot of the Lebanon and in Syria, mainly served the traffic on the great commercial route Petra-Damascus-Mesopotamia (Piny, *Nat. Hist.*, vi, 142; Strabo, xvi, 749, 755, 756), as nomad Arabs (Ἀραβες Νομαδῖται) were also settled by Tigranes with the end in view (Plutarch, *Lucullus*, 21; Piny, *Nat. Hist.*, vi, 142). In the Mithridatid war Arabs fought along side the Romans, but in the Syrian war they harassed the Roman army under Pompey and were defeated by him. Arabs served with Cassius (53 B.C.) and Crassus, against the Parthians. The Roman policy of winning over Arabs as confederates and auxiliaries against their own kindred in the Arabian-Syrian desert and against the Parthians was continued and extended by the Eastern Roman Emperors. The Arabian-Syrian border-land was under the rule of the Ghassānids (q.v.) as phylarchs, as was the border-land of the Euphrates in Southern Babylonia (al-Hira) which remained under the rule of the Lakhmids (q.v.) until 602 A.D.

In the meantime Arabs had even infiltrated in the 4th century A.D. into Southern Arabia apparently in connection with camel-breeding and traffic on the "incense" road. They are mentioned in the Sabaean inscriptions as Ḥārāb and form a notable part of the population, along with the ancestral sedentary population. Their importance is emphasised by the mention of these Ḥārāb in the title and style of the Sabaean ruler. But this political position did not prevent their kindred in North-West Arabia from entering into warlike disputes with the South Arabian kings. King Amr al-Kays b. 'Amr besieged Najdān, which belonged to the king Shammar Yusr'ib, and it may have been this Amr al-Kays who put an end to the prevailing influence of South Arabia in the region of 'Asir and Southern Hijāz.

At the beginning of the fourth century, the aforementioned Amr al-Kays b. 'Amr, who succeeded in gaining power over the tribes of Asad and Nisār and called himself "king of all the Arabs", put a detachment of Arab cavalry at the disposal of the Romans. This fact is clearly stated in the Nabataean inscription of al-Namira dated 328 A.D.

From the end of the fourth century A.D. for about a hundred years the princes of the family of Dadī'mina, the leaders of the tribe of Banī Šāhī, were vassals of the Byzantine Empire on the Syrian border, and held territories there which were gradually yielded to the Ghassānids in the second half of the fifth century A.D. Unfortunately we do not learn very much about them from Arabic sources.

About the middle of the 4th century A.D., the tribe of Kinda (q.v.), which after a long struggle with Hadramūt, to which it was inferior, had to leave the Yaman, and migrated to the country of Ma'add, where it settled at Ḥajr al-Hijl Kinda in the south-western corner of Najd, two days' journey from Makkah. Although the leaders of Kinda, as kings of the tribes of Rabī'a and Mudjar, may have possessed a certain influence on the Bedouin tribes in Najd from the time when they settled there, the real kingdom of Kinda, governing a coalition of Arabian tribes in close connection with the Himyarite power in the Yaman, actually began with Hudjir Aḥil al-Murār. Yamanī tradition says that he was made king of Ma'add, when Tubā'a ibn al-Karib invaded al-'Irāk, but possibly the attacks, directed against Persia or its vassals in al-Hira, were made by the Kindites supported by the Himyarites. It is further said that Hudjir made military expeditions with the tribes of Rabī'a to al-Bahrayn and at the head of the Banī Bakr attacked the frontiers of the Lakhmids, depriving them of their possessions in the country of Bahrā, so that Hudjir is called "King of the Arabs in Najd and of the border-lands of al-'Irāk". His dominion probably comprised most of Central Arabia including al-Yamāna, and he died after a long and successful reign; he was buried in Baṭn 'Aḥl on the road between Makkah and al-Baṭra south of the Wādī al-Rumma. After his death about 478 A.D., the tribe of Rabī'a, divided into 'Amr al-Makhr, son of Hudjir, the dominions of his father; we find the tribe of Rabī'a now under the guidance of Kulayb Wā'il, leader of the Banī Taghlib, and at war with the Himyarites, who supported 'Amr b. Hudjir. Kulayb as well as 'Amr were killed in these struggles about the last decade of the fifth century (c. 490 A.D.). With al-Hārith ibn 'Amr the dynasty of Kinda attained its greatest power. He is known to the Byzantine historians as Arēthas, chief of the Saracens, and concluded an alliance with the Romans, directed against Persia and the Lakhmids of al-Hira. In the struggles and expeditions against the latter, the tribes of Bakr and Taghlib played the most important rôle (about 503 A.D.).

At any rate al-Hārith succeeded in uniting the tribes of the Najd into a great kingdom and made invasions into Roman as well as Persian territory. The statement that al-Hārith subjugated Syria and the Ghassānid kings may be an exaggeration. The peace of 502 A.D. put an end to the war against the Romans, and in the following year (503 A.D.) al-Hārith's troops attacked al-Hira, doubtless with the consent and help of the Romans. Al-Hārith became master of all the Arabs in al-'Irāk (503-506 A.D.), and the Lakhmid al-Mundhir, who got so assistance at all from his suzerain, the Persian king Kūbād, submitted to al-Hārith and married his daughter Hūd. However, the domination of the Lakhmid country was not complete; according to a South Arabian tradition, by an agreement between Kūbād and al-Hārith, the Euphrates or the canal al-Sāra near the Tigris not far from Baghdad was fixed as the northern boundary of al-Hārith's territory, and it is said, that, after King Anūshīrwan had restored al-Mundhir to power in al-Hira, al-Hārith kept what was on the other side of "the river of al-Sawād" until 527-28 A.D. So the Kindite interregnum in al-Hira may have lasted some time between the years 525 to 528 A.D. When the Persian Empire was weakened by the Madakite movement, it seems, that al-Hārith, for some period even ruled

over al-'Irāk as far as 'Uman, possibly as a feeble of the Persian king Kūbād. After the fall of the Madakites al-Hārith had to flee; he lost all his property and 48 members of his family were put to death by al-Mundhir. He nevertheless could again approach the Romans and was even appointed as a phylarch of the Arabs, on the side of East-Roman Empire. In 528 A.D., the date of his death, he is mentioned in this position by Byzantine sources. With his death the second climax of the Kindite power in Arabia came to an end. Al-Hārith had divided his dominion, comprising all Najd, great parts of al-Hijāz, al-Bahrayn and al-Yamāna, between his sons, who had been placed as chiefs over the tribes of Ma'add. His eldest son Hudjir, who had a certain supremacy over the whole kingdom of Kinda, was killed in a rebellion of the tribe of Asad. Between Šurābīl and Salama, ruler the tribes of Rabī'a and Yamin, and possessing the eastern half of the kingdom of Kinda, a discord arose concerning the division of power after their father's death, and Šurābīl was killed in the battle of al-Kulab (a few years after 530 A.D.); it is highly probable that this dissension was caused or nourished by the intrigues of al-Mundhir, whom the Banī Taghlib as well as the Bakr joined after the expulsion of the victors from Salama. Ma'dikarib, the chief of the Kays-'Avlān, went mad, or fell in the battle of Uḥra, and the fifth son of Hudjir, 'Abdallāh, who ruled over the Rabī'a tribe of 'Abd al-Kays, in al-Bahrayn, is not mentioned further. So the kingdom of the family of Hudjir Aḥil al-Murār broke down, and the Kinda, or considerable parts of them, migrated to Hadramūt, where they settled about 543 A.D. according to a Sabaean inscription at the dam of Mārīb. Hudjir's son, the famous poet Imra' al-Kays, tried in vain to regain the power of his father with the help of the Byzantine Emperor, and died in Ankara perhaps before the year 554 A.D. A cousin of Imra' al-Kays, Kays ibn Salama, chief of the Kinda and Ma'add, is possibly identical with Kaysan (Kaisan), who received from the Emperor the governorship of Palestine and defeated the Lakhmid al-Mundhir b. al-Nu'mān, who died in 554 A.D.

The disputes and struggles between the nomad tribes in Arabia are listed under the well known "Ayyām al-'Arab", and an expedition to Ḥaybar in 567 A.D. is referred to in the Arabic inscription of al-Hira (dated c. 568 A.D.). The then existing "kingdoms of individual tribes along with those mentioned here is proved by a Nabataean inscription found in Umm al-Djimal and dating from about 250 A.D., in which a king of Tanūkh is mentioned.

#### (II) THE EXPANSION OF THE ARABS: GENERAL, AND THE "FERTILE CRESCENT"

If the expansion of the Arabs is regarded as a continuous process, certain permanent features can be detected: the expansion consists usually in the emigration of large or small nomadic groups, rarely in that of groups with permanent habitations; it may be military, by means of service in foreign armies or in their own army which has set out for conquest; or through the founding of trading colonies. Apart from this last case, the extent of emigration depends partly on particular coincidences, partly on a recurrent, but incalculable, factor, the increase in the pressure of population in Arabia. This is brought about by the decline of cultivation (in South Arabia also of industry) and of the caravan trade (in Islamic times also of the pilgrim traffic); there is a corresponding increase in the nomadic population. The expansion was preceded by the immigration into the central parts of the peninsula, which had been sparsely occupied by an earlier population. It was facilitated by the taming of the camel in the second (?) half of the second millennium B.C. Nor is it likely that the occupation of South Arabia took place earlier, to judge from the philological, ethnological and archeological evidence. The forefathers of these immigrants into South Arabia were presumably traders who followed the ancient trade routes into the land of incense and myrrh. A little later the Arabs began to expand in the North, at first in the direction of Sinai and Transjordan. The evidence of the inscriptions shows that in 853 they were present in the north of the Syrian desert, shortly afterwards on both edges of the Fertile Crescent; they were camel-breeders, oasis-dwellers, traders. This formed the chief objective of the Arab expansion. It did not, however, remain the only one, as the emigration of the Sabaeans into Ethiopia (about 400?) shows. It depended on the strength of the various states of the Fertile Crescent whether this immigration could be canalised in the form of colonisation, and on the borders of semi-nomadic life, or whether it led to the flooding of the cultivated land by nomads. In the 1st century B.C. the nomads (Scenites) on the near side of the Euphrates crossed the border of the arabic land as far as the line Apamea-Thapsacus, while in the Hijāz they roved as far as the border of the arabic

land in the south of the Khābūr and the Sindjār. We cannot here examine exceptional developments, like that of the trading state of the Nabataeans which expanded in the same century, in the north to the Hawrān, in the south to N.-W. Arabia.

The incorporation of the Syrian part of the Nabataean kingdom in 105 A.D., and the abandonment of the Roman sphere of interest in N.-W. Arabia some sixty years later, shook the security of these countries. It is, however, impossible to discern what were the consequences of the incursions of the "Saracens" in the west and of the Tayyī settled in the central mountain ridges of North Arabia (al-Jabal). Different is the case of the entry of two tribes into the steppe lying between the Lower Euphrates and the sandy desert, which was perhaps originated by Ardashir I, the first Sāsānid (d. 241). They were the Taghlib and Asad (s), who came from East Arabia; and they were followed by Nizār from Middle and Western Arabia. The Nizār, with the exception of Iyād, were absorbed by the population of the Euphrates frontiers; the Taghlib and the Asad, on the other hand, continued their wanderings, the Taghlib, for the most part, to Northern Syria and the Asad to the south of the Hawrān. Since the 4th century these countries saw also the arrival of tribes from West Arabia. In the meantime, the recession in the income trade (from the 3rd century 7) and its extinction (at the latest in the 5th century) had led to the bedouinisation of part of the population of South Arabia. Groups of such tribes, taking part in military expeditions of the Hīmalīte kings, reached the district of Najrān and also Central Arabia (e.g. Kinda). All through the 6th century we can observe an advance into the north, sped forward initially by the campaigns of the kings of Kinda; its path lay along the northerly 'Ard = Tuwayk to the steppe on the lower Euphrates (Bakr, Tamīm), from Bihā to the Wādī al-Rama ('Amīr), from the country north of Medina in the direction of Palmyra (Bahak', Kaib). The Taghlib, dwelling formerly on the lower Euphrates, moved upstream and settled at the beginning of Islam in the Dījāzra to the north of the Sindjār.

The expansion at the beginning of the Islam came about in the first place through enlistment in the armies and auxiliary troops which were sent by Medina to the Euphrates, in Transjordan and to Southern Palestine and after that conquered al-'Irāk, Syria and al-Dījāzra; later through participation in the campaigns which led, across the Persian Gulf or from the garrison cities of Kūfa and Basra, to Iran, from Damascus to Egypt, North Africa and Spain. It occurred further through the displacement of tribes from Transjordan to Palestine (in the north 'Amīl and Dīwānīn, in the south Lakhm); the emigration of parts of Bakr and Dīwānīn from the Hūdūd to Egypt; through continuous infiltration of families and groups into the garrison towns and the Dījāzra; and through resettlement of the people of Kūfa and Basra in Khurāsān. With the enrolment of 400 families of the Sulaym and other West Arabian Kayisites as colonists for Lower Egypt, followed spontaneously by three times their number, the first period of expansion in Islamic times ends. The curtain between the Fertile Crescent and Arabia falls again.

It took a considerable time before the loss which the population of Arabia incurred by the emigration during and after the campaigns of conquests was made good again. The first new movement led from

the Dījāzra towards the north-east: before the middle of the 9th century the Asad (1) began to advance along the pilgrims' road of Kūfa, and Tayyī followed close on their heels. In the second half of the 10th century, quarrels under the Buwayhids allowed the Asad to penetrate into the cultivated land; a part of them wandered on to Khūstān, where already before Islam a small Arab island (Tamīm) had been formed. In the meanwhile the campaigns of the Karmatians of East Arabia into 'Irāk (111-25/29-37), Syria and Egypt (355-68/94-78/9), had driven new waves of migration to the north: Khāladīya ('Uhayl) moved out of East Arabia into the steppe on the lower Euphrates, followed in the 11th century by Muntafik (also of 'Uhayl). Their place in East Arabia was filled by tribes which immigrated from 'Uman; part of these too later moved to 'Irāk. Some Tayyī settled in southern Transjordan, and subsequently acquired the overlordship over the older immigrants of the same tribe in Palestine. The stream of tribes from South Palestine to Egypt, which began in early Islamic times, began again in the middle of the 11th century (originated by orders of the government), and in the late Middle Ages it was brought to a halt by a movement in the opposite direction. Since the end of the 12th century there is a trickle of Dīwānīn from Northern Hūdūd over Sinai to Egypt and particularly to Transjordan, until in the 13th century this source dries up. They are followed by Balī. Finally since the end of the 13th century groups of the parish tribe of Hūtaym penetrate into the same districts from the territory east of Khaybar. Meanwhile a new expansion had begun in the Dījāzra. Around 1200 the Ghazīyā (Tayyī) appeared in the north between Transjordan and 'Irāk, the Banu Līm (also of Tayyī) in the south between Medina and the Kašim. Since the 15th century Ghazīyā camped on the Euphrates, but did not cross it for good till around 1800. The Banu Līm penetrated at the end of the 15th century to the northern frontier of the Hūdūd, but were repelled by the Ottomans, and following their ancient route turned in the middle of the 16th century to the east, and on to the lower Tigris and Khūstān.

The last great migration, that of Shammār and 'Anaza, commenced in the same district. At the end of the 17th century the Shammār came from the Dījāzra to the frontier of 'Irāk. 'Anaza (whose territory had been till that time from Madīn to Sīlīb to the Kašim) penetrated at the same time, accompanied by the Banu Saḥr, as far as Transjordan. In the 18th century 'Anaza, coming from S.-W. and S.-E., occupied the Syrian desert. Into the midst of this movement burst the campaigns of the Wahhābīs. In the nineties the Shammār Dījāzra left their homeland occupied by the Wahhābīs and went to the Euphrates. At the beginning of 1802 they crossed it with the agreement of the government and soon pushed on into the Dījāzra up to the edge of the mountains of Asia Minor. Other parts of 'Anaza reached the Syrian Desert together with the troops of the Wahhābīs or in the course of flight from their tax-collectors.

As the result of the progress of agriculture in North Arabia since 1911 and the exploitation of the oil resources in the last two decades, the expansion of the Arabs has ended for the moment.

Some features of the expansion must still be mentioned, which it was not possible to fit into this article: the settlement on the Iranian coast of the

Persian Gulf (which had pre-Islamic antecedents); the foundation of trading colonies on the coasts and the islands of the Indian Ocean from the early to the late Middle Ages: Malabar, Madagascar, East Africa (Pata-Kilwa, with antecedents in the ancient South Arabian period); the more recent colonial policy of 'Uman; the continuous emigration from Hadramawt, which in the 19th century was principally, but not exclusively, directed towards Indonesia (mercenaries in Haydarābād); and infiltration into Upper Egypt across the Red Sea. (W. CASSELL)

#### (iii) THE EXPANSION OF THE ARABS: IRAN IN EARLY ISLAMIC TIMES

The Arab conquest of Iran brought a part of the Arab people to that country. There appear to be two separate developments in settlement. (1) The immigration from the opposite Arab coast to the south coast of Iran along the Persian Gulf. The Arabs also spread in a south-easterly direction along the coast from the mouth of the Euphrates and Tigris. Apparently Arab settlements could be found here already in pre-Islamic times (see A. Christensen: *L'Iran sous les Sassanides*, 87, 128). The number of Arabs increased considerably here in early Islamic times; there is, for example, explicit mention as settlers of the 'Abd al-Kays from the coast of 'Uman (al-Balādhūri, 386, 392; al-Isṭakhri, 142; Ibn al-Aṭṭīr (Būlāki), 149). From then on Arab settlements remained along the coast and at some places inland (e.g. Māhān, in the district of Bardīz, 985 A.D.; al-Makhdī, iii, 462) until at least the times of the Mongols (B. Spuler: *Die Mongolen in Iran*, 'Leipzig 1955, 142, 149 f., 164). It seems reasonable to suppose that there is a connection between those settlements and the ones of today, in view of the continued migration of Arabs across the Persian Gulf and from Basra. (2) There was a second influx of Arab settlers into Iran from Mesopotamia. In the 7th century Arab colonies were formed in several towns such as Kāshān, Hamadān and Isfahān; Kumm became a predominantly Arab (and Shī'ite) town, and remained so for a considerable time (al-Balādhūri, 314, 409, 416, 426; Nārshakhi (Seifeder), 52; Ibn al-Aṭṭīr (Būlāki), v, 15; F. G. Browne, *Account of a rare ms. hist. of Isfahan*, Hertford 1901, 27 [offprint from JRAS, 1901]; B. Spuler: *Iran* [see Bibl.] 179). The number of Arab settlers in Ādharbaydīn (al-Balādhūri, 328, 331; al-Tabarī, i, 280 f. 1; Ibn Hawkal, 353; al-Ya'qūbī, *Ta'wīḥ*, ii, 446; *Aḥḥādīḥ*, xi, 59) was apparently much smaller. Khurāsān, however, remained the main goal throughout all these migrations. The actual settlement was partly made by large groups: there are reports of 25,000 from Basra and an equal number from Kūfa, who arrived in 52/672; a further batch reached the country in 683. On the basis of this number of men capable of bearing arms (50,000) and in view of the strictness of recruiting, J. W. Hauer (cf. *Bibl.*) estimates the number of Arab settlers in the beginning of the 8th century at 200,000. They did not live only in the towns—where in some cases quarters were put at their disposal after the conquest—but were scattered all over the country, as for example in the oasis of Marw, where they acquired possessions and adapted themselves to the *dikhān* way of living. The geographical contours of Khurāsān suited the Arabs very well: they could easily travel across the large plains and the steppes, although they were somewhat more awkward than the natives both at crossing rivers and in the mountains (cf. Barthold, *Turkestan*, 182).

The main body of Arabs in Khurāsān had come from Basra. Of the tribes settled there, the Kays (especially in the 8th century: al-Tabarī, ii, 1029) were in the majority in the west, while the Tamīm and Bakr were mixed together in the east and in Sīstān; thus the outcome of inter-tribal feuds was varied. Ibn al-Aṭṭīr (Būlāki, v, 6) states their numbers for 715 as follows: Basra 9,000, Bakr 7,000, Tamīm 10,000, 'Abd al-Kays 4,000, Asad 10,000, Kūfāns 7,000 (= 47,000 which tallies almost exactly with the above mentioned number for Kūfāns and Basra); in addition altogether 7,000 *mawālī* of these tribes. In this list the people from Basra and from Kūfa must stand for elements from the two towns which could not be reckoned among the tribes mentioned. The tribal divisions valid in Basra were taken over into Khurāsān. On the one side were the Rabi'a (= Bakr and 'Abd al-Kays) and the Yamānite Asd (who had arrived later), and on the other the Tamīm and Kays (collectively known as "Mudar"), who were very proud of their descent (cf. articles on these). The bloody battle between these began in connexion with the great civil war for the Caliphate in 683; a static war raged outside Marw for one year, 64-3/684-5 between Bakr and Tamīm (al-Tabarī, ii, 490-6), which eventually came to an end because of internal dissensions among the Tamīm. In spite of the fact that a neutral Kurayshī became governor in 74/693-4, fighting continued until 81/700 (al-Tabarī, ii, 859-62). The attitude of the governor often made the difference between victory and defeat, and his attitude, in turn, depended to a great extent on the party divisions in the west (Syria and Mesopotamia). In 85-6/704-5, the ascendancy of the Asd and Rabi'a was temporarily checked by a change of governor. Kūṭayba b. Muslim, the conqueror of Transoxania, who was not linked to either of the powerful groups by descent, tried to remain neutral. It was thanks to him that the Arabs had the chance of spreading to Samarkand, Bukhārā and Khāzīm, often moving into specially cleared quarters (al-Balādhūri, 410, 421 f.; al-Tabarī, ii, 126; Ibn al-Aṭṭīr (Būlāki), iii, 104; Nārshakhi, 52). After his death the Asd resumed power under Yazīd II, until the Tamīm took over in 720. The misrule of the latter and of the Kays brought Umayyad rule in Khurāsān into such disrepute that even the open-minded governor Naṣr b. Sayyār could not find a way to settle the disputes of the opposing groups after 744. The 'Abbāsid revolution, caused largely by the behaviour of the Arabs, passed them by. Its victory in 748-50 brought about new conditions for the Arabs in the east.

A few of the Arabs had, of course, entered into friendly relations with the Iranians soon after the conquest of Khurāsān. Some of the *mawālīs* and *dikhāns* had come quickly to terms with the Arab rule and the Arabs frequently took part in the cultural life of the Iranians (especially the celebrations of the *nasrāz* and the *mīhr-gāz*, as, similarly, they had also done in Egypt on the occasion of Coptic festivities). There were mixed marriages (mentioned expressly only where more prominent persons were concerned, yet even more likely to have taken place among the ordinary people) and the descendants of such unions in Iran were undoubtedly inclined to attach themselves to, and disappear among, the islamized Iranians. In addition, there were cases of Arabs (as, for instance, Mūsā b. 'Abd Allāh b. Khāzīm in Tirmīdī) who quarrelled with the government and joined forces politically with the natives. Furthermore, since the time of 'Umar II

197-20, there was a growing religious consciousness among some Arabs (such as Harīḡ b. Surayj) which demanded—with increasing insistence—equal treatment for the Iranian Muslims (cf. Wellhausen, *Das arab. Reich*, 280). Hence the many attempts to come to a reasonable solution of the question of the personal and land taxes where converted Iranians were concerned. In any case, one has the impression that the tribal feeling was more and more superseded by a new, predominantly religious, grouping from round about 720 onwards, when a new process of assimilation began which became important for the general feeling of pan-Arab unity. From this time onwards, political events can no longer be explained as deriving their main spring from tribal feuds.

Because of this Umayyad politics, which had been built up on the tribal structure, were doomed, and the future belonged to the 'Abbāsid movement (and also to that of the 'Alids connected with the former in the beginning) which worked on a different basis. The collaboration between the Arabs, who often took a leading part in the 'Abbāsid movement, on the one hand, and the Iranians on the other, went smoothly—at least until the fall of the Umayyads (nor was there much friction of the years 746-50; subsequently). Hence the victory of the years 746-50: at that time, however, the greater part of Arabs in Abū Muslim's army spoke Persian (al-Tabarī, iii, 51, 64 f.).

There were, however, Arabs, who took no part in this process of assimilation. The greater part of these were pushed out of Khurāsān in the course of the 'Abbāsid campaign. The remaining settlers, towards whom the Iranians showed no more animosity, were politically (i.e. as Arabs) of little importance. Tribal warfare now ceased completely, although some tribes are still mentioned in the 10th century (cf. the authorities quoted below). Assimilation continued, however, without interruption so that many Arabs eventually merged completely with the Iranians: more quickly, certainly, where they lived in isolation on their estates (as for instance in the oasis of Marw). One must also take into account a further distribution of the Arab element all over the country during the 'Abbāsid period, and further immigration from the west. Consequently there were places which had a partly Arab population as late as the 11th and 12th century, though the gradual decrease in their numbers is already recognisable in the 10th century. Detailed statements regarding this are rather rare; compare for Isfahān: al-Yā'qubī, *Buldān*, 274, for various places in Khurāsān, ibid., 294; al-Istakhrī 322/123, Ibn Hawkal, 499; al-Makdīf, 292, 303; for Kāshān: *Hudūd al-'Ālam*, 133, and ibid. 104, 108, 216 (Djūdān); al-Djāhiz, *Twa opuscula*, (van Vloten), 40; *al-Ghāṣi*, xiv, 102, xvi, 69; Dihwānī, ii, 46, (read *manligāh-i 'Arabā*); S. A. Volin, *K istorii sredneaziaticheskikh arabov*, in the *Trudy storoy sessii asociatsii arabistov*, Moscow and Leningrad 1947, 124; B. Spuler, *Iran*, 250. The family histories in Ibn al-Balḫī, *Fārī-nāma*, xix f., = 216 f., and Kumānī, *Ta'riḫ-i Kumm* (Tihān), 266-305 (family of al-Aḡḡār) are most illuminating for the gradual assimilation of Arab families of civil servants into the Persian people.

#### APPENDIX: ARABS IN CENTRAL ASIA AT THE PRESENT DAY

The origin of the Arabs living at the present day in Central Asia, and apparently also in Afghān Turkistān (where they speak Persian: *The Imperial Gazetteer of India*, V, Oxford 1908, 68; without mentioning of places) can not (or not yet) be fixed with certainty. According to their own tradition, they were brought there by Timūr, and they mention the Andkhūy [g.] district in Afghānistān and the nearby Akā (in the province of Mazār-i Sharīf) as the site of their original settlement, and Karshī, Buḡhārā and Hīdr as places through which they had passed. There is, however, no mention of Timūr re-settling Arabs, in the sources concerning his life, nor can his son-in-law, Mir Haydar, who is frequently mentioned in the oral tradition, be identified. On the other hand there is proof that inhabitants of Marw were transplanted to Buḡhārā, and those of Balḫ, Shaburghān and Andkhūy into the Zarafshān valley in the year 1513 ('Ubayd Allāh, *Zafar al-Afghān*, the *Zap. Vostochno Otdeleniya*, XV, 202 f.). We know, furthermore, that migration of "Arabs" was still possible in the first half of the 16th century between (Persian) 'Irāk on the one side, and the areas of Buḡhārā, Samarkand and the valley of the Kāshka Daryā on the other ('Abd Allāh b. Muḥammad al-Marwazī: *Tarāṣuṣ*, quoted by Volin 122-3; cf. also H. R. Hammer, *Staatsgeschichte der Timuriden*, Wiesbaden 1932, 94 f., 177, with facsimile 389-392 (without the factual part of the document)).

Thus it appears that the Arabs living in Central Asia today are not the immediate descendants of the immigrants of early Islamic times (see above III), although one must allow for the possibility of an association with these settlers, who had already been Iranian in the 11th and 12th centuries. In the 16th century, the Central Asian Arabs were under a *mir hāzir* who collected taxes for the government; they were generally known as nomads (*a'rāb*) (in addition to the above mentioned document cf. also an *inshā*-collection of Samarkand of ca. 1530, published by Volin 117-20). In the 17th and 18th centuries there is no information concerning them; already there is mention of them in the beginning of the 19th century, especially in various travel reports (quoted by Volin). Here we must distinguish two concepts:

(1) A close group marked by strict endogamy, who are, however, in their physical appearance hardly different from their Iranian neighbours; they call themselves "Arabs" but accepted the language of the country they live in. There is a group of Tadjiks and a group of Uzbek-speaking "Arabs" in the Samarkand area. Travellers mention similar groups of "Arabs" in Turkenistan, Kāshka, Fārgāna and mountain Tadjikistan. In the 19th century their number was assessed at between 50 and 60,000; Vinnikov (see *ibid.*), 9, sticks to these numbers (in spite of the result of the census) in 1926. In the 19th century these "Arabs" were still under a *mir hāzir*, but by this time he no longer exercised any fiscal function. The figure mentioned in a Soviet census of 1926 is 28,978, that of 1939, 27,793. According to this it would appear that these groups of "Arabs" who already spoke the language of their area, were absorbed more and more into their Uzbek or Tadjik surroundings. Their economic situation is also like that of their neighbours. As

survivals of the patriarchal system, however, we still find the institution of the "avunculate" (a special connection between the nephew and his maternal uncle and the marriage of first cousins), in which at least one third of these "Arabs" lived before the revolution. (Compare M. O. Kosven, *Avunculat in Sovetskaya Etnografiya*, 1948, no. 1).

(2) From these self-styled "Arabs" (obviously in a historical sense) we must distinguish groups which still speak Arabic. According to the above mentioned documents, it appears that this distinction goes back as far as the 16th century. This would mean that the settlement of these Arabs must have taken place some generations earlier, otherwise there could have been (in the case of nomads) no possibility of a partial linguistic assimilation. The Soviet census of 1926 gives the figure 4,665 for these Arabs, who can be divided into the dialectally different tribes of Sa'nūnī and Sa'būnī. They live largely in Uzbekistan (2,170) and in Tadjikistan (2,274). In 1939, Arab speaking inhabitants of Uzbekistan numbered about 1,750. It would appear that the Russian census of 1897, mentioning 1696 Arabs, had only the Arab speaking ones in mind; yet some doubt about this figure is still to be seen, in view of the numbers mentioned in later years. Apparently this group, too, is in the process of being assimilated by its surroundings.

The language of these Arabs has developed from a Mesopotamian dialect but has (like Maltese) developed into an independent branch of Arabic, and has split in two. The Central Asian Arabs developed *p* and *t* even in pure Arabic words, on the other hand it lost the *th*, *dh* and partly the *kāma*. *F* often disappeared, and *ḍ* often became *g*; the *ā* usually became *ā*, the *w* in the personal suffix *wa* (*wa*): *u*. Stress vacillates; assimilation, inversion, and elision are frequent. The 2nd and 3rd person fem. pl. retain their endings (as in the bedouin dialects). One of the two dialects developed the prefix *mi* in the imperfect tense (would this correspond to Iranian, or to Syrian and Egyptian Arabic?). A *durative* *presentis* developed under the influence of Turkish. As in the Caucasian languages (e.g. Old Georgian), the direct object is taken up again by a personal suffix in the verb (cf. also the Syrian development). "*Kāna*" is often used as an auxiliary verb (originally with a perfect meaning). The infinitive ends regularly in either *-ān* or *-in*. The nōnātion of the nouns is almost completely absent; plurals end in *-in*/*-āt* (this also frequently in the case of masculine nouns), while broken plurals are rare. Arabic numerals have been replaced by Tadjik ones almost completely. *Status Constructus* is retained, but even in the Indo-Germanic type are frequent (*Ḥalāq mīlīk*, "wood-seller"). Usual word order: subject, object, predicate. Vocabulary largely Semitic, leaning to 'Irākī and occasionally to peninsular Arabic.

#### (IV) EXPANSION OF THE ARABS IN EGYPT

At the end of the year 18/639, an Arab army appeared on the Syro-Egyptian frontier and commenced the conquest of Egypt. On 20 Rabī' II 20/9 April 641, a treaty was signed which wrested Egypt from the Greek or, more precisely the autochthonous population, from Byzantine domination. Alexandria still held out, and only surrendered eighteen months later. Viewed as a whole, the operations give the impression of an advance carried out not doubt with enthusiasm, but also of a carefully planned offensive. Certain papers of this period assume particular importance. We possess requisition orders for the billeting and provisioning of Arab troops, and we learn that the expenses incurred by the villages were remitted from the taxes for the following year. From information supplied by the same documents, we see advancing into the country a well-equipped army: armed cavalry and infantry, accompanied by a *butilla* for operations in Upper Egypt. Teams of blacksmiths and armours were formed for the repair of weapons. This information is based on Greek texts, some of which are indeed accompanied by an Arabic translation, but if the initiation of similar measures was the duty of the Coptic civil administrators, it is a fact that the Arab military leaders were fully aware of them. All this indicates training and discipline, and we may suppose that Bedouin elements did not form the major part of the Arab army. 'Amr b. al-'Ās relied in the main on a first contingent of Yeminite origin, nearly all from the 'Alak tribe, and it is apparent from the names of the districts of Fustāt that the majority of the groups were Yeminite. On the other hand, contingents of the Djūdān and Laḡīn tribes, who had formed part of the population of the Ghassanid Kingdom and had remained neutral at the battle of the Yarmūk, had joined the army of Egypt. The largest figure recorded of the numbers of the Arab warriors is 15,000 men; this seems to be a maximum figure, but not an impossible one.

After the conquest the Arabs remained in their tribal groups; in this connection, the names of the districts of Fustāt are again revealing. It may be questioned whether, in the beginning, the Arabs thought of anything but exploitation of the country by the military, who formed a *de facto* aristocracy which did not admit to its ranks any native of the country or mix with the inhabitants since it was forbidden to acquire land. The army of occupation was distributed between Fustāt, Alexandria, and various posts scattered along the Mediterranean coast, on the desert frontiers of the Delta, and on the Nubian borders. We lack any critical basis on which to form an estimate of the numbers of these garrisons, which were heavily reinforced, since in 43/663 12,000 men were needed in Alexandria alone. With a view to increasing their cohesion, these elements were organised in tribes. The members of each tribe were divided into sections of seven or ten,

under the control of a *syndic*, who received their pay, and also administered orphan's pensions under the supervision of the *hadd*. Every morning an official visited the tribes and registered new births.

In 709/727, the Comptroller of Finance in Egypt installed an important part of the *Kays* tribe in the region of Bilbais: the figure 3,000, which we are given, seems to include women and children. These *Kays*, who, as camel-drivers, participated in the traffic on the Fustat-Kalzuin route, were probably liable to military service, since they were registered on the pay-rolls. These reinforcements had been to some extent necessitated by the first revolt of the Copts, which occurred in 709/725. When the Christian historian of the Alexandrian patriarchate is describing this, he writes "One tribe was stationed in the eastern desert of Egypt, between Bilbais and Kalzuin on the coast; these were Muslims, who were known as Arabs". This mode of expression seems to postulate that the indigenous Muslims, doubtless a minority of the whole population, were at that time more numerous than the Arabs.

These Arabs preserved for more than two centuries the memory of their tribe of origin, and in the majority of the funeral stelae, in the cemeteries at Aswan and Fustat, the name of the deceased is habitually followed by the ethnic appellation indicating the tribe. It was the Arab title of nobility, and Coptic converts were, in the beginning, second-class Muslims. Some of the latter aspired further, and a judicial scandal which took place in 194/570-2 proves that the Arab tribes were still strong enough to appeal to Baghdad against the judgement of a *hadd* of dubious integrity which conferred on Copts the status of pure-bred Arabs. We observe that in the course of the 3rd/9th century surnames relating to tribes give way gradually to surnames of geographical significance; here, too the funeral stelae are documents of the greatest value, and furnish us with toponymic surnames.

The Muslims of Fustat, at the beginning of the 3rd/9th century, must have been mainly autochthonous elements, installed in all types of sedentary employment, in government service or in trade; the Arabs, occupied in suppressing revolts in the Delta in the course of the preceding century, were then struck off the military rolls as a result of the influx of *ghurabshahs*, and later of Turanians, who had probably resumed in the country side the principal occupation of their ancestors, the raising of live-stock. At all events, from then on they are not mentioned in the towns. Descendants of former soldiers, moreover, acquired land: we find the proof of this in the fact that the government claimed from them the *khirad*, or land tax. They thus became mingled with the indigenous population, which, at the beginning of the 3rd/9th century, was mainly Muslim; on the other hand, the Arabic language was used to an increasing extent by the Copts. The majority of the army, of Turkish stock, could not have made any distinction between the truly autochthonous elements and the descendants of Arab immigrants.

Finally, in 219/834, groups of the Lakhm and Du'dham tribes rebelled in the Delta; they were easily dispersed, and no further mention is made of their rights. The Arabs re-appear, even frequently, in the history of Egypt: they remained organised in tribes, some of which retained their nomad habits. They were mobilised as reserve troops in times of crisis, for example at the time of the landing by the Crusaders at Damietta. Later governments were obliged periodically to exercise their authority against

them, either to collect taxes, or to suppress banditry. In general, these interventions were bloody affairs, and were virtually punitive expeditions.

The most significant events were set in train by the temporary migration, in the 5th/11th century, of the Banu Hilal and the Banu Sulaym before their destructive onslaught on North Africa. It should not be forgotten that a group of Bedouin from the Arabian Peninsula tried to resist the advance of French troops in Upper Egypt in 1799.

Recent censuses have been vague in the extreme: it is estimated that the Bedouin scattered among the deserts of Egypt number about 50,000.

#### (V) EXPANSION OF THE ARABS IN NORTH AFRICA

It is extremely difficult to enumerate the Arab elements which, from the year 27/647 onwards, entered North Africa. We can only accept with the usual reservations the first number of 20,000, representing the fighting men from the Hijaz, furnished by the tribes and grouped round their chiefs, reinforced by contingents taken from the army of Egypt. The first expeditions were nothing more than long-distance raids, without any intention of settling in the country. This ambition appears with 'Uthba b. Nafi', who founded al-Kayrawan (q.v.) in 50/670. The death of this chief and the occupation of al-Kayrawan by the Berbers led to the despatch of fresh contingents. From then on, every serious failure on the part of the invaders, every Berber rising, every new phase in the arduous task of conquest, occasioned the arrival of reinforcements. Under the Umayyads, elements derived from the *diwan*, detached from the Syrian garrisons, and constituting regiments which already had an individual character, took the place of the fighting men recruited in Arabia. Under the Abbasids, the Egyptian militia joined forces with the Syrians, or relieved them. All these elements, living in groups as in the East, were distributed among the towns of the conquered territory. As is well known, their haughtiness as conquerors, their demands and their lack of discipline were a source of the gravest embarrassment to the governors of Ifrikiya, and the Aghlabid amirs, obliged to subdue them with great bloodshed, found them employment in Sicily.

Along with the fighting men intended to effect the first occupation of the country, the Arab world sent civilian elements. Apart from the governors and their entourage, kinsmen and clients, there were men of a religious character, who, from the time of the caliphate of 'Umar b. 'Abd al-'Aziz (99-101/717-20), undertook the methodical conversion of the Berbers. There were also merchants, who, from the start, saw in North Africa a field for their commerce, and prospered in fresh territory reputedly rich in resources.

These Arab immigrants constituted exclusively urban elements. The towns, where they formed a considerable proportion of the population, were centres of arabisation. By virtue of the prestige enjoyed by the conquerors, through the education given in the Qur'anic schools and the mosques, and through economic relations and mutual contact in

the markets, the Arabic language spread simultaneously with Islam in the cities and their environs. Al-Kayrawan played an important part in this process, but the other garrisons of Ifrikiya and its western marches were also able to spread their influence over a limited area.

The Arab immigration of which the Hilali invasion was the first phase was very different from the Muslim conquest and its consequences, both as regards those who took part in it and their role in the history of Barbary. The initial cause of this disaster was as follows:—in the middle of the 5th/11th century, the amir al-Mu'izz of the Banu Ziri (see *zfrns*) branch of the *Sanhaja*, which governed Ifrikiya in the name of the Fatimid caliph al-Mustansir, broke with his suzerain in Cairo, and the latter, on the advice of his minister al-Yaziri, despatched against the rebel kingdom the Arab nomads then encamped east of the Nile, recognised in advance their title to any towns and rural districts which they could conquer.

The Banu Hilal (see *hilals*), who formed the first wave of this "westward movement" (*taghrif*), and also the Banu Sulaym, who came on the scene later, were connected through their common ancestor as-Sayid b. Kays with the powerful line of Mudar. Both had previously dwelt in Najd, and groups of the two families continued to live there. Brought late within the pale of Islam, they had migrated in considerable numbers to Upper Mesopotamia and the Syrian desert. Their independent nature revealed itself immediately after the death of the Prophet. The Umayyads, and the 'Abbasids even more, had to punish their plundering activities conducted in particular at the expense of Meccan pilgrims. In the 4th/10th century they took part in the Carmathian revolt. The Fatimid caliph al-'Aziz crushed the movement (368/978) and forced the Arabs who had supported it to transfer themselves to Upper Egypt. It was from there that they set out to conquer Ifrikiya.

At the moment when their first bands, which could have numbered barely a million, reached the Zird kingdom of al-Kayrawan and caused its downfall, the most powerful of the Banu Hilal were the Riyah, who occupied the plains of Tunisia. Further east, the kingdom of the Hammalids (q.v.) and the Zab [q.v.] received the Aghlabids. This Arab expansion, whose limits in the 6th/12th century are described by the *Tabat*, caused the exodus of Hammalids, and the Ka'is to al-Bijaya and drove the Zanata nomads towards the plains of Oran.

The arrival of fresh bands led subsequently to an extension of the territory and to alterations in the distribution of the Arabs. The most important of these waves of immigrants was, starting from the end of the 12th century, that of the Banu Sulaym, who came from Tripolitania. At that period, the Armenian adventurer Karakogh, then to the Banu Ghaniya who attempted to revive Almoravid power, they placed themselves at the service of the Hafsids, the Almohad governors of Ifrikiya, who assured the fortunes of this great tribe. Thus Ifrikiya, the first domain of the Banu Hilal, remained, with the Sulaym, the region where the Arabs were the most numerous and most powerful. But one part of North Africa escaped what was considered by Ibn Khaldun to be an irreparable disaster. The quest by new arrivals for lands as yet unoccupied and for sedentary populations to exploit, the repulse of the weak by the strong, the advance of certain tribes, such as the Ma'kil of Southern Morocco, from the western boundaries of the desert, were the quasi-normal causes of their "westward movement". To these must

be added the mass transfers effected by the Maghribi rulers within their own territories of Arab contingents on whose collaboration they rashly counted. For example the transfer in 583/1187 of the tribes of Ifrikiya by the Almohad al-Manсур, who, wishing to use them in Spain, granted them the sub-atlantic plains of Morocco where they were then uninhabited.

The whole economy of Barbary was overthrown by this expansion. With their North African territory, where they lived during the summer, these pastoral nomads combined the corresponding Saharan territories, where they migrated in autumn with their families and where they found new pastures for their camels. At the two extremities of the annual migration, they possessed a source of income: by right of protection they claimed taxes in kind from the people of the oases, cultivators of date-palms, on the sedentary population of the north they levied imposts which the rulers had assigned to them in the form of *shat* (q.v.), or as part of the tax (*diya*) for whose collection they were responsible.

Intimately associated with Berber life, these eastern Bedouin naturally played a large part in the propagation of the Arabic language, and it has been thought possible still to recognise in dialect characteristics which seem to mark the difference between the contributions of the great tribes, Hilal, Sulaym, and Ma'kil. Simultaneously, however, with arabisation of the Berbers, one must take into account the berberisation of the Arabs, the progressive tendency towards a sedentary form of existence, and the gradual evolution of the way of life of the autochthones by groups of immigrants who had become irremediably impoverished.

**DIJAZAT AL-ARAB**, "the Island of the Arabs", the name given by the Arabs to the Arabian Peninsula.

- (i) Preliminary remarks.
- (ii) Physical structure and principal geographical features.
- (iii) Climate, drainage, and water resources.
- (iv) Political divisions.
- (v) Flora and fauna.
- (vi) Ethnography.
- (vii) History:

1. Pre-Islamic.
2. Islamic Middle Ages.
3. The making of modern Arabia—from the 10th/16th century to the present.

## (I) PRELIMINARY REMARKS

Although the Peninsula may not be the original cradle of the Arab people, they have lived there for thousands of years and regard it in a very special sense as their homeland. For students of Islam, Western Arabia occupies a unique position as the land in which the Prophet Muhammad was born, lived, and died. It was there that the inspiration of Allah descended upon the Prophet, and to this Holy Land come many thousands of Muslims every year from all parts of the Islamic world to make the pilgrimage to the Ka'ba, the House of Allah in Mecca (Makkah), and to visit the Prophet's tomb in Medina (al-Madina al-Munawwara).

The Peninsula has the shape of a rough quadrilateral with a length of c. 2200 km. from north-west to south-east and a breadth of c. 1200 km. The symmetry of the quadrilateral is marred by the bulge of Oman ('Uman) on the eastern side reaching out close to the Iranian coast. On the west, south, and east the Peninsula is clearly defined by the Red Sea (al-Bahr al-Ahmar), the Gulf of Aden (al-Baḥr al-'Adani), the Arabian Sea (al-Baḥr al-'Arab), the Gulf of Oman, and the Persian Gulf (al-Khalij al-Farsi). In the north, the Arabs themselves have often disagreed as to where Arabia ends and Syria (in the broad sense) begins. A vast steppe unrolls northwards from the Great Nafud with no natural features suitable as a limit for the Peninsula. For the purposes of this article the Peninsula is considered as extending only to the borders separating Saudi Arabia and Kuwait from Jordan and 'Iraq, even though these borders represent little more than artificial political concepts. This definition places the northernmost point of the Peninsula at 'Uman, a low mesa in the desert farther north than either Jerusalem or Baghdad. From 'Uman, the borders between Saudi Arabia and Jordan, not yet fully agreed upon, reach the sea near the head of the Gulf of al-'Akaba, while the borders between Saudi Arabia and Kuwait on the one hand and 'Iraq on the other run to the head of the Persian Gulf south of al-Basra. Along these eastern borders lie two small neutral zones, in one of which Saudi Arabia and 'Iraq and in the other Saudi Arabia and Kuwait share undivided full interests.

It is impossible to make a reasonably reliable estimate of the size of Arabia's population. All figures found in reference works are highly suspect, as none is based on proper statistics or sufficient familiarity with the whole Peninsula. In view of the extensive areas inhabited solely by scattered nomads and the relatively light density of population in most of the settled areas, one may doubt whether the total approaches 10,000,000, and it may well fall several millions short of this figure. The most densely populated country is the Yaman (al-Yaman). In Saudi Arabia the main concentrations are in a few cities of al-Hijaz, the well watered mountains and plains of 'Asir and the Tihama, some of the valleys of Najd, and the eastern coast of al-Hasa and al-Qatif. Hadramawt and Oman both contain many towns and Bedouin tribes.

Present state of knowledge. The inhabitants of Arabia have naturally always known much about the land, but each man's knowledge is restricted to a certain region, being detailed and particularistic rather than general and comprehensive. No single work in Arabic gives a full and accurate description of Arabia. The best volume in the language is still *Siḥat Dijazir al-'Arab* by al-Hamdānī (d. 334/945-46), which, though rich in information, fails to provide a coherent panoramic view of the whole Peninsula.

The serious scientific exploration of Arabia began with Carsten Niebuhr and the Danish expedition of 1762. While travellers of different nationalities pressed on with the penetration of the interior during the 19th century, British officers of the Indian Government undertook technical surveys of the surrounding seas and stretches of the coast. Technical surveying in the interior had to wait for the 20th century, when it began with an investigation of the southern border of the Yaman and preliminary studies for the Hijaz Railway. In recent years oil companies have surveyed large parts of Eastern Arabia, using the highly refined methods of modern geological and geophysical exploration, besides engaging in extensive reconnaissance in other regions.

By 1374/1955 travellers—both Western and Arab—had visited virtually all of the remoter places, so that none of the old major mysteries regarding the surface of the land had been left unsolved. Travellers' reports, however, are often incomplete and sometimes inaccurate, and much remains to be done in checking and correlating those now available. A number of important reports remain unpublished or buried in archives.

Recent years have also seen the introduction of aerial photography as an indispensable procedure in mapmaking. By 1954 a good part of the Peninsula had been photographed for cartographic purposes, and some of the results had already been transferred to maps. Aerial photographs, however, are of maximum value only if supported by ground control, i.e., the establishment of fixed points on the ground whose relationship to the photographs is precisely determined. For much of Arabia such control is still lacking.

The general outlines and main features of the map of Arabia have now been delineated with a fair degree—and in a few instances a high degree—of reliability, but years of study lie ahead before all the details can be filled in. Surveys done in the earlier days, such as those of the Persian Gulf, are now being redone in the interests of greater thoroughness and accuracy. Errors of the past, many of which have become established on maps, are being corrected, but the process is long drawn out.

Arabian governments are now making available information about their countries in a growing body of official publications, and modern Arab authors keep producing books and articles dealing with different parts of the Peninsula. Interest in such diverse things as oil and South Arabian antiquities has called forth a flood of material by Western authors, part of which is sound but much of which is superficial, misleading, or flagrantly contradictory to fact. Arabic sources likewise are often unreliable, so that the student of Arabia must constantly be on the lookout for pitfalls along his path.

(II) PHYSICAL STRUCTURE  
AND PRINCIPAL GEOGRAPHICAL FEATURES

Lying between Asia and Africa, Arabia is of such size and individuality of character as almost to justify its classification as a sub-continent. Usually considered an appendage of Asia, it also joins Africa through Sinai, which, though politically a part of Egypt, is closer to Arabia in both physical environment and the nature of its human life. Before the development of rift valleys provided a bed for the Red Sea, Western Arabia formed a part of the African land mass, and the southern half of Western Arabia still has a greater affinity in many ways with

Somalia-Ethiopia than with Northern Arabia or the rest of Asia. Northern Arabia, on the other hand, merges imperceptibly with Arab Asia through the Syrian steppe, and the Oman bulge contains a mountainous area closely resembling the ranges of Iran.

Geomorphologically the Peninsula consists of two main provinces: the ancient Arabian Shield of igneous and metamorphic rocks in the west, and the more recent sedimentary areas sloping away from the Shield to the north-east, east, and south-east into the vast basin consisting of Mesopotamia, the Persian Gulf, and the eastern part of al-Rub' al-Khali. The Arabian Shield is actually only the eastern part of the Arabian-Nubian Shield, an immense mass of basement rocks—granitoids, schists, granite, gneiss, &c.—which have thrust upwards to form bare and forbidding mountains, with the whole mass split into two by the rift valleys running southwards from the Dead Sea and along the course of the Red Sea. The older igneous rocks of the Arabian part represent primarily plutonic activity of the more remote past, while more recent volcanoes have blanketed the surrounding ground with fields of lava (*harra*, pl. *hirar*) often imposing in extent. Regions of igneous and metamorphic rocks may be rich in minerals and precious stones, but only insignificant quantities of these have so far been found in Arabia.

To the north and south the eastern limit of the Arabian Shield lies not far inland from the Red Sea. Between these two extremities the limit sweeps around in a rough bulge reaching as far east as the vicinity of al-Dawadimi, less than 200 km. west of the western wall of Tuwayk. The geomorphologically confused mountains of the Yaman, though composed of similar rocks, are physiographically highly different from the remainder of the Shield. Volcanic areas occur in the Yaman as well as in the mountains fringing the southern coast and those of the Oman bulge.

Valleys drop sharply westwards to the coast plain of Tihama from the high mountains paralleling the Red Sea. The gentler eastward slope to the Persian Gulf is interrupted by escarpments in Najd and 'Asir and al-'Arara, whose steep escarpments face westwards and whose backs then resume the downward trend. From the highlands of Hadramawt and Zufar the slope southwards to the Gulf of Aden and the Arabian Sea is short, while a longer slope runs northwards to al-Rub' al-Khali. The Oman bulge has a short descent north-eastwards to the Gulf of Oman and a much longer descent south-westwards to the same sand sea, though the mountains here, unlike those elsewhere near the coast, are steep on both sides, forming a hogback range.

The sedimentary province consists predominantly of limestone, along with an abundance of sandstone and shale. These rocks are products of sediments left behind by seas that in the distant past spread out as far west as the Shield. The sedimentary deposits reach a depth of over several kilometers in the vicinity of the Persian Gulf. Organic matter from the plants and animals that lived in the old seas is the source of the enormous accumulations of petroleum discovered in Eastern Arabia during the 20th century.

Islands. The islands, islets, and coral reefs (*dhār*, pl. *dhārāt*) off the Arabian coast are numerous, as one proceeds southwards down the Red Sea. The Faraasan Bank parallels the coast for nearly 500 km., its southern part including the Faraasan [g.s.] Archipelago, where the largest islands on the eastern side

of the Red Sea are found. Kamaran [g.s.] Island lies close to the coast of the Yaman. West of Kamaran the volcanic peak of Jabal al-Tayr in the fairway of the sea is reported to have been in eruption as late as the early 19th century. Also in the fairway is al-Zuhur, the highest island in the Red Sea (nearly 700 m.). The island of Perim [g.s.] (Mayayin) in the straits of Bab al-Mandab, the entrance to the Red Sea, stands nearer Arabia than Africa.

The island of Sukutra [g.s.], c. 210 km. long and nearly 400 km. distant from the mainland on the southern side of the entrance to the Gulf of Aden, must for both political and ethnographic reasons be regarded as belonging to the Peninsula. The Kuria Muria Islands stand off the mainland in the large bay east of Ra's Naws. The Arabic name for the group, Khūriyya Mūriyya [g.s.], is seldom used today, the more familiar names being al-Hallāniyya, al-Hāsiikiyya, and al-Sawdā', which belong to individual islands. Separated from Oman by a narrow channel is Maḥra, the only island of considerable size lying along the whole southern coast. The Arabian side of the Gulf of Oman is also almost entirely devoid of islands worthy of the name; one encounters only rocky islets standing alone, such as al-Faḥl north-west of Muscat, or in clusters, such as al-Daymāniyyāt a little farther towards the west.

The mountains of Oman end abruptly at the Strait of Hormuz, the entrance to the Persian Gulf, and some of the peaks detached from the main range form inescapable islands, the northern tip of one of which is Ra's Musandam. Abū Mūsa, an island in the Persian Gulf north-west of the port of al-Shūrikha, has deposits of iron oxide which are worked commercially. Close to the southernmost shore of the Gulf are a number of sandy islands, the largest of which is Mukayyāt (shown on most charts as Abū al-Abyad, the name of its northern part). In the western half of the embayment between the Trucial Coast and the Katar Peninsula are islands presumed to be salt domes rising above the sea, among which are Str Banī Yās [g.s.], Dalmā', Zarakkūh, Dās, and Hāḍil. The main island of Bahrain (al-Baḥrayn) has a scattering of attendant islets and a dependency of fair size, Hawār, which almost touches Katar. Tiḍrī, Abū 'Alī, and other islands hug the coast of Saudi Arabia, while al-'Arabiyya [g.s.] and al-Fāsiyya [g.s.] lie out near the middle of the Gulf.

The Great Pearl Banks (*ḥaṣr*, pl. *ḥaṣarāt*) stretch along nearly the entire length of the Arabian side of the Persian Gulf, with the richer banks in the central portion. The term *ḥaṣr* is not used for a reef in this Gulf, its place being taken by *ḥaṣr* (pl. *ḥaṣarāt*), *naḡḡa*, and *ḥuṣ'a*. A *ḥidd* (pl. *ḥudūd*) is a sand bank, a *ḥāla* (pl. *ḥawāl*) is a low sandy islet which may be covered at high tide, and a *ḥaṣar* is a projecting rock. *Rubb* is the common word for a shoal, while an area of deep water—13 fathoms (ḡṣ, pl. *ḡṣāt*) or *ḡṣān*, the Arab fathom being a little less than the English fathom of 6 feet) or more—is called a *ḡhabba* (pl. *ḡhabīb*). The Persian Gulf is a shallow sea, with few depths greater than 90 m., in contrast to the Red Sea, the depth of which in places is in excess of 2,000 m.

Bays and Coasts. The coasts of the Peninsula on the three sides facing the sea are relatively unmarked by major bendings or indentations; no other great land mass on the surface of the globe provides such a paucity of shelter for ships. The Red Sea has few bays on the Arabian side, but many narrow inlets of the type called *ḡhar*, which penetrate

some distance inland and then broaden out into lagoons in which small sailing vessels can anchor. The one good natural harbour along the southern coast is Aden. Between Ra's Fartak and Ra's al-Hadd there are four large bays, here called *ghubba* (cf. the use of this term in the Persian Gulf mentioned above), but all are as open to the sea that they give no protection. Muscat on the Gulf of Oman offers a hill-enriched bay large enough for steamers of medium size. Excellent harbours exist in the diff-walled inlets in the vicinity of Musandam, but they are so hot and inaccessible from the interior that good use has never been made of them. The Persian Gulf has a proportionally larger number of bays, here called *daaba*, but their waters are almost without exception extremely shallow. Inlets in the Arabian shore of the Persian Gulf go by the name of *hawr*, a term also used here for a submarine valley. One of the best examples of these inlets is Khawr al-'Udayd, which pierces the coast on the eastern side of the base of the Qatar Peninsula.

Mountains, Plateaux, and Plains. The chain or chains of mountains paralleling the coast of the Gulf of al-'Akaba and the Red Sea are known collectively as al-Sarāt (s.c.), though use of this name is not particularly widespread. In many places a lower range lies close to the coast and is separated by a plateau from a higher range farther inland. The average height of al-Sarāt is considerably below 2,000 m. Between the region of Madyan and Medina only the famous crags of Radwā (s.c.) west of Mecca and a few other mountains reach noteworthy heights. South-east of Mecca several peaks go up to over 2,500 m., and thence the chain rises to its greatest heights in southern 'Asir and the Yaman (Hadīr Shu'ayb west of San'a', c. 3,760 m.). The more precipitous western slopes are generally the higher, but many bold features are also met with along the inner eastern slopes. The range of Hāḡn east of Mecca, the historic boundary between al-Hijāz and Najd, appears to have lost this distinction in the popular mind, though the dividing line is considered to be along the eastern slopes or among the foothills of al-Sarāt. Passes across al-Sarāt, called *'abaha* in 'Asir and *naḡil* in the Yaman, are few and far between, and are usually difficult to travel. Notable gaps in the chain are those leading through to Medina and Mecca.

Interspersed among the mountains and occurring frequently along their eastern slopes are plateaux, among the most fertile of which are those in 'Asir and those surrounding San'a' and Dhahar in the Yaman. The plateaux are often capped with a bed of lava, and in places the lava has spilled down the western slopes to reach the verge of the Red Sea.

The highlands of the Yaman present a steep face towards the south, the eastern stretch of which is al-Kawr, called after its indigenous tribes Kawr al-'Awāḡil in the west and Kawr al-'Awāḡil in the east. Northeast of Kawr al-'Awāḡil is the highly dissected limestone plateau of al-Djawl which is split in twain by the eastward-trending channel of Wādī Hadramawt. The southern part of al-Djawl reaches heights of nearly 2,000 m., while the higher elevations of the northern part do not greatly exceed 1,000 m. The cliffs along the edges of al-Djawl are often awe-inspiring in their sheerness.

Farther east in the region of Zufar are the mountains of the tribe of al-Karā with peaks well over 1,500 m. in height. The growth of trees and grasses on the range is so thick that the residents often call it the Black Mountain. North-eastwards of

Ra's Nases the mountains paralleling the coast begin to dwindle in size and number, and the coast from Ra's Sawkira to Ra's al-Hadd has generally low-lying country behind it.

Mountains reappear again overlooking the Arabian shore of the Gulf of Oman, along which the range of al-Hadjar runs from Ra's al-Hadd to Ra's Musandam. The towering peaks of al-Hadjar are in the central portion, in the vicinity of Djabal al-Akhḡar, the highest exceeding 3,000 m. by a bare margin. Northwest of Djabal al-Akhḡar the mountains called al-Kawr form a part of the main range, while Djabal Haft rears its formidable hogbacked ridge in the open country west of the northern half of the range.

In the interior the range of al-Tuwayk lies in the borderland between Jordan and Saudi Arabia. Just south of the Great Nafūd the parallel ranges of Adjā' (s.c.) and Salmā are together known as Djabal Shammar. The hills of al-Nir lie in the central bulge of the Arabian Shield, near its eastern edge.

East of the Shield a series of roughly parallel cuestas curve around from north to south, following the contour of the crystalline bulge. The most striking of these is Tuwayk (s.c.), the backbone of Najd, with a length of c. 1,000 km. from Khazim Djarra to Khazim Khataima, where the sands of al-Rub' al-Khālī encompass its southern end. Just east of the sands of al-Dahna' is the low rocky plateau of al-Summan (classical al-Samman (s.c.)).

Mesas, buttes, and ridges often rise singly or in groups above the plateaux and plains. The Bedouins use the term *djabal* for rocky hillocks as well as massive mountains, and other terms in common use are *diḡ* (pl. *diḡa*) or *diḡān*, a general synonym for *djabal*, not necessarily a rib-shaped hill, *hazm* (usually lower than a *djabal*), *abrah* (pl. *abrahā*), whence the name of the great old field of Kawayt, al-Burāḡin, and *barḡ* (pl. *barḡ*), the last two being applied to hills whose sides are mottled with patches of sand. The promontories jutting out from the inland escarpments are called *ḡhām* (pl. *ḡhāmā*), the word for nose.

Within the northern border of Arabia lies the southernmost portion of al-Hamīd, a stony plain stretching on northwards into the steppe, and south-east thereof is al-Hadjar, another stony plain. Among the major *badabas*—plains with a mantle of gravel—are al-Dibdiba in the north-eastern corner of the Peninsula and Abū Bahr and Rayḡd south of the southern end of al-Dahna'. The plain of al-Djalada south-west of Rayḡd is completely ringed about by the sands of al-Rub' al-Khālī. Other plains are found along the southern and eastern edges of al-Rub' al-Khālī, all sloping towards the basin occupied by the sands.

The coast plains in the west and south are confined within a fairly narrow space nearly everywhere by the mountains crowding down towards the sea. Tibāma (s.c.), the general name for the coast plain along the Red Sea, is sometimes subdivided into Tibāmat al-Hijāz, Tibāmat al-'Asir, and Tibāmat al-Yaman. On the Gulf of Oman no more than faint traces of plains exist between Ra's al-Hadd and Muscat, but between Muscat and Shihāḡ the plain broadens out into al-Bāṭina (s.c.), one of the great date-producing districts of Arabia. Salt pans are particularly common along the southern shore of the Persian Gulf, and much of the low ground in this region is covered with sand.

Sandy Deserts. Dunes may be star-shaped, dome-shaped, or crescent-shaped (the crescentic or

barchane dune = *mashawī*, pl. *mashāwī*). Dunes bare of vegetation are called *ḡāḡ* (sing. *ḡāḡ*, probably from classical *ḡāḡ*), with the term *naḡil* (pl. *nāḡil*) being used for the larger ones. Masses of sand may form long single or parallel veins (*'irḡ*, pl. *'awrah*) or more complex arrangements underlying which an orderly pattern can often be discerned. Wide expanses of ground are covered with relatively thin sheets of drift sand. Barchane dunes occur in sizes ranging from c. 2 m. to c. 200 m. in height, and the largest are several km. or more in length. Almost all of the dunes consist of pure sand, with no core of rock or other substances. The colour and composition of the sand itself vary from place to place, with the predominant colour in the interior approaching red.

A sandy area is generally called a *naḡid* (pl. *naḡid*, pl. *naḡid*, pl. *naḡid*) in the north and *ramla* (pl. *rimla*) in the south. The term *'irḡ* may be applied to a whole area containing a number of *'awrah*, e.g., 'Irḡ al-Maḡhūr embraces seven major veins. As frequently happens with the Arabs, these common nouns are transformed into proper names applied to the most noteworthy examples of their categories: the northern desert known to Westerners as the Great Nafūd is called by the Arabs simply al-Nafūd, the whole southern desert known to Westerners as al-Rub' al-Khālī is ordinarily referred to simply as al-Ramla, while al-Urayk is a sandy area south of Katar.

Almost all of the principal sandy deserts lie in the sedimentary province, where they curve around the base of the crystalline Shield in the same fashion as the cuestas along the western bases of which many of them lie. The two largest are the Great Nafūd (s.c.), with an area estimated at c. 70,000 km<sup>2</sup>, and al-Rub' al-Khālī (s.c.), with an area estimated at over 500,000 km<sup>2</sup>, making the latter the largest continuous body of sand in the world. These two are connected by the long thin arc of al-Dahna' (s.c.) lying east of Tuwayk and al-'Arama. A similar arc runs west of Tuwayk between the two main sandy deserts, but its continuity is broken in several places. This lesser arc begins with 'Irḡ al-Maḡhūr, which leaves the Great Nafūd south of the point of departure of al-Dahna' and merges into three parallel fingers of sand, which from east to west are Nafūd al-Thawra, Nafūd al-Sirr, and al-Shuwaykha. The southern extension of al-Thawra is named Nafūd al-Balāḡin after the towns of the district of al-Waḡm lining its south-western edge. Almost connected with al-Sirr is Nafūd Kunayfīḡa, the south-eastern end of which nestles under the western wall of Tuwayk. South of Kunayfīḡa occurs a major interruption in the arc, after which the sands reappear in 'Irḡ al-Dahā which ends north of Wādī al-Dawair. The principal direction in which the sands migrate is southwards; in other words, they are slowly but steadily forsaking the Great Nafūd and working their way along the two arcs towards al-Rub' al-Khālī.

Although on the map al-Rub' al-Khālī appears to have two long arms extending northwards, the western of these, al-Dibdiba, is regarded by the Arabs as constituting a separate desert cut off from al-Rub' al-Khālī by the low ground of al-Djawl (Djawl Yabrin). The eastern of the two arms, also regarded as a separate region, penetrates deep into the hinterland of the Trucial Coast.

Ramat al-Sab'atayn south of the south-western corner of al-Rub' al-Khālī lies outside the system just described. Perhaps the largest accumulation of

sand on the Arabian Shield is 'Irḡ Subay' in the southern part of the central bulge.

Various geographical features associated with drainage and water resources are discussed in the following section.

### (iii) CLIMATE, DRAINAGE, AND WATER RESOURCES

The Tropic of Cancer bisects Arabia, passing between Medina and Mecca, between the districts of al-Khazij and al-Aḡḡāḡ, and between Muscat and Ra's al-Hadd, so that most of the land enjoys a generally temperate climate. Even in the south, where the tip of the Peninsula approaches 12° N. lat., much of the country is sufficiently elevated to avoid the rigours of tropical heat. Only the lowlands along parts of the Red Sea, the Gulf of Aden, and the Arabian Sea have a semitropical rather than a temperate environment.

Meteorological records, though improved in recent years, are still too scanty to provide a completely detailed picture of Arabian weather. The summer heat (*ḡayr*) is intense throughout the Peninsula, reaching over 50° C. in the hottest places. The dryness of much of the interior makes the heat tolerable there, but along the coast and in the southern highlands the humidity in summer is high and debilitating. Fogs and dews are common in the humid regions, but over Inner Arabia the sun shines the year round, obscured only by an occasional sandstorm or even rarer shower. Although not the happiest on earth, the Arabian climate has often been damned more violently than it deserves. Many days in fall and spring are fresh or mild. The winters are invigoratingly cool, with bitter cold occurring only at the higher altitudes, where snow crowns some of the peaks, and in the far north, where the winds are biting.

The winds vary greatly in different parts, being subject in particular to the influence of the surrounding seas. In Eastern Arabia the wind tends to blow from the same quarter, but on occasion it suddenly shifts halfway round the full circle, the prevailing *ghamāl* from c. NNW yielding to the *ḡaws* from c. SE. Winds whipping up into sandstorms may subside quickly or go on for days. In Najd the wind may box the compass, with drastic changes sometimes taking place every half hour. The monsoons of the Indian Ocean reaching parts of Southern Arabia profoundly affect the character of the country and the life of the people there.

Most of Arabia has been made and kept a desert by the scarcity of rainfall. In portions of al-Rub' al-Khālī no rain at all may fall for ten years on end, and in many other parts of the Peninsula the annual fall seldom if ever exceeds 50 mm. When rain does fall over the desert, it may come as a torrential downpour, providing enough moisture to carpet the ground with wild flowers. Periods of drought sometimes last for several years, bringing misery and even death to the people and causing some to migrate abroad. Higher areas tend to catch more rain than lower areas nearby: heavy winter rains may fall on the plateaux and plains in the north while the depression of Wādī al-Sirbā remains completely dry. Only the areas where the monsoons blow receive fairly ample rains.

Although Arabia contains no large perennial rivers, in the monsoon zone water may be found throughout the year in some stretches of the valleys (called *ḡayr*) in the south-west. A few of the valleys descending to the sea blend their fresh water with the salt, but most of them dissipate it throughout

their alluvial fans on the coast plains. In the dry zone rainwater from the higher areas occasionally comes down in spate through the stream channels (*wadī*, pl. *wadīyāt*, or *gha'ib*, pl. *gha'ibāt*), which otherwise contain only a few pools or none at all. These flash floods (*sayl*, pl. *saylāt*) sometimes cause great damage, and much of their precious water may flow away unused. Other floods come in sheets over flat surfaces such as gravel plains or the fans at channel mouths. Part of the water that seeps underground is recovered by man through wells and springs.

Although the courses of some valleys can be traced for considerable distances, bodies of sand or silt thwart them in places tend to prevent through drainage. A characteristic feature of the Arabian drainage system is the local enclosed basin, varying in size from very large to very small. Wādī al-Sirhān is not a true *wadī* but a depression c. 300 km. long and 50-70 km. broad into which many *wadīs* on both sides empty their *saylāt*. Types of smaller basins are the *khābā'*, a hollow with an impervious bottom holding water for a while after rain, and the *rawḍa* (called *ḥayḍa* in the north), whose bottom does not hold water, so that wild vegetation may be fairly abundant there. Another type of basin is the salt pan or saline flat (*sahḥa*, pron. *sahḥā*), which occurs with great frequency along the coasts and also in the interior, where it is fully enclosed.

The eastern tributaries of Wādī al-Hamḍ, which runs down to the Red Sea, originate in Harrat Khaybar. A short distance farther east are the headwaters of Wādī al-Rumāh (al-Rumma in al-Hamḍān), which through its extension al-Bāṭin runs to the Persian Gulf basin in the vicinity of al-Baṣra, though the connecting link between al-Rumāh and al-Bāṭin is choked with sands of al-Dahna'. The small area in Harrat Khaybar between the sources of al-Hamḍ and those of al-Rumāh is the one place in the whole Peninsula from which an easy slope to the sea on both sides can clearly be discerned.

Descending from the eastern slope of al-Sarāt, the three large valleys of Kanya, Biḡha (*g.u.*), and Taghlīb converge on the upper reaches of Wādī al-Dawḥar (*g.u.*), which receives their waters in times of exceptional floods only to lose them again as it fans out against the sands of al-Rub' al-Khālī after piercing through the wall of Tuwayk. Habawna (Habawana in al-Hamḍān) and Naḡrīn (*g.u.*) are valleys coursing eastwards to the sands which lie south of the southern end of Tuwayk. From the highlands of the Yaman the valley of al-Jāḥil (*g.u.*) flows down into the basin of al-Djāwī (*g.u.*) (Djāwī Ibn Nāṣir), the home of the ancient Minaeans.

The mountains of the Yaman send water southwards towards the coast in the vicinity of Aden through Tuban, Banā, and other valleys. Water from Banā is used for an extensive development of agriculture at Abyan. The southern outliers of al-Djāwī give rise to Wādī Mayfa'a and Wādī Ḥaḡḡar. Ḥaḡḡar is the one truly perennial river in Arabia, but its total length probably does not exceed 100 km. Its water, part of which comes from the hot springs of al-Sidra in the uplands, supports cultivation in the area of Mayfa'a at the river delta (not to be confused with Wādī Mayfa'a to the west).

Wādī Ḥadramawt (*g.u.*), the principal artery of a great drainage system, is fed by valleys coming from both the southern and the northern parts of al-Djāwī, those from the south being far more thickly settled than those from the north, just beyond the

town of Tarīm the Valley of Ḥadramawt assumes the name of al-Masila, which it bears for the remainder of its course to the sea.

Sana'il, one of the valleys flung out by the range of al-Ḥaḡḡar towards the Gulf of Oman, provides passage for the main road from the coast to Inner Oman. The chief valleys of al-Bāṭin are named after the tribes inhabiting their banks, al-Ma'awil and others. Going up Wādī al-Dijaz and Wādī al-Kawr, one comes to passes leading over the mountains to the Trucial Coast.

In the region east of al-Dahna' between al-Bāṭin and al-Sabha' the insufficiency of surface water has militated against the formation of true *wadīs* of any size. Wādī al-Miyāh northwest of al-Kaṭīf is a basin rather than a stream channel, deriving its name from the numerous wells and springs found within its confines. Other large basins are al-Farūḡ south of Wādī al-Miyāh and al-Shakk southwest of the city of Kuwait.

In the far north a series of valleys known as al-Widya' (Widya' 'Amara) runs north-eastward towards the Euphrates; among these are Tubal, 'Ar'ar, and al-Khurr. In Naḡḡa a number of valleys between al-Rumāh and Wādī al-Dawḥar cut through Tuwayk; al-'Atk (*g.u.*) is the northernmost of these. Wādī Hanḡa (*g.u.*), rising on the crest of Tuwayk rather than making a gap in the escarpment, twists down to the basin of al-Khāḡḡi where several important valleys empty into al-Sabha' (*g.u.*), the course of which can be traced across al-Dahna' and al-Djāḡira into the Persian Gulf basin. The valley of Birk cleaves through the wall of Tuwayk via a picturesque gorge and turns northwards under the name of al-'Akīm to follow a course towards al-Sabha'.

Arabia contains no large permanent lakes. Deep pools occur in places, with the most unusual ones being those in the districts of al-Khāḡḡi and al-Aḡḡāḡ. In oases such as al-Ḥaḡḡa big ponds may be formed by the run-off from irrigation. Dry lakes in the north may be filled with water over an area of 10 or more km<sup>2</sup> after a rain.

The thousands of wells (*biḡh*, pron. *biḡ*, pl. *biḡyāt*, or *ḡāḡ*, pl. *ḡāḡāt*) in the desert, some of them even in the central regions of al-Rub' al-Khālī, make possible the nomadic life of the Bedouins. The deepest is reported to descend c. 170 m. into the earth, and depths in excess of 70 m. are not uncommon. The wells may be steyned or unsteined; they may be frequently visited or seldom seen by man. Other watering places are spots in the sand or in valley bottoms where exiguous water is secured by digging down a meter or more. Blowing sand rapidly fills in these shallow holes, so that finding them may tax even the navigational skill of Bedouins bred in the wild. The water in some of the desert wells is too salty for humans (such a well is called a *ḡhawḡ*, pl. *ḡhawḡāt*), but camels drink it and furnish milk to sustain their masters.

Around most of the flowing springs (*'ayn*, pl. *'ayyāt*) oasis settlements or towns have grown. Other communities draw their water only from dug wells, while sometimes tanks and cisterns are used to catch rainwater. The larger oases consist of several or more villages or towns grouped close together, each with its own belt of date groves. The oasis name may apply to the whole group, which may cover tens or hundreds of square kilometers, rather than to any single community within its confines, e.g., al-Ḥaḡḡa with its chief towns al-Huḡḡif and al-Mubarrāz, and Biḡha with al-Rawḡhan and Nimrān.

Various methods of irrigation are used wherever there is sufficient water. Terracing is much practised in the south with water being led from enclosure to enclosure. In some regions an old system of underground aqueducts (*ḡalāḡ*, pl. *ḡalāḡāt*) similar to the *bandis* of Iran is common, while in others it is not known. In large oases such as al-Ḥaḡḡa and in Tihāma the rules governing the distribution of water for irrigation are elaborate and firmly fixed by custom. The building of dams, once an art in which the Arabs excelled, has been neglected in more recent times, but now, with a growing population and higher standards of life demanding an expansion of agriculture, it is being revived.

#### (iv) POLITICAL DIVISIONS

Political divisions in Arabia are often ill defined. Few international boundaries have been agreed upon by the parties concerned, and none has been properly demarcated throughout its full length. A rapid survey of the main political divisions as they existed in 1374/1954-5 will furnish examples of the truth of these statements.

The Kingdom of Saudi Arabia occupies the whole northern half of the Peninsula—with the exception of the small states of Kuwait, Bahrain, and Qatar, and parts of Oman—and a good share of the southern half as well. Stretching from the Red Sea to the Persian Gulf, it incorporates the large regions of al-Ḥijāz (*g.u.*), 'Asir (*g.u.*), and Naḡḡa (*g.u.*), and also most if not all of al-Rub' al-Khālī. Saudi Arabia and the Yaman agreed in 1354/1936 upon a boundary running from the Red Sea coast to a point short of al-Rub' al-Khālī, but no serious attempt has since been made to extend the line southwards from this point over a gap between 100 and 200 km. in breadth. No land boundaries have been fixed between Saudi Arabia and any of the following states, all of which may be assumed to have territories abutting on the Kingdom: the Aden Protectorate, the Sultanate of Muscat, the Imamate of Oman, the Amirate of Abū Zāḡi (the southernmost of the Trucial States), and the Amirate of Qatar. The boundary between Saudi Arabia and Kuwait and the boundaries of their neutral zone have been agreed upon in a general way. [See further SA'UDIYA, AL-'AFḡĀḡ, AL-'ARID, AL-ḤAḡḡA, AL-YAMAMA.]

The Mutawakkilite Kingdom of the Yaman lies along the Red Sea between Saudi Arabia and the Aden hinterland. The British and Yamanite Governments have a not entirely satisfactory working arrangement regarding the boundary between the Yaman and the Aden Protectorate, and the joint commission provided for in the Agreement of 1370/1951 to demarcate boundary locations and to recommend solutions to disputes arising from conflicting positions has not yet been constituted. [See further AL-YAMAN.]

The British Crown Colony of Aden, the only possession of a Western power on the Arabian mainland, occupies a tiny area c. 160 km. east of the south-western tip of the Peninsula. Perim Island forms a part on the Colony, and Kamarān is subject to its administration. The Governor of Aden Colony is also Governor and Commander-in-Chief of the Aden Protectorate, which runs c. 4200 km. along the southern coast from Bab al-Mandab to Ra's Darbat 'Alī and reaches inland an undetermined distance. [See further 'ADAN, ḤADRAMAWT.]

The Sultanate of Muscat (Maskat (*g.u.*)) provides an outstanding example of the peculiarities of the political scene in Arabia. The ruler, who styles

himself Sultan of Muscat and Oman, lays claim to virtually all the territory east of the eastern edge of al-Rub' al-Khālī, a space roughly 1200 km. long and 500 km. broad. Within this space, however, the Sultan administers only three relatively small areas, the remaining areas coming under the Imam of Oman or other independent chieftains. The Sultan's foothold on the southern coast—Zufār, which abuts on the Eastern Aden Protectorate—is separated from the main base of his power—the towns of Muscat and Maṭrah and the coast of the Gulf of Oman, including al-Bāṭin—by some 1,000 km. of coastline with its hinterland. Again, his domains on the coast of the Gulf of Oman are interrupted in the north by territories belonging to the Trucial States around Kalbā and al-Fudḡayra before the third centre of his authority appears near Ra's Musandam. The Sultan is of the line of Āl Bū Sa'īd, an Ibadī dynasty which first came into power c. 1157/1744. Unlike his neighbours on both sides, the Sultan is not formally under British protection, though he does have special ties with the British Government.

Another Ibadī ruler, the Imam of Oman, whose authority rests more firmly on a religious foundation than does that of the Sultan, directs the destinies of the interior region occupied by the Ibadī community. No clear dividing line exists between the territories of the Imamate and the Sultanate; those of the Imam reach the crests of the main mountain range of al-Ḥaḡḡar throughout much of its length, and a few of his governors (*wadīs*) are established on the seaward slopes. The Imam, whose theocratic realm is a continuation of the Khāḡḡi state founded in Oman c. 713/6750, has his capital at Naxwā, and some of his principal lieutenants reside at Tanāḡ in Inner Oman and al-Kāḡil in the district of al-Sharḡiya. Of all the major rulers in Arabia, the Imam, who maintains no formal diplomatic relations with any other power, is the most self-sufficient and the least known to the outside world. [See further 'OMAN.]

The Trucial Coast (Sāḡil 'Uḡāin or simply al-Sāḡil) is the southern shore of the Persian Gulf running southwards and then westwards for an undetermined distance towards Qatar. When the Arabs living there in the early 19th century were preying vigorously on shipping in the Gulf, the region was known as the Pirate Coast; after the British forcibly stopped the marauding and imposed a maritime truce on the rulers of the ports, it came to be called the Trucial Coast. The Trucial States, all of which are in special treaty relations with the British Government, are regarded as being under that government's protection, though without having the formal status of protectorates. [See further BAḡR FĀRIS.]

The Sultan of Muscat claims a part of the oasis of al-Buraym, but Saudi Arabia challenges this claim on the basis of its own connections with the place. Saudi Arabia likewise challenges the claim of the Trucial State Abū Zāḡi to al-Djāwī? Saudi Arabia claims an outlet to the Persian Gulf on the coast between Abū Zāḡi and Qatar, but the British Government, which by treaty controls the foreign relations of these two states, disputes this claim. In 1373/1954 the two parties agreed to submit the dispute to arbitration.

The Qatar (*g.u.*) Peninsula, jutting northwards into the Persian Gulf about halfway between its mouth and its head, is the seat of an Amirate under the rule of Āl Thānī, a dynasty of recent origin, with its capital in the port of al-Dawḡa. The boundary

between the Amirate and Saudi Arabia in the vicinity of the base of the peninsula has not been agreed upon, and the Amir of Bahrayn claims a piece of territory around al-Zubāra in the north-western part of the peninsula.

The archipelago of Bahrayn (q.v.) between Qatar and the Saudi Arabian mainland constitutes an Amirate under the rule of Al Khalifa, a family from Najd which established itself in the islands in 1197/1783 and has ruled there ever since, with its capital in the port of al-Manāma on the main island. British interests in the Persian Gulf come under the supervision of a Political Resident with headquarters in al-Manāma. Also subject to his administration are the Kuria Muria islands, which belong to Great Britain.

On the Arabian mainland at the head of the Persian Gulf is the small roughly triangular Amirate of Kuwait, partially separated from Saudi Arabia by a neutral zone and bounded on the north and west by 'Irāq. Al Sabāb, a family related to Al Khalifa of Bahrayn, has ruled Kuwait for over two centuries (see kuwait).

Katar, Bahrayn, and Kuwait have all granted the British Government by treaty the right to conduct their foreign affairs and have agreed not to enter into relations with other powers without the consent of that government. Questions dealing with water boundaries and the appurtenance of a number of islands in the Persian Gulf remain to be settled between Bahrayn and Kuwait on one hand and Saudi Arabia on the other.

#### (V) FLORA AND FAUNA

Throughout most of the Peninsula a sharp contrast exists between the untitled stretches of desert and the green patches of cultivation in the oases. In places, particularly along the margins of the Peninsula where rain falls more frequently or where stream channels bring sufficient water down from the highlands, cultivation is more widespread, sometimes climbing the heights in skillfully built terraces and sometimes carpeting the narrow plains between the mountains and the sea. Arabia, however, boasts no endless prairies or pampas tamed by the plough, nor does it boast any rich belt of forests—the best it can offer are the juniper woods of High 'Asir. The plant beyond compare in the oases is the date palm (*nakhlā* (q.v.)), so much in a class by itself that the Arab tends to think of it as a thing apart from all other trees. Not only is the date the most important staple food, but the branches and bark of the palm are also used in building huts, in making baskets and mats, and for a myriad other purposes. The date palm does not flourish at the highest altitudes, so that the villagers there depend on grain. In Zufā and a few other spots coconut palms grow in place of or alongside the date, which is also replaced on occasion by the *dawm* palm (gingerbread tree).

Wheat, barley, and the millets are the chief grains. Alfalfa (lucerne = *hatt* or *hath* or *harim*) is a common crop raised in the shade of the date palms, and cotton, rice, and tobacco are cultivated on a small scale.

On high terraces in the Yaman and 'Asir grows the coffee which made Mocha a goal for Western traders after the Portuguese found the way around Africa to India. Introduced only about five centuries ago into Arabia, coffee gave its Arabic name (*kahwa* (q.v.)) to the world, but the world now goes to Brazil for its everyday bean, the bean of the Yaman having become an exotic luxury. On many terraces coffee

has yielded place to the more profitable *hād* (q.v.), whose slightly narcotic leaves are chewed by people of all classes in the Yaman and other parts of the south.

Frankincense (*lubān* (q.v.)) and other aromatics, exported to the West over two thousand years ago by the Incense Road from South Arabia to the Mediterranean, still grow in the south, especially in the land of Mahra, but as articles of commerce they are now of virtually no value. Of greater use today is indigo, much favored as a dye in the south (the tree is called *hawr* and the dye *nīl* (q.v.)). Other common dyes are the yellowish *sars* and the reddish *henna*.

Among the larger trees are tamarisks—sometimes planted in a row as a wind break or to stop the advance of drifting sand—acacias, mimosa, and carobs. The jujube (*Zizyphus spina christi* = *sār* (q.v.)) in the north, *'sib* in the south) bears an edible fruit, called *dawm* (a homonym of the name of the palm) by the Bedouins and *hawr* by the townsmen. The aloe and the euphorbia often grow to a considerable height, and some varieties of euphorbia closely resemble cactus.

Arid though Arabia is, it is not without flowers and fruits. For roses and pomegranates al-Jā'ir is famed, al-Jharj for watermelons (*dīkh* in Najd, *habbāb* in al-Hijāz, and *dīkh* in the north), and al-Buraym for mangoes (*anbā* or *kanb*). Figs, grapes, peaches, bananas, and other fruits sometimes vary the monotonous diet of the townsman, but the Bedouin seldom savours anything more than his milk and dates.

In the cool season the Bedouins roam far afield, sometimes going for months without resort to water wells—the forage supports the camels, whose milk supports their masters. The most sought after plants for forage are the annuals (*'uḡb*, pron. *'uḡb*)—grasses, wild flowers, and herbs which spring up green after a rain, especially in the *raḥ*, the season of plenty following the first and best rains (*saḥm*). The sands provide favorable soil for the growth of such annuals and so are reckoned by the nomads as among the most attractive types of desert terrain. Perennial shrubs and bushes (*ḥadjar*) eaten by camels are *nāt*, *hādīdh*, and *sahāb* (pron. *sahāb*), as well as others too numerous to mention. From time to time camels hanker after bushes of the category called *hamd*, a prime source of the salt needed by their system. Among the many plants falling in this category are *rawḥa*, *rimḥ*, *'arād*, *'uḡrum*, *sūwād*, *ḥinān*, *ghadā*, and *hādīdh* (not *hād* as in classical Arabic). Dry bushes are also essential to the Bedouins for firewood (*ḥafāḥ*), among the best for this purpose being *'ah*, *ghadā*, and *rimḥ*. Burning with a fragrant scent, these woods help to make the ceremony of brewing coffee for a guest at the open door of the tent one of the chief pleasures of life. The Bedouin likes truffles (*ḥab'*) and eats other desert plants, though by preference and philosophy there is little of the vegetarian in his being. Twigs of the *arak* (pron. *arak*) are in common use as a toothbrush (*misḥak*), and *senna* (*sand*) is chewed as a purgative.

Vegetation would be more abundant in the deserts were it not for the migrating dunes, some of which move 20 in. in a year. In many places, however, bushes have taken root and fixed the sand, a hummock of which is built up around each bush. An area of such hummocks may extend for many kilometers, making very rough country known as *'afḍā*. Less difficult types of sandy terrain with vegetation are called *marḥāḥ* or *dihāḥ* (pl. *dihāḥ*, cf. class.

*dakh*, pl. *dikhāh*; and *dakhak* = flat surface, sandy plain).

Among animals the camel occupies a place analogous to that of the date palm among plants. The vast majority of Bedouins in Arabia depend on the camel above all other material possessions. The tribes which herd sheep rather than camels range over the steppes north of Arabia, close to the great rivers of Mesopotamia, and do not pass beyond the territory of Kuwait in their southward migrations. Milk is the camel's most precious product, but its meat, hide, and wool are also put to good use, its dung (*diwan*) is collected to be burned as fuel, and the tail of a dead camel makes a strong rope. Camels are sometimes harnessed for ploughing or drawing water from wells, and the nomads sell part of their stock to secure money for clothing and other necessities. In time of great thirst a Bedouin may slaughter a camel to drink the water stored in its stomach (*harāh*) and the urine in its bladder (*miḥḥāḥ*).

The general term for camels is *ishl* (q.v.) (often pronounced *hū*), with *hawāh* being common in the south. A riding camel is a *ḥalāl* (pl. *ḥawayh*); the plural *rikāb* is used for both those that are ridden and those that are not. The most highly desired camels are the thoroughbreds (*asā'il*), whose pedigree has been controlled and recorded over a number of generations. Many of these are from the breeds of Oman ('Uḥmāyiyāt), among which the Bawāṭin of al-Bāṭina are particularly well known, though these have the disadvantage of wanting to drink every day and of not being adapted to rough country. The camels of the sands tend to be smaller and lighter in color than those raised in the mountains of the Yaman. Among the multitudinous names in the special vocabulary reserved for camels are ones describing beasts which graze on certain plants, e.g. *hawārim* (fem. sing. *hawārim*) from the *hawm* bush, and *awārik* (fem. sing. *awārik*) from the *arāk* tree. Along the coasts camels are often fed on dried sardines.

Along with camels, most of the nomads keep sheep and goats (*ghanaḥ*), though not in great flocks like those of the northern steppes. Sheep and goats are valued for their milk, fleece, and skins. Sheep are in demand as the *poix de résistance* of the Arab banquet; even royalty can offer nothing more appetizing than a young lamb (*lāl*, pl. *lalyān*) baked in a pot with *sams* and served on a platter heaped high with rice. *Sams*, clarified butter for cooking and greasing made from the milk of the ewe (*na'dīn*) or she-goat (*anā*), is considered superior to *ḡhabāb* from the milk of the she-camel (*nāka*) or *awāḥ* from the fat of camels, sheep, or cattle.

The Arabian horse, the ancestor of the Western thoroughbred and once the pride of the Peninsula, is a disappearing strain. Few Bedouins own own horses, and the export of stock to India, Egypt, and the West, formerly an important item in the Arabian economy, has dwindled away to insignificance. An occasional man of rank still maintains a stud, but even this is likely to be neglected. The speed of the motor car has captured the Arab's fancy; cars are now used in place of horses for hunting and as cavalry in some of the Arabian military forces.

Fine breeds of donkeys are raised, particularly the large white ones of Bahrayn and al-Ḥaṣā. Donkeys are used for riding, drawing water, and as pack animals in the mountains, where their surefootedness makes them more reliable than camels. Cattle, which in most places are not numerous, are usually of the small humped variety, except in Sukutā, where the humpless kind is found.

The gazelle (*saby*), which in days past used to speed across the plain in great herds, is rapidly being thinned out by rifles in the hands of hunters hurtling by in trucks or cars. The three common types are the *ri'm* (pron. *rim*), the *'ifri* (cf. class. *ya'fūr*), and the *idm*; the term *ghazāl* is used only for the newly born kid. The swift greyhound (*salāhī*) of the Bedouins can on rare occasions outrun even the gazelle. Of the oryx (*awdayhī*) in the south, *ṣahar* (*waḥh* in the north), a larger antelope, small numbers survive in the remoter parts of al-Rub' al-Ḥālī but none or almost none is now left in the Great Nafūd. The ibex or mountain goat (*wa'ī* or *hadan*) also seeks refuge in distant retreats on higher cliffs. Other large wild beasts are the hyena (*daḥī*), jackal (*awṭī*), wolf (*dhī'ā*, pron. *dhīb*, pl. *dhayābal*), and cheetah (*simr*). The lion has long been extinct in Arabia. In the mountains of the south baboons are common, often chattering along in troops; they are fond of raiding the millet fields. Smaller animals are the fox (*ḥa'lab* or *ḥa'ī* or *hūnī*), the ratel (*jarinḥūn*, class. *zaribān*), the cony or hyrax (*waḥr*), and the hare (*arnāb*). The hedgehog (*ḥanfuḍh*) with its short quills is much commoner than the unrelated long-quilled porcupine (*inā*). The jerboa (*ḡarba'*, cf. class. *yarbā'*) hops about the desert on its long hind legs, resembling a miniature kangaroo; its cousin the *ḡūrīhī* (cf. class. *ḡurādh*), on the other hand, runs on all fours.

Snakes live in the sands and rocks, though seldom seen because of their nocturnal habits. Some are poisonous, including the horned viper, as well as a species of Arabian cobra (= Egyptian *aspi*) and a large snake called the *aym* (cf. class. *aym*), which the Bedouins say has the power of flying or leaping over a considerable distance. According to popular report, perhaps the most deadly of all is the *baḥḥ*, a small innocent-looking snake living in the sands. The striped seasnakes of the Persian Gulf are poisonous, but they rarely if ever bite human beings. The two large lizards are the *daḥb* and the Arabian or desert monitor (*maṣāl*), the first of which is eaten by all the Bedouins with relish, while the second is ordinarily shunned. Among the smaller lizards of the sands are the fierce-looking *ḥawayhī* and the slippery sand-swimming skink (*damḥūsa*).

The ostrich appears to have become extinct in Arabia during the past few years. Fragments of ostrich eggshells are often found in the desert, and the word *na'daw* and other terms relating to ostriches occur frequently in place names. Trained falcons, often called simply *fuyūr*, are much used in the chase, their chief game among other birds being the lesser bustard (*ḥubāra*). Species of the sand grouse such as the *baḥā* and the *ḡhalāl* are too fast for trained falcons, though they can be overtaken by the wild variety. The presence of wild falcons is attested to by the number of high places called *maṣbara* = nesting-place of the falcon (*sabr*). Among the larger birds of the desert are the eagle, the vulture (*naṣr*), and the owl, while the flamingo, the egret, and the pelican are found along the coasts. Smaller birds are commoner in the cultivated regions, among them being the cuckoo, the thrush, the swallow, the wagtail, the Syrian nightingale (*ḥulbāl*), and the hoopoe (*ḥudūd*). The bifasciated lark (*umm ṣāṭim*) is ubiquitous in the desert, and the courser (*ḥarādī*) nearly so. The pigeons of the Great Mosque in Mecca are famous throughout Islam.

The seas embracing the Peninsula are rich in fish, many of which, such as the king mackerel (*ḥaw'ad*) and the grouper (*ḥamūd*) of the Persian Gulf, are tasty and nutritious, but are not eaten as much by

the Arabs as might be expected. Whales occasionally enter the Persian Gulf from the Indian Ocean. Both sharks and sardines are caught in great numbers off the southern coast, and the Persian Gulf produces delicious shrimps.

The most disastrous plague visited upon Arabia by living creatures is that of the locusts (*ghazāl*). The solitary mitigaating aspect of a locust invasion is that a number of the invaders themselves are eaten by the people they afflict. Minor plagues by comparison are those of flies, camel ticks, and similar vermin, which are no worse in Arabia than in many other countries, even though the Bedouin may describe his life as *al ramī wa-hamī* (sand and lice). A more agreeable insect, even in spite of its sting, is the bee, kept for its honey.

**Paleogeography** (for sections i-v): Older Arabic sources: 'Arrām al-Sulamī, *Asmā' Dīwān Tihāma*, Cairo 1373; Hamdānī, *Sifat Dījazirat al-'Arab*; idem, *al-Iḥlīl*; BG.A, espec. Ibn Hawkal and al-Makdīsī; Ma'ūdī, *Murūj al-Dhahab*; Bakrī, *Mu'djam mā ša'djam*, Cairo 1945-51; Zamakhsharī, *al-Aḥkām wa'l-Dīwān* wa'l-Miṣyāb, Leiden 1896; Ibn al-Jawzī, *Rihla*, London 1907; Yāqūt, *Mu'djam al-Buldān*; Ahmad b. 'Abd Allāh al-Tabarī, *al-Ḥīdā' al-Ḥīdā' Umm al-Kawṣar*, Cairo 1367; Ibn al-Muḍāwir, *Descriptio Arabiae meridionalis*, Leiden 1903; Abu 'l-Fida', *Descriptio peninsulae Arabiae*, Oxford 1342; Ibn Baṭṭūṭa, *Voyages*; al-Makrīzī, *De valle Hadramawt*, Bonn 1866; Khallīl al-Zahrī, *Zuhd Khatm al-Mamālīk*, Paris 1894 (French text Damascus 1950); 'Abd al-Ghānī al-Nābulusī, *al-Bahā' wa'l-Mudjīz*, Cairo 1324.

Modern Arabic works of a broader scope: Amin al-Rihānī, *Mulūk al-'Arab*, Beirut 1929; Hāfīz Waḥba, *Dījazirat al-'Arab*, Cairo 1354; 'Umar Ridd Kabbāla, *Dughāṭat al-Shihā Dījazirat al-'Arab*, Damascus 1364; Fu'ād Hamza, *Kalām Dījazirat al-'Arab*, Cairo 1352; idem, *al-Bild al-'Arabiyya al-Su'ūdīyya*, Mecca 1353; L. Cheikh, in *al-Maḥrikh*, 1920; Muḥ. b. 'Abd Allāh b. Bulayhid, *Shihā al-Aḥbāb*, Cairo 1320-3.

#### (vi) ETHNOGRAPHY

In the study of the ethnography of the Peninsula an array of formidable problems remain unsolved. Who were the first inhabitants? Did they arise from the soil or did they come from abroad? If immigrants, what was their original home? What was the environment in which they lived—did it differ greatly from the Arabia of today? What intrusive elements intermingled with the earliest dwellers as time went by? Who were the first people to deserve the name of Arab, and where did they come from?

A measure of progress has been made in the attempt to elicit answers to these and similar questions, but far more work must be done before any of the more likely hypotheses can achieve the status of historical fact. Much more needs to be known about the geology and geography of the Peninsula, many promising archaeological sites need to be excavated, and an exhaustive investigation must be made of the various segments of the present population and their history. Moreover, the solution of Arabian problems may well depend to a considerable degree on the success of work relating to other areas. The problem of the identity of the Arabs, for example, dovetails inextricably into the broader problem of the identity of the Semites, the host of people speaking languages of the family to which Arabic belongs.

Space does not permit a review of the numerous hypotheses receiving serious consideration with respect to the early history of man in Arabia. Suffice it to say that available evidence indicates that the highlanders of the Yaman may form the least adulterated large group anywhere in the world now representing what anthropologists call the Negrito race. East of the territory of these highlanders a Veddoid tribe is said to appear, particularly among the tribe of Mahra and other tribes in the south speaking their own Semitic languages, which are distinct from Arabic. This Veddoid strain and other data suggest an ancient connection with lands farther east, perhaps India or Ceylon. The Bedouin of the north, to most Westerners the classic Arab type, is also basically Mediterranean, though not quite as characteristically so as the mountaineer of the Yaman. All along the coasts and with less frequency in the interior, other strains occur, sometimes in easily recognisable forms and at other times lying so far below the surface as almost to defy identification.

The unravelling of these mysteries is the concern of the archaeologist and the anthropologist [cf. also

BAUW). More important for the student of Islam is the concept the Arab—especially the Muslim Arab—has had, and in many cases still has, of his ethnographical development, a concept so prevalent and tenaciously held that it merits the careful consideration of the anthropologist as well.

The seeds of the Arab's own concept go far back into his past; how far can not be determined because of the relative lateness of the sources available, though the basic particulars of the concept had developed before the appearance of Islam. In weighing data pertaining to pre-Islamic times, however, one must use caution, bearing in mind the fact that most of the existing sources were recorded not only long after the event but also subsequent to the introduction of Islam with its new ways of looking at many aspects of life, so that the complete genuineness of these data may often be open to question. Furthermore, various refinements of the Arab concept were still being made in the time of the Prophet, and other refinements came even later. Finally, Islam with its doctrine of the brotherhood of Muslims and the equality of Arab and non-Arab presented a fundamental challenge to the validity of the Arab concept as a guiding principle for the life of the community.

Muslim genealogists have worked out an elaborate and ingenious system for the illustration and application of the Arab concept. Although this system has weaknesses—obscurities in the early stages, obvious gaps, unexplained riddles, inconsistencies, and contradictions—on the whole it hangs together well. Most important, its primary thesis—the core of the Arab concept—have been by no means the exclusive property of scholars; they have belonged to the people, and their influence on the politics and social life of Arabia has been penetrating and pervasive.

According to the Arab concept, the Arabs constitute a race, not simply a community of people speaking the same language. This race is made up of innumerable men and women each descending in a direct line from one or the other of two ancestors, who probably were not closely related (the connection between these two eponyms is one of the major unresolved aspects of the system). Greater homogeneity could have been attained only by insisting on the descent of all Arabs from a single ancestor. That the Arabs recognized in their clear and undisputed tradition the duality of their origin is a significant fact, and its effect on the history of the Arabs and Islam has been far-reaching.

The system of the genealogists begins with a nod at those whom the Arabs regarded as the original inhabitants of the Peninsula, tribes such as 'Ad, Thamud, Iram, Jurhum, Tamm, and 'Ijda' (pp. 2), all of which are believed to have disappeared before the beginning of Islam. Some of these, such as 'Ad and Iram, may well have been entirely legendary, while the historicity of others, such as Thamud, is not in doubt. Nothing certain is known about the identity of these tribes, though they are generally reckoned to have been Arabs, the Lost Arabs (*al-'Arab al-'Adiyya*). Sometimes they are even called the True Arabs (*al-'Arab al-'Adiyya*), though this has little meaning, as in the Arab concept they are mainly a historical curiosity and an example of the terrible fate visited on people who heeded not their prophets. Although in later times there were men who claimed descent from these ancients or even tribes reputed to have sprung from them, the conclusion of the genealogist Ibn Hazzam (d. 436/1054) was that 'on

the face of the earth there is no one whose descent from them is verified' (ed. Lévi-Provençal, 8).

Disposing of the autochthons in this fashion, the Arab concept concentrates on the two great ancestors—Kahtān and 'Adnān (pp. 2)—and the two great divisions of the Arab race they fathered. As all men go back to Adam, these two must have been at least remotely related. The question of a closer relationship depends on whether Kahtān was a descendant of Ismā'īl, who was recognised as an ancestor of 'Adnān. One opinion commonly held opposes such a descent for Kahtān, whose presumed line from Noah's son Shem (Sām b. Nuh) is separately traced. Kahtān's offspring are generally denominated the True Arabs (*al-'Arab al-'Adiyya* or *al-'Arab al-'Adiyya*), the Arabised Arabs (*al-'Arab al-'Adiyya* or *al-'Adiyya*), though the uncertainty of this classification is revealed by the existence of other versions, one of which brackets the Lost Arabs with Kahtān as the True Arabs, while another reserves the title of True Arabs for the Lost Arabs, designating the people of Kahtān as *muta'arriba* and those of 'Adnān as *muḍarriba*. In any event, Kahtān clearly comes out closer than 'Adnān to genuine Arabs.

The descendants of Kahtān are the Southern Arabs, Kahtān al-Yaman, whose origin is traditionally assigned to the south-western corner of the Peninsula, while the descendants of 'Adnān are the Northern Arabs, held to have made their first appearance in the northern half of the Peninsula. Whether this traditional division has a basis in truth is open to question. Certain data, for example, suggest that Saba' came from the north into the Yaman, though in the scheme of the Arab genealogists Saba' is the great-grandson of Kahtān and the father of Himyar and Kahtān, the eponyms of the two main branches of the Southern Arabs.

The peoples of the ancient South Arabian states—Sabaeans, Minaeans (pp. 2), and others—were regarded as descendants of Himyar, so that Himyar in Arabic became the comprehensive term embracing the civilisation of these states. Few of those recognised without qualification as descendants of Himyar played an important role during the Islamic period, the centre of the stage having by then been occupied by the sons of Kahtān, among whom were numbered Tayyīl, Ma'dhijīl, Hamdān, and al-'Ad. Among the sub-divisions of al-'Ad were al-'Aws and al-'Ijda' (pp. 2), residents of Medina who rose to fame in Islam as the Prophet's Ansār. Laḥm, Ghassān, Kūda, and other tribes of Kahtān became solidly established in the north and centre long before the beginning of Islam, so that a tribal map of Arabia in the 6th and early 7th centuries reveals a curious patchwork in which the ranges of many Arabs of Southern descent lie north of those belonging to Arabs of Northern descent.

'Adnān, the putative progenitor of the Northern Arabs, appears to have been even more of a misty figure than Kahtān, so that the Northern Arabs in popular practice often trace their descent back no further than 'Adnān's son Ma'add or even his grandson Nizar. Mudar and Ma'add, sons of Nizar, were the eponyms of the two main branches of the Northern Arabs, the descendants of a third son, Iyād, having largely sunk out of sight by the time of Islam. Kays 'Aylān, one of the two major divisions of Mudar, was of such importance that the term Kaysi was often used for all Northern Arabs. This division embraced Hawāzin and Sulaym, and Hawāzin alone included such notable tribes as Thakīf and the whole group of 'Amir b. Sa'sa'a

(Kushayr, 'Ukayl, Dja'sa, Kūda, and Hīlā). Khilaf, the other major division of Mudar, numbered in its ranks Hudhayl and Tamīm and above all Kindān, the tribe of which Quraysh formed a subdivision. Although the Northern Arabs by origin lacked the same identification with Arabdom that their Southern cousins enjoyed, the fact that the Seal of the Prophets came from the Northern tribe of Quraysh has redeemed their prestige under Islam in ample measure.

From Kahtān sprang the tribes of 'Anaza, 'Abd al-Kays, al-Namir, Taghlib, and the strong group of Bakr b. Wa'il, one of whose members was Hanifa. Well before Islam the original groups of Mudar and Kahtān dissolved, early folk of Mudar moving to the territory on the Euphrates called after them Diyār Mudar and early folk of Kahtān to the territory on the Tigris called Diyār Rabi'a. Many of their offshoots, however, remained behind in the Peninsula: Hudhayl in the vicinity of al-Jāfil; Sulaym in the mountains between Mecca and Medina; Tamīm and Hanifa and various members of 'Amir b. Sa'sa'a in the centre; and 'Abd al-Kays in the east.

An attitude of hostility between Kahtān and 'Adnān, which went far back into the past, was enhanced by the rivalry that developed between the Ansār of Medina and Quraysh of Mecca, so that it became a factor of extraordinary significance in the history of the early Islamic dynasties, the effect of which extended as far afield as Spain. The struggle between South and North finally came to an end, the twisting consequence with the eclipse of the Arab element in the Islamic world. Only in one section of the Peninsula—'Uman—has the ancient hostility endured down to the present as a vital force. For centuries the Northerners were known in 'Uman as Nizāri, and the Southerners as Yama'is. As the result of a civil war there in the early 11th century, the Northerners came to be called Ghāfir and the Southerners Hiniwī, a distinction which still carries weight.

A major anomaly in the system appears in the case of Kūda'a. A number of tribes—Bahrā, Dhuḥayna, Ifāl, Tanūkh, Kalb, and others—recognised a common ancestor named Kūda'a, but agreement was lacking as to whether he was a Southerner or a Northerner. Some said he was a son of 'Adnān, while others said he was a grandson or later descendant of Himyar. The genealogists also resorted to the device of declaring that all the Arabs were descended from three men—Kahtān, 'Adnān, and Kūda'a—but without the suggestion that Kūda'a represented a third element, neither Southerner nor Northerner.

In the conflict between the Southerners and the Northerners during the early period of Islam, the tribes of Kūda'a tended to side with the Southerners; genealogy was used for political purposes, the attribution to Kūda'a of a descent from Kahtān through Himyar prevailed, and the tribe of Kalb of Kūda'a advanced to the fore as champions of the Southern Arabs in the days of the Umayyads.

In studying the history of Arabia from 'Abbasid times to the present, one encounters great difficulty in determining the links between the tribes of a thousand years ago and the tribes of today. Oppenheim, Bräunlich, and Caskel in their work *Die Beduinen* have made the most ambitious attempt so far with respect to the tribes of northern and central Arabia, but much remains to be done in spite of the laudable degree of success they have achieved. Information on the tribes during the time when

the government of Islam was in or near Arabia is fairly abundant, and the same is true of the last two centuries or so, but for hundreds of years in between their story remains for the most part concealed from view. Great migrations took place of which only trifling records have been recovered. Elements broke off from one tribe to join another, or whole tribes reshuffled themselves into new groupings. Popular tradition among the Beduins has preserved some recollection of the changes, but this tradition is often far from trustworthy. In the 14th/10th century al-Hamdānī remarked on the tendency of tribes bearing a given name to associate themselves with stronger or more renowned tribes of the same name, and this tendency still holds true. In the time of the Caliph Abū Bakr the appearance of the false prophet Musayyina among Hanifa brought this tribe into disrepute; descendants of Hanifa in Najd today prefer to name as their ancestor Rabi'a, from whom Hanifa sprang, but so many other tribes have been named Rabi'a and popular knowledge of the traditional genealogical system is so scant that the result is often complete confusion. The modern tribe of al-Dawwār has a tradition that its ancestor was named 'Umar; the ordinary Dawwār today glibly identifies him as 'Umar b. al-Khaṭṭāb without knowing who 'Umar b. al-Khaṭṭāb was. The modern tribe of Banī Ghāfir in al-Bāṭina of 'Uman provides an example of the often unstable status of the tribes; although the Northern Arabs of 'Uman are now called Ghāfir after this tribe, the tribe itself is notorious for the way in which it has shifted its allegiance back and forth between the Northerners and the Southerners.

Some of the great tribes of the present, such as Tamīm in the centre and Hamdān in the southwest, apparently represent in a generally faithful manner the ancient entities which bore these names, though many members of each have in the course of time broken away and lost their identity, while outsiders have attached themselves to this tribe or that and become completely absorbed into the community. The modern tribe of Kahtān may be the residue of one or more segments of the original nation of Southern Arabs, or the connexion may be even more tenuous than this, despite the fact that the Beduins of Arabia still associate this tribe with the father of all Southerners. To follow the vicissitudes of the tribe of Quraysh since the beginning of Islam, one would have to investigate—among other things—the history and current status of the many thousands of real and reputed sayyids and ghāfis scattered not only throughout Arabia, but from one end of the Islamic world to the other.

Members of one modern tribe may tenaciously insist on their homogeneity in descent from a single ancestor, while members of another tribe readily admit that they are a confederation of diverse elements. The tribes of al-'Uḍayn and al-Murra, which migrated from the vicinity of Najrān to Eastern Arabia about two centuries ago, maintain that they share a common descent from Hamdān of the Southern Arabs through Yām. Their physical characteristics, their speech, and other facets of their life and history lend credence to this claim. On the other hand, large tribes such as 'Uyayba and Mutayr in Inner Arabia are closely knit companies the original components of which probably first coalesced not more than five or six centuries ago. These confederations may be transitory, e.g., the confederation of Nu'aym in 'Uman appears at present to be in the process of breaking down into its two

main constituents, *Al Bū Khuraybān* and *Al Bū Shāhīn*, with the old name of Nu'aym frequently being applied to *Al Bū Khuraybān* alone, while other members of Nu'aym, living c. 500 km. to the west, are no longer in close contact with the main body.

Despite all the genealogical vagaries and uncertainties, it is impressive how much importance is attached by most of the Arabs of Arabia to purity of descent. Mankind is divided into those whose race is universally recognised as purely Arab (*ajūl*) and those of a lower category whose blood is mixed or impure (*ghayy ajūl*). The Bedouins who know his immediate forebears through no more than six or eight generations is still profoundly convinced of his own nobility; his membership in a tribe of acknowledged purity of descent is sufficient guarantee that the line further back is without taint. Purity of blood is preserved by strict rules governing marriage, which among the Bedouins at least are seldom violated. The distinction between pure and impure, strongest among the Bedouins, is carried over to a considerable extent into the oases and towns, particularly those away from the coast, where many of the townspeople keep alive their sense of affiliation with one tribe or another. Other townspeople are grouped together in *Naǧd* under the appellation of *Bān Khādir*, a generic term for those whose origin can not be traced back to a specific tribe.

In the desert a few nomadic tribes by general consent bear the stigma of non-Arab descent. Among these is the tribe of al-Sulāhā (*q-r*) in the north, the physical characteristics of whose members, as well as the popular traditions regarding them, suggest an origin hidden in an unusual aura of mystery, though there is no foundation for the oft-repeated legend that they are the offspring of wandering Crusaders. Others of this category in the north are Hutaym and al-Sharāṭ. The tribe of al-'Aẓẓīm in the east has succeeded in rising somewhat above its inferior status as a result of its prowess in battle during the past forty years in the ranks of King 'Abd al-'Azīz of Saudi Arabia.

Along the coasts, in the seaports, and in towns not far inland are found the greatest infusions of foreign or nondescript racial elements. In some cases these are well defined types from abroad, such as Somalis and Indians along the southern coast and on the Red Sea, bantians or Indian merchants are also numerous in the ports of the Sultanate of Muscat and on the Persian Gulf. In other cases people of obscure origin are classified primarily on the basis of their occupations, such as the servants in Southern Arabia called *Sibyan* and *Akhdam*. Because many Muslims from distant lands desire to live and die on hallowed ground, Mecca contains a strikingly heterogeneous population, in which the so-called *Javanese* and *Bughāran* colonies (made up respectively of settlers from Indonesia and Central Asia) are among the largest. Certain foreign elements, such as the Abyssinians from the west and the Persians from the east, have a history in Arabia going back two millennia or more, yet they have never immigrated in great force and as few as the places where the majority of the population has not retained its basic Arab character, at least in such important aspects as language and religion. Other foreign elements, such as some of the Baluchis settled in the interior of 'Uman, have become so thoroughly Arabised that they are now considered by their Arab neighbors as *ajūl*.

Racial matters in Arabia are often intermingled with religious considerations. Descendants of the Prophet, who usually bear the title of *ḡharīf* in al-Hijāz and *sayyid* in the Yaman and Hadramawt, sometimes form a privileged caste in the community, while at other times they lead the life of simple nomads in the desert. The numerous *sayyids* of Hadramawt, who enjoy exceptional prestige, all claim descent from a small group of families who emigrated from 'Irāk to Hadramawt in the first half of the 4th/10th century. In 'Uman the title *sayyid* is popularly accorded to the Sultan of Muscat, who does not claim descent from the Prophet, and in *Naǧd* the incidence of *ḡharīfs* is remarkably low. In Eastern Arabia most of the *sayyids* are found among the Shī'ites, a fact which prompts the Sunni Bedouins to question the authenticity of their descent. The Jews, whose history in Arabia goes back well into the pre-Islamic period, may have been in the beginning Israelites who moved southwards or Arabs converted to the Judaic religion or a combination of the two. Once fairly numerous in the south-west, almost all of the Jews have departed within the last few years for Israel.

Slavery as an institution sanctioned by Islam flourished in the Peninsula until very recent times, though now it appears to be slowly dying out. The great majority of the slaves came from Central Africa, and Negro blood is found even in villages of al-Aḥlāḥ in the heart of Arabia. Like other Islamic lands, Arabia has remained uncursed by a colour bar, and emancipated slaves have on occasion attained positions of influence in society. Another Negro element exists in the so-called *Takānira*, who come halfway across Africa, often on foot, to make the pilgrimage; some of these stay on to eke out a living in the Holy Land, where their huts stand in the outskirts of *Ḍidda*.

Although migrations of persons and tribes from place to place within the Peninsula and from the Peninsula to the fertile lands farther north have been common throughout the centuries, only a relatively small proportion of the Arabs of Arabia have shown a fondness for crossing the seas to settle in foreign lands. Chief among these have been the people of 'Uman, who since ancient times have moved down along the coast of East Africa and into southern islands such as *Zanzibar*, and the people of Hadramawt, many of whom have more recently established themselves in the Indonesian Archipelago, the Malay Peninsula, and India, where they have been influential in the domains of the *Niḡām* of *Haydarābād*. Arabs of Eastern Arabia have moved across the Persian Gulf to occupy much of the Iranian coast, and seafarers from the Yaman have founded tiny colonies in such distant spots as Cardiff in Wales.

## (vii) HISTORY

### 1. — Pre-Islamic

*Arabia before the First Millennium B.C.* — The Arabian Peninsula has as yet no history earlier than the first millennium B.C., though future investigations will certainly bring many new facts to light. Excavations have been few and limited in extent, and even the surface in many regions has not been scrutinised by trained searchers.

Scattered finds indicate that the Peninsula was inhabited in both Palaeolithic and Neolithic times, but nothing is known about who the people were or where they came from. The problem of the site of the original home of the Semites is still a matter of speculation. The Semite nomads who began filtering into the Fertile Crescent from the adjacent deserts in the fourth millennium B.C. relied chiefly on the donkey, a beast not as well adapted as the camel to wide ranging in waterless tracts.

The cuneiform inscriptions of Mesopotamia contain numerous references to Magan, Melukhha, and Dilmun, places which may have lain in Arabia, though much of the geography of the time remains

vague. The Egyptian records relating to Punt are similarly imprecise. Egypt's connections with Sinai and the Red Sea are very ancient, and the availability of frankincense in Southern Arabia led to indirect or even direct intercourse at an early period.

A development of vast importance in the later history of Arabia and the Islamic world occurred, probably in the early second millennium B.C., with the devising of a system of alphabetic writing from which later Semitic alphabets, including South Arabic and North Arabic, derived. Tribal migrations about which little is yet known took place inside Arabia; in this millennium many of the 'sons of Kaḥlān' may have gone south to their new homes. The last centuries of this millennium were a time of change, with the Iron Age beginning in the Near East and the Semitic Aramaeans entering the Fertile Crescent in strength. The domestication of the camel appears to have been achieved during this period in Arabia, the first contribution of the Peninsula to the material progress of mankind.

*Arabia during the First Millennium B.C.* — The tenth chapter of Genesis, believed to belong to about the 10th century B.C., mentions Joktan and Hazarmaveth, who may be identified with Kaḥlān and Hadramawt. In the same century Solomon sent vessels into the Red Sea from the port of Eilat-geber, while his caravans traded with Northern Arabia. The location of Ophir, from which Solomon received gold and other products, continues to be a mystery. From the 9th century on, Assyrian and Babylonian inscriptions make frequent mention of the Arab, named-cowling inhabitants of Northern Arabia who paid tribute to the masters of Mesopotamia.

In recent years knowledge of the ancient civilisation of Southern Arabia has expanded tremendously. So many new inscriptions and other traces are coming to hand that current conclusions must often be regarded as tentative. An intensive review of the chronology is in progress, with the general tendency favouring a downward revision of dates. Available information suggests that organised states came into being in Southern Arabia during the second half of the first millennium B.C.

The four chief states—Saba' of the Sabaeans, Ma'in of the Minaeans, Katabān, and Hadramawt—throve on agriculture and commerce. The Ma'in dam in Saba' was the most imposing structure in an elaborate system of irrigation. For centuries the Southern Arabian merchants monopolised the frankincense trade and controlled traffic between India and the West, sending their goods by overland routes which traversed Arabia from south to north. Colonies were established in Northern Arabia, and evidence of business activity has been found in Egypt, the Aegean, and the Persian Gulf region. Strong Graeco-Roman influence on Southern Arabian culture is shown by archaeological discoveries. Southern Arabians migrated to Abyssinia, to which they gave its name, and their influence reached along the eastern coast of Africa.

Many impressive buildings in Southern Arabia were temples dedicated to pagan deities. The earlier rulers of Saba', who bore the title of Mukarrib, combined the functions of priest and king; later they gave way to the more secular rule of kings. [For details see AL-YAMAN.]

In the north, Aramaean influence was strong in the oasis of Taymā', briefly the capital of the Nabataean Empire under Nabonidus (regn. B.C. 536-529). Dedan, near modern al-'Ulā, became the center of a culture now called Lihyanite, using an

alphabet derived from South Arabic. Ṭhamūd, mentioned as a tribe in an Assyrian inscription of the 8th century B.C., held Egra (al-Hijr or Maḍā'in Ṣābiḥ) just north of Dedan. The recent finding of widely dispersed Ṭhamūdī inscriptions has raised new questions regarding the spread of this derivative of the South Arabic script and those who used it.

After the Persian capture of Babylon in B.C. 539, a short-lived satrapy called Arabiyyā was created in Northern Arabia. Darius I (regn. 521-485), who sought to stimulate trade via the Persian Gulf, sent out Scylax of Caryanda, who sailed from India to the northern end of the Red Sea. The world's knowledge of Arabia increased through Alexander's expeditions and the reconnaissance of the Persian Gulf carried out by Nearchus the Cretan. Alexander died in 323 just as he was planning the circumnavigation of the Peninsula and the subjugation of its peoples. Not long afterwards the Greek naturalist Theophrastus wrote an account of Southern Arabia and its products.

The Ptolemies of Egypt, who often pursued a forward policy in the Red Sea, threatened the trade monopoly held by the Arabs, while the Seleucids of Syria promoted the use of the northern routes from India. The establishment of the Parthian state in the mid-3rd century B.C. weakened the Seleucids, but Antiochus III was still strong enough to conduct an expedition in 205-204 against Gerrha on the Arabian shore of the Persian Gulf.

Late in the millennium the Nabataeans, a people of Arab stock with their capital at Petra, began playing a considerable role in the affairs of Syria, and Arabs appeared as rulers in various places in the Fertile Crescent, such as Charax Spasinai at the head of the Persian Gulf. Arab vassal chiefs enjoyed a large measure of autonomy under Parthian rule, and the immigration of Arabs into Mesopotamia went steadily on.

Towards the end of the 2nd century B.C. Eudoxus of Cyzicus sailed from Egypt to India, and in time Westerners learned the secret of using the south-west and north-east monsoons for voyaging across open water. The growing competition of the West seriously undermined the commercial dominance of the Southern Arabians, in whose homeland radical changes were taking place. An important event near the close of the 2nd century, later taken as the starting point of the "Islamic era", has been plausibly connected with the assumption of royal power in Saba' by the mountain tribe of Ḥamḍān. Both the kingdoms of Ma'in and Katabān came to an end in the 1st century B.C., and the Katabānian capital Timna' in Bayḥān was destroyed. Rome, which had made a client state of Petra in B.C. 60, coveted the wealth of Arabia Felix. Augustus sent the Prefect of Egypt, Aelius Gallus, supported by Nabataeans from Petra, on a long march in B.C. 24 towards the incense country, but the expedition, finding the deserts inhospitable and its Arab allies treacherous, did not get beyond Saba'. [For details see *AL-YAMAN*.]

*Arabia during the First Six Christian Centuries.* — About A.D. 50 an unknown author wrote in Greek the Periplus of the Erythraean Sea, an invaluable account of trade in the Red Sea and along the southern coast of Arabia. The King of Ḥadramawt in his capital Ṣābawā controlled the whole territory from Bayḥān in the west to Zuḥār in the east, while the "King of Saba' and of Dhū Rayḥān" (a recently assumed title) sat in Zaḥār in the mountains of the Yaman, where the power of Ḥimyar was growing.

In A.D. 105 or 106 the Roman province of Arabia was created in the old Nabataean domain, stretching from Ayla (al-'Akaba) in the south to al-Namāra in the northeast, with its capital first at Petra and later at Bostra. Merchants were encouraged to trade via the Red Sea through the port of Ayla, and Bedouin raids were warded off by the building of a line along the desert borders. Roman knowledge of the Peninsula in the mid-2nd century was summarized by the geographer Claudius Ptolemy.

Ardashīr I, the first Sāsānid (A.D. 224), is said to have founded a city in Eastern Arabia and to have induced the tribe of al-'Azd to settle in 'Uman. Sāsānid authority on one flank of Northern Arabia and Roman authority on the other were challenged by the Arab rulers of Palmyra, but the Roman Emperor Aurelian defeated Queen Zenobia and captured her desert stronghold in 272.

Something of the old glory of Saba' and Dhū Rayḥān was regained by Ṣhammar (or Ṣhamir) Yuhar'ish, who signified his triumphs about the end of the 3rd century by adding the names of Ḥadramawt and Yamanat to his royal title. His reign was followed by a relapse into weakness, during which Naḡrīn and the northern border was seized by the Lakhmīd Ma' (= Imru') al-Kays, extravagantly described as "King of all the Arabs" in the oldest North Arabic inscription known (al-Namāra 328). Later Kings of Saba' made their title even longer by appending "and of their Arabs in the mountains and the lowlands".

One of the most obscure periods in Arabian history fell in the 4th and 5th centuries. The decline and impoverishment of the Roman Empire affected the Peninsula, where urban civilisation waned and the simpler ways of nomadism attracted more adherents. Christianity with its promise of a better life in the hereafter made headway in Arabia as elsewhere. The Arabs proved particularly susceptible to the doctrines of Nestorianism, coming from Mesopotamia, and Monophysitism, coming from Egypt and Abyssinia. The Abyssinians occupied the Yaman for a brief period in the 4th century, with 'Ezānā, the first Christian King of Aksum, proclaiming himself ruler of Ḥimyar, Rayḍān, Saba', etc. Ṣhāḥrī II (regn. 370-79), called Dhū 'l-Aḥḥād by the Arabs, subjugated Eastern Arabia; the Sāsānid yoke was later removed, only to be reimposed shortly before the dawn of Islam. Judaism also made a successful appeal in Arabia, among its reputed converts being the King of Saba' in the early 5th century, Abkarīb As'ad, known to Arab tradition as Tubba' As'ad Kāmil, and one of its centres being the oasis of Yaḥrib (later Medina).

Both the Sāsānids and the Byzantine successors of Rome found it necessary to protect their territories from the unruly folk of Arabia by relying on buffer states ruled by Arab princes, the Lakhmīds [g.n.] standing guard on the edge of Mesopotamia and the Ḥassānīds [g.n.] shielding Syria. The two client states, like their suzerains, often came into conflict. In the first half of the 6th century al-Ḥārith b. Djabāla, the greatest of the Ḥassānīds, proved stronger than al-Mundhir b. Ma' al-Samā', the most famous of the Lakhmīds. In the late 5th century the chief of the Southern Arab tribe of Kinda [g.n.], Ḥudrī Ḥāl al-Murār, assumed the leadership of a confederacy of tribes in Central Arabia, but this loosely knit Kingdom of Kinda lasted only about half a century before it was overthrown by al-Mundhir the Lakhmīd.

In the 6th century Southern Arabia lay open to

attack by the Christian Kings of Aksum and the Sāsānid Khosrow I Anāshīrwan (regn. A.D. 531-79). Persecution of the Christians of Naḡrīn by the Judaizing Arab Dhū Nuwās [g.n.] led to a new Abyssinian occupation of the Yaman c. 522. The Abyssinian Abrahā [g.n.] as ruler of the Yaman carried out the last repair of the dam of Marīb before its final abandonment, marched into the heart of Naḡd on a campaign against the Arabs of Ma'ad, clients of the Lakhmīds, and, according to Islamic tradition, undertook an unsuccessful expedition against Mecca in the Year of the Elephant (c. 570). Under Khosrow the Persians evicted the Abyssinians, and the Yaman was Persian territory at the rise of Islam.

Mecca, a town of some antiquity on the main route paralleling the Red Sea, achieved greater prominence and prosperity in the late 6th century, aided by foreign domination of the Yaman and chaotic conditions along the northern routes resulting from the long drawn out wars between Persia and Byzantium. The Meccan merchants of Quraysh showed astuteness and industry in profiting from their participation in international trade.

The last centuries of this period gave birth to the form of Arabic now called classical, the dialectal sources and the exact process of the development of which remain uncertain. Used by the poets of the *al-Jahiliyya*, many of whom were Bedouins and some Christians or Jews by faith, this language became the instrument of expression for the supreme masterpiece of Islam, the Qur'ān, and the great works of Arabic literature in succeeding ages (see *'ARABIYYA*).

## 2. — Islamic Middle Ages

*Muhammad and the Rise of Islam (A.D. c. 570-632).* — About A.D. 570 Muhammad [g.n.] b. 'Abd Allāh of Quraysh was born in Mecca, then a principal centre of pagan worship. Only traditional accounts survive of Muhammad's early years, during which he became well acquainted with the tribal structure of both urban and nomadic life and saw something of the world outside Arabia while accompanying merchant caravans to Syria. About 610 he received his first revelation: two or three years later he began preaching in public, after which the nature of Islam was elaborated open in a series of revelations during the rest of his career as God's Messenger and Prophet.

The men in authority in Mecca did not welcome Muhammad's message. A small body of Muslims went into exile in Christian Abyssinia; later the whole Muslim community migrated northwards from Mecca to Yaḥrib, an event taken afterwards as having marked the beginning of the Islamic era (A.H. 1/A.D. 622). During the ten years Muhammad maintained his capital at Medina, he erected a state guided in all its functions by the precepts of Islam. Two revolutionary concepts emerged which transformed the face of Arabia. The Qur'ān, as emphasised by the divine revelations of which it consisted, was Arabic, a standard under which all Arabs could unite. Arabia had never before known an entity larger than relatively petty states or independent tribes and tribal confederations, usually at loggerheads with each other if not openly at war. At the same time, the Qur'ān and Islam were not limited to the Arabs: the Qur'ān is a revelation to all men, and under Islam the noblest man is the most Godfearing, not the one of highest lineage. This

universal appeal opened the way for Islam to go far beyond the borders of Arabia.

Muhammad's efforts during the Medinan period were devoted in large measure to settling affairs with Mecca, which was finally incorporated in the Islamic state in 8/630. Before this a fair number of tribes had been won over to Islam, but the great flood of applications to join Islam from tribes all over the Peninsula did not come until 9/630-3, the Year of the Delegations. Muhammad died in 11/632, before there had been time to anchor the Qur'ānic religion in the hearts of all who had taken the name of Muslim. Neither had there been time to carry Islam abroad, though a halting attempt had been made in that direction, and the moment was indeed ripe for shattering the fragile shells of Byzantine and Sāsānid defences in the Fertile Crescent.

*The First Three Caliphs (11-35/632-66).* — Soon after Abū Bakr (regn. 11-13/632-4) succeeded Muhammad as head of the Islamic state, many tribes reasserted their independence, with prophets in several cases preaching doctrines contrary to Islam. Abū Bakr reacted vigorously, dispatching Muslim columns to Central Arabia, Bahrain, 'Uman, and the Yaman. When Ḥadramawt, which held out the longest, was subdued, the Arabian Peninsula for the first and last time in history was effectively united throughout its length and breadth.

The other great achievement of Abū Bakr's brief rule was the inauguration of the grand programme of Muslim conquests outside Arabia. After invading 'Irāq Khālid b. al-Walīd marched across the Syrian Desert in 13/634 to participate in a victory over the Byzantines.

The conquests started by Abū Bakr were carried forward with verve during the rule of 'Umar (13-23/644-4). 'Irāq was taken from the Sāsānids, and Arabs from both the Northern and the Southern tribes peopled the newly founded military settlements of al-Baḥra and al-Kūfa. After a decisive victory over the Byzantines at al-Yarmūk and the capture of Jerusalem, 'Umar came to visit this holy city, the first journey of a Caliph beyond the confines of Arabia. Islam next advanced into Egypt, the occupation of which brought about stronger economic and cultural ties with Western Arabia. Although 'Umar is reputed to have ordered the expulsion of all Christians and Jews from the Peninsula, numbers of them lived on there for a long time to come.

In the days of 'Uḡmān (regn. 23-35/644-56) of the House of Umayyā, wealth and luxury abounded in Medina and Mecca, into which poured booty from the lands recently subdued. 'Uḡmān had no ear for the voice of Abū Dharr decrying the decay of the stern and frugal virtues of earlier Islam. Even more dangerous to the future of Arabia and Islam was the rift developing between the most powerful figures in the state, which led to the murder of 'Uḡmān in Medina.

*The Struggle over the Caliphate (35-73/656-692).* — The rift in high circles widened into a chasm when 'Alī, Muhammad's son-in-law and cousin, came to the fore as Caliph on the death of 'Uḡmān. Muhammad's wife 'A'isha and his Companions al-Zubayr and Talha rose in opposition to 'Alī, who left Medina to march against them in 35/656. In the Battle of the Camel 'Alī overthrew his rivals and won 'Irāq, only to find himself faced with a more formidable adversary in 'Uḡmān's Umayyad kinsman Mu'āwīya, the governor of Syria. When 'Alī fixed his capital at al-Kūfa in order to marshal strength against Mu'āwīya, Medina lost

the preeminence it had held since the Prophet's migration.

'Alī's tactics against Mu'āwīya so exacerbated the extremists among his own followers that they turned against him as the *Khawārij*. Despite the crushing victory 'Alī gained over these seceders at al-Nahrawān in 38/659, their party survived, Arabia long providing a fertile field for its propaganda. Mu'āwīya was proclaimed rival Caliph in Jerusalem, and his forces clashed with 'Alī's in Western Arabia from Medina to Najrān and the Yaman. When a *Khawārij* assassinated 'Alī in 40/661, the 'Alids set up his son al-Hasan as Caliph in al-Kūfa, but he soon renounced his claims in favor of Mu'āwīya, who thus temporarily reunited the community of Islam.

For the rest of Mu'āwīya's life no serious rising took place against the new Syrian Caliphate, but resentment was stirred up by his advocacy of hereditary succession. After the accession of Yazīd b. Mu'āwīya (regn. 60-4/680-3), 'Alī's second son al-Husayn left Mecca to rally support in 'Irāq, only to fall a martyr at Karbalā' in 61/686. His death cleared the field for a stronger candidate, 'Abd Allāh b. al-Zubayr, the foremost representative of the sons of the Prophet's Companions. Yazīd's army defeated the rebellious Medinans in the battle of Harrat Wāḳin and laid siege to Mecca, Ibn al-Zubayr's stronghold, where the Ka'ba caught fire, but Yazīd's death brought a pause in the hostilities. Ibn al-Zubayr won recognition as Caliph in nearly every quarter of Islam; in fact, had he proceeded to Syria immediately, he might well have destroyed the Umayyad power forever. While Ibn al-Zubayr lingered on in Mecca, 'Abd al-Malik (regn. 65-86/685-705) of the Marwānid branch of the Umayyads gradually regained ground outside Arabia. The *Khawārij*, who had at first leagued themselves with Ibn al-Zubayr, turned against him, the *Khawārij* Naḍīda b. 'Amr of Banū Ḥanīf making himself master of much of Arabia, only to be overthrown by another *Khawārij*, Abū Fudayk. 'Abd al-Malik gave al-Ḥaḍḍraḍī b. Yūsuf command of an army which captured Mecca in 73/692 after a long siege. Ibn al-Zubayr fell in the struggle, leaving the Holy Land of Islam in the hands of the Umayyads. Another Umayyad army marched to Eastern Arabia and put an end to Abū Fudayk.

*Arabia under the Umayyads (73-132/692-750).* — The Umayyads of Syria regularly appointed governors for Medina and Mecca, and exercised a measure of control, often shadowy, over other parts of Arabia. Powerful Umayyad governors of al-Basra such as al-Ḥaḍḍraḍī and Yazīd b. al-Muhallab made their word law in the Persian Gulf and along its Arabian shore.

The Umayyad Caliphs honored the sanctity of the Holy Cities in Arabia and lavished large sums on their shrines, even while favouring at times the claim of Jerusalem, which was easier of access, to an equal or higher rank. During much of this period Western Arabia was at peace, enjoying a prosperity such as it was not to know among the dissensions of later ages. The Umayyads developed the irrigation system, and many personages of Islam lived in their days of retirement on estates near Medina, Mecca, or al-Tā'if. The Holy Cities became renowned not only for Islamic learning but also for indulgent living, poetry, and singing.

The intense rivalry in Umayyad politics between the Northern Arabs and the Southern Arabs had its repercussions in Arabia, where Kalb, the principal

tribe among the Southerners, owned land in Wādī al-Kur' near Medina.

Towards the end of the Umayyad period an alliance of *Khawārij* was formed under the leadership of 'Abd Allāh b. Yahyā Ṭālib al-Ḥakḥ of Kinda and Abū Hamza of al-Azd. Abū Hamza took Mecca, won a victory at Kudayr in 130/747, and then entered Medina, while Ṭālib al-Ḥakḥ supported him from their base in Ḥadramawt and the Yaman. Despite the waning might of the Umayyads, Marwān II summoned sufficient strength to overcome these *Khawārij* chiefs, but only after they had contributed to his final undoing. Mecca was also used by the 'Abbasids as a centre for their plot aiming at the supersession of the Syrian Caliphs.

*Arabia under the Early 'Abbasids (132-266/750-875).* — The 'Abbasid transfer of the Caliphate to 'Irāq enhanced the importance of the Persian Gulf as a seaway for trade reaching out to China and East Africa. Wares bound to and from the 'Abbasid capital passed through al-Baḡra, while in the Gulf itself Sirāf on the Persian side in the 3rd/9th century became the busiest port.

'Abbasid authority in Arabia kept its strength for more than a century, during which time governors were sent to the Holy Cities and the Yaman, and on occasion to the central and eastern regions. The earlier Caliphs, notably al-Mahdī and Hārūn, and their wives, notably Zubayda, were diligent in making the pilgrimage and encouraging their subjects to do so by improving communications and the amenities of the route.

A sect of the *Khawārij* known as the Thābiyya set up its own Imamate in 'Uman under al-Djundāḍī b. Ma'ūd of al-Azd, but an 'Abbasid expedition under Khāzim b. Khurayma defeated and killed al-Djundāḍī in 134/752. Soon afterwards this Imamate was revived to endure with few interruptions for the next four centuries. 'Uman, however, was an out of the way region, and the *Khawārij* on the whole gave the 'Abbasids little trouble. (Cf. 604x.)

Taking the place of the *Khawārij* as a thorn in the Caliphs' flesh were the 'Alids (g.e.), both Hasanids and Husaynids. Through skilful propaganda the 'Abbasids in their campaign against the Umayyads had forestalled the 'Alids and usurped the leadership they regarded as rightfully theirs. For this the 'Alids never forgave them, and one after another they contested the 'Abbasid title to rule. Even though the 'Abbasids themselves came from a Meccan ancestor close to the Prophet, the 'Alids almost invariably found ready followers in Arabia; in the Holy Cities their rallying cry inspired the hope of regaining the place lost to Damascus and Baghdad.

The first 'Alid pretender in Arabia was the Hasanid Muhammad al-Nafs al-Zakiyya, who appeared as the Mahdī in Medina and had his claim to the Caliphate certified by no less a scholar than Mālik b. Anas, but all to no avail when he fell in 145/762 before the troops of al-Mansūr.

A major split took place among the 'Alids following the death of their sixth Imam, Dī'fār al-Sāḍī, in 188/796. The main body, giving loyalty to Dī'fār's son Mūsā al-Kāsim and five of his descendants, came to be known as the Twelvers. Others, the Seveners, advocated the cause of Ismā'īl b. Dī'fār and his son Muhammad, for whom they worked, often in secret, in the movement of Ismā'īlism. As time went by the Ismā'īlīs in particular tended to attract to their side the discontented and oppressed elements of society, enemies of the ruling classes.

Another Hasanid pretender, al-Husayn b. 'Alī, met a martyr's death fighting against an 'Abbasid army at Faḡhīh near Mecca in 165/786. The 'Alid cause, however, made progress in the Yaman, where it received the support of the great jurist al-Shāfi'ī, who finally won a pardon after being delivered as a prisoner to Hārūn's presence.

The end of the 2nd century H. saw a new upsurge of 'Alid strength in Western Arabia: in Mecca the Husaynid al-Husayn al-Aṭṭa' put forward Muhammad al-Dībādī, a son of Dī'fār al-Sāḍī, while the Hasanid Muhammad b. Sulaymān established himself in Medina. These pretenders did not hold their ground against the 'Abbasids, but greater success was achieved by Ibrāhīm al-Djazzār, a grandson of Dī'fār al-Sāḍī, in the Yaman. Yielding to the tide of pro-'Alid sentiment, the 'Abbasid Caliph al-Ma'mūn designated 'Alī al-Riḍā, the eighth Imam of the Twelvers, as his heir apparent and substituted 'Alid green for 'Abbasid black as the royal colour, but this change evaporated with 'Alī's death in 203/818.

To cope with the 'Alid threat in the Yaman, al-Ma'mūn appointed as his governor there one Muhammad, who claimed descent from Mu'āwīya's lieutenant Zayd b. Abī Ḥafṣa. The city of Zabīd in 204/820 and carving out a domain for himself, Muhammad established the dynasty of the Ziyādiyya (g.e.), which, while according nominal allegiance to the 'Abbasids, was actually the first of the numerous independent dynasties to spring up in Arabia as the Caliphate disintegrated.

Although not a strong Caliph, al-Wāḡhī (regn. 227-232/842-47) executed a vigorous policy in Arabia. When Bedouins of Sulaym made the region around the Holy Cities unsafe with their depredations, al-Wāḡhī dispatched the Turkish general Bughā the Elder to bring the culprits to heel. For the next two years Bughā campaigned against other tribes, climaxing his operations in 232/847 with a hard won victory over Numayr at Baṭn al-Sir deep in the interior, after which a man of Uḡlāh in Najd was appointed governor of al-Yamāma, Eastern Arabia, and the pilgrim route to Mecca.

Following the death of al-Mutawakkil in 247/861, the career of the 'Abbasids both at home and in Arabia took a turn for the worse. The dynasty of the Ya'furids (g.e.), claiming descent from the ancestor al-Ba'ḥā of Hims, arose in the highlands of the Yaman with Sa'ā' b. al-Ba'ḥā as capital. Ḥadramawt secured its independence, and local rulers set themselves up in the east, where 'Alī b. Muhammad—either a genuine Husaynid, as he gave himself out to be, or a member of 'Abd al-Kays—began an agitation among the nomadic tribes. Another Hasanid revolt in Mecca, inaugurated by Ismā'īl b. Yūsuf al-Uḡhayrī, led to the establishment under Ismā'īl's brother Muhammad of a new state in al-Yamāma, where these Uḡhayrīds maintained themselves until submerged by the onrush of Karmanianism.

Another blow was dealt the 'Abbasid empire by the recalcitrant governor of Egypt, Aḥmad b. Ṭūlūn, who by occupying Syria broke down the control once exercised over the tribes of the Syrian Desert. The most direct menace to the empire, however, came from the agitator in Eastern Arabia, 'Alī b. Muhammad, who transferred his activities to Southern 'Irāq, where he stirred up the Zandī, the negro slaves laboring in the salt marshes, in a massive insurrection (255-70/863-85) extending as far as the Holy Cities.

*Ismā'īlīs and Karmanians in Arabia (266-567/879-1171).* — At this juncture in 'Abbasid affairs

the rapidly spreading movement of Ismā'īlism (see ISMĀ'ĪLIYAT) took full advantage of its opportunities. Ismā'īlī missionaries carried out a well laid plan of penetration, with the Persian Gulf coast and the Yaman as the principal foci for their activity in Arabia. As these two parts of Arabia remained relatively isolated from each other, the connexion between later developments in them was slight.

Ismā'īlism was first introduced into the Yaman by Ibn Hawṣal (Maṣṣar al-Yaman) and 'Alī b. al-Faḍl in 260/875-80. Collaborating closely, these two won many followers, and 'Alī occupied both Sa'ā' and Zabīd for brief periods. The Ziyādiyya and the Ya'furids fought the Ismā'īlīs, and a new opponent arose against them in 280/893 with the arrival in the Yaman of the first Zaydī Imam, al-Mahdī Yahyā, a grandson of the Hasanid al-Kāsim al-Raḍī (d. 248/860), who had fashioned legal foundations for a Zaydī government closer to Sunnism than to the extreme Shi'ism of the Ismā'īlīs. The two Ismā'īlī leaders eventually fell out, and by 303/915 both were dead, but their doctrines did not die with them.

Ismā'īlism appeared c. 286/899 in Eastern Arabia, where under Abū Sa'ād al-Hasan al-Djannābī and his son Abū Ṭāhir Sulaymān a strong state was organised. The name Karmanīan, the origin and meaning of which are still in doubt, remains the popular designation for this particular aspect of Ismā'īlism, though its application is not restricted to this region. The 'Abbasids were too feeble to prevent these Karmanians from sacking al-Baḡra and al-Kūfa, and in 317/930 they entered Mecca and carried off the Black Stone to their new capital al-Aḥsā' (al-Ḥaṣā). With the conquest of 'Uman soon thereafter the Karmanians held the greater part of Arabia. These disturbances prompted the Husaynid Aḥmad b. 'Isā, the most famous ancestor of the *sayyids* of Southern Arabia, to leave al-Basra on a migration ending in Ḥadramawt, where Ḍabīs from 'Uman then held the upper hand.

New threats to the 'Abbasids came from the Būyids of Iran and the Ikhshīdīs of Egypt, who reached out at times to Mecca, though neither got a lasting foothold there. The Būyids, who by taking Baghdad in 334/945 assumed *de facto* authority over the 'Abbasid realm, also brought 'Uman within their sphere.

Abū Ṭāhir died in 332/944, and the Karmanians at the behest of the Ismā'īlī Fātimids of North Africa restored the Black Stone to Mecca in 339/950-1. Under al-Hasan al-A'sam, a nephew of Abū Ṭāhir, the Karmanians joined the Fātimids in a pincer movement on Syria and Egypt, the former exerting pressure from the east as the latter advanced from the west. However, after the Fātimids occupied Egypt in 358/969, the Karmanians broke with them and sided with the Būyids in resisting their designs on Syria. Damascus was captured by al-Hasan in 350/971, but he was repulsed on two expeditions against Egypt before reaching the newly founded Fātimid city of Cairo.

Following the death of al-Hasan, the Karmanian government was placed in the hands of a Council of six *sayyids*. The Fātimids won a military victory over the Karmanians, but had to pay a large sum to induce them to return to al-Aḥsā'. The Karmanians lost 'Uman in 372/985-6, were checked by the Būyids in 'Irāq and defeated in their own territory by a chief of al-Muntadik, who plundered al-Kaṭīf. (Cf. also KARMANIANS.)

About the mid-4th/10th century the Sharīʿate of Mecca (for which see *MAKKA*), destined to last a thousand years, was established by a family of Hasanids known as the Mūsawids. The most prominent member of this family was Abū al-Futūḥ al-Ḥasan, who in 402/1012 tried to make himself Caliph, only to be thwarted by the Fāṭimids, large lords of the *sharīʿa*. Contemporary with the early Mūsawids were Husaynids descended from al-Husayn al-Aḡḡar, a younger brother of the fifth Shīʿite Imam, who began ruling as *amirs* of Medina. This line, which lasted until the 9th/15th century, came later to be known as the House of Muḥannā.

An offshoot of Ismāʿīlism was the Druze movement, which had its origins during the reign of the Fāṭimid al-Ḥakīm. The Druze al-Mukṭanā sent a letter to the Karāmīyah *sayyids* of Eastern Arabia, proposing that they combine forces on the basis that they shared a common doctrine, but nothing concrete came of this.

Early in the 5th/11th century the Maʿnids (q.v.) came to power in Aden and Hadramawt, and the Zaydids in the Yaman gave way before the Naḡībids (q.v.), originally their own Abyssinian slaves. Ismāʿīlism in the Yaman enjoyed a revival under the Sulayyids (q.v.), rulers sprung from the tribe of Yām who held *Sanʿāʾ* as nominal vassals of the Fāṭimids, while the Zaydī Imams kept their base at *Sanʿāʾ*.

In 443/1051 Nāsir al-Kunūṣ visited al-Ḥabṣāʾ, where he found the Council of Six still in control. The details of his eyewitness account of the Karāmīyah state in its later days are unfortunately not supported by corroborating testimony.

The Shīʿism of the Būyids, Karāmīyah, and Fāṭimids aroused a Sunnite reaction championed by the Salḡūḡ Turks, whose leader Tuḡhril took Baghdad in 447/1055. A Salḡūḡ of Kirmān, Kāwurd Karā Arslān, brought ʿUḡmān under his sway. About this time Shīʿī was yielding its place as the chief port of the Persian Gulf to the island of Kays, the rulers of which made themselves also lords of ʿUḡmān, where in the mid-5th/11th century a break came in the line of Iḡdāl Imams. For the next three and a half centuries records survive of only one Imam.

The Sulayyids of the Yaman seized Aden from the Maʿnids and also expanded northwards, the authority of the Mūsawid *sharīʿa* over Mecca having faded away. In 453/1063 the Sulayyid ʿAlī b. Muḥammad installed an agnate branch of *sharīʿa*, the Ḥāḡīmids, in Mecca. Under Malik Shāh in Baghdad the Salḡūḡs reached the zenith of their power, and thanks to him the shadowy ʿAbbāsids of the day had lipservice paid to him in the Holy Cities as the Caliph of Islam. Malik Shāh and his minister Nūr al-Mulk concerned themselves with the affairs of the pilgrimage, spending freely to put them to rights.

About 470/1077-8 the Karāmīyahs of al-Ḥabṣāʾ met their final defeat at the hands of a native dynasty, the ʿUyūnids (q.v.) of the tribe of ʿAbd al-Kays. There is no trace of Karāmīyah left today among the Arabian people. The Shīʿites of al-Kaṭīf and modern al-Ḥaṣā, sometimes described as the remnants of the Karāmīyahs, are in fact orthodox Dīʿāfaris of the Twelver persuasion or Shīykhīs.

In 461/1068-9 Aden was granted as a dowry to a remarkable woman of the Sulayyid house, Sayyida bint Ahmad, upon her marriage to al-Mukarram Ahmad b. ʿAlī al-Sulayyī, and soon afterwards the government of the town was transferred from the Maʿnids to the Zurayyids (q.v.), who like the Sulayyids were Ismāʿīlīs of the stock of Yām. The Zurayyids

ruled Aden for nearly a century, gradually acquiring a larger measure of independence. Under Sayyida, into whose hands al-Mukarram placed the authority of the state so that she was recognized by the Fāṭimid Imam as Suzerain of the Kings of the Yaman, the Sulayyids enjoyed their last days of real dominion. Her death in 521/1127-8 marked the effective end of the dynasty, the succeeding representatives of which were a feeble lot.

Upon the death of the Fāṭimid Imam of Egypt al-Mustansir in 487/1094, two parties arose among the Ismāʿīlīs which have persisted to the present day. From the party supporting al-Mustansir's eldest son Nizār descended the Ismāʿīlī Assassins of Alamūt and the Khwāḡīs, the head of many of whom is the Aḡḡā Khān. The party favoring al-Mustansir's youngest son al-Mustaʿīn Ahmad, allied with the Sulayyids through Queen Sayyida, was strong in the Yaman.

The rule of Ahmad b. Sulaymān, one of the greatest of the earlier Zaydī Imams, ran from 532 to 566/1137-71, during which time he held *Sanʿāʾ*, Naḡīb, and al-Ḥajawī, occupied *Sanʿāʾ* and Zabīd, and made his influence felt as far north as Ḥaybar and Yanbuʾ.

Like the Sulayyids, the Naḡībids also produced a queen to rule during the dynasty's declining years, ʿAlam, originally a slave girl, whose death in 545/1150-1 was followed about a decade later by the ephemeral sway of the Maḡdīs (q.v.), who called themselves Hīmīyahs and were accused of being Khawāḡīs.

The Fāṭimids of Egypt succumbed to the Ayyūbids in 567/1171, and a plot to restore them was nipped in the bud in 569/1174 by Salāḡīn, who executed the poet and historian ʿUḡmān b. ʿAlī al-Ḥakamī of the Yaman. The center of the Musṭaʿīyah party was transferred from Egypt to the Yaman, where it stayed until the 10th/16th century, when it shifted to India, after which a split divided the party into the Dīʿāfaris of India and the Sulaymānīs of Southern Arabia (see *SONAKA*). Extensive secular dominion in Arabia eluded the grasp of the Ismāʿīlīs until the reign of the Sulaymānī Makramīds (q.v.) of Naḡīb in the 12th/18th century.

*Arabia in the Later Middle Ages (567-end of 9th Century/1171-end of 15th Century).* The advent of the Ayyūbids meant the triumph of Sunnism over Shīʿism in Arabia as well as in Egypt. Salāḡīn, recognized as sovereign in Mecca, sent his brother Tārīn Shāh to depose the third and last Maḡdīd and occupy the Yaman in 569/1173. During the half century or so of Ayyūbīd rule there members of collateral branches of the dynasty sat on the southern throne. Hadramawt was conquered, but did not become an integral part of the Ayyūbīd domain. Closer home the Ayyūbīds had their hands full with the Crusaders from the West, one of the boldest of whom, Renaud de Châtillon, raided Taymāʾ, sent his men cruising against the Muslims in the Red Sea, and even thought of attacking Medina.

About 598/1200 the Hasanid Katāda b. Iḡrīs moved from Yanbuʾ to Mecca, where he founded the dynasty of all the later *sharīʿa*. Endeavoring to build a strong independent state in al-Ḥijāz, he found the rivalries of the day too great to overcome. Katāda died in 617/1220-1, and soon afterwards al-Malik al-Masʿūd Yūsuf, the last Ayyūbīd in the Yaman, took Mecca and appointed the founder of the Rasūlīds, who claimed descent from the ʿHasanīds, his governor there.

On the other side of the Peninsula the Salḡūḡs, Atḡab of Fīz, Abū Bakr b. Saʿīd, the patron of the poet Saʿdī of Shīrāz, annexed islands in the Persian Gulf and set foot on the mainland at al-Kaṭīf and al-Ḥaṣā. The local dynasty of the ʿUyūnids gave way before the Salḡūḡ pressure and that of the tribe of ʿUḡmān, which supplied a new dynasty in the ʿUyūnīds (q.v.).

Succeeding the Ayyūbīds, the Rasūlīds (q.v.) reigned in Taʿāz and Zabīd from 621 to 810/1223-1446 as the most illustrious house in mediaeval Yaman. Islamic architecture reached one of its higher points, and scholars received the stimulus of royal approbation, some of the Rasūlīd Sultans themselves being authors of note. Embassies came to the court from China and other distant lands.

ʿUmar b. ʿAlī (regn. 628-67/1229-50) ruled from Mecca to Hadramawt, and after Ḥulāḡ executed the last ʿAbbāsīd in Baghdad in 656/1258 ʿUmar's son Yūsuf styled himself Caliph of Islam, but full enjoyment of such rank lay beyond the capabilities of the Rasūlīd state.

Baybars, the first great Mamlūk Sultan of Egypt, assumed nominal overlordship of the Holy Cities, leaving Meccan affairs in charge of the *sharīʿ* Abū Nuwayrī I Muḥammad (regn. 652-70/1254-1301), who strengthened the foundations of Katādan rule. Bedouins of ʿAl Mīrā and other tribes roamed through the Syrian Desert, exacting large fees from pilgrim caravans and penetrating into Naḡīb on their raids. In Damascus the religious reformer Ibn Taymīyya (d. 728/1328) laid the theological basis for the Wahhābī movement of the 12th/18th century.

About the beginning of the 8th/14th century the port of Hormuz on the Persian mainland at the entrance to the Persian Gulf was moved to a nearby island, after which it grew apace and in time surpassed its rival the island of Kays in attracting to its warehouses the merchandise of the East.

Political disturbances in Mecca during the reign of the *sharīʿ* ʿAdīlān b. Ruma-yibā (746-77/1345-75) provoked interference by the Mamlūks of Egypt, who took the Rasūlīd Sultan of the Yaman prisoner in a battle at ʿArafā in 751/1351. Rasūlīd fortunes were temporarily restored by Ahmad b. Ismāʿīl (regn. 803-27/1400-24), who held the Red Sea coast as far north as Haly, but after his death the state swiftly disintegrated. The later Rasūlīds carried on a lively competition with merchants in Egypt for Indian trade via the Red Sea.

In the early years of the 9th/15th century the Iḡdālī community of ʿUḡmān returned to its old practice of electing Imams, who succeeded one another in a series lasting over 150 years. About the same time the House of Kaḡīr under ʿAlī b. ʿUmar set out on its long course through the tortured politics of Hadramawt and Zūfār, while Hadramī missionaries carried the gospel of Islam into Somaliland.

In the mid-9th/15th century Maḡī b. Rabʿa al-Murayyid, the ancestor of ʿAl Saʿūd, migrated from the vicinity of al-Kaṭīf to Naḡīb, where he settled in Wādī Hanṣa. In the latter half of the century Adwād al-Zāmil of the Dīʿābrīd branch of the ʿUyūnīds ruled as lord of al-Kaṭīf and Bahrayn, making his name a byword for generosity in Eastern Arabia. Mecca prospered under the *sharīʿ* Muḥammad b. Barakāt and the Mamlūk Sultan Kāṭībāy, who erected many buildings there, while the Thāḡīrīs (q.v.) in Zabīd and Aden supplanted the Rasūlīds in the south.

### 3. — *The Making of Modern Arabia (from the 10th/16th century to the present).*

In the late 9th/15th century Portuguese explorers made their way from the Mediterranean down the Red Sea, and in 903/1498 Vasco da Gama, after rounding the Cape of Good Hope, was guided to India by an Arab pilot, probably the Naḡīb Ahmad b. Maḡīd. Portuguese vessels soon appeared in the Red Sea, and under Afonso de Albuquerque the invaders seized Arabian ports on the Gulf of ʿUḡmān and the great mart of Hormuz. Pedro, Afonso's nephew, toured the Persian Gulf in 920/1514, but Afonso died the following year without having achieved his ambitions of reducing Aden and launching an expedition against Mecca.

About 912/1506-7 a new line of Zaydī Imams was inaugurated by Shāraʾ al-Dīn Yahyā, and from then onwards the Zaydīs tended to fix their capital, if possible, at *Sanʿāʾ*. Coffee appears to have been introduced into the Yaman from Abyssinia about this time, and the use of *bāt* and tobacco spread among the people.

Badr Abū Tawayrik of ʿAl Kaṭīr (regn. 926-70/1516-68), whose authority in his palmier days reached from the land of al-ʿAwwālīk through Hadramawt to Saybūt, did not hesitate to offer fealty to the Ottoman Sultan. Before Badr died he lost all his territories and suffered long imprisonment at the hands of his Hadramī enemies.

Salīm I, the Ottoman conqueror of Egypt in 927/1517, assumed the high title of Servant of the Holy Cities, and the reign of Sulaymān the Magnificent (926-74/1520-66) fenced other regions within the empire. The Portuguese in alliance with the King of Hormuz attacked Bahrayn, where Mukrīn, the uncle and successor of Adwād the Dīʿābrīd, lost his life defending the island in 927/1521. Reacting to the aggressive policy of the Portuguese, the Turks bestirred themselves in the Persian Gulf and the Red Sea. Sulaymān at Baghdad in 941/1534 received the homage of the Arab chiefs of al-Kaṭīf and Bahrayn, and later his troops pressed up into the mountains of the Yaman, Aden and Muscat were occupied briefly, and an Ottoman governor was installed in al-Ḥaṣā.

For a period of some sixty years after c. 968/1560 the weak and feeble Imams of ʿUḡmān, where the secular Naḡībīd (q.v.) princes in their mountain fastnesses reached the climax of their power.

The slow receding of the Ottoman tide from the highwater mark reached under Sulaymān was observable in Arabia as elsewhere. The diversion of trade from the overland routes to the sea route round Africa contributed to the serious economic depression which beset the Near East during the early modern age. Besides the Austrians and other foes in Europe, the Turks had to face the Safawids, the strongest of whom, Shāh ʿAbbās I, pursued an expansionist policy in the Persian Gulf, where he subjected Bahrayn in 1017/1602. In the Yaman the Zaydī Imams kept alive resistance to the Turks, and Muʿayyad Muḥammad succeeded in expelling them completely in 1043/1635.

The formation of the East India Company in 1600/1600 was the prelude to a burst of activity by English traders in the Red Sea and the Persian Gulf. Allying themselves with the Persians, the newcomers drove the Portuguese out of Hormuz in 1037/1622. Once the Portuguese monopoly had been broken, the English found themselves involved in competition with the Dutch, who secured commercial

preeminence during the second half of the 11th/17th century.

After the election of Nāsir b. Muṣṣid of the Ya'rubids of al-Azd c. 1034/1624 as Ḥabīb al-Imām, this Imām remained in his family for more than a century. The Ya'rubids in their early days drove the Portuguese out of Muscat and all other *biḍā-terre*, and in their later days extended their authority overseas to Mombasa, Pemba, and Kilwa in East Africa.

Ḥusayn b. 'Alī, the third and last Pasha of the House of Afrāsiyāb, under whom al-Baṣra in the early 11th/17th century had become virtually independent of Qum, was killed in 1070/1660. His nephew of the tribe of Banī Ḥabīb al-Imām, the Ottoman governor of al-Haṣā in 1074/1663-4, these Bedouin chiefs kept the oases and grazing grounds of Eastern Arabia subject to their will until the Wabbāḥs advanced to the Persian Gulf in the early 13th century H.

In Ḥadramawt the Zaydis of the Yaman encouraged the spread of their version of Islam at the expense of Shāfi'ism. About 1070/1660 Ahmad b. al-Ḥasan, a nephew of the reigning Zaydi Imam, led into the main valley of Ḥadramawt a terrifying force known as the Night Flood (*sayd al-layl*) which undermined the position of the House of Kaḥḥir, but Zaydism failed to secure a permanent triumph over Shāfi'ism in this region.

In the 12th/18th century a new era began in Arabia with the spread of the reforming movement inspired by Muhammad b. 'Abd al-Wabbāḥ of Naḡdī, in a sense this also marked the beginning of the modern history of the whole Near East. Placing the unity of God above all else and demanding that the popular faith be cleansed of innovations, Ibn 'Abd al-Wabbāḥ's call reverberated throughout the Islamic world from West Africa to the East Indies and moved the spirits of the modernists of the Salafīyya in Muslim countries closer than Arabia to the encroaching lands of the West. As an Arab movement opposed to the remote and vitiated rule of the Ottomans, Wabbāḥism (q.v.) influenced the nationalistic tendencies developing among the Arabs in the 19th and 20th centuries. Within Arabia political unity supplanted petty partitioning, and orderly Islamic government functioned as it seldom had before.

Soon after first preaching in public in 1153/1742, Ibn 'Abd al-Wabbāḥ concluded a basic alliance with Muhammad b. Sa'ūd, ruler of the insignificant town of al-Dīrīyya. When Muhammad died, his son 'Abd al-'Azīz carried on, and by 1202/1788 all Naḡdī had accepted the doctrines and ways of the reformers, who had withstood three expeditions directed against them by the Ismā'īlī Makramids of Naḡdī, then a power in their corner of Arabia. [Cf. also SA'UDISM.]

In 1256/1743 the Ya'rubid line of Imams died out in 'Uman while the Persians were trying to establish themselves there. Ahmad b. Sa'ūd of Āl Bū Sa'ūd expelled the invaders from the Bāḥina coast and won election as Imam. After Ahmad's death the electors chose his son, but he proved such an obscure figure that even the date of his death is unknown. Later rulers of Āl Bū Sa'ūd (q.v.) made Muscat their capital and gave up the title of *imām*, calling themselves at first simply *sayyid* (though they claimed no descent from the Prophet) and afterwards *shaykh*. The Persians also held suzerainty over Bahrain for about thirty years until the occupation of the islands by Āl Khālidī in 1297/1781, since which date no part of Arabia has been subject to Persian dominion.

The rapidly expanding puritan state of Naḡdī came into conflict with the *ghazis* of Mecca in a war lasting fifteen years (1203-1220/1791-1806), with the Sa'ūdīs occupying Mecca for the first time in 1218/1803. Shortly after the death of Ibn 'Abd al-Wabbāḥ (1206/1792) Sa'ūdī authority flowed eastwards to the Persian Gulf, although it extended to 'Uman. In the south the reformers reached the Yaman and Ḥadramawt, while in the north their forces threatened to overrun Syria and Iraq. The Ottoman government, unable itself to dam the flood, turned in desperation to the new Viceroy of Egypt, Muhammad 'Alī.

In the 13th/19th century foreign intervention in Arabia, both Muslim and Christian, became more effective and extensive than ever before. Muhammad 'Alī annihilated the first Sa'ūdī state when his army captured al-Dīrīyya in 1233/1818. The British, at first welcoming and then fearing the advent of the Egyptians, carried out military actions against the Persian Gulf Arabs and in Inner 'Uman and occupied Aden in 1254/1839, after which their influence gradually advanced along the southern and eastern coasts and penetrated into the hinterland.

Sa'ūd b. Sulṭān, the most famous ruler of Āl Bū Sa'ūd (regn. 1221-1273/1806-1856), wielded little or no authority in Inner 'Uman, where he was hard pressed by the Sa'ūdīs, to whom he often paid tribute. In the latter part of his reign he devoted most of his attention to his East African possessions, but five years after his death the British established Zanbarā as a Sultanate independent of Muscat. The only Ḥabīb Imam elected during the century, 'Azān b. Kays, failed to win recognition by the British and was overthrown in 1287/1871 after two years of rule. The Sultans who followed him depended upon British support for the maintenance of their position in Muscat in the face of the hostile Ḥabībī tribes of the interior.

During the century internecine warfare was common in Ḥadramawt, where much power rested in the hands of mercenaries imported from the mountains behind Aden, particularly of the tribe Yanī'. In 1283/1867 the Ku'aytīs of this tribe occupied al-Shīr and fourteen years later acquired full possession of al-Makallā.

Proving resilient in recovering from disastrous blows struck by Muhammad 'Alī's forces, the Sa'ūdī state rebuilt its strength under Turki b. 'Abd Allāh, who fixed his capital at al-Riyāḍ, and later his son Faysal, though al-Ḥijāz was not occupied again. Civil war between Faysal's sons after his death in 1282/1865 caused another decline in Sa'ūdī fortunes, facilitating the reimposition of Ottoman sovereignty over part of Eastern Arabia and the rise of Āl Rashīd [q.v.] of ḤA'N to dominance in Naḡdī, where al-Riyāḍ itself was made subject. The Ottomans also reestablished themselves in the highlands of the Yaman with headquarters at Sa'nā'a, but they failed to crush the resistance of the Zaydi Imams. The opening of the Suez Canal in 1286/1869, making communications between Istanbul and Djidda easier, and faster, helped the Turks to exercise more control in al-Ḥijāz.

Āl Sa'ūd, thrice crushed to earth, rose once more under the leadership of Faysal's grandson 'Abd al-'Azīz, who took al-Riyāḍ from its Rashīdī government in 1319/1902. 'Abd al-'Azīz fought for twenty years before finally overcoming Āl Rashīd in the north. In 1317/1903 he drove the Turks out of al-Haṣā and then lent the British sympathetic support during the First World War. Although the Ḥijāz Railway from Damascus to Medina had been inaugurated in

1326/1908, the Turks had to yield Mecca when *ghazī* al-Husayn b. 'Alī, encouraged by the British, proclaimed the Arab Revolt in 1334/1916. The end of the war brought the end of Ottoman sovereignty in Arabia, the Zaydi Imam al-Mutawakkil Yamin and the Sultan's government should abstain from interference in each other's internal affairs, but in 1373/1954-5 the Sultan's forces, trained and led by British officers, occupied points not held before, hemming the Imamate in on all sides.

Although homage was paid to *ghazī* al-Husayn as King of the Arabs and later as Caliph of Islam, successor of the Ottomans, he was defeated by 'Abd al-'Azīz Āl Sa'ūd when war broke out between the two. Following the conquest of al-Ḥijāz, 'Abd al-'Azīz annexed the territories of the minor dynasties of Āl 'Aḍid and the Idrīsids in 'Asīr and its Thāma, received the title of King of Saudi Arabia in 1351/1932, and defeated Imam Yahyā of the Yaman in a brief war in 1357/1934, as a result of which Naḡdī was recognized as belonging to Saudi Arabia.

Killed in an abortive insurrection in 1367/1948, Imam Yahyā was succeeded by his son Ahmad. Dying in 1373/1953, 'Abd al-'Azīz was succeeded by his son Sa'ūd. Thus passed from the scene two monarchs who did far more than simply bequeath their names to the realms they wrought and guided for half a century.

ARABA. I. — The Turkish word *araba* (*araba*, *abra*), meaning "wagon" or "cart", is as old as the 14th cent. A.D. but it does not look like a pure Turkish word; neither does it have an obvious Arabic or Persian etymology. In Ottoman the usual spelling was *araba* with an 'ayn; and although Sîmi Frashî tried to prove the purely Turkish nature of the word, described this spelling as a "shocking solecism", it is in fact the more correct. The etymology of the word was correctly explained in the 18th cent.) *Sanglâh* of Mirza Mahdi Khân (folio 36 v. of the Gibb Memorial Trust MS.) in the following words: "*araba*, which rhymes with *âzarâba*, is a corruption (mashhur) of '*arârida*, also called '*ârida*, in Arabic, '*Arârida* means '*ballista*, a military siege weapon'. Admittedly a ballista is not a wagon, but the word came to mean "a gun, a mobile gun, a carriage carrying a gun", from which the transition to "wagon, cart" was an easy one. The transitional stage is seen in the Emperor Babur's *Memoirs* (Gibb Memorial

Series, I, fol. 336 v., l. 2), where the phrase *darûdîsh arâridârî* ("cavalier carts" in Beveridge's translation) occurs. There is at present no direct evidence of the date of the transition from '*arârida* to *araba*, but the guess may be hazarded that the word was adopted as a technical term in the Mongol army during the invasion of Persia early in the 13th cent. and that the change took place there. It had certainly taken place before the 14th cent., since there is no trace of '*arârida* in Turkish at that date and *araba* occurs in both the Italian and the German sections of the Codex Cumanicus (early 14th cent., with a late 13th cent. substratum); on the other hand there is no trace of either word in such 12th cent. authorities as Kâshgharî's *Divân Lughat al-Turk* or the *Kutâb al-Bilâg*. It is interesting to note that *araba*, in one form or another, occurs in practically every modern Turkish dialect, except apparently Yakut and Çuvash, which corroborates the general belief that these dialects had broken away from "common Turkish" before the 13th cent., and establishes the less generally accepted fact that the other peripheral dialects in Siberia, Chinese Turkestan and Europe had not yet broken away by that date. (G. L. M. Clavens)

II. — It appears that the plains and steppes of Central Asia, inhabited by the Turco-Mongols, were the centre where, about the beginning of the Christian era, a type of vehicle with two wheels and with shafts (carts), earlier developed in China, was furnished with a yoke of modern type relying on traction by the shoulders (A. G. Haudricourt and M. Jean-Berthelot, *L'économie de la charrette*, Paris 1955, 173 ff.). From there the use of this vehicle spread in both directions, towards China and towards Europe. These carts play an important part in the history of the peoples of the Steppe, particularly in the period of the Mongol empire.

The word *araba* appears in the 8th/14th century in the *Codex Cumanicus*, where it is glossed by *curtus*, and in Ibn Batûta. The latter describes, in the Crimea, a vehicle called by the inhabitants '*araba*, which had four wheels, carried a *yurt*, was pulled by two or more horses, by oxen or by camels, and controlled by a driver mounted on one of the animals. He travelled from Sarâ to Khâzîm on an '*araba* pulled by camels (II, 361-2; 385; 389, 431 etc.; III, 11). This is therefore a different vehicle, at least in the first case, from that of Central Asia, and is of a type (wagon) which probably had a pole (with old-fashioned yoke; traction by the neck), invented in the Danube region of Europe or in the Ukraine in pre-historic era, and perpetuated among the Tatars of the same region under the same name (P. S. Pallat, *Bemerkungen auf einer Reise in die südlichen Slawenländer des russischen Reichs*, Leipzig 1799-1801, I, 144 s. and pl. 6). In the 14th century also '*arabas* appeared in the Mamlûk Empire as a "Turkish custom" (al-Makrizî, *Sulâk*, ed. M. M. Ziyâdd, II, 1, Cairo 1943, 232, concerning an event in 721/1321). The word, in the form '*araba* or '*araba*, considered to be Ottoman by Ibn Iyâs (*Die Chronik ...* ed. F. Kahle, etc., v. = *Bibl. Islamica*, v. 5, Istanbul 1912, 321; trans. by H. Salomon, London 1922, 200 ff.), was introduced into Arabic and denoted wooden vehicles, on wheels, pulled by camels, horses, mules or oxen, used to transport people and principally, it seems, articles, and possessing an astonishing turn of speed (al-Nuwayrî, *Nûkhat al-Arab*, *apud* Halîb Zayrî, article quoted below). The Mamlûks' army sent against Selim I included one hundred wooden '*arabas*, each carrying

a culverin and pulled by two oxen (Ibn Iyâs, *loc. cit.*).

In Central Asia, where wheeled transport lost its importance after the 15th century as a result of the economic decline of the nomad world, the word *araba*, *araba* denotes chiefly a vehicle with two extremely large spoked wheels (diameter from 2 m. to 2 m. 30 cm.), with a reel floor which acts to some extent as a shock absorber; the vehicle is often covered with a sort of hood, decorated in varying degree, and is pulled by a horse between two shafts (sometimes by an ox or camel). Often one of the wheels is fixed to the axle while the other revolves on it, a factor which facilitates turning. It is considered to be extremely practical because its height from the ground enables it easily to cross fords, canals, and rivers in spite (the best description, with excellent photographs, is to be found in O. Olufsen, *The Emir of Bokhara and his Country*, Copenhagen 1911, 231-3; on the wood used in its construction, see *Asiatickaya Rossiya*, St. Petersburg 1914, II, 402, with a good photo of a Sart '*araba*, I, 166; cf. A. Woeikof, *La Turkestan russe*, Paris 1914, 139-40 and pl. IXA). When heavy loads are carried, the number of horses is increased (P. Grenard, *Géographie universelle*, VIII, 316). There are two distinct types of '*araba*: the '*araba* of Khâzîm and Kâshghar, in which the driver sits in the vehicle and steers with reins, and the common '*araba* of Turkistan, called the *Khokand*, in which the driver sits on the horse's withers, his feet resting on the end of the shafts, and steers with a short bridle (A. D. Kalmykov, *Proskolny sadaneti i sootklovenia Genov Turkestana*, 1906; Delmatians, *Archéologie*, XIII, 1908, Tashkent, 1909, 41). At Tovuia, the '*araba* is described as having four wheels (A. A. Pal'makh, *Russko-turkiskii slovar*, Moscow 1953, 25), and in Kirghiz the word is so common that a locomotive is termed "fire '*araba*" (ot *araba*) (K. K. Yudakhin, *Kirgiz sklovi*, tr. A. Taymas, Ankara 1945, 39).

The word has infiltrated into the Slav and Balkan languages: Rumanian (*Araba*); Russian *arba*; Ukrainian *arba*; Bulgarian, Serbian *araba* (K. Lokotsch, *Etymologisches Wörterbuch der europ. Wörter orient. Ursprungs*, Heidelberg 1927, no. 90). The word has also been borrowed by Iranian: Persian *arâbe*, Tadjik *araba*.

In Ottoman Turkish, the word, usually written '*araba* in Arabic characters, is the generic term for all types of carriages. In Ottoman Istanbul, people always went about the town on horseback. This was also the normal mode of travel for the sultans when they left their residences. When they were indisposed, however, and on various other occasions they travelled by '*araba*. Sulaymân the Magnificent, an invalid at the time of his departure for his last campaign, passed through Istanbul on horseback, but had to transfer to an '*araba* in the plain of Dâ'dîd Pâgh and never left this vehicle (with four wheels and a pole), the driver remaining seated on one of the two horses even during the sultan's conferences with his viziers (Hammer-Purgstall, III, 439; illustration based on a MS. in the article in *Camburiz* quoted in the bibl.), etc. etc. The '*arabas* of the sultans, princes and important personages were highly decorated (*ibid.*, v. 413; cf. the vehicle of the sultan *valide* depicted in F. Taeschner, *Alt-Stambuler Hof- und Volksleben, ein Türkisches Miniaturenalbum aus dem 17. Jhrdt.*, Hanover 1925, pl. 28). They were especially used in royal marriage processions. In 1048/1658, the guild of '*araba*-makers at Istanbul numbered 40 members and possessed 15 shops (Ewliya Celebi, I, 628; tr. Hammer, I, 231).

In the 18th century, the drivers' corporation at Istanbul was organized on regular lines. The profusion of vehicles was at its height at the beginning of the 18th century during the "tulip epoch" (*lâle devri*) (Ahmed Refik, *Lâle devri*, Istanbul 1931, 47). Later the sumptuary laws restricted this luxury, and the vogue of the *araba* declined (Ahmed Refik, *Hicri on üçüncü asrda İstanbul hayatı*, Istanbul 1930, 175, no. 210).

Apart from these luxury vehicles, the rural type of *araba* drawn by oxen (*ot araba*) circulated in the streets of the capital. It was a disgrace for a high personage to ride in one, and the Grand Vizier 'Ali Paşa (1102-3/1691-2) was nicknamed '*Arabacı*' because he inflicted this ignominious treatment on his political enemies, a treatment to which he himself was in the end subjected (Hammer-Purgstall, vi, 566 ff.).

Up to the beginning of the 19th century, the right to use *arabas* in Istanbul was restricted to very important functionaries (*Şer'îh ü'l-İslâm*, Grand Vizier; *Djeldet*, *Ta'rih*, x, Istanbul 1909, 183 ff.). At this period the importation of European carriages was in its initial stages. The number of vehicles increased, and they were increasingly adapted to conform to European fashions. In 1852 Théophile Gautier wrote: "Paris and Vienna send the masterpieces of their coach-builders to Constantinople, from whose streets the *talabas* with their brightly-painted and gilded coachwork, the typical *arabas* (carriages with shafts used by ladies for their drives in company and properly called *kaş*) pulled by huge grey oxen, will soon completely disappear" (*Constantinople*, Paris 1853, 318). But in 1861 Emmanuel Scherer, living at Hamidiye, a suburb of Istanbul, built coupés, victorias, omnibuses and every kind of carriage to order (*Tayir-i Efkâr*, no. 193, 3 *İhtisâs-ı Hakkı* 1280/26 April 1864). Standing-places for *arabas* were provided at many points. Their number, combined with the narrowness of the streets, caused congestion. The *Tayir-i Efkâr* of 12 November 1909 complains about this, and demands that the constitutional régime should no longer tolerate the inconvenience caused by the arrogance of the pashas and the beys.

*Arabas* made their appearance in Turkish literature with the exile to Keshân of 'Izzet Molla in 1238/1823; his celebrated poem *Mihnet-keşân* was composed in the *araba* which conveyed him there, the author conversing with his reflection in the mirrors which decorated its interior (Gibb, *Ottoman Poetry*, iv, 308, 314). In his novel '*Araba serâsırı*' (1905), Redjâ'zâde Mahmûd Ekrem describes a snob with a passionate love of carriages. To-day the rural four-wheeled vehicles are divided into *yayıl* "with (double) springs", and *yarım yayıl* "semi-sprung", that is to say with a single spring for each axle-tree (cf. *İstanbul Anıtkolâzı*, iii, Ankara 1949, 194-6); they are framed by wooden uprights, covered by a semi-circular tilt; as they are not provided with seats, a mattress is used to sit on. Freight vehicles (*yâk arabası*) are often unsprung (but some are "semi-sprung"; this category in particular is subject to decoration in various styles. The *talaba* (sometimes written *talaba* by false Arabic etymology, but in fact from the Slav word *talaga*, *telega*, etc., itself derived from the Mongol *targa*) provided greater amenities for the comfort of passengers. This carriage, widely used in the 19th century and still in use, especially on the Asiatic coast of the Bosphorus, is a sort of open fiacre; it has no door, but a footboard, surmounted by a small platform; the equally com-

fortable "long carriage" (*arab* '*araba*'), a sort of benched carriage, is also open, with a door to the rear, and is equipped with curtains and two benches placed lengthwise inside.

**Bibliography:** See the article 'AMALA' above. In addition, *Arabalar* (in the supplement to the journal *Cumhuriyet*, 17 subat 1955 = *Asiatic Boyanca İstanbul*, 97-100); M. Robinson, *Araba*, in *JA* (printing).

'ARABA, (WADI 'ARABA), is the southern extension of the Jordan fault, which includes the deep depression of the Dead Sea. The term 'Araba in the Old Testament refers also to the Jordan Valley. From approximately three to five miles in width, the Wadi 'Araba extends for about 110 miles between the south end of the Dead Sea and the north end of the Gulf of 'Akaba, which is the east arm of the Red Sea. Along much of its length are numerous ancient copper mining and smelting sites. They were probably worked by the Kenites and were intensively exploited in King Solomon's times. There are also extensive hematite deposits in the Wadi 'Araba.

The route of the Exodus led in part through the Wadi 'Araba. The few springs in the Wadi 'Araba attracted settlements as early as Middle Bronze I (21st-19th centuries B.C.), Iron II (10th-6th centuries B.C.) and particularly in Nabataean, Roman and Byzantine times. Near the centre of the north shore of the Gulf of 'Akaba, at the south end of the Wadi 'Araba, is Tell el-Khaleife, which has been identified with Solomon's port-city and industrial center of Elion-geber: Elath. The Nabataean to Byzantine site of Ayla [g.v.] is situated near the east side of this shore, with the modern village of 'Akaba [g.v.] immediately east of it, and the modern Israeli town of Elath is located on the west side of the shore.

**ARABESQUE.** For a long time this term was used in literature devoted to art to designate several kinds of typical Islamic ornament: geometric, vegetal, calligraphic and even figural. In the first edition of the *El*, E. Herzfeld still took into account this wider interpretation of the arabesque, which however was already antiquated since the time when A. Riegl had defined in his *Stilfragen* its distinctive character as being a particular, and exclusively Islamic, form of denaturalised vegetal ornament consisting of shoots or split or bifurcated leaves on inorganic tendrils. The leaves may be flat or curved, pointed or round or rolled, smooth or rough, feathered or pierced, but never isolated and always joined to the stalk for which it serves as an adjunct or a terminal. The stalk itself may be undulating, spiral or interlaced, going through the leaf or issuing again from it, but always intimately connected with it. To quote Herzfeld's definition: stalk and leaf are completely grown into each other, the leaves forming additions growing from the main stalk.

The principles which regulate the arabesque are reciprocal repetition, the formation of palmette or calice forms by pairs of split leaves, the insertion of geometric interlacings, medallions or cartouches compartments. In every instance, two aesthetic rules are scrupulously observed: the rhythmical alternation of movement always rendered with harmonious effect, and the desire to fill the entire surface with ornament. By its balanced and serene

Fig. 2. Mosque of Sidi 'Ukba in al-Kayrawân (after G. Marçais, *Coupoles et Plafonds de la Grande Mosquée de Kairouan*, Paris 1925)

Fig. 3. From a Kur'an, Granada 15th century (in the Islamicische Abteilung, Berlin Museum)

Fig. 4. Wood-carving, Egypt 13th century (after Bourgoin, *Précis de l'Art arabe*, Paris 1892, iii, pl. 88)

convolution, the arabesque avoids the dynamic excitement, the restless whirling and violent twisting of the nordic ornament with which it otherwise has much in common. The effect of contrast is obtained by

Fig. 5. Fayence mosaic in the türbe of Fakhr al-Din 'Ali, Konya, 13th century (after F. Sarre, *Denkmäler persischer Baukunst*, Berlin 1910, fig. 185)

differences in density, the stalk sometimes nearly disappearing beneath an abundance of foliage, at other times vigorously dominating the pattern.

The denaturalized vegetal ornament conforming to the rules described above is termed "arabesque"

Fig. 6. Stucco tile, Persia 13th century (in Islamicische Abteilung, Berlin)

with good reason, because its invention was certainly the outcome of a particular Arab attitude and parallel developments occur in Arabic poetry and music. The Arabic term *zawraq* (zawraq), clearly implies that the description was restricted to foliage; it

is preserved in *atawraq*, a term commonly used by Spanish authors to designate the genuine arabesque as understood by Riegl.

Fig. 7. Wood carving, Egypt 13th century (in Arab Museum, Cairo)

The arabesque may be combined with every kind of geometric decoration. In epigraphy, it may form a background to the calligraphy, or the letters

Fig. 8. H. Holbein the Younger, 1537 (after Jensen, *Der Ornamentbuch*, Berlin 1920, fig. 72)

may terminate in arabesques, or letters and arabesque may be interwoven. Animals may be drawn in the form of arabesques, which may also be combined

with human figures; the animals and the human figures may then be rendered more, or less, recognizable. Sometimes, an Islamic "grotesque" decoration occurs in which masks and prototypes of animals are combined with an arabesque scheme. It seems unnecessary to emphasise that the arabesque never has any symbolic significance but is merely one ornament from a large stock which includes other vegetal forms such as palmettes, rosettes and naturalistic flowers, and abstract forms such as cloud-bands. At certain periods, however, it played a predominant role.

The arabesque has its prototype in certain acanthus, vine leaf and cornucopia forms of late antiquity which tend to progress in undulations or with bifurcations. It is not yet completely developed in the Umayyad period, acquires its typical shape in the 9th century under the 'Abbasids and in Islamic Spain and appears fully developed in the 11th century under the Seldjûks, Fâtîmids and Moors. From then on it occurs throughout the Islamic world in countless variations, so that it is impossible to classify the various forms according to a chronological order or according to national or dynastic predilections. Persian, Turkish and Indian artists understood the language of the arabesque quite as well as Arabic-speaking artists, and through the centuries they competed one against the other in creating ever more varieties and combinations. Its use is not restricted to any one material, but is used in architectural decoration as well as carved or painted decoration, in pottery and glass and metalwork, and above all in book illumination.

In Hispano-Moresque art of the 12th century and later the arabesque predominates almost to the exclusion of other ornamental forms, and from Islamic Spain it found its way in the late 15th century to the Christian countries. Known as *moresque* it became fashionable in the first half of the 16th century and was introduced into Italy by Francesco Pelligrino, into France by the unknown master G. J., and into Germany by Hans Holbein and Peter Plattner. Like them, other artists tried to imitate, with more or less understanding, the particular character of the arabesque, principally in their pattern-books for jewellers and armourers (e.g. the *Livre de moresques*, Paris 1546).

(See also ORNAMENT).

**'ARABFAKIH**, Shihāb al-Dīn Ahmad b. 'Abd al-Kādir, chronicler of 16th century Muslim Ethiopia. He personally took part in the war between the imām Ahmad b. Ibrahim, lord of Harar, and the Negus Lebna Denghel; but, when he wrote his chronicle, he had already left Ethiopia for Djibuti in Arabia. His (Harari) surname 'Arab-Fakih "the Arab doctor" can be explained either as the sobriquet of an Ethiopian who was particularly well-versed in the Arabic language and *fiqh*, or as the local *labak* of an Arab who emigrated at first to Ethiopia (and who later returned to his native country). His chronicle bears the title (in its colophon) of *Futūḥ al-Zaman*, but it is given in the MSS. as *Futūḥ al-Habasha* "Conquests of Ethiopia". The narrative closes with the events of the year 1537; but the colophon describes the work as the "First Part". A second part, however, has never been found, and it is quite possible that the author was never able to complete his work as planned.

The *Futūḥ al-Habasha*, of which we possess only a few MSS., all recent, is also quoted and to a large extent summarised in the (Arabic) Chronicle of Gujarat (*Zafar al-Wāḥ bi-Muḥannad wa-Āḥḥa*) by al-Uṭugh-Kāhī, also an Arab writer, who emigrated to Muslim India during the second half of the 16th century.

**'ARĀBĪ PASHA** (see 'ARĀBĪ PASHA).

**ARABIAN NIGHTS** (see ALF LAYLA WA-LAYLA).

**ARABIC WRITING** (see KHATT).

**'ARABISTĀN**, "the Arab country", a term much in use until recently to denote the Persian province of Khūzistān; the latter name was revived during the reign of Rīdā Shāh Pahlawī. For further particulars see KHUZISTĀN. Following Persian usage, 'Arabistān denotes occasionally the Arabian peninsula. In Ottoman administrative documents from the 16th century it is occasionally applied to the Arabic-speaking provinces of the Empire, more especially to Syria. (Ed.)

**'ARABIYYA**. ARABIC LANGUAGE AND LITERATURE.

A. The Arabic Language (al-'Arabiyya).

(i) Pre-classical Arabic.

(1) The position of Arabic among the Semitic languages; (2) Old Arabic ("Proto-Arabic"); (3) Early Arabic (3rd-6th centuries A.D.).

(ii) The Literary Language.

(1) Classical Arabic; (2) Early Middle Arabic; (3) Middle Arabic; (4) Modern Arabic.

(iii) The Vernaculars.

(1) General survey; (2) The Eastern dialects; (3) The Western Dialects.

B. Arabic Literature.

AL-'Arabiyya, sc. *luḡha*, also *lisān al-'arab*, is:

(1) The Arabic language in all its forms. This use is pre-Islamic, as is shown by the appearance of *luḡha* 'arabiyya in third-century Hebrew sources, *arabica lingua* in St. Jerome's *Prologus in Danieli*; this probably is also the sense of *lisān 'arabi* (*muḥib*) in Kur'ān, xvi, 103 (109); xvi, 105; xvi, 12 (21).

(2) Technically, the Classical Arabic language (Cl. Ar.) of early poetry, Kur'ān, etc., and the Literary Arabic of Islamic literature. This may be distinguished from 'arabiyya in the wider sense as al-'arabiyya al-faṣiḥa or al-'arabiyya al-fuṣḥā, from *fasuḥa* "to be clear, pure" (cf. Assy. *piṣā* "pure, bright", Aram. *paṣiṣā* "bright, radiant"); it means "clear", i.e. "universally intelligible" Arabic, not "pure Arabic", as is shown by *afḥa* (*al-halima*) "to speak clearly" (LA, iii, 377), cf. also *a'raḥa* "to speak clearly, intelligibly" and "to use correct Arabic".

Cl. Ar. is the chief literary dialect of Arabic, though not the only written one (cf. Old Arabic and some modern colloquials, notably Maltese). The other forms of Arabic known to us belong to three distinct stages: 1) Old Arabic, also called Proto-Arabic (though this term would better be reserved for the hypothetical common ancestor of all Arabic dialects), German *altmordarabisch*; 2) The Early Dialects (*luḡhāt*); 3) The Colloquials (medieval *luḡha al-'amma*, modern al-*luḡha al-'ammiyya* or al-*dārījīya*, or *lahjījī*).

(i) Pre-classical Arabic

(1) The Position of Arabic among the Semitic Languages

Arabic belongs to the Semitic language family, which is part of a wider Hamito-Semitic family

including, inter alia, also Ancient Egyptian. Within that family, it belongs to the South-Semitic or South-West-Semitic branch, which includes two further sub-groups: (a) South-Arabian (comprising ancient Sabaean, Minaean, Katabanian, Hadramitic, etc. in Yemen and Southern Hadramawt and modern Mehri, Shihahuri etc. in Northern Hadramawt and the language of the island of Sokatra); contrary to a widespread assumption, ancient South-Arabian is a language-group quite different from Arabic; (b) Ethiopian (comprising ancient Ethiopic or Ge'ez, modern Tigre, Tigrinya, Amharic, Harari, Gurage, etc.); it is not yet quite clear whether Ethiopian originally derived from some form of South-Arabian (cf. E. Ullendorff, *Sem. Languages of Ethiopia*, 1955). The common traits of the S.-Sem. branch (partly obscured in the modern forms) are: almost complete preservation of the proto-Sem. sound system, except for *p* becoming *f* and *gh* coalescing with *s* (Arabic *ش* is proto-Sem. *š*); plural of nouns formed by internal vowel changes; *h*'aia and *u*'aiafa patterns in the verb, S.-Ar. and Eth., however, have some features in common with Accadian which Arabic does not share (W. Leslau, in *JAOS*, 1944, 53-8).

On the other hand Arabic shares with North-West Semitic (Hebrew, Ugaritic, Aramaic) certain traits not found in S.-Ar. and Eth.: the pl. masc. suffix *-ūn*, the internal passive (W. Christian, in *WZKM*, 1907, 201; for S.-Ar. see M. Hölzer, *Altisrabian Grammatik*, 82), and the *pu*-ayal diminutive (F. Praetorius, in *ZDMG*, 1903, 524-9), see also I. al-Yasini, *Lexical Relation between Ugaritic and Arabic*, 1952. Some forms of Arabic had closer connection with N.W.-Sem.: Old Arabic had, like Hebrew, a definite article *ka-* with doubling of the following consonant (as in אֲרָמָא; *arāmā*); names like אֲרָמָא (3rd cent. B.C.) and אֲרָמָא (3rd cent. A.D.) show that *āh* had the construct *āh* in all cases, as in Hebrew. Among the Early Dialects, the Taysi<sup>1</sup> rel. pron. *dhā* corresponds to poetical Hebrew *dhā*, while the *dh* of other Western dialects has its equivalent in older Aramaic; the W. dialects also sounded long *a* as *ā*, like Canaanite and W.-Syriac, and changed *iya* to *ā*, like Hebrew. The Eastern dialects, on the other hand, had *i* prefixes with the *a*-imperfect, like Canaanite and W.-Syriac (cf. C. Rabin, in *Journal of Jewish Studies*, 1950, 22-6).

Arabic as a whole thus stands between S.-Sem. and N.W.-Sem., having contacts with both. There existed perhaps dialects intermediate between N.W.-Sem. and Arabic: this has been claimed for the local dialect which influenced the Hebrew book of Job (cf. B. Moritz, in *ZATW* 1926, 81-93; Foster, in *Am. Journ. of Sem. Lang.*, 1932, 21-45).

#### (2) Old Arabic ("Proto-Arabic")

The oldest record of Arabic are some 40 proper names in Assyrian accounts of fighting against the Arabi (Arabi, Urbī, cf. O'Callaghan, *Aram Naharaim*, 95) during the years 853-626 B.C., collected by T. Weiss-Rosmarin, in *JSOR*, 1932, 1-37, and F. Hommel, *Ethnologia u. Geogr. d. alten Orient*, 1926, 378-89. Almost all can be identified as Arabic: the view of Landsberger and Bauer (in *EA*, 1927, 97-8) that the Arabi were Aramaeans has little foundation as that of B. Moritz (*Or. Studies* ... *Paul Haupt*, 1926, 184-212) that the Aramum mentioned in texts of the same period were Arabs. The Gaimbulu were closely allied with the Arabi (Assurbanipal's Rassam Prism iii, 65); among their chiefs (Sargon's Annals 254-3) were Hamdanu,

Zabidu, and Haza'bu, as well as some bearing Aramaic names. Most had Assyrian names, however, showing that some of these tribes had undergone the influence of the higher culture.

Assyrian influence also marks the earliest texts written by Arabs, in the 8th-7th cent. B.C., in a North-Arabian script close to the Dedanite, but in the Accadian language, except for the mixed form *yab*, which is Accadian *yab* 'he carried' with West-Semitic *y*-prefix. These include two short inscriptions found at Ur (Burrows, in *JRAS* 1927, 795-806) and some seal cylinders (W. F. Albright, in *Bull. Am. School. J. Or. Res.*, no. 128, 39-45). Albright identified the group from which these texts originated as the Chaldeans.

The Dedanite inscriptions at al-'Ula are probably only slightly later (H. Grimme, *Bruch u. Schrift*, iv, 19-28; id., in *OLZ*, 1932, 753-8). At the same locality, but later, are the Libyānite inscriptions. The latest are about 150 A.D., and show Early Arabic features. About this time (see, however, Bonesei, in *RSO*, 1951, 1-15) "Mas'ūd king of Libyān" put up inscriptions in archaic Nabataean Aramaic.

**Bibliography:** Texts: Janssen & Savigneau, *Mission archéol. en Arabie*, 1904-12, iii, 363-53; Grammar: Winnett, *Study of the Liby. and Thamudic Inscr.*, 1937; id., in *Mus.*, 1938, 299-310; W. Caskel, *Libyan u. Libyanisch*, 1954.

Grave inscriptions in Libyānic script exist in al-Hayā (G. Ryckmans, in *Mus.*, 1937, 291; Cornwall, in *GJ*, 1946, 434; Winnett, *Bull. Am. School. J. Or. Res.*, no. 102, 4-6; S. Smith (in *BSOAS* 1954, 442) thinks they emanate from the people of al-Hira.

Thamudic is represented by inscriptions in northern Hijāz, Sinai, Transjordan, southern Palestine (1,000 in A. v. d. Branden, *Inscriptions thomoudiques*, 1924; 524 in Harding & Littmann, *Some Th. Inscr. from ... Jordan*, 1952), Asir (9,000 discovered by G. Ryckmans in 1952), and Egypt (Kensade, in *Mus.*, 1952, 285-90). For grammar see v. d. Branden, op. cit., E. Littmann, *Thamud u. Safit*, 1943; id., in *ZDMG* 1950, 168-80. The latest Thamudic texts occur in conjunction with Early Ar. (one line on the stele of Hadrā of 207 A.D. (in Nabataean script), some graffiti on the temple of Ramm in Sinai, ca. 300 A.D., next to the oldest graffiti in Arabic script). The language hardly changed during the 600 years of its use; this suggests some literary tradition (constructive diagram in Harding & Littmann, op. cit., 50). They preserve obsolete forms into Cl. Ar., as in *Udā* (al-Tabari, iii, 236) = *ʾUdāʾu*, Safat. *ʾid* (i.e. *ʾOda*), which in Cl. Ar. would be *\*ʾAwad*, and give valuable information on the vocabulary of Old Arabic.

**Bibliography:** Texts: 396 in M. de Vogüé, *Syrie Centrale. Inscr. Sémit.*, 1868-71; 904 in Dussaud & Macler, *Missions dans la Syrie moyenne*, 1935; 136 in E. Littmann, *Publ. Amer. Arch. Exp. iv, Semitic Inscriptions*, 1904; 300 in H. Grimme, *Texte u. Untersuchungen zur Safar. Arab. Religion*, 1929; 1302 in E. Littmann, *Safaitic Inscr. = Syria, Publ. of the Princeton Archaeol. Exp.*, iv, C, 1943, with best sketch of grammar, cf. also id., *Thamud u. Safit*; 5380 in Corp. Inscr. Sem., vi, 1950. See also R. Dussaud, *Arabes en Syrie avant*

*l'islam*, 1907; id., *Pénétration des Arabes en Syrie avant l'islam*, 1955.

For further bibliography, cf. G. Ryckmans, in *Revue Biblique*, 1932, 89-95; id., in *Med. Kon. Vlaamsche Acad.*, 1941, 12-13; id., in *Mus.*, 1948, 137-213.

Since graffiti mostly consist of names, our knowledge of all these idioms is scanty. It is probable that the method of elucidating them by reference to the Arabic lexicon makes them appear more similar to Cl. Ar. than they really were. The transliteration of the Arabi names shows that *ʾayn* was sounded weakly, *ghim* was like Accadian *g*, *hā* like *h*, *thā* like *t*, and *dhā* like *p*. Greek transliterations of names from the Safatene area show a vowel-system reminiscent of Hebrew or Colloquial Arabic, e.g. *Oeobou* = *Uwayd*. Spellings like *bay* = *ب* and *ngy* = *ن* suggest that all defective verbs ended in *-iya*, as in Hebrew.

While all these peoples wrote their own languages in varieties of a script closely related to Old S.-Arabian, the Nabataeans (100 B.C.-4th cent. A.D.) and the Palmyrenians (1st-3rd cent. A.D.) used local varieties of Imperial Aramaic (the *lingua franca* of the Achaemenian empire) and Aramaic script, but their names show that the Nabataeans were wholly Arab, and at Palmyra there was an important Arab element (cf. Goldmann, *Palmyr. Personennamen*, 1937). In Palmyrenian, Arabic words are few (J. Cantaneau, *gr. du Palm. épigr.*, 1935, 150-1; even fewer in F. Rosenthal, *Sprache d. Palmyr. Inscr.*, 1937, 94-6). Nabataean has many *ʾayns*; their number increases sharply in later texts (Cantaneau, op. cit., ii, 172-80; id., *AIEO*, 1934, 77-97; see also F. Rosenthal, *Aramäische Forschungen*, 1939, 89-92). This Arabic substrate—which was probably different in various regions—includes Thamudic *ʾdh* 'legitimate hair'; in contrast to the epigraphic Old Arabic dialects it had the art. article (*Shyʾ* 'Yam against Safat. *Shyʾ* *ahem*, name of a god; *ʾghre* = *ghra*); long *a* was sounded *ā* as in the Early Western Dialects.

A source of Old Arabic hardly tapped is the study of the personal names, thousands of which are known. These show a striking continuity from the Arabi to present-day bedouins and form a common stock in various Old Arabic idioms (constructive diagram in Harding & Littmann, op. cit., 50). They preserve obsolete forms into Cl. Ar., as in *Udā* (al-Tabari, iii, 236) = *ʾUdāʾu*, Safat. *ʾid* (i.e. *ʾOda*), which in Cl. Ar. would be *\*ʾAwad*, and give valuable information on the vocabulary of Old Arabic.

**Bibliography:** G. Ryckmans, *Noms propres sémitiques*, 1934; Withnaw, *Sem. Menschen-namen i. d. griech. Inscr. u. Papyri d. Vorderen Orient*, 1930; Gratzl, *Arab. Frauennamen*, 1906; Briu, *Altnord. kultische Personennamen*, *WZKM*, 1925, 31-59, 85-115.

Another valuable source for reconstructing the phonetic history of Arabic is the geographical names preserved in texts in Accadian (cf. under Arabi above), Hebrew (J. A. Montgomery, *Arabs and the Bible*, 1924; id., in *Harvard Symposium on Archaeol. and Bible*, 1938, 188-201), and Greek and Latin (A. Sprenger, *Alte Geogr. Arabien*, 1875; Glaser, *Sätze*, etc., 1889-90; A. Mouil, *Topographical Itineraries*, ii, Appendix 3; cf. on all the material F. Hommel, *Ethnologie*, etc., 538-634). O. Blau, *Altharab. Sprachschichten*, *ZDMG*, 1871, 525-92, is methodically unsatisfactory.

Possibly Old Arabic was the dialect of Djourim,

from which Abū 'Ubayd (d. 223/838) gives ca. 30 words in his monograph on dialect words in the Kurʾān (cf. Rabin, *Ancient West-Arabian*, 7; ed. by S. al-Munajjid as a work of Ismaʿīl b. 'Amr al-Mukri', Cairo 1946). The Djourim, of course, belong to the *'Arab al-ʾshira* (q.v.) or *al-bāʾida*, from whom, according to the Arab historians, the *'Arab al-mustaʾriba*, the tribes making up the bulk of the population in the 6th cent. A.D., took over the country and the language. More specifically we learn that the Taysi<sup>1</sup> adopted the language of the Shabī (Yāskūt, i, 127). We must ask (1) whether the *'shira* tribes were identical with the known speakers of Old Arabic, 2) what language the *mustaʾriba* tribes spoke before they adopted Arabic. To neither question have we any answer. The matter is further bound up with the cleavage between Eastern and Western Early dialects: on the whole the latter appear to have been somewhat closer to Old Arabic, but it is likely that the real successor of Old Arabic were the Kudāʾa dialects, spoken over the same area as the former, our knowledge of which is practically nil; on the other hand we possess practically no epigraphic material from those areas where either the Eastern or the Western dialects were spoken, and the speech of those regions during the Old Arabic period may have been quite different from the Old Ar. dialects perpetuated by inscriptions.

#### (3) Early Arabic (3rd-6th centuries A.D.)

Following precedents in the nomenclature of English and German, we may give this name to the period from the 3rd to the 6th cent. A.D., when over a large part of Arabia dialects quite distinct from Old Arabic, but approaching Cl. Ar. were spoken, and during which Cl. Ar. itself must have evolved.

Outside evidence for this period is scarce, but we possess a number of quotations in contemporary Jewish sources (partly coll. by A. Cohen, in *JQR*, 1912/13, 221-33), including even sentences, e.g. *לֹא יָדָעְתִּי מִשְׁכָּח מִלֵּב מִלֵּב מִלֵּב* 'make room for thy throne' (*Midrash Rabbah* on Canticles, iv, 1).

This is the period during which hundreds of Aramaic loan-words entered the language through Christian and Jewish contacts (S. Fraemkel, *Aram. Fremdwörter im Arab.*, 1886); their phonological study throws some light on the Arabic of the period. Thus there is an older layer where *Arām* = *ʾr* (e.g. *ʾr* and a younger one where it = *ʾr*), due no doubt to a sound-change in Arabic (D. H. Müller, *Acts VII Or. Congr.*, 1888, 229-48; Brockelmann, *Grundr. Vergl. Gr.*, i, 129-30). Other words penetrated during this period from South-Arabian (H. Grimme, in *EA*, 1912, 158-68; cf. also F. Krenkow, in *WZKM*, 1913, 127-8) and Ethiopic (Nöldeke, *Neue Beiträge*, 31-66; but see Rabin, *Ancient West-Arabian*, 109, on *tābāt* and *mishkāt*) — owing to our restricted knowledge of S.-Ar., the two sources cannot always be clearly distinguished. Some Persian loan-words, found in the Kurʾān and poetry, entered during this period, though the great influx of Persian words took place in the first Islamic centuries (A. Siddiqi, *Studies in the d. pers. Fremdwörter*, 1919). Greek words entered mainly via Aramaic, Latin words via Greek and Aramaic: thus *ḥinḥā* < Syr. *hantā* < Lat. *centenarius*; *mandil* < Syr. *mandilā* < Gk. *μανδύλη* (with typical late Gk. soundchange) < Lat. *mandile*. Some military terms, e.g. *ḥarā* < *arab* or *harp* < *cavata* (cf., however, Palest. Jew. Aram. *ḥarā*) may have come directly from Latin.

*Bibliography:* Djawālikī, *Mu'arrab* (Sachau), 1867; Nöldeke, *Neue Beiträge*, 23-30; A. Jeffery, *Foreign Vocabulary of the Qur'an*, 1938; A. Salomon, *Alt-Sabäer und Kultursprachen im Arab.*, 1939 (= *St. Or. Soc. Or. Fennica*, xvii, 2).

It must be assumed that these words originally entered some specific dialect area in contact with the culture in question and then spread into Cl. Ar. We hear of foreign words used only at Medina (Rabin, *op. cit.*, 96; Fück, *Arabiya*, 10).

Arab philological literature preserves much material about the Early Dialects of Najd (Tamin, Asad, Bahr, Tayyī, Kayy), Hijāz and the highland area of the south-west (Husayn, Asad, Yaman), very little about those of other areas. The information seems to have been gathered during the 2nd-3rd Islamic centuries—when these dialects were probably rapidly disintegrating—partly from tribesmen in the *amṣār*; it is distorted by the scholastic approach and by the use made of it for elucidating difficulties in texts which had nothing to do with the dialects cited. Interest in the dialects for their own sake developed only late, and many data are preserved only in late works whose sources we cannot check.

A sharp cleavage clearly emerges between an Eastern group centred on the Persian Gulf, and a Western one, including besides the south-western and Hijāz dialects also that of Tayyī. Within the latter the characteristic features are most clearly marked in Yaman and Tayyī, while Hudhayl and Hijāz show evidence of Eastern influence. The differences are in rhythm (vowel-elisions and assimilations in the East), phonetics (e.g. West distinguished ā—sounded ē—and ē, while in the East both coalesced into one ā, sounded *āi*; *hama* was strongly sounded in East and even became *haya*, but was completely elided in the West), grammar (e.g. Eastern *al-ladhi*; Western *dhā*, *dhā*; E. passive *bilā*; W. *hā*; E. imper. *raddū*; W. *uraddū*), syntax (e.g. the 'Hijāzī *mā*' = E. *dhā*/'(n) *r-riddā*: W. *dhā*/' *r-riddā*) and vocabulary.

It cannot be determined whether this cleavage had but recently developed or was old-inherited; the possibility must be taken into account that the inhabitants of Arabia had come from different parts of the Semitic world and that the common 'Arabic' features were produced by mutual influence or by a common substrate after their settlement in Arabia.

The dialects of Yaman hold a special place: owing to the lexica of Ibn Durayd and Nashwān b. Sa'īd information is plentiful, and can be evaluated because the modern colloquial here continues the ancient dialect (cf. data in C. de Landberg, *Parfane*, 1909-13; idem, *Glossaire Dajani*, 1920-27). The dialect of 'Himyar' as described by the philologists was an archaic Western Arabic idiom strongly influenced by South-Arabian. We possess some rhymes and sayings in it, as well as a number of 'inscriptions' (*Musnads*) forged by Nashwān and al-Ḥamdānī in the belief that the South-Arabian kings of ancient Himyar and Saba spoke the language of the 7th-cent. A.D. 'Himyar'.

*Bibliography:* Older literature (to be used with caution): G. W. Freytag, *Einführung etc.*, 1861, 65-125; P. Anastase Marie, in *Mash.*, vi, 329-36; Näslil al-Yazīdī, in *Acta VII Or. Congr.*, 1888, ii, 69-104; K. Vollers, *Volkssprache*, 1906. Modern research begins with Sarauw, *Die älteren Dialekte*, *Zeitschr.*, 1908, 17-49; H. Koller, *Reise al-Habash*, *Dialekte*, WZKM, 1920, 61-130, 233-62; 1921, 32-88, 247-74; 1922, 15-30, 234-36; I. Anb, *Al-*

*Lahadjāt al-'Arabiyya*, ca. 1926; E. Littmann, *B. Fac. Ar.*, 1928, 1-56; C. Rabin, *Ancient West-Arabian*, 1931; K. Petráček, *ARO*, 1934, 406-6.

To the Early Arabic period belong two inscriptions in Nabataean characters but practically pure Arabic language: One is at *Hiḍra* (Arabic *al-Hiḍr*, near Madā'in Sāhib), northern Hijāz, dated 467 A.D. (M. Lidbarski, in *ZA*, 1909, 194-7; Jaussen & Savignac, in *Rev. Biblique*, 1908, 241-50; Chabot, in *Comptes Rend. Ac. Ins.*, 1908 269-72; 1. Cantineau, *Nabataen*, ii, 38), with a line in Thāmidic; the other the inscription of Imra' al-Kays 'king of all Arabs' at al-Namara, dated 328 A.D. (R. Dussaud, in *Riv. Arch.*, 1922, 109-21; id. *Mission*, i, 375; *Syrie Moysenne*, 314; M. Lidbarski, *Ephemeris*, ii, 24; *IRP. Epigr. Sém.*, no. 485; Cantineau, ii, 49). M. Hartmann (*OLZ* 1906, 573); *Arab. Fragm.*, 1908, 501; now also Dussaud, *Pénétration etc.*, 64 50q) thought Imra' al-Kays to have been a king of al-Hira, but the language of the inscription is shown to be a Western dialect by the pronouns *fy* fem. sg. demonstr. and *dhā* relat.

#### (ii) The literary language

##### (i) Classical Arabic

The oldest texts in Arabic script are three graffiti on the wall of the temple of Ramm in Sinai, dating from ca. 300 A.D. (H. Grunme, *Rev. Bibl.*, 1935, 270; 1936, 90-5). Christian inscriptions, accompanied by Greek versions, are at Zabād, dated 512 A.D. (E. Sachau, in *Mith. Pr. Ak. W.*, 1881, 169-90; id., in *ZDMG*, 1882, 345-52), and at Harrān in the Lejḍā dated 568 A.D. (Schneider, in *ZDMG*, 1884, 34; Dussaud, *Mission*, i, 375; *Syrie Moysenne*, 324; Cantineau, *Nabataen*, ii, 50; on both inscr. E. Littmann, in *RSO* 1917/18, 195-8). The text of an inscription on the church of Hind at al-Hira, about 560 A.D., is recorded by Muslim historians (al-Bukhārī, 1964; G. Rothstein, *Laḡmiden*, 1899, 24). An undated graffiti is at Umm al-Djīmāl (E. Littmann, in *ZS*, 1929, 197-204). All four inscriptions in N. Abbott, *Rise of the North-Arabian Script*, 1939, plate 1.

The Christian character of the dated inscriptions suggests that the Arabic script was invented by Christian missionaries, as were so many Eastern alphabets. Abbott (*op. cit.*, 5) localises its invention, with much probability, at Hira or Anbār.

It is probable that at least partial Bible translations into Arabic existed before Islam. Stylistic reminiscences of the Old and New Testaments are found in the Qur'ān (W. Rudolph, *Abhängigkeit d. K. v. Judentum u. Christentum*, 1922; T. Andrieu, *Ursprung d. Islams u. d. Christentum*, 1926; A. Mingana, *Bull. J. Rylands Library*, 1927, 77-89; Ahrens, in *ZDMG*, 1930, 15-68, 148-90). A Baumstark claimed pre-Islamic date for the text of some Arabic Bible MSS (*Islamica*, 1931, 562-75; *BZ* 1929/30, 350-9; *OC*, 1934, 35-66; against this Graf, *Gesch. d. Chr.-Arab. Lit.*, i, 142-6). There also is a fragment of the Psalms in Arabic-Greek characters (Vissiet, in *OLZ*, 1901, 384-403). Examination of this and of two of Baumstark's texts (B. Levin, *Griech.-Arab. Evang. Ueberr.*, 1918) shows a language slightly deviating from Cl. Ar. towards the colloquials. This is typical for Chr.-Arab. literature (Graf, *Sprachgebrauch d. älteren Chr.-Arab. Liter.*, 1905), for early papyri and for the language of scientific writing; it may be early colloquial influence, but also a Cl. Ar. not yet standardised by grammarians.

The Arabian Jews are less likely to have participated in the literary formation of Cl. Ar., since

at that period written translations of the O.T. were not being made by Jews (though a Jewish translation is mentioned Birkhäuser, 1931). The Jewish traditions in Umayya b. Abi 'l-Salt (J. W. Hirschberg, *Jud. u. Chr. Lehren im vor- u. frühislam. Arabien*, 1930) and in the Qur'ān (cf., e.g., Torrey, *Jewish Foundations of Islam*, 1933; A. Katsh, *Judaism in Islam*, 1951), show all signs of oral transmission. Jews, however, used Cl. Ar. before Islam, as e.g. Saṇaw'al b. 'Adiyā' (cf. also I. Guidi, *Arabic antedil.*, 1927, 145-6; Hirschberg, *Dissein des ar-S. b. 'A.*, 1932, Intro.), and are said to have taught the Muslims to write at Medina (Birkhäuser, *Fulāḥ*, 473).

Wellhausen (*Reise arab. Heidentums*), 1927, 232) plausibly suggested that Cl. Ar. was developed by Christians at al-Hira. Muslim tradition names among the first persons who wrote Arabic Zayd b. Ḥamīd (ca. 300 A.D.) and his son, the poet 'Adī, both Christians of Hira (*Aghānī*, ii, 200-2). 'Adī's language was not considered fully *faṣḥ*, which may be taken as meaning that Cl. Ar. was still in course of evolution. Al-Mufaḍḍal (*apud* al-Marzubānī, *Mawāḍiḥ*, Cairo 1343, 73) says that 'Adī drew on many tribal dialects, a procedure alleged by other scholars to account for the excellence of the Quraysh dialect. This statement gains in substance if we recall that nowadays the poetry of settled Arabs is often couched in bedouin dialects, and that the oldest genuine bits of poetry, those connected with the War of Bāsis, come from the Euphrates region. The court of Hira remained a centre for bedouin poets: this helped in developing and unifying the language of poetry; its written use at al-Hira also furthered its standardisation.

As to the origins of that poetical language itself, early Muslim tradition sought it in various tribes, while later scholars, no doubt for theological reasons, identified it with the dialect of Quraysh. This view was accepted by Grunme (*Mohammed*, 1904, 23), Taha Husayn (*Al-Adab al-Djāhili*, 1927), and Dhorme (*Langues et écritures sémit.*, 1930, 53). Most western scholars agree in seeking its home among the bedouins of Najd—as did in practice the Muslim philologists of the 2nd-4th centuries who would only accept Najdī bedouins as authoritative informants. Some believe it to have been originally the language of one definite tribe, others a compromise between various dialects; others again think it acquired some purely artificial characteristics. An important feature is its archaic character, both in phonetics (it lacks the contractions typical for the Eastern Dialects) and in syntax, where it keeps alive constructions lost in early prose (Bloch, *Fers und Sprache im Altarab.*, 1946). It is beyond doubt, however, that in the late 4th cent. A.D. it was a purely literary dialect, distinct from all spoken idioms and super-trial. It is today often referred to as the 'poetical koine'. Its continuity was assured by the professional reciters, or *rhōfīs*. The language was practically uniform throughout Arabia: even allegedly local features like the *dhā* *TA*-*Arabiyya* and *mā* *Hijāziyya* occur in poetry from outside those regions. There may have been differences in the choice of words: Prof. F. Krenkow, in a letter to the present writer, suggested that northern poets used *asad* for 'lion', southern ones *layḥ*. The main differences, as in the case of other standard languages, were no doubt in pronunciation; it is interesting that Abu 'l-ʿAswad al-Du'ālī of 'Abd al-Kays chose from thirty men an 'Abkāsh as the one with the best pronunciation (al-Anbārī, *Nawāḥ*, 11) and the Hijāzī 'Uḡmān thought

a Hudhāl the best person to dictate to a scribe (*Gesch. d. Qur.*, ii, 2). It is, however, likely that some regionalisms and archaisms in the poems were eliminated by editors, for it is not rare to find that a verse is quoted by a grammarian for some peculiarity which is absent in the *dhūn* of the poet, the verse being slightly recast.

*Bibliography:* K. Vollers, in *ZA*, 1897, 125-39; I. Guidi, *Una somiglianza fra la storia dell' arabo e del latino*, *Miscelanea linguist.*, i, G. Ascoli, Torino 1901, 325-6; id., *Arabic antedil.*, 1927, 42-4; A. Fischer, in *Verhandl. d. Philologengesellschaft zu Halle*, 1905, 154; Nöldeke, *Beitr.*, 2. Birkeland, *Språk og religion hos Jøder og Arabere*, 1949; J. Fück, *Arabiya*, 1950, 55; R. Blachère, *Hist. de la litt. arab.*, i, 1952, ch. iii; W. Caskel, in *ZDMG* 1953, \*28\*-316 = *Amer. Anthrop. Assoc. Memoir*, no. 76, 1954; C. Brockelmann, *Handbuch d. Orientalistik*, ii/3, 1954, 217-7; Rabin, *Ancient West-Arabian*, 1951, ch. iii; idem, in *Stud. Isl.*, 1955, 19-37.

Our sources for the investigation of Cl. Ar. proper are: (1) pre-Islamic and early Islamic poetry; (2) the Qur'ān; (3) the official correspondence of Muḥammad and the first caliphs, as recorded by historians, and the early papyri; (4) the Hadith; (5) the prose portions of the *Ayyām al-'Arab*.

Utilisation of pre-Islamic poetry for the study of Arabic would, of course, be pointless if we were to reject all these poems as forged, as did A. Mingana (*Odes and Psalms of Solomon*, ii, 1920, 125) and D. S. Margoliouth (in *JRAS*, 1925, 415-49)—Taha Husayn, who in *al-Adab al-Djāhili* rejects most of them, admits at least those by Hudhāl as genuine—, though even then the language of the earlier Islamic poets would still be evidence of a bedouin tradition distinct from the Qur'ān.

In assessing the language of the Qur'ān, we must distinguish between the consonantal skeleton, unaltered since the revision under 'Uḡmān, and the vowels, inserted considerably later. The genuine Qur'ān spelling (*Gesch. d. Qur.*, ii, 19-37)—unfortunately 'corrected' in the Fligel edition—differs in some respects from the current orthography; the difference was already felt in the time of Mālik b. Anas (al-Suyūṭī, *Iḥṣān*, *nuṣṣ*, 76/2). Some of these peculiarities are no doubt pure spelling archaisms (e.g. the omission of *sh* when = *dh*), others probably represent grammatical deviations (P. Schwarz, in *ZA*, 1915/6, 46-59), not always amenable to interpretation, e.g. تَقَاتَل for *tataḥallat*, which some Readers pronounce *tahattalat*, others *tahattalat*. The diacritic points and vowels differ according to the *biṣṭ* (4/1). Readers differ not only in interpreting the polysyllabic consonantal outline, but also in grammar and pronunciation. Some readings agree, or are said by commentators to agree, with Early Dialects (cf. Hammūda, *al-Kirā'at wa 'l-Lahjāt*, 1948), others resemble the colloquials.

In 1906 K. Vollers (*Volkssprache u. Schriftsprache im alten Arabien*) asserted that these colloquial readings represented the townsmen's speech, Muḥammad, while the *ṣayḥa* of the official, 'canonical' reading systems was the result of a

revision in accordance with bedouin language. This theory found little acceptance; it has partly been revived by P. Kahle (in *Goldstern Memorial Volume*, i, 1948, 263-82, etc.) who sees in a saying of al-Farrā' promising reward to those reciting the K. with *ʿrāb* support for Volz's view that the original Kurʿān had no *ʿrāb*. Fück (*Arabiyya*, 2-3) cites verses which would have been ambiguous without *ʿrāb*; the dialect variants prove that Readers sometimes did not have command of Cl. Ar. or were slovenly. There is thus no proof for a revision by adding *ʿrāb*, though we know of another revision: the introduction of the *hamsa* into a spelling based on its absence. We learn, however, that the *hamsa* sign was added later than the vowels and at first written in a different colour (al-Dānī, al-Nuḥāj [Pretel], 113-4) and there was opposition to it (Tā, ii, 553), while we hear of no hesitation with regard to *ʿrāb*.

As far as we can see, the language of the Kurʿān stands somewhere between the poetical standard *koine* and the Hǫǫǫǫ dialect. A slightly different mixture of the same elements marks the style of the Meccan poet ʿUmar b. al-Rabʿi (P. Schwarz, *Diwan* *U. b. A.R.*, iv, 1909). Even their command of the ʿArabiyya was not perfect, or Muhammad used Meccan dialect, but was influenced by the Cl. Ar. used by the *ādīms* or soothsayers (Brochmann, in *Handb. d. Orient*, iii/23, 216-20) not of the poets whom he detested, or then adopted elements from Muhammad a Meccan variety of Cl. Ar. used perhaps in writing (e.g., commercial accounts and letters) and public speaking. The differences from the poetical language may be partly due to the needs of prose expression; here, too, some of the developments may well antedate Muhammad.

*Bibliography:* Nöldeke, *Sprache d. Korans*, in *Neue Beiträge*, 1-30, trsl. by G. H. Bonquet as *Remarques critiques sur le style et la syntaxe du Coran*, 1953; G. Bergsträsser, *Vernünŕungs- u. Fragepartikeln im K.*, 1914; T. Sakhag, *La mythologie dans le K.*, 1943; Zayāt, *Les néologismes arabes au début de l'islam*; R. Blachère, *Introduction au Coran*, 1947, 156-81; G. E. v. Grunbaum, in *WZKM*, 1937, 29-50.

The language of Ḥadīth, especially in dialogue, often deviates from Cl. Ar., mostly in the direction of colloquial Arabic, but sometimes in that of the Hǫǫǫǫ dialect. In traditions invented about 100 AH such features may show, at least, that at that time a more "popular" variety of Cl. Ar. existed (cf. our remarks above on Christian Arabic), but in fact the earliest recordings of traditions, in Ibn Waḥb and Mālik, are much freer from these peculiarities: unless we assume that they corrected the style of the texts they noted down, we must admit the likelihood that these stylistic artifices were introduced later in order to create "atmosphere". The value of H. for linguistic research is thus a complex problem.

The language of the *Ayyām al-ʿArab*, which were handed down by philologists, shows only few aberrant features (W. Caskel, in *Islamica*, 1931, 43).

Cl. Ar. had an extremely rich vocabulary, due partly to the bedouin's power of observation and partly to poetic exuberance; some of the wealth may be due to dialect mixture. It was not rich in forms or constructions, but sufficiently flexible to survive the adaptation to the needs of a highly urbanised and articulate culture without a disruption of its structure.

Already in Pre-Islamic Arabia, the *koine* had to be learnt, and the men who preserved and taught it, the *rāwīs*, were ready when the need arose for non-Arabs to acquire it under the Umayyads and Abbāsids. Abu ʿI-ʿAswad al-Duʿālī and Khalīl b. Ahmad belonged to that class, but they were soon joined by men who had inherited the habits of thinking taught in the Hellenistic Schools of Rhetoric, and who systematised the traditional lore of the *rāwīs* and applied the science thus created not only to poetry but also to the Kurʿān, harmonising wherever the texts "deviated" from the before turning into the Literary Arabic of the Islamic period. Cl. Ar. thus underwent a process of sifting and systematisation, with subsequent refurbishing of the old sources, poetry and Kurʿān, according to the new stricter standards.

*Bibliography:* (see J. Fück, *Arab. Studien*, in *Europa vom 12. bis ... 19. Jahrh., Beiträge zur Arabistik*, Leipzig 1944, 85-253).

The history of the European study of Arabic is at first one of increasingly effective utilisation of the Arab philologists' work. The first grammars, by Postel (1538) and Erpenius (1613), were based on late school manuals. The first systematically to use older and more advanced Arabic works was S. de Sacy (1810). C. P. Caspari (1848) was based on Zamakhsharī; in the 3rd edition of W. Wright's translation (1896) and reprint (1905) S. de Sacy's emended D. Vernier (1807-2) utilized Sibawayh; M. S. Howell (1880-1911) digested all Arab grammars. In lexicography, the evolution goes from Rapphegius (1813) and Giggeus (1832), based on the *Kawāṣ* of al-Firuzābādī, via Golius (1653), based on the *Saḥāḥ* of al-Jawharī to E. W. Lane's gigantic translation and rearrangement of the *Tā* (1883-91; parts 6-8, ed. by S. Lane Poole, are less useful) and the practical dictionaries of Belot and Hava, based on *Lā*.

In its second stage, European scholarship attempted to improve on the achievements of the Arabs by direct reference to texts and independent analysis. In grammar, the process begins with H. L. Fleischer's notes (S. de Sacy, *Al-Kawāṣ* *Schriften* i/v, 1886-8), further of special importance Th. Nöldeke, *Zur Gramm. d. klassischen Arabisch*, SBdK. Wien, 1897, ii; H. Ruckendorf, *Systematische Verhältnisse d. Arab.*, 1895-8; id., *Arabische Syntax*, 1921; C. Brockelmann, *Grundr. d. vergl. Gramm.*, ii, 1913; M. Gauderoy-Demonbynes and R. Blachère, *Gramm. de l'Arabe Classique*, 1937. In lexicography, the principal fault of the Arab works is that—apart from some specialist vocabularies and al-Fayyūmī's *Muḥāḥ al-Munir*—they largely neglect the post-classical accretions to the language. Texts were utilised already by G. W. Freytag (1830-7) and A. de Biberstein-Kazimirski (1860). In spite of the *Supplement* of R. Dozy (1881), the *Addition* of E. Fagnault (1923), the glossaries added to the Leiden Tabarī edn. (1901) and vols. iv, v, vii of the *BdA*, etc., the vocabulary of medieval Arabic is still far from fully recorded. I. Krachkovsky, Neustadt and Shusser (1947), and H. Wehr (1952) deal with modern Arabic. Yet even for Cl. Ar. there is still much work to be done. Some gaps are closed by glossaries with editions of poets, e.g., that of A. Müller to Nöldeke's *Delectus* etc. (1890). A. A. Bevan to C. J. Lyaal's edn. of the *Mufaḥḥalīyāt* (ii, 1924), and those added by Ch. Lyaal to *ʿAbid* and *ʿAmir b. Tufail* (1913) and F. Krenkow to *Tufail and Terimāḥ* (1927). The Hebrew University of

Jerusalem has prepared a card-index concordance to Pre-Islamic poetry. Publication is planned at Cairo of the lexicon of A. Fischer; the edition by J. Krenkow of Nöldeke's *Belegwörterbuch* (incorporating collections by Bevan and others) began in 1952. No scientific dictionary exists as yet for the Kurʿān, those by F. Dieterici (1881) and Penrice (1873) being unsatisfactory.

(C. RABIN)

#### (a) Early Middle Arabic

The Arabic literary language has been academically standardised since the 3rd/9th and 4th/10th centuries. Its grammar, syntax, vocabulary and literary usages were clearly defined after systematic and laborious research. Since that time and down to the present it has had a continuous and uninterrupted existence. Although every Arabic-speaking country has developed its own colloquial language for everyday life, they have all continued to use the standard literary language for purposes of writing.

The scholars of the early centuries of Islam—who were responsible for that remarkable achievement of linguistic standardisation—made their starting point the historically authentic text of the Kurʿān which described itself as a "Clear Arabic Book", and which was recorded, put together, and officially circulated in the 7th century. Collections of the traditions, epistles and speeches of the Prophet; sayings and speeches of the Caliphs and the famous orators of the early Islamic period, and anthologies of Arabic poetry were also used as references and textual examples of the literary language. But the greatest efforts of the scholars in the 2nd/8th, 3rd/9th and 4th/10th centuries were directed towards the collecting, reviving and verifying what was still kept in the memories of *rāwīs* and bedouins of pre-Islamic literature. The poetry as well as proverbs and speeches of the last hundred and fifty years of the *ḡhāḡiyya* period were collected, studied and commented upon, and were used as explanations of Kurʿānic usages and as proofs of linguistic and literary correctness.

The assumption on which this work of reconstruction and standardisation was built was the identity of pre-Islamic and post-Islamic literary language. This assumption is borne out by many historical and literary data. The Kurʿān claimed to have spoken to the Arabs in their own tongue as was God's way with every Divine mission ("We have never sent any messenger except in his people's tongue"; xiv, 4). When the Arabs heard the Kurʿān they understood it, appreciated its literary excellence, and were greatly struck by its superior eloquence (Ibn Hishām, Cairo 1914, i, 201, 216-7).

Many references could be quoted to strengthen the claim to authenticity of what was retrieved of the *ḡhāḡiyya* poetry, and the reality of its construction, style and language with the text of the Kurʿān and the manner of composition of post-Islamic poetry. The second fact upon which historical references are agreed is that the *ḡhāḡiyya* poetry as it has been collected and handed down to us was recited and appreciated all over Arabia. The poetic language heard in the courts of the *Lakhmids* in al-Iraq and the *Ghassanids* in Syria was the same as that heard and applauded in Najd and Ḥijāz.

Claims for priority in evolving the literary language were advanced for different tribes. A statement often quoted in Islamic books advances the theory that pre-Islamic poetry began in Rabīʿa with Muḥallī; thus shifted to *Kays* where the two Nabighas and

Zuhayr flourished, and finally reached Tamīm where it remained till the days of Islam (al-Muḥḡir, ii, 476, 477). Light on the subject may be sought in the many attempts at explaining the tradition "The Kurʿān was revealed in seven *ʿarab* (tongues or languages)". According to Ibn ʿAbbās those were the seven dialects of Upper Ḥawāḡin and Lower Tamīm. This may be taken to mean that these seven dialects, being the clearest and the most eloquent, contributed largely to the formation of the literary language (al-Suyūṡī, al-Ḥibās, Cairo 1935, 47). Al-Tabarī raises the question as to whether the Kurʿān was revealed in all or some only of the Arab dialects, and uses the tradition referred to above to argue that the Kurʿān was revealed in some only (seven) as the Arab dialects were too numerous to count. (*Tafsīr*, Cairo 1323, i, 13).

The second stage in the development and spread of literary Arabic begins with the rise of Islam. The new religion chose to make its challenge to the poetically-minded Arabs through a literary composition, the new Holy Book, by its excellence, proved to the Arabs as miraculous as the turning of a stick into a snake, or the healing of the sick was to former peoples. The whole revolution in the life, belief and practical philosophy of the Arabs was embodied in the chapters of this new Book. From the beginning of the revelation it was being learnt by heart by the Muslims and recorded in writing by the special scribes employed by the Prophet (al-ḡhāḡiyyā, al-Wuḡarā, s. ʿI-Kuṡṡib, ed. Sakā and others, Cairo 1938).

The general practice was that a Muslim would learn a few verses (ten for example) and would not exceed them until he knew their meaning and followed their precepts in practical life (al-Tabarī, *Djāmiʿ al-Bayān*, i, 27, 28). It was not long before a group of companions (e.g. Ibn ʿAbbās, Ibn Maʿūd, ʿIkrima, and ʿAlī) became specialists in the interpretation of the Kurʿānic text. Thus a new branch of literary and linguistic learning started which became later an important factor in the standardisation of literary Arabic. But there was another important aspect of Kurʿānic reading which had some bearing on the development of literary Arabic, namely the variants which caused concern to many a faithful believer.

The danger of this variation in the reading of the Kurʿānic text was removed only by the preparation of standard copies at the command of the third Caliph, ʿUḡmān (see *Kurʿān*).

Thus the first and foremost Islamic literary work in the Arabic language became the most authentic model for literary usage. Wherever the Islamic faith went in its rapid spread, it carried with it this religious and literary constitution. Every believer learnt part or all of it by heart, and was influenced in his literary activities by its diction and modes of expression.

Many of the variant readings of the Kurʿān, however, were preserved to us through the *Kirāʿat* literature and have proved valuable in the reconstruction of Arabic dialects.

The Kurʿān had, yet, another aspect in which it influenced the course of the literary language, namely its unsurpassable excellence. The literary Arab celebrities admitted impotence before its challenge, and Muslims down the ages looked up to it as their literary guide and linguistic authority. The study of the secrets of Kurʿānic eloquence (*ʿIḡdā*) has given Arab literary criticism a special approach and a wealth of material (see M. Khalā-

fallah, *Qur'anic Studies as an Important Factor in the Development of Arabic Literary Criticism, Faculty of Arts Bulletin*, Alexandria 1952).

During the Prophet's life-time and some time after, poetical activities among the Arabs gave way to the propagation of the new faith by word and by sword. Some devout Muslims found better occupation in learning the Qur'ān and pondering on the beauty of its style, others joined the invading Muslim armies in Syria, 'Irāk and Persia. The art of public speaking, for a period, took the place of the art of poetry. The literary language now was turning more and more into a language of religious guidance, moral uplifting and legislation for the new order. New shades of meaning and literary usages began to develop within the framework of the pre-Islamic literary language. "The Arabs in their *ḡhāḡiyya* days", says Ibn Fāris, "had inherited from their ancestors a heritage of dialects, literature, rituals and sacrificial practices. But when Islam came conditions changed, religious beliefs were discarded, practices abolished, some linguistic terms were shifted from one usage to another, because of matters added, commandments imposed, and rules established". Examples of these changes are given by al-Suyūṭī, Ibn al-Khalawāṭi, al-Tha'ālibī and Ibn Durayd, see, *al-Mashir*, i, 294, 295, 296, 298, 301, 302).

Thus the second stage in the development of the Arabic literary language has brought in new important factors, religious and social, and introduced many necessary linguistic changes. But that was not all. The scene was considerably widening and shifting. The Arabs were no longer contained in their Peninsula, but were spreading out with the rapidly sweeping conquests of Islam. Wherever they went they carried with them not only their new Arabic Holy Book with its polished and appealing language, but they carried also their tribal linguistic characteristics, and their traditionally inherited literature (poetry, proverbs, narratives, and oratorical speeches) which they stored in their memories.

These conquests were an important factor in the process of Arab linguistic unification. Several of the big invading armies were composed of mixtures of tribes, many of whom were accompanied by their women and children. Thus a good deal of inter-mixing and intermarriage between the tribes took place in the conquered cities. Newly established settlements—such as *al-Kūfa*—had in them elements from North as well as from South-Arabia, and from Hīdžāz as well as from Naḡd.

The Arabs were now passing from the tribal stage to the stage of cities and countries. Their social units were no longer tribal, but urban, as in Basra or Kūfa, and regional, as in Syria or Egypt. This new regrouping of the Arabs must have reduced considerably the differences of the dialects, and reinforced the unifying processes already begun in pre-Islamic times.

With those conquests, Arabic was now spreading to new non-Arab territories. Its fortunes in the different units of the vast Islamic empire were varied. In some countries like Syria and Egypt it became—and is still at the present—the national language of the country. In others like Persia it remained for a few centuries the language of culture, but with time it gave way to the native Persian language. The story of this spread in its early stages, and the emergence of the colloquial languages in the Arabic-speaking countries is a long and interesting one. (See, S. Fayyāl, *al-Muḡallamaṭ*

*al-Islamiyya*, Cairo 1952, Vol. II). The spread and establishment of Arabic in some countries as a national language was aided by various factors. In Syria Arab elements had already settled, Arabic poetry had been welcomed at the ḡhassānids' courts, and many of the inhabitants spoke Aramaic, a kindred language. In 'Irāk, too, Arab tribes had already settled from pre-Islamic times, and an Arab state had established itself in al-Hira. In those regions of 'Irāk where Persian was prevalent, the long-established neighbourhood of Arabs and Persians paved the way for the conquering language. Some Persian kings—such as Bahānūr Gūr—are said to have been brought up in the Arabic courts and to have composed Arabic poetry. H. C. Wooler in *Language in History and Politics* states that Persian was influenced in the seventh century A.D. by a strong Aramaic current which prepared the way for the spread of Arabic. Another form of that influence came through Syriac which occupied an important position as a cultural medium in Persia.

In Egypt, Greek had been, since Ptolemaic times, the language of culture, politics, administration, and later of the Church, while Coptic was the vehicle for daily intercourse among the population. Yet the adoption of classical Arabic as a state language, and of colloquial Arabic as a conversational medium among the Egyptians was accomplished within a century after the conquest. Authorities state that Coptic disappeared almost completely after that period from most parts of Egypt, and could only be found among the scholars who specialised in studying it (A. Amin, *Faḡir al-Islām*, 259). When Islam entered North Africa it found three languages there; Latin, which was the language of administration and culture; a mixed language composed of Greek, Latin and semitic elements which was bequeathed by Carthage; and Berber in the interior of the country. Arabic became the dominant language in the cities through the spread of the new religion and the arrival of wave after wave of Arab settlers. The Berber language, however resisted the spread of Arabic in its strongholds in the interior.

These conquests, then acted as carriers of Arabic both as a literary and as a colloquial language in many different lands. As many Arabs migrated to these new territories, taking their language with them, so did great numbers of non-Arab migrants to the opposite direction; many as slaves, migrants and clients (*mawālī*), and they settled in the big Arab centres of Mecca, Medina, al-Basra and al-Kūfa. They naturally adopted Arabic as their medium of intercourse, and some of them mastered literary Arabic and became famous writers and poets. Some of the Persian *mawālī* found in the two capitals of Hīdžāz a fertile soil for their music and singing. Thus a movement of interaction between Arabs and non-Arabs was taking place all through the Islamic empire during the 1st/7th century. This movement produced a great civilisation which became known as Arab-Islamic civilisation. The contribution of the conquered races to this civilisation consisted in culture, learning, and administration, while the purely Arabian contribution lay in the linguistic and the religious fields. The ancient Aramaic and Iranian cultures, under the aegis of the Caliphate, were woven into a new pattern and expressed through the medium of the Arabic tongue. Arabic was thus invigorated by new elements of ideas and images, stimulated by fresh conceptions of excellence and eloquence, and enriched even with a new vocabulary. Persians, in particular, was responsible for the introduction

of new terms in the fields of luxury, ornaments, handicrafts, fine arts, government administration, and public registers (A. Amin, *Faḡir al-Islām*, Section iii). (M. KHALAFALLAH)

### (3) Middle Arabic

The creation of an Arabic Empire stretching at the height of its power from the Pyrenees and the Atlantic to the shores of the Sīr Daryā and the Indus had far-reaching consequences on the development of the Arabic language. Arabic, hitherto spoken in Arabia proper and its immediate neighbourhood, went with the Muslim armies to the farthest ends of the far-flung empire. Life in camp and on expedition brought men of different tribes into close contact and the vicinity of the tribal quarters (*ahḡāṭ*) in the great cities soon led to a levelling of their dialects. In addition to these dialects, some forms of interdialectal speech were in existence, notably the language of oratory used by the tribal spokesmen (*ahḡāṭ*) in his harangues, and the poetical language, both of which had been cultivated in pre-Islamic days and were now enriched by the language of the Qur'ān. The poetical language was characterised by certain peculiarities of metre and rhyme, vocabulary and phraseology, figures of speech and imagery inherited from the ancient Arabs, but otherwise it was presumably still close to the language of everyday conversation; verses were still improvised on the spur of the moment, nor did their understanding require any sort of education on the part of their hearers.

It is only in the latter half of the first century that we find new linguistic traits in the love-poetry of the Hīdžāz. These poets, whose surroundings gave them leisure to reflect upon their emotional experiences, felt the conventions of bedouin poetry inadequate for their purposes and began to use the conversational style of the new aristocracy, which was modified by the Hīdžāz dialect as well as by the exigencies of settled city-life (see Paul Schwarz, *Der Dīwan des 'Uṭayyib b. al-Hakīm*, iv, 109, pp. 164-172).

In the new provinces—except perhaps Syria—the Arabs were considerably outnumbered by the indigenous population who continued to use their mother-tongues, but had in their dealings with government to adapt themselves to the idiom of the conquerors, though at the beginning they used some sort of makeshift language. Then there were those non-Arabs who had been taken prisoner and were brought into the houses and harems of their Arab masters. They quickly adopted Arabic and as a rule embraced Islam. Many of them or their descendants were freed from bondage and played as freedmen (*mawālī*) an important rôle in the economic life of the empire, especially in the cities where they formed the bulk of the population. They spoke Arabic with many alterations, due partly to the influence of the language of their forebears, partly to the dialect of their Arab patrons and neighbours, and last but not least to the rapid changes in their economic and social environment. These widely differing idioms were the forerunners of the Middle-Arabic local dialects, which were spoken by the lower classes in the towns of the various provinces. They were characterised by a simplified pronunciation; the glottal stop was dropped; *h*, voiced in bedouin speech became voiceless; emphatic and non-emphatic sounds and also *ḡīd* and *ḡā'* were confused; in the areas where Aramaic was formerly dominant, the interdialectal spirants were replaced by the corresponding occlusives. But the most telling feature

of Middle Arabic was the weakening and loss of the short final vowels and along with it the abandonment of the desinential inflexion (*ʿarab*), which had momentous consequences for the structure of the language (J. Cantin, *Bulletin de la société linguistique*, 1952, 112). The old system of inflexion fell into disuse; cases, status, moods were no longer distinguished. Their functions had to be taken over by word order, periphrastic expressions, and other means common in languages of an analytical type. Middle-Arabic was also adopted by the Christians of Palestine, Syria, and Mesopotamia and by the oriental Jews, and from the 2nd/8th century onwards used by them for literary purposes, whilst with the Arab Muslims the classical language remained the proper medium for literary activities. In this appreciation of the language of the Qur'ān and of the ancient Arabic poetry they were followed by the *mawālī*, who from the first tried to conform to the higher standards of Arabic and were already in the 1st/7th century contributing to Arabic poetry (e.g. Ziyād al-Aḡḡānī). By the end of the 1st/7th century the *mawālī* felt the necessity for some sort of training in the classical language, thus giving an impetus to the beginnings of grammatical studies, whilst the Arabs grew apprehensive of unidiomatic speech and realised the necessity for preserving the purity of their language.

Once taken up by the *mawālī*, the classical language survived the downfall of the Umayyad dynasty and continued to be the medium of Islamic culture throughout the Muslim world, not only in those provinces where Arabic was dominant or gaining ground but even in countries where it was never to gain a firm footing. In the schools of Basra and Kūfa the rules of the "Arabiyya" were standardised according to the idioms of those bedouins who were credited with the purest language. This standard language was used at court and in good society, and to master it was one of the first accomplishments of a man of letters or learning. Its application to literary purposes shows a great variety of types. All narratives referring to Arabic and bedouin life (e.g. the *amḡāl al-'Arab*, *ayyām al-'Arab*, but also the *maḡāzī* and the *ṣīra*) preserved to some extent the uncouth originality and artless naïveté of the old language. In the literature of *ḡadīḡ* (traditions) and *ḡāḡ* (jurisprudence) the social and economic changes left their marks on the vocabulary, phraseology, and even morphology. Of a quite different type is the language of the secular prose-writers of the early 'Abbasid period (e.g. Ibn al-Mukāḡḡa). Here the changes in Muslim society brought about by the ascendancy of the non-Arab races, the pre-Islamic heritage and the revival of Oriental Hellenism, came full aflour. It is polished, lucid, flexible and well adapted to the expression of thought in a precise manner; its vocabulary, though lacking the exuberant abundance of the bedouin language (as witnessed e.g. by the *urḡḡāṭ*-poetry), is rich and expressive, and its grammatical structure free from the cumbersome overgrowth of nominal and verbal forms so conspicuous in the bedouin language. The same simplicity and smoothness is found also in the verses of the so-called "modern" (*muḡallath*) poets of the same period (e.g. Abū 'l-'Aḡḡiyya), although in poetry as a rule the imitation of the old patterns has always been closest.

On the language of every-day life and the dialects spoken by the different strata of Muslim society during this period very little is known. How complicated the linguistic situation had grown by the

end of the 20th century we can gather from occasional remarks of al-Dhābi (165-235) not only about the correct language of true bedouins, its gradual corruption through the vicinity of towns and intercourse with the peasantry, about the patois of the lower orders, the cant of pedlars, the argot of beggars, the technical terms of trades and professions, but also about mispronunciation and faulty speech on the one hand and euphemism and mannerism on the other.

These divergent tendencies soon affected the written language. The translators and scientists who made the legacy of Greek philosophy, medicine, mathematics, and other sciences accessible to the Muslim world, enriched the vocabulary considerably by innumerable technical terms. But they were often Christians (e.g. Hunayn b. Ishāq) or Jews, and had neither a good grounding in Arabic grammar nor any aptitude for literary perfection and accomplished style. Their translations, therefore, show as a rule some Middle Arabic features (see G. Bergsträsser, *Hunayn b. Ishāq und seine Schule*, Leiden 1913, 28-35).

The decline of the 'Abbasid power and the ascendancy of the Turkish soldiery in the course of the 10th century led to a general lowering of the standards of education; hence the court-language no longer preserved its former purity but became marred by vulgarisms. About the year 900/12 the classical language ceased to be used in the conversation of good society, in the law-courts and colleges, and froze into a literary idiom; to stick to the rules of the *ḥudūd* was considered a sign of pedantry and affectation. At the same time the former enthusiasm for the bedouins began to wane, and their language—the dialects of which had in the meantime undergone many changes—was no longer looked upon as the best representative of Arabic speech. The classical language was spoken only on solemn occasions, otherwise its use was restricted to the domain of literature. Here its application was mainly a problem of style. Henceforward the term 'arabiyya meant an unalterable system of words, phrases, grammatical forms and syntactical structures, which was strictly regulated by the rules of grammarians and lexicographers and could not—at least theoretically—be improved upon. In applying this artistic language to his theme—which in its turn he had to select from a limited number of topics (*ma'ād*)—an author had a choice between different styles, differing in the employment of rhyme, rhythm, figures of speech and other embellishments. But once he had chosen his theme and its style he was committed to the traditional patterns (see G. E. von Grunebaum, *Die Ästhetik des Islams*, *Comparative Literature*, 1932, 325-40). It is for this reason that a writer had not only to possess a thorough knowledge of the intricacies of Arabic grammar and lexicography, but had also to study and learn by heart the best pieces of classical prose and poetry (though the question as to what authors were of classical rank was often hotly debated). In these circumstances the 'arabiyya was bound to become a learned medium, and its study was cultivated by Arabs and non-Arabs alike. The non-Arab races contributed even some of the best prose-writers (e.g. al-Ḥāḥī 'āzami, and Badī' al-Zamān) and philologists (e.g. Abū Ḥilāl al-ʿAskarī). High literature was the privilege of an élite and required sometimes a commentary either by the author (e.g. Abū 'Alā' al-Maʿarrī) or by his admirers (e.g. al-Mutanabbī) in order that it might

be understood by the hearers. Occasionally vulgarisms were used for artistic purposes (in *ṣawāḥib al-ṣaḥāb*, *ṣaḥāb*) and even the argot of the beggars and swindlers was made use of by Abū Ḍalaf in his *al-Kaṣida al-Sāsaniyya*; but on the whole the vocabulary of high literature was choice and exquisite.

These high standards, however, were required in high poetry and ornate prose only. In the other branches of literature there is a great variety in language and style. Often it is only the preface which is written in rhymed prose and in choice wording, whilst the bulk of the book betrays the Middle-Arabic character of the author's speech. In books written for practical purposes the technical terms of the subject had to be used. If the author had no proper knowledge of the grammar, faulty speech was unavoidable; the worst example is perhaps the *Qaṣṣa 'Adībiyya al-Hind* by Buzurg b. Shahrīyār al-Rāmhurmūzī written after 342/953 (*Le Livre des Merveilles de l'Inde*, éd. par P. A. van der Lith et L. M. Devic, Leiden 1893-6). It is full of vulgarisms (see de Goeje's remarks in van der Lith's edition, 205), some of which are common in Middle-Arabic whilst others are probably due to the author's non-Arab mother-tongue and his profession.

These disrupting tendencies were fostered by the disintegration of the 'Abbasid empire. Already in 375/985 al-Maḥdī could in his description of the Muslim world attempt to characterise each country by the peculiarities of its language. It appears from his account that in his days in all Arabic-speaking countries the conversational language of the upper classes had suffered considerably under the inroads of local dialects and that the most correct Arabic was heard in the Eastern (Iranian) countries where much attention was paid to the study of grammar.

Already in the days of al-Maḥdī the increasing independence of the Sāmānid dynasty led to the revival of New-Persian literature, which had momentous consequences on the position of Arabic as the Islamic language in the Eastern regions. Outside the Arabic-speaking world, Arabic was in the dominions of the Sālsūks gradually superseded by New-Persian not only as the language of court, society, diplomacy and administration, but also in poetry, belles-lettres and other branches of secular—and later on even religious—literature. At the same time the rise of independent dynasties in the Arabic-speaking countries gave a new impetus to the development of the dialects spoken in their dominions and increased the already existing tension between literary language and colloquial. Thus the picture of the Arabic language as reflected in the literature of the Sālsūk period (311/1118-1218 centuries) is of a bewildering complexity. There are masterpieces of ornate prose, written in a faultless style like the *Maknāt* of al-Ḥarfī (d. 516/1122), which could be appreciated only by a small group of connoisseurs. In high poetry the imitation of the time-honoured patterns continued, but some poets succeeded in modernising the poetical diction by adapting it to the conversational style of their contemporaries, e.g. Ḥabīb al-Dīn Zuhayr (d. 656/1253). Others even made use of the local dialects, e.g. Ibn Kuzmān (d. 555/1160) and Ibn Dāniyāl (d. 693/1294). Usāma b. Munqidh (d. 584/1188) composed verses in the conventional fashion, but his famous memoirs are written in an unpretentious style which savours of the dialect of Syria. Some grammarians grew lenient in admitting vulgarisms which were formerly excluded from correct speech,

whilst others, like Ibn Yaʿqūb (d. 643/1245) (see G. Jahn in the preface to his edition, I, 10-12) wrote in a slovenly style, without regard for the rules of grammar they were expounding. In ordinary prose, offences against grammar are rather the rule than the exception, as witnessed by the works of Yāqūt (d. 686/1299) (see Wustenfeld in vol. v, 58-65 of his edition) and al-Kawfī (d. 682/1283) (see Wustenfeld in vol. II, 15 of his edition). Works written outside the Arabic-speaking countries sometimes betray the fact that their authors had not a full command over the language; Persian (and later Turkish) writers e.g. Ibn al-Muḍāwirī (d. 690/1291) (see Löfgren, *Arab. Texte zur Kenntnis der Stadt Aden im Mittelalter*, II/2, 21) were apt to disregard the differences of gender, the concord of gender and number, and the rules concerning the article. There are further works of a popular character, such as the epic romances (e.g. the *Sirat 'Antar*, *Sirat Banī Ḥilāl*), the *Maḥāḥil*-legends (e.g. by Abū 'I-Ḥasan al-Bakrī, c. 693/1294) and the mystic poems of the religious orders; they were destined for the edification and entertainment of the middle and lower classes and were therefore written in a rather vulgar language and style. Similar vulgarisms are found in the writings of the *Druses* (see de Sacy, *Chrestomathie Arabe* II, 236, n. 9, etc.) and the religious poetry of the *Yāzīdīs* (see R. Frank, *Scheich 'Adī*, 107 ff.). Naturally the writers of other denominations, as e.g. the Christians, the Jews (see J. Friedländer, *Der Sprachgebrauch der Maimonides*, I, Frankfurt a.M. 1902) and the Samaritans (see Abū 'I-Ḥasan al-Bakrī, *Samariyya*, ed. E. Vilmar 1865) had no part in the literary traditions of the Arabs, though men like Maimonides were otherwise deeply imbued with Islamic culture. But many more inquiries into the language of individual authors will have to be made before the development of literary Arabic in these centuries can be elucidated. For this studies a perusal of autographs or at least of contemporary manuscripts will be necessary, for our editions are as likely as not 'corrected' by oriental printers (see August Müller in the preface to his *Ibn Abī Uṣaybi'a*, Königsberg 1864, VII-VIII) or European editors (see S. L. Skoos in the preface to his edition of al-Fāsi, *Ḍiḍmā* al-*al-Fāsi*, I, 1936, CXL-CXLII).

After the devastation of the Asiatic countries—and later on even religious—literature. At the same time the rise of independent dynasties in the Arabic-speaking countries gave a new impetus to the development of the dialects spoken in their dominions and increased the already existing tension between literary language and colloquial. Thus the picture of the Arabic language as reflected in the literature of the Sālsūk period (311/1118-1218 centuries) is of a bewildering complexity. There are masterpieces of ornate prose, written in a faultless style like the *Maknāt* of al-Ḥarfī (d. 516/1122), which could be appreciated only by a small group of connoisseurs. In high poetry the imitation of the time-honoured patterns continued, but some poets succeeded in modernising the poetical diction by adapting it to the conversational style of their contemporaries, e.g. Ḥabīb al-Dīn Zuhayr (d. 656/1253). Others even made use of the local dialects, e.g. Ibn Kuzmān (d. 555/1160) and Ibn Dāniyāl (d. 693/1294). Usāma b. Munqidh (d. 584/1188) composed verses in the conventional fashion, but his famous memoirs are written in an unpretentious style which savours of the dialect of Syria. Some grammarians grew lenient in admitting vulgarisms which were formerly excluded from correct speech,

The great changes which took place in the world from the end of the 9th/13th century deeply affected

literary Arabic. After the capture of Granada in 897/1492 and the expulsion of the Moors the Arabic language vanished from the Iberian peninsula. In the Maghrib, where the classical language had always stood in sharp contrast to the local dialects, there sprang from the latter a new poetical language, the so-called *malūn*, which since the 10th/16th century has enjoyed an ever-increasing popularity in Morocco. The other Arabic-speaking countries were sooner or later conquered by the Ottoman Sultans who were not primarily concerned with the cultivation of the Arabic language and literature. Even in Egypt, hitherto the mainstay of Arabic culture, literary activity sank to its lowest ebb. Literary Arabic was the prerogative of an élite. The dialect was occasionally utilised for literary purposes (e.g. by al-Shirbīnī, c. 1098/1687, in his *Ḥaṣṣ al-Buḥārī*). Already in the 10th/16th century poems were composed in the vernacular (see M. U. Bouriant, *Chansons populaires arabes*, Paris 1891, and Fuad Hasanain Ali, *Aegyptische Volkslieder*, I, 1939). In Syria, the Maronite archbishop of Aleppo, Germanus Farḥāt (s.d. c. 1145/1732) did much to revive the study of Arabic grammar, lexicology and rhetoric amongst his countrymen. Outside the Arabic countries Arabic continued to be used by scholars, especially in theology, jurisprudence and kindred subjects; but though its sphere comprised by now parts of North and East Africa, Zanzibar, Malaya, and the Indonesian Archipelago, yet it was less influential than in the preceding period. This period of stagnation and decay lasted till the beginning of the 13th/19th century.

**Bibliography:** References are already given in the article. Many observations on the classical and postclassical usage are found in the prefaces to editions of Arabic texts, in grammars and dictionaries and especially in H. L. Fleischer, *Kleinere Schriften*, I-III, Leipzig 1885-8; Th. Nöldeke, *Zur Grammatik des klassischen Arabisch*, Wien 1896; see also J. Fück, *Arabiya, Untersuchungen zur arabischen Sprach- und Stilgeschichte*, Berlin 1950 (Arabic translation by 'Abd al-Ḥalīm al-Nadīdjār, Cairo 1951; French translation by C. Denizeau, 1955). (J. W. Fück)

#### (4) Modern written Arabic

The intrusion of Europe into the range of vision of the Arab world begins with Napoleon's expedition to Egypt in 1798. The adoption of innumerable elements of Western civilisation had far-reaching effects on the written language. This began already with Muḥammad 'Alī's programme of reform which set out deliberately to take over Western achievements and was focussed on France, which everywhere remained too modest until after the first World War. As a result of the sending of student missions to study in France, the formation of schools on European lines and the foundation of an Arabic press, and, above all, of the translation of numerous European books, the necessity of finding expressions for a host of foreign ideas was felt first in Egypt and then too in other countries—foreign ideas for which at first only foreign words were available. Even the works of early translators in Egypt, of whom the most notable was al-Taḥṭāwī (1801-1873; cf. Brockelmann, II 481, S II 731, W. Braune in *MSOS XXXVI* 2, 119-125, J. Heyworth-Dunne in *BSOS IX* 961-7, N 399-413) already contain, side by side with numerous foreign words taken over indiscriminately, pure Arabic neologisms to express Western concepts.

But a real counter-movement against the excessive use of foreign words did not begin until the second half of the 19th century. The question of how to meet the ever-growing need for new expressions in Arabic became one of the major problems of intellectual life. The impact of Europe in itself awoke among the Arabs, after an interval of centuries, reconsideration of their own linguistic and literary tradition. The revival of the old philological learning was facilitated by the printing of many old literary works and especially of native dictionaries and grammars. The dogma that the 'Arabiyya as the oldest literary form of the language was better and more 'correct' than any later forms and that it must therefore be the highest authority for linguistic correctness at the present day too became the guiding idea for the whole language movement, even if there were voices in opposition. Thus the old purism was revived again, and with it the tendency artificially to control the development of the language, with recourse wherever possible to the old model language. This movement started in the Syrian-Lebanese area. Outstanding among the earlier language critics was Ibrahim al-Yāzīdī (1847-1906; Brockelmann, S II 766), who criticised the language of the journalists of his time in *Lughat al-Qur'ān* (published in book form, Cairo 1919). The inevitable modernisation and expansion of the vocabulary of the 'Arabiyya ought, according to the wishes of the purists, to be effected not by drawing to the greatest possible extent on the wealth of words, roots and forms in the 'Arabiyya. The question of how to proceed in detail and how far European words should be employed has been actively discussed again and again. In innumerable essays in nearly all periodicals and in many separate publications right up to the present moment, immense quantities of neologisms have been proposed, although it must be said that only a small percentage pass into general usage. Extending far beyond the circle of professional philologists, this movement has also affected large circles of the general educated public. The struggle with technical terms (*muṣṭalahāt*) is a difficult problem for every specialist in any technical or scientific branch and gives many of them the impetus themselves to become linguistically creative and to publish their own technical terms. The literature on this subject written in Arabic is very vast and scattered, and cannot be treated here more than generally. There are large collections of the terminology for many special fields (Ahmed 'Isā, *Mu'djam Asmā' al-Nabīl*, Cairo 1930; Amin al-Ma'nūf, *Mu'djam al-Hayawān*, Cairo 1932; Muṣṭafā al-Shāhīd, *Mu'djam al-ʿIlm*, Cairo 1932; Danasus 1933; M. Ashraf, *English-Arabic Dictionary of Medicine, Biology and Allied Sciences*, 2nd ed., Cairo 1940—to mention only a few). But such works do not confine themselves to listing expressions which are already in current use; they also introduce suggestions of their own; they cannot therefore be considered as descriptive scientific material but are contributions to the establishment of terminology. The idea of coordinating these efforts and of establishing language academies for the standardisation of vocabulary dates from the 80's of the last century (cf. Braune Lc. 735). After several unsuccessful attempts, a scientific academy (*al-Majma' al-ʿIlm al-ʿArabī*) was founded in Damascus in 1919, which also devoted itself to the reform of the language and published many contributions to the language problem in its review, which first appeared in 1921. In 1932 the Egyptian *Royal Academy of*

the Arabic Language (now *Majma' al-Lughat al-ʿArabiyya*) came into existence. Apart from the study of the old language and literature its main concern is the regulation and expansion of the modern vocabulary. In its review (*Majma' al-Lughat al-ʿArabiyya*, Vol. I-VII, 1934-1951) and since 1942 in a sequence of special publications, the use of a great many *muṣṭalahāt* has been recommended, so far without the anticipated and desired effect being achieved. The official principles on which the Academy works can also be gathered from the minutes of meetings (*Mahādīr*, since 1936). Even in Iraq, where formerly the review *Lughat al-ʿArabī* (Vol. I-IX, 1917-1921) of F. Anstase al-Karmālī was the leading organ of the purist trend, an Academy was formed in 1947 (*al-Majma' al-ʿIlm al-ʿIrāqī*) which, *inter alia*, is also concerned with the problems of terminology. The real difficulty, however, with all these official attempts at creating standard terminologies for technical and scientific fields lies not so much in coining new expressions, as in securing their general use among the specialists concerned. Although the possibility of popularising newly-coined technical terms in specialist circles has often been overestimated, the practical effect of the purist movement on actual language usage cannot be denied. In many individual cases one can observe how artificially created words have quickly entered into the general stock of words of journalists and writers. The efforts of the purists, however, are concentrated almost entirely on the isolated word, that is, on the extrinsic elements of the language.

Turning to the linguistic facts, the striking feature is the infiltration of English and French phraseology, translated into Arabic (so-called loan translation or 'calques') and the change in the inner form. In particular the language of daily communication (press and radio) and of writers with little or no classical education has a distinct European touch. Phraseology and style are far more difficult to check than terminology. This development is therefore inevitable and must be accepted as a fact. In the field of *belles lettres*, on the other hand, we find in many cases a strong attachment to tradition. Authors with a classical education are still today able to keep close to the ideal of the 'Arabiyya in their style; they sometimes make use of uncommon words and phrases of the old literature and especially of the Qur'ān as artistic stylistic devices. But no-one can completely escape the influence of European phraseology.

Grammar, on the other hand, which can be defined in rules and which is much more subject to conscious control, gives quite a different picture. The written language has remained untouched by the sound-change, and the morphology has remained constant from the earliest times till the present day; the same is true of the syntax at least in its basic features. Here the conservative attachment to the past has proved itself astonishingly effective. In vocabulary a considerable basic stock has remained alive since the earliest times. Post-classical words, including those from the later Middle Ages, form a further element of the modern vocabulary. A host of generally accepted expressions are available to express ideas which come from Europe, most of which are in full accordance with the above-mentioned wishes of the purists. Forgotten words of the 'Arabiyya have been revived and are used without formal alteration but with meanings more or less modified (e.g. *ḥīṭ* = train of camels drawn up one

behind the other > railway train); words of the 'Arabiyya still in use have been given a new additional meaning (e.g. *ḥark* = lightning > telegraph); sometimes the change of meaning is made by analogy with the foreign word, which served as model (e.g. *ṣunḍūḥ* = box > cash-box, cash office, after the French 'caisse'). Moreover a large number of completely new nouns formed from old roots with the help of the Arabic nominal forms (most frequent: *maṣāl*, -a, *maṣāl*, -a, *faṣāl*, -a) have passed into general usage (e.g. *maṣāl* = museum, *maṣā'il* = jet-plane); likewise verbal nouns and participial forms are used for new expressions (e.g. *idhā'a* = broadcasting, *muḥarrir* = motor). The *nishā'*-ending is widely employed in the formation of new words (e.g. *ishārāh* = socialist, *ishārāhiyya* = socialism); by the expansion of its use many new adjectives have been derived from nouns, and with them European compounds can easily be reproduced (e.g. *al-ḥarīd al-djāwī* = airmail); genuine compound forms are still confined to those with the negation *lā* (e.g. *lā-sihl* = wireless). Until the first World War the majority of foreign words were borrowed from French, others from Italian. English became an influence after the first World War, especially in Egypt and Iraq. The decrease of foreign words in Arabic is a considerable achievement of purist efforts. Words of Turkish origin have disappeared almost entirely in the last decades. We may consider as loan-words such as correspond to an Arabic nominal form or can easily be assimilated to it, and for which broken plurals are formed (e.g. *bank-bawik*, *film-afim*, *duḥūr-dahīra*) and such as are assimilated through the addition of the ending -*riyya* which serves as abstract ending (*dimāḥiyya* = democracy).

The numerous accepted new words are still not sufficient. Very specialised scientific and technical details to the present day still cannot be expressed in Arabic in a form understood by all concerned. The anarchy in the field of specialised terminology even within one country is far from being at an end. The situation is aggravated by the fact that Greek and Latin technical terms which so often help specialists towards an international understanding even on complicated matters, are translated into Arabic. There are often several terms in circulation for the same thing; the same terms may occur where the same term means different things to different authors. Nevertheless the standardisation of technical terminology which is the basic problem of present-day Arabic has undoubtedly made considerable progress and thus we can also expect further favourable developments in the future.

The fact that there exists a basically uniform written language in all Arabic countries from Iraq to Morocco is of great value, ideal and practical, to the Arabic peoples. It is the symbol of their old cultural unity and their political union in the present day. Thus we can conclude that there is no reason to anticipate that the written language will anywhere be replaced by a local dialect and forced out of practical use.

## (ii) The Vernaculars

### (1) General survey

#### AREA IN WHICH ARABIC IS USED

Arabic is spoken to-day by about 60 million people ranging from Hitler Asia to North Africa, from the Persian Gulf to the Atlantic Ocean; these regions are: Arabia with the Fertile Crescent up to the Persian and Turkish frontiers; Egypt and most of the Sudan (from the Nile to the Chad); Tripolitania; Tunisia, Algeria and Morocco; Mauritania, French West Sudan, and the northern Sahara. In addition to this continuous geographical area, there exist isolated pockets; in Africa: Djibouti and Zanzibar; in Europe: Malta (formerly with the Balearic Is., Sicily, Pantellaria up to the 18th century), Spain (up to the 15th century [see AL-ANDALUS]). Finally, attention should be drawn to the Syro-Lebanese diaspora in North and South America and French West Africa.

Within the limits of the geographical area mentioned above, Arabic has found itself in contact with a series of foreign languages which it has tended to supplant, although some have still retained great vitality side by side with Arabic (e.g. Berber), but it is characteristic that Arabic has only succeeded in replacing indigenous languages when the latter have possessed structural features akin to its own; this has been the case in Egypt, where Coptic ceased to be spoken in the Middle Ages, while the Indo-European sphere has successfully resisted it, despite the implantation of Islam.

#### ORIGIN

The Arabic spoken to-day is derived basically from old dialects of Central and Northern Arabia. To the limited extent to which one can form an idea of them, these dialects, although differentiated, do not seem to have presented any essential points of difference, because the classical philologists, who remain the most important source, only note variations in pronunciation and vocabulary, while the structure of the languages seems to have been homogeneous. The same philologists, using *faṣḥa* [q.v.] as their criterion, divided the old dialects into three main groups: those of the Hijāz, considered the purest, those of the Naǧd, and finally those of the neighbouring tribes, considered to be contaminated to a greater extent by other Semitic or by non-Semitic languages. This distinction, always a fine one, is no longer tenable to-day, because the dialects concerned have developed markedly. Of all the classifications worthy of consideration, the most convenient, although it is based on a geographical division rather than on linguistic criteria (which are: the formation of the 3rd person 's, and pl. of the imperfect of the verb, and the treatment of short vowels in open syllables), consists of distinguishing two major groups, the

first (see below, section II) comprising the Eastern dialects, east of a line running approximately from Sollum to Chad, the second being formed by the Maghribi dialects, situated geographically west of the above line.

The dialect of the *Hijāz*, and more particularly that of the *Kuraysh* of Mecca, is known to have been one of the pre-Islamic Arabic dialects; it was elevated to the status of a literary language, not, however, without some interference with the pre-Islamic poetic *kuwa*. But the old dialects remained none the less alive, not only in their own country, but also outside the Arabian Peninsula, because they were spread abroad by the Arabs in the territories which they conquered. Organised in their traditional groups, the Arab conquerors preserved for some time their own tongue, but dialectal peculiarities tended to become less marked as the result of the blending of tribes within the fighting units. It was this sort of *kuwa*, rather military in character, which constituted the language of the conquered or newly-founded towns, but a contrary development soon occurred, with the appearance of indigenous elements and elements from the linguistic substratum, which resulted in an ever greater differentiation between the urban dialects, although on the whole the dialects of the large cities of the Arab world still displayed common characteristics. It is therefore possible, in order to rely on a sociological rather than a geographical criterion, to distinguish on the one hand the dialects of the urban and settled populations (because the role of the large cities had aided the rapid spread of the urban dialects in concentric circles), and on the other the Bedouin dialects. The latter were the dialects of more or less homogeneous and nomadic tribes which had emigrated from the Arabian peninsula either before or after the conquests. In general, the boundaries between the two major groups defined above are not fixed absolutely, and it is even possible to discern the existence of an intermediate group of dialects which display both urban and Bedouin characteristics. The criteria which enable one to distinguish between urban and Bedouin dialects are set forth in sections II and III below, but it should be noted here that, in general, the Bedouin dialects exhibit more conservative tendencies, and greater homogeneity within the framework of the tribe. The urban dialects display pronounced evolutive tendencies; they have introduced morphological and syntactical innovations and, further, differentiated dialects quite often appear within the same urban area, not only between the following of different religions (Muslims, Jews and Christians for example), but also between the social classes and even between the sexes and different generations.

If Classical Arabic is compared, in the most general terms, with present-day dialectal Arabic, the main point to be noted is the early abandonment, by spoken Arabic, of case endings and the inflections of the verb. Perhaps less characteristic, in the phonetic sphere, are the loss of the phoneme represented by *ay* and the tendency of short vowels in open syllables to disappear; further, short internal vowels, even in stressed syllables, have become weakened in the most developed dialects. Morphologically, in addition to the disappearance of terminations, one notes the almost complete disappearance of the passive with vowel change, the decreased use of the dual and the feminine plural. On the other hand the phonetic system is richer than that of classical Arabic and the vowel range greater; a

present indicative *a*, in a number of dialects spoken by settled populations, was derived from the imperfect by means of various preverbs; the syntax, less synthetic, used an analytical construction simultaneously with the relationship of association (*idāla*). Finally, as regards vocabulary, the basic vocabulary is also found in classical Arabic, with losses due to the disuse of a large number of special terms (notably those relative to Bedouin life, in the case of the settled populations), but also with gains due to loan words from foreign languages which continued to co-exist with Arabic.

#### DIACLECTAL LITERATURE

The religious prestige of classical Arabic naturally prevented dialectal Arabic from playing the part of a literary language, at least among Muslims; further, with the exception of a certain number of proverbs and poems (see especially *Zajal*) dialectal literature is fundamentally oral; it consists of songs and poems, which treat of the same themes—epic, religious, lyric, satiric, elegiac, erotic etc.—as classical Arabic, of tales, legends and even epics. When, exceptionally, a dialectal work of importance has been set down in writing, it has never preserved its original form, but has been transformed into more or less correct literary Arabic, which deprives us of documentary evidence which would otherwise be of great interest. The most typical example is that of the Thousand and One Nights (see *ALF LAYLA WA-LAYLA*). For the attempts made in recent years to create a dialectal literature, and for the use of colloquial Arabic in novels and plays, see *Arabic Literature* below.

Christian Arabic literature should not be overlooked (see G. Graf, *Geschichte der Christlich-Arabischen Literatur und Der Sprachgebrauch der ältesten christlich-arabischen Literatur*, Leipzig 1905); nor that, in Roman script, which developed, but without great originality, at Malta, nor the Judaeo-Arabic writings. On these last, which until the present time form a vast branch of literature, see the article *TUMINIA*, and E. Vassie, *La littérature populaire des Juifs tunisiens*, in *RT*, 1904; G. Vajda, *Un Recueil de textes historiques judéo-marocains*, Paris 1951; M. Steinschneider, *Arabische Literatur der Juden*, Frankfurt 1902.

No complete work has yet been devoted to dialectal literature, but the reader is referred to the references given in Ch. Pellat, *Langue et littérature arabes*, Paris 1952, 54. For North Africa, H. Basset, *Essai sur la littérature des Berbères*, Paris 1920, deals with a subject which is closely connected with Arabic dialectal literature.

*Sources*: — The works of modern Orientalists, who often give texts in dialectal Arabic and help to give a fixed form to popular literature, are enumerated in sections II and III below, which are specially devoted to the modern dialects. For a historical study, apart from the references of the Arab philologists and the glossaries quoted in the article *AL-ANDALUS*, special reference should be made to the transcriptions of Arabic texts in Coptic or Greek script (see especially the ancient psalm fragment given by Violet in *OLZ*, 1901), to the early Egyptian papyri and to the Sicilian documents edited by S. Cusa (*I diplomi greci ed arabi di Sicilia*, I, Palermo 1868).

#### (2) The Eastern dialects

##### THE ARABIAN AND NORTH ARABIAN DIALECTS

The geographical area covered by these dialects extends from Egypt to Syria in the case of the

former, and in the case of the latter, comprises on the one hand the Arabian Peninsula, and on the other the Syrian desert and 'Irāk.

The non-Arab languages represented are as follows: in Egypt, the Siwa Berber group. In Syria-Lebanon, the Aramaic dialect of Ma'olā, *Ḍjubbā'dīn* and *Bakh'ā*; the language of the Circassians living in villages in various parts of Syria: *Kunaytira*, *Alin Zā*, *Tell Amērī*, *Khansūr*, *Manbij*, and in Jordan *Ḍjarrāb*; the Armenian (or Turkish) of about 200,000 Armenians (principal centres Beirut, Aleppo); the language of about 230,000 Kurds living in the region of Hassetché, *Ḍjarrābūs*, *Ḍjabbal Akhrād* and certain cities, notably Beirut and Damascus. In 'Irāk, these Kurds constitute a quarter of the population; in addition, there is the neo-Syriac of the Masāḍīn plain. In Arabia, Kumzīrī (peninsula of Masādān, in 'Umān), a Persian dialect; the modern South Arabian languages, between the Hadramawt and 'Umān: Mahri, Karawī, Harsūf, and Botahari. In Israel, modern Hebrew.

Egyptian Arabic (nomad dialects) has penetrated into the republic of Sudan among the Nigritic and Kushiic languages, and then, with Maghribi influences, among the Negro-African languages in the region of Lake Chad. Yemenite Arabic is used as the second language in Africa among the Somalis. The Arabic of 'Umān has found its way to Zanzibar. In Turkmenistān, *Khazaristān*, *Tādjikistān* traces have been found of Arabic nomadic dialects. Finally, in America, there is the Syro-Lebanese diaspora.

The eastern dialects, in Egypt, Sudan, and elsewhere, are well-known, that of Alexandria less well, that of the *fallāḥs* very little, and that of the nomads and the whole of Upper Egypt hardly at all. In Palestine, a tripartite division must be carefully observed between sedentary urban-dwellers, the sedentary rural population (*fallāḥs*), and nomads. In Syria-Lebanon, the dialects of the sedentary urban and rural populations are indeed indistinguishable, but their differences are less marked; they contrast with the nomad dialects; the dialects of the large towns (Beirut, Damascus, Aleppo, Jerusalem) are curiously similar to one another. The Mountain region of Lebanon, divided into separate districts, introduces local variations, and anti-Lebanon still more. In 'Irāk, the urban and rural dialects are more strongly subordinated by the dialects of the North Arabian nomads; this has resulted in blending and compromise in varying degree between the two types of dialect, even in the large towns. Only assiduous linguistic research can show what remains of the dialects of the sedentary populations. In general, nomad dialects are linguistically dominant; thus 'Irāk remains within the sphere of the North Arabian dialects. A study of the dialects of the Jews of Baghdad and Basra would be most useful; recent migrations have disorganised these communities. It is interesting to note the use of dialect in a literary context, in Egypt (*al-Hiǧǧ Darwish*, plays for the theatre), and in the Lebanon (*Fīmānūs*, *Ḍjinnūn*); see J. Locort, *Littérature dialectale et renouveau arabe moderne*, in *REOD*, II, 1952, 179-258; III, 1953, 43-175.

The eastern dialects have not received equal treatment as regards actual publications. A concise bibliography will be given here, within the limits of this general outline (for convenience, 'Irāk will be included here):

At least six works deal primarily with the Arabic of Cairo, the following will suffice: W. Spitta-Bey, *Grammatik des arabischen Vulgärdialektes von Ägypten*,

Leipzig 1880, xv+519 pp. in 8vo. (Texts 447-516; K. Vollers, *Lehrbuch der ägyptisch-arabischen Umgangssprache, mit Übungen und einem Glossar*, Cairo 1890, xi+231 pp. small 8vo. (English ed. by F. R. Burkitt, Cambridge 1895); C. A. Nallino, *L'arabo parlato in Egitto, grammatica, dialoghi e raccolta di circa 6,000 vocaboli*, Milan 1900, xxviii+386 pp. small 8vo., 2 ed. Milan 1913; D. C. Phillott and A. Powell, *Manual of Egyptian Arabic*, Cairo 1926, xxix+911 pp. small 8vo. In addition: Spitta-Bey, *Arabic-English Dictionary of the Modern Arabic of Egypt*, 3rd ed., Cairo 1929, xvi+518 pp. in 8vo. (arranged in purely alphabetical order). For Upper Egypt there are only the *Contes arabes* . . . . . published by H. Dulac, *Jā*, 8th series, v, 5-38 (in Arabic characters with translation but without transcription) [the *Chansons populaires*, collected by G. Maqsoo (*Ann. Serv. Ant. Égypte*, xiv, 97-109) are inadequate for a linguistic inquiry. For the nomads of Lower Egypt a number of the *Lieder der libyschen Wüste* of M. Hartmann, Leipzig 1899; it should be used with caution.

The Sudan is hardly better known, nor is the Lake Chad area. For the former A. Worsley, *Sudanese Grammar*, London 1925, vi+30 pp. in 8vo.; S. Hillebrand, *Sudan Arabic, English-Arabic Vocabulary* (p. 205-18, Cambridge 1935, xiv+219 pp. in 8vo., see especially pp. xi-xliv of the Introduction; idem, *Sudan Arabic, English-Arabic Vocabulary* [with transcription] and ed., London 1930, xxviii+351 pp. in 2vols.). For the latter: G. J. Lethem, *Colloquial Arabic, Shuwa Dialect of Borneo, Nigeria and the region of Lake Chad*, London 1920, xv+48 pp. in 8vo. (Part III English-Arabic Vocabulary, 235-487). Lethem gives good conservative Bedouin Arabic; a form of Arabic which already shows changes (disappearance of the emphatics) is found in *Méthode pratique pour l'étude de l'arabe parlé au Ouaday et à Fés du Tchad* by H. Carbou, Paris 1911, 251 pp. (reprinted, 1954). Narrative texts: C. G. Howard, *Shuwa Arabic Stories*, with an Introduction and Vocabulary (p. 83-115), Oxford 1921, 116 pp. in 2vols.; J. R. Patterson has published the *Stories of Abu Zeid the Hilali in Shuwa Arabic*, London 1930, Arabic text with translation but without transcription.

For linguistic geography, we are indebted to G. Bergsträsser's *Sprachkarte von Syrien und Palästina* (incl. the Lebanon and Jordan), *ZDPV*, xxviii, 169-222, 42 maps. This *Sprachkarte* is an excellent beginning. J. Cantineau has added his *Remarques sur les parlers de sédentaires Syro-Libano-Paléstiens*, *BSL*, no. 118, 80-8, in which he proposes a classification; his article on *Le Parler des Drûs de la montagne Utranassi*, *AfEO*, Algiers, iv, 157-84, in which he shows that a dialect of the sedentary population of the Lebanon is involved; his profound study of Hawrān, *Les parlers arabes du Hôrān, Notions générales, Grammaire*, Paris 1946, x+75 pp. in 8vo. (Publ. SL, Iii), and an *Atlas* of 60 maps, *ibid.* 1940. Haim Blanc has studied the dialects of the Drûses in northern Galilee and on Mt. Carmel in his *Studies in North Palestinian Arabic*, Jerusalem 1953, 139 pp. in small 8vo. (Or. Notes and St. Ist. Or. Soc., No. 4), phonological and phonetic survey 22-78; texts 79-108.

For Syria-Lebanon, Palestine, the following should be mentioned: (1) General descriptive works: A. Barthélemy, *Dictionnaire Arabe-Français*, 5 fasc., Paris 1935-34 (the last two published by H. Fleischer, 943 pp. in large 8vo. (deals exhaustively with the vocabulary of Aleppo (1900), and gives the elements

of the Lebanon, Damascus and Jerusalem). G. R. Driver, *A Grammar of the Colloquial Arabic of Syria and Palestine*, London 1925, x-257 pp. in 8vo. L. Bauer, *Das palästinensische Arabisch, die Dialekte des Städtischen und des Fellachen, Grammatik, Übungen und Chrestomathie* p. 164-256, 3rd edition, Leipzig 1913, viii-264 pp. in 8vo., 4th edition, Leipzig 1926, and *Wörterbuch des Palästinensischen Arabisch*, Leipzig 1926, viii-432 pp. in 8vo. Feghali (Mgr. Michel), *Syntaxe des parlers actuels du Liban*, Paris 1928, xxv-633 pp. in small 8vo. (PELOV), *La Grammaire du dialecte Libano-Syrien* of R. Nakhla, Beirut 1937, does not describe a fixed dialect, (2) Monographs: a) on the Lebanon: M. T. Feghali, *Le parler de Kfar'Abida* (Lebanon-Syria), Paris 1919, xv-204 pp. in 8vo.; this type of dialect only obtains in part of the Lebanon. H. Fleisch, *Notes sur le dialecte arabe de Zahlé (Liban)*, MUSJ, xxvii, 75-116, in part a monograph on an important dialect of the Bekaa. H. El-Hajjé, *Le Parler arabe de Tripoli (Liban)*, Paris 1934, 203 pp. in 8vo. (Text in transcription and translation pp. 276-99). b) on Syria: J. Cantineau, *Le dialecte arabe de Palmyre*, I, Grammaire, x-287 pp. in 8vo., II, Vocabulaire and Texts, vii-149 pp. in 8vo., Beirut 1934 (Mém. Inst. Fr. Damas, II), which describes a dialect of the settled population. The only works dealing with Damascus are the phonetic survey of Bergerstrasser (see below), the *Manuel élémentaire d'arabe oriental (Damas musulman)* of J. Cantineau and Y. Helboua, Paris 1933, 124 pp. in 8vo., and the elements given by J. Oestrup in his *Concise du Dialecte de Damas* 1897, 153 pp. in 8 vo., pp. 122-135. (3) Useful texts: for Palestine, it is sufficient to mention here the *Chrestomathie* of L. Bauer; for the Lebanon, the *Contes, Légendes et Contes populaires du Liban et de Syrie* of M. Feghali, Arabic text, transcription, translation and notes, Paris 1933, xiii-195-87 pp. in 8vo.; for Damascus (Christian), *Zum arabischen Dialekt von Damaskus* of G. Bergerstrasser, I *Phonetik* (p. 2-50), *Prosodie*, Hannover 1924, 111 pp. in 8vo. (*Zeits. z. sem. Phil. u. Ling.*, No. 1), Arabic text in transcription with translation; for Hamā, the story (*in* transcription, with translation) *Muhammad al-hadabi*, published by E. Littmann, ZS, ii, 20-30. Little is known about 'Irāk: the *Neu-arabische Geschichte aus dem Irak* of B. Meissner, Leipzig 1903, lvi-118 pp. in 8vo., and the *Reise zur Kunde des Irak-Arabisches* of F. H. Weisbach, I, *Prosodie*, Leipzig 1908, xvi-208 pp. in 8vo., II, *Poetische Texte*, Leipzig 1930, 357 pp. in 8vo. (Leip. sem. St., iv, 1 and iv, 2), deal with the same dialect of the rural population of northern 'Irāk; Meissner's work contains a substantial section on grammar, pp. vii-lviii, and a short vocabulary, pp. 112-48. For Masad and Mardin, we have only the texts collected by A. Socin, ZDMG, xxxvi, *Der Dialekt von Mosul*, 4-12; *Der Dialekt von Mardin*, 22-53 and 238-77, in transcription with translation, accompanied in part by the Arabic text, without study of the grammar or vocabulary. L. Massignon, in his *Notes sur le dialecte arabe de Bagdad* (reprinted from *Bull. IFAO*, xi, 24 pp. in 8vo.) has emphasised the linguistic complexity of Baghdad, where he has distinguished "at least seven stable indigenous groups, all of the Arabic language, but differing in dialect" (p. 2). A survey of Baghdad, which will be a particularly difficult task, is still awaited. The *Bagdadische Sprichwörter*, published by A. S. Yahuda in *Or. Studien* (collection of studies dedicated to Th. Nöldeke, Giessen 1906), pp. 399-416, deals with Jewish Baghdad. The two works: J. van Ess,

*The Spoken Arabic of Iraq* (above all Basra), 2nd ed. Oxford 1936, and M. Y. van Wagoner, *Spoken Iraqi Arabic* (Baghdad), Ling. Soc. of America, 1949, are a medley of dialects and are not so far of use as linguistic information.

The western dialects bear a certain family likeness, and the same can be said for the eastern dialects. For the purpose of this comparison the more conservative nomad dialects (this does not exclude the facts of their own evolution), which are much less well-known, will be disregarded. We are concerned with the dialects of the settled populations of east and west. We will consider first the elements which link them (and also those which distinguish them): G. S. Colin, *L'arabe vulgaire*, 190th anniversary of ELO (Paris 1948), pp. 100-1.

Phonetically: 1) The disappearance of the velarised latero-interdental phoneme represented by the old (س), replaced in general by d (emphatic); dh (emphatic) among the fellahs of P. and at T.; 2) The development of the three interdental fricatives (dh, th, dh emphatic) into dental occlusives (d, t then ts in M. and Alg., d emphatic except among the fellahs of P. and at T.); 3) The tendency of the short vowels to disappear in open syllables, particularly when they are not stressed (especially i, u, a). 4) The tendency to reduce the diphthongs ay, au to the simple sounds e, o (even i, u in Oc.), except in a large part of the Lebanon.

Morphologically: 1) The disappearance of the old inflexional vowels (a'rah); as a result the dialect becomes less synthetic, and makes greater use of grammatical instruments. Word order assumes importance in denoting relationship (construct state), the subject and the complement of the direct object. 2) The dual retrogressively becoming a survival without influence as such as regards grammatical concord. 3) The periphrastic expression of relationship (determinative complement of the noun), in place of the construct state, for various reasons: Eg. *hala'*; P., S.-L. *hala'*; (M. *ayal*, TL *ayal*, T. *ayal*). 4) The use of an indeclinable simplified relative pronoun: *elli* (similarly *di*, *addi* in M. and in several Arabic dialects (W. Marçais, *Tlemcen*, 175). 5) The formation of a new interrogative pronoun for things: Eg. *ya'*; P., S.-L. *ya'*, *ya'*, *ya'* (M. *ayal*, TL *ayal*, T. *ayal*). 6) The abandonment of a special form for the feminine plural of personal pronouns and verbs. 7) The abandonment of the passive formed by change of vowel: *hatala'* 'he has killed', *hatala'* 'he has been killed' (except in Oman). 8) A form indicating duration: Eg. *'ammāl*, 'amm; P., S.-L. *'am* (M. *hā*, verb expressing duration or habitual action). 9) The formation of an indicative by means of various auxiliary words prefixed to the old imperfect: 10) The conjugation of the imperfect of doubled verbs with the intercalation of a phoneme of the number of types of broken plurals and still more of the types of infinitive (*majdār*).

The Eastern and Western dialects, over and above these common characteristics, give respectively a certain impression of unity, in so far as evolutionary tendencies have culminated, in each of the two groups, in different results. They can only be contrasted when, on both sides, the different result is identically constant. For example the method of

\* Abbreviations used: Alg. = Algeria; Eg. = Egypt; Ir. = 'Irāk; L. = Lebanon; M. = Morocco; Oc. = Occidental; Or. = Oriental; P. = Palestine; S. = Syria; T. = Tunis; TL = Tlemcen.

forming the first persons of the imperfect of the verb. The Eastern dialects have formed an indicative: imperfect with *h-* being contrasted in general with the subjunctive-jussive (without *h-*): L. *hirid yikhib* 'he wishes to write'. This indicative has in the 1st pers. s. a preformative *h-*: L. *hikhib* 'I write', *nahkhib* 'we write', whereas the Western dialects have a preformative *n-* and secondarily *bi-* as usual: *nahkhib* 'we write', a distinctive plural form in *-u* e.g.: T. *nakhib* 'I write', *nakhibu* 'we write'; this is an excellent and characteristic example of contrast between the Eastern and the Western dialects; but it is not absolute: a preformative *n-* of the 1st pers. s. impf. is found in the Najd (Socin, *Drazen*, Part II, 1336 and 1948) and is confused in the Hadramawt (de Landberg, *Anasrah*, iii, 53). The loss of short vowels in open syllables, largely complete in the Western dialects, is a much less reliable indication: in fact in the Lebanon at Kfar'Abida, all short vowels in open unstressed syllables disappear; at Palmyra, there is a fairly general disappearance of *a* and *e*, even when stressed, if they occur in an open syllable (this is one of the dialects called 'differential' by J. Cantineau, *Études*, in *AIEO*, ii, 49).

The dialects also reveal a certain individuality, by comparison with the Western dialects, by virtue of the presence of grammatical characteristics which are lacking in the latter. Note for instance, in Eg., P., S.-L.: 1) In the vocalisation of the simple verb, the retention of vowel contrasts reduced to a pattern *hatal* *hatal* or *hatal* and *hatal* *hatal* (in Eg. the pattern is not quite so clear). 2) The formation of the plural of the demonstrative pronouns in a similar manner: the addition to the singular of the old demonstrative form of the pl. *'ul* (cl. *'ul*, *'ul*, *'ul*): Eg. *da* + *'ul* > *dāl*; P., S. *hāda* + *'ul* > *hādāl*; L. *heyda* + *'ul* > *heydāl*, Ba'albek *ha* + *'ul* > *hāl*; and other forms. These two phenomena, however, also obtain in the case of a number of North Arabian nomad dialects (Cantineau, *Études*, Ann. II, 79 and 107) and their 'Irāk extension; in addition, a form *hādābā* occurs at T. (which seems to have been brought in by an 'Irāk dialect, according to Barthelmy, *Dict.*, 876 [n. 3]). 3) The frequent use of the present participle in Eg., P., S.-L., as a present perfect: *shayy?* 'do you see?' ('have you seen and do you still see?'). But 'Uman presents similar features and in the Maghreb certain participles serve as a present-perfect.

As regards vocabulary (here 'Irāk is included), a distinction must be made between: 1) The vocabulary of the dialects at the time of their formation. This consists of the Arabic basis brought by the invaders and words taken from the languages of the conquered and arabised peoples (substratum): Coptic in Eg., Aramaic-Syriac in P., S.-L.; Syriac in 'Irāk. L. only has been made the subject of study: M. Feghali, *Étude sur les emprunts syriaques dans les parlers arabes du Liban*, Paris 1918. 2) Vocabulary borrowed from the dialects of the districts: Pallavi, Persian, Aramaic-Syriac, Greek and Latin (by various routes) have given words to literary Arabic, received through it and with it into the dialects at the time of their formation (such words form part of the Arabic basis) or received from it after their formation. The history of these borrowings from within is completely unknown to us. The loan-words proper are the distinguished Persian words in 'Irāk, Turkish, Turkish, Persian and Turkish-Italian words, throughout the whole area from 'Irāk to Egypt; Italian words in Eg., P., S.-L.; French words (recent borrowings) in

Eg., P., S.-L.; English words (recent borrowings) in Eg.

The co-existence of Arabic and Aramaic-Syriac in the Lebanon, and of Arabic and Coptic in Eg. has provided the occasion for a certain amount of borrowing. But how can the loan-words be distinguished from the vocabulary of the substratum?

The Turkish contribution (in its different forms) is very important at Mas'ad, Baghdad, Aleppo, and slightly less so at Damascus, in P. and in Eg. A study has been made, for Damascus, by E. Saussey, *Mélanges Inst. Fr. Damas* (Section des arabistes), i, 77-129, and for Eg., by E. Littmann in *Festschrift Tschudi* (Wiesbaden 1954), 107-27. The *Dict. Ar.-Fr.* of A. Barthelmy, deals with all the loan-words in its etymologies; there is a systematic study for Aleppo in the *Introduction*, (to appear shortly) Part 2, Section 3, B.

Greek can have given certain liturgical terms directly to the dialects; its contribution is primarily indirect through literary Arabic, Syriac and Coptic. A peculiarity of the substratum: *baḥ* 'mosquito' at Aleppo, 'bug' in L. and Alg. (literary Arabic *bahḥ* = 'bug'). Aleppo has retained the meaning of the Syriac *baḥā* 'mosquito'. *Ḍān* 'chin, beard', in L., perpetuates two different words: the literary Arabic *ḍānānu* 'chin' and the Syriac *ḍānā* 'beard'. The etymology, however, is complicated; the Syriac *ḍānā* also has the meaning of 'chin'. Certain loan-words pose questions: how did the Persian *kaḥḥān* 'thimble', which is not known in literary Arabic or in Turkish, reach S.-L.? How did the Fahlawi *randāq* 'plane', an early loan-word, of which there is no evidence in literary Arabic or Turkish (Persian *randā*), reach Aleppo, and by what route? The comparative study of vocabulary has not yet been pursued sufficiently to enable us to dwell further on this subject here.

The Arabian and North Arabian dialects. The North Arabian dialects have been studied by J. Cantineau: *Études sur quelques parlers de nomades d'Orient*, in *AIEO*, Algiers, ii, 1936, 1-118, iii, 1937, 117-137; these studies in linguistic geography have enabled him to make a classification which he considers allows at least the main points of the subject to be clearly defined. There is not space here to repeat the critical appreciation made by J. Cantineau, at the beginning of his 1st *Étude*, of the publications of G. A. Wallin, I. G. Wetzelstein, A. Socin, E. Littmann, C. de Landberg (Anasrah), A. Musil (Kwala), J. J. Hess and A. de Bonchouan (complete references, Cantineau, *AIEO*, iii, 126). In addition, R. Montagne *Contes poétiques, Ghazal* (critical appreciation and references, J. Cantineau, *ibid.*). The following should also be mentioned: R. Montagne, *Sāliḥ Shāyḥ* *Alamāl* *ghad ʿarḥāl*, in *Mé. Gaudry-Demombynes*, Cairo 1939, 125-30; H. Charles, *Tribus montagnardes du Moyenne-Euphrate* *ʿAḥḥāl*, *Inst. Fr. Damas*, *Doc. Et. Or.*, viii, 1939, an ethnographical study containing several phrases, vocabulary and 14 lines of narrative. H. Charles, *Quelques travaux de femmes chez les nomades montagnards de la région de Hama-Hama* *ʿUmār* and *Bani Kāḥlād*, an ethnographical and dialectal study, *BEOD*, vii-viii, 1937-38, 195-213; 3 texts of considerable length and a short passage of 6 lines, transcribed and translated. For the other regions:—

1) The nomads of Arabia Petraea are only known through the ethnographical study by A. Musil, *Arabia Petraea*, iii, Vienna 1908; these texts must be used judiciously.

Hidjās: only the *Mekhanische Sprachwörter und Redensarten* of Snouck-Hurgronje, The Hague 1886.

Yemen: S. D. F. Goitein, *Jemenica*, 1432 *Sprachwörter und Redensarten aus Zentral-Jemen* (Jews of San'a), Leipzig 1934, xxiii-194 pp. in 8vo, grammatical study pp. vii-xxiii. E. Rossi, *L'arabe parlé à San'a, grammatica, lessico* (Ital.-ar., 190-246), Rome 1939, vi-250 pp. in 8vo. (Pub. Is. Or.); see particularly by the same author *RSO*, xvii, 230-65 and 460-72 (a classification of the dialects, p. 472). Aden: E. V. Stace, *An English-Arabic Vocabulary for the use of the students of the Collège d'Aden*, 188 pp. in 8vo., London 1893, in printed Arabic characters without transcription.

ʿUman (and Zanūbar): C. Reinhardt, *Ein arabischer Dialekt gesprochen in ʿUman und Zanūbar*, Stuttgart and Berlin, 1894, xxv-428 pp. in 8vo. (Lehrbücher des Seminars f. Or. Spr., Berlin); texts 297-428.

J. Cantineau, *Remarques* (*BISL*, no. 118) has indicated (p. 81-2) the main general characteristics which enable a distinction to be drawn between the dialects of the settled populations of the East and the dialects of the Arab nomads. The sole effective criterion is the unvoiced pronunciation of ʿ (irrespective of what might otherwise be the articulation-point): all the dialects of the settled populations, and only the dialects of the settled populations have this pronunciation; the voiced pronunciation of ʿ is the mark of a nomad dialect (as it is in the case of western dialects).

We owe our present knowledge of the classification of the dialects of the Arabian nomads to J. Cantineau in his *Études*, in *AEO*, III, 222 f. The brief summary which follows is based on him:

As regards the North-Arabian dialects, he distinguishes dialects A (ʿAnāzā, dialects B (Shammar), dialects C (Syro-Mesopotamian); ʿAnāzā dialects: Ḥāne, Rūwā, Shāʿa, Wād, ʿAlī, etc.; Shammar dialects: ʿAbde, Khroise, Rmāl, etc.; are linguistically akin to the Shammar dialects, group Bc: in ʿIrāq probably the Tayyī, in Syria and Jordan: ʿAmīr, Sīlī, Sardiyya, Sirhān, in part the Banū Khālid of Jordan and the Banū Saḥār; Syro-Mesopotamian dialects: the population of the town of Raqqa and the tribes: Ḥadīdī, Mawālī, Nʿēm of Dīqlān, Fadīl (these last two forming a sub-group), which fall into the category of lesser nomads called *ghāwya* or *raʿya*. The case of the Dīqlān dialect is a separate question; the dialect of ar-Rass (Kasīm) is to some extent a Ba dialect.

It is difficult to demarcate, even approximately, the southern limit of the North Arabian dialects; their existence is definitely confirmed in Khādm, al-Haḥā, and probably in the ʿArid, the Waghm and the Sadr. Of the dialects of the Hūdīya very little

is known, and nothing of those of ʿAsīr. The dialects of the Hadramawt and the Daḥīnā, known through Landberg's texts, seem to be related, distantly it is true, to the dialect of the North Arabian nomads, and it is possible that the dialects of the nomads of the Rubʿ al-Khālī are connected with the same group. On the other hand, through the efforts of C. Reinhardt, E. Rossi, H. Dürchardt, and S. D. Goitein, we know that the dialects of ʿUman and the Yemen are of a completely different type.

*Bibliography:* In the body of the article. Works treating of the dialects as a whole: C. de Landberg, *La langue arabe et ses dialectes*, Leiden 1895; C. Brockelmann, *Das Arabische und seine Mundarten in Handbuch der Orientalistik*, III, Semitistik (1954), 207-45; J. Cantineau, *La Dialectologie arabe*, in *Orbis*, IV, 1953, 149-69; this gives additional bibliography and information on the current position as regards studies in Arabic dialectology. (H. FLEISCH)

### (3) The Western Dialects

The Arabic language is widely used in North Africa, but is by no means the only language in use. Berber is extensively used (see HERNERS), and the Berber language, though losing ground in some instances, can for the most part be considered to be in an extremely flourishing state and not on the retreat.

The elimination of the old autochthonous language naturally has taken place in those cases and in those countries in which the tide of Arabic spread without meeting any obstacles: first of all, in the towns which the Arab conquerors rebuilt, colonised or founded, and their environs; then in Cyrenaica and above all in Tunisia, which were reached by the first and largest waves; finally in those regions of the Maghrib, probably Zenata, where the old pastoral life prepared the way for Bedouin Arabism: the Sahara, the Saharan fringe, the high plains of Algeria and Constantine, the valleys of the Tell, and practically the whole of Orania. This Arabic tide surrounded but did not submerge the settled centres of the Saharan oases, and similarly the mountainous regions in the interior and on the coast, which were difficult of access. In Morocco, arabisation followed the Atlantic seaboard, reached the Fez and Taza corridor, flooded the Gharb, and left almost intact the riparian massifs of the Mediterranean and the interior, the Berber mountains.—The area in which Arabic is dominant in the Maghrib is thus immense. Nearly fifteen million people there speak it. They are to be found in widely-differing regions, and following very dissimilar ways of life: all town-dwellers, nearly all the agriculturalists and semi-pastoral peoples of the plains, plateaux and steppes, a large number of villagers, several groups of the settled population of the oases, and hill peoples arabised by the neighbouring towns. This geographic diversity (which, unlike that of the Iberian dialects, is still in progress) and the diversity of these modes of existence are the result both of the complex configuration of the country and of the historical circumstances of its arabisation. These two aspects will not be dealt with here. It will be sufficient to emphasise that, given physical and human conditions such as these, it is not surprising to discover great diversity in the spoken Arabic; variations so great that it seems difficult to define the Arabic dialects as a whole by common, specific characteristics; and that it is perhaps rash to employ the term 'Maghribi Arabic'. It will never-

theless be employed, if only for the convenience of this *exposé*.

C. Brockelmann, at a time when few documents on the various Arabic idioms spoken in North Africa were in our possession, said in his *Grundriss* that the Maghribi dialects were mainly of the Bedouin type. He doubtless based this on the accentuation of the verb in the 1st form, which he considered as the primitive form in all Semitic languages: *faʿala*, *faʿila*, *faʿūla* culminating in *faʿal*, *faʿil*. This syllabic reduction, doubtless attributable to stress, can already be found in Andalusian, but it is not Maltese. And it is far from being the only example which is found in the Maghrib, on the one hand, nor is it on the other hand exclusively Bedouin. This appreciation by Brockelmann, without doubt open to dispute in principle, is clearly completely inaccurate when one compares it with the extraordinarily complex reality of the dialectal facts.

This is a phonetic characteristic which applies to the great majority of the Maghribi dialects, without being common to them all or being confined to them alone (since it is found in certain Middle East dialects): a considerable loss of vocalic content, and consequently a marked tendency towards the neutral tones of the short vowel system. Obviously such a general statement takes no account of dialectal variations. In order to try to justify it, the actual facts must be examined more closely. In all the dialects of northern Morocco, Algeria, Tunisia, and in all the dialects of the western Sahara, the short vowel drops out in an open syllable *v + e + v*. The articulatory effort is directed towards the end of the word and disregards the beginning: the word, from being a disyllable, becomes a monosyllable. Thus *darab* becomes *ḍab* 'he has hit', *farab* becomes *frāb* 'joy'. Naturally the reduction also operates, and in the same sense, when the root of the word is followed by a suffix or an inflexion, or is preceded by a prefix. Thus *darabu* becomes *ḍarbu* 'they have hit', *ḍaribuhu* becomes *ḍarbu* or *ḍarbu* 'thou hast hit him', *ḍarjara* becomes *ḍarja* 'tree', *maḥama* becomes *maḥma* or *maḥma* 'court of a ḥādī', etc. The concentration of elements is sometimes so strong that the whole vocalic element disappears, the articulation of series of consonants being made possible by a consonant with a vocalic function, with an ultra-short vocalic point. Thus *qāba* 'reed', *qāba* 'who is taking you?'. These are the dialects of Morocco, especially the extremely degenerate dialects of the towns (for example, Fez), where this feature can be readily observed. In this evolution, which leads to a semi-spoken idiom to reduce the elements of the language (thus taking the line of least resistance), it has often been noticed that the short vowels of quality *i* and *u* are most in danger. Being of small aperture, they seem to be by nature extremely vulnerable: the slightest relaxation of the organs of speech alters the nature of their original quality, if it does not cause their disappearance pure and simple. One is tempted to think that the loss of the short vowels in open syllables started with the vowels of quality *i* and *u*. This is what emerges from the position of the Syrian dialects, on which J. Cantineau has written some excellent monographs (one, in particular, devoted to Palmyra): the conjugation of sound verbs in the basic form differs according as the radical vowel is *i* or *u*, or *a*; the former have become monosyllabic, the latter have remained disyllabic. This is similarly the case in a considerable number of the dialects of Fezzan-Cyrenaica and in the extreme south of Tunisia, which constitute, from

this point of view, the link between the eastern and the Maghribi dialects: some trace of the vowel *a* always remains, whether it is a well-preserved qualitative element, as in *darab* 'he has hit', *ḥalīb* 'milk', or an element with a different form, as in *raḥab* 'he has joined', *ḥabab* 'basket', etc.

Morphologically, there are also traits which can be in differing degrees considered to be typically Maghribi. The most characteristic, it appears, is the presence of the sign *n*—in the first person singular of the imperfect of the verb, replacing the initial *hamza* which is general throughout Middle East dialects. This morpheme *n*—is, to the exclusion of all others, that of all the dialects, without exception, of Morocco, Algeria, Tunisia, Mauritania, the Sahara, Fezzan, Tripolitania, Cyrenaica and Malta. Egypt seems indeed to form the eastern limit of its use. Ch. Kuentz, during recent years, has precisely defined the extreme limits (dialects of Alexandria and of certain settled populations of the Delta). The substitution of *n* for *ʿ*, already reported by Ibn Khaldūn in the Hīlālī popular songs which he collected, is recorded by Ibn Kūmān for Almoravid Andalusia, and recurs in mediaeval Norman Sicily. It can be considered as a morphological innovation proper to the Muslim West; it consists in the creation of a personal sign of the singular, clearly on the analogy of the signs of the plural: *naʿala* from *naʿala* *naʿala*. The purely Maghribi creation (all the dialects give evidence of this, including Maltese) of a verbal derived form *fʿal*, originating perhaps from the old forms IX-XI, must also be accounted an innovation. It expresses a resultative meaning: *ḥād* 'he has become black', *ḥād* 'he has become white', *ḥād* 'he has become one-eyed', *ḥād* 'he has become rough-skinned', *ḥād* 'he has become tall', *ḥād* 'he has become fat', *ḥād* 'he has become complacent', *ḥād* 'he has become handsome', etc. The presence of a long vowel *a* between the 2nd and 3rd radical, creates a phonetic problem of conjugation which the dialects answer in different ways (L. Brunot, *Sur le thème verbal fāl en dialecte marocain*, in *Mélanges W. Marçais*, Paris-Maisonneuve 1930, 35-62).—On the analogy of the derived forms with a reflexive and middle-passive significance, with a prefix *t* (V *tʿal* originating from II *tʿal*, VI *tʿal* from III *tʿal*), Maghribi has formed, like certain eastern dialects, a *tʿal* (which recalls the very old *thpʿel*) as opposed to the 1st form *faʿal*; it uses it by preference, often to the detriment of *naʿal*; then, carrying this further still, it arrives at a combination of *tʿal* and *naʿal* and produces *naʿtʿal* and *naʿtʿal*, for instance *naʿtʿal* 'he is wounded', *naʿtʿal* 'he is burnt'.—The old system, for forming nouns of action corresponding to verbs of the basic form, resorted freely to the subtle interplay of contrasts of vocalic quality: *jaʿ*, *faʿal*, *faʿil*, *faʿl* etc. It is the decay of the short vowel system, fairly general in the Maghrib (and the syllabic upheavals which accompany it), which has doubtless induced the all-told to display a preference, in the case of verbal nouns, for nominal forms with long vowels. Among them, there is one which recognises an unusual prolongation, which can be held to be specifically Maghribi (Malta also uses it): namely, *fʿul*. Formerly a *masdar* form of limited application (verbs denoting a noise, a cry), to-day it constitutes the most frequently used *masdar* of verbs of action, especially those denoting material operations: *ḡib* 'act of dancing', *ḡib* 'act of washing', *ḡib* 'act of cooking', *ḡib* 'act of flying', etc. This form *fʿul* perhaps owes its success to the analogical influence of *tuʿul*, *maḡdar* of the 2nd form, a characteristic of

in Fezzan.—'To send' is *yfot* (*yfot, yfot, yfot*, etc.) in Morocco and a considerable part of Orania, *yaf* in Algeria, *seyeb* in the South, *dezz* in Tunisia and Libya, *ziel* representing a term of educated speech.—'For' 'to lift, remove', *yfoi* is the verb of the west, Moroccan, Oranian and Algerian, and of part of Constantine; *kazz* is the word of eastern Constantine and Tunisia, *yfoi* that of Suf, Tripolitania and Fezzan.—'To do' is a vague idea expressed by a variety of verbs: *'mad* is the most general; *dār-dār*, essentially Bedouin, has everywhere infiltrated into the urban dialects; *asaw* (and its metathesis *asaf*) as well as *'addel*, *saawel* prevail in the western Maghrib, *lūl-yēlū* extends into the north-west of Orania, *ahām* in northern Constantine.

Whatever the difference between the dialects of the Maghrib, they remain closely akin to one another and are in varying degrees peculiarly Arabic. From the Arabic system proceeds the vast majority of the sounds of the language, the grammatical forms, the lexicographical material and the methods of presenting ideas. The dialectal variations found in the Maghrib seem, in general, scarcely more palpable than those which appear in the dialects of the Middle East. They can, to some extent, be attributed to influences alien to Arabic: 1) that of the Berber substratum which clearly gained new strength in certain regions and in certain fields of expression (those concerning the things of the material life, especially rural); but there are also areas where the memory of Berber has almost entirely disappeared from the language; 2) that of the languages of the coloured races in the northern zones bordering on the Negro lands; 3) that of the Romance languages; of Latin, often transmitted through the medium of Andalusian, and also of Spanish and Italian;—4) that of Turkish, particularly in Algeria and Tunisia;—5) finally, that of French, an influence which is still exerted to-day.

The part played by inherited or loan elements, however, does not seem to be the only reason to put forward to explain the original and motley character of Maghribi. There is the diversity of the Arabic dialects, which were already differentiated when they were imported by the conqueror at various periods during the process of establishing himself in the Maghrib. There is also, and perhaps this is the most important differentiating factor, the carrier of innovations, spontaneous or conditioned, which have come into being and have spread in different directions, sometimes propagating themselves throughout vast geographical groups, sometimes confining themselves in districts divided into rigid compartments.

- (II) Second-Century Literature.
  - (i) Poetry; (ii) Prose.
- (III) Third to Fifth Centuries.
  - (i) Prose; (ii) Poetry.
- (IV) Sixth to Twelfth Centuries.
- (V) Modern Arabic Literature.
  - (a) To 1914; (b) Since 1914.

**General Bibliography:** No complete history of Arabic literature has yet been written. Many important works still exist only in manuscript, critical studies of individual poets and writers are relatively few, and several periods and regions have not yet received monographic treatment. The fullest bibliographical details are to be found in C. Brockelmann, *Gesch. der arab. Literatur und Supplementbände*. Outline surveys are given by F. Gabrieli, *Storia della Letteratura araba*, Milan (1955); H. A. R. Gibb, *Arabic Literature*, London 1926; R. A. Nicholson, *Arabic History of the Arabs*, 2nd ed., Cambridge 1930; Ch. Pellat, *Langue et Littérature arabes*, Paris 1952; O. Reuchert, *Abriß der arab. Literaturgeschichte*, i, ii, Stuttgart 1925; Djirdil Zaydān, *Ta'rikh Adāb al-Lughā al-'Arabiyya*, 4 vols., Cairo 1911; Ahmad al-Iskandarī and M. 'Isānī, *al-Waṣṣṣ fi 'l-Adāb al-'Arabi*, Cairo 1919 etc.; and numerous other textbooks in Arabic. Monographs on separate periods are cited in the sectional bibliographies below; those of particular writers will be found in the relevant articles.

## (I) Early Arabian Literature

### (a) Pre-Islamic

(i) Poetry. The history of Arabic literature begins with the emergence, towards the end of the 5th century A.D., of a school of Arab poets in

N.E. Arabia and the Euphrates border, of whose productions more or less extensive fragments have survived. The second generation of poets of this school, of whom the most outstanding was Imru' al-Kays, brought its technical and artistic methods to a high degree of perfection. Their odes, technically called *ḥajda* (pl. *ḥajdāt*, coll. *ḥajdāt*), served as standards and models for later generations of Arabian poets, whose odes were, almost without exception, cast in the same structural mould, with some variation in content and treatment of the themes. The productions of this school spread with great rapidity in Arabia and the regions of Arab settlement in Syria and Mesopotamia, and found in all parts imitators and practitioners, who in some regions gave rise to local schools. The poets of the third generation (middle of the 6th century A.D.) already represented widely diverse regions; those of the fourth (end of the 6th century), drawn from all tribes and regions, are beginning to show characteristic epigonic features. With the rise of Islam and the consequent shift in tribal interests, this type of poetry was temporarily eclipsed.

The *ḥajda*, the distinctive artistic production of this poetic literature, is essentially an art-form, which has little in common with the forms of artistic poetry in other literatures. Its main theme is boasting or panegyric, led up to by a journey theme. The latter is elaborated: (i) by an elegiac-erotic prelude (*naḥb*), recalling a former attachment to a woman of another tribe, leading to or connected with the journey-theme; (ii) by description and praise of the poet's camel or horse, more especially (iii) by comparing it with a beast of the chase, developed into a finely-executed tableau of animal life in the desert. The main theme is similarly elaborated by the introduction of idealised pictures of beduin hospitality or drinking, thunderstorms, war and battle scenes, and satire of rivals. The whole poem runs from 60 to 100 lines in length, being composed throughout in the same metre ending in the same rhyming syllable [see further *ḥajda*].

The pre-history of the *ḥajda*, i.e. the origins of Arabic poetry in general, are lost in obscurity and apparently irrecoverable. The Arabic philological tradition (which constitutes almost the only source of information) itself knows nothing earlier than the rise of the *ḥajda*-poets. It can scarcely be doubted that the poets of this school stood on the shoulders of a long chain of predecessors, who perfected its diverse metrical systems [see 'ARABIC] and who laid the foundations of the special literary idiom ('*Arabiyya* [see above, ARABIC LANGUAGE, ii (1)] and) of the artistic devices utilised by them. The hypothesis (put forward by al-Babbitt, v. *Bibl.*) of an earlier production of lengthy homogeneous odes, reconstructed fragments of which supplied the model for the *ḥajda*, is purely speculative and improbable. The rise of the new school contemporaneously with the kingdom of Kinda [g.e. in N.E. Arabia, and its relations with the princes of Hira and Ghassan, suggest the possibility of a stimulus from the Fertile Crescent, but nothing has been adduced in evidence for this supposition. In any case, it seems reasonably certain that the *ḥajda* constituted a new departure in Arabic poetic art, consisting of the combination of a number of existing themes of Arabic poetry into a subjectively related pattern, and that (prefiguring a characteristic often to be seen in later Arabic literature) such a pattern, once established, became normative for future generations of poets and by reason of its combination of different

in all probability this style which furnished the models for the first literary art of Arabic written prose, at the hands of the *katib*, the secretaries of the Umayyad caliphs and governors, of which, however, there are few authentic examples until the papyrus documents of the period of Sulaymān and the chancery records of 'Umar II at the end of the 1st century (between 715 and 720 A.D.).

#### (b) First-Century Poetry

The Arabic poetry of the 1st/7th century closely reflects the social and economic changes resulting from the Islamic movement and the Arab conquests, the military settlements of the Arabs outside Arabia, the growth of luxury and a money economy, the rise of an imperial government and the imposition of its authority over the tribesmen, and the emergence of religious and political parties and tribal factions. The results of these changes are most clearly seen in the transformation of the occasional poem, and the cultivation of particular themes or types by individuals or schools. The old satire (*hiǧāz*) loses its aura of supernatural influence and develops either into a string of indecencies or a theatrical display of mutual taunting by poets of rival groups (see below). The *hamd* poem becomes the vehicle of religious exaltation and defiance among the *ḫalīdīyā* [q.v.]. The most remarkable new development is the rise of the independent love-poem (*ghazal* [q.v.]) in the wealthy and luxurious cities of the *Ḥijāz*, using a simplified linguistic structure influenced by *Ḥijāzī* conversational style, and, through its close association with the rise of a new medical profession (see *ḥunṭāʾ*), metrically adapted to the needs of singing. This *ghazal* was of two kinds: one, connected more especially with Mecca (see 'UMAR B. ABI RAB'Ā), realistic, urbane, and gay; the other, connected especially with Medina (see *ḤAMIL* and *ḤUMRA*), depicting an idealising and hopeless love, with beduin protagonists. New themes of politico-religious poetry were inspired by the disasters and aspirations of the 'Alid *gh̃*'s (see AL-KUNAYT and KULIYAVVIR), and the *radīas* poem, a simple iambic piece formerly used especially to rouse the ardour of combatants, was made into an instrument for displays of linguistic virtuosity in lengthy and consciously archaising *basīdas* by a school of beduin poets (see AL-'ANṢARĪYĀ).

All these give evidence of the new vigour and plasticity which had been imparted to the literary arts of the Arabs by the Islamic movement and its political and social consequences. Poetry, without losing any of its artistic qualities, becomes less formal and more functional; style and content complement and harmonise with one another. The *basīda* also, revived after a short intermission during the conquests, was shaken out of the rigid, formulaic and obligatory canons of style which had circumscribed it in the old tribal society. During the 1st century it was cultivated almost exclusively by a group of beduin extraction in al-'Irāq and Mesopotamia, represented especially by al-Aḥḡḡal, Dīārī, al-Farazdak, and Ḍhu 'l-Rumma. Al-Aḡḡal, the authentic representative of the schools of 'Amr b. Kulthūm and al-Nabīḡa, stands closest to the spirit of pre-Islamic poetry, both in his tribal odas and his panegyrics of the Umayyad caliphs. For the poets of al-'Irāq, on the other hand, the *basīda*, while preserving the traditional external structure, changes both in inner content and in function. Al-Farazdak in his boasting odas may celebrate the renown of his ancestors, but for him, as for Dīārī, beduin life is poor and brutish, and the *basīda* an

instrument to gain riches from the powerful and wealthy at the price of often hypocritical adulation, no longer phrased in terms of tribal virtues, but of political and religious controversy. Alternatively inter-tribal *maḥabbara* is overlaid by a flood of personal taunts in slanging matches on parallel themes (*maḥabb* [q.v.]), of considerable ingenuity and virtuosity, for the debilitation of the tribesmen of Kofa and Basra. Both of these developments went far towards changing the original art-form of the *basīda* into an artificial convention; and in language also the poets sought the suffrages of the rising philological schools in al-'Irāq by conscious exhibitions of luxuriant and sonorous vocabulary. This is still further developed in the special art of Ḍhu 'l-Rumma, devoted mainly to descriptions of desert scenery and life, emotionalised by a *ghazal* theme.

The outstanding difference between the pre-Islamic poetry and that of the Umayyad age in general is, however, psychological. The passions of the pre-Islamic age were strong, but moved within narrow limits; and the poets held them to a high moral plane. Those of the Umayyad age were multiple and conflicting, and the poets shared in the general psychological instability and conflict of principles and parties. The emotional foundation of the *ghazal* is self-evident; but emotion enters also into the traditional themes, bringing them closer to the popular taste and giving them a sharper and coarser tone, which lowers the ethical plane, in spite of a copious sprinkling of Qur'anic phraseology and pious sentiment. The political role also of much of this poetry required the poets to play to the gallery and pander to the debased taste and love of excitement of the masses, especially in their *nabā'id*.

As regards the authenticity and transmission of Umayyad poetry, it is evident from the relatively complete state of the *diwān*, as compared with those of the pre-Islamic poets, that they were written down either during the poet's lifetime or immediately afterwards. Specific references are found to a written corpus of the poetry of al-Farazdak, kept by a secretary (Aḡḡal, xiv, 22), and also to that of Ḍhu 'l-Rumma (al-Dīdhī, *Ḥunayyir*, i, 41), and to a written text of the *nabā'id* (ed. Beyran, 190).

#### (ii) Second-Century Literature

(i) Poetry. The Arabic literature of the 2nd/8th century is sharply distinguished from that of the 1st/7th century by two main features. It was, with few exceptions, the literature of an urban society, concentrated for the most part in al-'Irāq; and the majority of its producers were half-Arab or non-Arabs, converts or descendants of converts from the original Aramaean and Persian population. The resulting changes and developments in literary production are more marked in prose than in verse production, but are clearly to be seen also in the poetry of this period.

In contrast to the new prose literature, however, the transition to the early 'Abbāsid age made no

violent breach in the tradition of Arabic poetry. Metrical systems and technique evolved within the older framework, and structural innovations met with little or no success (see ante 'A-ḡḡḡḡḡ). The permissible metres and deviations were ingeniously systematised by al-Khālīl b. Ahmad (d. 175/791) and strictly adhered to. In language also the poets are as precise and meticulous in their pursuit of 'arabiyya as their predecessors, but begin to aim at smoothness and simplicity in place of the sonorous beduin poets. These changes are marked to a certain extent by the continued cultivation of the *basīda*, which now, however, even more than in the Umayyad age, acquired a ceremonial function. The poet who presented himself at the court of the caliphs or of lesser authorities was required to demonstrate his qualities by his *basīdas* and was rewarded accordingly. Since it was by their patronage that the poet gained his livelihood, he was compelled to conform to their expectations, especially when the reward was not infrequently proportioned to the length of his ode. To these factors must be added the natural conservatism of the Arab, which tended to restrict the poet to conventional forms, and of the poets themselves, for whom (as for their critics in the rising philological schools) poetry was the guarantor of the pure tradition of Arabic linguistic art, and the *basīda* the highest proof of the poet's mastery of it. Internally, in spite of the conventionality of its form and matter, the *basīda* shows a development away from the old beduin themes, and both panegyric and satire are handled with considerable diversity and originality, while at the same time the newer types of postal production affect to some extent the traditional modes of expression.

It is, however, in these newer types that the social changes and currents in the new age found their fullest expression. The first impulses came from the *ghazal* poetry of the *Ḥijāz* and its musical accompaniment, both directly and through Syria, where they were combined with the (probably native Syrian) tradition of wine-songs by the Umayyad caliph al-Walīd II (d. 126/744), with whom tradition connects the first representatives of the new school in al-'Irāq (see *ḡḡḡḡ* n. IVAs). Their witty, uninhibited, and often scandalous verses met with a delighted reception in the new secular and pleasure-seeking society of Basra and Baghdad, and were even set to music, enjoyed in the private entertainments in caliph's palaces. The general intellectual effervescence resulting from the contact of Islamic society with Persian and Aramaean culture stimulated, both by attraction and by repulsion, a wide range of emotional attitudes and reactions, which were freely exposed in verse, and at the same time created a social atmosphere which, in spite of the opposition of the nascent legal and theological schools, encouraged freedom of thought and expression. Together with the new trends of urban poetry, several of the movements of the Umayyad age (notably *ḡḡḡḡ*) still continued to furnish themes for poetic elaboration, and the old 'Irāki tradition of secular and satirical verse was revived by the Mu'taḡīl Bighr b. al-Mu'tamir, Abu 'l-'Atāshīya, and others. Two other lesser poets also were originators of new literary genres: 'Abbas b. al-Aḡḡal (d. c. 192/807), the inventor of the court-*ghazal*, short poems on themes of chivalrous love; and Abū b. 'Abd al-Hamīd (d.c. 200/815), who first used the rhymed *radīas* couplet (*muḡḡḡḡḡḡ*) for verse romances and didactic poems. In sum, therefore, the output of

Arabic poetry in this century was enormous, and characterised for the most part by an originality, achieved not so much by breaking out along new lines as by fusing new elements with the traditional themes in such a way that the effect is almost that of a wholly new art.

Yet, for all this, the poetry of the 2nd century prefigures, if it does not itself illustrate, the decline of the true poetic art and the growth of artificiality in Arabic poetry. The freshness and sincerity of the *Ḥijāzī* *ghazal* were not compensated for by wit and cynicism; and the pursuit of wit led to a straining after verbal brilliance and originality in metaphor. This was the origin of the so-called *badī'* [q.v.], the embellishment of verse by tropes and antitheses and ingenious exploitation of Arabic morphology. The earliest exponent of this "new style"—not as yet exaggerated or formalised—was the blind poet Baḡḡḡḡ b. Burd (d. 168/784), of Iranian extraction, and the first major Arabic poet of non-Arab origin. The elaboration of the traditional *basīda* with *badī'* devices is generally ascribed to one of the poets of the next generation, Muslim b. al-Walīd, who was in consequence highly esteemed by some critics and condemned by others as "the first who corrupted poetry". There is, in contrast, little trace of these artifices in the work of his greater contemporary Abū Nuwās (d.c. 198/803), who in poetic genius, fecundity, many-sidedness and command of language has few rivals in Arabic literature. Witty, gay, cynical and foul-mouthed, he was at his best in his incompensable wine-songs, most virulent and coarsest in satire and *ghazal*, versatile in pansyerie, and a linguistic virtuoso in the beduin style of hunting poems (*ardīyīyī*), the fashion for which he revived.

On the other hand, Abū Nuwās and the other poets of the latter half of the century exemplify a new development which was soon to affect all Arabic poetry, not generally to its advantage. Hitherto the poets had learned their art exclusively by association with their predecessors. With the rise of the philological schools, particularly at Basra, they began to perfect their training by systematic instruction from and association with the philologists. The common ground of this association has already been noted above, but its effect was to imbue the poets themselves (exclusive of the purely popular poets) with a more or less philological approach to their art and the acceptance of philological criteria of poetic merit. To this, probably, is due, more than to any other cause, the increasing formalisation of Arabic poetry in later centuries, and its degeneration, in the hands of the less gifted, to an almost mechanical recapitulation of well-worn themes with a surface decoration of *badī'*.

Transmission. Paradoxically the situation in regard to the texts of the early 'Abbāsid poets is often much worse than to those of the Umayyad poets, since the philologists (who did not regard them as reliable authorities for linguistic usage) made no efforts to collect their *diwān*s. Some have never been collected, and such *diwān*s as survive in later MSS (including that of Abū Nuwās) are far from reliable. The authorship of single verses and even of whole poems is sometimes in question, and later collectors of *badī'* figures have caused much confusion by lack of care in citation and attribution (see I. Kratchkowsky, *Abū 'l-Faraj al-Waḡḡḡ*, Petrograd 1914, Introduction, 68-96).

(ii) Prose. As already mentioned (i) (ii) above, ad fin.), the first essays in Arabic prose were made by the *katib*, the chancery secretaries of the

Umayyad caliphs, in a style based on that of the official *khawāṣṣ*. In the earliest known literary productions, those of 'Abd al-Hamid b. Yahyā (d. 152/750), however, in which the matter called for a logical expansion of general principles in complex detail, the adaptation of Arabic syntax to these unfamiliar demands could be met only by ingenious experiment. As in other literatures, flexibility in prose style was first acquired by the process of translation, in this instance from the Pahlavi court-literature of Sāsānid Persia, initiated by 'Abd al-Hamid's disciple Ibn al-Mukaffā' (d. 139/757). In their existing forms, the extant works of Ibn al-Mukaffā' have probably undergone some rehandling in subsequent decades; but it is clear that he posed the problem which was gradually solved by his successors: that of creating a smooth and palatable prose style which was capable of expressing systematic thought, within the limits of the available vocabulary. The function of this literature was didactic and ceremonial; it laid down rules of conduct for princes, court officers, secretaries and administrators of all kinds, and supplied the general knowledge required for the performance of their duties, in the form of manuals, anecdotes and romances, the whole being comprised under the general head of *adab* [q.v.]. Their agreeable literary style and diverting contents procured a wide popularity for these works in the new urban society, and for several decades the translations from and imitations of Persian literature held a dominant place in Arabic prose literature.

In the meantime, native forms of Arabic prose were being developed. The primitive narrative arts were organised into conscious literary styles, such as the *basar*, the combination of a number of *ḥadīṭ* into a connected story (exemplified in the *Sīrat al-Nabī* of Ibn Isḥāq (d. 151/768), the *ḥissa* [q.v.] or anecdote, and *ḥikāṣ* [q.v.] or narration, particularly in the romances of beduin lovers ('*uṣṣāḥā*) and of the "battle-days" (*ayyām al-arab*) [see I (a) (ii) above]. In contrast to these narrative genres, which preserved in a greater or less degree their original Arabian structure, the rapid expansion of intellectual energies in Basra and Kūfa, especially in the schools of philology and law, was creating, with the help of Greek logic, a new argumentative prose which was far more flexible and close-knit than either the new narrative forms or the translations of the secretaries. At the same time, the philologists, consciously opposing the increasing degeneration and impoverishment of Arabic in the mixed society of the 'Irāqī cities, and with the support of Islamic religious circles, set themselves to define the correct modalities of Arabic speech and to preserve both the extensive vocabulary (*ḥajḥ*) and the pure idiomatic usage (*ḥayḥa*) of the peninsula. Thus, in opposition both to the jurists and to the secretaries, for whom the Arabic language was primarily an instrument, they reasserted—in a new context—the old Arabian insistence on the importance of form, and thereby contributed to maintain the concept of the 'arabiyya as an undisturbed and unchanging artistic structure, which remained unaffected by the varieties and evolution of spoken Arabic. Closely related to these activities, and also in conscious opposition to the secretarial school, was their activity in searching for and preserving the memorials of the old Arabic culture, such as poems, proverbs and tribal traditions, to serve (in conjunction with the Kur'ān and all the materials relating to the Islamic movement) as the basis of the "Arabic

humanities". Except for technical monographs, mainly on philological subjects—the most important of which are the dictionary, *K. al-ṣāḥih*, of al-Jaḥḥil b. Ahmad (d. 175/791), the grammar, *al-Kaṣb*, of his pupil Sibawayh (d.c. 180/796), and the monographs of Abū 'Ubayda (d. 210/825) and al-Asma'ī (d.c. 218/831)—few original literary works, in the strict sense, had been produced in philological circles by the end of the century, and it was only in the 3rd/9th century that the Arabic humanities came into full fruition.

Much the same may be said of the associated field of historical studies (see TA'RIKH), in which, except for the rather conscious adaptation of the *ayyām*-technique in the *Sīra* of Ibn Isḥāq, the activities of historical students were devoted mainly to the compilation of source-materials in the form of monographs on particular episodes of Arab or Islamic history (see ARḌ MITHQAF, AL-MADĀ'IN, AL-WARĪD) or on tribal genealogies (see MITHMAM b. MUHAMMAD AL-KALBI).

The legal schools, on the other hand, had already attained the stage of producing major works, both expository and controversial (see FIQH). The lead was taken by the Hanafī school of al-ʿIrāq with Abū Yūsuf (d. 182/798) and Muḥammad al-Shaybānī (d. 189/804), while the school of al-Madīna produced the first important corpus of legal *ḥadīṭ* in al-Muṣaḥḥa' of Mālik b. Anas (d. 179/795). As early as the next generation, al-Shāfi'ī was able to set out and defend in a series of tracts (*al-Umm*) the principles which were henceforth to govern legal reasoning in Sunni Islam.

Finally, in regard to Kur'ānic studies, the practice of oral transmission still predominated, and the first collected work on exegesis appears to have been made by the above-mentioned Abū 'Ubayda.

### (III) Third to Fifth Centuries

#### (i) Prose

By the opening of the 3rd/9th century, the philological, historical, legal and Kur'ānic studies just described had laid the foundations for an Arabic-Islamic prose literature, which could challenge the predominance hitherto enjoyed by the secretarial school in the field of public letters (*adab*). The problem that remained to be solved was that of mobilisation, or how to bring these studies out of their scholastic or technical isolation into a positive relation with the public interests and social issues of the day. This problem was illuminated, rather than solved, by the genius of al-Djābir (d. 255/869), who brought them to bear on all aspects of contemporary life in a serious, learned and witty style, of unequalled linguistic vigour and variety, but too individual to serve as a stylistic model for general literature. The final solution was found by his later contemporaries who blended the clarity of the secretarial style with the traditional art-language and the argumentative prose of the philological and legal schools, in a medium capable of expressing all varieties of factual, imaginative and abstract subjects with great refine-

ment and precision, though at some cost to the wealth and vigour of the ancient idiom cultivated by the philologists. One of the first results of this "modernised" prose medium, with its superior flexibility and adaptation to social changes, was to restrict and ultimately to displace poetry from its former social function, and to relegate it more and more to a purely aesthetic role in social and literary life.

The success achieved by the writings of al-Djābir and his successors was not due solely, however, to their command of the Arabic sciences and a more flexible linguistic instrument. The schools of Basra, with their rationalising tendencies, had already been attracted (especially in the theological groups of the Mu'tazila [q.v.]) by the surviving elements of Hellenistic culture in Western Asia. Early in the 3rd/9th century the revival of Hellenistic learning received a strong impulse from the establishment by al-Ma'mūn (198-218/813-33) of the *bayt al-hikma* [q.v.] for the translation of Greek philosophical and scientific works. During the whole period treated in this section, the dominant feature of Arabic culture is the fruitful interaction of the Arabic and Greek traditions which is already illustrated in the writings of al-Djābir, and was subsequently displayed in almost all branches of Arabic literature, both secular and religious. These internal developments were further expanded and accelerated by the vast extension of literary activities, which, hitherto all but confined to al-ʿIrāq, began in the 3rd century to be revived in a large number of centres, from the Samarqand to Kayrawān and al-Andalus. The material foundation of this expansion was the rapid economic development of the Islamic empire, supplemented by the introduction of paper (*ṣawāḥ* [q.v.]) manufacture from the Far East in the second half of the 2nd century.

The range and extent of these new literary movements rapidly overcame the Sāsānid tradition of the *ḥadīṭ*, in spite of their rearguard movement of resistance (see MU'AMMAYYA) and denigration of the Arabs and their culture. A reconciliation was effected by Ibn Kutayba (d. 276/889-90), who in a long series of works furnished the secretaries with compendia and extracts from all branches of Arabic learning, but incorporated in them also such elements of the recent historical and literary traditions as had established themselves at the court and could be harmonised with the Arabic-Islamic humanities. Henceforward, *adab*, in the strict sense, was confined to treatises and other literary works based on this widened Arabic-Islamic tradition, including both the Persian and the Hellenistic components.

Simultaneously, the widening of general intellectual interests was displayed in the cultivation of a great variety of specialist disciplines, the cumulative productions of which constitute the climax of the mediaeval Islamic culture, and for this reason cannot be entirely excluded from any general survey of Arabic literature. In the 3rd century the Hellenistic contribution was greatly expanded by the many translations of Greek works made by Kustā b. Lūḳā (fl. 220/835), Hunayn b. Isḥāq (d. 260/873), his son Isḥāq b. Hunayn (d. 298/910), and other translators. Already before the middle of the century, the first independent Arabic works on philosophy were being written by Yaḥyā al-Kināfi (d.c. 256/850), to be followed in the next century by the Turk Abū Naṣr al-Fārābī (d. 339/950) and the Persian Abū 'Alī Ibn Sīnā (d. 428/1037),

to mention only the most prominent names (see FALSAFA); on mathematics by Muḥammad b. Mūsā al-Khwarizmi (fl. 230/841) and Thābit b. Kurra al-Sābi' (d. 268/901) [see RIVĀḌA]; on astronomy by al-Farghānī, Abū Ma'shar al-Balḥī (d. 272/885), and al-Battānī (d. 317/929) [see TANQID]; and on medicine by Ibn Māsawayh (d. 243/859) and Muḥammad b. Zakariyyā al-Rāzī (d.c. 317/923) [see FIBR]. Although the technical literature of the sciences cannot be dealt with here, yet the importance of these studies, and of other popular works on Hellenistic origin (such as *Sirr al-Aṣṣār*, attributed to Yahyā b. al-Bṭrīk, c. 200/815), in determining or at least influencing the intellectual climate of the period must not be underrated. In geography, in particular, they not only directly inspired the "revision" of Ptolemy's geography by the above-mentioned al-Khwarizmi, but also indirectly contributed to the first road-book, by the postmaster Ibn Khuradādhbih (fl. 230/844), and in conjunction both with the older philological interest in the place-names of Arabia and with Indian materials (see SINDHIND) and old Persian concepts, stimulated the intellectual curiosity which produced the rich geographical literature of the following century (see GUGRAPHIYA).

The opposition to these hellenising tendencies was led by those "orthodox" students of theology and law who rejected the rationalist principles of the Mu'tazila. The search for Prophetic Tradition (*ḥadīṭ* [q.v.]), which had developed in the 2nd century as a weapon against the pragmatic tendencies of the local schools of Law, was vigorously cultivated in the 3rd by the orthodox everywhere, partly (as in the famous "Six Books" of al-Buḥārī, Muslim, al-Tirmidhī, Abū Dā'ūd, Ibn Māḍja, and al-Nasā'ī) in order to consolidate the dominant place which it had gained in the juristic sciences, but partly also (as in the more comprehensive *Musnad* of Ahmad b. Hanbal, d. 241/855) against the critical attitudes of the Mu'tazila. So potent a force did the *ḥadīṭ* prove to be, with its appeal to simple piety and veneration for the Prophet, that in the next century the Shī'īs also, both among the Ismā'īlīs (*Dā'ir al-Islām* of the 3rd al-Nu'mān b. Muḥammad, d. 363/974) and in Imānī circles (the "Four Books" of al-Kulaynī, d. 328/939, and others [see MU'ṬA]), aimed to rival the achievement of the Sunnīs by the collection and attribution of *ḥadīṭ* to the Imāms.

Nevertheless, although the schools of law, thanks to the early standardisation of their methodology, seem to have been little affected by the hellenistic revival and continued to produce an extensive literature of their own, both theology and popular religion could not but be coloured by their environment. Orthodox theologians, in the schools of al-Ash'arī (d. 324/935) and al-Māturīdī (d. 333/944), reconciled Greek physics with the data of the Kur'ān and the *Ḥadīṭ* by a skilful dialectic (see KALĀM), which by the end of the 5th century had established itself as the universal scholastic theology of Sunni Islam; while Shī'ī theology, especially in the Ismā'īlī schools, was still more strongly influenced by the neoplatonism expounded, together with the Greek sciences in general, in the popular encyclopaedia of the 4th/10th century called the *Epistles of the Sincere Brethren* [see IḤṢWĀN AL-SĀFA]. The literature of theological polemics also, as well as that on "comparative religion" (i.e. on the differences between the Muslim and the non-Muslim religions), is clearly aware of the general positions of

Greek philosophy and prepared on occasion to discuss them in detail. The most celebrated work in these two fields is the incisive *K. al-Faṣl* by the Andalusian Zuhri Ibn Hazm (d. 456/1064), equally noted for his delicate anatomy of love under the title of *The Dove's Neckring*.

While popular religion was less affected by theological problems as such, it had from the first been influenced by the older religious movements in Western Asia and North Africa. By the 3rd century most of these accretions had been pruned away, except for gnosticism and Syrian mysticism (itself incorporating many Stoic and Neoplatonic elements), which were exercising an increasingly profound influence upon ascetic and pietist circles, and trans-forming piety and asceticism into mystical *ṣūfism* (see TAKAWUṬ). Already in the 3rd and 4th centuries a new *ṣūfī* literature was fully developed, ranging from systematic treatises (beginning with al-Muḥāsibī, d. 213/837) and *raṣāʾid* (al-Dīnawarī, d. 297/910) to collections of aphorisms, mystical poetry (see AL-HALLĀǦ), and stanzas by ʿIḥwān (d. 245/859) and al-Niffārī (d. 354/965).

The total result of these specialist literary activities was immensely to expand the range of mediaeval Arabic as a linguistic instrument. Not only in the technical vocabulary of the various sciences, but also as a medium for expressing fine shades of philosophical and psychological analysis, it had developed capacities far beyond the old classical language. But this must not be taken to imply that the range of literary *adab*, or even its expressiveness, was widened in an equal degree. Much of this technical and analytical vocabulary was probably little understood outside the restricted circles of specialists. No doubt (indeed, it could hardly have been otherwise), some of these wider intellectual horizons were occasionally reflected in works of polite letters. Nevertheless, the *adab* works also demonstrate very clearly the marginal position of the purely Hellenistic elements and of the special sciences dependent on them (as distinguished from the generalized influence of Hellenistic culture) in relation to the main body of Arabic and Islamic elements in the mediaeval Islamic culture. A few *uṣul*<sup>1</sup> show in their writings an interest in metaphysical and scientific disciplines, e.g. Ahmad b. al-Tayyib al-Buhārī (d. 286/899), Abū Ḥayyān al-Tawhīdī (d. 414/1021) and Abū ʿAlī Miskawayh (d. 421/1030) [see also ʿAṢḤĀṬ]. But such works are on the whole exceptional. The mainstream of Arabic letters after Ibn Kutayba runs through miscellaneous topics drawn from Arab poetry and history, politics and rhetoric, anthologies and collections of anecdotes, and popular ethics, illustrated by such writers as Ibn ʿIḥwān (d. 287/894), Ibn al-Muʿtazz (d. 296/908), the Andalusian Ibn ʿAbd Rabbihī (d. 328/940), Abū Bakr al-Sūlī (d. 335/946), Abū ʿI-Faraj al-Isfahānī (d. 356/967), author of the *K. al-Aḥqānī*, al-Muḥassin al-Tawhīdī (d. 384/994), collector of 'table-talk' and anecdotal literature, and Abū Mansūr al-Dīnawarī (d. 429/1038 [see below]). The huge output and popularity of such works show how sharply, on the whole, the social and intellectual interests of literary circles were circumscribed, and the consequent limitation of the concept of *adab*. On a more technical level of *adab*, but essentially of the same kind, were the 'sessions' (*maḥallāt*) and 'dictations' (*imānāt*) of the professional philologists (e.g. al-Muḥarrarī, d. 285/898, al-Faṣṣāḥ, d. 292/899, Ibn Durayd, d. 311/924, al-Kāfī, d. 356/967), in distinction from their pedagogical works on philology

proper, which included the first major dictionaries of the classical language by Ibn Durayd, al-Dīnawarī (d. c. 393/1002) and Ibn Fāris (d. 395/1004-5).

This intense absorption in literary and linguistic production was bound to produce in due course a considerable volume of technical literary criticism. Although as late as the *K. al-Aḥqānī* criticism seems to consist mostly of subjective judgments on the relative merits of given poets or verses, the first steps towards a more systematic criticism had already been taken by al-Dīlālī, from a different angle, by Ibn al-Muʿtazz, who in his *K. al-Badʿ* classified the figures of speech employed in the 'newer' poetry. Kullūbā b. ʿIṣṣāʿ (d. 310/922) introduced the practice of classifying poetic 'beauties' and 'faults', and by the end of the 4th/10th century the *K. al-Sināʾatayn* of Abū Hilāl al-ʿAskarī (d. 395/1005) offers a complete critical analysis of poetry and prose in terms of structure, rhetorical devices, and figures of speech. The significant feature of most of this discussion was the insistence upon form rather than matter as the decisive criterion of quality; the declared assumption is that little if anything new can be originated in poetry, and that the only difference between one poet and another lies in his manner of expression. The balance was to some extent redressed by ʿAbd al-Kāfir al-Dīrdjānī (d. 471/1078), who supplemented the excessively formal analysis of his predecessors by a system of logical and psychological analysis which demanded an at least equal consideration for the 'ideas' expressed. Additional point was given to the argument on literary aesthetics by its bearing on the doctrine of the incomparability (*ʿidghāz*) of the Qurʾān; inevitably, in spite of protests in theological circles and by al-Dīrdjānī, the prevailing concentration of literary criticism upon form tended to emphasize unduly its supreme verbal qualities in terms of the current stylistic theories.

A further consequence, equally inevitable, was that rhetorical and literary prose began to be affected by the same theories and to display the same pursuit of verbal elaboration. The virtuosity of the *adab* was displayed in 'Paragraphs' (*ḥuṣūl*) and describing scenes, persons, emotions, events, and objects, or in Epistles (*rasāʾid*) addressed to friends or colleagues on a variety of occasions. Ibn al-Muʿtazz seems to have been, if not the inventor, at least the populariser of this art, which in the 4th century swept over the whole field of Arabic letters. The secretarial class fell victim to it almost at once; in the intense competition for office every refinement of literary style was eagerly exploited. The technique of secretarial correspondence was elaborated into art (*maḥāṣin* [g.e.]), based upon admired models of elegant, florid, insinuating or pungent writing, and it was not long before rhyming prose (*saḍʿ*), which the best stylists had hitherto used only as occasional ornament, became inseparable from official style. By the middle of the 4th century the vizier Abū ʿI-Faḍl b. al-ʿAskarī (d. 350/967-70) style composing his correspondence in *saḍʿ*; with his disciple and successor Ibn ʿAḥḥād, known as 'the Šāḥib' (d. 385/995), its use had become a mania. Contemporary literateurs, the most celebrated of whom are Abū Bakr al-Kh̄ẓarīmī (d. 383/993) and al-Hamaḍīnī, known by the sobriquet of Badīʿ al-Zaman (d. 398/1007), developed the new style more freely and freely in their *raṣāʾid*, which often resemble a kind of uncanonised verse rather than prose. From then onwards every writer with a reputation to make or to maintain had perforce to

follow their example; and industrious compilers like al-Thaʿālibī, in his *Yatīmat al-Dahr*, and Abū Ishāq al-Huṣṭī of Kayrawān (d. 453/1061), in his *Zahr al-ʿAdab*, were quick to compose anthologies and treasuries of the most successful verses and *ḥuṣūl* and the most approved metaphorical descriptions and imagery. The additional premium which this placed on wit and agility produced, it is true, not a few masterpieces of artistic invention by those who possessed a natural gift for this style, but exacted in return a heavy price. The enforced cult of rhyming prose not only contorted the style of men of natural but more ponderous genius like Abū ʿI-ʿAlī al-Maʿarrī (d. 449/1057), but by rewarding artificiality it contributed to turning Arabic writers still further away from the solid ground of real life and living issues and to sap the vitality of Arabic literature.

For the moment, however, the revival of *saḍʿ* coincided with a search for new or original methods of presenting literary themes. Badīʿ al-Zaman found a new setting (or revived a Hellenistic genre) in the popular theme of the witty vagabond, and created the dramatic anecdote or *maḥla* (g.e.). About 416/1025 the Andalusian Ibn al-Shaybānī, in *ʿI-Ṭawṣīf* and *ʿI-Zawāʾid* imagined a series of interviews with the *ḡinn* who had inspired the great poets of the past. Eight years later Abū ʿI-ʿAlī al-Maʿarrī wrote his *Kisāʾil al-ḡhurān*, in which, more daringly, he imagined a visit to heaven and hell to interview the poets themselves. These extravaganzas, however, were less appreciated by literary taste in their respective times than the witty anecdotal *maḥla*. Ibn Zaydīn of Cordova (d. 463/1070), satirising his rival Ibn ʿAḥḥād, and the letters in tightly-knit and decorated *saḍʿ* of Kābūs b. Waḥmīr, prince of Tabaristān (d. 403/1012), collected under the title of *Kumāl al-Balāgha*. Even the *maḥallāt* of al-Hamaḍīnī seem to have found few imitators until the end of the 5th century, when they were revived by al-Ḥarīrī of Basra (d. 376/1122), with the same motif as that of his predecessor, but with a refinement of philological subtlety and wit equalling the most ingenious of the *raṣāʾid* and a striking poetical gift in addition. It is something of a paradox that with all their formal perfection and qualities of erudition and wit, the *maḥallāt*, *ḡinn*, *ḡhurān*, *ḡinn*, and *ḡinn* of al-Hamaḍīnī are firmly rooted in the common life of the Islamic city, and portray its manners and its humours so realistically as to constitute one of the most precious social documents of the Islamic Middle Ages.

Historical composition, though properly distinct from *adab*, was to some extent affected by the same influences. At the beginning of the 3rd/9th century, the continued association of history with religious studies is seen in the histories of Mecca by al-Aʿrakī (d. after 217/832) and al-Fākhī (d. after 272/885), and in the biographical and genealogical works on the Companions by Muḥammad b. Saʿd (d. 230/845), the secretary of al-Wāḥidī, and on Kuraish by al-Zuhayrī (d. 233/848). It is still present in the first (and last) attempt to compile a comprehensive Universal History based on the corpus of Islamic materials (which by now incorporated the Sāsānid tradition) and significantly entitled 'The History of the Prophets and Kings', by Muḥammad b. Dīrār al-Tabarī (d. 310/923), as a complement to his Commentary on the Qurʾān, and more freely and freely in their *raṣāʾid*, which often resemble a kind of uncanonised verse rather than prose. From then onwards every writer with a reputation to make or to maintain had perforce to

as an independent branch of study and of literary activity begins to appear in such diverse forms as the historical encyclopaedia of al-Yaʿqūbī (d. 284/897) and the history of Baghdad by Ibn Abī Ṭāhir Tayfūr (d. 280/893). By the 4th century historical writing not only flourished luxuriantly, but took in a wide range and variety of subjects: universal history (combined by the traveller al-Maʿarrī, d. 345/956, with a hellenistic curiosity about all things terrestrial and celestial, local histories of regions and cities from Central Asia to Spain, antiquarian research, memoirs on current events, histories of viziers and kads, biographies of individuals, biographical dictionaries of different classes and professions, even historical pseudographs and forgeries. History became an essential part of the equipment of an educated man, and as such entered into the general concept of *adab*.

It is possible, generally speaking, to draw a broad line of division between two attitudes to history among the educated classes. On the one side stand the scientific or serious historians, whose writings conform to certain standards of accuracy and veracity. By the 5th century these were mostly, though not exclusively, officials and courtiers, such as Miskawayh (d. 421/1030) and Hilāl al-Šāḥibī (d. 448/1056) in al-ʿIrāq, al-Musabbihī (d. 420/1029) in Egypt, and Ibn Ḥayyān al-Kurtubī (d. 469/1076-7) in Spain, together with a few independent scholars, of whom the mathematician and astronomer Abū Rayḥān al-Bīrūnī (d. 440/1048) is the most outstanding. On the same side of the line stand the compilers of biographical dictionaries of scholars, notably al-Khatīb al-Balāḥī (d. 463/1071). On the other side are those for whom history is no more than a branch of *adab*, a quarry for ethical or entertaining anecdotes, or an instrument of propaganda, as in the biographies of saints, the literature of ʿAlid martyrdom, and the largely forged collection of ʿAlī's letters and speeches known as *Nahḍ al-Balāgha* [see AL-ŠARAF AL-BADĪ].

The elaboration of literary prose also, in time, invaded the field of historical writing, but only, it seems, in the composition of eulogistic dynastic annals. The example was set by Ibrāhīm al-Šāḥibī (d. 459/994) in his last work *al-ʿIḍāḥ* on the history of the Buwayhids, and was followed by al-ʿUṭbī (d. 427/1035) in its counterpart *al-Yamīn* on the history of the early ʿĠhannawids. It may be more than coincidence that these works are contemporary with the revival of the old Persian historical tradition and the Persian epic. At all events, no other examples of this style seem to be known until the later Saldjūq period (see § IV below).

#### (ii) Poetry

It has been pointed out at the beginning of the preceding section that from the 3rd century onwards poetry was displaced from its former social function by the new prose literature. Partly this was due to the adaptation of the artistic tradition of the *ʿArabīya* to produce a vigorous prose style, which deprived poetry of its previous aesthetic monopoly. But to a far greater extent it was the result of the wide expansion of intellectual interests, with which the poets were unable to keep pace. As at the end of the pre-Islamic age, they were prisoners of their own conventions, broadened out and diversified with a difference as these conventions had been during the 1st and 2nd centuries. To a certain extent also they were the prisoners of their society. In his private verse the poet was no doubt free to amuse

himself as he pleased, but the doctrine which finally prevailed was that his major function was to "immortalise" his patron by his panegyric *hauḍas*: a curious and remarkable revival of the tribal function of the pre-Islamic poet.

From the literary-historical angle, one of the most interesting features of 3rd century poetry is the effort made, but without substantial success, to break through these conventions in different ways. Abū Tammām (d. 231/846), a self-taught Syrian, tried to revive the weighty sonority of *beḥn* poetry and to marry it to the *badīʿ* ornamentation of the poets of al-ʿIrāq; at the same time he attempted to make his verse the vehicle of a more complex structure of thought. His poetry is in consequence often strained and overloaded, or alternatively relaxed to an excessive degree, although it has found warm admirers in both mediaeval and modern times. His fellow-townsmen and disciple, al-Buḥārī (d. 284/897), with a more natural gift, remained closer to the ʿIrāqī tradition in his smoother and more polished verse. In al-ʿIrāq, on the other hand, the al-Buḥārī (d. 283/897) attempted to create a new introspective and analytical poetry, in which each poem develops a single theme in an organic unity, and which has sometimes, but doubtfully, been genetically linked with his "Greek" origin. The originality of this poetry (though marred by an excessive sense of grievance) was appreciated, but not imitated; and the more typical and influential representative of the ʿIrāqī tradition was the ʿAbbāsid prince Ibn al-Muʿazz (d. 296/908), who freely adapted traditional themes and metres to poetical *raʿāʾid* and descriptive verse, corresponding to the prose *fayḍ*. His innovations in technique and ingenuity (including a historical poem in 450 *raʿāʾid* couplets celebrating the reign of his cousin, the caliph al-Muʿtadid) rest, however, on the established conventions of Arabic poetry; they revise, rather than reform, its characteristic methods and outlook.

From the 4th/10th century on, such pieces of natural description, epistles, poems on social occasions and the like constitute, together with epigrams and ceremonial *hauḍas*, the stock-in-trade of all minor poets in every part of the Muslim world, and in varying degrees of excellence. By the use of *hauḍ* had become so universal in poetry as to be a natural constituent of the finished poetic imagination; in the *ghazal* or wine-song it might be allowed to play only a minor part, but no poem with any pretensions could be composed without it. It required, however, the genius of a greater poet to blend in just proportions the Arabian *hauḍ* of the Syrian school and the smoothness and technical ingenuity of the ʿIrāqī school. This was accomplished by Abū ʿIṣṣāq al-Mutanabbī (d. 354/965), of Kūfān origin and an admirer of Ibn al-Rūmī and Ibn al-Muʿazz, but Syrian in his poetical apprenticeship, and the brightest ornament of the "Circle of Sayf al-Dawla". For skill in construction, felicity of language, and mastery of the lapidary phrase, al-Mutanabbī has no equal among the later *hauḍ* poets, although his chief rival in Aleppo, the Hamdanid prince Abū Fīrās (d. 357/968) may have surpassed him in the direct emotional appeal of his best poems. A greater rival was his contemporary Ibn Hānī al-Andalusī (d. 362/973), the panegyrist of the Fātimid caliph al-Muʿizz, whose *hauḍas* (sometimes unjustly depreciated on sectarian grounds) are more faithful to the pre-Islamic models.

Little need be said of the later poets in the eastern provinces, whose production remains on the

whole within the frame of subjects, conventions and techniques established in the 3rd and 4th centuries. The leading poets in al-ʿIrāq were the ʿAbbāsid al-Shāfiʿ al-Rādī (d. 406/1015) and Mihyār al-Daylāmī (d. 428/1037), who seem, however, to have been less appreciated in their own time than a number of writers of popular poetry (in the literary language), of which only a few fragments have survived. The most notable of 5th century poets was the Syrian Abū ʿIṣṣāq al-Maʿarrī (d. 449/1057); a follower of al-Mutanabbī in his earlier *diwān* (*Siḥr al-Zandī*), he broke with convention in his later collection of short pieces (*Luḥūḥ wa-lam Yaḍam*), the tone of which, however, probably owes less to their poetical quality and elaboration of technique than to the unorthodox freedom of the ideas which they expressed.

In the Maghrib and al-Andalus also, the mainstream of poetry, like that of Arabic letters in general, still flowed in the channels dug for it in the East, distinguished only by local colouring. As Ibn Hānī took Abū Tammām and the pre-Islamic *hauḍ* for his models, so Ibn Zaydūn (d. 463/1071) followed al-Buḥārī—but with an elegance and freshness that sometimes surpasses his model—and Ibn Darrājī (d. 421/1030), the panegyrist of al-Manṣūr b. Abī ʿAmīr, followed al-Mutanabbī. With these may be mentioned, though of later date, the Sicilian Ibn Kharrūb (d. 527/1132), and among the many minor poets the ʿAbbāsid prince al-Muʿtadid (d. 488/1095). During the 5th/11th century, however, a new strophic type of poetry, of local inspiration, began to be cultivated in Spanish-Arab literary circles, but did not reach its full development until the following century (see § IV below).

#### (IV) Sixth to Twelfth Centuries

The beginning of the 6th/12th century witnessed the triumph of the two forces which were henceforth to dominate the intellectual life of the Arab countries: scholasticism and *ʿulūm*. Both of these movements were associated in the Sunnī revival under the Salḡūks (g.s.) which, beginning in Khurāsān in the middle of the 5th century, spread to ʿIrāq under the Salḡūk sultanate, and to Syria and Egypt under the Zankid and Ayyūbid *ulūm*. In the West a similar movement, led by the Berber Muhammad b. Tūmart (d. 524/1130) on his return from Baghdad, was associated with the Muwāhid (Almohad) regime in the 6th century, and their parallel development in the two halves of the Arab world was maintained by multiple contacts and interactions.

The chief material factor in the spread of scholasticism was the gradual concentration of all literary education in the *madrasa* (g.s.), the new type of organised college introduced by the vizier Niḡm al-Mulk (g.s.; d. 485/1092) into Baghdad for the training of *ʿulūm* and administrators, and thence spread over the entire Muslim world. The formation of education involved also the formalisation of the disciplines taught, and contributed powerfully to the substitution of text-book and encyclopaedic compilation for original composition. This tendency is already visible in the first generation of leading scholars at the Niḡmīya *madrasa*: in the philologist al-Thirīfī (d. 502/1109), a pupil of Abū ʿIṣṣāq al-Maʿarrī, whose production was confined to schoolworks and commentaries, as also was that of his successor al-Djāwīdī (d. 539/1145); and in the Shāfiʿī theologians al-Djawnī Imām al-Haramayn (d. 478/1085) and his pupil Abū Ḥamid al-Ghazālī (d. 505/1111), whose earlier works were devoted to methodology and the scholastic defence of orthodoxy against Hellenistic philosophy and Gnostic heresy. In their footsteps followed a long and immense majority of Sunnī theologians and jurists of the later generations, producing a vast literature of doctrinal summaries (*ʿabḍā* [g.s.], pl. *ʿabḍāʾid*) (the most reputed being those of the Hanafī Abū Ḥafṣ al-Nasāfi (d. 537/1132), ʿAḥmad al-Dīn al-Djī (d. 736/1355), and Muḥ. b. Yūsuf al-Sanūfī (d. 824/1486))—works on *ḥadīṡ* (especially the supplement to the "Books" by Ibn al-Haytham (d. 1027/1140)), and the comprehensive *Kanz al-ʿUmmāl* of the Indian ʿAlī al-Muttaḥī (d. 975/1567)—school textbooks of law and collections of *fatāwā*, as well as handbooks on special branches of it (see XIX)—commentaries on the Qurʾān or on particular sections of it (see TAPIRI) or on the *ḥiṣṣ* (g.s.)—and on all of these and similar works a prodigious structure of commentary (*sharḥ*) and super-commentary (*ḥāshiyah*). The Shiʿa, in turn, on the basis of the 4th and 5th century works, produced similar theological and dogmatic compendia (especially by al-Mutahhar al-Hillī, d. 726/1326, and Muhammad Bakr al-Madīlī, d. 1110/1700), textbooks of law, and Qurʾān-commentaries.

The exceptions to this increasing stratification and narrowing down of scholastic thought are few but important. The outstanding original religious thinker and reformer, the Hanbalite Ibn Taymiyya (d. 728/1328), and his pupil Ibn Kayyim al-Djauziyya (d. 751/1350) engaged in a vigorous polemic against both the inertia of the schools and the *shīf* cults, but with little success until the revival of his teaching by Muhammad b. ʿAbd al-Wahhāb (d. 1206/1791) in Central Arabia. In India, an important and little-studied school of religious philosophy, founded at Djawpur by Mahmūd al-Djawnī (d. 1062/1652), remained active for several generations, and influenced the work of the religious reformer (Shāh) Wali Allāh al-Dihlī (d. 1176/1766). In law, original contributions were made to the study of legal principles by the Shāfiʿī Tāj al-Dīn al-Subkī (d. 771/1370) and the Hanafī Ibn Nudjāy al-Mīrī (d. 970/1563). In philology also, fresh minds were occasionally brought to the study of the congealed schooltexts, as, for example, by the Andalusian Abū Ḥayyān (who, amongst other works, composed grammars of Turkish, Persian, and Ethiopic; d. 745/1344) and his Egyptian pupil Ibn Hishām (d. 761/1360).

The effects of scholasticism were not, however, confined to the religious and philosophical sciences. It affected every branch of literary composition,

not even excluding poetry, by encouraging an intellectual tendency to standardisation on the part of both writers and readers. Originality of thought, though not stifled, reaped little reward, and was less valued than the ability to refurbish familiar themes in a more pointed or elegant manner. The output was enormous, yet characterised in every field by a sameness of method and treatment which reduces any survey of the literature of this period to little more than lists of names. But there was also another factor which contributed its share to this levelling process. In the vast new territories added to the Islamic world between the 7th/13th and 9th/15th centuries, as indeed already in Persia and Central Asia, although the parallel extension of the *madrasa* system carried with it an extension of the area of Arabic scholastic studies, the medium of *belles lettres* and poetry was no longer Arabic, but Persian or Turkish. These new literatures, while drawing to a greater or less extent on the traditions of Arabic literature, not only contributed nothing to Arabic letters, but siphoned off the talents which might otherwise have rejuvenated Arabic literature and opened it up to new experiences. When it is recalled how much that had given variety and resilience to the literature of the preceding centuries was produced or initiated in the Persian provinces, the effect of their loss to Arabic letters can be readily appreciated.

At the same time, the intellectual energy and literary taste that displayed themselves in this period must not be underrated. Original works of *belles lettres* may be few, but the same vigour and freshness of mind that broke through even in the scholastic disciplines found other fields of exercise, especially in the first four centuries. It was in the continuing impulse of the Hellenistic tradition, in the immense development of historical composition, and under the growing stimulus of *ḡifān* that they were most active; yet from time to time certain writers found ways and means to express their interests and personalities in works which bear an individual stamp. Amongst memoirs, there are some which throw a vivid light upon the authors and their times, especially the reminiscences of war and the chase of the Syrian Ḥusayn b. Munḡiḥ (d. 584/1188), the more literary narrative of ʿUmar al-Yaman (d. 569/1175), and the autobiography of the Tunisian historian Ibn Khaldūn (d. 808/1406). Among the books of travel, which were stimulated more especially by the Pilgrimage, there are some which betray a lively interest in the observation of manners and customs of other countries; of the travellers from the West the most remarkable are Abū Ḥamid al-Ghazālī (d. 505/1109-70), Ibn Djibār (d. 614/1217), and Ibn Baṭṭūṭa of Tangier (d. 779/1377), and of those from the East ʿAlī b. Abī Bakr, "the shaykh of Harāt" (d. 612/1214). Memoirs and travels, it is true, succumbed in most cases to the prevailing scholasticism and *ʿulūm*, being reduced to little more than lists of teachers and books, or of visitations to religious personages and shrines. But even to a few later travellers we owe interesting narratives of missions to different parts, such as those of the Moroccan Abū Ḥasan al-Tamghūrtī (fl. 1000/1591) and Abū ʿIṣṣāq al-Zaynī (fl. 1249/1843), and there is even a journal of a visit of a Chaldean priest, Ilyās b. Yuhannā, to America (1668-83).

A third and still newer branch of letters which flourished for a time was devoted to the arts of war, stimulated especially by the Crusades. During the following two or three centuries there was a

known as al-maḥṭabī, in opposition to the Aristotelian school; but another Suhrawardī, Shihāb al-Dīn 'Umar (d. 632/1234) issued a more orthodox exposition of iḡrābī mysticism in 'Aḥdīr al-Ma'ārīf. Both works had a deep and lasting influence in the East, but much less in the Arab world. Here the new monistic mysticism (wahd al-waḥdān) was founded, on a basis of neoplatonism and Moroccan ṣūfism, by the Moroccan Muḥyī al-Dīn Ibn al-'Arabi (d. in Damascus 638/1240), carried to Anatolia by this pupil al-Konawī (d. 672/1273), and spread still more widely by the ordered exposition of its metaphysics in al-Isḥāq al-Kāmil of Kutb al-Dīn al-Qūṭb (d. 632/1248).

The prose literature of Arabic ṣūfism down to the 10th/16th century offers little that calls for remark. Paraenetic in function, it gradually became affected by the scholasticism of the madrasa, especially as in course of time the 'ulama themselves were increasingly drawn into the ranks of the ṣūfī orders. At a more popular level it produced a voluminous body of hagiography, more interested in the miracles of the saints than in their teachings, illustrated at one extreme by al-Shaifanawī's (d. 713/1314) *manāḥib* of 'Abd al-Kādir al-Qūṭbī (*Ḥaḍrat al-Arār*), at the other by the lives of the saints of the Moroccan *rif* (al-Mahjād) by 'Abd al-Hakīm al-Bāḍī (d. after 722/1322). More important was its poetical output, which, though never rising to the heights of the great ṣūfī poetry of Persia, played a considerable role in stimulating and conserving the religious enthusiasm of its adepts among both the literate and the illiterate. Its chief characteristic was the adaptation of the themes of love and wine songs, whether in the ornate styles of the traditional art-poetry or in popular verse, to those of Divine Love and ecstasy. The most gifted representative of the former is the Egyptian 'Umar b. al-Farid (d. 632/1235), but in bulk of output he is far surpassed by Ibn al-'Arabi himself, who displayed an astonishing virtuosity in modelling his mystical poems not only on pre-Islamic and 'Abbasid odes, but also in the form of *muwaḥḥabāt*. His most highly esteemed successors in this art were the disciple of his pupil al-Konawī, 'Alī al-Dīn al-Filāsīnī (d. 699/1291), and the latter's son Shams al-Dīn, known as al-Shāḥib al-Za'ī (d. 688/1289).

The rapid dedication of most other branches of literary activity which followed the Ottoman conquest of Syria and Egypt at the beginning of the 10th/16th century gave an added impulse to ṣūfī activity, which almost alone displayed an element of vigour, though often expressed in extravagant and even fantastic terms as in the writings of the Egyptian 'Abd al-Wahhāb al-Sha'rānī (d. 973/1565). The outstanding figure in the Arabic literature of the Ottoman period was 'Abd al-Qāṣim al-Nābulusī (d. 1143/1731), not only for his theological and ṣūfī treatises, but also as a poet and the originator of a new kind of mystical travel-literature in rhyming prose. Almost all the later 18th-century writers of Egypt and Syria came directly or indirectly under his influence, which reached even to the Maghrib. In the East, the prevailing ṣūfī philosophy continued to follow the iḡrābī school, which through the Persians Sadr al-Dīn Shīrāzī (d. 1050/1640) and his pupil Fayḍ al-Kāshī (d. after 1090/1679) influenced both the Indian schools of ṣūfism and the founder of the reformist Shī'ite school of the Shaykhīyah, Ahmad al-Ahsā'ī (d. 1242/1827). Only at the end of this period there appeared the first indications of a return to earlier orthodox ṣūfism, with the writings

of Murtadā al-Zabīdī, of Indian birth but domiciled in Egypt (d. 1205/1791), and among the Shādhilīyah in the Maghrib.

#### (V) Modern Arabic Literature

##### (a) To 1914

The term "modern Arabic literature" implies a development differing from and to a degree of change greater than, a simple revival of literary activity, whether within the narrower circle of the philological arts or in the wider humanistic range of the 3rd and following centuries. Such minor local revivals had occurred from time to time, as, for example, in Aleppo under the influence of the Maronite archbishop Dīnārīnīs Farhāt (1670-1732), and in Baghdad in the first half of the 12th/18th century (see al-Aḥmad al-Misk al-Adhhar, Baghdad 1948/1950). In the 13th/19th century also, the rise of a new literature was preluded by a sustained movement for the revival of classical Arabic and an output of literary works directly or indirectly inspired by classical models. The first object of the leaders of this movement was to rescue the Arabic language from its degeneration in the preceding centuries and to restore the heritage of classical literary art; in its purest form it is represented by Naṣīf al-Yāzīdī (1800-1871) among the Syrians, by Naṣr al-Hūdīnī (d. 1874) and 'Alī Paṣha Muḥarrak (1823-93) in Egypt, and by Mahmūd Shukrī al-Aḥūd (1857-1923) in 'Irāk. All of these, and many others, were consciously ambitious to revive the classical traditions, both in their pedagogical work, and in their original productions, e.g. al-Yāzīdī's *mahmūdāt* (*Madīna* al-Bahrayn) in the manner of al-Harīrī, 'Alī Paṣha's al-*Khīṣṣat al-Tawfīhiyya* in continuation of al-Makrīfī, and al-Aḥūd's *adab* collection *Ḥuḍḥ al-Arab*.

Alongside these, but also fundamentally sharing their aims, was another group of writers who were led by circumstances or personal choice into closer contact with the literature and the ideas of the western world. The first major impulse in this direction was given by the needs of the military academies set up by the viceroy of Egypt, Muḥammad 'Alī, for translations of technical works from the French, together with the establishment of a printing press in Egypt in 1828, and others soon afterwards in Syria. The chief of the Egyptian translators was Rūḥ al-Bay Rūḥ al-Taḥṭāwī (d. 1872), whose original works included a novel of his experiences in France as *imām* of the Egyptian educational mission, and many later educational handbooks. It is questionable how widely the large body of translated technical works of this period circulated, or how far they affected the outlook of men of letters; but it seems clear that for Rūḥ al-Bay and others like him the western materials which they used in their literary works were simply adjuncts embedded in the framework of the established Islamic categories or (in the case of their translations from French literature) supplements to them. The literary productions of the contemporary Lebanese scholars who were in contact with the western educational missions in Syria, and in particular Butrus al-Bustānī (1819-83), Ahmad Fāris al-Shidyāk (1801-87), and Naṣīf's son Ibrāhīm al-Yāzīdī (1847-1906), as also of the

Tunisian Muḥammad Bayram (1840-89), were to a large extent similarly motivated; but along with all these men were also among the creators of the new Arabic periodical press and experimenting in the formation of a modern journalistic medium.

The development of the new periodical press in Egypt, at first largely under Syrian direction but soon followed by a vigorous native Egyptian production, provided the real forcing-bed of modern Arabic literature. During the last decades of the 19th century and the first decade of the 20th, the press was the theatre in which (except for poetry) literary reputations were made and literary Arabic was adapted to modern social themes and currents of ideas. This did not exclude the widest diversity in literary styles: the strict but vigorous classicism of Muḥammad 'Abdūh (1849-1905), the modernised *maḥmūdāt* of Muḥammad al-Muwayyilī (1868-1930), the elegant neoclassicism of Muṣṭafā Luṭfī al-Manfalūtī (1876-1924), the functional prose of Dīnārīnīs Zaydān (1861-1914), Ya'qūb Sarraf (1852-1927) and Kāsim Amīn (1865-1908), the fiery rhetoric of Wall al-Dīn Yakan (1873-1921) and Muṣṭafā Kāmil (1874-1908), the satirical colloquialism of Ya'qūb Samīrī ('Abd Naḍḍīra' (1839-1912) and 'Abd Allāh Naḍīm (1844-96). At the same time the Syrian press transported to America was producing a type of literary essay and Whitmanesque "prose poems" which entirely discarded the classical traditions and even sought to remodel the linguistic structure in part; its leading figures were Dībārīn Khālī Dībārīn (1883-1931) and Amīn al-Rayḥānī (1857-1940).

This stylistic experimentation in the press in the treatment of modern themes was reinforced by a very extensive output of translations of European works of literature, often by the same hands. Of the translations so made few have much claim to literary distinction, except those made by al-Manfalūtī and perhaps one or two others. But the activity in translation played a vital part in the development of modern Arabic literature. "It may be said that, just as the works of an Ibn al-Mukaffa' or an al-Dīḥlī would have been impossible without the translators of the 'Abbasid period, so without the translators of the 19th century modern Arabic literature could never have been called into existence" (Kratchkowsky). The translated works served not only as exercises in expanding the range of Arabic literary expression, but also as models. Not a few translators themselves tried their hands at original works of a similar kind, and many others were stimulated to original composition by them. In the former group, the most interesting are the attempts to develop a dramatic literature. The earliest of these were made by the Syrian Muḥammad al-Nakkāsh (1817-55), inspired by Molière; he was followed by Naḍḍī al-Haddād (1867-99), in the style of Corneille, Hugo, A. Dumas and Shakespeare, and more successfully, by the Egyptian Muḥammad 'Ughmān Dīḥlī (1828-98), who adapted Molière to Egyptian settings and speech, besides producing a remarkable adaptation in literary Arabic of *Pand al Foyez*. In spite of this, however, it cannot be said that the Arabic drama achieved much success in the 19th century. On the other hand, some progress was made with the novel, particularly in the series of historical novels written in the manner of Scott by Dīnārīnīs Zaydān and the psychological novel *Uruḥ al-Dīḥlī* by Farah Antūn (1874-1922). Many other original compositions also depend largely on European materials, e.g. the politico-social writings of

'Abd al-Rahmān al-Kawākībī (1849-1903), while the literature of the nascent Egyptian feminist movement, illustrated by 'Aṣgha al-Taymuriyya (1840-1902), Malak Ḥifnī Nāṣif (1886-1918), and Kāsim Amīn, betrays its original inspiration even though adapted to its own social and literary environment.

In the sphere of poetry, on the other hand, the continuing classical tradition far outweighed any literary influences from the west down to 1914. With the rise of nationalism, its range was widened by patriotic themes, developed first by Mahmūd Sāmī al-Bārūdī (1819-1904), then with more classical polish by Ahmad Shawkī (1868-1932) and more depth of social feeling by Muḥammad Ḥafīz Ibrāhīm (1871-1932). But neither the new themes, whether patriotic or social or individual, nor the techniques of western poetry affected to any marked extent the long-established structure, genres, and modes of expression of Arabic poetry (in the hands, at least, of its most competent artists). The only outstanding exceptions are found in 'Irāk, where the native Arabic poetic tradition had remained more vigorous and less cramped by artifice than in Syria and Egypt in the previous centuries. In more unconventional forms and freer language, Dīḥlīnī Sulṭān al-Zahīdī (1867-1936), and with more classical restraint Ma'rūf al-Ruḥānī (1875-1945), both achieved an authentic expression of current ideas and aspiration. An isolated attempt to acclimatise Greek poetry in Arabic was made by Sulaymān al-Bustānī (1856-1925) with his translation of the *Iliad* (1904); in itself not unsuccessful as a translation, it nevertheless failed to make much impression.

##### (b) Since 1914

In contrast to the preceding period, which was on the whole a period of experiment and imitation in modern Arabic prose, the decades since 1914 have seen the beginnings of a new and original Arabic literature which to a much greater extent reflects the social and intellectual interests of the Arab peoples. A leading part in this development was taken by the "liberal" group of Egyptian writers, inspired by Muḥammad 'Abdūh, who were associated with the journal al-*Qarida* (issued from 1907, edited by Ahmad Luṭfī al-Sayyid) and its successor al-*Sayra* (from 1922, edited by Muḥ. Husayn Haykal); but the movement itself soon extended widely beyond this circle. The principal types of production were at first the short story (followed by the novel) and the literary essay; later on these were followed by the literary drama.

The first major work of the new school was *Zaynab*, a novel of Egyptian village life, published anonymously in 1914 by M. H. Haykal (b. 1888). In spite of its merits, the technical weaknesses of the work threw a sharp light on the deficiencies of literary Arabic at that time for the adequate presentation of the novel of manners. During the decade 1920-30 these were largely surmounted by a growing output of realistic short stories of contemporary life, beginning with the sketches (*Mā Tarāḥ al-Uṣṣān*) of the talented Muḥammad Taymūr (1867-1921), and continued with increasing skill and success by his brother Mahmūd Taymūr (b. 1894) and by several others ('Asā 'Ubayd, Shihāṭa 'Ubayd, Tāhir Lāḥib, etc.). The most brilliant stylist in this field was Ibrāhīm 'Abd al-Kādir al-Māmin (1899-1949), who eventually produced also the first successful novel of manners (*Ibrāhīm al-Kāhī*, 1931). From 1930 the output of novels slowly increased, among the more notable of the earlier works being 'Asad

al-Rûb (by Tawfîk al-Hakîm, 1933), *Sûra* (by 'Abbas Mahmûd al-Akkâd, 1938), and *Nida al-Madhalil* (by Mahmûd Taymûr, 1939). The historical novel had already been recreated by Muḥammad Farîd Abû Ḥadiḍ with *Ḥinat al-Manzil* (1926). The psychological novel also was successfully attempted on a smaller scale by Ṭāḥā Ḥusayn (b. 1896), who in his autobiographical work *al-ʿAyyām* (1926) endowed modern Egyptian literature with one of its masterpieces in content and literary style. Innumerable short stories have been produced also in Lebanon, Syria, Iraq and America, with the variations in subject, style and technique which one would expect. The output of novels, on the other hand, has been more fluctuating, and is still relatively small in proportion to the total literary production.

The literary essay envisaged a different purpose. It aimed not only at the critical evaluation of both classical Arabic and modern western literature (extending sometimes even to classical Greek and Latin literature) and social criticism in general, but also at the valorisation of the Arabic cultural tradition, in the widest sense, in the circumstances of the modern world. The rapid increase in daily, weekly and monthly journals after 1920 provided endless opportunities for the publication of such essays, and the representation of all points of view. The collected essays of many writers were subsequently reissued as separate works, whose very profusion makes it difficult and inadvisable to single out individual names. It must suffice to mention, from among the older generation of writers, Ṭāḥā Ḥusayn and al-Akkâd as particularly influential thinkers and critics on the modernist wing; Shaykh Raḡhib Riḍā (the editor of the reformist religious journal *al-Manār*, 1865-1935) and Farîd Waḡḍī as equally influential in conservative and religious circles; Muṣṭafā Ṣāliḥ al-Khidr (1880-1937), who carried neo-classicism to the verge of preciosity; in Syria, the classicist Muḥammad Bey Kurd 'Alī (president of the Arab Academy of Damascus, 1876-1952); and of the Syro-Americans Miḥdī Nū'ayma (b. 1889). Out of this more or less ephemeral production there gradually arose a more developed literature of literary and social criticism, with a dominantly academic bias, but also with a certain amount of creative verve, and in some hands (e.g. Tawfîk al-Hakîm) the technique of the novel, and even other literary media, as in the scientific travel narrative *al-Sinḍiḥ al-ʿAṣrī* by Ḥusayn Fawwā (1938). Another noteworthy later development was the application of these newer literary methods to the early history of Islam, exemplified by M. H. Haykal, Ṭāḥā Ḥusayn, and al-Akkâd, and in dramatic form, somewhat earlier, by Tawfîk al-Hakîm.

The technical advance made in the presentation of the realistic narrative and novel was reflected also in dramatic literature. With few exceptions, the lead was taken by Egyptian authors, beginning again with Muḥammad Taymûr, and continued more especially by Tawfîk al-Hakîm, who, after some experiments in literary drama in themes drawn from Islamic literature (*Al-ʿAkāḍ*, *Muḥammad, Shaḥrazād*), has shown himself a major dramatist on modern social themes. Together with these may be mentioned the experiments made by the poet Ahmad Shawkī to create a literary genre of 'classical tragedy', based on traditional Arab themes, followed more recently by Muḥammad Taymûr.

Among the technical problems confronted by the Arabic drama, and to a lesser degree by the short story and novel, the question of language constitutes

a peculiar difficulty. In the purely literary drama and in historical plays generally the use of the written language needs no justification; but in the contemporary realistic drama this involves a degree of artificiality which tends to destroy the theatrical effect. Whereas, however, the popular theatre has always flourished on plays in the colloquial language, the attempts made to produce a more developed drama in colloquial speech have neither been markedly successful on the stage nor met with much approbation in literary circles. Even in the short story the introduction of colloquial speech in dialogue (attempted in their earlier works by Mahmûd Taymûr and Tawfîk al-Hakîm) was felt to involve a stylistic dislocation, and has not been commonly practiced. Even less consideration has been given to more ambitious attempts to produce literary works in the colloquial throughout, chiefly by Lebanese writers and poets. A definite solution of this problem is not yet in sight, but for the time being a working compromise is provided by the use of a simplified form of the literary language for dialogue both on the stage and in the novel.

At the same time, and in the opposite direction, one consequence of the vogue of the literary essay has been to mobilise more effectively the resources of classical Arabic, and to facilitate the growth of a neo-classical style in the novel and general literature since 1940. With the richer and more flexible range of vocabulary and construction thus made available, together with the more technical concentration of meaning in modern Arabic (in contrast to the conceptual looseness of the older literary language), the contemporary writer has at his disposal an instrument which can express with grace and precision all normal aspects of contemporary Arab life and thought. Behind this range, however, neo-classical Arabic is still deficient in both the fine nuances and the contextual associations which are the product only of long use and habit. For this reason, the attempt (first made by Biḡrī Fāris, in his play *Maṭrah al-Turk*, 1938) to create a symbolist or impressionist style in modern Arabic must be considered premature.

This applies even more especially to the poetical production of recent years. Since 1914, the situation of prose and poetry have been reversed. Whereas in prose writing Arabic authors, after the period of translation and imitation, moved on to original composition, Arabic poetry has moved towards the freedom of western poetry and the imitation of its techniques. On the one hand, the intensity of political aspirations and frustrations could not fail to inspire many poets in the Arab countries (particular mention may be made of the Tunisian Abū 'Iḥsān al-Shābbāḥ, 1909-31), who have applied traditional themes and imagery to modern situations with great effect, most of the younger poets have been experimenting with the creation of a psychological poetry in new strophic and rhetorical forms, and wrestling with the traditional linguistic structure and its associations. The Syro-Arabian poets were the first to challenge the traditional formalism, and have been followed particularly by the Lebanese poets in Brazil (Raḡhib Salīm al-Rihlī and Fawwā Ma'ūd, 1899-1939), in North America (Ilyās Abū Maḡdī), and in Lebanon itself (Ilyās Abū Shaḥabā, 1903-47, and others). The leader of the 'new school' in Egypt was Ahmad Zaki Abū Shāhī (1892-1953), whose mature work, over a short time (1922-3) provided a forum for the younger poets, in competition with the older 'modernising' school represented by the Lebanese Khālīl Matrūn

(1871-1949), and with greater freedom by al-Akkâd, which, though no less contemporary in subject and psychological approach, made a less violent breach with the formal and linguistic traditions of Arabic poetry. Much the same may be said also of the contemporary poetry of Iraq, within the framework of its own tradition.

#### Appendix—Arabic Literature in Spain\*

**General bibliography:** Apart from the general histories of Arabic literature (see above, B), which devote one or more chapters to Muslim Spain, the work of A. González Palencia, *Historia de la literatura árabe-española*, Barcelona, Madrid, etc., 1928, 2nd. ed. 1943 (a recent edition, with an extensive bibliography) is the only comprehensive work which exists on Arabic literature in Al-Andalus. A brief general account will be found in: Elias Terés Sadaba, *La Literatura Árabe-española*, apud F. M. Pareja, *Islamología*, II, Madrid 1954, 979 ff. Apart from a few monographs on authors (see under the names of these authors) and, fewer still, on periods, Spanish has written monographs concerned with the production of short studies (such as are to be found in the journal *al-Andalus* in particular); the following, however, should be mentioned; for poetry: E. García Gómez, *Poemas arábigo-andaluces*, Madrid 1930, 1940, 1943; idem, *Poesía arábigo-andalusí, breve*

\* Circumstances beyond our control have obliged us to insert here an article which, in a more expanded form, was originally designed to form part of the article *AL-ANDALUS*. [Editors' note.]

*sinthesis histórica*, Madrid 1952; for history and geography: F. Pons Boigues, *Ensayos bibliográficos sobre los historiadores y geógrafos arábigo-españoles*, Madrid 1898; in addition: E. Lévi-Provençal, *La Civilisation arabe en Espagne. 1.—Down to the Almoravids (92-485/711-1092).

2.—From the Almoravids to the end of the period of Arab domination (485-897/1092-1492).

It would certainly be possible, if not desirable, in a more detailed account of the history of Arabic literature in Spain, to distinguish five or six periods corresponding to the political history of the country under Arab domination, but, for the purposes of this article, it seemed simpler to keep to a division into two long periods of four centuries each, in order to take into account two facts: first, up to the time of the Almoravids, Spain was governed by amirs, caliphs and kings who, although defenders of Islam, did not act in the name of strict religious principles, while the Almoravids and Almohads were prisoners of an ideology; secondly and reciprocally, up to the end of the kingdoms of the *Tauqīq*, profane literature, especially poetry, predominated over religious literature proper, whereas after the Almoravids, the religious sciences—and, through a shift of emphasis, science pure and simple—took precedence over profane literature. In addition, the Arabic literature of Spain seems scarcely to have experienced any sudden setbacks, despite an unusually turbulent political and military history; it appears on the contrary to have pursued a steadily upwards path until the 5th/11th century; it then altered course somewhat, and came to an abrupt end when the last Arabs were driven out of Spain.

#### (1) Down to the Almoravids (92-485/711-1092)

When the conquerors set foot on Spanish soil, at the end of the 1st/beginning of the 8th century, Arabic literature was still only represented, in the east, by the Qurʾān and the religious sciences, as yet in their infancy, and by a lively poetic muse. It is therefore probable that the Arab warriors, who were poets to a greater or lesser degree, respected the old tradition, but probably confined their literary activity to the composition of a few poems designed to extol their tribe, celebrate their military exploits, lament their dead, or bewail their exile from the homeland, in the same way as their fellow-Muslims sent to conquer other parts of the world (cf. C. A. Nallino, *Literatura — Scritti*, VI, 51, 110-4; French trans., 81-2, 170-7). None of this has been preserved; a late notation states however that in ancient times, 'the inhabitants of Al-Andalus sang in the style of Christians or of Arab caliphs' (apud E. García Gómez, *Poesía*, 30-1).

Nevertheless, the foundation of the Umayyad amirate brought about the establishment of close contact with the East, which did not fail to send religious nobilities to catechise Spain, and the rapid blamisation of a considerable part of the indigenous population required the development of juristic-religious studies. From 200/80 onwards, the substitution, in the Umayyads, of political motives, of Malikiism for the *maḥbal* as *al-Awḍāʿ* (see *AL-ANDALUS*, VII, soon bore fruit in the formation of a school of jurists who, to a varying

but not inconsiderable degree, contributed to the propagation of the *Muwattaʿ* of Malik. In his defence of Muslim Spain, Ibn Hazm (see *Al-Andalus* 1954/7) cites in the first place ʿIsā b. Dīnār (m. 212/827), Ibn Ḥabīb (180-238/796-852), al-ʿUṭfi (m. 235/869), Ibrāhīm b. Muzayn (m. 238/872), Mālik b. ʿAbī Kāsim (m. 258/882); these studies were pursued with enthusiasm by the successors of these pioneers, Muḥ. b. ʿUmar b. Lubāba (225-314/840-920), Muḥ. b. ʿAbd al-Malik b. Ayyam (252-330/866-942), Kāsim b. Asbagh (247-340/861-951), Ahmad b. Saʿīd (284-350/897-961) and especially the great *ḥāfiḥ*, traditionist and man of letters Ibn ʿAbd al-Barr (368-463/978-1070). The attempt made by Bāḥ b. Maḥdī (201-268/817-890), on his return from the East (his meeting there with Ibn Ḥanbal is worth special mention), to introduce into Spain the *Shāfiʿī madhhab*, had little effect, but this traditionist is the author of a collection of *ḥadīṭ*s presented in the combined form of a *mujaṣṣaf* and a *muṣṣaf*, of a work on the Companions of the Prophet, and above all of a commentary on the Qurʾān which Ibn Hazm considers to be superior to that of al-Tabarī. Zāsim, on the other hand, was introduced by ʿAbd Allāh b. Kāsim (d. 272/885-6) and supported by Muḥdīr b. Saʿīd al-Balḥī (d. 355/962), before being made famous by Ibn Ḥazm (384-456/994-1064) who dominates, in nearly every sphere, the intellectual activity of the first half of the 5th/11th century, and whose *K. al-Fisal*, going beyond the strict limits of Islam, set forth the history of religious ideas in terms of Islamic thought. Muʿtazilism itself was not unknown; among its supporters were Khālī Ḥafīf (390/10th century), Yahyā b. al-Samīn (d. 315/927), and Mūsā b. Ḥudayr (d. 320/932). Finally, philosophy appeared on the scene with the mystic Ibn Masarra (d. 310/931) and his school (see Asín Palacios, *Ahimsasara y su escuela*, Madrid 1914).

The disciplines connected with the religious sciences developed on parallel lines. From the end of the 2nd/beginning of the 8th century, the first oriental works on grammar were introduced into Spain and a course of instruction was devoted to them, but it appears that philological and lexicographical studies received their greatest stimulus from the arrival at Cordova, in 350/961, of the ʿIrāqī philologist Abū ʿAlī al-Kāḍī (288-350/900-7), whose *ʿAmāl* are not a reflection of the knowledge which he disseminated there, because he also composed, *inter alia*, the *K. al-Nawādir* and an important work on lexicography, the *K. al-Bārīʿ*; his contemporary Muḥ. b. Yahyā al-Riyāḥī (d. 358/968) and Muḥ. b. ʿĀsim (d. 382/992) are considered by Ibn Hazm to be the equals of the great disciples of al-Mubarrad. Ibn al-Kūṭīyā (d. 367/977) also devoted himself to the study of grammar, while a disciple of al-Kāḍī, Ibn al-Sayyīd (d. 385/995) produced a lexicon, which was followed by that of Ibn al-Tayyibī (d. 436/1044) and above all by the mastery work of Ibn Sīda (Sīd) (398-458/1007-66), al-Muḥḥasayy.

As regards history, the Andalusians were not averse to retracing the course of universal history, as for instance Ibn Ḥabīb, already mentioned, who did not make any clear distinction between history and legend, or ʿArb b. Saʿīd (d. 370/980), who took up again and continued the *Annals* of al-Tabarī, but they applied themselves in determined fashion to the history of Spain, in the form either of dynastic chronicles—in particular the ʿĀmirids, but also of the Zīrīds of Granada by the last king of that dynasty, ʿAbd Allāh (447-after 481/1056-after 1090)—or of biographies of jurists and traditionists (Ibn

al-Farajī, 351-403/962-1013), of *kāfīs* (al-Khushand, d. 361/971), of physicians (Ibn Dīnādī, d. after 372/982), of secretaries (Sakan b. Saʿīd, d. 457/1065), or of chronicles covering the period from the conquest to the author's own times. This last genre was the particular concern of Ahmad b. Muḥ. b. Mūsā al-Rāzī (279-344/888-952) and his son ʿIsā, whose work is quoted in part in the *Al-ḥabīb Maḥmūd* (s.c.), by Ibn al-Kūṭīyā—or at all events by the editor of the book published under his name—and above all by the great historian Ibn Ḥayyān (374-469/987-1075), whose important chronicle, *al-Muḥabbi*, has been partially recovered. An apt disciple of Ibn Ḥazm—who by himself also took an interest in history, preferring mainly the genealogical genre, recently edited by the Andalusians—Sāʿīd of Toledo (410-63/1020-69), wrote his *Tahkīk al-Umam*, in which both the Greeks and the Romans figured. In the realm of geography, apart from al-Rāzī (Ahmad b. Muḥ.), whose description of Spain has been partially reconstructed, the principal author is Abū ʿUbayd al-Bakrī (d. 487/1094).

As a result of the beneficent influence of al-Hakam II, a school of mathematicians and astronomers arose under the leadership of Maṣlama al-Maḥḍīrī (d. about 398/1007) and continued under Ibn al-Samhī (370-426/980-1034) of Granada, while in the following century there flourished at Toledo al-Zarkāl and, at Saragossa, the Hūdīd kings themselves. Finally, the study of medicine and botany received a powerful stimulus as a result of the arrival at Cordova, in the reign of ʿAbd al-Rahmān III, of the work of Dioscorides. After Ibn Dīnādī, who has already been mentioned, and Muḥ. b. al-Ḥasan al-Maḥdīdī (d. about 420/1029), Abū ʿI-Kāsim Khāḍaf b. ʿAbbās al-Zahrāwī (325-404/936-1013), known to Europe in the Middle Ages as Abulcasis, and Ibn Wāḥid (388-466/988-1074) were the first of a series of great physicians and botanists who achieved fame during the era which followed.

According to customary practice when dealing with Arabic literature, it has been necessary up to this point to give an account of disciplines and *genres* which the historian of most other literatures would certainly disregard, and an attempt has been made to make a rapid list of works which for the most part bear a characteristic imprint of Islam and which differ little from similar works written in the East. The same consideration obtains when one embarks on a study of the first literary works proper, whether in prose or verse. It is nevertheless astonishing that it was not until the 4th/10th century that there appeared in Spain an *adab* work written by an Andalusian, the famous *ʿIḥḍ* of Ibn ʿAbd Rabbih (d. 328/940), the contents of which are still specifically oriental; it is equally remarkable that this *genre* had no great success in Spain and that Ibn ʿAbd Rabbih had few imitators during the first period with which we are dealing. Yet for more than a century, the country had been “*trickier*”, from the time of the arrival at Cordova, at the beginning of the amirate of ʿAbd al-Rahmān II, of the celebrated ʿIrāqī satirist Ziryāb (727-242/789-857), who brought to Spain the fashions of the ʿAbbāsīd court (see E. Lévi-Provençal, *Civilisation*, 69 ff.). Baghdad was indeed still a model to be imitated, but an event of the utmost importance had occurred, of a kind which gave to the Arabic literature of Spain an orientation slightly different from that which obtained in the East. In fact, from the 3rd/9th century, the two systems of disconcerting ethnic elements which populated the Peninsula had,

after a long period of mutual ignorance, been gradually drawn closer together and had finally achieved a sort of fusion eminently favourable to the production of an original literature.

Our information on the Arabic poetry written during the early centuries of Muslim domination is very scanty, and the loss of the oldest collections—especially the *K. al-Hadīq* of Ahmad b. Farajī (d. 344/976)—deprives us of essential documentation. Perhaps Yahyā al-Kāṣṣālī (d. 257/864), who was sent by ʿAbd al-Rahmān II on an embassy to Constantinople (see E. Lévi-Provençal, *Islam d'Occident*, 81 ff.), wrote poetry of merit; it is known that he favoured a minor epic form, by his use of the *urjūḍa*, and this form was also employed by Tammām b. ʿĀmir (184-283/801-96) and Ibn ʿAbd Rabbih. It is not the epic, however, but the *muṣawwḥ* (s.c.), which is the most typical Spanish poem. From the end of the 3rd/9th century dates the creation, attributed to a poet of Calera named Mukaddam b. Muʿāṭa (d. at the beginning of the 4th/10th century) of this new verse-form; its fundamental characteristics were the arrangement in strophes, an arrangement virtually unknown to the Arab lyric, and the addition of an *enwei* (*ḥijāz*) not in Arabic, but in Romance, as has recently been revealed by S. M. Stern (*Les vers finaux en espagnol dans les muṣawwḥs hispano-hébraïques* . . . , in *al-And.*, 1945, 299-346): we have here a unique example of the combination of the two languages and the two systems. As long as there are manuscript collections of *muṣawwḥ*s still unpublished (see S. M. Stern, in *Arabica*, 1955/2), it would be more the less the author of a list which, if not exhaustive, would at least be fairly comprehensive, of authors of poems of this type; in any case, some of them are later than the period under review.

The importance attributed in recent years to the *ḥazān* can be explained on the one hand by the attraction of a novelty and, on the other, by the renewed controversy on the relationship between Spanish poetry and that of the troubadours, but it must be admitted that the *muṣawwḥ*s, however much appreciated by the Andalusians, even by Orientals, constituted no more than a minor literary category which could in no way supersede the other poetic forms esteemed in the Muslim Orient, and the necessary concomitant of the establishment of the western caliphate was an original poetic form which neither showed clearly signs of indigenous influence, nor followed too closely oriental forms. Nevertheless, oriental works were well known in Spain, from the pre-Islamic *ḥayḍas*—studied as relics of a bygone age but not imitated—to the *diwāns* of “modern” and neo-classical poets, in particular al-Mutanabbī—who was the subject of commentaries by al-Fihri (352/413/961-1049), al-ʿĀṣim al-Shantamārī (410-76/1019-53), and Ibn Sīda—and it was these works which inspired Andalusian poets when Cordova, the metropolis of the Muslim West, possessed all the conditions favourable to the production of poetry of a characteristic flavour. As was to be expected, this poetry passed through various phases: somewhat official to begin with, it later became progressively independent and free, and finally blossomed in the 5th/11th century with incomparable richness.

Without going so far as to claim that the Umayyad caliphs were the centre of literary circles, one may legitimately affirm that they regularly played their part as patrons of letters by promoting Arab culture—notably by creating libraries, including the cele-

brated library of al-Hakam II—and by granting pensions to poets commissioned to sing their praises and to give, through their compositions, the customary lustre to the various solemn functions of official life: the *maṣrif* of al-Hakam II and Ḥishām II, al-Muḥabbi (d. 372/982) is the perfect example of such poets (see E. García Gómez, *La Poesía política en el califato de Cordoue*, in *REI*, 1949, 5-21).

Although this type of poet did not hesitate on occasion to embark on other kinds of poetry than the political, it was under al-Mansūr—who had ordered the burning of those books on philosophy, astronomy and other sciences which were considered to be contrary to the interests of Islam—that truly urban poetry came into being with Ibn Darrīdj al-Kāṣṣālī (347-421/958-1030), Sāʿid of Baghdad (d. 418/1026), al-Rāḥimī (d. 403 or 413/1013 or 1022). Moreover, from the end of the period of the caliphate, a literary group was established which, aristocratic in origin, but revolutionary in its ideas, was hostile to the *muṣawwḥ* *genre* which was considered too popular, stoutly defended arabism without however submitting wholly to oriental influence, and proclaimed that the production of good literature depended on the genius of the authors and not on tradition or imitation. The leader of this school was Ibn Shuhayd (382-426/992-1035), who developed his ideas in a prose work of undoubted originality, the *Risālat al-Tawḥīd* wa ʿI-Zawāʿid (see García Gómez, *Ibn Hazm de Córdoba y El Collar de la Paloma*, Madrid 1952, 6 ff.); his natural heir was Ibn Hazm who, although he did not give evidence of superior poetic talent, was none the less the author of a charming analysis of ʿUḡhrīe love, the *Tawḥ* al-*Ḥamīma* which, unique of its kind, belonged henceforth to universal literature.

The momentous events which led to the fall of the caliphate and the establishment of the kingdoms of the *taifa*s (*Tawāʾif* (s.c.)) did not appear to have a fatal effect on the future of poetry, and it was precisely in the 5th/11th century that poetry reached its peak—a “false” peak, according to E. García Gómez, *Poesía*, 65 ff. It is no mere chance that we possess, on this period, not only anthologies and *diwāns*, but also the most important monograph which has been devoted to the literary history of Muslim Spain, *La Poesía andalusí, en arabe classique, en arabe médiéval*, Paris 1937, and ed. 1953, by H. Pirené who, while seeking to bring out its documentary value, has at the same time painted an overall picture of the poetry of this period. Although it is possible to distinguish at each of the courts which came into being a kind of specialisation in some branch of knowledge, poetry dominates all literary activities; everywhere it reigns supreme. It opens its doors and “an extempore poem can be worth a viciership” (García Gómez). For the most part in neo-classical verse, and in the form of *ḥayḍas*, which is an indication of a recrudescence of oriental influence, every imaginable theme is dealt with; satires, elegies, acrostic poems, songs of love and war, panegyrics, songs of wine and passion. Every *genre* is found, and the 721 trivial incidents of daily life are recounted in verse; nevertheless the poets show a certain preference for descriptions, whether of nature, cities, gardens, animals or human beings.

At Cordova flourished Ibn Zaydīn (393-463/1003-70), who sang the praises of the princess Wallīda; at Seville the sovereign himself, al-Muʿtamid (d. 488/1095), whose life was “pure poetry in its essence” (García Gómez, *Poesía*, 70), gave inspiration to a court which attracted not only

Spanish poets like Ibn 'Annār (d. 477/1084) and Ibn al-Labbān (d. 507/1113) but even the Sicilian poet Ibn Hamdān (447-527/1055-1132) (see S. Khalis, *La Vie littéraire à Séville au XI<sup>e</sup> siècle*, Sorbonne thesis 1955, unpublished); at Almería, al-Mu'tasim (d. 484/1091) received Ibn Sīd al-Qatīf (1052-1092), while at Granada, flourished the relatives al-Andalusī, al-Ishkī al-Ishkī (d. 474/1089), and at Badajoz Ibn 'Abdūn (d. 529/1134).

[2] *From the Almoravids to the end of the period of Arab domination* (488-892/1092-1492).

The Almoravid conquest, which there and there brought the careers of these poets to an abrupt close, for a time reversed the fragments of al-Andalus. It was unfavourable to the development of poetry, because the new rulers lacked the refinement and the taste of the *reyes de taifas*, and showed less interest in literature than in religion. While a wholly conventional type of poetry flourished at court, only Valencia maintained the tradition of the preceding century with the 'landscape-painters' Ibn Khafā' (420-533/1028-1138) and Ibn al-Zālikā (d. 529/1135), who did not despise, respectively, erotic poems and baroque songs. Under the Almohads, the only names of any note are those of al-Buṣṣī (d. 572/1177) and Ibn Sahl (d. 649/1251); later, up to the fall of Granada, Lisān al-Dīn Ibn al-Khathīb (713-761/1313-74) and Ibn Zayrūn (713-96/1313-93) merely maintained the tradition. Their contemporaries did not fail to note the decline of poetry and, thinking that the time had come to gather together the legacy of the past in order to save it from oblivion, they compiled anthologies: Ibn Bassām (d. 542/1147) his *Ḍakhira*, al-Faṭḥ b. al-Khānī (d. 529/1134) his *Kalīd al-ʿIḥyān* and *Matn al-ʿAnus*, while Ibn Saʿīd al-Maghribī (d. 692/1274), in extracting from his *Magribī* the *Riḥat al-Muharrir*, seemed to be writing "the last testament of Arabo-Andalusian poetry" (García Gómez, *Poesía*, 86).

It, however, noble or classical poetry shone with but a feeble lustre, the *muṣawwaba*, which the most aristocratic poets had continued to produce in the preceding century (see *Arabiya*, 1955/2), again flourished with singular brilliance through the efforts of al-Amīn al-Tuḥfī (d. 520/1126), Ibn Bāḥ (d. 500/1105) and many others. In addition, the *saḍā* [40], whose origin is attributed, perhaps erroneously to the 13th century, came truly to life with "one of the highest poetic peaks of the entire Middle Ages" (García Gómez, *Poesía*, 81), Ibn Kuzāmī (555/1159), and a host of popular poets mastered this form and kept it alive until the end of the period of Arab domination.

Prose literature, which had made such a promising beginning with Ibn Shuhayd and Ibn Ḥazm, again became orientated with the *Sirāḡ al-Mulūk* of al-Tuḥfī (451-520/1059-1126), the encyclopaedia of Ibn al-Shaykh al-Balawī (570-640/1132-1207), and the several imitations of the *Makāmil* of al-Hafḍī which found their most prolific commentator in Spain in the person of al-Sharīf (d. 619/1222). While particularly unfavourable to poetry and literature properly so-called, the Almoravid conquest was, on the other hand, an advantage to the sciences, both religious and profane, which developed to a considerable degree from then on. Space will not be devoted here to the religious disciplines which, though they had innumerable devotees, produced few noteworthy works apart from the *Taḥṣīs* of Ibn 'Asim (760-849/1359-1430), or to philology or lexicography, because, apart from Ibn al-Sid al-

Batalyawī (508-86/1114-83), the masters of these sciences, Ibn Mālik (605-72/1208-74) and Abū Bayyān (655-744/1257-1344), preferred to go and give the fruits of their knowledge to the peoples of the East.

As regards history, the biographical genre achieved great success, with the *ḥaḍī* 'Iḍā (478-544/1085-1149), Ibn al-Baḥḥālī (493-578/1108-83), al-Dabbī (d. 599/1202), Ibn al-Abbār (595-658/1198-1260), Ibn al-Zuhayr (628-708/1231-1293); to the dynastic chronicles was added a great work by Ibn Saʿīd al-Maghribī, a continuation of the *Muṣhif* of al-Hijāzī (500-63/1106-35), the *Magribī*, which made extensive use of earlier historians including once again Lisān al-Dīn Ibn al-Khathīb. In the sphere of geography, the greatest name is, of course, al-Iḍrī (493-564/1100-69), while the Maghribis, and especially Andalusians, applied themselves successfully to the genre of narratives of travel: Abū Ḥāmid al-Iḥmāḍī (473-565/1080-1169), Ibn al-Zuhayr (560-641/1145-1217), al-'Abdārī (708/13th century).

The 6th and 7th and the 7th-11th centuries were for Andalus the golden age of science: mathematics, astronomy, medicine, pharmacology, botany. There is no need to repeat here the names of those who achieved fame in these sciences (see above, B, from the 6th to the 12th century); the names of the principal philosophers and mystics of the period under review will also be found in that section.

For *aljamiado* literature, see *Aljamiado*. On the question of the possible influence of the Arabic poetry of Spain on European works of the Middle Ages, see MUHAMMADIAN and ZAGJAL.

**AL-'ARABIYYA**, *Ḍajīrat*, island in the Persian Gulf in Lat. 27° 46' N, Long. 50° 10' E, about 50 miles from the Saudi Arabian mainland and 60 miles from that of Iran. It is one of a five-island group—the others being Bārkhūl, al-Farisiyya, Karak, and Kurayn—on the Arabian side of the Gulf. Al-'Arabiyya is less than a mile square and is normally uninhabited, but it is claimed by three of the Gulf states: Saudi Arabia, Kuwait, and Iran.

(W. E. MULLIGAN)

**'ARABKIR**, (taken to mean 'Arabkir, i.e. 'conquest of the Arabs'), in modern Turkish orthography Arapkir, in Armenian Arapkir, in the Byzantine sources Arakesh, a town in eastern Anatolia, 19° 5' north, 38° 30' east, about 70 km. north of Malatya, situated on the Arapkir Su, a tributary of the Karas, which later becomes the northern Euphrates, 1200 m. above sea-level. Capital of a *hādī* in the *ulāyat* of Malatya, with 6,684 inhabitants (1945); the *hādī* itself has 23,612 inhabitants.

The town is situated on a hill in a lowland which is surrounded by steeply rising walls of basalt. Because of the altitude, the climate of the town is harsh. Extensive orchards which surround the town are worthy of special mention. The town, as we find it at present, dates back only to the beginning of the 19th century, and is consequently of a modern appearance. Until then, the town had been situated at a place half an hour further to the north, which is still called Koldighebir ('old city') and still shows traces of buildings.

The town is not mentioned by any of the older Arabic geographers; it is, however, mentioned several times in the *Saldūki* Geography of Ibn Iḥdī (written 680/1281, ed. Houtsma, Leiden 1902). In the year 1839, whilst the British Consul General, J. Brant, who travelled a few years earlier, mentioned 6,000 houses (4,800 inhabited by Turks, 1,200 by Armenians), from which one might assume a higher total of inhabitants. Taylor mentions 35,000 inhabitants in the year 1868 and Cusick 20,000 towards 1890 (11,000 Muslims, 8,500 Georgian Armenians). A considerable part of them, particularly Armenian families, made its living by weaving cotton goods

from English yarn. Every year, emigrants come down from the mountains of Arapkir to try and make their fortune in Istanbul, Diyarbakir, Damascus, Aleppo and the sea-ports. In former days one used to find a servant from Arapkir in most houses in Aleppo.

In the First World War 1914-18, the town suffered greatly, most of the houses and their famous gardens were destroyed, and trade died off. In post-war years, it recovered and began to flourish again. *Bibliography:* Le Strange, 110; Hādijī Khallīl, *Ḍajīrat-nūmā*, 624; Ewliya Celebi, *Seyahat-nāme* iii, 213 ff.; St. Martin, *Mémoires histor. et géogr. sur l'Arménie* (Paris 1818), I, 289; Ritter, *Erkunde*, 3, 793-9; E. **'ARAB SHAHIDS** (see *SHAHIDS*).

**'ARAB**, translation of the Aristotelian term *συσταστικός*, accident is defined as that which cannot subsist by itself but only in a substance (*ḡashar* [g.s.]) of which it is both the opposite and the complement. Thus, anything that is asserted of a subject is an accident, by which term the Muslim philosophers understand the Aristotelian categories (*ma'kūlāt*, [g.s.]) except that of the substance. The theologians (*mutakallimūn*) held different views on the subject (e.g., some believed that there can be substances without qualities and vice versa etc.) which cannot be described here (see e.g. al-Ġṣrī, *Mabāḥāt al-Ilāmiyya*, vol. ii). Some held the doctrine of *ahwāl* [states] (g.s.) which they described as qualities which are neither existent nor non-existent. An important tenet held by the *mutakallimūn* was the thesis that an accident cannot subsist in another accident.

In another sense *'arab* is the opposite of *malūḡa* (quiddity) or *ḡaḥ* (essence) [g.s.] and denotes an attribute which is not a constituent element of an essence. Two kinds of *'arab* are distinguished: (a) that which, though it is not a part of an essence, is its necessary concomitant (*'arab lāzim*) e.g., laughing with regard to man *συσταστικός καὶ ἀνά τὸν ἄνθρωπον* (in Aristotle, *Met.*, iv, 1) (b) that which is found in some members of a species but not in others (*'arab ḥāḥ* or *al-ḥāḥ*) e.g., writing with regard to man (*συσταστικός*, in Aristotle). An essential attribute, on the other hand, is e.g., rationality in relation to man.

Discussions on *'arab* will be found in Muslim works on logic. For the views of the *mutakallimūn* see *Mabāḥāt al-Ilāmiyya* of al-Ġṣrī, ed. G. Ritter, II: *Dict. of Technical Terms*, 8, 7; S. Pines, *Debate sur islamisme Atomisme*, etc. (F. RABMAN)

**AL-'ARĀF** (A.), plur. of *'arī*, "elevated place", "crest". In an eschatological judgement scene in *Ku'fān*, vii, 46 a dividing wall is spoken of which separates the dwellers in Paradise from the dwellers in Hell, and men, "who are on the *'arāf* and recognise such a wall by its marks" (v. 48: "those of the *'arāf*"). The interpretation of this passage is disputed. Bell makes the doubtful conjecture *'arāf* and translates:

"(Presiding) over the recognition are men, who recognise . . .". According to T. Andrae the "Men on the elevated places" are probably the dwellers in the highest degrees of Paradise; "who are able to look down both on Hell and on Paradise". Perhaps the reference is in particular to the messengers of God, who come into action again at the Last Judgement in order to separate the good from the bad.

According to the traditional explanation "those of the elevated places" are to be supplied as subject of the sentence at the end of v. 46 (*lam yadhkhalūhū*) and in v. 47. According to this they would be—at any rate provisionally—either in Paradise nor in Hell, but in an intermediate place or condition. As a result of this explanation al-ʿarāf was given the meaning "Limbo" (see BARZAEEL).

(R. PARKER)

**ʿARAFĀ**, or ʿARAFĀT, plain about 21 km. (13 miles) east of Mecca, on the road to Tāʾif, bounded on the north by a mountain-ridge of the same name. The plain is the site of the central ceremonies of the annual Pilgrimage to Mecca; these are focused on a conical granite hill in its N.E. corner, under 200 feet in height, and detached from the main ridge; this hill also is called ʿArafā, but more commonly Dīḥ al-Rahma (Hill of Mercy). On its eastern flank, broad stone steps (constructed by order of Dīḥ al-Dīn al-Djāwad, vizier of the atābek Zankī) lead to the top, which is surmounted by a minaret; on the sixteenth step there is a platform containing the pulpit from which the ritual *khutba*, the Pilgrimage address, is delivered on the afternoon of the "Day of ʿArafā" (9 ḥu ʾl-Hiǧǧa). On the top there stood formerly a *kuḥba* named after Umm Salama (Ibn Dīḥayr 173), which was destroyed by the Wahhābīs. The hill is also said to have been called ʾIlā, but this name is more probably to be regarded as that of a shrine or perhaps of the deity worshipped on the spot in the pre-Islamic period (Wellhausen, *Reste arab. Heidentums*, 82-3).

The plain of ʿArafāt (about 4 miles in breadth from E. to W. and 7-8 miles in length) lies outside the ḥaram or sacred territory of Mecca; the pilgrim coming from Mecca emerges through a defile called Maʿzama and passes the pillars which delimit the ḥaram; to the east of these is a depression called ʿUraṇa, at the further edge of which is a mosque called by the names of ʾIbrāhīm or Namiṣ or ʿArafāt. The mosque or place of assembly extends immediately to the east of this mosque and southwards from the Dīḥ al-Rahma, and is bounded on the east by the mountain-chain of Tāʾif. In the early centuries of Islam, a number of wells were dug in the plain and several plantations and dwellinghouses are mentioned. The aqueduct built by order of Zubayda to bring water from the region of Tāʾif to Mecca also runs at the base of the ridge of ʿArafāt. The plain is now covered with rough herbage and normally unpopulated, and is filled with life only on the "Day of ʿArafāt", when the pilgrims pitch their camp for the celebration of the prescribed *waḥd* or festival assembly. This begins after the midday *khutba* and prayer and lasts until just after sunset. For further details of the ceremonies see the art. *ḤAǧǧA*.

The origin of the name ʿArafāt is unknown. The legendary explanation is that Adam and Eve, separated after their expulsion from Paradise, met

again at this spot and recognised each other (*baʿdraba*). Arabic writers mention also other etymologies of a similar kind.

**ARAGHON** (see SUPPLEMENT).

**AL-ʿARĀʾISH** ("the trolleys of grape vines"), in French and Spanish orthography *Larache*, town on the Moroccan seaboard situated on the Atlantic coast, about 44 m. S.-W. of Tangier and 83 m. N.-W. of Fās. Astronomical position: 35° 13' lat. N., 8° 28' 22" long. W. (of Paris).

Larache occupies the slopes of a hill which juts out into the sea in the form of a headland and dominates the left bank of the Wādī Lūkkas at the point where this river discharges into the sea. The Muslim town is insignificant, and has no feature of interest except the *sib*, quadrilateral in form, which is lined with arcades and presents a vaguely monumental appearance. As a legacy of the first Spanish occupation (1610-89), there remains a fortress called *Castillo de las Cipriotas* (of the storks) or *Santa María de Europa*. To the S. and S.-W. of the Muslim town, the Spanish, who re-occupied Larache in 1911, built a European town, the centre of which in 1955 was a circular area called *Plaza de España*. The alluvial deposits of the Wādī Lūkkas have formed a bar which renders the harbour inaccessible to vessels of large tonnage. The population of Larache in 1955 numbered just under 15,000, of whom (in rounded figures) 20,000 were Muslims, 1,500 Jews and 13,000 Europeans, almost all Spanish. In the neighbourhood of Larache potatoes and fruit trees are chiefly cultivated. Industry is of little importance, but fishing has increased to some extent (more than 250 small craft in 1955). The patron of Larache is Lālī Maḥmūd, whose *hubbā* marks the beginning of the *Madīna* as one approaches it from inland.

Al-ʿArāʾish is not a very old town. Al-Idrīsī does not mention it, and the Arab authors do not mention it before the 7th/13th century. Further, it only occurs infrequently in texts. It was apparently founded by the Banū ʿArīs tribe, who gave it, on account of the abundance of vines in the neighbourhood, the name of al-ʿArīsh mātʾ Būl ʿArīs. The Almohad sultan Yaʿqūb al-Manṣūr built a fort at the mouth of the Wādī Lūkkas, and, in 1270, Spanish Christians carried out a successful surprise attack on the place. However, as is often the case with places of secondary importance on the Moroccan coast, the history of Larache is only known with any certainty from the time that the Portuguese set foot in Morocco. In the years immediately following their occupation of Ceuta (1415), the Portuguese launched a successful attack against the town, but the results of this victory were short-lived. The occupation of

Arzila and Tangier by King Alfonso V of Portugal in 1472 led to the evacuation of Larache, which the peace treaty included in the zone of Portuguese influence and which remained depopulated for twenty years. In 1489, King John II of Portugal took advantage of this circumstance to consolidate his position in northern Morocco and to constitute a more direct threat to Fās and al-Kayr al-Kibīr, by erecting a fort named *la Graciosa* on the right bank of the Lūkkas a little below the confluence of that river with the Wādī Mīḥāzen. Besieged by the Moroccans, decimated by marsh-fever, ill-supplied and ill-informed because the river was barely navigable, the Portuguese garrison, after a long resistance, was obliged to accept an honourable surrender, which enabled it to retire unmolested. Al-ʿArāʾish was restored by Mawlay al-Nāṣir, son of the Waṭṭīd Sultan Muḥammad al-Shaykh. Leo Africanus, who gives an account of the town at the beginning of the 16th century, informs us that large numbers of eels were caught there, that a plentiful supply of game was to be found there, and that on the banks of the Lūkkas there were woods abounding in wild animals. The inhabitants made charcoal which they sent to Arzila and Tangier. But they lived in fear of the Portuguese, who continually raided the area and who attacked the port itself in 1504 (there was also an unsuccessful attack by the Spanish from Cadix in 1546). This insecurity did not prevent the development of a certain amount of maritime trade due to the fact that al-ʿArāʾish was then the only port in northern Morocco not occupied by the Christians, and that it was one of the channels through which passed the trade of Fās, to which it was relatively near. The Portuguese maintained a commercial agent there (*factor*); Genoese merchants visited it regularly, and a castle situated at the entrance to the harbour became known as "Genoese Castle". From then on, Larache became a pirates' lair, and piracy increased after the evacuation of Arzila by the Portuguese in 1530. The havoc wrought by the pirates on the Spanish coast led Philip III to occupy Larache in 1610, following an agreement with the Saʿdī Sultan Mawlay Muḥammad al-Shaykh. The town was retained by the Moroccans in 1689 during the reign of the ʿAlawid Sultan Mawlay Ismāʾīl, and was repopulated by the Dīḥāla and the tribes of the Rif. From that date until 1911, the operations of the European powers against Larache were confined to bombardments or to more or less successful attacks from the sea. In 1705, the French Admiral Du Chaffault suffered a heavy defeat there. In 1860, during the Spanish-Moroccan war, Larache was bombarded by a Spanish squadron. During the "Moroccan crisis", Spanish troops landed at Larache on 8 June 1911, and the town remained within the Spanish zone of influence until the proclamation of the independence of Morocco in 1956.

Opposite Larache, on the other bank of the Wādī Lūkkas, on the Spanish coast, there stand the ruins of the Punic town of Lixos or Lixus, where many excavations have been made.

(G. VYER—R. RICARD)

**AL-ARAK**, to-day Santa María de Alarcos, a small citadel in the district of Calatrava la Vieja, situated about seven miles S.-W. of Ciudad Real, on the summit of a mountain whose spurs descend to the Rio Guadiana. In the undulating plain which lies at its feet, the famous battle between Yaʿqūb al-Manṣūr and the Castilians, which ended in the rout of Alfonso VIII (see the article *and* *Yūsuf* *yaʿqūb*, for details of events immediately prior to the battle).

We have little information on the details of the actual battle, because we only have at our disposal on the Muslim side accounts which are rather fragmentary. The Christian sources are more objective, although briefer. It seems that the Castilians launched a surprise attack on the Almohad advance guard, commanded by the Vizier Abū Yahyā, grandson of Abū Ḥafṣ ʿUmar Intī [g.c.], but only achieved a partial success. Yaʿqūb, with his own force, attacked the flank of the Christians who, as the struggle became prolonged, were forced, exhausted by the heat and by thirst, to take refuge in the castle of Alarcos or to flee with their King in the direction of Toledo. Moreover the Castilian Pedro Fernández de Castro, a personal enemy of Alfonso VIII, contributed with his own squadron of cavalry to the success of the Almohad ruler, on whom he lavished advice. Don Diego Lopez de Haro, the great *almojarif* of Castile, took refuge with the royal standard in the castle, but was soon forced to surrender.

The Muslim chroniclers, on the subject of this battle, have absurdly exaggerated the numbers of the troops on either side, that of the Christian dead and that of the prisoners taken in the castle. At all events, the army of Alfonso VII suffered heavy losses and experienced such a severe blow that, in the years following, despite the aid of the King of Aragon, it did not dare to risk a further engagement with Yaʿqūb when the latter penetrated into its territory. The battle of Alarcos took place under the most favourable conditions for the Almohads. Alfonso VIII was at war with Leo and Navarre. Accustomed to easy and fruitful raids into Andalusia, where his troops did not meet with serious resistance, he completely underestimated the strength of the Muslim forces and the strategic ability of Yaʿqūb al-Manṣūr.

**ARAKAN.** The most westerly Division of Lower Burma, lying between the Arakan Yoma range and the Bay of Bengal. Until 1197/1284, Arakan was an independent kingdom, and thereafter formed part of Burma, under British administration from 1243/1820. From the 9th/14th to the 13th/18th century the history of Arakan was closely linked with that of Muslim Bengal.

From the 13th century Arakan was Buddhist, but in 809/1406 King Naramekhla, defeated by the Burmese, took refuge with the Muslim ruler of Bengal. He was restored to his throne, in 813/1419, by troops of the Bengal sultan, whose tributary he became. (For the identity of this sultan see Phayre, 76-77; Collis, 34-35; *History of Bengal* ii, 120-20).

If Naramekhla's connection with Bengal had

Arakanese fleets and taking Čittagong in 1076/1666. (The Portuguese had been won over for the previous year, and the Mughals were accompanied by Kamāl, son of Prince Mangat Rai, the governor of Čittagong who had fled to Dhākā in 1048/1638).

This ended the Arakanese ascendancy in Eastern Bengal, though slave raiding continued far into the 12th/18th century. Moreover, in 1101/1692 Muslim soldiers of fortune, combining with the many captive Bengalis, rose in the capital and for twenty years had made the mastery in Arakan. The Bengali Muslim poets Dawlat Kāfi and Sayyid al-Awwal, who wrote at the courts of Kings Thiruthudamma and Sandathudamma, were under the patronage of such Muslim officers and officials at the court. Descendants of these Muslim soldiers still live in the Ramri and Akyah areas, and are called Kaman (Pers. *kamān*—a bow). (Biswasvar Bhattacharya, *Bengal Past and Present* No. 63, 1927, 139-41).

The Arakanese connexion with Muslim Bengal found expression in the assumption of Muslim titles by the Buddhist kings and in the issue of coins on which appear those titles, or the *kalima*, in the Persian script.

Arakanese title	Regnal years	Muslim title	Coinage
Naramekhla	813/1430—837/1434		Tributary of sultan
Meung Khari	837-8/1424—863-7/1459	‘Alī Khān	
Basawpya	863-4/1459—887-1482	Kalima Shāh	<i>kalima</i>
Kasabadi	929-30/1523—931-2/1525	Ilyās Shāh Sultān	<i>kalima</i> & title
Thatasta	931-2/1525—937-8/1532	‘Alī Shāh	<i>kalima</i> & title
Minbin	937-8/1532—961-6/1535	Zabuk Shāh	title
Minpalaung	978-9/1572—1001-02/1593	Sikandar Shāh	title
Minyazaung	1001-02/1593—1021-02/1612	Husayn Shāh	title
Minthakaung	1021-02/1612—1031-02/1622	Salim Shāh	Persian lettering
Thiruthudamma	1031-02/1622—1047-8/1628		
Sandathudamma	1062-3/1652—1096-7/1683	No Muslim title or coinage	

been that of a tributary, that of his nephew, Basawpya, was a conqueror's, for he took the important port of Čittagong. Lost about 918/1512 to the Tippera *rajdā*, recaptured by King Minyaza, and then in the hands of the Husayn Shāhs from 923/1517 until 946/1530, Čittagong was absorbed into the Arakan kingdom from the time of King Minbin until that of King Sandathudamma.

The naval forces of Arakan based on Čittagong, working with those of Portuguese freebooters settled in the head of the Bay, now dominated the riverine tracts of Bengal. The Noakhali and Backergunge districts were swept for plunder and slaves, (see *Travels of Father Manrique*, ed. C. E. Luard for the large numbers involved), and, indeed, for some years they were virtually Arakanese possessions. In 1034/1625 even Dhākā, the Mughal provincial capital was sacked.

In 1076/1660, Shāh Shujā'ī, defeated in Bengal by the forces of his brother, the emperor Aurangzib, sailed with an Arakanese flotilla which had operated in his support, and sought asylum with King Sandathudamma at Mrohaung. The Mughals offered the King large sums for his extradition, while Shujā'ī, denied shipping in which to leave, intrigued with the many Muslims in Arakan. On 6 Jumādā II 1072/7 Feb. 1661 Arakanese troops surrounded his house, and the Prince was probably killed in the struggle which followed. (See G. H. Harvey, *four, Burma Research Soc.* 1922/3, 107-15).

Aurangzib's viceroy, Shāyista Khān, avenged the death and curbed Arakanese raids by destroying two

It is clear that the Arakanese coins are modelled upon those of Bengal. Thus in Bengal the use of the *kalima* begins about the time when Naramekhla was restored by the sultan to the Arakan throne, and in both countries a clumsy Kufic is used. (See Phayre, *Coins of Arakan, of Pegu, and of Burma*, in *International Numismatic Orientalist*, 1882; M. S. Collis, *Jour. Burma Research Soc.* 1925/6, 34-35; J. W. Laidley, *J.A.S.B.* 1846 pl. IV no. 12; H. F. Blochman, *J.A.S.B.* 1873/3, 209-309).

Muslims in Arakan left their traces in the Sandikhān mosque at Mrohaung, and in the Buddemokan at Akyah and Sandoway—shrines of Badr al-Din Aylwā, whose most famous shrine is at Čittagong. He is the guardian saint of salutes of Arakan and Bengal. (See E. Forchhammer, *Monograph on Arakan Antiquities*, and Sir R. C. Temple, *Jour. Burma Research Soc.* 1925, 1-31).

**ARAL**, a large, slightly salty lake in west Turkistān, 46° 45' to 43° 45' N and 76° to 79° 27' E, with a surface area of (1942) 66,438 sq.km.; of this 2345 sq.km. are islands. (The largest islands are the Tokmak Ata in front of the mouth of the Āmū Daryā, Ostrov Vorodeniya, "Island of the Resurrection", formerly Nicholas Island, discovered in 1848, 216 sq.km.; Barsa Kelmez, "arrival without

return", 135 sq.km.; and finally Kug Aral, in the north, eastward in front of the Kara Top peninsula, 273 sq.km.) The maximum length from NE to SW is 428 km., the breadth at 45° N 284 sq.km. The average depth of the lake is 16 m., in the middle it is up to 20-25 m., in the west up to 68 m. The lake has today in the N, E and S numerous bays, and particularly in the SE, rocky islands offshore. Only the western shore, which borders on the Ūst Yurt plain partly with cliffs up to 120 m. high, has no bays. The east bank is flat and sandy.

In prehistoric times (diluvium and ice ages) the level of Lake Aral stood some 4 m. above the present waterline; hence the lake had (particularly in the bays in the NE and NW) a considerably larger extension and was besides (through the Ōzboy (cf. Aral DARVA) connected with the Caspian Sea and through this, at the time, with the Ocean. Since the production of the present geological conditions it has no longer any outlet. (Cf. Brockhaus-Efron, *Entsiklopedicheskii Slovar'*, ii, 10-12, and *Bo'shaya Sovetskaya Entsiklopediya*, 33, 326.) In historical times also the water-level fluctuated by several meters, and the banks altered because of this, especially in the E and SE; but there is no evidence of significant changes at this time. In fact the description of the delta of the Āmū Daryā by al-Makdisi, 288: two days from Mirdākhān to the Kerder, one day and four *farsāḡhs* to Paratagin (B[if]aratagin) and a further day to the bank of the lake, corresponds as well with modern conditions as Ibn Hawkal's account (ed. Kratzers, 512). He says that the place Dibi-Naw-Archieh (cf. *al-Mas'ūdī* al-Hadīthā = Turkish Yedi Keat (al-Mas'ūdī) Naw Karḡa?), identical with the present ruins of Djankeet, some 22 km. SW of the modern Kazalinsk (Ül), in S. A. Tolstov, *Auf den Spuren der alt-choresmischen Kultur*, Berlin 1953, 254; further details, *ibid.*, 266) is two days distant from the bank of the lake (both 10th century accounts, Barthold, *Turkistan*, 178). In the 19th-20th centuries the level fell and rose alternately: 1860-80 it fell, then the waterline rose till 1915 by 2 m.; within the period 1874 to 1931 it fluctuated by 3.1 m. Accordingly its height above sea-level is given variously as 49 m. (as an average: *Bo'shaya Sovetskaya Entsiklopediya*, 32 m. (Leimbach), and as its highest point in 1931: as 51 m.). This evidence also corresponds to the estimation of its depth. The lake, whose salt content (1.03-1.08%) is considerably lower than that of the Ocean, scarcely ever freezes up completely. Mostly only the bays in the north turn solid, or the whole northern part (as far as the Barsa Kelmez island).

To this northern part (some 5500 sq.km.) the Kazakhs have given the special name Kūsh Tēñiz ("small sea"); so the main southern part is called Ūlu Tēñiz ("great sea").

The Āmū Daryā (g.e.) concerning the possible change of its course) and the Sīr Daryā run into the Aral Sea. Of the Sīr Daryā al-Umari (1301-48) claims in his *Musālik al-Abyār* (reproduced by W. von Tiesenhausen, *Materialy etnograficheskoy k istorii Zolotoy Ordy*, i, 1884, 215, transl. 217), following the account of the merchant Badr al-Dīn al-Rūmī, that it changed its direction three travelling days below Dīand, and Hāfiẓ-i Abrū (1424-5), who disputes the existence of the Aral Sea, makes it join the Āmū Daryā. Finally in the *Bābur-nāma* the great conqueror of India (d. 1530) reports that the Sīr Daryā subsides into the sands in the west. One should not attach much weight to these accounts, of which that of Hāfiẓ-i Abrū may be

regarded as legendary and that of al-Umari conveys nothing conclusive; Abu T-ḡhāzī too knows nothing of the Sīr Daryā at one time not reaching the Aral Sea (cf. also Sīr DARVA).

It is uncertain whether the Aral Sea was known to classical antiquity. A. Hermann does not refer the reports about the 'Oξεαυή λίμνη (palus Oxiaria) to the Aral Sea; on the other hand he sees in the palus Oxiaria of Amianthus Marcellinus, xviii, 6, 39 the Aral Sea (Pauli-Wanson, xviii, 2, 1942, 2004-5). Also the quite general accounts of the Chinese and the *Shiyue* of the Byzantine ambassador Zenkhoros, 568 A.D. (Menander Protector, *Corp. Script. Hist. Byz.*, xviii, 238 f.; C. Müller, *Fragm. Hist. Graec.*, iv, 229) cannot be interpreted with any certainty.

In Islamic times Ibn Rusta, 92, is the first to describe the lake, without naming it. He gives its circumference as 80 *farsāḡhs*; al-Istakhṡir, 304, makes it 100, the *Ḥudūd al-'Ālam*, 53, 300 *farsāḡhs*. Whether the earlier report in Ibn Khurādādhbih, 173, about the lake of Kerder (for this form instead of Kurdar cf. A. Zeki Velidi Togan in *Türkiye İktisadi Mecmuası*, ii, 340) can be referred to the Aral Sea, is questionable. At that time the Oguz (Oghuz) and the Pecheng nomads round the lake, except on the southern bank (Kū'arizim).

The Aral Sea was called by al-Istakhṡir, the *Ḥudūd*, and the later geographers, Buhayrat Kū'arizim and rightly described as a closed salty lake, which lay to the right on the journey from Gurgandj (Old Urgandj) to the Pecheng (so Gardizī, reproduced in W. Barthold, *Öldir & komandirovsk v Srednyaya Azia*, 1897, 95) al-Umari (cf. *al-Mas'ūdī* al-Sarī Kanāhū [see Aral DARVA]). On the other hand al-Mas'ūdī (*Tanbih*, 65; in more general terms also in *Murādī*, i, 211) says that the "Lake of Dīand-nūya" is connected with the Caspian Sea. Dīand (d. 861/1476-7), following the *Dīand-nūma* (from the beginning of the 13th century), calls it also "Lake of Dīand" after the city on the lower reaches of the Sīr Daryā. Finally, Hāfiẓ-i Abrū claims (in 820/1427) that the lake has vanished (and furnishes thus new proof of the fact that one must by no means blindly trust isolated accounts by Islamic geographers of the Middle Ages).

Between the 13th and 16th century no report about the Aral Sea has been handed down. Abu T-ḡhāzī and al-Istakhṡir Khān speaks in the *Shajarat al-Abrāh* (Desmoussin), 338, for the first time of Aral ("island") as the place where the Āmū Daryā runs into the lake. After this "island" (which in the 18th century formed a separate state with the capital Kungrāt [g.e.] and was not re-united with Khiva until the reign of Muhammad Rahīm Khān, 1806-26) the lake later received the name of Aral Teñiz, "Aral Sea", among the Kazaks. Following this the Russians call it Aral'skoe More, "Aral Sea" (first occurrence in 1697). Previously the Russian work *Kniga bol'shogo tēñiza* (finished in 1626) called it Since More, "Blue Sea"—it does in fact have a deep blue colour. This name appeared in 1697 also on the Dutch map in Witten, *Noord en Oost Tartarye*, 1687, while J. N. de Hōle, in 1723, uses the modern name (Barthold, *Aral*, 77 f.).

The Russians erected first in 1847 a fortress Raimskoe (the name probably derives from Ralim) on the right bank of the lower Sīr Daryā, 60-65 km. from its mouth. Already from 1819 several expeditions had more closely explored the lake and furnished descriptions (1819 N. N. Murav'ev; 1820: A. F. Negri and A. K. Baron Meyendorff; 1823-6 F. W. H. Berg; 1833-5 G. von Helmsen; 1839 V. A. Conant

Perovskiy; 1840 M. M. Zembulnikov; 1840-4 Antov; 1841 I. P. Blaraberg and D. I. Romanov; 1842-3 Danilevskiy; 1843 Schulz and Lemm; then in 1848 A. I. Butakov and A. I. Makheyev. Between 1853 and 1853 the Russians kept a flotilla on the Aral Sea, which was stationed in the beginning in Aral'sk, then in Kazalinsk (see the lower Sir Darya). It was disbanded after the Aral Sea had become a Russian inland lake with the conquest of the Khānate of Khiva in 1873. Since 1906 the lake is reached by the railway line Orenburg-Tashkent at the NE corner near Aral'sk. Otherwise the lake is still to-day situated inconveniently for traffic.—During the civil war of 1918-21 a flotilla was formed again on the Aral Sea. Since the reorganisation of territories in 1924 and 1926 the southern part of the lake belongs to the autonomous republic of Karakalpakia in the framework of the Uzbek SSR, the northern part to Kazakhstan. The lake is of importance for the surrounding population and altogether for the USSR principally because of its fishing industry.

**ARAR** (see *HARAR*).

**ARARAT** (see *ARABAL AL-ARAB*).

**ARAS** (see *AL-RAS*).

**'ARBAN**, site of ruins in Mesopotamia, on the Western bank of the Khābūr, to the South of the 'Ababal 'Abd al-'Aziz, situated under 36° 10' N. Lat. and 40° 50' E. Long. (Greenw.). The remains of the old town are hidden under several hills, after one of which the site is also called Tell 'Arbāba. It was here that H. A. Layard found several winged bulls with human heads, products of the genuinely Mesopotamian civilization which is closely related to that of ancient Babylonia. 'Arban is probably identical with the Gar (Shal)-dikana of the cuneiform inscriptions. During the later Roman period the town, then called Arabana, possessed considerable military importance as the principal station on the line of frontier against the Parthians. In the Arab period 'Arban played an important part as the centre of the Khābūr district and as place of storage for the cotton cultivated in the Khābūr valley. Geographers (cf. e.g. Yāqūt s.v. 'Arabān) and historians refer to it frequently as a flourishing town. The date of its destruction is unknown; possibly it took place during the Mongol invasion under Timur.

**ARBONA**, the name by which the Arab historians designated the town of Narbonne. Reached by the early Muslim expeditions, it was taken in 96/715 under 'Abd al-'Aziz b. Mūsā b. Nusayr, was probably then lost or abandoned, and was retaken in 100/719 by al-Samh b. Malik al-Khawlānī. In 116/734, two years after the battle of Poitiers (see *BALAT AL-GHURARA*), the Duke of Provence concluded a treaty with the governor of Narbonne, Yusuf b. 'Abd al-Rahmān, whereby the latter was allowed to occupy a certain number of places in the valley of the Rhône, in order to protect Provence against the attempts of Charles Martel and to procure a new invasion route to the north; Charles Martel reacted at once, took Avignon in 119/737 and invested Narbonne, but without success. It was not until 142/759 that the town, after a long siege, was finally taken from the Muslims by Pepin the Short. In 177/791, 'Abd al-Malik b. Muḥammad advanced as far as Narbonne, set fire to the outskirts, defeated the Duke of Toulouse not far from the city, and withdrew with considerable booty; another expedition, which was unsuccessful, took place in 226/840. Narbonne and its region still maintained relations with the Umayyad court. Jewish merchants being particularly active in this respect.

**Bibliography:** E. Lévi-Provençal, *Hist. Esp. Mus.*, I (see index), gives the main facts and enumerates (8, n. 2, 30-1 and 54, n. 1) the sources and studies, amongst which should be noted: Codera, *Narbona, Gerona y Barcelona bajo la dominación musulmana* in *Est. crit. hist. dr. esp.* (VII); M. Reinoud, *Invasions des Sarasins en France*, Paris 1836 (Eng. tr. by H. K. Sherwani in *Islamic Culture*, iv/1930, 100 ff., 251 ff., 197 ff., 588 ff., v/1931, 71 ff., 472 ff., 651 ff.); A. Molinier and H. Zotenberg, *Invasions des Sarasins dans le Languedoc d'après les historiens musulmans* in *Devie and Vaisette, Histoire générale du Languedoc*, II, Toulouse 1875. There is also the *Chronicon Fridiparti*, the *Chronicon Minsianense*, the *Chronicon Fundanlensis*, and other Latin chronicles (cf. Ch. Pellat, *Les Sarasins en Aragon*, in *En Terre d'Israhel*, 1944/IV, 178-90). (Ed.)

## ARCHITECTURE.

### I. EARLY MUSLIM ARCHITECTURE

#### (1) The Time of the Prophet

Arabia, at the rise of Islam, does not appear to have possessed anything worthy of the name of architecture. Only a small proportion of the population was settled, and these lived in dwellings which were scarcely more than hovels. Those who lived in mud-brick houses were called *ahl al-madar*, and the Bedawin, from their tents of camel's-hair cloth, *ahl al-madar*.

The sanctuary at Mecca, in the time of Muḥammad, merely consisted of a small roofless enclosure, oblong in shape, formed by four walls a little higher than a man, built of rough stones laid dry. Within this enclosure was the sacred well of Zamzam. This little sanctuary, known as the Ka'ba, lay at the bottom of a valley surrounded by the houses of Mecca, which came close up to it, and we are expressly told that when 'Umar wanted to surround it by an open space, large enough to contain the Faithful, he

had to demolish many houses (al-Balādhuri, *Futūḥ*, 46).

The Ka'ba, being in a bad state, was demolished and reconstructed by the Quraysh, when Muḥammad was in his thirty-fifth year, i.e. in A.D. 608. The Quraysh took the wood of a ship which had been wrecked, and employed a carpenter and builder named Bāḳim, who had been on the ship, to help them in the rebuilding. Arrakt (Wüstenfeld's ed., *Chronicon der Stadt Mekka*, I, 110, last line—112, L 12) says that the new Ka'ba was built with a course of stone alternating with a course of wood up to the roof, there being sixteen courses of stone and fifteen of wood. The door, which had previously been at ground level, was now placed with its sill four cubits and a span from the ground. The roof rested on six pillars (columns), 17 of silver arranged in two rows of three each. Total height of structure 18 cubits. Arrakt says that on the ceiling, walls and columns were pictures (nawar) of the Prophets, trees and angels. (Cf. Creswell, in *Archæologia*, 94, Oxford 1951, 97-102).

This curious style of architecture, of alternate courses of stone and wood, resembles the style practised in Abyssinia in early times (see Krencker, in the *Deutsche Islam-Expedition*, II, 168-94) and Bāḳim is probably an abbreviation of 'Enbāḳim, the Abyssinian form of Habakkuk, that is to say the "carpenter and builder" employed was most probably an Abyssinian (see my *Ka'ba in A.D. 608*, in *Archæologia*, XCIV (1951), 97-102).

When Muḥammad migrated to Medina he built a house for himself and his family. It consisted of an enclosure about 100 cubits square of mud brick, with a portion on the south side made of palm trunks used as columns to support a roof of palm leaves and mud. Against the outer side of the east wall were built small huts (*hujra*) for the Prophet's wives. All opened into the courtyard. We have the description (preserved in Ibn Sa'd, *Tabaḳāt*, I, 280) of these huts, due to a man named 'Abd Allāh b. Yazid who saw them just before they were demolished by order of al-Walid: "There were four houses of mud brick, with apartments partitioned off by palm branches, and five houses made of palm branches plastered with mud and not divided into rooms. Over the doors were curtains of black hair-cloth. Each curtain measured 3 x 3 cubits. One could reach the roof with the hand".

Such was the house of the leader of the community at Medina. Nor did Muḥammad wish to alter these conditions; and Ibn Sa'd records the following saying of his: "The most unprofitable thing that I have heard up to the wealth of a Believer is building" (*Tabaḳāt*, I, 181, II, 7-8; also VIII, 120, L 1). At this time Ṭā'if was the only town in the Hijāz that possessed a wall. When Medina was attacked in 5/627 it had no wall, so Muḥammad had a ditch dug to defend it; the idea is said to have been due to a Persian slave named Salimān, and it created a great sensation for nobody had ever heard of such a thing before. The word *khandaq* given to it is Persian. Medina was first surrounded by a wall in 63/682-3; (Mas'ūdī, *Tanbih*, 305, L 4).

#### (2) The Patriarchal and Umayyad Caliphates

The men who formed the Arab armies of conquest were mainly Bedouin, but even those who came from permanent settlements, such as Mecca and Medina, knew nothing of art or architecture. They soon found themselves in two totally different

cultural environments, one of which had been under Hellenistic influence for a thousand years, the other under Persian influence for even longer.

And not only were the cultural conditions different, the material conditions were different also. Syria was a country of splendid building materials. Syrian limestone was the best of its kind, resisting weathering and taking a beautiful amber luster on exposure, and cedar wood was plentiful, for the Lebanon had not yet been deforested. So the seventh-century invaders found themselves in a country of splendid buildings—churches of cut stone, some of ashlar in courses 90 cm. high, with arcades on marble columns, gable roofs of cedar wood and large surfaces decorated with coloured glass mosaics on a glistening gold background.

In the other cultural sphere they met with buildings of brick, sometimes only of mud brick, sometimes vaulted and sometimes with flat roofs of palm trunks, palm leaves and mud.

In these early days, the Muslims, when they conquered a town in Syria, usually took one of the churches and used it as a mosque, or merely divided one of the churches if the town had surrendered without resistance. At Hims, for example, they took a fourth part of the Church of St. John. How was a church converted into a mosque? One can easily guess. In Syria the *babā* (direction of Mecca) is due south, whereas churches are turned towards the east. Under these circumstances it was only necessary to close the western entrance (or three entrances), pierce new entrances in the north wall and pray across the aisles. That this is exactly what happened can be verified in the Great Mosque of Hama where the west front of the *Kanīsat al-'Uymā* (Great Church) which was converted into a mosque in 15/636-7, now forms the west end of the sanctuary. Its three western doors have been converted into windows and it is now entered from the north.

At Jerusalem they made use of the remains of the basilical hall of Herod, ruined by the army of Titus, which ran along the south side of the Temple Enclosure. This primitive mosque was seen by Arculf about A.D. 670 (Geyer, *Itinera Hierosolymitana*, I, 145). In Persia, at Persepolis and Karvin, they appear to have taken *apadāna*, or hypostyle audience-halls of the Persian kings, with flat roofs resting on columns with double bull-headed capitals.

But the situation was different in 'Irāq, for here the Arabs founded new towns (which they did not do in Syria) so pre-existing buildings could not be employed, and they had to construct some sort of place for themselves. What manner of buildings were the first mosques of the earliest towns in Islam?

The following is a list of those Umayyad Friday mosques the essential features of which are known from literary or archaeological evidence:

1. — Basra, reconstructed in 45/665.
2. — Kufa, reconstructed in 50/670.
3. — Damascus, construction begun in 87/706.
4. — Medina, reconstructed 88/706-9/710.
5. — al-Masjid al-Akṣā, Jerusalem, built under Walid I, 86/705-96/715.
6. — Aleppo, built under Walid I or Sulaymān, 86/705-99/717.
7. — Fustāt, reconstructed 92/710-93/714.
8. — Kāmīla, completed 95/712-102/720.
9. — Bāḥrā, built in 102/720-1.
10. — Kair al-Harr al-Sharī (identified by Sauvaget as Rusafa, the residence of Hishām) built in 110/728.

11. — Harrân, built in 126/744-133/750.
12. — Hamât, reconstructed, date uncertain.
13. — Dar'a, date uncertain (?).

At Basra, founded about 14/635, the first mosque (according to al-Balâdhuri, *Futuh*, 343, 342 and 346-7) was simply marked out (*ihstâfa*) and the people prayed there without any building. According to another version, also given by al-Balâdhuri (346 and 350), it was enclosed by a fence of reeds. At Kûfa, founded in 17/638, the first mosque was equally primitive. Its boundaries were fixed by a man who threw an arrow towards the *hîbla*, then another towards the north, another to the west and a fourth to the east (al-Balâdhuri, 275-6; al-Tabari, i, 248r, ll. 12-13). A square with each side two arrow-casts in length was thus obtained. This area was not enclosed by walls but by a ditch only, and the sole architectural feature was a covered colonnade (*milâ*), 200 cubits long, which ran the whole length of the south side.

The columns were of marble, taken from some buildings of the Lakhmid Princes at Hira, about 4 miles away. This *milâ* was open on all sides so that, in the words of al-Tabari (i, 249a), a man praying in it could see the convent known as Dayr Hind and the gate of the town known as Bab Dîr. On the *hîbla* side and only separated from the praying place by a narrow street was built a dwelling for Sa'd the Commander-in-Chief.

The first mosque in Egypt, the Mosque of 'Amr, built at Fustât in the winter of 641/2, was equally primitive. It measured 50 x 30 cubits and had two doors on each side except on the *hîbla* side. (Makrizi, *Khawâss*, ii, 247). The roof was very low and probably consisted of palm trunks resting on palm-trunk columns as in Muhammad's house at Medina.

The first mosques to be worthy of the name of architecture were the second Great Mosques at Basra (45/665) and Kûfa (50/670). Regarding the latter al-Tabari (i, 249c) says that Ziyâd b. Abîhi summoned "Masons of the Days of Ignorance" (i.e. non-Muslims). Then a man who had been one of the builders of Khawâss, came forward and described how columns of stone from Bâbâh Ahrâr should be used to carry a roof 30 cubits high. Ibn 'Ubayy, who saw this mosque, says (de Goeje's ed., 217) that "the *hîbla* side has five aisles whereas the rest have two only; the aisles are supported on columns like masts, . . . extremely high and not surmounted by arches" (Fig. 1). It is obvious that the roofing system resembled that of an *apadana*, or Hall of Columns of the Achaemenian kings, exactly as was the case in the first Great Mosque at Baghdad.

The Dome of the Rock at Jerusalem, the oldest existing monument of Muslim architecture, was built by the Caliph 'Abd al-Malik and completed in 72/691. It is an annular building and consists in its simplest analysis of wooden dome 20.44 m. in diameter, set on a high drum, pierced with sixteen windows and resting on four piers and twelve columns, placed in a circle and so arranged that three columns alternate with each pier. This circle of supports is placed in the centre of a large octagon averaging 20.60 m. a side, formed by eight walls 9 1/2 m. high (excluding the parapet which adds 2.60 m.) each pierced in their upper half by five windows (Plate IIIa and Fig. 2).

There is a door 2.60 m. wide and 4.30 high in each of the four sides which face the four cardinal points, and on these sides the central window above the door is consequently much reduced. The space

between the circle and the octagon being too great to be conveniently spanned by single beams, an intermediate octagon, consisting of arches borne by eight piers and sixteen columns, so arranged that two columns alternate with each pier, has been placed between the two to provide the necessary support for the roof (Plate IVa). The two concentric ambulatories thus formed were of course used for the *taawûf* or ceremonial circumambulation of the sacred object, the Rock.

The exterior was always panelled with marble for half its height, as it is to-day, but the upper part was originally covered with glass mosaic (*fayyâsh*) like the inner arcades. This was replaced by the present coating of fayence by Sultan Sulaymân in 959/1552. The vaults of the four entrance porches were also decorated with mosaic, but it has only been preserved in the eastern porch. The lintels of the four doorways are decorated on their under side with sheet metal, either copper or bronze, worked *en repoussé* and exhibiting a variety of designs, chiefly vine leaves, bunches of grapes and acanthus. The raised parts of the design are gilt, the background of the central part is painted black and the outer border bright green. The inner side of the outer wall is panelled with marble from top to bottom, likewise all the piers. The tie beams of the arches of the octagonal arcade are decorated beneath with a bronze sheathing like the door soffits (Plate IIIb-c), but their inner faces are treated like a Corinthian entablature. The arcades above are covered with glass mosaic on both faces and their soffits also (Plate IVb, V and VI). The arcades of the central circle are also decorated with glass mosaic on their outer faces, but their soffits and inner faces have been given a coating of marble at some unknown date, but before A.D. 1340. The drum above is also decorated with mosaic. The ceiling of the outer ambulatory is probably the work of Sultan al-Nâsir Muhammad in 715/1315 like the present lining of the dome. The ceiling of the inner ambulatory dates from the end of the 18th century. The original dome, until it fell in 1407/1617, was covered with sheets of lead, over which were placed 10,210 plates of brass gilt (Ibn 'Abd Rahîm, *al-Fih*, iii, 367). The harmony of its proportions and the richness of its decoration make the Dome of the Rock one of the most beautiful buildings in the world.

The Great Mosque of Damascus. Al-Walid began the construction of the Great Mosque of Damascus immediately after his accession in 86/705. A curious situation had prevailed here since the conquest. A great sanctuary of a Syrian god existed here, consisting of a *temenos*, or sacred enclosure, measuring 100 m. from N. to S. and 150 m. from E. to W., set in an outer enclosure over 300 m. square.

At each corner of the inner enclosure, which had pilastered walls nearly 13 m. high resting on a socle of at least 4 m., was a square tower, and all round the interior ran a double colonnade. There were four axial entrances and in the centre, or a little to the west of it, was the temple, its entrance facing east. In the 4th century Christianity became the state religion and Theodosius (A.D. 379-395) converted the temple into a church (Malalas, *Chronographia*, 344-5). After the Arab conquest the *temenos* was divided between Muslims and Christians. Ibn Shikhr says that they both "entered by the same door, placed on the south side where is now the great *mihrab*. Then the Christians turned to the west towards their church (i.e. the converted temple), and the Muslims to the right to reach their mosque".

Where? Opposite the traditional "*mihrab* of the Companions of the Prophet", i.e. under that part of the interior colonnade which was to the east of the entrance. As for the corner towers, Ibn al-Fakhri (p. 108) says: "The minarets (*miḍḍana*) which are in the Damascus Mosque were originally watch-towers in the Greek days . . . when al-Walid turned the whole area into a mosque, he left these in their old condition". Al-Mas'ûdi (*Murûj*, iv, 90-91)

then built the sanctuary with three aisles running parallel to the south wall and cut through its centre by a transept about 8 m. higher. The arcades are in two tiers, the lower of large arches being 10.35 m. high, the upper, in which two small arches correspond to each one below, is nearly 5 m. high. Similar arcades form porticoes on the three sides of the court. The aisles of the sanctuary have gable roofs covered with sheets of lead, and so has the transept, but

Fig. 1. Plan of Great Mosque of Kûfa.

says: "Then came Christianity and it became a Church; then came Islam and it became a mosque. Al-Walid built it solidly and the *sandmî* (the four corner towers) were not changed, they serve for the call to prayer at the present day".

This state of affairs lasted until al-Walid, after bargaining with the Christians, demolished everything except the outer walls and the corner towers and built the present mosque. He first of all reduced the interior of the enclosure into a rectangle by building the long rooms to east and west, leaving a vestibule in front of the east and west entrances. He

the porticoes on the three sides of the court have roofs which slope slightly inwards (Plate VIIa-b). On the transept was a wooden dome, very high and conspicuous.

The decoration consisted of marble paneling (some parts of the original paneling exist next the east entrance) above which ran a golden *harna* or vine-scroll frieze, and above that was glass mosaic (*fayyâsh*) right up to the ceiling. A considerable amount has survived the three fires of 1069, 1401, and 1595, and may still be seen under the west portico, where the famous panorama of the Baradâ

(the river of Damascus) is over 34 m. in length and nearly 7 m. high (Plate VIIIa). When intact the surface of the *ḥusayfā* must have been greater than in any other building in existence! There were also six marble window-grilles (Plate VIIIb) which

Fig. 2. Dome of the Rock.

constitute the earliest geometrical designs in Islam. The Great Mosque of Damascus was rightly regarded by medieval Muslims as one of the Seven Wonders of the World.

Another building due to al-Walid is the audience hall and *ḥammām*, known to-day as *Kuṣayr 'Amra*,

in Transjordan. It consists of an audience hall about 10 m. square, with two slightly pointed transverse arches supporting three tunnel-vaults (Plate IX and Fig. 3). There is a vaulted recess on the side opposite the entrance, with a small vaulted room on either side of it. A door on the east side gives access to the *ḥammām*, which consists of three small rooms covered by a tunnel vault, a cross vault and a dome. The latter was the *calidarium*, under the floor are hypocausts exactly as in a Roman bath. But most remarkable of all are the paintings which cover the walls (Plate X), mostly scenes from daily life, a hunting scene and figures symbolising History, Poetry and Philosophy with the words in Greek above their heads. The dome of the *calidarium* was painted to represent the vault of heaven, with the Great Bear, the Little Bear, the signs of the Zodiac, etc. But most important of all was the painting of the enemies of Islam defeated by the Umayyads, with their names written above them in Greek and Arabic: *Kaysar* (the Byzantine Emperor), *Rōdork* (the Visigothic King of Spain), *Chorros*, *Negus* (the King of Abyssinia), and two more the names of which have been obliterated. Painting, contrary to the popular idea, is not forbidden by any passage in the *Kur'ān*, and hostility to it only took proper theological form towards the end of the 8th century A.D. (see my *Lampbrush of Painting in Early Islam*, in *Art Islamica*, XI-XII, 159-66).

The Umayyad Caliphs were great builders of palaces. Their external fortified appearance, although built in the heart of their Empire, hundreds of miles from the nearest frontier, is to be explained by the route taken by the armies of the conquest. They passed a long series of Roman frontier forts, the *castra* of the Roman *limes*, which ran from the Gulf of 'Akaba to Damascus and thence to Palmyra. The most important of these (for which see Brünnow and von Domaszewski, *Die Provincia Arabia*) are:

Uḡḡruh	built by Trajan
Da'ḡanilya	probably Trajanic
Ladidjun	probably Trajanic
Bḡhayr	inscription of Diocletian (A.D. 284-304)
Dumayr	A.D. 162.

Some of these frontier forts were lived in by Umayyad princes. For example, Walid II sometimes lived at Azrak, which was rebuilt in 634/1236-7, but which in his day (A.D. 744) was a Roman fort of Diocletian and Maximian. When he was attacked by conspirators he fled north to the Kasr al-Balḡhā, which is the Arabic name of a Roman fort about 15 miles S.-W. of Palmyra.

Now the result of this was twofold. It not only gave the Umayyad Caliphs the necessary knowledge when they wanted to build fortresses on the Byzantine frontier, e.g. *Massifa* in 834/702-3, *al-Muḡakkab*, *Katargish*, *Mira*, *Būka* and *Baghas*, all in 105/724 (see *al-Balḡḡḡ*, 165-7), but it affected the design of their palaces. Here is a list of them:

1. — al-Walid's palace at *Minyā* on Lake Tiberias, A.D. 705/75.
2. — al-Walid's *ḡayr* at *ḡabal Seis*, A.D. 705/15.
3. — Hishām's palace of *Kasr al-Hayr al-Gharbi*, c. 727.
4. — Hishām's palace of *Kasr al-Hayr al-Sharḡi*, 110/729.
5. — Hishām's palace at *ḡharbat al-Mafḡjar*, 4 miles N. of Jericho.
6. — Walid II's palace of *Mḡḡḡḡ*, c. A.D. 744.
7. — Walid II's palace of *Kasr al-Tūba*, c. A.D. 744.

All these palaces, although built in the midst of Muslim territory, look externally like forts, for they are stone enclosures with round flanking towers. Nos. 1-5 are approximately 70 m. square externally, No. 7 is twice as large, 70 × 140 m. and No. 6 is four times as large, i.e. 145 m. square. Why this fortified appearance when it was not necessary? It would seem that having been in the habit of occupying forts belonging to the Roman *limes*, they came to look upon a rectangular enclosure flanked by towers as a necessary feature of a princely residence.

When Hishām about 727 A.D. built his palace, known to-day as *Kasr al-Hayr al-Gharbi*, he chose a site on a small mound about 40 miles to the west of Palmyra, where there was a monastery built by the ḡhassānid *Arethas* (= *al-Hārith*) under Justinian in A.D. 559. He incorporated the tower of this monastery, which had a door protected by a *māchicolis* (of one opening only) high above it, so that it formed a tall watch-tower at the north-west corner of his 70 m. square *ḡayr*. This is how the *māchicolis* first passed into Muslim architecture.

*Kasr al-Hayr al-Gharbi* has been admirably excavated by M. Daniel Schlumberger, (see *Syria*, XX, 195-238 and 324-73). The entrance was found to consist of two great stone door-posts and a lintel decorated with vine ornament, which must have been taken from Palmyra. He has also brought to light masses of stucco ornament, wall panelling, window grilles and frames, and human figures, part of which has been skilfully assembled and put together in the Museum at Damascus. Two large fresco paintings were also discovered, one representing the Caliph on horseback hunting with bow and arrow and using stirrups, which is almost the oldest known record of their use.

Two years later Hishām built another palace, known to-day as *Kasr al-Hayr al-Sharḡi*, together with a small walled city provided with a mosque of

three aisles, cut through the centre by a transept of greater height, exactly as at Damascus (Plate XIIa and Fig. 4).

As for the Palace Enclosure it averages nearly 67 m. a side internally and 71 m. externally with walls of stone flanked by 32 round towers, of which the total height must have been at least 14 m. There is only one entrance in the centre of the west side; it is defended by a *māchicolis* as are the four gates of the *Madīna* alongside. The walls are decorated with a string-course of brickwork at the level of the rampart walk and each tower was crowned by a room with a brick dome. The tops of the pair which flank the entrance are decorated with arched panels of stucco, acanthus leaves and also apparently vine leaves and grapes (Plate XI). The interior consisted of an open court, which must have measured about 37 × 45 m., surrounded by two tiers of rooms, the lower tunnel vaulted, the upper with flat wooden ceilings. It awaits excavation.

Another palace of Hishām at *ḡharbat al-Mafḡjar*, 4 miles north of Jericho, has also been excavated in recent years. It consists of a palace enclosure about 70 m. square with its own mosque, a large forecourt, a tank with a little open octagonal pavilion in the centre, another mosque with aisles (two) on the *bīḡla* side only, and to north a very large *ḡammām*, consisting of nine domed bays arranged three by three, with a small annex on the north side containing the most beautiful floor mosaic ever discovered in Palestine. It consists of a fine tree executed in three shades of green, with two gazelles grazing on the left and a lion pouncing on another on the right. In Muslim palaces the staircases are generally narrow and inconspicuously tucked away, but here there are five broad staircases which led to the upper floor. Here again masses of stucco ornament have been recovered and put together in the Palestine Museum at Jerusalem. It consists of panels decorated with geometrical ornament, window grilles, human heads and dancing girls (see the *Quarterly of the Department of Antiquities*, V, VI, VIII and X-XII).

These three palaces each had an enclosure which is *Kasr al-Hayr al-Sharḡi* is about 1½ km. wide and 7 km. long, with walls of stone to the height of a metre and a half and above that at least 2 m. more of mud brick. There are half-round buttresses at intervals, first on one side of the wall and then on the other alternately. Traces of a similar wall exist at *Mafḡjar*. Such an enclosure was called a *ḡayr*, and here is the proof. *Va'ḡḡḡḡ (Uḡḡḡḡ)*, p. 263, describing the foundation of *Simsārā* by the Caliph al-Muḡḡḡḡ in A.D. 836 says: "And wherever these streets of al-Hayr touched land granted to other people, he would order the wall [of al-Hayr] to be built further back. Behind the wall were wild animals, gazelles, wild asses, deer, hares and ostriches, kept in by an enclosing wall in a fine broad open tract". And *Miskawayhi* (*Margolouth's* text, I, 159) under the year 113/25-6, says: "This year there was a rising of the disbanded cavalry, who went out to the Oratory, plundered the palace called al-Thurayyā (the palace of the *Pleiades* at *Baghdād*), and slaughtered the game in the *ḡayr*".

*Mḡḡḡḡḡ*, about 4 miles from *Zīza* and about 20 miles south of *Amḡḡḡḡ*, is the largest of all the Umayyad palaces, measuring about 145 m. each way, but it was never finished. The outer walls with their half round towers are of well dressed limestone, but all the walls of the interior are of red bricks resting of three or four courses of cut stone. The bricks are of two sizes, 6½ cm. square and 28 cm. sq., and 6½ cm. thick.

Fig. 3. Kuṣayr 'Amra, plan.

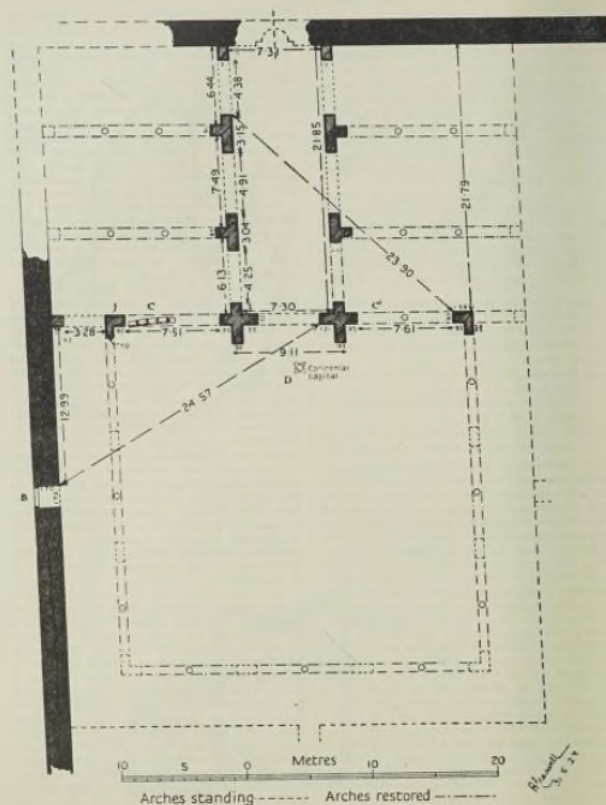

Fig. 4. Kasr al-Hayr al-Sharqi, mosque.

The entrance is in the centre of the south side. Internally it is divided into three tracts running from north to south, the central one being 37 m. in width and the lateral ones about 42 m. The buildings intended to occupy the lateral tracts have never been begun, and even those projected for the central tract have never been finished. Of the latter, however, the group at the north end must have been very nearly finished, and the plan of the group at the south end can be clearly seen, for a great stone

grid is visible formed by the stone foundation course (Fig. 5). The part immediately behind the gateway was obviously intended to be an entrance hall 17.40 m. long, leading into a court 27.14 m. broad and 23 m. deep; these two elements were flanked by other rooms and courts. This group may be called the Gateway Block. Beyond the court just mentioned is an enormous central court, just over 57 m. sq. on the north side of which is a triple-arched entrance (the

arches have fallen) leading into a great basilical hall, 21.60 m. deep, ending in a triple apse (Plate XIII-c and Fig. 6). This basilical hall, which presumably was the Throne Room, is flanked by two symmetrical complexes composed as follows: on either side of an oblong court, placed perpendicular to the basilical hall, is another court at right angles to it, flanked on each side by a pair of vaulted chambers. These rooms were intended to have a marble panelling, for great block of a fine green stone (looking like marble, but really a calc-schist),

a vine leaf and a bunch of grapes. The wall-surface is divided into twenty upright and twenty inverted triangles by a cornice-like moulding, which runs up and down zig-zag fashion from the socle to the entablature. The triangles are about 2.85 m. in height and 2.30 in width at the base. Exactly in the centre of each is a rosette, those in the upright triangles being lobed hexagons, those in the inverted triangles straight-sided octagons. The kernels of all the rosettes vary. The surface of the upright triangles is decorated with extraordinary richness in high

Fig. 5. Mshatta, plan.

some already sawn into slabs 3 cm. thick, were once to be seen lying in the east side tract.

But Mshatta really owes its fame to the marvellous carving on its south facade, or rather on the two half-octagonal towers that flank the entrance and the first length of curtain wall to right (13.20 m.) and left (13.50 m.). It consists of a plain socle 47 cm. high, a richly decorated base 1.25 m. in height, a decorated wall-face 2.95 m. in height and an entablature, 90.4 cm. The base consists of a torus moulding with a hollow moulding above and below. The torus moulding is decorated with a network of interlacing vine tendrils which form loops, each occupied by

relief, vine tendrils, bunches of grapes, birds which pluck at the fruit, etc. In the lower part of some of the triangles is a chalice, out of which two animals drink (Plate XIII). On the right hand side of the facade there are neither animals nor birds and the ornament is on a much smaller scale, in fact the differences are sufficient to justify the suggestion that it was executed by a different school of craftsmen.

**Summary:** The monuments of Umayyad architecture are really splendid structures of cut stone with arcades resting on marble columns and richly decorated internally with marble panelling and

mosaic (*ḥusayfā*). The mosques are nearly always covered with a gable roof (*djamālān*). The minarets were tall square towers, derived from the church towers of pre-Muslim Syria, and the triple-apsed sanctuaries were due to the same influence. Umayyad monuments exhibit a mixture of influences, Syria occupying the first place and Persia the second, and Egyptian influence is definitely demonstrable at the end of this period in Mshattā. Umayyad architecture employed the following devices: the semi-circular, the horse-shoe and the pointed arch, flat arches or lintels with a semi-circular relieving arch above, joggled voussoirs, tunnel-vaults in stone and brick, wooden domes and stone domes on true spherical-triangle pendentives. The squinch does not appear to have been employed. But we know from descriptions of early authors that a type of mosque prevailed in 'Irāk and Persia quite different from the Syrian type. It was square in plan, had walls of brick (sometimes of mud brick) and its flat timber roof rested directly on the columns

Fig. 6. Mshattā, triple-arched entrance.

without the intermediary of arches. Here we have a direct link between the ancient Persian audience-hall (*apadāna*) and the flat-roofed portico (*ḥallār*) of more recent Persian palaces.

### (3) The 'Abbasid Caliphate

The effect of the foundation of Baghdad was as far reaching as the transfer of the capital of the Roman Empire from Rome to Constantinople. The whole centre of gravity of the Empire was changed; hitherto its capital had been in territory which since the time of Alexander had been in the sphere of Hellenistic culture. The transfer resulted in the weakening of this influence and its replacement by the cultural influences of Sāsānian Persia, to which sphere 'Irāk belonged. This made itself felt in the design of the new city, for which we possess such detailed accounts in al-Ya'qūbī and al-Khāṭib that its form can be reconstructed, although no trace of the Baghdad of al-Manṣūr has survived. The foundation took place in A.D. 762 and everything was finished in 766.

It was a circular city with an outer and inner wall, and a *faṣṣ* or *intervalum*, about 35.40 m. wide between. The outer wall was about 14 m. high and

4 m. thick, the inner about 17 m. high including the crenellations and about 5 m. thick; the towers, of which there were 28 between each gate, rose about 2½ m. higher. There were four equidistant gateways. al-Khāṭib says that "each was composed of two gateways, one in front of the other, separated by a *dihliz* and a *rababa* opening on the *faṣṣ* between the two walls. When one entered by the Khurāsān Gate one first turned to the left in an oblong passage (*dihliz ḥaṣṣī*) with a vault of brick, 20 cubits wide and 30 long, the entrance of which was in the width and the exit in the length and passed out into a *rababa* . . . 40 cubits wide leading to the second gateway. At the far end of this court was the second gateway which was that of the city . . . The four gates were constructed on the same model". It is clear from the words of al-Khāṭib—"when one entered by the Khurāsān Gate, one first turned to the left, etc." that the outer gateway was a bent entrance. Al-Khāṭib continues: "The second or inner gate, which was that of the city . . . gave access

to an oblong corridor, vaulted with bricks and gypsum (*ḡipsūm*) 20 cubits long and 12 wide. Above the vault was an audience hall . . . covered by a gigantic dome 50 cubits high" (Fig. 7).

The Muslim historians insist that the circular form of the city was a feature that had never been known before, but such is far from being the case, for many earlier examples are known, e.g. the Hittite city of Sinjerli, Abra, Agbatana, Parthian Ctesiphon and Takht-i Sulaymān, Dārābajird in Fārs and also Firūzābād.

A mosque was built in the centre of the new city. According to al-Khāṭib it was 200 cubits (roughly 100 m.) square and had a roof supported by wooden columns. There were 17 aisles from right to left, and the side aisles were two deep, the sanctuary was probably five deep as at Kōfa and Wāsit. It was rebuilt by Hārūn al-Rashīd with burnt bricks and teak-wood, in 193/808-9.

The palace of al-Manṣūr measured 400 cubits each way. It was on the *ḥibla* side of the mosque and in contact (*mudhārib*) with it, as was the practice in early Islam, e.g. at Damascus about 10 A.H., at Bayra in 45 A.H., at Koyrawīn in 50 A.H., at Wāsit in 83 or 84 A.H., at Merv in 132-6 A.H., and (if we count

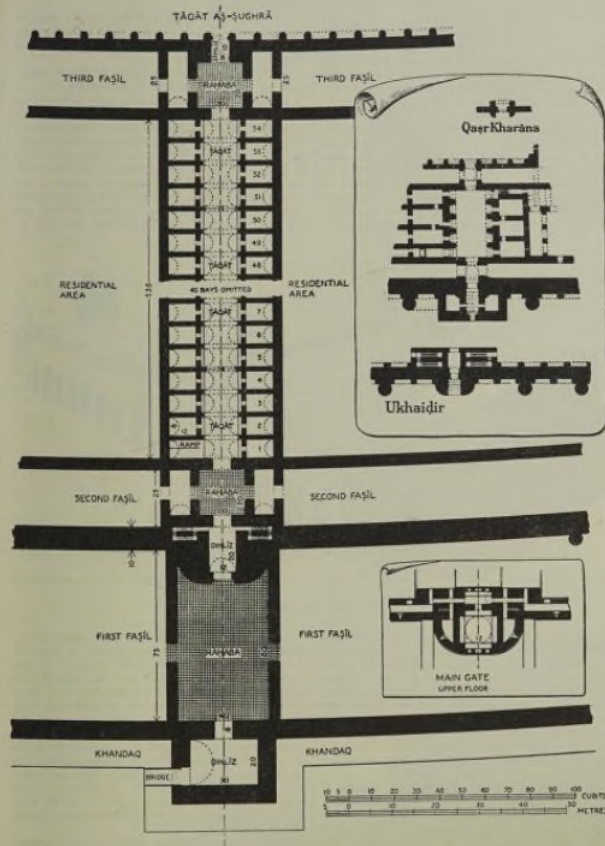

Fig. 7. Baghdad, *ṭāqāt*.

the, Dār al-Imāra as a palace) in the mosque of Ibn Tulūn at Cairo, in 265 A.H.

Palace and Mosque have long since disappeared but fortunately a fairly well preserved 'Abbasid palace of this period has survived, viz: Uḡhayḍir, on the Wādī 'Ubayd about 30 miles west of Karbalā'. It consists of a fortified rectangular enclosure measuring 175 × 260 m. with a gateway in the centre of each side. There are four round corner towers and ten intermediate half-round towers, not counting the peculiar gateway towers, on each side (Plate XIV a-b).

Within the great enclosure and in contact with its northern face, is the Palace proper, measuring 111 m. from north to south and 82 from east to west. It also is provided with half round towers. Its main entrance forms one with the northern entrance of the main enclosure. The masonry is composed of roughly shaped slabs of limestone set in gypsum mortar. The walls with the parapet must have been about 19 m. high. The palace proper consists of a

between. It must have been intended to contain a fire, for the vault next the outer wall is pierced by a pair of terra-cotta pipes, so it must have been a kitchen.

The palace was also provided with a mosque 24.20 m. wide and 15.15 deep, with a portico one aisle deep on the east, south and west sides, but without one on the north.

Uḡhayḍir was probably begun by 'Isā b. Mūsā, uncle of the Caliph al-Manṣūr, in 161/778.

At about this time the Akṣā Mosque at Jerusalem was partly rebuilt by the Caliph al-Mahdī. Recent research enables us to affirm that it then consisted of a central aisle 17.50 wide with seven aisles to right and seven to left about 6.25 m. in width, all covered by gable roofs and all perpendicular to the *qibla* wall. There was a great wooden dome at the end of the central aisle. On the north side was a large central door with seven smaller ones to right and left, and ten "unornamented" ones on the east side (Fig. 9).

Fig. 9. The Akṣā Mosque in A.D. 780.

great court of honour, with a *ḥaḍra* for the Hall of Public Audience and a square room behind it, presumably a hall of private audience. On either side are other vaulted rooms. A great vaulted corridor about 3½ m. wide runs completely round this group of rooms and the court of honour, and on the east and west sides of it are four isolated and self-contained sets of vaulted chambers, each with its own courtyard, which I regard as four *ḥayts* for the four lawful wives of the Muslim prince for whom it was built, as at Mshattā (Fig. 8).

In these *ḥayts* the side next the great corridor is bounded by a blind arcade of five arches, the central arch being occupied by the door. On the far side was a portico 2.80 m. deep of five arches resting on four round piers, and covered by a tunnel vault. The north and south sides are occupied by a triple-arched façade. These arches form a portico, behind which are three parallel tunnel-vaulted rooms. A passage leads from the courtyard to a room 17.60 m. long and 3½ wide, placed transversely behind the three tunnel-vaulted rooms. It is covered by two lengths of tunnel-vault with a space open to the sky

There can be no doubt that this mosque had a great influence on the Great Mosque of Cordova built by 'Abd al-Rahmān I in 170/780-7. It was added to on three occasions but this earliest part still exists; as at Jerusalem the aisles, of which there are eleven, run perpendicular to the back wall, they are all covered by parallel gable roofs, and the central one is wider than the rest. The influence of Syria in Spain at this time is not surprising for Spain was full of Syrian refugees. The arcades each consist of twelve arches with twelve more above, an ingenious device whereby a height of ceiling of about 9.80 m. was obtained with columns which, with their capitals and bases, only measure 3.80 m. (Plate XIVc and XVa).

Another building of this period, of great importance for the history of architecture, is the Cistern of Ramla in Palestine, for it consists of a subterranean excavation 8 m. deep divided into six aisles by five arcades of four arches each, all of which are pointed and appear to be struck from two centres, varying from one seventh to one fifth of the span apart (Plate XVb and Fig. 10). And there can be

no doubt about the date for on the plaster of the vault is a Kufic inscription of Dhū 'l-Hiddja 172/May 789. It is therefore centuries earlier than the earliest pointed arches in Europe.

In 212/827 'Abd Allāh b. Tāhir, the Governor of Egypt, ordered the Mosque of 'Amr at Fusṭāṭ to be doubled in size by the addition to the west of its exact area in the same shape. Makrūf (*Kāṣaf*, II, 253) says that the part added included the great *mihrāb* and all that is to the west of it. The number of doors was now thirteen: five on the N.-E., three on the N.-W., four on the S.-W., and one for the *ḥiṣṣa* on the *ḥiḍba* side. This is the last recorded extension of the mosque, and its significance is of far reaching importance for it follows that no part of the present structure lying to the right of a line drawn through its centre can possibly be older than 212 A.H. The Mosque then measured internally (as it does to-day) 109 m. on the S.-E. side, 105.25 on the N.-W., 120.55 on the N.-E. and 117.25 on the S.W. As a result of a number of trial trenches made

Fig. 10. Ramla, cistern, plan.

between 1926 and 1933, we now know from the foundations that there were 7 arcades running from right to left on the *ḥiḍba* side and the same number on the side opposite, and four on the S.-W. side. On the N.-E. side the arcades ran perpendicular to the wall. The outer walls were about 10.50 m. high without their cresting, about which we know nothing. There were seventy-eight windows very interesting construction. The span was about 2.70 m. There were engaged colonnettes at the inner and outer corners and a pair of dwarf marble columns placed on either side of the opening. A transverse beam resting on the latter reduced the span to about 1.90 m. The springing of the arch began about 1.40 m. above the sill, and the rise was about 1.40. These arches which have survived are considerably stilted and very slightly pointed, and the broken edge of a stucco grille is visible along their intrados. A beam ran across the opening at the springing of the arch, and nailed to its inner side was a strip of carved woodwork which continued along the face of the wall. The decoration consists of a flowing acanthus frieze in which four-leaved

whorls alternate with five-lobed leaves (Fig. 11). This is of fundamental importance, for it is derived from the Hellenistic art of Syria and it shows that the 'Abbasid art of 'Irāq, which we find fifty years later in the Mosque of Ibn Tulūn, had not yet reached Egypt.

The Great Mosque of Kayrawān is another famous mosque, founded in the early days of Islam, of which no part (excepting the minaret only) is earlier than the IXth century A.D. The oldest part of the present mosque dates from the rebuilding carried out by the 'Aghlabid Ziyādāt Allāh in 228/836.

Fig. 11. Mosque of 'Amr, bay.

The measurements of the mosque are as follows: N. 65.60 m., S. 70.25, E. 121.80, W. 120.50. The sanctuary consisted of sixteen arcades of seven arches each, running perpendicular to the *ḥiḍba* wall, but without reaching it, for a transverse arcade runs at a distance of about 6 m. from it and it is against this arcade that the sixteen arcades abut. The side aisles are 3.30 m. in width against 5.40 for the central aisle, which must have measured 6.60 m. originally, for its width has been subsequently reduced by two arcades built in contact with the old ones, without any bond or liaison of any sort. The columnseve have their own impost blocks instead of each pair being tied together by a common impost block, and the arches of the "lining arcade" are pointed horse-shoe arches instead of round horse-shoe arches like all the rest (Plate XVII). There is no doubt that they are the work of Ibrāhīm II b. Ahmad, 261-89 A.H. (see below). The whole was covered by a flat roof of uniform height, even over the central aisle, for the latter was only raised during the extensive works of Ibrāhīm II. There were no *riads* on the three sides of *ḥiḍba* until the time

of Ibrahim III. The outer walls were of stone, strengthened at intervals by buttresses.

This same year 221/836 was marked by an event of great importance — the foundation of Sāmarrā. The palace was built on the edge of the plateau, which is about 17 m. above the alluvial valley of the Tigris. In the valley itself is a great basin, 127 m. square, from which a great flight of steps, 60 m. broad, gently ascended to the terrace in front of the Bāb al-'Amma. The latter consists of a great triple-arched façade, about 22 m. high, with three parallel tunnel-vaulted rooms behind it (Plate XVIIa). This is the best preserved part of the whole palace; nearly everywhere else the walls either only rise a metre or two or have been exposed by excavation. Behind the Bāb al-'Amma were six transverse halls, then a square court. To the north one reached the rooms of the Caliph, on the south was the *Harim*. But going directly forward led to an oblong Court of Honour, with the triple entrance of the Throne Room beyond it. The latter consisted of four T-shaped halls arranged in a cruciform fashion. Each one resembled a three-aisled basilica so as to obtain light from the clerestory.

Crosses are smaller rooms with marble dados, also a mosque for the Caliph with a *mihrāb*. Beyond this again is the Great Esplanade, a great court or garden, 180 m. wide and 350 m. deep, intersected by little canals. Beyond again was the polo-ground, and the distance from the great basin to the race-course must have been nearly 1200 m.

The decoration consisted of stucco, generally of moulded stucco, except in the Throne Room group where they are of marble slabs. The upper part of the walls in the *Harim* were decorated with fresco paintings, which included living forms and foliage. All woodwork was of teak, carved and painted.

The Great Mosque of this period has not survived, as it was entirely rebuilt in 234/7 H. Before describing it we must speak of the Great Mosque of Sāsa in Tunisia built in 236/850-1.

The mosque proper, excluding its annexes, is a perfectly regular rectangle built of stone in courses about 1/2 m. high and measuring internally 49.39 m. deep and 37.16 wide. The *sahn*, which measures 41 × 24 1/2 m., is surrounded by low arcades of slightly horse-shoe form, rising on squat T-shaped piers. There are eleven arches to north and south and six to east and west, and the height of the façade is about 6 1/2 m. It is perfectly plain except for a splay-face moulding, immediately above which is a fine inscription frieze in simple undecorated Kufic, the maximum height of the characters being 28 cm. The band on which they are carved curves forward slightly to compensate for foreshortening and thus help the observer at ground level. This is the earliest known example of this treatment, which passed into Egypt with the Fatimids and appears in the Mosque of al-Hākim, 350-403/990-1013. The three *riwāḥs* vary in depth from 4.08-4.27 m. and each is covered by a tunnel-vault (Plate XVIIIa).

The sanctuary consists of thirteen aisles formed by twelve arcades of six arches each running towards the *qibla* wall. Each aisle is divided into six bays by other arcades running from east to west. All these arches, which rest on squat cruciform piers, are of horse-shoe form. The first three bays going south are covered by tunnel-vaults, with one exception, the third bay in the central aisle, which is covered by a dome on an octagonal drum with slightly incurved faces.

The next three bays going south are covered by

cross-vaults at a slightly higher level. Here again the third bay in the central aisle is covered by a dome on squinches. It is obvious that the mosque has been extended towards the south, that the first three bays are the original part and that the first dome marks the bay in front of the original *mihrāb* (Plate XVIIIb), which has been removed together with the original back wall. Before that the depth of the mosque must have been 44 m. The date of the original work is given by the great Kufic inscription as 236/850-1.

The Great Mosque of Sāmarrā was rebuilt by Mutawakkil; the work was begun in 234/848-9 and finished in Ramaḍān 237/Feb.-March, 852. It is the largest mosque ever built, for its outer walls form an immense rectangle of kiln-baked bricks measuring roughly 240 m. deep internally by 156 m. wide (proportion approximately as 3:2); its area therefore is nearly 38,000 sq. m. Only the enclosing walls have been preserved; they are 2.65 m. thick, strengthened by half round towers averaging 5.60 m. in diameter with a projection of 2.15 m., and the curtain walls between them average 15 m. in length. There are four corner towers, twelve intermediate towers to east and west and eight to north and south making forty-four in all. There were sixteen rectangular doorways spanned by beams with a relieving arch above.

The towers are perfectly plain, but each curtain wall is decorated with a frieze of six recessed squares with bevelled edges; in each square is a shallow corner of about a metre in diameter and 25 cm. deep. The total height of the walls is now about 10.50. In spite of its simplicity the whole effect is truly monumental (Plate XVIIb).

The south wall is pierced by twenty-four windows placed on the axis of the twenty-five aisles of the sanctuary, except the central one, for there was no room above the *mihrāb*. There were two more windows on each side making 28 in all. Externally they are narrow rectangular openings, but internally they are splayed and covered by scalloped arches of five lobes resting on little engaged columns, the whole being set in a sunk rectangular frame.

Herfied's excavations showed that the roof rested directly on octagonal piers of brick, with marble colonnettes at the four corners, making a support 2.07 m. square. The clear height within was 10.35. There were no arches.

The mosque proper was surrounded by an outer enclosure, or *siyāda*, on the east, north and west sides, and air photographs show that the great rectangle thus formed stood in a still greater enclosure measuring 376 × 444 m.

The minaret, the famous Malūwiyya, stands free at a distance of 27 1/2 m. from the north wall of the mosque. There is a square socle, 33 m. a side and about 3 m. high, on which rests a spiral tower with a ramp about 2.30 m. wide, which winds round in an anti-clockwise direction until it has made five complete turns. The rise for each turn is 0.10 m., but as the length of each turn is less than the previous one it follows that the slope inevitably becomes steeper and steeper. At the summit of this spiral part is a set in a shallow frame (Plate XVIIIc). The southern niche frames a doorway at which the ramp ends; it opens on to a steep staircase, at first straight then spiral, leading to the top platform which is 50 m. above the socle. From eight holes to be seen Herfied concluded that there was probably a little pavilion on wooden columns here.

A few years later, between A.D. 860 and 861, another immense mosque was built by the same Caliph at Abū Dulaf to the north of Sāmarrā. It measures internally 213 m. from north to south and 135 from east to west. Here the outer walls are of mud brick about 1.60 m. thick strengthened by half-round buttresses, but the roof rested on arcades of burnt brick running from north to south; it was apparently about 8 m. high. The sanctuary is divided into seventeen aisles by sixteen arcades of five arches each with an average span of 3.13 m. The two outer arcades are carried right through to the north end of the mosque, forming side *riwāḥs* 14 m. in depth. The northern *riwāḥ* resembles the southern one, except that it is only three arches deep. On the north side are about 9.50 m. from the mosque is a miniature Malūwiyya on a socle about 11.20 m. square, above which is the much damaged spiral part which barely makes three turns.

Ten years later important works were carried out in the Great Mosque of Kayrawān by Abū Ibrahim Ahmad, who reduced the width of the central aisle by about 1.20 m. by constructing two new arcades with the old ones. The result was that the side arcades are pointed horse-shoe arches instead of round horse-shoe arches like those they are in contact with. He also built three free-standing arches and one wall-arch of the same type to carry a fluted dome in front of the *mihrāb*. They rise to a height of 9.15 m., and the square thus formed is terminated above by a cornice, its top edge being 10.83 m. from the ground. On it rests the octagonal zone of the minaret, 2.15 m. in height, which is formed by eight semi-circular arches springing from colonnettes resting on little corbels inserted in the cornice just mentioned. The drum is composed of eight arched windows and sixteen arched panels arranged in pairs between the windows. The dome, which is 5.80 m. in diameter, has twenty-four ribs, each springing from a little corbel. Between the ribs are concave segments, 30 cm. deep at the base and diminishing to nothing at the apex. The whole composition is charming. Externally the dome resembles a cantaloup melon, with 24 convex ribs (corresponding to the 24 concave segments) which taper to nothing at the apex (Plate XIXa and XX). Abū Ibrahim's work was carried out in 248/862-3. He also lived in the *mihrāb* with a support of very beautiful carved marble panels assembled in four tiers of seven panels each; total height 2.72 m. He also decorated the face of the *mihrāb* and the wall surrounding it with lustre tiles about 21 cm. square (Plate XIXb). The marble panels and the tiles had been imported by him from 'Irāk, and the latter constitute the oldest examples of lustre pottery of certain date.

#### The Mosque of Ibn Tūlūn

In 265 A.H. Ahmad b. Tūlūn decided to build a new mosque on an outcrop of rock called *Djabal Yaḥshūr*. The scheme of the mosque can be seen from the plan (Fig. 12) and the general view (Plate XXI) taken from the minaret of the Madrasa of Saḥlūmūdī. It consists of a *sahn* of about 92 m. square surrounded by *riwāḥs*, five aisles deep on the *qibla* side and two aisles only on the other sides. This part—the mosque proper—is enclosed by a wall with a remarkable cresting, and forms a great rectangle measuring 122.26 m. in width and 140.33 in width. It is surrounded by a great outer court or *siyāda*, except on the south-eastern (*qibla*) side which was occupied by a private apartment of the amir, the Dār al-Imra. This outer *siyāda* is roughly 19 m. broad

and its outer walls are lower than those of the mosque proper. The whole forms a great rectangle almost exactly square, measuring 162 m. in depth and 162.46 in width, constructed of red bricks, measuring roughly 18 × 8 × 4 cm., coated with a very hard stucco in which the ornament is cut. No wooden ties are used anywhere, except at the tops of the piers.

It results from careful measurements that the unit employed for setting out the mosque was the Nubian cubit of 54.04 cm., for the principal dimensions are almost exact multiples of it.

The scheme of the façade of the mosque proper is as follows. It would seem that the architect set out his design by bisecting the façade as regards its height and then took this median line for the level of the window sills. Then the plain lower part was pierced by seven rectangular doorways, and the upper part by thirty-one pointed-arched windows, with their sills from 5.70 to 5.86 m. above the floor. The window-arches rest on stumpy engaged colonnettes of brick exactly as in that part of the Mosque of 'Amr which dates from 212 A.H. The walls are 10.03 m. in height up to the roof level, above which is a row of pierced circles in squares and then a curious row of work cresting, making a total height of 13.03 m. above the sills of the doorways (Plate XXIIa). The latter are perfectly plain except for the carved wooden soffits, of which four original ones remain. In addition to the seventeen large and two small doors leading from the *siyādas* into the mosque proper there are four in the *qibla* wall, one of which leads into the room behind the *mihrāb*. This must be the door mentioned by Makrizī (II, 269, l. 22 ff.) which enabled Ibn Tūlūn to go directly from the Dār al-Imra to the *maḥsūra* next the *mihrāb* and the *mihrāb*, as was the practice during the first three centuries of Islam.

The *sahn* is roughly 92 m. square with thirteen pointed arches on each side (Plate XXIIb). The sanctuary is formed by five arcades of seventeen arches each, and the *riwāḥ* opposite by two arcades. These seven arcades are carried right through to the side walls. The arcades of the lateral *riwāḥs*, however, abut against the outer arcades of the sanctuary and N.-W. *riwāḥ* and consequently consist of thirteen arches only. The arches rest on piers 2.40 m. wide and 1.37 m. deep, with engaged brick columns at the corners. They are placed about 4.60 m. apart. Dove-tailed wooden plates are used round the tops of these piers to strengthen them. The pier-capitals are derived from late Corinthian capitals, the two tiers of acanthus being replaced by conventionalized Sāmarrā vine leaves (Plate XXIIIa).

The soffits of the arches are decorated with bands of stucco ornament, of which about ten are fairly well preserved (Plate XXIV). All consist of a very broad central strip between narrow double borders. The central strip in every case consists of a geometrical frame-work, the interstices of which are filled with various elements according to style B of Sāmarrā (Fig. 13). In addition to this a continuous border of ornament, 46 cm. wide, runs round the arches on both faces, turns at right angles at the springing, runs across the top of the pier, and then turns again at right angles to run round the next arch. A frieze of stucco ornament runs along just above the band of ornament running round the arches. About 20 cm. above this ran the famous Kufic inscription carved on wood, of which a fair amount still remains, running along about 30 cm. below the beams of the ceiling. Calculation shows that this frieze, which must have been over 2 km. long, may have contained about one seventeenth part of the Qur'ān.

Fig. 12. Mosque of Ibn Tulūn, plan.

The windows, in the shadow of the aisles, stand out against the sky like delicate lacework and form one of the most beautiful features of the mosque. There are 128 in all. Each consists of a pointed arch springing from a pair of engaged dwarf columns with stucco capitals, and a border of stucco ornament runs round each, turns at right angles at the springing and runs along horizontally to the next window (Plate XXIII b-c). Unfortunately only three, or at most four, of the window-grilles are original. These are mainly composed of compass work, i.e. intersecting circles and segments of circles; two have been set out by a method similar to that employed for one of the marble grilles in the Great Mosque at Damascus (Plate VIII b), the third on a network of equilateral triangles (Fig. 14).

The pendentives of the present wooden dome in front of the *mihrāb*, on stylistic grounds, are undoubtedly the work of Lādjīn in 696 A.H., and the dome is much later. I very much doubt if there was a dome here originally. The present minaret is likewise the work of Lādjīn, the original one (seen by Mukaddas) was probably fairly similar to the Malwiyya of Samarra.

The statement of al-Ḳudāʿī, quoted by Ibn Duqmāḳ and Makrizī, that the Mosque of Ibn Tulūn was built after the style (*ʿald bnaʿ*) of the Mosque of Samarra (unless it refers to the general impression produced by the minaret) is certainly not correct, for its plan does not in the least resemble either of the two mosques of Samarra, except that all three are surrounded by *siyḍas*. It differs from

Fig. 13. Mosque of Ibn Tulūn, analysis of soffits of arches (see Plate XXIV).

Fig. 14. Mosque of Ibn Tulūn, analysis of window-grille (see Plate XXIII c).

the Great Mosque of Sāmarrā in the number of its aisles 5, 2, 2, 2 instead of 9, 4, 4, 3. As for the Mosque of Abū Dulaf, its aisles run perpendicular to the *hība* wall instead of parallel to it. It also differs from the Great Mosque of Sāmarrā in that its roof rests on arcades instead of directly on the piers. Its piers alone recall those of Sāmarrā, but whereas the piers at Sāmarrā are square and have engaged marble columns at the corners, those of Ibn Tulūn are oblong and the columns at the corners are only counterfeited in the brickwork. Neither does the scheme of the façade recall either of the mosques of Sāmarrā for it has no bastions. The sole feature of the façade that recalls Sāmarrā is the row of circles in squares below the cresting. Its windows in no way resemble those of the Great Mosque, which are few in number, have lobed arches internally and are treated externally like arrow-slits, but they do resemble those of the mosque of 'Amr of 212 A.H., except that they lack the transverse beam and carved wooden frieze. In other words, Ibn Tulūn's façade is derived from that of the Mosque of 'Amr of 212/227 and, as no such façade is known elsewhere, must be regarded as Egyptian.

As regards the ornament, everybody now agrees that it is derived from Sāmarrā, but whereas at Sāmarrā the three styles, A, B and C, occur separately, in the mosque of Ibn Tulūn they are combined and mixed. By its ornament and in certain other respects the mosque may be regarded as a foreign, 'Irāki building planted down on the soil of Egypt, and large numbers of 'Irāki craftsmen must have been employed for its decoration in wood and stucco. Its ornament and that of the Dayr al-Suryān in the Wādī Natrūn are the two most westerly examples of the art of the 'Abbāsid Empire, which prevailed over a large area from Babrayn and Nīshāpūr to Samarkand.

**Summary:** Under the 'Abbāsids the Hellenistic influences of Syria were replaced by the surviving influences of Sassanid Persia, which profoundly modified the art and architecture, and this gave birth to the art of Sāmarrā, the influence of which extended to Egypt under Ibn Tulūn, to Nīshāpūr and Babrayn. In palace architecture there was a vast difference between that of the Umayyads and 'Abbāsids, partly due to the adoption of Persian ideas of royalty which almost deified the king. Hence elaborate throne-rooms, generally domed, for private audience, preceded by a vaulted *hūḍā* (or four radiating *hūḍā*) for public audience. The *hūḍā* also were different, following the type of Ka'bi Shīrīn and not the Syrian type of Mahāfiḍ and Kayr al-Tūba. The scale was immense and axial planning is a marked feature. But all are built of brick and a great part of that faced with materials — mud brick — hidden by thick coats of stucco. A new type of pointed arch appears, the four-centred arch. The earliest existing squinches in Islam date from this period. An important innovation was the introduction of lustre tiles, the earliest examples being those brought to Kayrawān from 'Irāq in 248 A.H. Bands of inscription were usually made to stand out on a blue background. But the widespread influence of 'Abbāsid art did not extend to Spain, where Umayyad art, brought thither by Syrian refugees, was still full of life.

**ARCHIVES** [see BAIBERKAT ARSIV, DAFTAR, DĀR AL-MAHFŪZĀT AL-'UMŪMIYYA, WAĞİFĀK].

**ARCI** (ARĠIAHĠIRIN), a small Caucasian nation of Upper Daghistan, ethnically akin to the Awar (q.v.), but distinct from the Ando-Dido group (see ANDI, DIDO). In 1933 it comprised 2,930 people, living in the high valley of the Kara-Koyun (Soviet Autonomous Republic of Daghistan). The Arci have their own language, which belong to the Daghistan branch of the Ibero-Caucasian languages, and which represents an intermediate stage between Awar (q.v.) and Lak (q.v.); it is not fixed by writing, and the Arci use Awar and, less commonly, Russian and Lak, as the languages of civilisation. Since the 1918 Revolution, they have been merged in the Awar nation. Converted to Islam by the Awar, towards the end of the 15th century, the Arci are, like the former, Sunnis of the Shāfi'ī rite.

**ARCOS** [see ARKŪSH].

**ARCOT** (Ārkāt), a town in North Arcot district of Madras, on the right bank of the Palar. From the Tamil *Ārkāt*—'forest of Ar', or *Āru-kāḍu*—'six forests'. A Cōla foundation, the *Arkalas* of Ptolemy, it is much earlier than is suggested by the tradition of its foundation by a son of Kolātunga Cōla, and the building of its fort and refoundation by Timūr Reddī. (See K. A. Nilakanta Sastri, *The Cōlas*, 1935; R. Sewell, *Archaeological Survey of Southern India*, I, 196). In the 12th/18th century it became the capital of the Muslim Nawab of Ārkāt.

During the previous century, Ārkāt had passed from Vijayanagar to Bijāpūr and Golkonda, to the Marāṭhas, and then to the Mughals. In 1109/1698, Awrangzib formed a new province, the Carnatic, and Dā'ūd Khān, its governor from 1115/1703, made Ārkāt the capital.

His successor, Muḥammad Sayyid Sa'īdat Allāh Khān, was a Nawābat, who parcelled out the whole province of Ārkāt among his relatives. His nephew succeeded him and extended the province. His son

Şafdar 'Alī attacked Marāṭha Tanjore, while his son-in-law Husayn Dōst Khān, (Candā Šāhib) took Trichinopoly by a trick.

This aggression brought the Marāṭhas down upon Ārkāt in 1155/1740. The Nawwāb was killed at the Damalcherry pass, Ārkāt sacked, and Candā Šāhib carried off prisoner to Satara.

Şafdar 'Alī succeeded to power but was murdered in 1155/1742. The *pāḥadār* of the Dakhan thereupon appointed an outsider, Anwār al-Dīn, a move resented by the many Nawwāys who held subordinate posts in the province.

Their hostility allowed Duplex, governor of Pondicherry, to intervene. In 1161/1748 Duplex assisted the release of Candā Šāhib, the Nawwāy candidate for Ārkāt. Next year French troops under Candā Šāhib slew Anwār al-Dīn at Ambur, and in 1164/1750 when the *pāḥadār* of the Dakhan was killed, Candā Šāhib was proclaimed Nawwāb of Ārkāt.

In the next eleven years Ārkāt was a pawn in the Anglo-French struggle, now taken and held by Clive, now lost to Lally. The war ended with the British protégé, Muhammad 'Alī, established as Nawwāb. His troops twice surrendered Ārkāt to Haydar 'Alī of Mysūr, he became deeply involved in debts, but his line continued till 1272/1855, when the estate escheated to the Company on failure of male heirs. (The administration of the province of *ārkāt* had passed to the British in 1216/1801.)

The palace and fort, and the fortifications of the town, elaborately constructed on European lines by Muhammad 'Alī, are now in ruins. There are numerous mosques, a fine tomb of Sa'adāt Allāh Khān, and the shrine of Tipū Mastān Awliya, after whom Tipū Sultān of Mysūr (Mysore) was named. (L. B. Bowering, *Haider Ali and Tipu Sultan*, 117-18 ss.)

**ARD HĀL**, petition. In the Ottoman Empire of the 18th century, the writing of petitions was the prerogative of the *'Arđ-hāldīs* (*Arzvalı*). Admission to their number was regulated by the *'Arđ-hāldī-hāshī*, the *Çavuşlar emini*, and the *Çavuşlar hāshī*, the qualifications required being personal respectability, proficiency in calligraphy, and a knowledge of *şer'ī'a* and *hukūms*. Petitions were considered by the *Çavuşhāshī* on behalf of the Grand Vizier, and answers to them were drafted by the two *Tağhīredīs* (known as *Tağhīre-i ewvel* and *thānī*).

(G. L. LEWIS.)

**ARDABB** [see KAYL].  
**ARDABİL** (Turkish Erdebil). A district and a town in eastern Āğharbāyījān. The town is located

at 48° 12' E. long. (Greenw.) and 38° 15' N. lat. The distance to Tabriz is 210 km. by road, and it is 40 km. to the Soviet frontier. The altitude of the town is 4,500 ft. above sea level, and it is situated on a circular plateau surrounded by mountains. The district (*ghābistān*), of which the town is the capital, comprises four counties (*bāghān*), capital county, Nāndū, Āttākā, and Garml.

There are few trees around the town and irrigation is necessary for cultivation. Some 20 n. west of the town is Mt. Savālūs (Sablūs of Arabic geographers) 15,784 ft. at the summit, with perennial snow. The climate of the town and capital county is cold in winter (average monthly temp. below freezing) and the town is assigned to the cold districts (*sardār*). The other three counties, however, are reckoned in the warm districts (*garmār*). The river Bālīkhūlū or Bālīkū (or *chāy*), a tributary of the Karāsū, flows through the southern part of the town. In the vicinity of the town are warm springs which have attracted visitors throughout history.

The etymology of the name is uncertain, but Minorkey in *J.A.*, 217 (1930), 68, proposes a meaning "willows of the sacred law". The pre-Islamic history of Ardabil is unknown, for we find the name only in Islamic times. San'ād vocalises the name as Ardabīl, while the *Ḥadād al-ʿĀlam* writes Ardawīl. In Armenian we find Artavēt (Gheved) and later Artavel, Firdawī and Yākhīt say the town was founded by Pēroz the Sāsānian king (457-484 A.D.), hence it was called Bīdān Pēroz or Bāghān Payrūz. Kazwīnī in his *Nasbat al-Kulūb* attributes its founding to a much earlier monarch.

It is uncertain whether the mint mark ATRA, on Sāsānian and pre-reform 'Umayyad coins (Āghar-bāyījān?) refers to Ardabil, but it was the residence of the *marzbān* at the time of the Arab conquest of Āghar-bāyījān, according to al-Balādhurī. The city was taken by treaty, and under the caliph 'Alī his governor al-ʿAṣṣāthī made Ardabil his capital. It probably did not remain the capital continuously throughout the 'Umayyad Caliphate; for example in 112/730 the Khazars captured it. Marāgha may have been a second capital of Āghar-bāyījān, for the seat of authority seems to have shifted between it and Ardabil.

The district of Ardabil suffered from the uprising of Bābak (q.v.). Ardabil was in the domain of the independent Sājjid governors at the beginning of the 10th century A.D., and the district suffered from internecine struggles of local rulers, as well as from the invasions of the Rūs in the first half of the 10th century. We find dirhems with the name Ardabil on them for the first time in 286/899.

The town of Ardabil was captured and destroyed by the Mongols in 617/1220. It lost its former importance until the rise of the Safawids. Shāykh Saif al-Dīn had made Ardabil the centre of his Šīfī order at the end of the 13th century. In 1499 Ismāʿīl, his descendant, returned from exile in Gilās to Ardabil where he started the Safawid dynasty, and shortly thereafter he became *shāh* in Tabriz.

Ardabil became a Safawid shrine and Shāh 'Abbās especially enriched the mausoleum and mosque of Shāykh Saif by gifts, among them Chinese porcelains and rugs. The city was held by the Ottomans for a short time at the end of Safawid rule, but Nādir Shāh retook it and was crowned *shāh* in the nearby Mughān steppe in 1736. During the Ottoman occupation a survey of population and land was made for the city and province; a copy of this is preserved

in the Baycekalat Arşivi [p. 2] in Istanbul. In the time of Napoleon Gen. Gardanne fortified the city and built ramparts, and 'Abbas Mirzā established court there.

European visitors who visited the town and briefly described it were Pietro della Valle (1619), Adam Olearius (1657, with a pictorial map of the town), J. B. Tavernier, Comte de Maure (1703), and James Morier (1821). Much of the library of the shrine of Shaykh Sa'ī, as well as art objects, were carried to St. Petersburg by the Russians after 1827.

Morier (*Second Journey*) estimated the population of the town at 4,000; now it is ca. 23,000. Historical sources include the shrine of Shaykh Sa'ī, the *masjid-i dīnawā* (built in 1382) and the mausoleum of Shaykh Dīlārāwī (father of Shaykh Sa'ī) 6 km. to the north of Ardabil.

Pope, *Chinese Porcelains from the Ardabil Shrine*, Washington D.C. 1936; Le Strange, *op. cit.*, above sea level; Farmanfarmaei, *Dīwān-i Ardabil*, 4, Tehran 1952, 11-13; Dīkhādā, *Lughat-nāma*, Tehran 1950, 1290-2; *Kāhnamā-yi Irān* (Ministry of War map service, Tehran, 1952), 10-12 (where a sketch map of the town appears). (R. N. FRYE)

**ARDAHAN**, town in the remote north-east of Turkey, 42° 18' north, 42° 42' east, on the Kuraçay, which becomes the Kura, 1,800 m. above sea level. At one time capital of a *sandjak* in the 1940s of Kars. By the Treaty of San Stefano in 1878, the town, its surrounding district and Kars were ceded to Russia. On Feb. 23rd 1921, it was ceded back to Georgia; it has since remained Turkish, and is the capital of a *bağd* in the *wilāyet* of Kars. In 1945, the town had 6,182 inhabitants, and the *kada* 29,099.

**Bibliography:** Hādījī Khāfī (Kābil Celebi), *Dīkhādā-nāma*, 407. (F. TSCHERNIK)

**ARDAKAN** (dialect Erdēkhān), town in Persia situated 32° 18' N. Lat. and 53° 50' E. Long. (Greenw.) on the present route from Nā'īn to Yazd. It is located on the edge of the desert. To the north is the district (*buluk*) of 'Akhā, and to the south Maybūd.

It is located at a height of 3260 ft. above sea level. The identification with Ptolemy's Ἀρδακάν (Tomaschek, in *Paddy-Watson*, s.v.) is open to doubt, and there are no ancient ruins in the town. Ibn Hawkal (Kramers), 263, mentions a town Adharkān on the edge of the desert near Yazd which may be identical with Ardaḳān. There is no certain mention of the town until the 7th/13th century when a Süfī Ḍikrkhān was erected there; cf. 'Abd al-Husayn Ayyat, *Ta'wīḍ-i Yazd*, Yazd 1939, 50, who also lists the famous people from this town. The name Ardaḳān appears on European maps beginning in the early 18th century. Today the town is the centre of a district with 5 villages and 10,430 population (in 1930), according to Ma'ūd Kaykhān, *Dīwān-i Ardabil*, 11, Tehran 1933, 438. Some of the population are Zoroastrians. The people are known for their metal work and sweets. The former flourishing cloth and carpet industry is now unimportant.

Gabriel, *Die Erforschung Persiens*, Vienna 1952, 58 (von Poser), 188 (Ruhos), 304 (Baier); Stahl in *Petersmann's Geogr. Mitteil.*, Supplement 118 (1985), 29.

Another Ardaḳān, in Fārs, 30° 16' N. Lat. 51° 50' E. Long. (Greenw.) is a Kaḡhāḡ tribal centre. (R. N. FRYE)

**ARDALĀN**. This name was formerly used for the ill-defined province of Persian Kurdistan, the major part of which at present is the district (*dahmad*) of Sanandāq (formerly Senna). For the geography see *ARMENIA* (Persian).

Usually the name refers to the Banū Ardālān who were rulers of much of Kurdistan from the 14th century A.D. The origin of this extended family is unknown, but according to the *Shāraf-nāma*, Bābā Ardālān was a descendant of the Marwānids of Diyār Bakr, who settled among the Gūlān in Kurdistan. Another source (R. Nikitine, *Les Fides*) says Ardālān was a descendant of Ardashīr the first Sāsānian king. Several histories of the rulers of Ardālān were written in Persian in the 19th century which are primarily biographies of the rulers (Storey, 369, 1300). The rulers received the title *wilā* from the Safawid shahs, but sometimes they declared their allegiance to the Ottomans.

One of the most illustrious of the rulers was Amin Allāh Khān who ruled at the beginning of the 19th century, and his son married the daughter of Fath 'All Shāh. Nāṣir al-Dīn Shāh appointed a Kājār prince as governor of Kurdistan and the rule of the Ardālān family came to an end. (See KURDISTĀN, SENNA).

(R. N. FRYE)

**ARDASHĪR**, old Persian: Artakshashtra, Greek Ἀρταξέρξης, well-known name of Persian kings. Muslim tradition has certain knowledge only of the later Sāsānid kings of that name, viz. Ardashīr I (226-241), Ardashīr II (379-383) and Ardashīr III (628-629). (See SĀSĀNIDS).

(H. MASSÉ)

**ARDASHĪR KĪURRA** (see *ARDAKĀN*).

**ARDĪSHĪT** (see *ARDAKĀN*).

**ARDĪSTĀN** (dialect Ardhān), a town in Persia located on the edge of the desert east of the present road from Nā'īn to Nā'īn, at a height of 3575 ft. and 35° 25' N. Lat., 52° 24' E. Long. (Greenw.). It was a well known town in the Middle Ages. Arabic and Persian histories say a fire temple was erected by Ardashīr the first Sāsānid (226-42 A.D.) and Khuraw I Anshārawān (531-79) was born here. On the early (14th century) mosque here cf. A. Godard, in *Atchārd Irān*, 1936, 285. Zawāra, NE and near Ardīstān, has an old mosque and pre-Islamic ruins. The population of the district of 30 villages (1930) was ca. 27,000.

**AL-'ARDJĪ** 'Abd Allāh b. 'Umar, great-grandson of the Caliph 'Uthmān, and a poet regarded as the best of those who belonged to the Umayyad family. Of a generous but violent disposition, he tried to play a part in politics and took part in several

expeditions (especially with Maslama b. 'Abd al-Malik, against the Byzantines), but, thwarted of power, he retired to the Hīlāz, dividing his time between Mecca and one of his estates near al-Jā'if, al-'Arjī, from which he took his *nisba*. Reduced to a life of idleness, like so many of the aristocracy of the Hīlāz, he turned to amusements, frivolous or satirical, and joined the poetic poets who flourished at that time in the two Holy Cities. Doubtless moved by jealousy, he satirised the Governor of Mecca, Muḥammad b. Hishām, the maternal uncle of the Caliph Hishām, and went so far as to compose, in order to discredit him, erotic verse regarding his mother 'Dāyā'ī. His behaviour led to his being arrested, placed in the pillory and thrown into prison, where he died, probably about 120/738.

**Bibliography:** *His āwān* was recently printed in Baghdad (1956) with an Introduction. Levi Della Vida*, 361-70, with bibl. (Ch. PELLAT)

**ARDJĪSH**, a small and ancient town situated on the north-eastern bank of Lake Van, which in the Middle Ages was still called the Lake of Ardjīsh. Its existence seems to be vouched for since the Urartean period, and more expressly by the Graeco-Roman geographers. It was occupied for a time by the Arabs during the time of 'Uthmān, but remained an integral part of the Armenian principalities up to the 8th century A.D.; from 772 onwards, it was incorporated into the Kayse emirate of Aghlāt [p. 2]. In the 10th century A.D., it belonged to the Marwānids, but about 1025 it was taken by the Byzantines, who proceeded to annex southern Armenia. In 1054, it was retaken by the Saljūkid sultan Tuğrīl Beg [p. 2], and, when the Saljūkid empire was divided up at the end of the 11th/12th century, it was incorporated in the principality of the Shāhs of Armenia of Aghlāt and, at the beginning of the 12th/13th century, in that of their Ayyūbid successors. Pillaged repeatedly in the 13th century by the Georgians and the Mongols, it was nevertheless of sufficient importance for the Ilghādī *waṣī* 'All Shāh to fortify it at the beginning of the 8th/14th century (it does not appear to have been fortified before). Later, it suffered from the devastations of Timur and during the disorders associated with the Perso-Ottoman wars. It was still the chief town of an Ottoman district in the 17th century; but the growth of Van, and the northward movement of the lake waters, acted to its detriment. The last inhabitants left the town about the middle of the 19th century, and to-day the ruins are mainly under water. A small modern township has sprung up half an hour's journey to the north.

**Bibliography:** See ARMENIA and AKHLAT. To the Arabic sources (al-Balādhūrī, Ibn al-Azrak al-Fārīqī studied by Amédour in *JRAS*, 1902, 785-812; Ibn al-Athīr, etc.), should be added the Armenian sources used in R. Grousset, *Histoire d'Arménie*, Paris 1948, and F. X. de Nève, *Histoire des Guerres de l'Arménie d'après Thomas de Madoz*, Brussels 1860, in Persian, Hamd Allāh Mustawfī, *Nusha*, and, in Turkish, the *İlghādī-nāma* of Hādījī Khāfī and the *Travels of*

Ewliyā Celebi, vol. IV, cf. also M. Canard, *Les Hachmides*, I, 188 and 473 ff.; E. Honigman, *Die Ostgrenze des byzantinischen Reiches*, Brussels 1935; and Rosim Darhot, article *Erci* in *IA*, which gives the references to the earlier modern works (Hübbschman, Markwart). (CL. CAHEN)

**ARDJĪSH-DAGH** (see ERGAYĪSH DAGH).

**ARGAN** (Berb.), argan-tree (*argania spinosa* or *argania adenocaulis*), a tree of the family *Sapotaceae*, which grows on the southern coast of Morocco. A shrub with hard, tough wood, it produces a stone whose kernel, when ground, yields a much-valued oil; the oil-cakes are given to cattle.

The word is also known to some of the Arabic-speakers of Morocco, but they took upon it a loan-word.
